After 1956 the army reverted to recruiting mainly tribesmen except for the technical services. A system of thorough political screening for all recruits was instituted, and it was accepted that the relatively small bedouin recruiting base precluded the option of a mass conscript army. Since then the emphasis has been on the creation of a fighting force combining the minimum possible numbers with the highest degree of combat efficiency. Even then the numbers required for Jordan's defence were comparatively large and so, in place of a high-turnover, politically unreliable conscript army Jordan chose to militarise a high proportion of the male bedouin population in a well-paid, all-volunteer regular army.

It has of course proved unavoidable that numbers of Palestinians be recruited to serve in the military specialities demanding a high level of education or specialist technical skills, and this has been done regularly, with reliance being placed on high pay, generous privileges and close political supervision to ensure their loyalty. When the Palestinian National Guard was dissolved by royal decree in 1965, due to the rising political activism of the Palestinian population, about 40% of its members were re-enlisted in the regular army after appropriate screening.

By 1967 the armed forces had grown to about 50,000 men, but Jordan was then enticed into the farcical Egyptian–Syrian–Jordanian joint command by falsified reports of Arab victories. In the brief war the small Jordanian air force was almost all destroyed on the ground, and the army was then driven out of the West Bank with heavy losses. Over half the economic resources of the kingdom were lost to Israel, and the impoverished remainder of the country was inundated by a new wave of refugees.

With the army virtually in ruins and the power of the Palestinian guerrilla organisations at its height, King Husain was forced to make a number of concessions to the Palestinians in 1969 and early 1970. These included the retirement, transfer or demotion of numbers of officers of tribal origin who were the King's own close supporters and who opposed the Palestinians' methods and aims. In the meantime, however, he was quickly reorganising and re-equipping his army with both Arab and American aid, and by September, 1970 he was able to challenge the power of the guerrilla organisations openly. The ensuing civil war saw bitter fighting between the Jordanian army and the Palestinian organisations both in the capital, Amman, and in the north of the country, as well as tank battles with Syrian armour sent south to intervene on the Palestinians' behalf, but the Army's loyalty held and the King won. All the Palestinian guerrillas were expelled from the country and their organisations banned. (Many ended up in Lebanon, thus initiating the sequence of events which triggered that country's civil war.)

Since the civil war the regime has been even more a target for Palestinian violence and incitements to revolt. In 1971 Prime Minister Wasfi al Tal was assassinated, and in November, 1972 the acting commander of a Jordanian armoured unit was discovered to have received a large sum of money from Palestinian guerrilla sources to organise a coup. Some 300 army and civilian personnel were arrested, and an air force pilot implicated in the plot attacked the royal palace with rocket fire and injured the King before dying in the ensuing crash. King Husain has by now survived at least eight assassination attempts. The obvious course of action was to reduce the number of Palestinians in the army still further, and this has now become easier to do since the younger, mostly settled generation of tribal Jordanians are far better educated and qualified than their fathers. It is estimated that the proportion of Palestinians in the armed forces is now well below 10%, of whom most are concentrated in the air force and the technical services. Plots against the King are still occasionally uncovered in the army (the latest allegedly in May, 1977 — see Current Developments), but there is no question that the great majority of armed forces personnel have a strong personal loyalty to the monarch.

Jordan stayed out of the 1973 Arab–Israeli war with the blessing of Egypt and Syria (since it had still not acquired a proper air-defence network and it would have been plainly suicidal to fight without one), but the army did send one armoured brigade to aid Syria on the Golan Heights when it appeared that the Israelis were about the break through in the south. In the 1974 Arab League summit meeting at Rabat which considered Arab post-war strategy, Jordan acquiesced in the declaration naming the Palestinian Liberation Organisation the 'sole legitimate representative of the Palestinian people', thus implicitly relinquishing its own claim to the West Bank, but this may prove not to have been an irrevocable decision (see Current Developments).

World Armies

STRENGTH AND BUDGET

The armed forces of Jordan now number 67,850 men in a total estimated population of 2,970,000. The army is the dominant service, with 61,000 personnel, but the air force has tripled since 1971 to its current strength of 6650. The navy numbers only 200 men. There are 30,000 reserves, and paramilitary forces numbering about 10,000 made up of a 3000 man Mobile Police Force and 7000 man Civil Militia. Conscription has recently been introduced, but it is highly selective and is not expected to increase the size of the armed forces substantially.

The 1978 defence budget amounted to 95,300,000 dinars (\$304,000,000), out of an estimated GNP of \$1,300,000,000. This represented a substantial increase on the previous year's defence budget of 67,000,000 dinars (\$200,600,000), and was about a quarter of all government expenditure, but as usual a very large proportion of it was derived not from ordinary revenues but from foreign aid. United States military aid to Jordan in 1977-8 was almost \$125,000,000, two-thirds of which was in the form of foreign military sales credits guaranteed by oil-rich Arab governments. In addition there were direct 'contributions to the war effort' of 52,000,000 dinars from Kuwait and 10,000,000 dinars from Saudi Arabia (although it is not certain that these contributions were incorporated into the ordinary military budget, more probably being devoted to payments on the Hawk missile system which is being bought for Jordan by the Gulf States at a price of over \$500,000,000).

If these latter payments were counted in, the Jordanian defence budget would more closely resemble its 1967-73 pattern in that it would amount to about 45 to 50% of all government expenditure. It would also conform to the long-term pattern in which only half or less of the defence budget has been met from domestic resources. Broadly speaking, before 1957 the rest of Jordan's military expenditure was covered by grants and subsidies from Britain, and between 1957 and 1967 it was met by direct United States aid and by facilities and supplies furnished under the United States Military Assistance Program (MAP). Between 1967 and 1970 the Jordanian defence budget was subsidised by the oil-rich Arab States to the extent of about \$100,000,000 a year. After the civil war of 1970 this sum was halved as all Arab contributors except Saudi Arabia cut off their subsidies in disapproval, but the gap was entirely filled by renewed United States budgetary and MAP aid.

Since 1973 United States aid has continued at about the same level in constant dollars, while the Rabat conference in 1974 promised Jordan, as a 'confrontation State', an annual military subsidy of \$150,000,000 a year from the oil-rich Arab States (though in practice it has usually been about half that figure). It will readily be seen that the Jordanian military budget, far from being a crushing burden on an impoverished economy, may even represent a net advantage to the economy in time of peace.

COMMAND AND CONSTITUTIONAL STATUS

The constitution states that 'the King is the Supreme Commander of the Army, Naval and Air Forces', the words 'supreme commander' having the same connotation as does 'commander-in-chief' when applied to the President of the United States of America. The King has the constitutional right to declare war, conclude peace and sign treaties, and to rule by decree under martial law or in a state of emergency (both of which are to be declared by decision of the Council of Ministers appointed by the King).

The army's role, as defined by the constitution, is 'restricted to the defence of the realm and its safety'. Its senior officer is the commander-in-chief in ordinary parlance, officially the commanding general of the Armed Forces General Command, based in Amman. He is in theory answerable to the Minister of Defence, but in practice that minister does not issue operational or policy directives unless they are ordered by the Prime Minister or the King. (Strong prime ministers, however, often combine their own office with that of Defence Minister.)

The Commander-in-Chief is also the Army Commander, and under martial law acts as military governor-general of the country. He is invariably a close personal acquaintance of the King, and is generally a scion of one of the leading bedouin clans. For practical purposes he has direct access to the King on all matters, and even in war acts in consultation with him rather than as an autonomous expert. The office is quite stable: there have been only two incumbents since 1957 except for the turbulent period of 1967-70. The present Commander-in-Chief is Major-General Sharif Zaid bin Shaker, who had previously served as Chief of Staff since 1972.

The main functions of the Ministry of Defence are administrative and logistical, and include the preparation of the military budget. It does not participate in the operational control of the armed forces.

The Commander-in-Chief's immediate subordinate at General Headquarters is the Chief of Staff, who heads a General Staff on the British model that directs the administration and operations of the army. The principal staff officers are the Director of Operations and the Director of Military Intelligence; special staff sections include the adjutant-general, quartermaster-general, surgeon-general, finance officer, signals officer and others. Since 1973 General Headquarters has also contained a new Directorate of General Intelligence whose director is responsible to the Commander-in-Chief; this directorate appears to be involved primarily with the collection of internal intelligence, especially within the armed forces, and seems not to have any direct relationship with the rest of the staff organisation.

The small navy is organisationally part of the army. The Royal Jordanian Air Force is semi-autonomous. Its commander, who is subordinate to the Commander-in-Chief and the Chief of Staff, carries out a degree of policy co-ordination

with the Army General Staff, and receives some logistical support from the army, but he has his own staff for air force operations and administration. Air force headquarters are at Marka, near Amman.

This organisational framework greatly understates the King's influence on every aspect of armed forces operations and policy. He is himself a trained soldier, a graduate of the Royal Military Academy, Sandhurst, and a qualified pilot who personally test-flies all new air force aircraft. He devotes a large amount of his time to military affairs, personally approves all officer promotions and transfers, and cultivates a close personal connection with all ranks in the armed services. Jordan is essentially a praetorian State, in which the sole but sufficient condition for the survival of the monarchy is the personal loyalty of the armed forces to the Ruler, and so continuous close attention to this link has always been the King's first priority.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

Despite the fact that the Jordanian armed forces are equipped and trained primarily to fight a high-technology conventional war against formidable opponents, their internal security role is at least as important. Indeed, the operational engagements of Jordanian army units have more often occurred in this role than against outside enemies, primarily because of the unusually divided nature of its population. Apart from extreme cases like the September, 1970–July, 1971 civil war between the monarchy and the Palestinian guerrilla forces, which also took on some aspects of a conventional international war because of Syrian military intervention from the north, the army has frequently been employed in aid of the civil power in the cities where periodic outbursts by militant Palestinians have got beyond the limited capabilities of the civil police. Since 1971, however, there has been far less of this sort of thing, and so long as the army's loyalty to the King is not shaken — and it never has been — there is little likelihood that the internal security situation could get beyond its control in any case.

In its role of external defence, the army's main concern is of course Israel. (Syria was also a serious cause for worry in the 1960s, but has not been so since President Assad came to power there.) Notwithstanding the great improvement in the army's capabilities since 1967 and the recent acquisition of a comprehensive air-defence system, it must still be considered to have a strictly defensive posture: there is no reasonable prospect that it could mount offensive operations westwards across the Jordan into Israeli-held territory with more than transitory success. Even in defence, the army's forces are too few to offer an impenetrable resistance along the entire length of the Israeli–Jordanian border, especially in view of the shallowness of the populated and economically productive zone between the Jordan and the desert.

Commitment

Jordan is sufficiently strong to require the commitment of substantial Israeli forces to overcome it, however, and this does make it a considerable deterrent to an Israeli attack. In the opinion of most observers such an attack would be extremely unlikely in any case, as Israel has no wish to threaten the Hashemite throne. The one part of Jordan which is widely considered to be vulnerable is the north-east corner, which offers Israeli forces an opportunity to outflank Syria's dense defences on the Golan Heights by going round them to the south. Jordan itself recognises this, and keeps substantial forces in the field entrenched on the heights around Umm Qeis overlooking the Jordan River in this sector. This area was also one of the first to be brought under the coverage of Jordan's newly installed SAM system.

Jordan's international commitments, apart from membership in the United Nations and the Arab League, include a number of inter-Arab arrangements which formally involve defence co-ordination: the Defence Council and the Joint Command of the Arab League, a defence agreement with Egypt dating back to 1967, and membership in the loosely associated Eastern Front Command comprising Jordan, Syria, Iraq and the Palestine Liberation Army, which was set up in 1970. None of these institutions has any real military significance, however.

Jordanian defence links with Syria, however, are of some importance. Despite the sharp disparity of political systems, Syria's President Assad and Jordan's King Husain are personal friends who share what is effectively a single front with Israel, and they have accordingly created a Syrian–Jordanian consultative body to co-ordinate military policy. There are regular liaison visits between the Syrian and Jordanian Chiefs of Staff, and a number of Syrian army officers are attending military courses in Jordan and serving in the Jordanian Army Staff College. Consultations on a joint military defensive strategy take place regularly, and during 1976 consideration was given to creating an integrated air-defence operations centre. This would certainly make operational sense, since Amman and Damascus are little more than 100 miles apart, but the Jordanian decision to buy the American-made Improved Hawk SAM system, which is incompatible with Syria's Soviet-supplied air-defence radars and missiles, appears to have prevented the realisation of this scheme.

The other country with which Jordan attempts a degree of defence co-ordination is Saudi Arabia, although the latter is reluctant to conclude a military pact. It was reported in 1977, however, that Saudi Arabia had agreed to place all its northerly air bases at Jordan's disposal in the event of war with Israel. This is of considerable significance, as all of Jordan's own major air bases are only a few minutes' flying time from Israel, and its air force would stand a much better chance of

World Armies

escaping destruction on the ground if this sort of more-distant operating refuge were available. The most important facility the Saudis were alleged to have placed at Jordan's disposal is the air base at Tabuq (about 50 miles from the Jordanian-Saudi Arabian frontier), which is well protected by SAM defences.

Deployment

The smallness and proximity to the Israeli border of the settled parts of Jordan means that the army's main bases spread across the country provide a suitable initial deployment both for external defence and for internal security operations. The main base areas for the army are the complexes at Amman and az-Zarqa, with lesser installations in the north around Irbid-al-Mafraq and in the south at Ma'an, al-Aqaba and elsewhere. The two major all-weather airfields in use by the air force are at Marka near Amman (where the airstrip and some facilities will continue to be shared with Amman's civil international airport until the new Queen Alia International Airport opens at the end of 1979) and at al-Mafraq. Smaller airfields exist at Ma'an, al-Aqaba and elsewhere, and three new military airfields are being built in the interior of the country in order to provide the air force with a longer warning time of an Israeli air attack. The country's naval forces are all stationed at al-Aqaba, along the few miles of coastline Jordan possesses between Israel and Saudi Arabia on the Gulf of Aqaba.

The Jordanian Arab Army is so distinguished in Arab circles that it has furnished training missions to a number of countries in the Gulf, and currently has a training force operating with the Pakistani army. One Special Forces battalion served in Oman during the campaign in Dhofar province against the guerrilla forces of the Popular Front for the Liberation of Oman and the Arabian Gulf (PFLOAG), but was withdrawn before that war ended in 1975.

Recent Operations

The Jordanian armed forces have participated at full strength in two wars against Israel. In 1948 they proved to be the most effective of the Arab armies, securing the West Bank and East Jerusalem to the Hashemite throne. In the Six-Day War of 1967 they had little advance warning of hostilities, and were forced to fight without air cover after their air force had been destroyed on the ground in the first hours of the war. Their performance was therefore much less effective, and they were driven back across the Jordan with grievous losses. Even then, however, their resistance was distinguished by its tenacity in the face of superior numbers and overwhelming air attacks, and their forlorn defence of the Old City area of Jerusalem, where Israeli air power could not be brought to bear, cost Israel almost half its casualties in the entire war.

In the civil war of September, 1970 later known to the Palestinians as 'Black September', the Jordanian forces again demonstrated their combat efficiency and ruthlessness, especially in the heavy fighting encountered by the 40th Armoured Brigade in its offensives against PLO positions in the hilly country just south of the Syrian border and in its subsequent operations against intervening Syrian armoured forces. In the 1973 war it was again the 40th Armoured Brigade that was sent north by Jordan, this time to assist Syria's defence of the Golan Heights in the tenth day of the war. Driving north from Jasim towards Kuneitra with the intention of cutting into the narrow Israeli advance, it was left with unprotected flanks when the Syrians and Iraqis proved unable to give it the promised support, and lost 22 of its 80 Centurion tanks when it was outflanked by the Israelis outside al-Harra.

All of these operations, however, have confirmed the widely held opinion that the Jordanian army is a well-led and highly professional force which deserves a great deal of respect on the battlefield.

ORGANISATION

Arms of Service

The Jordanian army's arms and services are virtually identical to those of the British army. As in the British army, though not to the same extent, individual units have a strong identity. The air force also follows the British model in its categories of specialist officers and ground crew.

Operational

The Jordanian army consists of two armoured divisions, two mechanised divisions recently converted from infantry, three special forces battalions with brigade superstructure, two anti-aircraft brigades (with at least two more forming), and at least 20 battalions of artillery. The divisions are basically triangular in form: each division has three brigades, each brigade three battalions, and so on. While adopting this basic United States model of organisation, however, the Jordanians have preserved considerable remnants of their previous British model of organisation, especially in the administrative, maintenance and other technical units.

Jordanian divisions are smaller than their United States equivalents because they do not include so much organic logistical and administrative support. Higher echelon logistic functions are carried out by central base facilities and

specialised units which serve more than one division, a perfectly practical arrangement where distances are so short and one which permits a highly favourable ratio of combat to support strength. Artillery battalions and mobile air-defence batteries of guns and missiles are separate combat elements from the divisions, and are allocated amongst them by General Headquarters as the particular situation dictates. Special forces battalions also stand outside the divisional organisation. The chain of command runs directly from General Headquarters to each divisional headquarters and thence down through the pyramid of subordinate units.

Air force operations are organised on a squadron basis closely resembling that of the British Royal Air Force. The combat squadrons consist of two interceptor squadrons, one flying F-104A/Bs and the other F-5E/Fs, and one fighter-ground attack squadron and one operational conversion unit (with full FGA capability) flying F-5A/B/E/Fs. There is also one transport, one helicopter and one training squadron.

The small navy is in fact part of the army.

RECRUITMENT, TRAINING AND RESERVES

Until recently recruitment was entirely by voluntary enlistment, with strong preference being given to recruits of bedouin tribal background from central and south Jordan south of Amman, rather than to urban Palestinians and Transjordanians from the area north of Amman (who are more oriented towards the town and village life of southern Syria and have on occasion made common cause with the Palestinians). Palestinians are rather more numerous in the air force and the technical services, but the infantry and armour are almost exclusively Transjordanian. Standards of recruitment developed in the old Arab Legion have been maintained, including political screening.

With a predominantly young and male population — in 1973 65% of the population was below the age of twenty-four, and of those 54% were male — there is no shortage of military manpower even given the policy of recruiting mainly among those of bedouin descent. A high unemployment rate, comparatively good pay scales in the armed forces, and a marked affinity for, and pride in, military service amongst those Jordanians of tribal background have ensured that there would be a sufficient flow of volunteers forthcoming from this reservoir. The army also provides 4 years' free training in vocational schools for selected boys aged thirteen who volunteer, with family consent, to serve at least one term of enlistment in the army upon completion of school.

The health and educational standards of recruits are good by regional standards: Jordan has an adult literacy rate of about 50%, and the army provides literacy training for those who need it. The recruits are typically tough and capable of endurance, and are easily moulded into excellent soldiers by the army's own training methods, which are again modelled on those of the British army.

The main personnel procurement problem has always been that of securing well-qualified technicians. It has become gradually less severe during the 1950s and 1960s, but the emergence of lucrative job opportunities elsewhere in the Middle East for technically qualified individuals in the 1970s, combined with the higher demand for technicians in a rapidly modernising military force, has brought the problem back in a more acute form. It was primarily to solve this problem that Jordan put into effect a conscription law on January 1st, 1976, requiring every Jordanian male between the ages of nineteen and forty to serve in the armed forces for a period of 2 years, unless exempted by the authorities.

The application of this law has been highly selective in practice, most of the conscripts being the sort of technically qualified people (many of Palestinian origin) whom the army could not induce to volunteer. Those with a university degree are drafted into the officer corps, the remainder serving as privates or NCOs. The intake of conscripts is only planned to amount to 3500 per year, which means that the proportion of conscripts in the armed forces' stabilised total strength of 70,000 will not amount to more than 10%.

Junior officers for the army and air force are trained at the Jordanian Military Academy at al-Rusayfah, near az-Zarqa. They are drawn principally from urbanised families of tribal origin. The applicants must have a secondary school education and are carefully screened for loyalty. The course lasts for 2 years, and is modelled on that which used to exist at Britain's Royal Military Academy, Sandhurst prior to the recent drastic abbreviation of the Sandhurst curriculum. Upon graduation, cadets are commissioned as second-lieutenants in the army or air force. Very large numbers of Jordanian officers attend military schools and academies overseas after graduation for further or specialist training: there are currently 300 in the USA, 40 in Britain and some attending the military academy in Taiwan. Direct commissioning from the ranks is not infrequent in the army, and the air force also grants direct commissions to technical specialists.

Air force pilots are trained to fly at the Royal Jordanian Air Academy at al-Mafraq, and some receive further training in the USA and Britain. These countries also make available technical training for non-flying officers and NCOs of the Jordanian air force. It is now proposed to convert the Royal Jordanian Air Academy into an Arab Air Academy, offering flying instruction to civil and military aviators on fixed-wing aircraft and helicopters from basic flight training to instructor-pilot level. Major-General William Maddox, former Commander of the United States Army Helicopter School, has been appointed Head of the Academy, which will move to Amman's present civil international airport when the new one opens in 1979. The Arab Air Academy is to be supported by an inter-Arab agreement, and is not intended to supersede training facilities already in existence elsewhere in the Arab world. The military part of the academy has been transferred to the Royal Jordanian Air Force, but will continue to share the same facilities.

World Armies

More advanced levels of officer education are provided by the Jordanian Staff College, located south-west of Amman, where the course, of 1 year's duration, is closely modelled on that of the British Army Staff College at Camberley. Other Jordanian officers attend the course at Camberley, or its equivalent at the United States Army Command and General Staff College at Fort Leavenworth.

Pay and allowances in the Jordanian armed forces have historically been among the highest in the Middle East, especially for enlisted personnel, although they have of course been overtaken in many of the oil-rich States since 1973. Enlisted men receive cost-of-living and family allowances, and officers receive longevity pay and (for those above the rank of major) servant allowances. Other types of allowances are paid for special qualifications and dangerous duty, and there are good provisions for medical care and retirement benefits. Discipline is strict, even harsh, but generally fair. In most cases it would be true to say that Jordanian officers and soldiers enjoy a higher standard of living when not in the field that they could expect in civil life.

Jordan does not maintain an organised reserve structure. Discharged veterans who are still physically fit are subject to recall up to the age of forty, and would be mobilised through the main bases at Amman, az-Zarqa and al-Mafraq, but they would only be mobilised to expand the support services and provide combat replacements in the event of combat operations extending over a considerable period of time. For the short wars which are more typical of the area, the existing regular forces are already recruited up to the limit of budget capabilities to provide suitable equipment. The current total of reserves is about 30,000, but this figure may be expected to rise now that there is a steady flow of short-term conscripts through the armed forces.

EQUIPMENT AND ARMS INDUSTRY

The Jordanian army's main armoured strength resides in its 320 M-47/-48 and M-60 United States-built medium tanks and its 180 older British-built Centurion medium tanks. These are supported by 140 Ferret scout cars, and 700 M-113 and 120 Saracen APCs. In addition to its 110 25-pounder guns and its 90 105 mm, 16 155 mm and unknown number of 203 mm towed howitzers, it has now acquired 35 M-52 105 mm and 20 M-44 155 mm self-propelled howitzers, and has M-110 203 mm SP howitzers on order. It also disposes of large numbers of 81 mm, 107 mm and 120 mm mortars, and 106 mm and 120 mm recoilless rifles. The standard personal weapon is the M-16.

For anti-tank defence, it relies upon TOW and Dragon ATGWs. A great deal of attention has been devoted to air defence in recent years. In addition to large numbers of the short-range man-portable Redeye SAMs and 200 M-42 40 mm SP anti-aircraft guns, Jordan will possess by the end of 1979 an integrated system of 14 Improved Hawk surface-to-air missile batteries supported by over 100 M-163 Vulcan 20 mm AA guns, providing air-defence coverage for both military positions and Amman at a cost of \$540,000,000 (paid for by Saudi Arabia).

The Jordanian air force possesses 76 combat aircraft: 20 F-104A/B interceptors, 24 F-5E/F interceptors, and eight F-5A/Bs and 24 F-5E/Fs configured for the ground-attack role. Its transport strength consists of four C-130B Hercules, one Boeing 727, one Falcon 20 and four Spanish-built CASA C-212A Aviocars; one C-130H is on order. The current helicopter inventory is 14 Alouette IIIs and two S-76s; four further S-76s and 10 AH-1H Huey Cobra attack helicopters are on order. Training aircraft include eight T-37Cs, 12 Bulldogs and one Dove. The standard air-to-air missile in use is Sidewinder.

The tiny navy has 10 small patrol craft.

As will be realised by reading this list, the Jordanian armed forces depend on the USA for approximately 90% of their weapons, with most of the remainder coming from Britain. The air force re-equipment programme is virtually complete, as is the creation of an integrated air-defence system. The substantial reinforcement of the army's tank strength and the mechanisation of two infantry divisions (plans to create a third mechanised division have been dropped) were substantially accomplished in the period 1973-8. Further large increases in the armed forces' size or weapons inventory are unlikely in the next few years.

At the present there is no arms industry to speak of, although the capabilities of the army and air force maintenance workshops substantially exceed the Middle Eastern norm. There is, however, a plan to build a tank conversion facility in Jordan to up-gun and modernise the army's tanks and provide them with diesel engines. The projected factory is estimated to cost over \$100,000,000 and would be the second-largest industry in Jordan. It would require an injection of funds by other Arab countries, but is well within Jordan's capability to operate and could prove valuable to other Arab armies as well.

RANK, DRESS AND DISTINCTIONS

The rank structures of the Jordanian army and air force are identical, and closely resemble that of the British army. Insignia of rank are worn on shoulder straps by officers; enlisted men wear chevrons, point downwards, on both upper sleeves. The basic colour of insignia and buttons in the army is gold; in the air force, silver.

Rank	British Equivalent	Insignia
Al Malik (the King)	Supreme Commander	Crossed sabres within a wreath, and one crown
Mushir	Field Marshal	Crossed sabres within a wreath
Fariq Awal	General	Crossed sabres, one star and one crown
Fariq	Lieutenant-general	Crossed sabres and one crown
'Amir Liwa'	Major-general	Crossed sabres and one star
Zaim	Brigadier	Crown and three stars
'Aqid	Colonel	Crown and two stars
Muqaddam	Lieutenant-colonel	Crown and one star
Raid	Major	Crown
Rais	Captain	Three stars
Mulazim Awal	Lieutenant	Two stars
Mulazim Thani	Second-lieutenant	One star
Murashah	Cadet	White bar
Waqil	Warrant Officer	Crown within wreath
Naqib	Sergeant-major	Crown and three chevrons
Naib	Sergeant	Three chevrons
'Arif	Corporal	Two chevrons
Jundi Awal	Lance-corporal	One chevron
Jundi	Private	—

All army personnel wear a gold-coloured metallic arc at the outer edge of their shoulder straps spelling out in Arabic 'The Arab Army'. Many units have authorised shoulder patches or flashes, although these are not worn in combat. Air force flying personnel wear wings similar to those of the British Royal Air Force.

Army uniforms are brown wool; both field and garrison uniforms are similar to those of the British army for both officers and men. In summer, light-weight khaki uniforms of desert tan are worn. Senior officers and staff college graduates wear red lapel patches and red hatbands.

Except in combat and field exercises, both officers and men frequently wear the red-and-white chequered Arab headcloth called the *kafiya* or *shmaag*, secured by a two-looped black cord called the *aigal*. In the field, infantry wear brown berets, armour black, artillery blue and engineers maroon.

Air force uniforms are almost identical to those of the British Royal Air Force. The *kafiya* is almost never worn by air force personnel.

All decorations, honours and awards are conferred by the King. The highest award for valour by members of the armed forces and police, established in 1972, is the Hashemite Order of Grace (al-Nahda al-Hashemi al-Naamat). Other awards, in descending order of precedence, are: the Order of Military Gallantry (al-Nahda Agdam), the Order of the Renaissance (al-Nahda al-Ba'ath), and the Star of Jordan (al-Kawkab al-Urdani). There are also service medals for World War II, 1948 and all subsequent campaigns and for 20 years' honourable service.

CURRENT DEVELOPMENTS

The demographic potential for an anti-Hashemite upheaval is ever-present in Jordan, but in fact the country has been far less turbulent since the PLO was expelled in the 1970–71 civil war. There has been little need to use the army in the internal security role, as had habitually been necessary during the 1960s. The army bulks so large in Jordanian affairs that it is impossible to conceive of radical political change in the country unless it is subverted from within, or unless the country were to be subjected to massive foreign intervention or serious defeat in war.

The likelihood of successful subversion in the army is very low, in view of the great pains taken to guard against it. Moreover, apart from some Palestinian factions, there is now no outside power that has any interest in encouraging the overthrow of the regime. It may be significant that the most recent report of a planned military coup in Jordan, apparently thwarted by the arrest of the plotters in late May, 1977, was allegedly uncovered thanks to information provided by the Soviet Union, which was approached by the plotters for support. (Jordan has denied the entire episode.)

King Husain, the reigning expert in the art of survival in Arab politics, has consistently succeeded over the past few years in finding a position which is acceptable or at least tolerable to all the protagonists in the Arab–Israeli confrontation — 'rejectionist' States, conservative Arab States, both super-powers and Israel. At the same time, while not openly questioning the decision of the 1974 Arab summit at Rabat that Jordan should relinquish its claim to the West Bank, he has skilfully manoeuvred the country into a position where others might eventually turn to Jordan as the only possible solution to the Palestinian problem (perhaps in the form of a Jordan–Palestine federal State).

Should there once more be war between Israel and Syria, Jordan would now have a reasonable prospect of emerging

World Armies

relatively unscathed, so long as it did not voluntarily initiate hostilities on the Jordan–Israel border. The re-equipment and modernisation of the armed forces has made Jordan too tough a proposition for Israel to add to its military opponents unless it had to, and the demands of pan-Arab solidarity might again be met, as in 1973, by the dispatch of a token Jordanian force to the Syrian front.

The creation of relatively thick defences in the north-west corner of Jordan, next to the southern end of Syrian defences in the Golan Heights, can be interpreted as part of this strategy. In a future war with Syria, Israel would most probably seek to outflank the densely fortified Golan position rather than attack it head-on, which means swinging round through northern Jordan or southern Lebanon. Jordan's defences have the effect of making the Lebanese option seem more promising to Israel (if it is not so in any case), and so might allow Jordan to avoid fighting on its own territory and to keep control over the scale of its involvement in such a war.

GWYNNE DYER

KAMPUCHEA (CAMBODIA or KHMER REPUBLIC)

Reliable information about the strength, composition, equipment and command of the army of Kampuchea, formerly the Khmer Liberation Army, is unavailable. In 1975, when it defeated the anti-communist forces led by Marshal Lon Nol, it was thought to number about 80,000–90,000, organised in four divisions and three independent regiments. It had been in existence since the late 1940s, when it fought a low-level guerrilla war against the French, but did not become significant until 1970, when it succeeded in wresting control of five northern provinces from the government. It was then supplied and assisted by the North Vietnamese. It has recently fallen out with its former friends, and severe fighting has taken place on the border with the southern Vietnamese provinces, as a result of which Kampuchean territory has been occupied and numbers of prisoners have fallen into Vietnamese hands. The reason for the attack on the Vietnamese border seems to have been an internal dispute between pro- and anti-Vietnamese factions in the government, in which the stronger anti-Vietnamese faction sought to compromise for good their opponents' relations with Vietnam by military action against that country.

There is a considerable amount of Russian, Chinese and American equipment in Kampuchea, including: M-113 (USA) and BTR-152 (USSR) APCs; about 400 field and medium artillery pieces; mortars; recoilless rifles; and light anti-aircraft guns; but, in view of the government's refusal to maintain relations with the outside world, much of it must now be unserviceable.

JOHN KEEGAN

KENYA★

History and Introduction

Kenya attained independence in 1963 becoming a republic a year later. In colonial days the 3rd and 5th Battalions of the King's African Rifles had been recruited in Kenya, together with certain other smaller units. These and other war-time Kenya battalions of the King's African Rifles served in the German East African campaign in World War I in the Italian East Africa, Madagascar and Burma campaigns of World War II, and since 1945 in counter-insurgency campaigning in Malaya (3rd Battalion only) and Kenya itself. These campaigns are recalled with pride, and are in no way seen as alien service.

Strength and Budget

Population: 14,500,000 (approximately)

Army: 6500 with an air force of 800, a navy of 400 and a barrack police force of approximately 2000

GNP: \$3,500,000,000

Command and Constitutional Status

The President of the Republic is Commander-in-Chief of the Armed Forces; the Minister of Defence is Mr. J.S. Gichuru and the Chief of the Defence Staff is Lieutenant-General J.K. Mulinge. Army Headquarters are situated in Nairobi.

The Kenya army has played virtually no role in politics since independence. The involvement of the (then) Chief of the Defence Staff, Lieutenant-General J.M. Ndolo, in the so-called 'Kamba Plot' of 1971 is the sole exception to have appeared in public. Occasional rumours of individual officers' political ambitions and occasional unexpected retirements of certain officers suggest, however, that the army is not entirely free from the influence of events elsewhere in Africa.

The government, it is said, is anxious to identify the army with the overall social structure. Senior officers, for example, are encouraged to become landowners.

Role, Commitment, Deployment and Recent Operations

The Kenyan army is faced with one of Africa's most grave military problems in the defence of national frontiers. Somalia claims large areas of north-east Kenya, and Uganda has recently claimed a considerable area of western Kenya. In the first years of independence the Kenyan army was heavily committed in operations against Somali *Shifita*, or insurgent groups, supported by Mogadiscio. The operations were conducted efficiently, as a result of which (and also as a result of government changes in Mogadiscio) the insurgent attacks died down. Both problems remain latent and Somali reverses in Ethiopia may lead her to such compensation at Kenya's cost. Following the collapse of the East African Community, relations with Tanzania have become very cool, and there remains fear of a Ugandan attack, perhaps co-ordinated with one from Somalia. Although Kenya has consistently supported successive Ethiopian governments in their efforts to preserve Ethiopia's frontiers, Kenya's rulers are too realistic to presume upon gratitude.

Organisation

The army consists of four infantry battalions (known as the 1st-4th Kenya Rifles) and one support battalion; this latter includes a parachute company. A fifth infantry battalion is proposed with an eventual aim of two brigades of three battalions each, but funds are not yet available for this expansion.

Recruitment, Training and Reserves

In the colonial period the Kenya battalions of the K.A.R. were largely recruited from the Kamba and Kalenjin (in particular Nandi) ethnic groups; with independence the army was based on something approaching a proportional system, though there is still a tendency for Kamba to appear in a number of senior posts (in contrast to the barrack police, or General Service Units, as they are called, in which Kikuyu officers appear to be preponderant). Recruitment is by voluntary means. A few Kenyan-nationality Asians serve in the army.

Kenya gained — in relative east African terms — from being the last of the three territories to become independent. Both President Kenyatta's overall policy of national unity and reconciliation, and his immediate military needs, led him into a

* For general notes on African armies, see Appendix 1.

more close military relationship with Britain than either of his neighbours. A defence agreement was signed in 1964 by which Britain offered Kenya a substantial measure of British assistance and Britain was permitted to use training-area facilities in northern Kenya. At independence the first Kenyan officer to command a battalion was appointed, but Kenyatta retained the services of a British army general (on secondment), either as Army Commander or as Chief of the Defence Staff, until 1969. The very large British Army Training Team operated in Kenya until 1970, though these personnel had been withdrawn from unit or sub-unit command appointments earlier. Some British-born officers were also appointed on contract. Although Israeli help was accepted in the mid-1960s and a few Kenyan army personnel are sent to countries other than Britain for training, these non-British arrangements form a minority. In the 1962–5 period a very large number of Kenyans passed through Sandhurst and Mons Officer Cadet School, smaller numbers continue to do so and also to attend courses at the Royal Military College of Science, the Staff College and the Royal College of Defence Studies. Kenya now trains the majority of its officer cadets at a special officer-training unit at Lanet.

The *Shifta* operations greatly improved the army's morale and efficiency.

Kenyatta saw benefits without constraints upon his military and foreign policy as a result of the British alliance — he was the first of the east African leaders to seek British help in suppressing an army mutiny in January, 1964, and he firmly rejected the Soviet Union's offer of some elderly T-34 tanks as a gift and refused to accept into the Kenyan army a number of largely Luo cadets trained — under private political arrangements — in Bulgaria. Personnel trained in Israel were also not accepted unless they retrained in Kenya.

The administration, training and equipment of the army have more recently been the subject of further reform, based on the need to develop from a small counter-insurgency force to a field army capable of withstanding air and armoured attacks. British advice was sought.

Equipment and Arms Industry

The infantry battalions possess the normal range of British army battalion weapons, including SLRs, GPMG, 84 mm Carl Gustav RCLs and 81 mm mortars. There is also a small sub-unit equipped with 120 mm mortars, and the company-size reconnaissance element in the support battalion has a very small number of British Saladin and Ferret armoured cars. More recent purchases have included 10 West German light UR-416 APCs and 10 French Panhard M3 APCs. Sizable replenishments of ammunition and additional numbers of Carl Gustav rocket launchers were sent to Kenya in July, 1976 at a time of tense relations with Uganda. Kenya's army's latest order is for 40 Vickers Mk. 3 medium tanks. An unconfirmed report notes that the purchase of Rapier light anti-aircraft missiles is under consideration.

The Kenyan air force consists of four Hunters, 12 Northrop F-5Es and five B.A.C. Strikemasters, training and transport aircraft, and five helicopters.

Kenya has no local arms industry.

Rank, Dress and Distinctions

The overall structure remains British patterned. The rank badges vary only with the replacement of the crown, and uniforms maintain the K.A.R. style except that a special headdress has been introduced for ceremonial wear.

Current Developments

Due in part to the prolonged British training and in part to Kenya's obvious military needs, its army is one of the most efficient in Africa, although small in size. It is well capable of containing a local insurgency or a local attack.

The country's military future is, however, less sure. Kenya could not contain a major Somali attack, particularly if at the same time there were difficulties on the Ugandan border. Following the incursion into Kenya of a large Somali force in August, 1977 the northern frontiers of Kenya were reinforced with additional troops.

It becomes difficult to divorce Kenya's external problems from those of her internal politics, increasingly restless and uncertain. Kenya's financial position necessitates gifts or long-term credits for any further increase in the armed services: the USA appears more willing to offer these facilities than Britain. The British alliance with its troop training facilities is under some local political criticism, though still favoured by the government. Prior to the Ethiopian Revolution a mutual defence treaty with Ethiopia had been a cornerstone of Kenya's defence policy; although this treaty has not been abrogated by Kenya the attitude of a Marxist Ethiopian government in the event of an attack by Somalia upon the conservative Kenya regime is unpredictable, and indeed might prove hostile to Kenya if Addis Ababa wished to effect a reconciliation with Somalia. Internally Kenya is faced with a phenomenal birth rate; much evidence also suggests mounting tensions both ethnic and social. Assets, however, are some alleviation of Kenya's post-1973 acute economic problems, largely through improved coffee prices and a resurgence of tourist interest, the measure of strategic control that Kenya can exercise upon Uganda through control of the railway and port facilities, and the general African agreement to adhere to the colonially drawn frontiers — Somalia's Ethiopian incursion was generally criticised elsewhere in Africa.

NORTH KOREA

HISTORY AND INTRODUCTION

The Korean People's Army, at a strength of 430,000, ranks seventh in size in the world, immediately after the South Korean. Proportionate to the country's population of 16,000,000 its strength is unmatched, and only approached by that of Taiwan. No country in Europe, except the Soviet Union, has so many men under arms; by way of comparison, it is revealing to note that a State of nearly equal populousness, East Germany, also with a vital strategic frontier, maintains an army of only 105,000.

North Korea's highly militarised condition is the result of the failure to settle the problem of Korean unification after World War II (see the entry on South Korea), a failure first of agreement between the Western allies and the Russians, then of arms in the Korean War of 1950–53. But it is also, like the first of those failures and the war itself, the fruit of a particularly aggressive local ideology, compounded of Soviet-style communism, Korean nationalism and the 'cult of personality' of the North Korean leader, Marshal Kim Il Sung.

Kim Il Sung, born near Pyongyang the capital of North Korea, in 1912, was first heard of as the leader of a band of communist guerrillas operating, under Chinese Communist control, against the Japanese (who had annexed Korea in 1910) in Manchuria during the 1930s. After a year in a Japanese prison, he fled to the Soviet Far East in 1941, where he was trained in the Communist Party School at Khabarovsk. In September, 1945 he landed, wearing Russian uniform, at Wonsan with the Russian occupation force which, by agreement with the Western powers, was to garrison the country as far south as the 38th Parallel until its political future could be arranged. The method chosen was the holding of nationwide elections under the aegis of the United Nations but, on the refusal of the Russians to allow the United Nations' commissioners to enter their occupation area, elections were held in the South only. The government formed by the elected assembly in May, 1948 was recognised in December as legitimate by the United Nations General Assembly, which called on the occupying powers to withdraw their forces as soon as practicable. Russia announced that she had done so on Christmas Day, by which time a government had also been set up in the North, under the Presidency of Kim Il Sung, who had taken office on September 10th.

Kim Il Sung's government claimed jurisdiction over the whole of Korea and was quick to embark on a programme of subversion inside the South, which soon developed into a campaign of cross-border raiding which the Southern government reciprocated. By the spring of 1950 the number of border incidents had reached several dozen a week, and both sides had deployed their armies in full strength along the 38th Parallel. That of North Korea's was much larger and stronger than the South's. Moreover, the latter was a recent creation, while Kim Il Sung's army was well-established. It consisted of two main elements, the Border Constabulary (*Bo An Dae*) and the People's Army (*In Min Gun*). The Border Constabulary, originally known as the Peace Preservation Corps, had been raised under Russian aegis from Korean communists who had fled to Soviet territory before September, 1945. In 1950 it numbered 50,000 and was organised in five brigades — 1st, 2nd, 3rd, 5th and 7th, equipped as light infantry. The People's Army counted 10 divisions in June, 1950. Three (the 10th, 13th and 15th) were still forming and two (the 2nd and 3rd) were newly-raised. But the remaining five consisted of, or contained, veteran soldiers of Korean formations of the Chinese People's Liberation Army (CPLA). The 5th and 6th Divisions were the former Chinese 164th and 166th Divisions, the latter formed in 1942 from deserters from the Japanese Kwantung Army in Manchuria. The 7th Division had been made by transferring into it the Koreans from the Chinese 139th, 140th, 141st and 156th Divisions, while the 1st and 4th Divisions each contained one regiment of Korean veterans of the CPLA.

But while the manpower of the army owed most to the CPLA, its equipment was largely Russian. The most important items were the 120 T-34 tanks of the 105th Armoured Brigade, but each of the divisions also had 12 SU-76 SPGs as well as field and medium artillery. All formations were organised along Russian lines, and the character and tactical doctrine of the army were strongly Russian. Soviet officers had acted as training advisers to the army from the moment of its official formation in February, 1948 and were still present in large numbers in the summer of 1950.

To what extent Russia and China endorsed North Korea's decision to mount the invasion of the South which she launched on June 25th, 1950 remains a matter of argument. It seems unlikely that North Korea would have taken the decision independently. Her version of events is that the attack was launched in the opposite direction and that it was the South which was the aggressor. But that has not been generally accepted, either at the time or later. The United Nations Security Council, from which Russia had temporarily withdrawn, condemned North Korea as an aggressor on June 25th and voted to approve military action to restore peace in the area on June 27th.

While member nations, which meant principally the United States, deployed forces to South Korea to contain the invasion, the North Korean army made rapid progress southwards. It quickly destroyed most of the South Korean army and roughly handled the first American units, rapidly transported from Japan, which came to its support. By the beginning

of August it had pinned the survivors of the opening campaign into a tiny bridgehead around the port of Pusan in the far south-east corner of the peninsula, from which the United Nations Forces looked unable to break out. A remarkable strategic gamble appeared to have paid off. On September 25th, however, the United Nations Commander, General MacArthur, delivered a long-prepared and finely calculated amphibious assault at Inchon, the port of Seoul, deep in the North Koreans' rear, and completely unhinged their front. Caught between the Inchon force and the Pusan garrison, who had simultaneously broken out of their perimeter, the North Koreans were, despite a precipitate retreat, almost destroyed as an army in the next fortnight. Out of some 130,000 soldiers who had entered the South, only about 30,000 made good their escape across the 38th Parallel, all in a broken state. Some formed bodies, cut off by the rapidity of the United Nations advance, remained in the mountains of the South where they gradually initiated guerrilla attacks against the rear of the United Nations army.

The intervention of the Chinese, as the United Nations advance neared their border with Korea, transformed the character of the war, which thenceforth became one of attrition along or close to the 38th Parallel, in which the bulk of the forces were provided by the Chinese 'Volunteer' Army, the Americans and the reconstituted South Korean army. The direction of the war passed from Kim Il Sung to the Chinese and the Russians, the latter supplying the munitions and equipment with which it was waged from the communist side. But, during the 3 years for which the campaign dragged on, the North Korean People's Army was gradually reconstituted, until by the signing of the ceasefire in July, 1953 it again numbered 10 divisions. Remarkably, in view of the humiliating collapse of September–October, 1950, Kim Il Sung remained as Head of State and nominal Commander-in-Chief of the People's Army. He seems in fact to have faced a challenge to his leadership from within the party in 1953, but forestalled it by instituting a purge. Three years later his authority was directly attacked at the party conference but he once again asserted his ascendancy, exiled his opponents and thenceforth sanctioned a 'cult of the personality' which has made him today a Korean Stalin.

Kim Il Sung's standing does not depend, however, simply upon his manipulation of the party's propaganda machine. He has also presided over a programme of economic development which achieved in the late 1950s a remarkable degree of success. North Korea has considerable natural resources, including coal and iron, and was left the infrastructure of a modern industrial base by the Japanese. Under Kim Il Sung's direction, and with plentiful aid from Russia, China and other communist countries, her mining, machine tool, chemical, textile and pharmaceutical industries were greatly expanded and hydroelectric capacity increased. In the 1960s however, economic growth slowed, due to the very heavy investment in military equipment — over 30% of government expenditure was allocated to the armed forces in 1968 — and to the interruption of overseas aid. North Korea has oscillated in alignment between Moscow and Peking. Originally a Soviet protégé, the regime fell very much under Chinese influence during and after the Korean war, but continued to receive aid from both countries. When the Moscow–Peking split developed, Kim Il Sung sided generally with the Chinese, and between 1962 and 1964 there was an almost open break with Moscow, manifested by a withdrawal of Soviet and eastern bloc aid. Relations were normalised in 1965, when Premier Kosygin visited Pyongyang, and Soviet aid restored, but North Korea appears to remain more strongly committed to China than to Russia. Chinese aid, particularly in the form of oil which Korea lacks, outweighs Russian, and China's Asian policy is more in tune with Kim Il Sung's than Moscow's.

Both great communist powers must nevertheless feel some alarm over his long-term ambitions, which remain the reunification of the two Koreas, by force if necessary. They are obliged to provide him with the equipment which will match the massive armoury of South Korea, which is now partly supplied by its own industry, but neither can wish to see him use it aggressively. Russia needs to preserve the appearance of *détente* in the north-west Pacific as urgently as anywhere else, while China is anxious that the threat of involvement in another Asian war should not prompt America to disengage her forces, a valuable local counterweight, from the area. Without the material assistance and moral support of one or the other, Kim Il Sung cannot undertake military operations on any scale. Nevertheless, he maintains one of the most impressive military establishments in the world. The North Korean army, recruited by universal long-term conscription, has once already proved itself a formidable fighting machine, is larger and far better equipped than in 1950, and appears wedded to the offensive tactical doctrine of the Soviet school in which it was brought up.

STRENGTH AND BUDGET

Population: 16,720,000

Army: 430,000

Navy: 25,000; 10 submarines, seven frigates, 370 small craft

Air force: 45,000; 630 combat aircraft

Paramilitary forces: 40,000 security and border guards; militia of 1,800,000

GNP (1976 estimate): \$8,900,000,000

Defence expenditure (1976): \$1,000,000,000

COMMAND AND CONSTITUTIONAL STATUS

The constitutional status of the army is defined in Article 100 of the constitution, which was promulgated in September,

World Armies

1948. The article is taken almost verbatim from the Soviet constitution and reads 'In order to defend the Democratic People's Republic of Korea, the Korean People's Army shall be organised. The mission of the Korean People's Army shall be to defend the independence of the fatherland and the people's freedom.' The army's relationship with the party is defined by an amendment of 1961 to the Rules of the Korean Workers' Party of 1956. The rules (66, 67 and 68) lay down that 'the Korean People's Army is the armed force of the Korean Workers' Party, that an Army Party Committee shall be organised and that it shall belong directly to the Central Committee of the Party'. It ordains the organisation of a General Political Bureau to organise and execute party activities inside the army and it enjoins the forging of links between party organisations within the army and with local party organisations and encourages its members and officers to seek office in such local organisations. In this it again follows Soviet example.

The Korean People's Army is a unified force, comprising army, navy and air force, which are commanded by a single chief of staff. As in the Soviet Union, and all other communist countries, however, command of the armed forces, though vested nominally in the apparatus of government, in fact resides in the party. In North Korea, the key organ of command is the Military Affairs Committee of the party, on which on June 26th, 1950 the Presidium of the Supreme People's Assembly conferred responsibility for prosecuting the war. It has remained the supreme arbiter of military affairs ever since. Its Chairman since 1950 has been Kim Il Sung, who is also President of the Republic, General Secretary of the Party and Supreme Commander of the Armed Forces, in which he holds the rank of marshal. Its other members, who usually number six, are always drawn from the most powerful men in the State, their standing being determined by their intimacy with the President and his family. No disclosures of its discussions or decisions are ever made. But it is known to control directly not only the armed forces but also the People's Militia and the provincial military committees of the party, each of which is run by a serving colonel acting as vice-chairman.

The Military Affairs Committee controls the formal governmental organ of command. This is the Ministry of National Defence, of which the minister is either a retired or serving officer; he has under him three vice-ministers, of whom one, a serving officer, also acts as Chief of the General Staff, commanding the three services. A second commands the General Bureau of Rear Services, and the third, who answers effectively directly to the party, is Chief of the General Politburo and Chairman of the Party Committee of the Korean People's Army, i.e. head of the political commissar structure. The Chief of the General Staff commands the operational services — Army, Mechanised Unit, Artillery Unit, Air Force and Navy — and 14 staff bureaux, of which the most important are Operations, Reconnaissance (which oversees intelligence gathering in, and infiltration into, South Korea), Combat Training, Military Recruitment and Replacement (the personnel office). The importance of the Geology Bureau, another of the fourteen, may be greater than had been thought in view of the discovery of the border tunnels. The Director of Rear Services controls finance, building, munition production and the medical service. The Ordnance and Engineer Bureaux, however, are subordinate to the Chief of the General Staff.

He also shares authority with the Chief of the General Politburo over the Political Security and Court Martial Bureaux. The authority of the latter may be thought greater in those fields. The primacy of the party even in non-political affairs is in general very strongly stressed. As in all communist armies, the party oversees and interpenetrates the army at every level. There is a political vice commander (commissar) in each army, division, regiment, battalion and company, and there is a party committee in every army, division and regiment. In the battalion there is a 'primary party organisation' and in each company a cell, the nuclear party unit. It consists of the commander and vice-commander of each of the three platoons and of several private soldiers. About 20% of platoon members are believed to be party members; the proportion for higher ranks is of course much greater.

Party control over the Workers' and Peasants' Red Militia is even more complete, since its officers at provincial, *kun* (prefectural), and *ri* and *tong* (village and worksite) level are almost always the officials of the party organisation at the same local level.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The declared role of the army is the defence of the frontier with the South. Kim Il Sung openly hints, however, that it is ready to intervene in the South should 'revolution' occur there and, before the improvement of relations in 1972-4, the North Korean armed forces had conducted large-scale infiltration across the border and along the Southern coastline. The army also acts as an important medium of education of North Korean youth in the official ideology.

The flavour of the official role of the army, which corresponds closely with its actual one, is caught in this order of the day issued on the tenth anniversary (1969) of the founding of the Red Militia: 'Regarding it as the greatest honour and happiness to fight, devoting their youth and lives along the one road of the revolution, the one road of victory and glory indicated by the leader, they firmly resolve in their hearts to live up to the solicitude and trust of the Leader, their adoration of him being higher than the sky and deeper than the sea. They will show their love by thoroughly implementing the revolutionary line of our Party on stepping up economic construction and defence upbuilding in parallel, as put forth by the Leader; more solidly building up their combat capacity so that each can match one hundred foes; upholding the military line of the Party; defending the socialist Fatherland like an impregnable fortress; and making firm preparations to the full for bringing about earlier the great revolutionary event of the unification of the Fatherland.' The 'arming of the whole population' and the 'fortification of the entire country' are the two means consistently stressed towards the ultimate goal of reunification. The constitution of the People's Republic declares its capital to be Seoul.

North Korea, though it has security treaties with both Moscow and Peking that were reaffirmed in 1962 in the immediate aftermath of General Park's coup in South Korea, is not committed to assist in the defence of any foreign country. However, a number of North Korean pilots are believed to have flown in action over North Vietnam during the Indochina war during 1966–7. The regime also apparently has a general commitment to the encouragement and support of 'liberation movements' in many parts of the world. It has trained guerrilla fighters from many different countries and has been obliged at various times to withdraw its diplomats from Ghana, Burundi, the Central African Empire and Sri Lanka as a result of protests at its interference in their internal affairs.

The deployment of the North Korean army is cloaked in secrecy. It was reported in 1976 that its two armoured divisions had been moved up close behind the border with the South, which suggests that they had earlier been held back in reserve. The frontiers with Russia and China, particularly the latter, scarcely need defending, and it may be presumed therefore that the bulk of the 22 infantry divisions face the South Koreans across the border. However, the presence of South Korean marines on the Peklyong Do, the group of islands off the Haeju peninsula, and the agreement which allows free civil navigation of the mouth of the Han estuary, both of which lie north of the Demilitarised Zone, may prompt the North to keep sizeable concentrations of troops there.

The most recent operations of the army, which properly fall under the heading 'military engineering', are the construction of the tunnels under the Demilitarised Zone, the first of which was discovered in November, 1974. Eighteen are believed to have been built altogether, but only two have been counter-mined, the one originally found at Gorangpo, near Seoul, and another and much larger one east of Chorwon, the centre point of the North–South frontier. Five kilometres long and of six foot section, it would, when completed, have allowed thousands of troops an hour to enter the rear of the South Koreans' positions. The expense of counter-mining the tunnels is so high that the South Koreans (and the Americans, who have assisted them in their location) do not intend to proceed immediately against the others, but to monitor the surface over the suspected areas for signs of resumed activity.

Because of the effort and expense entailed, Western armies are not attuned to think of tunnelling as a useful military activity. Asian soldiers, however, are traditionally great diggers: the Japanese constructed enormously elaborate fortifications, which often included labyrinthine tunnels, throughout their island and mainland war zones during 1941–5. And what is called 'the waging of tunnel warfare' is actually a tenet of the Maoist doctrine of protracted warfare. Both the French and Americans in Indochina were chronically frustrated in their attempts to consolidate their possession of disputed regions by the existence of veritable mazes of tunnels, extending beneath hundreds of square miles of country, in which the Viet Minh and Viet Cong lived, maintained dumps and hospitals, and moved undetected from one tactical zone to another. The North Korean tunnels, though built on a more impressive scale than has been normal, may be seen as a completely conventional feature of the Asian communist approach to warfare.

The North Korean army has also engaged in active operations of a minor though menacing sort within the last 10 years. The most important formed part of its campaign of military infiltration of, and subversion within, the South in 1966–70. The South Koreans reported 566 infiltrations of the border in 1967 and in 1968 a 31-man unit described as belonging to the North Korean army's 124th Unit was found within 500 yards of the Blue House, the presidential palace in Seoul. Its members were killed in a gun battle and were later announced by the South Koreans to have been charged with the mission of assassinating President Park. There was a major North Korean coastal commando raid near Ulchin later in the same year. In 1970 the campaign tailed off, however, and infiltration stopped altogether between 1972 and 1974 while Kim Il Sung was pursuing negotiations for the peaceful reunification of the country. Relations have since sharply deteriorated once more and it is reported that North Korea's infiltration force now numbers 26,000. But the murder of two American officers in the Demilitarised Zone in August, 1976, horrifying though its manner, is probably best seen as an aberration of North Korean policy.

ORGANISATION

Arms of Service

These are those normal in a Soviet-style army: infantry, armoured troops, engineers, signals, ordnance and rear services. The latter include transportation and medical services as well as administration and construction.

Operational

The operational structure is unusual in that the armed forces form five branches under a single general staff. The air force and navy apart, the other three are the army, the mechanised unit and the artillery unit. It is perhaps simplest to think of the army being organised into three: the infantry divisions, the tank divisions and a strategic artillery force.

Infantry divisions, of which there are twenty-two (some sources estimate twenty), are organised on old-style Soviet lines. They number about 9000 men each and comprise three infantry regiments of three battalions each, three artillery battalions of 18 tubes each (respectively 76.2 mm field howitzers, 122 mm medium guns and 120 mm mortars), an anti-tank battalion of 18 57 mm guns, an air-defence battalion with 24 37 mm and four 14.5 mm guns, an assault-gun battalion with 18 (?) 100 mm SPGs, an engineer battalion, a signals battalion, a reconnaissance company and a chemical warfare company,

World Armies

with some small auxiliary units. The infantry regiments comprise, besides the infantry battalion, an air-defence battery with 14.5 mm guns, a mortar company with six 120 mm mortars, an artillery company with six 76.2 mm howitzers, an engineer company, a signals company and a chemical warfare platoon. The infantry battalion, besides its three rifle companies, has a mortar company with six 82 mm mortars, an anti-tank company with six 82 mm recoilless rifles, and a heavy-machine-gun company.

The organisation of the two tank divisions and five independent tank regiments probably follows that of the Soviet equivalents, and it is probable that all the 950 APCs in the army are with these formations.

The 'artillery unit', best thought of as the artillery reserve of the army under direct control of the general staff, comprises three air-defence brigades, a missile regiment, two howitzer regiments, two mortar regiments and two 203 mm gun battalions. But it may be that it has been expanded recently to accommodate the new Frog missiles (there are reports of two new missile regiments).

The infantry divisions of the army are grouped under five army (sometimes called Army Group) headquarters, numbered 1, 2, 3, 5 and 7. In 1971 they controlled four, five, four, four and three divisions, respectively, and were themselves directly commanded by army headquarters under the general staff.

The Security Corps (*Choson Kyongbidae*) (Border Guards) is controlled by the Ministry of Public Security and is organised into regiments and companies. With other guards, these paramilitary forces number 40,000.

The Workers' and Peasants' Red Militia (*Nodong Chokwidae*), in which service is compulsory for all able-bodied males between the ages of eighteen and forty-five and all able-bodied females between the ages of eighteen and thirty-five, and which numbers about 2,000,000, is organised on a local basis. North Korea is divided into 10 provinces, subdivided into 175 prefectures (*kun*), themselves into villages (*ri*). The party organisation at *kun* level provides the regimental command, that at *ri* level the battalion command, while the personnel of the companies, platoons and sections is provided by the inhabitants or workers at hamlets and factories where they are organised. Battalions and regiments only take shape at times of major training. Weapons are provided by the provincial Public Security department, but are stored in factory or village premises. The object of the Red Militia, besides that of militarising the population, is to ensure the unyielding defence of each foot of the homeland. It must, however, also be prepared to wage guerrilla warfare if its positions are by-passed by an invader.

RECRUITMENT, TRAINING AND RESERVES

Until 1956 the army was recruited by voluntary enlistment. Conscription was then introduced, and is now universal for all able-bodied males from their twentieth year (the age of enlistment was raised from eighteen to twenty in 1965). The term of service is the longest in the world, 5 or 6 years being usual. The conditions of service are also abnormally harsh. Home leave, of which a short allowance was formerly granted to exemplary private soldiers, was abolished in 1969, while recreational time during the service day is closely supervised and free time almost non-existent. Pay is tiny. The only compensations for military service are abundant food and an honoured public status. To be deemed ineligible for service, on any but medical grounds, 'is to be saddled with a life-long social and political stigma'. 'Ineligibility' derives from a 'bad family background', usually meaning being the son of a capitalist or landowner under the former regime.

Recruits are trained in their units. As in all communist armies, a great deal of the training time is devoted to political education, apparently one quarter in the Korean army. Recruits, however, come to the army with some military knowledge, all having done at least 2 years in the Red Militia, which requires its members to perform at least 2 hours military training a week.

Officers, who may be on either regular or short-service enlistment, are selected from the Socialist Working Youth League, the young communist organisation, or from high schools or colleges, in all of which 200 hours of military training is carried on each year, and a reserve officer's examination held. (Students who fail their military courses are not allowed to proceed to the next year of military work). There are three main officer training schools: the 1st Combined Officers Training School (which offers a 1 year course for short service officers), the 1st Combined Military Academy (which trains regular officers for 2-3 years) and the Army War College (which offers a 2-3 year staff course to captains, majors and lieutenant-colonels, and a 1 year course for more senior officers). Veterinary and medical officer cadets are trained at their own academies for 3 years and 5 years, respectively. The Tank and Joint Artillery Schools give specialist training to officers, cadets and NCOs of those branches. The quality of officer training in the People's Army is judged to be high.

Reserves

Because the term of conscript service is so long in the People's Army, the size of the first line reserve must be consonantly smaller than for other armies of comparable size. If the annual contingent numbers 60,000 — perhaps a low estimate — the first-line reserve might be judged to number 300,000. It seems moveover unlikely that the State has sufficient equipment available to form large reserve units, and that the first line reserve is earmarked to provide replacements and mobilisation details. The true 'reserve' of the regular army is probably the Red Militia, which has the defensive task of protecting the homeland while the regular army performs the offensive mission on which its training lays such stress.

EQUIPMENT AND ARMS INDUSTRY

North Korea counts among the most industrialised countries of East Asia: industrial income represented 65% of national income in 1969 and the officially reported production of coal and crude steel in 1970 was 27,000,000 and 2,000,000 tons, respectively. Over 40% of the work force was employed in industry, which now achieves machine-tool building. The bias of production is still, however, towards heavy industry and raw materials on the one hand, the traditional direction given it by the Japanese, and towards electronic and light-engineering goods on the other. Moreover, the public statistics bureau ceased to issue figures after 1969, when the current 7 year plan had begun to fall behind schedule, and it is now difficult to form a clear picture of the achievements of North Korean industry. Military investment is very high, but is believed to be devoted disproportionately to infrastructure — fortifications, roads and tunnels — rather than to the production of equipment, most of which still comes from China and Russia. It is probable that North Korea does not produce anything more complicated than small arms, some light weapons and light ammunition. It would be surprising if its defence industry was more developed than South Korea's, which is just approaching the production of medium artillery and the assembly of armoured vehicles.

Equipment

Equipment is very varied: much Russian, some Chinese, some captured American from the Korean war, some home produced, and of very mixed age. The Red Militia is equipped with obsolete or obsolescent models, intermixed with a little new material held by the better units. The army uses weapons of the generation before current Soviet models, except for its small arms.

Rifle: 7.62mm AK-47 (Russia; Korean made (?))

Machine-gun: 7.62mm PK/PKS (Russia; Korean made (?))

Mortar: 82mm M-37 (Russia; Korean made (?)), 120mm M-38 (Russia) and 160mm M-53 (Russia); these equip the mortar company of the infantry regiments and a battalion of the divisional artillery in the artillery reserve (9000 in service altogether)

Anti-armour weapons: RPG 2 and 7 rocket launchers (Russia; Korean made), 75 mm M-20 recoilless rifle (USA; Chinese or Korean made), 82mm B-10 recoilless rifle (Russia; Korean made) and 57mm M-43 gun (Russia); these equip the divisional anti-tank battalion

Air-defence weapons: 12.7 mm machine-gun (Russia; Korean made); 14.5 mm cannon (Russia); 37mm M-38 gun, 57 mm M-50 gun, 57 mm ZSU gun, 85 mm M-44 gun and 100mm M-49 gun (all Russian; a total of about 5000 guns in service); SA-2 missile (Russia; a total of 250 in service with the air force)

Artillery: 76.2 mm howitzer and 122 mm M-37 gun (both Russian; in the divisional artillery); 152 mm M-37 howitzer and 203 mm M-55 gun (both Russian; in the artillery reserve); Frog 7 missile (at least 24 in service). There are about 3000 guns in service

Armour: BTR 40 armoured car, BTR 60 APC, BTR 152 APC and M-67 APC (all Russian; a total of about 750 in service, probably in the armoured divisions); SU 100 assault gun (Russia; equips the divisional assault gun battalion); PT-76 light tank (Russia; 150 in service) and T-62 light tank (China; 50 in service)*; T-34 medium tank (Russia; 350 in service), T-54/55 medium tanks (Russia) and T-59 medium tank (China) of which there are a total of 1400 in service

Aircraft: these are operated by the air force but, since that forms part of the People's Army, its units probably co-operate closely with the ground forces. It has about 50 Russian helicopters (Mi-4, Mi-8), 225 transports of several types, about 300 ground-attack fighters (MiG-15/17), 230 fighters (MiG-19 and MiG-21) and 80 light bombers.

RANK, DRESS AND DISTINCTIONS

The appearance and rank structure of the People's Army is closely modelled on the Soviet. There is a heavy emphasis on the deference due to senior rank, and there has never been, as in the Chinese People's Army, any attempt to democratise the army. The differential between the pay of junior soldiers and senior officers is very great; generals earn over two hundred and fifty times as much as privates.

Ranks

General	Four stars on shoulder strap
Colonel-general	Three stars on shoulder strap
Lieutenant-general	Two stars on shoulder strap
Major-general	One star on shoulder strap

* Not to be confused with the Russian T-62 medium tank.

World Armies

Colonel	Three stars and two stripes on shoulder strap
Lieutenant-colonel	Two stars and two stripes on shoulder strap
Major	One star and two stripes on shoulder strap
Captain	Four stars and one stripe on shoulder strap
Senior lieutenant	Three stars and one stripe on shoulder strap
Lieutenant	Two stars and one stripe on shoulder strap
Junior lieutenant	One star and one stripe on shoulder strap

As in the Soviet army, there are a number of decorations, most of which carry material privileges. In descending order of importance, the principal ones are: the Gold Medal, with title of Labour Hero; the Order of the National Flag, 1st, 2nd and 3rd classes; and the Freedom and Independence Medal, 1st and 2nd classes. The latter is awarded to officers for bravery.

The uniform of the army is dark khaki, cut on Soviet lines and worn with a distinctive képi-style cap. Some units of the Red Militia wear army uniform, without insignia, as does the Public Security Force.

CURRENT DEVELOPMENTS

The People's Army is a vital institution of the North Korean State, since it is the only body which might challenge the authority of Kim Il Sung and his Korean Worker's Party and would be the principal instrument of his highly aggressive foreign policy should he ever decide to move from the field of words and gestures to full-scale action.

The President is keenly aware of the theoretical danger which a military challenge offers to his personal rule. In 1968 he abruptly removed the three leading military men, charging them with failure to implement the party's basic military policy: fortifying the whole country, militarising the whole people and training each regular soldier to fill the rank next senior to his. It may be, however, that the root cause of the purge was a suspicion by Kim that the three threatened his personal position. More recently he has moved against O Chin-U, a comrade of his partisan days and lately Chief of Staff, apparently fearing that the general saw himself as his successor. Nevertheless, while Kim Il Sung retains his health and powers, a military intervention is extremely unlikely. The army is under the closest political scrutiny, while at the same time Kim Il Sung uses military men as some of his closest and most publicly honoured intimates.

In the immediate future, therefore, it is to the military, rather than the political, role of the army that observers should look. If military consumption has seriously distorted the development of the North Korean economy since the inception of the Seven Year Plan in 1961, it is because the army was charged almost immediately on its inception with a redoubling of preparations for 'reunification' with the South. Kim Il Sung is believed to regret the 'lost opportunity' of the student revolt of 1960 against the government of Syngman Rhee, and to have decided to let no new crisis in the South find him unready to take advantage of it. He also believes that America will at some time in the future withdraw her ground forces from the peninsula — as the Carter administration has given notice of its intention to do — and that their departure may provide him with the opportunity for military action which at present he does not dare risk. On the other hand, he must also be aware that the South, with twice the population of the North and an industrial base both larger and faster growing than his own, will soon be able to defend itself without American assistance. If he is to achieve his cherished and publicly proclaimed goal of reunification, he may be forced to provoke a conflict with the South in a narrow time gap between the departure of the Americans and the maturation of South Korea's military self-sufficiency. It is vitally important to his policy, therefore, that the combat edge of the army be constantly sharpened and its readiness for action instantaneous. He must be very aware, however, that his military suppliers (Russia and China) are neither of them keen on a new Korean war and stringently limit the amount and quality of the equipment they provide. His strategy may therefore be to accept reverses in a conventional campaign between the regular armies of North and South and to hope that through the 'militarisation of the whole population' and 'fortification of the whole country' he could emerge victorious from a protracted war, much of it fought on Northern rather than Southern territory. It is certainly significant that much of the regular army's efforts are devoted to tunnel building and that the interior of North Korea is mouseholed with tunnels over much of its area. Fighting defensively and to a strategy of protracted war, the People's Army and the Red Militia would make a formidable adversary.

The International Institute of Strategic Studies' most recent estimate suggests the formation of three new motorised infantry divisions, three reconnaissance brigades, 12 independent infantry brigades, five airborne battalions and a number of artillery and air-defence regiments.

JOHN KEEGAN

SOUTH KOREA

HISTORY AND INTRODUCTION

The Republic of Korea, with a population of 34,000,000 and a land area of 34,000 square miles, maintains an army of 520,000, the sixth largest in the world after those of China, Russia, America, India and Vietnam. The government of the Republic has been in the hands of the army high command since a *coup d'état* in 1961. A third of the budget is devoted to defence and the population is constantly practised in civil defence measures. By these tests, South Korea must be counted one of the most militarised countries in the world. The reasons for this remarkable state of affairs derive from its experience in the Korean War of 1950–53 and the persisting state of ceasefire, rather than true peace, to which that conflict led.

Korea, annexed by Japan in 1910 after a thousand years of dependency from China, was occupied, through previous agreement between the Allies, by Russian and American forces in 1945. The Russians entered the north of the country, the Americans the south, and a demarcation line between their zones was fixed along the 38th Parallel. Both were committed to the reunification of the country under its own government but failed to agree on how that might be brought about and, having each established a regime friendly to themselves in their respective zones, withdrew their troops, the Russians in 1948, the Americans in 1949. Relations between the two successor regimes were extremely hostile from the outset and in June, 1950, after much cross-border raiding by both sides, the North Korean army invaded the south. The Americans, thanks to the temporary withdrawal of the Russians from the Security Council of the United Nations, were able to secure a condemnation of the act as one of aggression and to invoke the provisions of the United Nations Charter for military sanctions against it. American troops from Japan at once left for the front, and were quickly joined by others from the continental United States, while contingents from other United Nations countries hurried to join them, first a British brigade, and eventually units from the Australian, Belgian, Canadian, Colombian, Ethiopian, French, Greek, Luxembourg, Dutch, New Zealand, Philippines, Thai, Turkish and South African armed forces. Fifty-three nations altogether endorsed the United Nations' decision to take action.

But it was South Korea, not then a member of the United Nations, which provided the largest fighting force, larger than the American and eventually amounting to more than half the United Nations' ground combat command. In June, 1950 it fielded eight weak divisions. In the first months of fighting, when the North Koreans drove them and the Americans back into the tiny Pusan perimeter area in the south of the country, most were destroyed. When the Americans reversed the tide of war in September, by General MacArthur's brilliantly timed amphibious assault at Inchon, it was his divisions which led the great advance to the border with China. But when the Chinese, in early 1951, had pushed the United Nations' troops back to the 38th Parallel, where the fighting thereafter settled into stalemate, the South Koreans began to rebuild their army until at the ceasefire it numbered 16 divisions, manning three-quarters of the front. The Americans, moreover, conceded that it was in safe hands. The South Korean army had proved itself to be a very fierce fighting force indeed.

Its progress had been remarkable. In 1945, though the Koreans had acquired a reputation as tough, even brutal, soldiers in the Japanese army, and some Koreans had become officers in it, there existed no formed fighting force in the country. The Americans, in their zone, recognised the need for an armed force to police a disorderly countryside and created the Korean Constabulary. In 1948, shortly before they left the country, they transformed it into the Republic of Korean Army and on the eve of the outbreak of the war it numbered 94,000. But it had little artillery or armour while the North Koreans had 2000 guns and 240 Russian tanks. Though the South's population outnumbered the North's by 20 million to eight million, its army was therefore no match for the other and its initial defeat was wholly understandable. Parts of it having survived, however, American training and re-equipment and the mere experience of war quickly sufficed, through the medium of universal conscription, to turn it into a large and very capable army.

Its very size and efficiency were to yield predictable peace-time results. It was to become the most modern institution in the country and, while the North refused to negotiate a settled peace, its most important, swiftly dominating post-war society, 'By contrast, most other organisations in the nation were embryonic, parasitic or anaemic. In the name of the defence of freedom, South Korea had become an immense garrison.'

The 'freedom' for which the war had been fought was that of freedom from aggression rather than liberty of the subject, for President Rhee's pre-war regime had been distinctly autocratic in character. Its restoration in an even more autocratic form after the war, was not accepted, however, with the same previous passivity at home, and widespread student rioting at the suspect results of the National Assembly elections of 1960, which the army did nothing to suppress and the United States' representatives appeared to approve of, led to his downfall. A year later, after a period of ineffective civilian government, the army itself intervened. The coup of May 16th, 1961 was planned and led by a group of middle-ranking officers, identified as the 'eighth graduating class' of the Korean Military Academy (i.e. a group who had been cadets together in 1949), supported by some of the younger generals. Foremost among them was Chung Hee Park, then a major-general commanding the logistics base at Pusan. The coup came as a complete surprise to the rest of the army,

World Armies

including the First Army immediately north of the capital Seoul, and to the American commander of the United Nations Command and the United States' ambassador. The latter proposed to the incumbent President, General Yun, that the former be used to put down the coup, on the grounds that it would be followed by a second and a third, which would fatally weaken the political stability of the country. However, he refused, believing that an even worse outcome would be a division of the army into two warring camps. The coup was therefore allowed to succeed, its leaders taking over the government and constituting themselves a Supreme Council for National Reconstruction, in place of the cabinet. Of its 30 members, three were from the Marine Corps, one each from the air force and the navy, the rest all from the army. About a third were of lieutenant-colonel or colonel rank.

The Council declared its object to be 'the reconstruction of the Republic of Korea as a genuine democratic republic' and at once began to purge political life of leading figures of the previous regime through a Political Activities Purification Law. It also announced that civilian rule would be restored by elections in May, 1963. As the date for elections approached, General Park, a peasant's son who had originally been commissioned into the Japanese army through the Imperial Military Academy at Tokyo, wavered in his promise 'to restore the government to honest and conscientious civilians and return to . . . proper military duties'. Having disqualified himself for the presidential election of 1963, he yielded to a soldier's demonstration (which lacked the appearance of spontaneity) and in March announced the prolongation of military rule for another 4 years. Appraised of American hostility to this change of plan, made concrete by refusal of a request for an extra \$25,000,000 in aid, Park cancelled the prolongation but took his discharge from the army and, as a civilian, won the presidential election by a comfortable majority.

He has remained in power ever since, though elections are held regularly and an opposition party records large votes at the polls. Despite the appearance of democratic practice, the character of the regime is essentially authoritarian, with the army and the police providing its chief support; the Constitution of 1972 was suspended for several months as late as 1974. However, President Park from the outset made clear his belief that in the poorer Asian countries 'the people are more frightened of poverty and hunger than totalitarianism', and that the substance of democracy must wait upon the creation of a 'welfare state'. He has continued to affirm his intention of restoring civilian rule and he has also achieved extraordinary success in his economic programme. The GNP has increased by an average of 12% in every year of his Presidency, and a great deal of the growth has been consumed by the population, whose living standards have improved out of recognition in the period. Foreign economists predict that the country may reach a Japanese economic level within a generation. It is understandable therefore that the harsh censorship laws are sparingly invoked, and that the burden of defence costs and military service are borne uncomplainingly by the majority of the people (though not by many students and opposition politicians). While the population enjoys a rising standard of living, and as long as the North Koreans refuse to relax their aggressive posture, the military character of the government looks unlikely to change.

STRENGTH AND BUDGET

Population: 35,200,000

Army: 560,000

Navy: 25,000 (plus 20,000 marines); 16 warships, many smaller craft

Air force: 30,000; 335 combat aircraft

Reserves and paramilitary forces: 1,000,000 reserves; 750,000 militia

GNP (1975 estimate): \$18,400,000,000

Defence expenditure (1977): \$1,800,000,000

The Korean armed forces were built almost wholly with American aid payments, and maintained from the same source during, and for some years after, the war. As compensation for its withdrawal of one of its two divisions in 1971, the USA agreed to supply \$1,500,000,000 in aid over the period 1971-5. But growth of the Korean economy had made the defence establishment increasingly self-supporting, and in 1976 the country embarked on a 5 year Armed Forces Improvement Plan, the aim of which is to make it able to repulse any attack from the North without outside help, except for American logistical support. The programme is expected to cost between \$4,500,000,000 and \$5,000,000,000, about two-thirds of which will be raised by a defence tax introduced in 1976.

COMMAND AND CONSTITUTIONAL STATUS

There have been three major constitutional revisions since the military coup of 1961, those of 1963 and 1972 notably increasing the executive power of the President and curtailing civil liberties. The President is Commander-in-Chief, and the armed forces are effectively only subject to his authority and jurisdiction. However, pursuant to the Taejon Agreement of 1950 between the then South Korean government and the United Nations Command, the operational control of the Korean armed forces is in the hands of the United Nations Commander, who is also always the Commander of the United States Forces in Korea. At the time of the 1961 coup, the United States commander complained that the movement of troops ordered by the conspirators was in breach of the Taejon agreement.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

In the late twentieth century, the military role of armies on the border between the communist and non-communist world has been diminished by the nuclear factor, while the political role of armies everywhere in the developing world has greatly increased. The political role of the army of South Korea, still a developing country, is self-evident but its military role remains, nevertheless, predominating. This is the consequence of the unsettled situation on the ceasefire line with North Korea, of the very large forces maintained by North Korea across it and of the evidence of the aggressive attitude maintained by the North Korean government. The army's role has therefore been defined officially as 'to ensure the success and realisation in peace of the Revitalising Reforms of the Nation (the programme of the 1961 coup leaders), to be the driving force for the advance of the Korean people and the restraining force against the outbreak of another war and disorder . . . In order to restrain and cope with any kind of enemy surprise invasion, *and also to get final victory in any case* (italics supplied), immense combat strength should always be maintained in accordance with the "strength against strength" principle.' The army is thus maintained at a very high state of combat readiness, can manoeuvre in a strength of two corps (i.e. at the level of a major NATO or Warsaw Pact exercise) and is practised not only in conventional operations but also in mountain warfare and airborne, amphibious and snowfield operations 'applicable to the geographic and climatic characteristics of the Korean peninsula'.

The army also plays an important social role, both through training of the conscript classes, and in the organisation of the Homeland Reserve Forces, a militia largely based on the villages which benefit from the *Saemul* (New Village Movement). This is a programme of rural improvement through government investment and self-help, which touches to some degree every one of South Korea's 35,000 villages.

Commitment

South Korea is the beneficiary of the Mutual Defense Agreement of 1953 with the USA, which binds the USA to provide the South Korean armed forces with equipment and training. It is also the beneficiary of a 16-nation (those which committed combat troops to the war) agreement of July, 1953 which pledges those nations again to unite and resist renewed aggression across the ceasefire line. The ceasefire line is supervised by the United Nations Command, of which the United States Commander in South Korea is also Commander, and by the United Nations Commission for the Unification and Rehabilitation of Korea, set up in 1950, though its duties are limited to observation and to reporting to the General Assembly. A number of the powers which fought under the United Nations Command (e.g. Britain) also maintain token forces which do duty at the ceasefire centre at Panmunjon in the Demilitarised Zone.

South Korea does not itself reciprocate these military commitments, since they are given to deter a specific threat, namely the violation of the country's territorial integrity. In token of its special relationship with the USA, however, it maintained two divisions (the Tiger and White Horse) and a marine brigade in South Vietnam during the American campaign there. In order to maximise the army's combat experience, about 300,000 Korean soldiers were rotated through those forces.

Deployment

The major combat formations of the army are deployed directly on the 151 mile ceasefire line. The western sector, where the line approaches to within 25 miles of Seoul, the capital and home of 7,000,000 inhabitants, is garrisoned by the Third Army of 10 divisions; the eastern sector is garrisoned by the First Army of eight divisions. The interior of the country, divided into four district commands, is garrisoned by the Second Army, whose units are chiefly training units. The islands and estuary of the Han river, west of Seoul, and the five islands collectively known as the Peklyong Do, close to the North Korean coast, are garrisoned by the Marine Corps, but also come under the United Nations Command.

Recent Operations

Since the war of 1950–53, and apart from the operations of the Tiger and White Horse Divisions in Vietnam, the South Korean army has not been engaged in operations. It has, however, had to cope with numerous North Korean transgressions of its borders, both by land and sea, notably in the period 1966–9. Since 1974 its engineers have also been engaged in detecting and destroying a series of major tunnels driving under the ceasefire line by the North Koreans, intended apparently as a means of moving an invading force of many thousands from North to South in a few hours.

ORGANISATION

Arms of Service

The internal organisation of the army is modelled on that of the United States army. Its main arms of service are infantry,

World Armies

artillery, armour, engineers, signal corps, ordnance corps and quartermaster corps. The marine corps is a separate entity under the administrative control of the navy.

Operational

The army is organised operationally into the First, Second and Third Armies. The Second is a training and administrative organisation, active in the interior of the country which is divided into four district commands. Major establishments which come under the Second Army are the Military Academy, the Army College, the Joint Services College, the War College, the recruit training centres, the service and technical schools, the Combat Arms Command, the Logistic Command and the rear divisions. The Second Army is responsible for the security of the interior and the coast. The First and Third Armies provide the garrison of the ceasefire line and control the army's main fighting strength. Their 18 divisions are organised into five corps. The divisions are of the infantry type, apparently organised on traditional 'triangular' lines of three infantry regiments of three battalions, with three field- and one medium-artillery battalions. The armour is separately organised in two armoured brigades, in which most of the APCs are apparently deployed, and seven independent tank battalions. There are also two independent infantry brigades, five airborne brigades (although there is aircraft lift for less than one at a time), 30 independent artillery battalions, a missile battalion with Honest John missiles and two Nike Hercules air-defence battalions. The Marine Corps is organised in one division. A recent addition to the army's strength is the American TOW anti-tank missile, with which one battery in each division is now equipped.

RECRUITMENT, TRAINING AND RESERVES

Recruitment is by universal conscription. The term of service in the army and marines is 30 months.

Recruit training is carried out initially in the recruit training centres; specialist training is given at the arms schools, of which the Infantry, Artillery and Signals Schools are located at Kwangju in the south-west.

Regular officers are trained at the Korean Military Academy (run on West Point lines) and subsequently at the Staff College at Taegu in the south-east. Conscript and short-service officers are trained at the Third Military Academy.

Trained reserves now number 1,100,000 for the army and marines. The reserve mobilisation scheme is not made public, but it is presumed that on mobilisation some reservists would go to form new units in the Second Army and others would be used as reinforcements and replacements in the First and Third. In theory the reserves would treble the army's fighting strength, but only the younger reservists would be suitable for combat units, while equipment is lacking to fit out any sizable number of reserve formations.

The Homeland Reserve Forces, 750,000 strong, are village home guards, who could not be used outside their localities, but would be useful to check guerrilla activity, which the North is expected to set in motion by the infiltration of small units by land, sea and air. Its guerrilla campaign behind the lines during the Korean war required a major diversion of United Nations effort to counter it.

EQUIPMENT AND ARMS INDUSTRY

The South Korean armed forces were built up with American equipment, and still exclusively use it. Rapid industrialisation in the last 10 years has allowed the country, however, to manufacture some items under licence and to assemble and refurbish others. Rifles and machine-guns are manufactured (Colt has recently opened a factory at Pusan), together with their ammunition, and some artillery, including the 155 mm howitzer, though the latter is not yet in mass production. At the beginning of 1976 the government requested permission of the Americans to begin manufacturing the M-60 tank, but are still confined to refurbishing their M-47 and M-48 models, the guns of which they are anxious to change from the 90 mm to the 105 mm. Observers expect Korean industry soon to be capable of assembling aircraft and helicopters, though not perhaps the modern models which the air force needs to replace its ageing jet fighters.

Rifle: 5.56 mm M-16 (USA; Korean made)

Machine-gun: 7.62 mm M-60 GPMG (USA; Korean made)

Mortar: 60 mm M-2 (USA; Korean made), 81 mm M-1 (USA; Korean made) and 4.2 in M-30 (USA)

Anti-armour weapons: 57 mm M-18 recoilless rifle (USA), 75 mm M-20 recoilless rifle (USA), 106 mm M-40 recoilless rifle (USA) and TOW guided missile (USA)

Air-defence weapons: 40 mm L/60 and L/70 guns (Swedish Bofors; made in USA), Hawk missile (USA; 80 in service) and Nike Hercules missile (USA; 40 in service)

Artillery: 105 mm M-101 howitzer (USA), 155 mm M-114 howitzer (USA; some Korean made), 155 mm M-59 gun (USA), 175 mm M-107 SP gun (USA), 203 mm M-115 howitzer (USA) and Honest John missile (2000 artillery pieces in service)

Armour: M-113 APCs (USA; 500 in service), and M-47 and M-48 medium tanks (USA; 840 in service); some M-60 tanks are also in service

Aircraft: the army is dependent for air support on the air force, but the latter is effectively its air arm. It has 33 Phantom and 270 F-5 strike aircraft, but needs to replace its 50 Sabre interceptors with a more modern model. It also has 44 transports and 13 helicopters, with 80 more of the latter on order.

RANK, DRESS AND DISTINCTIONS

Ranks and badges of rank are indetical with those of the American army, and uniforms are very similar; the cadets of the Military Academy wear West Point-style grey and white on ceremonial occasions.

CURRENT DEVELOPMENTS

By far the most important development in Korean affairs in recent years was the decision of the new Carter administration in February, 1977 to withdraw the Second Infantry Division from Korea. In 1954 the strength of the American army in Korea was reduced to two divisions, forming with support units the Eighth Army. One of these divisions was subsequently withdrawn in 1971, to the loudly voiced alarm of the South Korean government. The withdrawal of the second will leave only one air-defence brigade in the country and one wing of the Fifth Air Force, based on Osan and Kunsan on the west coast. However, air, naval and marine forces in the Pacific can be deployed towards, or into, South Korea at short notice if necessary, as they were in August, 1976 when the killing of two American soldiers by North Koreans in the Demilitarised Zone of the ceasefire line brought a squadron of F-111 fighters from the continental United States, Phantoms and RF 4s from Okinawa and B52 strategic bombers from Guam, within a week, as well as a naval surface squadron from the Seventh Fleet.

Air support is necessary to the South Koreans, since it is the one respect in which its forces are inferior to the North's. But even more important is the continuing presence of the United Nations Command, since its Commander is also the United States Forces Commander in the country. Because he exercises operational control over the South Korean armed forces, under the 1950 Taejon agreement, the United States automatically becomes involved in the defence of the country if the North invades. The phased withdrawal of all American ground troops from the country over a period of time, which the Carter administration has also adumbrated, will leave him without a convincing role, and perhaps lead eventually to the dismantling of the United Command. It is a prospect which deeply perturbs the South Korean government.

Its capacity for self-defence is nevertheless impressive. The ceasefire line, which runs through the 2½ mile-wide Demilitarised Zone, is backed by a belt of fixed defences running back for 30 miles and manned by virtually the whole of the South Korean army. Its plan is to hold the line inflexibly, and destroy any North Korean invading force on it. In 1975 the American commander outlined a strategy for such a campaign, which would be concluded successfully in 9 days. In the first five, 1000 sorties a day would be flown by American strategic and tactical aircraft over the battle zone, to inflict crushing losses on the attackers, heightened by continuous artillery bombardment, and in the remaining 4 days South Korean infantry would restore the front. South Korean superiority in tanks and anti-tank weapons would ensure the failure of armoured penetrations.

American ground disengagement robs this plan of some conviction. So too does the discovery, first made in November, 1974 of the existence of tunnels dug under the Demilitarised Zone from North to South, of dimensions which would allow the passage of thousands of troops an hour. About 18 tunnels are believed to exist. The South is exposed in another direction — that of the islands of the Puklyong Do group, which are closer to North Korean territory than to South Korea. They are heavily garrisoned and the South is determined to fight for them, if attacked, but would have difficulty in defending them.

In view of the diminished security of the South, and the continuing aggressive attitude of the North, Japan (South Korea's most important trading partner) has considered moving units of its army, traditionally concentrated in the north of their islands nearest Russia, to the south where they would be closer to South Korea. Japan is, however, unwilling at present to increase its defence spending to a level where it could act as an external guarantor of Korean territorial integrity. Moreover, its constitution forbids it to deploy its forces outside the national territory, while public opinion would find it difficult to support the provision of military assistance to a regime so openly authoritarian as President Park's and one in the circumstances likely to grow more, not less, so. South Korea remains, therefore, almost alone in the world, a country in which the army's ability to defend its frontiers against large-scale conventional attack is of prime importance in considering its future. No-one is more aware of this than the South Koreans themselves, who recognise that their new prosperity depends upon convincing foreign investors and traders of their ability to defend themselves.

JOHN KEEGAN

KUWAIT

HISTORY AND INTRODUCTION

Kuwait began as one of a number of small fishing and trading settlements along the north coast of the Arabian peninsula, with a population related by clan and tribal links to those of Nejd in Saudi Arabia and the adjacent areas of desert Iraq. It eventually fell under Ottoman suzerainty, but retained its own autonomy under the government of the Sheikh, invariably selected from the leading Sabah clan. It passed painlessly under British protection in 1889, at a time when British influence was displacing Ottoman all along the southern shores of the upper Gulf. A treaty between Britain and Turkey in which the latter relinquished its claim to rule Kuwait from the neighbouring Basra Vilayet of Iraq was negotiated in 1913, but the outbreak of World War I prevented ratification and left the issue unresolved.

The subsequent discovery of oil in Kuwait made it the first of the small Gulf States to experience the benefits and problems of enormous wealth suddenly bestowed on a poor and backward community. The money allowed Kuwait to create the Middle East's first comprehensive welfare State by the 1950s, at a time when its neighbours were still just beginning their development, and the longer times it has had to reach its present level has allowed the country to avoid some of the more severe physical and psychological effects of ultra-rapid modernisation. It is today unquestionably the most mature and evenly developed of the Gulf States, and pre-eminent amongst them in commerce and finance.

Like all the small Arab States on the Gulf with the exception of oil-poor and relatively populous Oman, Kuwait has a majority of foreigners in its population: some 700,000 of the 1,160,000 residents are not citizens, and a substantial minority of these are not even Arabs. The proportion of non-citizens still shows a gradually rising trend, despite official concern about it, especially since a very large proportion of the foreign Arabs (perhaps half) are Palestinians. In fact, however, the ratio of citizens to foreigners is relatively high for the region, reflecting the longer period of prosperity which has produced an educated generation of native Kuwaitis. Moreover, the Egyptians and Palestinians who man much of the civil service and social services could not be dispensed with in any case, and have no history of meddling in local politics, which is purely a Kuwaiti matter. The estimated 130,000 Indians and Pakistanis in Kuwait, originally imported as temporary labour for specific projects for the most part, show every sign of becoming permanent as the sole source of semi-skilled labour for general construction and Kuwait's new industries, in which almost no Kuwaiti citizens are willing to work; these Asians have no political rights and dramatically lower living standards, and could become a serious source of unrest in the future.

Kuwait received its independence from Britain in 1961, and was immediately plunged into crisis when the regime in neighbouring Iraq resurrected the old Ottoman claim to Kuwait on its own behalf. The immediate crisis was overcome by emergency reinforcements of British troops, later replaced by an Arab League force, which dissuaded Baghdad from pursuing its claim by military means, but the long-term consequence was a rapid expansion of the small internal security-oriented army that had been trained by the British, into a comparatively large force equipped and trained for conventional battle. It is a process still underway today, and can be expected to continue for some time to come.

Internal security is not seen as a serious problem for the army, since the great majority of the country is empty desert, the population being concentrated in Kuwait City and a few much smaller towns. The ruling dynasty remains the supreme repository of political authority as well as the mainstay of the officer corps, especially in the more senior ranks. Many of the officers were trained at Sandhurst, and Britain continued to be the main provider of both training and military equipment until quite recently.

External security, on the other hand, is a serious problem because of border disputes, but even more because of Kuwait's highly exposed geographical situation. It is a very small and unpopulous country sandwiched between the three most powerful States of the region: Iraq, Saudi Arabia and Iran (which lies across the Gulf with only a few tens of miles of Iraqi coastline intervening). All three of these countries are heavily armed, and each is intensely suspicious, if not openly hostile, towards the other two. Moreover, the 'top' of the Gulf where Kuwait lies is where the most sensitive regions of each of its neighbours are located: Saudi Arabia's main oilfields lying just south along the coast, Iraq's narrow outlet to the sea through the Shatt al-Arab and Iran's main oil-producing region. It lends a certain urgency to Kuwait's attempts to stay on at least moderately good terms with all three, and certainly explains why the country has always been the most enthusiastic supporter of that evergreen mirage — a Gulf mutual security pact.

Kuwait's specific border problems with Iraq are far more acute than with Saudi Arabia, although Baghdad abandoned its categorical claim to all of Kuwait in 1965. The longest standing dispute is over the Iraqi occupation of Bubiyan and Warba islands, traditionally Kuwaiti islands which lie across the exit from the Shatt al-Arab into the Gulf. This river, formed by the union of the Tigris and Euphrates in their lower courses, is Iraq's only means of maritime access to the Gulf and Indian Ocean, as nowhere along its 50km coastline is suitable for a port on the Gulf proper.

The Shatt al-Arab has growing strategic significance for Iraq since the pipelines taking oil exports westwards to the Mediterranean across Syria and Turkey are regarded as politically insecure (and indeed the Syrian line has been unusable

since the beginning of the Lebanese civil war). The completion of a pipeline from the northern oilfields to the port of Fao on the Shatt in 1975 has therefore made this route as important for Iraq's oil exports as it already is for general imports, and the port of Umm Qasr opposite the island of Warba is the Iraqi navy's only base and the sole regular port of call in the Gulf for the Soviet navy. In these circumstances Iraq has made it absolutely clear that it will not evacuate Warba and Bubiyan islands, which could be used as bases from which to blockade the Shatt.

Kuwait closed its border with Iraq in 1972, and in the following year Iraqi forces occupied the Kuwaiti border post at Samita. Further forays into Kuwait's territory by Iraqi forces occurred in 1976, and relations between Kuwait and Baghdad were virtually non-existent. The contacts that began between the two governments in 1977 have led to a considerable easing of tensions (*see* Current Developments), but Iraq unquestionably remains Kuwait's primary defence concern.

Relations with its other large neighbour, Saudi Arabia, have not been without difficulties either, however. There was a lengthy dispute until 1966 over the demarcation of the neutral zone between the two countries, which contains rich oil reserves. Since the 1966 partition each country has administered its own share of the neutral zone as part of its own territory, while treating the on-shore oil production as an integral whole to be shared equally between the two. The question of the demarcation of territorial waters off the neutral zone was never decided, however, as Kuwait resists Saudi Arabia's claim that the rich off-shore oil reserves there should also be shared equally on the grounds that the territorial waters of the two countries were never in dispute.

From the middle of 1976 a Saudi-Kuwaiti joint commission met each month to discuss this dispute about the ownership of seabed oil reserves off the neutral zone, with Riyadh insisting that the 1966 agreement required equal sharing of them and Kuwait insisting that a resolution of the issue must await the long-delayed conclusion of the UN conference on the law of the sea. Kuwaiti-Saudi relations deteriorated sharply after differences over oil pricing policies at the December, 1976 OPEC conference, and in June, 1977 Saudi Arabian forces occupied the two offshore islands of Umm al-Maradem and Gharo in the disputed area.

While Kuwaiti-Iraqi relations have often been openly hostile, however, Kuwait's relationship with Saudi Arabia is never allowed to deteriorate to such a level. This is partly because Saudi Arabia is seen as the ultimate deterrent to any Iraqi move against Kuwait, and partly because the two ruling groups share common political perspectives both internally and internationally. Indeed, as Saudi Arabia's steady ascent to the position of local superpower in the Arabian peninsula has proceeded, so has its ability to influence events in the Gulf sheikhdoms; it is widely believed that Saudi disapproval for the faintly radical sentiments being expressed by some Kuwaiti parliamentarians was largely responsible for the Ruler's decision to dissolve the elected Kuwaiti National Assembly in August, 1976. This desire not to offend the Saudis is the main reason that Kuwait has not officially protested against the Saudi occupation of the offshore islands, and indeed formally denies that it has occurred.

In internal affairs, Kuwait's main concern is the political orientations of its large Palestinian resident population, and their influence on some Kuwaiti politicians. After 1976 it was evident that some Palestinians in senior civil service positions were being replaced by Egyptians, who were considered to be more reliable politically, but there have been no deportations. Kuwait contributes large sums of money to the Palestinian Liberation Organisation as part of its strategy for purchasing immunity from Palestinian radicalism on its own territory, and probably has the ability to foresee and control any outbreaks of Palestinian political activism on its own soil that might endanger its internal stability.

In external affairs, Kuwait is the most prominent and persistent volunteer for the post of mediator in almost all Gulf disputes, and is the most acceptable local choice for most of its quarrelsome neighbours. The great goal of Kuwait's foreign policy is the creation of a Gulf mutual security pact embracing all the littoral States, which it sees as a potential guarantee of the status quo, but its efforts have so far had little success.

In the meantime, its not inconsiderable armed forces (one-fifth the size of Saudi Arabia's but with a greater combat capability than any other Arab Gulf State) will continue to expand. While they would not be able to defend Kuwait against all-out invasion by either Iraq or Iran (the two States that figure most prominently in Kuwaiti defence contingency planning), they are large enough to ensure that no take-over could occur without a serious fight.

STRENGTH AND BUDGET

The Kuwaiti armed forces grew in strength from 600 in 1954 to 2500 in 1961, and to 7000 5 years later, and now stand at 10,000 officers and men. Conscription has now been introduced and further expansion is to be expected, but it should be borne in mind that the recruiting base is relatively narrow, consisting only of those 400,000 residents who are actually Kuwaiti citizens.

Defence spending in 1977 amounted to \$322,200,000 out of a GNP of \$12,000,000,000. Following a major border clash with Iraq in 1973, however, a supplementary defence budget of \$1,500,000,000 was introduced to pay for the rapid expansion of Kuwait's armed forces. A second special allocation of \$2,800,000,000 was made when this was expended in early 1976, and a further supplementary defence budget of \$1,500,000,000 was announced in March, 1977. Thus Kuwait's actual military budget since 1973, including capital expenditures, has not been the figure contained in the regular budget, fluctuating around the \$200,000,000-\$300,000,000 level, but more like \$1,000,000,000 per year.

World Armies

COMMAND AND CONSTITUTIONAL STATUS

The Ruler of Kuwait, Shaikh Jaber Ahmad Jaber al-Sabah, is the Commander-in-Chief of the Armed Forces, and the constitution (now suspended) gave him exclusive power to commission and discharge officers. The Minister of Defence and the Interior is Shaikh Saad Abdullah Salem al-Sabah, from the other main branch of the al-Sabah family. Shaikh Saad has held these offices since 1968, and has presided over the expansion of the Kuwaiti armed forces from an internal security organisation to a fully-fledged external defence force; in February, 1978 he was formally designated Crown Prince and heir to the throne. The Chief of Staff is generally a member of the ruling Sabah clan, and is at present General Mubarak al-Abdullah al-Sabah.

The constitution that was partly suspended in 1976 is still officially in effect except for the provisions regarding the National Assembly. The constitution is now being revised by a working committee drawn mainly from the Council of Ministers, an appointed body, and there is speculation that the National Assembly could be revived in some form in the near future. The reality of power in Kuwait, however, especially as regards control over the armed forces, is that the Royal Family rules. Most senior command positions in the armed services are held by officers who are related to the family by blood or by marriage, and the highest positions are invariably held by men who are themselves powerful within the family. The internal security forces are commanded by an army officer — the present Director-General of Security is Brigadier Muhammad Ahmad al-Hamad.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The Kuwaiti armed forces are still to find a commitment in a possible agreement over Gulf security. Token armoured units served on the Suez front during the 1973 Arab–Israeli War, and there are recurrent alarms on the Iraqi frontier, where much of the ground forces are deployed. Although the official enemy is Israel, the actual focus of concern for Kuwaiti military planners is Iraq, which raised a claim to all of Kuwait at its independence in 1961, and still has serious border disputes with the country. Despite the recent easing of tensions this will continue to be the first defence priority.

The only other countries that are of direct security interest to Kuwait are its other neighbour, Saudi Arabia, and its near-neighbour, Iran. It is extremely improbable that military operations could ever occur between Kuwait and Saudi Arabia, however strained their relations may occasionally become, and the Saudis probably do not figure in contingency planning in the Kuwait General Staff except as possible allies against Iraq. Kuwait is also careful to maintain good relations with Iran, but there is undoubtedly a certain suspicion of Iran's intentions in all the Arab Gulf States.

While the Kuwait armed forces are certainly strong enough to defend their borders, territorial waters and air-space against limited incursions, even after the present expansion envisaged by the 7 year Defence Development Plan adopted in 1976 is completed, they will not be able to defend the country against an all-out Iranian or Iraqi onslaught. They would, however, be able to offer serious enough resistance to make it impossible for a surprise attack, launched without evident mobilisation and concentration of forces, to overrun the country in just one or two days, and thus could win the time for other forces to come to Kuwait's aid. That is probably their principal justification.

ORGANISATION

The arms of service are the army, the navy and the air force. The 10,500 strong army is organised into one armoured brigade and two infantry brigades, while the 1000 man air force (not including expatriates) is operationally divided into one interceptor squadron, two fighter–bomber squadrons (forming), one counter-insurgency squadron, one transport and three helicopter squadrons. One of the helicopter squadrons, equipped with Pumas, is devoted to troop transport, assault and logistical support; one of the two Gazelle squadrons is employed for observation, liaison and communications purposes, and the other is equipped with HOT missiles and dedicated to the anti-tank role. The small navy follows the usual pattern of naval organisation, and is all concentrated at a single base.

The internal detail of squadron, brigade and battalion structure, etc. conforms closely to the British model.

RECRUITMENT, TRAINING AND RESERVES

The officer corps is recruited mainly from among the ruling clan and related tribal groups, in order to ensure the loyalty of the forces to the regime. Many of the senior officers have been trained at Sandhurst, and no expense is spared in the training of any Kuwaiti officer, but some doubts must prevail as to whether the professional quality of the officer corps is uniformly as high as it might be if recruitment and promotion were more open to competition. However the same comment is true for almost every other State in the region.

Manpower for the rapidly expanding forces is being provided, since April, 1978 by the application of the new compulsory military service law. Under it all male Kuwaiti citizens are liable to perform 2 years military service between

the ages of eighteen and thirty, thus yielding a potential conscript strength, additional to the existing regular component, of some 10,000 troops. Conscripts are normally inducted at the age of eighteen, although exemptions for various valid reasons and deferments for further education are generally available. The law has become necessary because it was proving impossible to attract sufficient Kuwaiti recruits for the planned expansion of the forces on a volunteer basis despite the very generous pay and conditions of service (Kuwaitis enjoy similar benefits in civil life), and because the government was unwilling to recruit volunteers from amongst the many alien residents.

Kuwait intends to create new military colleges and technical schools as part of its Defence Development Plan, but at the moment it remains heavily dependent upon foreign training assistance. Many Kuwaiti officers are sent abroad for training, particularly to Jordan, Pakistan, Britain and the USA, and a variety of foreign training missions are to be found in the country. The USA provides the training for the 1850 Kuwaiti troops who operate and support the Hawk missile systems and A-4 fighter-bombers Kuwait has bought from them, and 125 British officers are in the country to assist Kuwait in the operation of British-built aircraft and of its British-equipped armoured forces. France provides similar training for Kuwaiti military personnel operating Mirage interceptors.

Four Egyptian advisory teams are operating in Kuwait, training the army in infantry tactics, coastal defence and special forces techniques, and a number of Jordanian officers have been lent to Kuwait in various capacities. A Syrian military team is advising Kuwait on the introduction of conscription, while Pakistan is providing training aid in the development of Kuwait's nascent navy. About 20 Soviet military experts led by a general arrived in April, 1978 to oversee the training of Kuwaitis in the operation of the SA-6 and SA-7 SAM systems which are being acquired from the Soviet Union.

There is not at this time a formal reserve system in Kuwait, but it is anticipated that one will be introduced after the first batch of conscripts complete their military service in 1980.

EQUIPMENT AND ARMS INDUSTRY

The main armoured strength of the Kuwaiti army is 24 Chieftain, 50 Vickers and 50 Centurion medium tanks, with 129 more Chieftain tanks on order from Britain. Other armoured vehicles include 100 Saladin armoured cars, 20 Ferret scout cars and 130 Saracen APCs. The army is relatively short of artillery, disposing of only 10 25 pounder guns and 20 AMX 155mm SP howitzers. It possesses a variety of anti-tank guided weapons, including SS-11, HOT, TOW, Vigilant and Harpoon.

Further equipment on order, besides the Chieftain tanks, includes an undisclosed number of Scorpion light tanks from Britain and \$100,000,000 of SA-6 and SA-7 mobile SAM systems from the Soviet Union. There have been discussions with the USA on the purchase of 150 M-113 APCs and an integrated command and control system for an estimated \$85,000,000, and it is believed that Kuwait also plans to buy an undisclosed number of M60 tanks and M109 howitzers from the USA.

The Kuwaiti air force possesses 63 combat aircraft. Its interceptor squadron is equipped with 20 Mirage F-1B/Cs and its fighter-bomber squadrons fly 34 A-4KU Skyhawks. The COIN squadron has nine Strikemaster Mk.83s.

The three helicopter squadrons have 30 Gazelle and 12 Puma Helicopters. Transport aircraft include two DC-9s, two L-100-20s and one Argosy. Training aircraft include four Hunter T67s and six TA-4KU ground-attack aircraft with combat capability. Air-to-air missiles in service are Red Top, Firestreak, R.550 Magic and Sidewinder; the air-to-surface missile is the Super R.530.

The air force is responsible for the operation of the 50 Improved Hawk missiles that provide the long-range SAM defences. They are grouped in four mobile batteries, but are based at fixed points on Kuwait's territory.

The navy is still very new, consisting of only 500 men and possessing only five FPBs, 12 inshore patrol craft, 16 patrol launches and three landing craft. There are ambitious plans for its development, however, and discussions are underway with Vosper Thornycroft in Britain for the purchase of a number of FPGBs armed with Exocet (French) or Otomat (Italian) surface-to-surface missiles and a French fire control system.

There is a very large programme of military construction underway in Kuwait, which includes a \$100,000,000 military camp 20 miles from Kuwait City to be built by an Indian firm, a \$29,000,000 naval base to be completed at the end of 1979 and a new air base being constructed by a consortium of Yugoslav firms.

Kuwait has no defence industry of its own, and has so far refused to join the Arab Organisation for Industrialisation (AOI) which is being funded by Saudi Arabia, Qatar and the United Arab Emirates to build advanced weapons in Egypt for the Arab countries. Kuwait's contribution to the AOI's founding capital has been set at \$400,000,000, which was more than Kuwait was prepared to risk in an undertaking of whose management and commercial viability it was equally doubtful.

RANK, DRESS AND DISTINCTIONS

The army wears khaki. Ranks and badges of rank follow the British system.

World Armies

CURRENT DEVELOPMENTS

The rapid modernisation and expansion of the Kuwaiti armed forces will doubtless continue for the next few years, as money is no constraint and conscription will supply the needed extra manpower. It would be reasonable to foresee a total strength of over 20,000 by the early 1980s, which should be more than enough to cope with any counter-insurgency problems — especially in terrain as inhospitable to insurgents as Kuwait's — and adequate to enable Kuwait to resist for 2 or 3 days against the improbable eventuality of a major military attack by one of its neighbours, in which time it could hope for aid from friends to arrive. The army by then will be a well-balanced, mobile force consisting largely of armoured and mechanised elements, including about 250 tanks. The air force, with perhaps 75 modern combat aircraft and comprehensive SAM coverage, likewise would be up to its task, and the navy should be nearing a match for Iraq's in the FPGBs which are most significant vessels in the narrow and shallow waters at the head of the Gulf.

In fact Kuwait's relations with Iraq, for long extremely tense, have recently undergone a considerable improvement. Following a visit to Baghdad by the Kuwait Defence Minister in July, 1977 the border between the two countries was reopened for the first time since 1972, and both sides withdrew their forces up to 10 miles from the frontier in what was described as a 'disengagement'. A joint ministerial committee was appointed to discuss the settlement of outstanding border disputes, principally the Iraqi occupation of Warba and Bubiyan islands and the area around the Samita border post seized by Iraq in 1973.

On the more serious of those issues, Iraq has indicated that it recognises Kuwaiti sovereignty over the islands, but that it is not prepared to withdraw its forces from them since they overlook the access from the head of the Gulf to its only naval base at Umm Qasr. Baghdad has instead proposed to return the civil administration and internal security responsibilities on the islands to Kuwait, and merely to lease them for military purposes together with a land corridor on the south side of the channel from Umm Qasr to the area lying opposite Warba Island. (This land, still under Kuwaiti control, overlooks an area where ships which are travelling up the channel bound for Umm Qasr must pass through Kuwaiti territorial waters.) Kuwait is not opposed to this solution in principle, although the two countries are still in disagreement on the freedom of action that Iraqi forces should be allowed on the islands. A substantial impediment to any final agreement, however, is Saudi opposition to a measure which would legally guarantee Iraqi access to the Gulf.

GWYNNE DYER

LAOS

Little reliable information is available about the Lao People's Liberation Army. It was originally known as the army of the Pathet Lao when it operated against the French in the early 1950s. After 1954, when the country's neutrality was established by international agreement at Geneva, the eastern half of the country passed effectively into Pathet Lao hands, and large numbers of North Vietnamese troops, who had first entered the country in 1952, began to be stationed there. Fighting between the Pathet Lao and the Royal Laotian Army was endemic and, despite further international efforts in 1973 to arrange a peaceful settlement, culminated in 1975 in the final defeat of the royal government's forces. The Lao People's Liberation Army, which is about 45,000 strong, and organised into about a hundred infantry battalions, is distributed throughout the countryside, which is believed to be divided into five military regions. There is said to be recruitment by conscription, but it would be a new departure in Laos. About 80,000 soldiers of the Vietnamese People's Army, which formerly controlled the Pathet Lao army (as it may still do) are permanently stationed on Laotian territory and the Laotian army is trained, organised and equipped on Vietnamese lines.

A variety of French, American, Russian and Chinese equipment is in Laotian hands, including some Russian PT-76 and American M-24 light tanks, Russian BTR-40 and American M-113 APCs, field and medium artillery pieces, light and medium mortars, and recoilless rifles. The air force has about 45 aircraft, mostly American T-28 trainers equipped for ground attack, about 30 transports and 50 helicopters. It is doubtful if the American aircraft are now all operational.

JOHN KEEGAN

LEBANON

At the time of writing (March, 1979) the Lebanon had still not recovered from the effects of its 19 month civil war in 1975–6, and efforts to reconstitute the Lebanese army, which disintegrated during the course of that conflict, were still in an early stage. The normal arrangement of World Armies entries has therefore been modified as follows. The History and Introduction section includes an account of the civil war and its aftermath up to the end of 1978. All subsequent sections except the last refer to the structure and character of the pre-1975 Lebanese army, with comments on how plans for the recreated army differ where appropriate. The Current Developments section assesses the progress that had been made in rebuilding the armed forces up to early 1979.

HISTORY AND INTRODUCTION

The Lebanon owes its existence as a State separated from its natural Syrian hinterland to the presence in the Mount Lebanon area north of Beirut of an Arabic-speaking but Christian population, the Maronite Catholics, who had retreated to this mountainous stronghold as a refuge from Muslim domination even before the time of the Crusades. Unlike the other Christian Arabs, who are predominantly Orthodox, the Maronites have always identified themselves with the West and have not regarded themselves primarily as Arabs. (Thus, for example, the Greek Orthodox Christians of Syria generally supported Islam against the West during the Crusades, while the Maronites sided with the Crusaders.)

During the nineteenth century, when the entire area was ruled by the Ottoman Empire, France succeeded in winning certain rights of autonomy for the Christians of Mount Lebanon, and a recognition of itself as their special protector. This relationship was consummated after World War I, when both Syria and the Lebanon became French mandated territories. Faced with strong resistance from nascent Arab nationalism elsewhere in its new possessions, Paris found it convenient to rely on the support of the Maronite Christians in the coastal districts, and created for them the separate State of Lebanon in which they were a majority of the population. Even in the 1920s, however, this 'Greater Lebanon', extending well beyond the traditional confines of Mount Lebanon, contained a large Muslim minority occupying lands which France preferred to attach to the Lebanon for strategic reasons.

Two of the three factors which led to the utter collapse of the Lebanese State in the mid-1970s were thus implicit in its creation: the fact that it was carved out of Syria (which has never agreed to open an embassy in Beirut since independence, on the grounds that both States are part of 'Greater Syria'); and the fact that it had been gerrymandered to incorporate a variety of Muslim and non-Maronite Christian groups into a Maronite-dominated State. Although higher Muslim birth rates soon turned the Maronites, and then the Christians as a whole, into a minority in the country, the well-organised Maronite militias ensured that the Lebanon continued to operate on the original basis of Christian predominance after it proclaimed independence in 1941.

Christian suspicions that they were becoming a minority had led them to prevent the holding of any national census after the early 1930s — there has not been one to this day — in order that they could maintain the fiction of a six-to-five Christian majority and a consequent dominant position in the government, where offices were allocated on a confessional basis proportional to population. The National Pact of 1943 (concluded before French forces finally left the country in 1946) enshrined a constitution which was in the nature of a contractual agreement between the various politico-religious communities of the Lebanon, allocating shares of governmental power between them. Under it, both the President of the Republic and the Commander-in-Chief of the Armed Forces were always to be Maronite, the Prime Minister was to be Sunni Muslim, and various lesser offices were guaranteed to the Druze, Shi'ite, Greek Orthodox and other communities.

The ultimate guarantee of Maronite pre-eminence in this system despite their declining share of population was their control of the Lebanese armed forces. These grew out of the *Troupes Spéciales du Levant* which the French mandatory authorities had organised as an internal security force in greater Syria in the 1920s. The founders of the Lebanese army were trained as officers in the *Troupes Spéciales*, and were transferred by the French to the independent Lebanese government in 1946.

The Lebanese army was always primarily intended for internal security duties, but as soon as possible the task of actually policing the country was handed over to the gendarmerie while the army assumed the role of ultimate guarantor of the integrity of the Lebanese political system. In the first decade after the French withdrawal it had little to do, as the system worked tolerably well. Nominally democratic, it was actually a highly fragmented system in which the notables (*za'im*) of the various confessional communities, holding power of an almost feudal character over their own groups, bargained with each other until a consensus on policy was achieved — or not, in which case the constellation of alliances would be reshuffled once more.

Already in 1948, however, the third factor which was eventually to destroy this system had emerged: the State of Israel. The creation of Israel on the Lebanon's southern border had two consequences for the latter. First, it contributed greatly to the awakening of a pan-Arab nationalism, tending in the 1950s and 1960s to follow a Nasserist line, politically radical and

strongly anti-Western. This current of sentiment affected the Muslims of Lebanon at least as much as Arabs elsewhere, and increasingly alienated them from the pro-Western Maronite community which had welcomed the creation of Israel. The leftist character of this Nasserist ideology accentuated the split in the Lebanon, since it tended to be Christians who dominated the country's burgeoning commercial sector, while the most deprived segments of the population were mainly Muslim.

The second consequence of the creation of Israel was to land the Lebanon with a very large Palestinian refugee population — now numbering about 400,000, or over 10% of the total Lebanese population of around 3,000,000. The full significance of this was not to be seen until the Palestinians became a well-organised and well-armed radical political force in the late 1960s, but their mere presence, in 14 large refugee camps dispersed throughout the south and centre of the country, was a substantial influence in raising the Arab nationalist consciousness of the Lebanese Muslims.

The Palestinians did not play a major role, however, in the civil war of 1958, the first sign that the unique Lebanese political structure was breaking down. The war was caused by the spread of Nasserist ideas amongst sections of the Muslim populace who had been further roused by the Anglo-French-Israeli aggression against Egypt in 1956, and were seeking to end the Lebanon's policy of avoiding involvement in the Arab-Israeli confrontation. This, of course, required the overthrow of Maronite Christian dominance in the government, and the large Maronite militias (which had been in existence since the 1930s) soon became involved in large-scale clashes with the Muslim leftist forces. The army was not able to contain the fighting, and only the intervention of the USA, which landed a force of Marines in the Lebanon, prevented the disintegration of the State in 1958.

General Fuad Shehab, who was elected President under the American aegis before the United States troops were withdrawn, succeeded in restoring stability to the Lebanese system for a decade, but made no progress in achieving reform and modernisation of the country's institutions before he was succeeded by President Charles Helou in 1964. The parliamentary façade of the Lebanese political system continued to operate under Shehab and Helou, but officers of the Military Intelligence, operating through a highly organised network of agents, were in effective control and determined the outcome of parliamentary elections. It was no more than a holding operation, however, on behalf of a Maronite concept of the Lebanon where the Maronites themselves were now no more than one-third of the population. After the election of President Franjeh in 1969 this network of agents was dismantled, but it could probably not have contained the pressures which were destabilising the Lebanon by them in any case.

The key development which initiated the slide of the Lebanon into catastrophic civil war — the sole cause of all the subsequent trouble, in the opinion of most Maronites, though that is much too simple an explanation — was the creation of militant Palestinian guerrilla organisations in the camps in the latter 1960s. Not only did the Palestinian guerrillas soon come to constitute a State within a State, but their guerrilla raids into Israel and terrorist activities elsewhere repeatedly brought down Israeli retaliatory raids on the Lebanon. The first of these was in December, 1968 when Israeli commandos destroyed 13 civilian airliners on the ground at Beirut airport in reprisal for an attack on an Israeli airliner in Athens by Palestinians who had allegedly been trained in Lebanon. It soon became customary for Israel to attack targets in the Lebanon in response to any Palestinian guerrilla activity, whether originating there or not, since it was far easier and safer than mounting raids into the well-armed Arab confrontation States: between mid-1968 and mid-1974 Israel mounted 44 major attacks into the Lebanon, killing approximately 880 Palestinian and Lebanese civilians as well as some guerrillas.

These raids had disastrous consequences for the authority of the Lebanese State, which was repeatedly shown to be incapable of defending its citizens, and for the tenuous cohesion of Lebanese society. The Lebanese army carried out military operations in April and October, 1969 seeking to remove guerrillas from the southern border areas, which led to armed clashes, but these clashes caused severe rioting by pro-Palestinian mobs in all the major cities, forcing the resignation of the Prime Minister. In November, 1969 the Lebanese Army Chief of Staff was compelled to conclude the famous Cairo agreement with Yasir Arafat of the Palestine Liberation Organisation, granting the guerrillas autonomy in the refugee camps and in the southern border regions.

Lebanon enjoyed a brief respite after September, 1970 when the Palestinian organisations were severely weakened by their defeat and expulsion from Jordan, but the main effect of 'Black September' in the longer run was to make the Lebanon an even more important base of Palestinian operations, as the only country where they were still free from government control. A particularly bold Israeli attack in April, 1973, when 35 Israeli commandos entered Beirut and assassinated three of the main PLO leaders and nine bystanders, moved the army to try once again to break the power of the Palestinians. In the following month the Lebanese army attacked the camps around Beirut, even employing fighter-bombers against them, but the fighting was a stand-off, and a further psychological defeat for the army and the State. Ominously, right-wing Christian militias were reported to have joined in the fighting for the first time.

What happened between 1968 and 1975 was that the limited basis of intercommunal co-operation which had made the old Lebanon workable was comprehensively destroyed. The younger and more radical sections of the Lebanese Muslim population, resentful of the domination of the State by a Maronite minority, sympathetic to the Palestinian and Arab cause, and aroused by the incessant Israeli attacks, drifted rapidly away from their traditional conservative leaders and into a proliferating variety of socialist and Nasserist parties which sought the wholesale reorganisation and reorientation of the Lebanese State. This basic trend was accentuated by a number of other factors: the fact that the divisions between rich and poor, and between Christian and Muslim, tended to coincide to a large extent; the tremendous growth of Beirut as the financial and commercial capital of the Middle East, which sucked huge numbers of unskilled Muslim poor from the

World Armies

countryside into the very centre of power; and most of all, perhaps, the new sense of pride and confidence in the wealth and power of the Arab world after the 1973 war and the oil boycott, which made Lebanese Muslims more unwilling than ever to accept Christian hegemony in their country.

Almost all of these new leftist, mostly Muslim groups (though numbers of Greek Orthodox Christians, resentful of Maronite dominance, also joined them) became loosely associated in the National Movement, an umbrella organisation founded in 1969 by Kamal Jumblat. Jumblat was the outstanding leftist leader in the Lebanon since the early 1950s (although his actual power derived not from his Progressive Socialist Party but from his position as feudal leader of the Druze minority). In the traditional Lebanese way, many of these leftist parties began to create their own militias in the early 1970s, although the great growth of the leftist militias occurred only after the civil war had begun.

The National Movement, whose programme included the abolition of the confessional system in Lebanese politics, the reorganisation of the army, and amendment of the citizenship and electoral laws — all intended to destroy the control of the Christian minority and to bring the Palestinians fully into Lebanese politics — was the organisation which provided the main institutional link with the Palestinian groups. The mainstream Palestine Liberation Organisation held itself more aloof from attempts to overthrow the existing Lebanese system than the more radical Rejectionist groups like the Popular Front for the Liberation of Palestine (PFLP), but all the Palestinians had learned from their bitter experience in Jordan that they needed the support of the mass of the local population. Clearly, changing the Lebanon in the way desired by the National Movement would make it a better base for all Palestinians, while for the extreme leftist factions it was natural to ally themselves directly with predominantly Muslim groups like the Nasserites, Jumblat's PSP, the communists and so on.

To the Maronites who had always dominated the Lebanon, the threat posed by this alliance was absolutely clear (although, since before 1975 the bulk of the armed forces on the Muslim–leftist–Palestinian side were Palestinian, the Maronites tended to concentrate mostly on the Palestinian 'foreigners' who were threatening to take over the country). They also tended to view the conflict in religious terms, whereas in fact being either Muslim or Greek Orthodox Lebanese or a Palestinian of any religion — and many Palestinians are Christian — simply meant that one was likely to see oneself as disadvantaged in the Lebanon, and belonging also to the greater Arab world. Only Maronite Christians had any real cause to be loyal to the kind of Lebanon that had been created for their benefit, and which held itself aloof from wider Arab concerns.

The Maronites began preparing to defend that Lebanon from the National Movement and the Palestinians in the early 1970s. The two main existing Maronite militias, Camille Chamoun's National Liberal Party 'Tigers' and Pierre Gemayel's *Kata'ib* (Phalange), grew rapidly in membership, and even before he became President in 1970 Suleyman Franjieh founded a new militia of his own, the Zghorta Liberation Army. By 1974 major arms shipments were arriving at the port of Jounieh, in the heartland of Maronite territory north of Beirut, and the Maronite leaders were actively preparing for a showdown with the Palestinians.

In essence, therefore, what had happened in the Lebanon by 1975 was that a combination of the Palestinian presence, Israeli attacks, Arab nationalist ideas and rapid social change had destroyed the position of the traditional conservative leaders of the Muslim communities who had participated in and profited from the Lebanese system, and had created a new Muslim–leftist–Palestinian coalition which potentially had the numbers and the armed strength to overthrow it. The Maronites, still under their traditional leaders, saw it coming, and recognised that they would receive neither aid nor sympathy from anywhere else in the region, and only sympathy at most from Western powers who were more concerned to cultivate the good will of Arab oil producers. The Maronites therefore decided in desperation to strike first, in the hope of eliminating the Palestinians whom they blamed for all the changes that threatened to overwhelm them.

The opening shots of the civil war were in a massacre of a busload of 27 Palestinians in Beirut in April, 1975 by Phalange gunmen, and for the first month or so the fighting was restricted to clashes between Maronite militias and the more radical Palestinian groups. By the early summer, however, the crisis had developed into a full-scale civil war right across the country, with Muslim, leftist and Palestinian groups associated with the National Movement fighting the Maronite militias loosely grouped together as the Lebanese Front defending the status quo. Extremist Palestinian groups like the PFLP, the PFLP–General Command and Arab Liberation Front were heavily involved in the fighting throughout 1975, although the mainstream organisation *Al-Fatah* managed to stay clear of most of it until the end of the year, but from July, 1975 the main burden of the war on the anti-Maronite side was borne by the Lebanese leftists and Muslim militias, which expanded with great rapidity once the shooting started.

Given the high degree of segregation of the various Lebanese communities in the rural areas and even in the cities, the fighting soon took on a strongly territorial character, concentrating first of all on the elimination of enclaves belonging to the rival community and the 'cleansing' of mixed-community urban neighbourhoods, which involved some appalling massacres. Beirut was soon sharply divided between the Christian eastern districts and the Muslim western parts, and only the largely Shi'ite deep south and the central areas of the Maronite territory escaped heavy fighting. Once underway, the fighting rapidly did take on most of the characteristics of a religious war, with the result that the most horrible atrocities were frequently committed against unarmed civilians by both sides. The rapidly growing expenditure on ever heavier weapons by both sides was mainly met by radical Arab States so far as the Muslim–leftist coalition was concerned (Libya alone contributed \$30,000,000–\$40,000,000 during 1975), and on the Maronite side by a levy of 10 Lebanese pounds per family per month. Both sides supplemented these funds by robbing and looting banks and other commercial enterprises and by extortion. Maronite arms expenditure in 1975–6 was estimated at up to \$600,000,000, spent mainly on the private

arms market, but in the latter stages of the war the militias were receiving large amounts of direct military aid from Egypt, and later from Israel, through Jounieh, the only port under their control. Muslim—leftist arms came principally from Iraq, Syria (at some stages of the war) and Libya.

There had been a considerable erosion of the dominant Maronite position in the army officer corps during the years 1958–75, but the high command remained a predominantly Christian organisation. The army's initial strategy was to hold itself aloof from the fighting, waiting for a decisive moment to commit its 17,000 men in defence of the status quo. The result, however, was that the bulk of the army simply melted away by desertion, its officers and men either retiring to their home districts or joining one of the rival militia organisations. Attempts to commit the armed forces at the climax of the war's first phase in January, 1976, when the Lebanese air force was used against Palestinian enclaves, simply led to the army's final fragmentation into four separate organisations (for details, see pp.429 and 430).

By the end of 1975, it had become clear to the Maronite leadership that they lacked the military strength to destroy the Muslim—Palestinian alliance and recreate the traditional Lebanese political system. They then modified their strategy and tried to set up a separate Christian State based on Mount Lebanon and the northern coast, with access to the port of Beirut and the Christian eastern parts of the city. This decision to seek partition, however, changed the character of the war, for the mainstream Palestinian guerrilla groups now committed their forces. This was partly because, as part of their strategy for consolidating their territory, the Maronites blockaded and attacked the Palestinian refugee camps in their prospective territory in January, 1976, but the PLO would have been compelled to intervene in the fighting directly in any case to prevent the creation of a Christian State in their rear which would inevitably be pro-Israeli.

More importantly, Syria, which had hitherto encouraged its traditional leftist clients while seeking to avoid damaging its new friendly links with France and the United States or provoking the Israelis, now intervened against the Christian forces. In January, 1976 it sent units of its Palestine Liberation Army (which is wholly loyal to Damascus, and equipped and organised to the same standards as the Syrian regular army) into Lebanon to forestall the Christian plan. Under this new and far greater pressure from the Palestinians and the Syrians, the Christians were soon clearly losing the war, and readily accepted a ceasefire at the end of January, 1976.

From this point on it was the Syrians who dominated the war in the Lebanon, and the key to their seemingly capricious changes of policy and alliance within the Lebanese tangle is to be sought in their fixed and long-standing purpose: to convert the Lebanon into an obedient satellite, as a way-station on the road to the recreation of 'Greater Syria' and as strategically vital territory which could protect the flank of Syrian defences on the Golan Heights while simultaneously opening the long-term possibility of creating a new front against Israel if necessary. They have always possessed the sheer military power to establish their control over the Lebanon by force, of course, but at all stages of the war they had to act with considerable caution because of the possibility of a violent Israeli military reaction.

At no time did Syria's aims coincide with those of even the moderate Palestinian groups (whose activities within Syria itself are very strictly controlled and confined), but during the first 8 months of the Lebanese civil war the Muslim—leftist—Palestinian coalition enjoyed Syrian support, including arms and financial aid. When it became clear in January, 1976 that this coalition was unlikely to be able to achieve fully its goal of creating an 'Arab' Lebanon, and that the most probable outcome would be the partition of the country and the emergence of a pro-Israeli Christian State flanking Syria's defences, Damascus felt compelled to escalate to direct intervention with its own Palestinian forces. Having stopped the Maronites short of partition and achieved a shaky ceasefire, Damascus then attempted to impose a moderate programme of reforms which would grant the Muslim population more representation and a greater share of power in the Lebanese government.

The Syrian intervention had decisively tipped the military scales against the Maronites, however. While the Christian militias were therefore disposed to agree to the Syrian proposals, the National Movement—Palestinian forces were not willing to abandon their advantage in return for this compromise settlement. Throughout January and February, 1976 the Lebanese leftists and the Palestinian forces incessantly broke the ceasefire to press forward, both in Beirut's hotel district and in the mountains, with the clear aim of crushing the beleaguered Maronite militias utterly.

This was utterly unacceptable to the Syrians on three counts: (1) their ability to convert the Lebanon into a satellite depended upon the country remaining divided between more or less evenly balanced factions; (2) a Lebanon run by a coalition of Nasserists and Palestinian guerrillas would be a most unwelcome neighbour for Syria; and (3) the prospect of such a Lebanon would almost certainly cause Israel to invade and occupy much of the country, which would be a strategic disaster for Syria even in the unlikely event that it did not cause a new Arab—Israeli war. Having failed to persuade the Lebanese Muslim and leftist forces and the Palestinians by argument to accept a compromise settlement, therefore, Syria turned to force.

In the spring of 1976 the Syrian-controlled Palestine Liberation Army regular units in the Lebanon and the Damascus-based *Saiqa* group of Palestinian guerrillas switched sides and began supporting the beleaguered Maronites. When this failed to turn the tide of the fighting, regular Syrian army units were committed on the Maronite side in the savage fighting of May and June. Syria did not even intervene to stop the terrible siege of the Tel al-Za'atar refugee camps, which culminated in a motorised assault by the Phalange and a ghastly massacre in August, 1976.

Nevertheless, the limited Syrian forces in Lebanon were still insufficient to break the resistance of the Palestinian—leftist militias, and over the summer of 1976 a political and military stalemate set in. In June the Arab League despatched an Arab Peace Force to Lebanon, comprising about 5000 troops from Libya, Sudan, Saudi Arabia and the Gulf States, but its efforts had little effect.

World Armies

The stalemate was finally ended after Damascus got assurances that Israel would not react to a full-scale Syrian military occupation of Lebanon provided the Syrian army stopped at the line of the Litani River some 15 miles north of the Israeli border. In October, 1976, therefore, approximately 22,000 Syrian regulars with tanks and artillery broke the back of the Palestinian and Lebanese Muslim—leftist resistance. By the end of the month Syrian forces were all over the Lebanon except in the far south, and the Palestinians and the National Movement groups had accepted a ceasefire. A cloak of decency was dropped over the Syrian invasion by the Arab League, which at the Riyadh and Cairo summit conferences during October renamed the Syrian army in Lebanon the 'Arab Deterrent Force' (ADF), incorporating also token contingents from some other Arab countries which had been there in an ineffectual attempt to keep the peace since June.

The 19 months of war had virtually ruined the Lebanon. Between 40,000 and 60,000 people out of a population of 3,000,000 had been killed, and well over 100,000 injured — the great majority of them innocent civilians. An estimated 700,000 people had fled abroad, and many (including a high proportion of the country's most skilled people) have still not returned. \$12,000,000,000 of property damage had been done, the centre of Beirut was a rubble-strewn wasteland, and the trading and banking heart of the Lebanese economy had been destroyed. Moreover, the Maronites had effectively achieved a *de facto* partition of Lebanon: they had even commenced to build their own port and international airport in the area under their control. Above all, the country had lost its independence, probably irretrievably, to a thinly disguised Syrian occupation force.

Almost 3 years later, 35,000 troops of the Syrian army are still in the Lebanon, and are probably the only thing that prevents the civil war from re-igniting instantly. The Palestinian guerrilla groups have mostly returned to their camps, and the Lebanese leftist and Muslim militias have sent most of their men to their homes, still in possession of their weapons, to await further developments. Although Syrian patrols of the ADF do enter some of the areas held by the Maronite militias from time to time, the latter are still on a war footing and in full control of their areas. This is not surprising, as the Syrians have now 'switched sides' again and are attempting to destroy the Maronites' independent military position.

It was inevitable that the Syrian—Maronite alliance would end as soon as the Palestinians and their Lebanese allies were crushed, since Syria's purpose is to break the power of all the rival groups in the country and reconstruct a Lebanese government and army which will be subservient to Damascus. It has proved exceedingly difficult for Syria to accomplish this aim, however, because it is entirely contrary to Israel's interests.

So long as Syria was fighting the Palestinians, Israel felt no need to intervene. Since October, 1976, however, it has repeatedly demonstrated its determination not to allow the Syrian army to establish full control over the Maronite-held areas between east Beirut and Mount Lebanon, or over the buffer zone south of the Litani River in parts of which Israeli-assisted Christian militias have also been able to establish control since 1976.

The Syrian strategy in Lebanon since the war has been to create a pro-Syrian government and army and to construct a 'Broad National Front' embracing political forces drawn from both the polarised extremes of Lebanese politics. These institutions and groups would serve as a foundation on which to 'normalise' the Lebanon on a new basis involving a restructured constitution that more closely reflected the actual communal balance, and a close and subordinate relationship with Damascus. Militia groups would be disarmed, the Palestinians brought under State control and — presumably — Syrian troops would remain.

A start was made at building this new Lebanon just before the ceasefire, when a special day-long ceasefire was arranged in Beirut so that the Lebanese Chamber of Deputies, under overwhelming Syrian pressure, could install the pro-Syrian Elias Sarkis as the new Lebanese President and grant him power to rule by decree. This has since allowed Syria's actions in Lebanon to be covered by a double legitimacy, since they are carried out in the name of the ADF, which in turn is answerable to President Sarkis, who is Damascus's man. After the Syrian army had finally broken the Palestinian—leftist resistance and imposed a ceasefire in October, 1976 Sarkis appointed a close associate, Dr Selim Hoss, Prime Minister, and he in turn selected a cabinet of non-political 'technocrats'.

The next task was the recreation of the Lebanese army in a form which was politically obedient to Syria. This was particularly urgent as the Israeli refusal to let the Syrian army enter the south of Lebanon had meant that Palestinian—Christian fighting flared up there just when it had been damped down elsewhere in the country, and it was hoped that Lebanese army units might be able to stop it. In January, 1977 Lieutenant Ahmad al-Khatib, the leader of that part of the old Lebanese army which had broken away to fight on the Muslim—leftist side, was arrested and taken to Damascus. In March the strongly pro-Maronite Army Commander, Brigadier-General Hanna Said, was replaced by Brigadier-General Victor Khoury, an officer who, like Sarkis, had been a key figure in the Shehab regime, and who had fled to Syria in 1973 when the army was being purged of Shehabist elements. The head of the army's *Deuxième Bureau*, the Intelligence Section, was likewise replaced by a pro-Syrian officer, Major Juni Abdou, and in April, 1977 the nominal Lebanese commander of the ADF was replaced by another officer obedient to Damascus, Colonel Sami al-Khatib. But the creation of a pro-Syrian high command for the Lebanese army did not mean the re-creation of the army itself on a similar basis, which is a goal that still largely eludes Damascus.

From the Syrian point of view this has had particularly unfortunate consequences in the south, where Christian militias commanded by Maronite officers of the Lebanese army had succeeded in establishing a considerable measure of control with open support from Israel. When major Palestinian forces withdrawing from central Lebanon under Syrian military pressure re-entered the south in late 1976 they immediately came into conflict with these Christian forces, whom Israel was already providing with arms, supplies and fire support from across the border. Unable to send Syrian troops in, and lacking

adequate numbers of Lebanese regular units, Damascus was reduced to supporting the Palestinian guerrillas fighting to end Christian–Israeli control over three major enclaves in the south even as it was still engaged in sporadic clashes with the Palestinian guerrillas around the camps further to the north. In two major bouts of fighting, in March–April and July, 1977, some 200,000 people, one-third of the south's population, became refugees. Each was ended by a ceasefire which left the positions basically unchanged, with Major Sa'ad Haddad's 'Lebanese Forces in the South' still controlling much of the border in league with the Israelis. The continuing fighting there threatened to restart the Palestinian–Christian war in the rest of Lebanon, and even to escalate into a Syrian–Israeli war.

The seriousness of these dangers was demonstrated in early 1978, when Syria permitted even larger numbers of Palestinian guerrillas — up to 3000 — to go south of the Litani River to increase the pressure on the Christian enclaves. Israel responded in March with a massive military invasion of the entire area, including saturation bombardments of suspected Palestinian positions by heavy artillery and aircraft. Lebanese civilian casualties were in the thousands, and a new wave of refugees descended on Lebanon's collapsing cities, but the Palestinians conducted an orderly fighting retreat and lost only a couple of hundred men.

If the guerrilla-killing aspect of the Israeli invasion miscarried, however, its purpose of removing Palestinians from the border areas was largely successful. Syrian army forces stayed well back from the line of the Litani River where they might have come into contact with the Israelis, and the latter did not withdraw until a new United Nations Peacekeeping Force (UNIFIL) of some 6000 men under the command of Ghanaian General Emmanuel Erskine had been hastily created to take their place in the buffer zone. Even so, Jerusalem supported the Christian militia in its refusal to permit UN troops to enter its own zone of control along the 60 mile frontier when the Israeli army finally handed over to the UN force and withdrew from Lebanon 3 months later. Israel also left the militia well supplied with tanks and other heavy weapons.

An attempt by President Sarkis and Syria to send 700 men of the Lebanese army into the south in mid-June, 1978 just after the Israeli withdrawal, was thwarted by the Christian militia, whose Israeli-supplied artillery halted them 25 miles short of their destination. This action was scarcely surprising, as the 'Lebanese' troops in question were actually units of the breakaway 'Vanguards of Lebanon's Arab Army' which had fought for Syria in the civil war, now reincorporated into the Lebanese army. In early 1979 there was still no Lebanese government presence in the south, much of which was in effect controlled by Israel via the Christian militia forces. About 600 Palestinian guerrillas had infiltrated back into the area under UNIFIL control, and clashes between the UN troops and both the Palestinians and the Christian forces were common-place.

Syrian efforts to consolidate the control of the Sarkis government and 'normalise' the situation in the rest of Lebanon have had little more success. Clashes between Syrian troops and Palestinian forces have become much less frequent since 1977, although the Syrian army still keeps forces emplaced around most of the major Palestinian camps, but relations between the ADF and the Maronite militias have deteriorated into open hostilities. It has frequently been the militias who have initiated the clashes, but the basic problem is that the Maronites have no intention of falling in with Syria's plans for Lebanon's future.

The Syrian army could probably crush the militias and overrun eastern Beirut in an all-out offensive, but it would cost it more casualties than it is willing to accept. As it is, the Syrian army suffered about 1000 casualties in Lebanon during the 'peaceful' year of 1978. More importantly, Syria is restrained and the Maronites emboldened by the possibility that the Israeli armed forces would intervene to prevent conquest of the Maronite heartland — as Jerusalem has indeed hinted from time to time. In the circumstances, Syria has instead adopted a policy of attrition, aimed first of all at breaking the Maronite hold on east Beirut, by massive artillery bombardments which cause high Christian casualties (mostly civilian) and cost few Syrian lives.

In 3 days of concentrated and indiscriminate shelling of the Christian parts of Beirut by 300 artillery pieces and Katyusha rockets in July, 1978 the Syrian army killed about 400 people and laid waste residential areas that had largely survived the civil war fighting. The bombardment was only stopped after Israeli forces on the Golan Heights were placed on alert, Israeli fighters flew low over Beirut breaking the sound barrier, and President Sarkis threatened to resign. In the ensuing months, however, very large numbers of weapons, reportedly including artillery and some tanks, were sent to the Maronite forces by Israel, and renewed Maronite military provocations against the Syrians in Beirut in October, 1978 unleashed another week of intense bombardment of Christian east Beirut, causing at least 500 casualties. Syria made a determined effort to cut the bridges linking the Maronite-held parts of Beirut with the Christian hinterland to the north, but this clash too ended inconclusively in another ceasefire.

Thirty-one months after the end of the civil war, in other words, Syria has still not made significant progress towards any of its goals in Lebanon. The country is still effectively partitioned and the government has virtually no authority beyond that provided by the Syrian army. No progress has been made on the reconstruction of the constitution or of the economy, and very little on the rebuilding of the Lebanese army. The Maronites are totally hostile to Damascus, the Palestinians only conditionally reconciled to the Syrian presence, and Israeli influence probably exceeds that of Syria in almost half of Lebanon's territory. The Lebanon continues to be an occupied country, and one in a state of suppressed civil war.

THE MILITIAS AND GUERRILLA FORCES IN LEBANON

The following groups fought in the civil war. Their present strengths are not available, but in general it may be assumed that they could quickly return to the numbers they had during the war, which are given when known.

World Armies

Maronite-Christian Forces

The Phalange

This was the largest force on the Maronite side, and probably counted 25,000 fighters at one time. It is associated with the *Kata'ib* Party headed by Pierre Gemayel, and is commanded by his sons Bashir and Amin. It drew its support mainly from the middle and lower classes of the Maronite community.

Bashir Gemayel also heads the unified military command of the Maronite militias, which constitute the military arm of the Lebanese Front headed by former President Camille Chamoun.

The Tigers

This is the militia of Camille Chamoun's National Liberal Party, and is led by his sons Dori and Dany. It rivalled the Phalange in size, and was more extremist politically. The National Liberal Party represents the conservative Christian establishment.

Zghorta Liberation Army (also known as the Giants Brigade)

The private militia of Suleyman Franjeh, who was President until September, 1976. It was much smaller than the two main Maronite militias, being recruited mainly from Franjeh's semi-feudal following in his family's home area, and was commanded by his son Tony. The latter was assassinated in mid-June, 1978.

The Maronite League

An extremist religious militia led by Shakir Abu Suleyman, a disciple of Father Sharbal Qasis. It numbered no more than a few thousand.

Guardians of the Cedar

Another extremist militia, first seen in July, 1975, and based in the Ashrafiye quarter of Beirut. Several thousand fighters.

Lebanese Forces in the South

This is a force of over 1000 men, commanded by Major Sa'ad Haddad, whose core of regular soldiers has been filled out with Christian villagers living along the Israeli border. It first came into prominence at the end of 1976, and is largely equipped with Israeli-supplied weapons. In close association with the Israeli army, it controls the southern frontier zone.

Muslim-Leftist Forces

Progressive Socialist Party

Mainly significant for its leader Kamal Jumblat, the most prominent figure on the Lebanese left and leader of the National Movement coalition which grouped together the anti-Maronite forces during the civil war. The militia of the PSP itself was small, however, and mostly recruited from Jumblat's own Druze community. It fought primarily in the Mount Lebanon region. Jumblat was assassinated in March, 1977 and has been succeeded by his son Walid.

Popular Guard

The militia of the Lebanese Communist Party, drawn mainly from the underprivileged Shi'ite community. Numbers unknown, but probably 2000-3000.

Communist Labour Organisation

A radical leftist group headed by Muhsin Ibrahim. No formal militia organisation is acknowledged, but some of its members fought in formed bodies during the war.

Al-Mourabitou

The militia of the Independent Nasserites, led by Ibrahim Kuleilat. A strongly pro-Palestinian force which was the biggest leftist militia in Beirut during the war. Perhaps 15,000 men.

Firgat al-Nasr (The Victory Division)

A Nasserite group led by Najah Wakim and Kamal Shatila which fought the Phalange in the Beirut area, but did not resist the Syrians. The political party associated with it was the Nasserite Organisation — Union of the Toiling People's Forces. Strength under 5000.

Quwwat Nasir (The Forces of Nasser)

Militia belonging to the Nasserite Organisation — The Correctionist Movement, a breakaway group from the previously mentioned one, led by Isam Arab. Strength under 5000.

Popular Nasserite Organisation

Local militia in Sidon, led by Mustafa Sad. Strength under 1000.

Movement of October 24th

Local Sunni Muslim militia in Tripoli, strongly pro-Palestinian and leftist. Fought the Zghorta Liberation Army and later the Syrians. Strength 2500+.

The Ba'ath Party

Split into pro-Syrian and pro-Iraqi factions. The pro-Syrian group led by Isam Qansu stopped fighting after the Syrian intervention, but the pro-Iraqi faction's militia led by Abdulmajid al-Rafit continued to resist the Syrian forces. Neither group's militia was very large.

Syrian Socialist Nationalist Party

Leftist, also split into pro- and anti-Syrian factions. The former stopped fighting after the Syrian intervention. Neither faction exceeded 1000 fighters.

The Battalions of Lebanese Resistance (also known as Hope)

The military arm of the Movement of the Dispossessed, a militant Shi'ite group led by Imam Musa al-Sadr (who was kidnapped in 1978 and has not since been seen). Took only a limited role in the fighting.

Palestinian Groups

These included *Fatah* (the biggest group, relatively moderate and not heavily involved in the fighting until 1976) and the PFLP, PFLP-General Command, PDFLP and ALF (all Rejection Front, in the thick of the fighting from the first). While all the above groups also fought the Syrian army in the summer and autumn of 1976, the *Saiqa* group changed sides. The PLA (Palestine Liberation Army) consists of regular military units run by the Syrians, which followed Damascus's lead throughout the war.

Total combat strength of the Palestinian guerrilla forces in the Lebanon was about 25,000.

Lebanese Army Factions

The Lebanese army, in addition to suffering a desertion rate far higher than 50%, broke into four separate forces during the course of the war.

The 'GHQ Army'

A small number of officers and men, mostly Christian, who remained obedient to the Army Commander, Brigadier-General Hanna Said. It took no part in the fighting.

Lebanese Arab Army

An organised body of Muslim enlisted men and junior officers which broke away in late 1975 under the leadership of Lieutenant Ahmad al-Khatib. From January, 1976 it fought on the Muslim—leftist side, and later against the Syrians. At its

World Armies

peak it numbered 3000–4000 men, but it withered away in the course of 1976 and was eventually reduced to a mere rump in the unoccupied far south.

Lebanon's Army

A Christian breakaway group commanded by Major Fuad Malik, which fought on the Maronite side and was closely associated with the National Liberals of Camille Chamoun.

The Vanguard of Lebanon's Arab Army

A small pro-Syrian force led by Lieutenant-Colonel Fahim al-Hajj, organised in May, 1976 to support the Syrian invasion of Lebanon.

STRENGTH AND BUDGET

At the beginning of 1975 the strength of the Lebanese armed forces was approximately 17,000 men, of whom all but 1000 served in the army. The most optimistic estimate for the Lebanese army's strength in mid-1978 was 7000 men, plus 300 in the navy and 500 in the air force, but there was room for doubt about whom some of the army formations owed their loyalty to. There has been some talk of building the army up into a force of 40,000 men, but the current target of the Ministry of Defence's rebuilding programme is 15,500. There is also an Internal Security Force (gendarmerie) of 5000 men.

Lebanon's 1978 defence expenditure was \$167,000,000, compared to a projected 1975 expenditure (which was never reached due to the war) of \$144,000,000. In the meantime, however, the GNP has declined from its 1974 level of \$3,700,000,000 to a 1977 figure of \$2,900,000,000, so the relative burden of defence on the economy has risen rapidly. Initial cost studies have indicated that Lebanon needs equipment to the value of \$1,000,000,000 to rehabilitate its defence forces — and this figure would only cover the first stage.

COMMAND AND CONSTITUTIONAL STATUS

Executive power is vested in the President, who must be a Maronite Christian. He is elected for a term of 6 years by the Chamber of Deputies, which is itself elected on a confessional basis, with 53 seats for Christians and 45 for Muslims. The present Chamber, which elected Elias Sarkis to the presidency under strong Syrian pressure in September, 1976, was itself elected in 1970, but the civil war has caused a postponement of national elections until June, 1980.

The President appoints his own cabinet, including the Defence Minister (who is customarily Greek Orthodox) and the Commander-in-Chief of the Lebanese Armed Forces, the senior serving officer, who according to the National Pact of 1943 must be a member of the Maronite Christian sect. Under the new Army Law, replacing that of 1967, the Commander-in-Chief submits proposals for the appointment of army commanders to the Military Council, made up of senior military officers. If the appointees are not approved, the matter is referred to the Defence Council, comprising the President, the Prime Minister and the Ministers of Defence and Interior, whose decision is final.

The current Defence Minister is Mr Fuad Boutros, and the Commander-in-Chief is Brigadier-General Victor Khoury. At the present time, the Lebanese army is in practice subject to a very large measure of Syrian control. The 5000 strong Internal Security Force is controlled by the Minister of the Interior, currently Mr Salah Salman. Its commander is Colonel Ahmad al-Hajj.

The largest armed force in the country is not the Lebanese army but the Arab Deterrent Force, over 90% of whose 37,000 troops are Syrian. The ADF is formally under the control of President Sarkis, and its nominal commander is a Lebanese officer, Colonel Sami al-Khatib. In practice, however, the Syrian army in Lebanon receives its instructions from the General Staff in Damascus.

The various rightist, leftist and Palestinian militias in the country have no constitutional status. The 6000 United Nations troops of UNIFIL stationed in the south of Lebanon are commanded by a Ghanaian officer, General Emmanuel Erskine, who is responsible to UN Secretary-General Kurt Waldheim.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role, commitment and recent operations of the various armed forces in Lebanon have been discussed in the section headed *History and Introduction*. The deployment of the Lebanese army is principally in the Beka'a valley in the north-east; it does not have any forces in the Maronite-held areas or in the area south of the Litani River. The Syrian army and other units of the ADF are distributed fairly evenly around the country with the same exceptions: the biggest concentration of Syrian

forces is in Beirut, where there were one armoured brigade, three brigades of armoured infantry, six commando battalions and more than 200 tanks in late 1978.

The Palestinian guerrilla forces are now largely confined to their camps, although some hundreds are active in the south of the country. The Maronite militias control east Beirut, and the coastline and mountains north of there to just south of Tripoli. The Muslim and leftist militias of the civil war are largely demobilised and in their home areas at the moment. The UN forces occupy the buffer zone between the Litani River and the Israeli border, with the exception of the strip close to the frontier which is controlled by the 'Lebanese Forces in the South', a Christian militia group enjoying Israeli support.

ORGANISATION

The army consists of two armoured reconnaissance battalions, six infantry battalions (some much under strength) and two artillery battalions.

The air force has one FGA squadron, one interceptor squadron (aircraft not in use) and one helicopter squadron.

RECRUITMENT, TRAINING AND RESERVES

Officer recruitment traditionally favoured Maronite Christians, and this preponderance is still reflected in the composition of the present officer corps. Enlisted men, on the other hand, tended to be recruited from the poorer rural areas of the country, which are predominantly Muslim. Recruitment was voluntary, and training did not involve serious attention to modern conventional combat so far as the army was concerned. There was a military academy for officer training and an NCOs' school which provided some technical instruction; it is not known if they have been reopened.

Under the impact of the civil war, which drew an estimated 150,000 men into the various militias, the Lebanese Chamber of Deputies approved a law instituting compulsory military service in December, 1975. This law has not yet been put into effect widely, if indeed at all.

The only reserve available to the old Lebanese army was a few thousand former regular soldiers who had left the service at a young age, and a much larger number of people who had received a scanty military training in secondary school followed by a 1 month army summer camp after they had graduated from school. If conscription is put into practice, however, the future Lebanese army may develop a more useful reserve organisation.

EQUIPMENT AND ARMS INDUSTRY

The old Lebanese army was poorly equipped with antiquated weapons, which caused little concern as it was primarily an internal security force. Indeed, there were frequent debates between those wishing to stay clear of the Arab-Israeli conflict and those seeking a more active role in it as to whether it was even desirable to upgrade the armed forces' equipment, which were generally won by the former group. Thus, for example, in 1971 a deal to buy Crotale SAMs for the army was cancelled by the Lebanon with considerable financial loss to the country, and there were pressure groups within the government and even the armed forces wishing to sell off the high-performance Mirage fighters that had been bought for the air force just after the 1967 war.

At the outbreak of the civil war in 1975, the army's equipment included 60 Charioteer, 25 AMX-13 and 18 M-41 light tanks, about 100 M-6 and Panhard M-3 armoured cars, 96 APCs, an unknown number of guns and mortars, and 20 TOW anti-tank launchers. Numbers of these weapons fell into the hands of various militias during the war, others were destroyed, and still others are doubtless unserviceable by now; it is not known how many are still in the army's possession and operational. Since the war the army has acquired some Saladin armoured cars, some Saracen and 80 M-113 APCs, and 10 105 mm and some 155 mm guns.

The navy has one large and three small patrol craft. The air force has one operational squadron of 11 Hunter F70 and T66 fighter-ground attack aircraft, and one non-operational squadron of 10 Mirage III EL/BL interceptors armed with R.530 air-to-air missiles. The helicopter squadron has 12 Alouette II/III and six AB-212s. Training aircraft include six SA Bulldogs, six Magisters and one Chipmunk. There are two transport aircraft: one Dove and one Turbo-Commander 690A. There is an early warning/ground-control network, but much of it is not in use.

The paramilitary Internal Security Force has 40 Saladin armoured cars and five Saracen APCs. Its units are equipped with standard infantry personal and support weapons.

RANK, DRESS AND DISTINCTIONS

The rank structure of the Lebanese armed forces parallels that of the French. Uniforms are similar to those worn by other eastern Arab armies.

World Armies

CURRENT DEVELOPMENTS

There has been considerable loose talk in the Lebanon about plans to rebuild a well-equipped modern army which in the first stage would number 15,500 men and cost about \$1,000,000,000 to equip properly, followed by a further expansion to some 40,000 men after the 1975 Conscription Law was put into effect, with still greater expenditure to equip it properly. This would, no doubt, be very useful for Syria if its plans for Lebanon's future political orientation also work out, as it would create the equivalent of two new army corps for Israel to worry about on its northern flank. The expenditure involved, however, is entirely beyond the Lebanon's present means, and great difficulties are being experienced in reaching even the first-phase goal: after 2 years, the army was only half-way there.

Indeed, the first line of difficulty in rebuilding the army has been political, since most of its troops were involved in the civil war on one side or the other, and the majority of its officers are Maronite Christians who are not sympathetic to Syria's plans for the Lebanon. Initially, the government sought to weed out those officers of the old army whom it did not want to keep by issuing a decree in February, 1977 ordering all army officers to submit their resignations within 3 months, the idea being that it would then accept or reject them according to its preferences. Although the deadline was extended to the end of 1977, however, only one-quarter of the officer corps complied, and a large proportion of those remaining were officers whom the government did not want to re-employ.

The same problem applied with enlisted men, most of whom had become members of some Muslim—leftist or Maronite militia during the war. As a result, by late 1978 the government had succeeded in recruiting only two 'virgin' battalions, consisting of officers and men untainted by close links with one or another militia: these are stationed at Hadeth, a suburb of Beirut, and near the Presidential Palace at Ba'ada, and are the only formations which can be counted on to obey orders.

The largest force, and the first to become available to the new army, is the Beka'a Command, consisting of some 3000 soldiers stationed in north and north-east Lebanon and commanded by the Commander-in-Chief's brother. In fact, however, the Beka'a Command is simply the 'Vanguards of Lebanon's Arab Army', the breakaway group which fought for the Syrians, under another name. Other units have been reshuffled in accordance with a secret army survey of the religious and communal affiliations of its troops so that entirely Christian units (most of whose troops will have fought in Christian militias) will be stationed in Christian areas, and all-Muslim units in Muslim areas.

What this means, in effect, is that few of the troops on the army's books would obey an order from the Defence Ministry without checking first either with the Syrians or with their local warlord. The sheer preponderance of Maronite officers has likewise thwarted both Syria's desire to construct a reliably pro-Syrian high command, and the desire of Lebanese moderates to have a balanced and neutral high command: of five bureaux chiefs in the General Staff, one owes allegiance to Syria and four to the right-wing Lebanese Front, while left-wing newspapers refer to the regular army as the 'regular militia'.

The re-equipment of the army is also proceeding at a less than headlong pace. In mid-1977 the USA agreed to provide Lebanon with an immediate \$25,000,000 credit for the purchase of 5000 M-16 rifles, 80 APCs and 105 mm and 155 mm guns, and promised a further \$75,000,000 in credits over the following 2 years (which would be spent on heavier equipment). The USA also made an immediate donation of surplus armoured vehicles (Saracens and Saladins) which were transferred from Jordan to the Lebanon against replacement by the USA with newer vehicles, and undertook to provide training in the use of the American weapons to Lebanese officers and NCOs in the USA and through American advisers in Jordan and Saudi Arabia. The Lebanon has requested technical assistance from the USA in launching conscription for the armed forces during 1979.

In November, 1978 Lebanon's Defence Minister Fuad Boutros also sought French arms aid during a visit to Paris. The French government agreed to play a major role in reconstructing the Lebanese army, not only by supplying weapons but also by training cadets and officers in France. The arms purchases discussed were said to include AMX-30 medium tanks and AMX-13 light tanks, helicopters, anti-tank missiles, patrol boats and small arms. There was some discussion on a proposal for France to take over the maintenance of the Lebanon's unserviceable Mirage fighters and to reconstruct the radar system on Mount Hermon that was put out of action in the 1967 war. The package was reported to be worth about \$300,000,000 of which the bulk was to be financed by Saudi Arabia.

Even if the manifold difficulties in the way of reconstructing an efficient Lebanese army which is loyal to the State should be surmounted, however, it will mean little unless the far more numerous militias of the Christian right, the Muslim left and the Palestinians are disarmed. More than 3 years after the civil war's end, progress on that crucial issue was precisely nil.

GWYNNE DYER

LESOTHO

Lesotho, a mountainous and impoverished nation of 1,200,000 people which is entirely surrounded by South Africa, has perforce to depend on that country for all defence against external threats, although it is fundamentally hostile to the Republic's policy of *apartheid*. Against South Africa it is wholly defenceless, and in addition it is almost entirely dependent on the South African economy — all imports and exports and all travellers to and from Lesotho must pass through South Africa, 40% of the country's adult male workforce seeks its employment in South Africa's mines, and the South African rand is Lesotho's currency as well.

Bereft even of the possibility of external defence, Lesotho is also spared one of the main internal security problems that trouble most black African countries. It is almost unique amongst the sub-Saharan members of the Organisation of African Unity in that 99.7% of its people belong to a single tribe, the Basotho, and speak a single language, Sesotho. There is a strong instinctive sense of national unity, and therefore no need for security forces to hold the country together.

What remains as a possible source of conflict is domestic political dissension, and that Lesotho has had. Its security forces, therefore, are exclusively designed to control, and if necessary repress, the political opponents of the regime. They have repeatedly proved themselves capable of performing this task.

As a British High Commission Territory, an African kingdom which had made a direct treaty with the British crown, Basutoland (as the country was called before independence) did not become part of the Union of South Africa when it was created in 1910. Like the other High Commission Territories, Swaziland and Bechuanaland (now Botswana), it was therefore eligible to become an independent nation and acceptable as such to other black African States, as other traditional tribal territories which had been physically incorporated in South Africa were not. It received its independence in 1966 as a constitutional monarchy with Chief Leabua Jonathan as Prime Minister under King Moshoeshoe II, and became a member of the United Nations and the Organisation of African Unity. It has always been understood by other African States that Lesotho's peculiar situation compelled it to maintain reasonably friendly relations with the Republic of South Africa, so this did not constitute an obstacle to its membership in the latter organisation.

At the first national election in January, 1970, however, the Congress Party, a radical grouping led by Ntsu Mokehle, an avowed pan-Africanist who had made it clear that he did not intend to continue Chief Jonathan's policy of co-operation and co-existence with South Africa, emerged as the surprise but clear winner. Jonathan promptly alleged electoral fraud, and carried out a coup with the aid of the paramilitary Police Mobile Unit, then commanded by British officers who were personally loyal to him. Mokehle and 80 of his Congress Party supporters were jailed, and the King was placed under house arrest before being permitted to go into exile. Pockets of resistance in outlying areas were quickly crushed, a revolt by a force of about 1000 men in the north of the country in April, 1970 was briskly suppressed, and Jonathan's rule was secured. Since then he has governed by decree.

King Moshoeshoe returned later in 1970, having accepted a government order prohibiting the monarchy from participating in politics, and most of the political prisoners had been released by 1972. There was then some hope of a gradual return to democracy, but an attempted coup by Congress Party supporters in January, 1974 reversed the trend. The coup attempt was a feeble affair, involving attacks with small arms on five police stations in northern Lesotho, but the response of the security forces was severe: at least 50 Congress Party supporters in the affected area were shot or beaten to death, and strict new security laws were introduced.

The regular security forces which assure Chief Jonathan's rule are the Police Mobile Unit and the Lesotho Mounted Police, who are well trained in riot control and counter-insurgency tactics. They number about 900 men, and are under the direct command of Prime Minister Chief Jonathan, who is also the Minister of Defence and Internal Security. In addition, Jonathan's National Party maintains a 4000 strong militia of party supporters known as *Lesotho Khotso*. Annual military expenditure is about \$1,200,000, a modest 1.5% of GNP, but additional money is spent on the party militia. The regular forces are recruited by volunteer enlistment; the pay and conditions of service are attractive compared to the prevailing circumstances in the civilian economy. Training, organisation and tactics follow British models.

Lesotho's first serious external quarrel arose in 1976, when South Africa gave independence to the first of its projected 'Bantustans', Transkei, which lies between Lesotho and the sea. In common with all other countries except South Africa, Lesotho refused to recognise Transkei, regarding it as a puppet of Pretoria and an illegitimate offspring of the *apartheid* policy. South African officials were withdrawn from the Transkei border areas, and an attempt was made to force Lesotho to enter into direct negotiations with Transkei — thus conferring tacit recognition of it — by refusing to allow Basotho villagers living in remote parts of Lesotho, cut off by mountains from the capital and the western regions, to pass through Transkei on their way to and from their habitual shopping centres in South Africa without buying Transkei visas first. Lesotho's allegation that the border had been 'closed', however — for which it received \$17,000,000 in compensatory aid from the United Nations — was a fabrication.

The Xhosa of Transkei and the Basotho of Lesotho have never been particularly enthusiastic about each other, and the

World Armies

pressures placed on the Lesotho government to deal with Transkei by both Transkeian and South African diplomats have created a good deal of resentment and some hardship in Lesotho. There is little likelihood of any open conflict between the two, however, and even less of clashes between Lesotho and South Africa.

Lesotho can get by comfortably in its external relations without having to build a larger and better equipped force, and the present force seems quite adequate for internal security. If the long-predicted internal turmoil comes to South Africa, with refugees in large numbers, black nationalist guerrillas seeking base areas, and the rest, then of course the security position of Lesotho would be drastically changed for the worse. Precisely because Lesotho is too small and weak to ward off such problems successfully, however, the government has seen little point in attempting to build up forces that would be even a gesture in that direction.

GWYNNE DYER

LIBERIA

History and Introduction

Although Liberia became independent in 1847 no permanently established force existed until 1908, when the Liberia Frontier Force was created; its chief purpose was to pacify the interior and to defend the interests of the coastal Americo-Liberian community in their control of the nation's economy. This force, when despatched to the interior, often lived off the area which it was pacifying, an additional communal punishment; it also recruited by methods frequently forcible. Its officers were drawn either from the coastal aristocracy or tribal *élites*; it started to receive United States military assistance in World War II. In 1962, after the independence of so many former colonies and also after a very poor performance by a battalion in the U.N. Congo Force, the role of the force was reviewed, and as 'The Liberian National Guard' it emerged as a national army with a nascent professional spirit. After industrial troubles in 1966 the Liberian government decided to increase the Guard to its present size; at the same time a citizen militia, organised on the lines of the United States National Guard, was also established. A major reason for the creation of the latter was the need for a check on the Guard; with its increasing professional ability appeared political ambitions among certain officers. The Militia has now, perhaps, assumed the former role of the Frontier Force, the preservation of the privileged position of the Americo-Liberians.

The professional pride of the Guard turning to political ambitions can be observed in reports of a planned coup in 1963, the arrests of retired senior officers in 1969 and again in 1970, and a further planned coup involving two lieutenant-colonels in 1973. In an unexplained political move in August, 1977 the President dismissed his Defence Minister, M.A. Greaves, and rusticated his personal military aide, General D. Warner, for a month

Strength and Budget

Population: 1,800,000
Army: 3000 with a militia estimated at 6000
GNP (1977 estimate): \$800,000,000

Command and Constitutional Status

The Liberian Minister of Defence, in the government of President Tolbert's True Whig Party, is the President's son-in-law, Mr B. Holder. The President is the overall Commander-in-Chief.

Role, Commitment, Deployment and Recent Operations

The roles of the two forces have already been outlined. Liberia does however perceive an external threat to her sovereignty from Guinea, particularly in the rich iron ore Mt. Nimba area, where occasional incursions by Guinean soldiers are rumoured.

Organisation

The Guard comprises three infantry battalions, an artillery battalion, an engineer battalion, a reconnaissance company and a logistic unit. One report suggests that a special Presidential Bodyguard unit may have been added to the establishment. There are also three light and two transport aircraft.

Recruitment, Training and Reserves

Recruitment of soldiers is voluntary in peace-time. Americo-Liberians and members of important families in the inland ethnic groups tend to provide the majority of the officers.

A resident United States army mission assists with training.

A Liberian National Military Academy was founded in the 1960s.

Training of the militia is reported to be very poor.

World Armies

Equipment and Arms Industry

Both the Guard and Militia use only United States equipment provided under the United States Military Assistance Programme. The infantry battalions still use United States army M-1 rifles and carbines, together with 60mm and 81 mm mortars; the artillery battalion has 105 mm (towed) howitzers and the reconnaissance company M-3AI scout cars.

Rank, Dress and Distinctions

These generally follow the American system.

Current Developments

Although Liberia's independence is very much older than other African States, her problems are very similar, and are reflected in microcosm in her forces. Both President Tubman and, since 1971, President Tolbert, have had to try to integrate the hinterland ethnic groups into a nation, many of whose institutions and whose leading families were alien in custom and speech. The government hopes the forces will act both as a medium of integration and as a precaution against revolutionary change.

L. L. MATHEWS

LIBYA

HISTORY AND INTRODUCTION

Libya, with fewer than 3,000,000 people and such unthreatening neighbours as Tunisia, Niger, Chad and Sudan, has the tenth largest force of medium tanks in the world. With the exception of Israel and Syria, all the other members of this select group with over 2000 tanks have at least ten times Libya's population. Libya is the limiting case in that class of oil-rich, population-poor States whose defence expenditure is neither constrained by circumstances nor directed against recognisable military threats. Nor does it seem bound by an unimaginative adherence to traditional military precepts: the ratio of tanks to artillery pieces in the Libyan army is of the order of 13 to 1.

The immense wealth derived from oil exports which allows Libya to cut such a bold figure on the international political and military stage is, however, of extremely recent origin. As recently as 15 years ago, it was one of the poorest and least-developed nations in the world. Almost all adult Libyans were born into a poverty-bound and deeply traditional society: the extreme and erratic courses of Libyan political and military policy since the money began to flood in are by no means solely attributable to the vagaries of a single leader. General Mu'ammarr al-Qaddafi is in many ways representative of the responses of Libyan society as a whole to the abrupt transformation in its circumstances.

Libya's career as a political entity has been relatively brief. All its links with classical antiquity were broken by the Arab conquest of the seventh century AD, and even the Berber cultural substratum which still survives elsewhere in the Maghreb was totally submerged in Libya in the ninth and tenth centuries by large-scale immigration of Arabic-speaking nomadic tribes originally from the Najd in central Arabia. Of Cyrenaica in particular it may be said that no other part of the 'Arab world' except Arabia itself is more genuinely 'Arab' in ethnic terms. What little survived from the civilisation of classical, Abassid and Fatimid times was permanently destroyed by the catastrophic invasion of the Banu Hilal and Banu Suleim tribes in the eleventh century: agriculture was abandoned everywhere, and the country lapsed into a severely fragmented tribal society living in a semi-nomadic subsistence economy for over half a millennium.

Little improvement was brought by the Ottoman conquest of Libya in 1543, and the province was soon left to the administration of the local Pashas, Deys and the pirate captains whose captives provided most of the income of the small urban section. The three main inhabited regions of the country — Cyrenaica on the eastern coast, Tripolitania on the western coast and the extensive oasis complex of the Fezzan in the south — lived in almost complete isolation from each other, separated by hundreds of miles of desert, and even within each region tribal and family loyalties precluded any broader sense of identity. The very first glimmering of such an identity came only with the spread of the Sanusi religious brotherhood, founded in 1834 in Cyrenaica by Muhammad ibn 'Ali al-Sanusi, but it was not until this forgotten Ottoman province was exposed to foreign invasion in the early twentieth century that a broadly Libyan national consciousness began to take shape.

In 1911 Italy made an unprovoked attack on the Ottoman Empire with the purpose of seizing and colonising Libya; Italian troops were quickly landed and captured the few large coastal towns. The Turkish response, however, was to send arms and young army officers with experience of Balkan guerrilla warfare (including Enver Pasha, later the Ottoman leader in World War I) to organise the Libyan population in guerrilla resistance. This they did, in close co-operation with the leaders of the Sanusi order, and the Italians were successfully confined to the coastal towns. Turkey, defeated in the Balkan Wars, was forced to cede Libya to Italy in late 1912 and withdrew its officers, but the Sanusiya continued to resist fiercely. The Italians had still made little progress in the Sanusi stronghold of Cyrenaica, and had only a tenuous hold on the inland parts of Tripolitania, when in late 1914 general war broke out in Europe, and Turkish arms and military advisers once again began to reach Libya by submarine. The Italians were unable to deal with the Sanusi army, but it was decisively defeated by the British when it attempted on Istanbul's orders to invade the Western Desert of Egypt in 1915. This led to a change of leadership in the Sanusi, which then passed to Sayyid Muhammad Idris, and a peace settlement was concluded which recognised him as the Amir of the interior of Cyrenaica on condition that he end attacks on the coastal towns and on Egypt.

The forced growth of Libyan national consciousness under these conditions is seen in the fact that the Tripolitanians, who attempted to form a republic and expel the war-weary Italians in 1918, recognised Muhammad Idris as Amir of all Libya in 1921 in order to present a joint front in the negotiations for 'administrative independence' which were held in Rome in that year. The negotiations failed, but even under the vigorous military leadership of Mussolini's new Libyan governor, Count Volpi, it took the Italians until 1925 to pacify Tripolitania and disarm the population. The main Sanusi bases in the oases of the south were occupied in the later 1920s, but it was not until 1931, after a barbed-wire fence had been built all along the Egyptian frontier and the tribes of Jebel Akhdar in central Cyrenaica had been put into concentration camps, that resistance finally ended in Cyrenaica with the capture and hanging of Omar Mulhtar, the main Sanusi military leader.

World Armies

The Italian rulers of Libya transformed the country during their brief tenure there, developing agriculture and building roads, towns and harbours, but it was all done for the benefit of the relatively very large numbers of Italian peasant immigrants who were now encouraged to settle in the country. Libyans were discouraged from proceeding beyond a primary education, and very many of them lost their lands to the immigrants. The extreme anti-Western sentiment and the willingness to support virtually any movement anywhere in the world that portrays itself an 'anti-imperialist' which now characterises Libyan policy owes much to the fact that, unlike any other Arab State except Algeria (which shares these policies), Libya was the victim of a deliberate programme of large-scale European colonisation.

There is also a largely unremarked historical reason for Libya's uniquely uncompromising policy of pan-Arab nationalism and its extreme interpretation of the pan-Islamic ideal. Qaddafi and his contemporaries were powerfully influenced in their formative years by the propaganda on these topics preached by Cairo radio in Nasser's heyday — as they admit themselves — but they were in any case born into a culture which had been the first Arab society in the twentieth century to fight against European domination: their parents grew up while the resistance was still continuing.

In the circumstances prevailing in Libya in 1911–18, at a time when the Ottoman Empire was appealing strongly to the pan-Islamic ideal, there was an almost complete identity between local nationalism and pan-Islamic ideology in the Libyan resistance movement: no other twentieth-century Arab nationalist movement began within the framework of a Muslim religious order. As for the pan-Arab strand, at the formative stage of the Libyan resistance movement in 1914–15 it was advised by Ottoman officers of Arab origin who were already involved in secret pan-Arab revolutionary societies, like Nuri as-Said, later a military leader of the Arab revolt and Prime Minister of Iraq until 1958, and Aziz al-Masri, later the Egyptian senior officer who was the *éminence grise* behind the 1952 Free Officers' revolt. Due to the almost complete dearth of information about the currents of opinion within Libyan Arab society during the Italian and post-Italian colonial eras, the links between Libya's formative experience of nationalism and its present-day character cannot be traced, but it seems safe to say that modern Libya is acting within its own ideological tradition.

The modern Libyan armed forces have their origin in the Libyan Arab Forces (LAF) which were raised by the British authorities in Egypt at the beginning of World War II from amongst the Cyrenaican refugees who had taken asylum in Egypt after the collapse of the anti-Italian resistance a decade before. By 1940 the LAF, more popularly known as the Sanusi Army, numbered 600 officers and men. When two divisions of Cyrenaicans raised by the Italians fell almost intact into British hands in that year many of them elected to join the LAF, which thus expanded to a force of five battalions intended by the British for guerrilla operations in the Jebel Akhdar region. Because of the high mobility and considerable technical requirements of modern desert warfare, however, the LAF was in the end mostly used for ancillary duties such as guarding military installations and prisoners (although one battalion did take part in the fighting at Tobruk).

When the Italians were driven out of Libya the British saw no further need for this force, but the Sanusi Army was reluctant to disband and a majority of its members arranged to transfer to the local police force in Cyrenaica under the British military administration. During the years 1945–50 the country was administered by Britain with the greatest economy while its fate remained in doubt — at one point the Soviet Union was actively seeking the mandate for Libya from the United Nations — but eventually, in accordance with a United Nations resolution, Libya received its independence in December, 1951 as a monarchy under King Muhammad Idris, the Sanusi leader and hero of the earlier resistance movement. The veterans of the LAF then transferred from the police to form the nucleus of the Royal Libyan Army.

Libya was then an extremely poor country, with little to sell abroad except her strategic position, so in 1953 King Idris concluded a 20 year treaty granting Britain the right to maintain military bases in the country in return for substantial annual payments. In 1954 he concluded a similar 20 year treaty with the USA, and by the late 1950s Wheelus Air Force Base in Libya was the largest USAF base outside the USA. Oil was not discovered until 1959, and did not begin to be produced in significant quantities until 1962.

The King's main power base was in the strongly Sanusi areas of Cyrenaica, and as the years passed even that began to be undermined by the flood of Nasserist pan-Arab, anti-monarchical propaganda emanating from next-door Egypt. As the main Arab States involved in the confrontation with Israel became increasingly anti-Western and more closely tied with the Soviet Union in the period 1956–67, his close links with the Western powers and the presence of Western military bases on Libyan soil became an increasing embarrassment: there were serious student riots in 1964 and 1967.

In these circumstances the King grew increasingly to distrust his army, particularly as its original composition, consisting almost entirely of personnel of tribal extraction, began to be diluted by more skilled but politically less reliable city dwellers to cope with the greater technical requirements of a modern military organisation. Yet he was being encouraged by his Western allies to modernise his army (and his new navy and air force, founded in 1962 and 1963, respectively) in order to protect the oilfields, and incidentally to serve as a market for large imports of tanks and air-defence systems from Britain. His solution was to keep often ill-qualified Cyrenaican officers owing him personal loyalty in all important command positions, and to organise the force along regional and tribal lines, with the Cyrenaican bedouin forces being deployed in the politically more important areas including the two main cities of Tripoli and Benghazi. The army's strength was deliberately limited to 6500 men, and it was counterbalanced by a variety of armed police forces ranging from lightly armed territorial forces to the mobile National Security Force, equipped with helicopters and armoured cars, and the Cyrenaican Defence Force, a sort of praetorian guard recruited exclusively from tribes ruled by the Sanusi clan. The strength of these latter two forces in 1968 was 14,000 and their armament was not significantly inferior to that of the army: if the army bought tanks, the CDF was provided with anti-tank weapons, and vice-versa.

Even these elaborate measures failed to preserve the monarchy, which was overthrown in a bloodless coup on September 1st, 1969. As oil revenues had grown almost exponentially through the 1960s — by 1968 Libya was the second-largest Arab oil producer, with the great advantage, as a supplier to Europe, of being on the right side of the Suez Canal — the contrast between what might be done with those revenues for pan-Arab causes and for domestic living standards, and the conservative policies pursued by the King, had become painfully obvious to many Libyans. Qaddafi and the other young officers who seized power in 1969 have since revealed that they had been secretly discussing a Nasserist revolution for the previous 10 years, but by the time the revolution came virtually the entire Libyan population supported it. King Idris went into exile in Egypt, and the 'Revolutionary Command Council' (RCC) of 12 young officers declared the country a republic.

Most of the RCC officers in 1969 were from the lower strata of society — half were from tribal and peasant backgrounds — and their average age was twenty-eight. Qaddafi himself was twenty-seven, the son of a shepherd. They were the first generation to grow up with a truly national outlook, moulded in the army, and in origin were evenly distributed amongst the country's three main regions. Like most of their contemporaries in the army they were imbued with a pure Nasserist dedication to the pan-Arab cause, unsullied by any of the practical considerations and great-power ambitions which repeatedly distracted their Egyptian hero from his goal, and they had virtually unlimited funds at their disposal. At the same time they were almost all the products of a completely traditional and xenophobic society, and were determined to reassert that society's values. They at once embarked on a comprehensive restructuring of Libya's domestic society and its international relations.

The first priority was the unification of the armed forces, which was accomplished by incorporating most of the National Security Force and the Cyrenaican Defence Force into the army, whose strength was thus tripled at a stroke to about 20,000 men. The entire leadership of generals and colonels was dismissed or retired (though usually on generous pensions), leaving the ranks of colonel and lieutenant-colonel held by some of the RCC members as the highest in the army. After an alleged coup attempt by the Ministers of Defence and the Interior in the first, largely civilian cabinet in December, 1969 at least one hundred other officers were retired, and members of the RCC took direct control of most branches of the government. The Sanusi tribes were disarmed, and the remaining police forces were placed under the Ministry of the Interior, which was headed by an RCC member. In 1971 a civilian militia known as the Popular Resistance Forces was created under the command of another RCC member, Major Khweildi al-Humaidi, and under the operational control of the Chief of Staff of the Libyan Armed Forces.

In domestic affairs the regime pursued a radical policy of Arab nationalism and Islamic fundamentalism. Alcoholic drinks and the use of languages other than Arabic were banned, all non-Muslim places of worship were closed, and such traditional Koranic punishments as the amputation of the hands of thieves were introduced. Most of the European and American experts employed in the country were rapidly replaced by Arabs from more advanced neighbouring countries, principally Egyptians and Tunisians, who soon came to account for one-sixth of the country's resident population as the regime's policy of creating a Libyan welfare State and a modern diversified industrial economy demanded ever larger numbers of foreigners with skills unavailable in the Libyan population itself. The law requiring Libyan ownership of all businesses in the country was strictly enforced for the first time, and the distribution facilities of the main oil companies operating in the country were nationalised — to be followed at a later date by their production facilities. In 1970 the property of all Italians and Jews remaining in the country was sequestered and they were expelled from the country.

In its international relations with non-Arab countries, the new regime adopted a policy of strict non-alignment. The treaties permitting Britain and the USA to maintain military bases in the country was brought to an early end, and by mid-1970 all foreign forces had departed from Libya. Closer relations were maintained with France, which was seen as being less closely tied to either super-power and more favourably disposed to the Arab side in the confrontation with Israel, and most Libyan arms buying was transferred from Britain to France.

The armaments which the Libyan regime has been buying in ever-increasing amounts since 1970 are intended for the modernisation of the armed forces, which in turn are officially stated to be intended for the sole purpose of destroying the Israeli presence in the Middle East. Thus far greater stress was placed on creating first-class armoured and air forces than would otherwise be appropriate for a nation facing as few military threats on its own borders as Libya. In recent years these equipment acquisitions have clearly exceeded the ability of the Libyan armed forces to operate them even in terms of sheer manpower availability, and it must be assumed that a large proportion are destined for other Arab nations when they finally see the light and join Libya in one last victorious *jihad* against Israel.

Libya's priorities in foreign policy have always been principally within the Arab/Islamic world: first, and closely linked, come pan-Arab unification and the elimination of Israel; second, at some distance, comes the support of other Islamic nations and minorities; third comes the support of other 'anti-imperialist' causes. Pan-Arab unification has always been seen in the context of republics: traditional Arab sheikhdoms and monarchies are viewed as obstacles to unification, and have been the constant target of Libyan-subsidised intrigues aimed at overthrowing them. Libya's attempts to further all of these aims have principally taken the form of the promise or the actual delivery of financial subsidies, and occasionally arms, paid out of its almost bottomless coffers. They have generally been characterised by a devastating naïvety on the part of Tripoli, and a cynical willingness to utter 'anti-imperialist', pan-Arab and/or pan-Islamic platitudes pleasing to Libyan ears on the part of the variegated beneficiaries.

The most striking demonstration of the regime's pan-Arabism was the enthusiasm with which it rushed headlong into

World Armies

agreements on unification with various other radical Arab regimes. In the very month he seized power, Qaddafi signed a loose confederal pact (the Tripoli Pact) with Egypt and the Sudan envisaging the eventual union of all three States, and in April, 1971 Egypt, Syria and Libya created the Federation of Arab Republics. Libya took an idealistic approach to these agreements, but for the other partners they were mere measures of expediency, intended only to secure Libyan financial aid and a certain propaganda appeal in the wider Arab world.

All the non-Libyan participants had strong but transient reasons for needing such a boost at the time: Nimeiri of Sudan had just seized power 6 months before the Tripoli Pact, and was facing powerful challenges both from the Ansar religious sect and from the Communist Party, while Nasser was still gravely shaken by his defeat in the 1967 war. Libya was indeed instrumental in saving the Sudanese regime during the 1971 communist coup in Khartoum, when it forced down a British civilian airliner bearing the coup leaders back to Sudan and handed them over to Nimeiri for execution, but thereafter Nimeiri, his power secure, lost interest in union. At the time of the 1971 federation the new Egyptian leader, Anwar Sadat, was still facing a major internal challenge from the pro-Moscow Ali Sabri faction, and the Syrian leader Hafez al-Assad had just clambered to the top of the Ba'athist pile in Damascus, but as those two regimes grew in domestic strength over the following year they too lost interest in pursuing union with Libya.

To avoid the opprobrium of publicly spurning 'Arab unity' Sadat agreed in August, 1972 to total unification between Egypt and Libya by September, 1973 but despite such bizarre Libyan pressures as a 'popular march' on Cairo by 40,000 Libyans (which achieved no more than the destruction of an Egyptian border post), the appointed date passed without action. In the following month Egypt enraged the Libyan leadership by launching its 1973 war against Israel without previously informing Tripoli, and then burnt its bridges forever with the fundamentalists in Libya by revealing that it was a 'limited war' intended to lead to a negotiated peace settlement with Israel. Qaddafi denounced it as an 'operetta war'; by the end of 1973 Egyptian-Libyan diplomatic relations had been ruptured, and Cairo had established a close relationship with a new source of financial assistance, Saudi Arabia.

There was one further essay towards Arab unity, when Qaddafi persuaded the ageing President Bourguiba to agree to the union of Libya and Tunisia after private talks in January, 1974 but this decision was immediately reversed when Tunisian Prime Minister Hadi Nouira, who had been abroad, returned to his country. Just as Qaddafi was left behind with his Nasserist goal of grand confrontation with Israel while almost all the Arab countries had moved into an era of gradual negotiation, so he was left isolated in his dreams of pan-Arab union, which had lost their dramatic appeal in the rest of the Arab world by the time he had come to power. His main response to those rebuffs, after 1973, was to seek to destroy those Arab regimes which had betrayed his ideals, and to accelerate greatly the expansion of the Libyan armed forces.

Qaddafi's regime had already acquired a reputation for its dangerous readiness to resort to violence and its unpredictability. Two attempts to overthrow and kill King Hassan of Morocco in 1971 and 1972 were subsidised by the Libyan intelligence service. Qaddafi had ordered an Egyptian submarine captain in 1973 (when the two countries were officially operating a joint command) to torpedo the British liner *Queen Elizabeth II* cruising towards Israel on charter to a group of Jewish tourists, in retaliation for the shooting down of a Libyan airliner that strayed over Israeli-occupied Sinai. (The submarine commander refused to obey the order.) But it was in 1974-5 that Tripoli set about systematically to overthrow the Arab regimes which had rejected its plans for union. The first target was Egypt, where Libyan agents began supporting various secret groups of Islamic extremists opposed to the existing regime in acts of sabotage and assassination. Several plots were directed against President Sadat's life, and the two countries had reached the point of large-scale border clashes by July, 1977 (see Recent Operations).

During 1975-6 the Libyan government supported two major attempts to overthrow and kill President Nimeiri of the Sudan: in the second of those attempts, in July, 1976 about 1000 Libyan-trained and equipped rebels succeeded in reaching Khartoum, and the city centre was heavily damaged in the fighting before they were suppressed. In the same year Libyan-trained agents were sent into Tunisia to kidnap or assassinate Prime Minister Nouira, who had thwarted the project for Libyan-Tunisian union. (They were captured, and confessed.)

Facing almost complete frustration in its programme for war against Israel and Arab union in the Mashreq (the Arab east), the Libyan regime turned its attention increasingly after 1974 towards its cherished project for a 'People's Maghreb', a union of the Arab west under radical regimes. It gave moral support (though not diplomatic recognition) to the 'Saharan Arab Democratic Republic' which was fighting to reverse the partition of the former Spanish Sahara between Morocco and Mauritania in 1975, and in December of that year committed its armed forces to a full military alliance with Algeria should the latter's provision of bases and support for the Saharan rebels draw it into war with Morocco.

Libya also recommenced providing military aid to the Muslim tribal rebels of northern Chad (Frolinat) in 1975, after a coup in N'Djamena overthrew and killed the Chadian President, General Tambalbaye, with whom Libya had made a secret agreement in 1973 to cease supporting the rebels in return for Chadian silence on Libya's annexation of 37,000 square miles of Chad's northern territory (the 'Aouzou Strip'). The new Chadian regime of General Félix Malloum repudiated the agreement and protested publicly against the advance of the Libyan border up to 110 miles south, whereupon Libya began a process of escalating military involvement in support of Frolinat which now involves thousands of Libyan troops (see Recent Operations). Libya also annexed about 7500 square miles of territory along the Niger frontier in 1975, and backed a bloody coup attempt against Niger's President Kountché in Niamey in March, 1976 to forestall any protests. The coup failed, but President Kountché forebore to raise the question of his lost territory at an urgent meeting with the Libyan and

Algerian leaders in the following month, and also agreed in principle to recognise their protégé, the Saharan Arab Democratic Republic.

The orgy of conspiracy and intervention against Libya's neighbours after 1974 was paralleled by a sharp rise in Libya's indiscriminating aid to extremist and terrorist groups. In addition to its lavish financial assistance and provision of training, travel and communications facilities for the more violent and extremist sections of the Palestinian resistance movement, it was to be found supporting Dhofari rebels in Oman, Muslim secessionists in the Philippines and Thailand, the Irish Republican Army, secessionists in the Arab minority in Iran and Eritrean rebels in Ethiopia (until the revolution in Addis Ababa, and Soviet and Cuban arguments, persuaded it to change sides). African nationalist guerrillas and such regimes as President Amin's in Uganda and Emperor Bokassa's in the Central African Empire both benefited from Libyan largesse, and at the height of this phase in 1975-6 there is little doubt that non-Third World terrorist groups like Germany's Red Army Faction and the Japanese Red Army were at least indirectly associated with some Libyan enterprises through the links which they had established with Palestinian extremist groups like Black June. Libyan aid to such groups is now considerably more discriminating, however, and support for acts of outright terrorism against innocent third parties (aircraft hijackings and the like) has been withdrawn.

Thus one post-1973 Libyan response to the frustration of the regime's goals was all kinds of direct action against those forces which were seen as obstacles; the other has been a huge military build-up. Until about 1973 the expansion of the Libyan armed forces was aimed at the creation of modern, well-balanced forces of a size that Libya could reasonably expect to operate with its limited resources of skilled manpower, although even then there were severe shortages of pilots and skilled technicians. Most arms were bought from France, and although an agreement on oil co-operation had been concluded with Moscow in 1972 Libya's relationship with the Soviet Union was not close. It was not to be expected that France would co-operate in the scale of arms purchases that were now envisaged by Libya, however — nor indeed did France have the production capacity to fill such orders within a reasonable period of time — and in view of Libya's political isolation in the world the only potential supplier was the Soviet Union. Accordingly, Prime Minister Abdul Salam Jalloud visited Moscow in May, 1974 with a lengthy shopping list of arms. The Soviet Union, aggrieved at its expulsion from Egypt and hungry for hard currency, agreed to supply the arms, and the first Soviet tanks were delivered in 1975. Since then Libyan armoured strength has virtually doubled every year, and annual cash payments for arms to the USSR have been estimated at well over \$1,000,000,000 a year (occasioning a severe liquidity crisis even for wealthy Libya in 1977). Some Soviet advisers have been stationed in Libya and numbers of Libyan officers and men have been sent to the Soviet Union for training, but there is no indication that there is anything more than a cash deal; certainly there are no Soviet base facilities in Libya. (For further comments on the probable military purposes of this great expansion of the armed forces, see *Role, Commitment, Deployment and Recent Operations*.)

Throughout the decade since the 1969 revolution there have been almost continuous attempts to create some broader constitutional and popular base for the regime. The Arab Socialist Union (modelled after Nasser's political front in Egypt) was created in 1971 as the sole official party and an instrument of popular mobilisation. A 'cultural revolution' was launched in 1973 (directed, unlike its Chinese namesake, to the revival, not the destruction, of traditional cultural values) and 'popular committees' were formed in each geographical and functional unit of Libyan society to serve as the executive and legislative organs of government, with a General People's Congress (GPC) at the top which would eventually supplant the RCC. It did not do so, however, until 1977, when at its fourth congress the GPC officially changed the country's name to the Popular Socialist Libyan Arab Jamahiriya (an Arabic neologism coined from the words for 'republic' and 'masses' — 'peopledom' is the favoured translation). At that congress all power was officially vested in the people through People's Congresses, Popular Committees, Trade Unions, Vocational Syndicates and the General People's Congress. The RCC disappeared, and in its place the General Secretariat of the General People's Congress was established with Qaddafi as General Secretary.

It did not escape notice, however, that the membership of the General Secretariat was the same as that of the RCC; there has in fact been no progress whatever in moving from a personal to a more broadly based regime, and all power in Libya remains concentrated in the hands of Qaddafi and his dwindling band of military associates who carried out the 1969 revolution. That is not to imply that he is without popular support, however, and the regime's waning popularity was at least temporarily revived in the surge of patriotism which followed the brief war with Egypt in July, 1977. A more serious problem is the continuous decline of support within the army itself for Qaddafi's extremist foreign policies and his unfathomable objectives in acquiring so much unusable military equipment. Of the original 12 members of the RCC, only five are left, and there have been numerous arrests and some executions amongst other army officers. (For further details, see *Current Developments*.)

STRENGTH AND BUDGET

The manpower strength of the Libyan armed forces, which for years had hovered around the 25,000 mark, has been expanding rapidly since the effective introduction of conscription, and is now estimated to total 37,000. 30,000 of these serve in the army, 4000 in the air force and 3000 in the navy. The new stabilised figure for armed forces' strength when expansion is completed is likely to be well over 40,000, almost all of the increase being in the army.

World Armies

Libya had to rescind an earlier decree on conscription in 1967, when the withdrawal of workers from the civilian economy caused a severe labour shortage, but now as then this is a problem pertaining specifically to skilled labour, not to total manpower availability. From a native population of 2,600,000 Libyans, growing at a rate of 3.8% a year and weighted heavily in favour of the younger age groups, the country is able to provide the raw manpower for armed forces of this size. With 40% of the adult labour force now provided by foreigners, including the larger part of the skilled workforce, conscription is unlikely to produce the economic difficulties it caused in 1967; on the other hand, nor is it likely to produce an adequate number of recruits with suitable backgrounds for mastering complex weapons systems.

The shortage of skilled personnel, rather than of sheer numbers, has been the main problem in the Libyan armed forces all along. In 1977 it was still the case that over one-third of the Libyan army would be used up simply in providing crews for its tanks, while all the rest could ride comfortably in its APCs and other combat vehicles, leaving nobody to answer the telephone at headquarters. Conscription will produce no quick answer to the acute shortage of trained manpower, which meant that in early 1977, according to foreign intelligence sources, the Libyan armed forces had only 150 competent pilots for over 160 combat aircraft (the normal ratio is two pilots per aircraft or more).

The Libyan defence budget in 1978 was 130,000,000 Libyan dinars (\$448,000,000) out of a GNP of \$18,500,000,000, almost all derived from oil. This was just the housekeeping expenditure, however, and did not include most arms purchases from abroad. Estimates of expenditure on arms range up to \$2,000,000,000 per annum since 1974, but exact figures are unavailable since the bulk of purchases were from the Soviet Union for undisclosed sums. Not all of this expenditure was for arms for Libya's own forces, however (substantial sums are believed to have been paid to Moscow for Soviet arms supplies to Syria), and the total may be exaggerated. If the lower estimate of about \$1,000,000,000 per annum on arms purchases is closer to the truth, it would represent an unexceptional 20–25% of total annual Libyan expenditure on development, a proportion common amongst the wealthier Middle Eastern States. Even if the phasing of payments may cause occasional liquidity crises (as in 1977, when French arms deliveries were temporarily suspended due to Libya's falling into arrears on payment), the ability of the State to sustain this level of expenditure over the medium term is not in question. Much of Libya's arms debt to the Soviet Union is met partly by barter deals involving Libyan crude oil; a substantial proportion of the \$400,000,000 due to Brazil for supplies of armoured cars is being paid in the same way.

Libyan subsidies to Arab groups and countries and to Muslim revolutionary groups worldwide come not from the military budget but from the separate Defence and Arab Co-operation Fund and the Jihad Fund. Subsidies to more sensitive groups, which would cause embarrassment if a Libyan link could be proved, come from secret funds; it has been reported that these are collected at least in part by a front known as the Africa Trading Company in Tripoli, which receives a 5% commission on some Libyan contracts with foreign suppliers, especially of military equipment.

COMMAND AND CONSTITUTIONAL STATUS

Major-General Mu'ammār al-Qaddafi is General-Secretary of the General Secretariat of the General People's Congress (a position organisationally corresponding to the Soviet post of Chairman of the Politburo, and for practical purposes equivalent to that of president and supreme executive) and Supreme Commander of the Armed Forces. The Head of the General Popular Committee (a position equivalent to Prime Minister), Mr Abdul Ali al-Obeidi, is not in the chain of command.

Defence remains the responsibility of the General Secretariat (the RCC under another name), although internal security has been transferred to the General People's Committee. The Chief of Staff of the Armed Forces, who also serves as Commander of the Army, is Lieutenant-Colonel Mustafa al-Kharrobi; both he and his predecessor until 1976, Lieutenant-Colonel Abu Bakar Yunis Jaber, were members of the RCC and are now members of the 5-man General Secretariat. The commanders of the navy and air force report directly to the Chief of Staff of the Armed Forces.

The transfer of internal security matters to the GPC is also less of a change than it seems, since the regular police remain under the command of an army officer, while the militia (the Popular Resistance Forces) has been commanded since its creation by Major Khweildi al-Humaidi, another member of the RCC and now of the General Secretariat. The Head of the Security and Military Intelligence Service, which serves both as internal secret police and as the executive arm for intrigues abroad, is his brother, Captain Abdul Majid al-Khweildi.

The chain of command below the level of the General Secretariat members is not known, but is largely irrelevant for an army of the size and character of the Libyan, where orders may pass directly from the General Secretariat to individual units. The various constitutional fictions which have been erected do not conceal the fact that all power over every aspect of armed forces administration, policy and operations remains collectively in the hands of the five surviving members of the RCC, now reconstituted as the General Secretariat: Major-General Qaddafi, the three officers named above, and Major Abdul Salam Jalloud.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The main announced role of the Libyan armed forces is war against Israel, and that is indeed the task for which they are

configured. That is the reason for the acquisition of Tu-22 bombers with a 1400 mile range, and armoured forces grossly in excess of those required for Libya's own defence. Some token Libyan forces participated in the 1973 war in subsidiary capacities, but unless there should be a drastic change of regime and policy in Egypt there is now no way that Libyan ground forces can strike at Israel.

Libya's rapidly growing naval forces—General Qaddafi has predicted that Libya will have the 'third-largest navy in the Mediterranean' (presumably excluding the Soviet and American fleets) within a few years—and elements of its air force are capable of limited action against Israel in a Middle East war even without using Egyptian territory. The ranges, however, are too great to allow such action to have any major effect on the course of such a war, and the Israeli air force is able to reach the Libyan bases in Cyrenaica from which such operations would have to be launched.

The great build-up in Libyan armaments only began after this situation had already come into existence. Moreover, it is manifestly the case that the Libyan army, even when expanded to the maximum size that conscription will permit, will not be remotely capable of operating 2000 tanks unless it were to dispense entirely with the normal supporting arms—no other army operating that number of tanks has less than five times the manpower of the Libyan army. This has given rise to speculation about the Libyan reason for stockpiling such a large quantity of weapons.

Dismissing the suggestion that it is in fact a Soviet stockpile for Soviet use in an emergency, which is ruled out by the fact that the arms have been paid for in cash, that they are not maintained to Soviet standards and that the present Libyan regime is by no means a Soviet puppet, the most plausible explanation is that Libya proposes to be, in Qaddafi's words, 'the arsenal of Islam', waiting for the day when other Arab countries agree on the necessity of fighting Israel and have need of arms. At this point, Libya would enjoy a far larger voice in Arab counsels if she represented an immediate source of weapons in large quantities.

The curious patterns of Libya's arms-buying—tanks far more than artillery, for example—remains to be explained, but the only alternative explanation for the present arms policy is a total miscalculation of the capacity of the Libyan army to absorb weapons. In terms of sheer manpower the same comment cannot be applied to the weapons acquisitions of the navy and air force, but at present a substantial portion of Libya's combat aircraft are flown by foreign pilots on secondment.

The second principal role of the armed forces is internal security, but the officer corps also represents the main threat to the regime. There are no ethnic or religious minorities in Libya that might pose a threat to the regime, nor is it likely that popular disturbances like those in 1975 would be a serious danger so long as the army's loyalty to the regime is not shaken.

For practical purposes, it is neither Israel nor internal security that has been engaging the attention of the army's combat formations in the past few years, but rather quarrels along Libya's own frontiers. By far the most serious is with Egypt, which by 1977 had moved forces from Sinai into the Western Desert that were roughly equivalent in numbers to the entire Libyan army. Following 4 years of steadily worsening relations and numerous Libyan-supported attempts to subvert the Egyptian regime, Egypt launched a carefully prepared limited war—more by way of a large raid, perhaps—against Libya in July, 1977, on the pretext of Libyan border violations.

The Libyans had ample advance notice of this: a Soviet note predicting and protesting against such an Egyptian attack was given to all Arab governments over 2 months beforehand. They appear nevertheless to have been taken by surprise by the timing of the assault, which was fixed by Cairo for July 21st in the belief that it was necessary to forestall Libyan action against the vulnerable Sudanese government. Egyptian armour drove across the border at Musaad, penetrating some 15 miles, and there were reports of Egyptian troops being landed by air at the oasis of al-Jaghbug some hundreds of miles south from the coast. At the same time Egyptian aircraft launched a large raid against the main Libyan interceptor base at El Adem; despite the lack of opposition this caused little damage, but another Egyptian raid 2 days later again caught the Libyans on the ground and had more success. A number of Libyan radar stations were also attacked and destroyed. On July 24th, both sides accepted a ceasefire mediated by Yassir Arafat of the Palestine Liberation Organisation.

The performance of the Libyan armed forces in this brief clash was unimpressive: the most reliable estimates are that Libya lost between 10 and 20 Mirages (mostly on the ground) and 30–40 tanks, against negligible Egyptian losses. Libya claimed that only its militia forces were engaged on the ground, but Egypt has stated that the Libyan 9th Armoured Battalion was put out of action with 50% of its equipment destroyed. Although the Egyptian operation was a military success, however, it had precisely the reverse effect to what Cairo had hoped for, which was a coalescing of the numerous dissatisfied sections of the Libyan population and army into a united front that would overthrow the regime. Instead the militia forces were mobilised, uniforms and weapons were distributed to the civilian population in prodigious quantities, and public opinion swung back behind the regime in an upsurge of patriotic emotion.

As a military problem, however, the Egyptian concentration of forces across the eastern frontier is now the major concern of Libya's military planners. The confrontation remains serious, with considerable potential for further clashes, and the larger part of the Libyan army is now stationed in the eastern part of the country.

Libya's other borders do not represent similar threats. Relations with Sudan are hostile and the border has been closed since 1975, but the small Sudanese armed forces pose no danger to Libya. Relations with Niger and Algeria are good, as they are with the island of Malta to the north. Indeed, in September, 1978 it was reported that Libyan military personnel had flown into the former British Royal Naval Air Station at Hal Far in Malta to set up a helicopter base. Relations with Tunisia have been strained for some time by a dispute over seabed demarcation in the Gulf of Gabès between the two countries, exacerbated by reports of a major oil find in the disputed area. This led to a small-scale naval confrontation between the two countries in 1977, but a larger clash is unlikely—Tunisia's armed forces are too greatly inferior to

World Armies

encourage anyone in authority in Tunis to seek a military solution, while Libya has adopted a posture of waiting for the aged and ailing President Bourguiba to be succeeded by what it hopes will be a politician more sympathetic to the idea of union with Libya.

Libya's remaining border, with Chad, is the other area in which the country's forces are concentrated; or rather, they are deployed across it, with a reported 4000 Libyan troops in the Aouzou strip area and even northern parts of undisputed Chadian territory, in support of the Frolinat guerrilla movement which is seeking to overthrow the government in N'Djamena. The rebellion of the northern Muslim tribes against the domination of Chad's government, commerce and army by black southerners began in 1966, but Libya first became actively involved in supporting Frolinat on a large scale after President Félix Malloum protested in 1975 against Libya's annexation of the Aouzou area, which had been condoned by his predecessor when it took place 2 years previously.

By supplying arms and aid on a large scale, Libya assured the ascendancy of its candidate, Goukkouni Wodei, leader of Frolinat's Second Army and son of the traditional spiritual leader of the Toubou tribal group that dominates the north, in the three-way factional struggle that had hamstrung Frolinat for some years. Even Goukkouni does not accept the Libyan annexation of Chadian territory, but the Tripoli government appears to be moved by a combination of Muslim solidarity and a conviction that Frolinat in power would raise less strenuous protests on the subject in world forums. Libya was also concerned by the military links between the Chadian government and France, for which reason it has also enjoyed Soviet support in its intervention.

Libya constructed an airstrip in the Aouzou region to ferry in supplies to the rebels, and a greatly expanded Frolinat Second Army, approximately 2500 strong, took the offensive in February, 1978 with Libyan troops allegedly in direct support. In mid-February the main garrison town of the north, Faya-Largeau, was overwhelmed by these forces, and 1500 prisoners were taken (30% of the entire Chadian army). The whole northern half of the country then rapidly fell to Frolinat forces. A reported 800 Libyan regular troops supported by surface-to-air missiles were left to hold Faya-Largeau, which lies several hundred miles south of the area officially claimed by Libya.

A ceasefire in Chad was instigated by Libya in March, 1978 apparently in the hope that a coalition government including strong Frolinat representation could be installed in N'Djamena, but ceasefire violations provided France with an excuse to send 1200 troops and a squadron of Jaguar fighter-bombers to aid the Chadian government in April. Franco-Chadian counter-attacks then succeeded in pushing the Frolinat forces some distance back north from their most advanced positions. By July one of the disappointed rivals of Goukkouni for the leadership of Frolinat, Hissène Habré, had gone over to the government with his small army (approximately 500 men); in September he was appointed to the newly created post of Prime Minister by President Malloum in a gesture intended to conciliate Muslim northerners.

In late 1978 precarious ceasefires and sporadic negotiations continued to be interspersed with bouts of renewed fighting between Franco-Chadian and Frolinat forces along the front line running east-west across the country about 100 miles north of N'Djamena. Considerable numbers of French and Libyan troops remained in the country, but they had not clashed directly. There were no other Libyan troops deployed beyond the country's borders, 500 Libyan troops who had been sent to Lebanon as part of the Arab League peace-keeping force having been withdrawn in December, 1976. Reports that squadrons of Libyan aircraft have been sent to the aid of the Ethiopian and Ugandan governments for brief periods have never been confirmed.

ORGANISATION

Arms of Service

The division of arms and services follows the British pattern, the arms being infantry, armour, engineers and artillery. There is an army aviation branch.

The air force also follows British RAF models in its basic division into flying and non-flying personnel, with numerous specialisations within the latter.

Operational

The Libyan army has one armoured brigade, two mechanised infantry brigades, one National Guard Brigade, one special forces brigade, and three artillery and two anti-aircraft artillery battalions. There is no divisional structure.

The air force is organised on a squadron basis. There are four fighter-ground attack squadrons (of which one doubles as an Operational Conversion Unit), two interceptor squadrons (one of which is an OCU), two COIN squadrons and one bomber squadron. There are also two transport and four helicopter squadrons. The surface-to-air missile batteries are grouped into three SAM regiments.

It is not known whether squadrons are grouped together in a wing organisation, but there are several squadrons based at each of the air force's principal bases: Ukba bin Nafi (formerly Wheelus AFB) near Tripoli, where there are MiGs and Tu-22s; Benghazi (shared with the civil airport), where there are more MiGs; Gamal-Abdul Nasser AFB (formerly El Adem) just south of Tobruk, where most of the Mirages are stationed; and Al Kufra, about 500 miles south of the coast near

the Egyptian border. Most of these bases are shared with army units. In late 1977 there were reports that Libya was building a new base capable of accommodating 2000 men and at least 10 fighter aircraft in the Aouzou area recently annexed from Chad.

The navy is organised on the conventional ship, squadron and shore establishment basis. Naval headquarters and the principal naval base are at Tripoli; other naval bases are at Benghazi, Dernah, Tobruk and Burayqah.

RECRUITMENT, TRAINING AND RESERVES

The Libyan constitution states that 'the defence of our homeland is the responsibility of every citizen. The whole people shall be trained militarily and armed by general military training.' This provision has been realised by the reintroduction of conscription and the enrolment of the fit adult population between 18 and 49 years of age (including many unmarried women) in the Popular Resistance Forces. Volunteers are enlisted in the regular forces for a period of 5 years; conscripts are drafted at the age of eighteen for 18 months' service in the armed forces, the great majority serving their terms in the army. In the event of war or other emergency, the law provides that males up to 32 years of age may be conscripted.

Following basic training, conscripts undergo further on-the-job training in their units. Numerous regular force personnel receive training abroad, principally in the Soviet Union, and there are substantial numbers of foreign military personnel in the country serving with training missions and providing technical skills as yet unavailable in the Libyan armed forces. The largest training mission is that of the Soviet Union, which has between 1000 and 2000 military and civilian personnel in Libya manning radar installations and missile sites, and helping to train tank crews and MiG pilots. There have been reports that Soviet aircrews are flying Tu-22 bombers of the Libyan air force pending the availability of Libyan aircrews capable of handling them, and this would certainly be the case with the MiG-25 Foxbats that Libya has recently claimed to possess. A number of Cubans were involved in training General Qaddafi's personal bodyguard, but the report of thousands of Cubans in Libya which emanated from Egyptian sources in 1977 were not accurate. Some non-Soviet Warsaw Pact military personnel also perform military training duties in Libya.

There are a number of French personnel in Libya maintaining the air force's Mirages, and the most promising Libyan pilots and ground crew are sent to France for further instruction. A large proportion of the Mirages are still flown by seconded Pakistani military pilots, and a Pakistani mission has primary responsibility for the training of the Libyan navy. The new Air Force Academy is largely staffed by Yugoslavs, and a 100 man Nationalist Chinese military group works with the Libyan army.

Libyan army officers are trained at the Military Academy in Benghazi, and work began on the construction of a maritime academy near Tripoli in 1978. The Air Force Academy at Zawia near Misurata, opened in 1975, is now supported by an air force secondary college which was established at Ukba bin Nafi AFB in 1978. The system is now being extended further downward, with the creation of a network of flying clubs across the country which are given jet training aircraft by the government and are intended to provide basic flight training for future pilots of all three armed forces. In time this comprehensive system should give Libya a generation of pilots fully qualified to operate the air force's combat aircraft without recourse to foreign assistance, but it will be the better part of a decade before the results begin to show themselves.

There is no information available on the size and structure of the Libyan reserves, although now that conscription has been applied it would seem natural that a reserve organisation should be introduced. The Popular Resistance Forces are a militia which undoubtedly has considerable significance as a political and morale factor, but the kind of training which these citizen forces receive, like the arms which they are supplied (mainly personal weapons), suggests that they are not a major element in the military equation. Students are obliged to undergo militia training each year, but the military instruction provided to the rest of the force — that is, to ordinary citizens — is rudimentary.

EQUIPMENT AND ARMS INDUSTRY

The main armoured strength of the Libyan army is approximately 2000 T-54/-55/-62 medium tanks. These are supplemented by 100 Saladin, some Panhard and 200 EE-9 Cascavel armoured cars (another 200 Cascavels are on order from Brazil) and 140 Ferret scout cars. There is also a considerable number of Soviet BMP-2 MICVs. The mechanised infantry are borne in 400 BTR-40/-50/-60, 140 OT-62/-64, 70 Saracen and 100 M-113A1 APCs. The army is relatively short of artillery, having 40 105 mm and 80 130 mm howitzers and some M-109 155 mm SP howitzers. Long-range bombardment capability is provided by 25 Scud B surface-to-surface missiles. Some reports also refer to a number of the shorter-range FROG-7 SSMs.

Anti-tank weapons consist of 300 British-made Vigilants, some French-manufactured SS-11s and a large number of Soviet-supplied Sagger ATGWs. Anti-aircraft guns consist of 180 23 mm and some L/70 40 mm and 57 mm automatic cannons and a number of ZSU-23-4 self-propelled AA guns. The infantry and some vehicles are equipped with SA-7 surface-to-air missiles, but all heavier SAMs belong to the air force.

The army's aviation wing consists of some Cessna O-1 light aircraft and six AB-47, five AB-206 and four Alouette III helicopters. Sixteen CH-47C Chinook medium-lift helicopters are on order from France, which builds them under licence.

World Armies

The navy's major warships are three Soviet-supplied F-class submarines, one ex-British frigate armed with Seacat SAMs, and two corvettes (one armed with Otomat SSMs). Three further F-class submarines are on order from the Soviet Union, four submarines of French design are on order from Spain, and three more 547 ton frigates of the Wadi Mragh class, equipped with Otomat SSMs, Oto Melara dual-purpose guns, two triple torpedo tubes, mine-laying equipment and a comprehensive electronic outfit, are being built for Libya in Italy.

The navy is already strong in missile-armed fast patrol boats, having five Soviet Osa II class equipped with Styx SSMs and three Vosper Thornycroft-built Susa class armed with French SS-12M SSMs. In 1977 it placed an order with France for 10 Combattante II class FPGs each armed with four Otomat SSM launchers. The navy also has 14 patrol craft, two logistical support ships and two LSTs (one Bidassoa-class, one Polnocny-class).

The Libyan Arab Air Force has at least 178 combat aircraft, mainly of French and Soviet manufacture. There is one bomber squadron flying 12 Tu-22 Blinders, and two interceptor squadrons equipped with 24 MiG-23s. The fighter-ground attack squadrons fly 90 Mirage VD/DF, 10 VDR and 10 VDD aircraft (allowing for the losses incurred in the 1977 clash with Egypt). Libya has claimed to have taken delivery of some MiG-25 Foxbat aircraft, but this is unconfirmed. There are also two new COIN squadrons flying 32 Yugoslav-built G2-A-E Galeb armed jet basic trainers. Air-to-air missiles are AA-2 Atoll for the MiGs and R.550 Magic AAMs for the Mirages.

The air force's transport squadrons have eight C-130H Hercules, one Boeing 707, nine C-47, two Falcon and one Jetstar aircraft. One AS-61A-4 helicopter is on order as a VIP transport. The helicopter squadrons fly 13 Alouette II/IIIs, six AB-47s, nine Super Fréons and 10 CH-47Cs. Training aircraft include two Mystère 20s, five MiG-23Us, 12 Magisters, a few Falcon ST2s, 20 SF-260s and 17 Galebs.

The air force's SAM regiments have 60 Crotale SAMs and nine batteries with 60 SA-2, SA-3 and SA-6 SAMs.

Known air force orders include 32 Mirage F1-AD/ED and six two-seat Mirage F1-BD fighters from France, and 230 more Siai Marchetti SF-260 jet trainers from Italy. It is not known what proportion of the SF-260s are pure trainers and how many are the Warrior ground-attack or Sea Warrior (armament and surveillance radar) versions, but the bulk are believed to be destined for the Air Force Academy at Zawia and for government-sponsored flying clubs that are to provide *ab initio* flying training for armed forces pilots. The air force also has 20 CH-47C helicopters on order from France.

No information is available on what further aircraft orders may be awaiting delivery from the Soviet Union, but it is widely believed that such orders exist. The Libyan government has also had serious discussions with Brazil on buying a number of EMB-110 Bandeirante maritime reconnaissance aircraft. There are also a number of military orders outstanding from the USA which have been put under at least a temporary ban, including the latter eight of an order for 16 C-130H Hercules aircraft dating from 1970, and more recent orders for two Boeing 727 and three Boeing 747 aircraft. Deliveries on a Libyan order for 400 heavy flatbed vehicles suitable for use as tank transporters have also been prevented by the United States government.

There is very little by way of an arms industry in Libya. In July, 1978 Yugoslavia signed a contract to build a plant in Libya to manufacture ammunition and spare parts for the Soviet-made weapons of the Libyan army, but at present even workshop repair and maintenance facilities are both inadequate and manned to a considerable extent by foreign experts. A plan to set up an assembly plant in Libya to build the latter half of the large order for SF-260 trainers was abandoned in 1977.

A large proportion of the Libyan armed forces' tanks and some aircraft are in storage, due to lack of sufficient crews to man them. Proper storage facilities have now been constructed for most of this equipment, which suffered badly in the early stages of the build-up from being left out in the open for months with no protection or attention, but even now much of it is not maintained to Soviet standards, and deterioration may well be continuing at a slower rate.

General Qaddafi has repeatedly stated his intention of acquiring nuclear weapons, and secretly sent his closest associate, Major Jalloud, to China in an attempt to buy an atomic bomb only months after seizing power in 1969. It is believed in some quarters that a major reason for annexing the Aouzou strip from Chad was the suspected presence of rich uranium deposits in that area. For practical purposes, however, Libya has not the remotest possibility of developing its own nuclear weapons, even if the 10,000kV research nuclear reactor contracted with the Soviet Union in June, 1975 and the 440 MW power reactor whose purchase from Moscow was agreed in late 1977, should both be delivered. It is not clear whether the 1976 French agreement to build a nuclear reactor in Libya is still valid.

RANK, DRESS AND DISTINCTIONS

Ranks in the Libyan armed forces follow the British pattern, with the standard Arabic terms being substituted for the three different forms in the British army, navy and air force. Since the 1969 coup, however, it has been the rule that the highest rank actually held by serving Libyan officers was lieutenant-colonel (Qaddafi's rank in 1969), and it is common for very influential Libyan officers to have the rank of major or even captain. Mu'ammarr al-Qaddafi was promoted to the rank of general by the General People's Congress in 1977, but is still popularly known as 'Brother Colonel', and no other officers have been advanced to general's rank.

Pay for all ranks is generous even when compared to wages for comparable skills in Libya's buoyant civilian economy. Uniforms in the army and navy closely resemble those of the British; air force uniforms are modelled on those of the United States air force. The shoulder insignia for a colonel is a falcon crest with two stars; for a lieutenant-colonel, the same crest

with one star. Majors wear only the falcon crest; captains, first-lieutenants and second-lieutenants wear three, two and one stars, respectively. No information is available on medals and distinctions in the Libyan armed forces.

CURRENT DEVELOPMENTS

In late 1978 Libya remained in a state of military alert on its Egyptian border, engaged in military operations within Chad and with considerable tension along its Tunisian and Sudanese borders. Its status of odd-man-out in the Arab world was no less pronounced than ever, although what was perceived as the urgent need to present a united Arab front against a possible Egyptian peace treaty with Israel had caused it to soft-pedal some of its outstanding quarrels with other Arab regimes: thus it overlooked its bitter opposition to Syrian policy in the Lebanon in order to join in a united Rejection Front condemning Egypt's intentions, and reduced its support for the Polisario guerrillas fighting against Morocco in the former Spanish Sahara in order not to drive King Hassan into open support for the Egyptian position. Apart from the role of the Libyan intelligence service in attempting to organise a coup to overthrow the Saudi Arabian government in July, 1977 (see later) and the continuing efforts to subvert President Sadat's regime in Egypt in the form of attempts to infiltrate the army and subsidies to extremist Islamic groups like the Muslim Brotherhood and the terrorist Society for Repentance and Retreat, no recent Libyan adventures in plotting the overthrow of other Arab regimes have come to light.

Domestically, the regime has lost much of its earlier popularity, but a combination of lavish public expenditure and efficient secret police supervision of potential civilian opponents effectively insulates it from potential challenges from that quarter. The peak of popular dissent represented by the student riots of early 1975, when dozens of students were shot down by the army, has subsided markedly, although an estimated 700 political prisoners dating from all periods back to 1969 remain confined in Aziza barracks in Tripoli. Despite repeated mass expulsions of Egyptian and Tunisian workers from Libya at moments of particular tension with those two neighbours, the predominantly Egyptian foreign community in Libya now numbers about 400,000, and is indispensable to the running of the administration, education and industry; it is not considered to pose a political threat to the regime.

The real cause for concern to the regime is undoubtedly the officer corps of the army itself. The waves of arrests after the banning of political parties in 1970 and the promulgation of the 'Cultural Revolution' in 1973 struck mostly at civilians on the Marxist and Islamic fundamentalist extremes of politics, but the three instances of military unrest in 1975 led to the arrest of at least 120 officers and about 130 of their civilian allies. The cause of all three — a joint declaration by 39 officers (who are still in jail) in March, 1975, a planned coup by the Chief of Military Transport and six colleagues of the Benghazi garrison in July, and a more serious coup attempt involving the commander of the Republican Guard and about half of the then-members of the RCC in August — was anxiety in the officer corps at the regime's almost total isolation in the Arab world and its rapidly growing military links with the Soviet Union. In the aftermath of the last coup attempt two leading RCC members, Planning Minister Major Omar Abdallah al-Meheishi and Foreign Minister Major Abdul Moneim al-Huni, defected to Egypt (where a Libyan assassination squad attempted to kill them in the following year) and two other RCC members were arrested.

No other plots against Qaddafi's almost total domination of the army and the country have since come so near success, but the regime's concern at the continuing grave unrest in the army was shown by its execution by firing squad of at least 22 officers accused of involvement in the 1975 plot in April, 1977. These death sentences, the first carried out in Libya since 1954, were soon followed by public hangings of other individuals accused of political crimes of violence, and reports continue to filter out of Libya of other executions of dissident army officers. An opposition movement of Libyan exiles in Europe known as Al-Tajammu al-Watani (National Grouping) began to smuggle anti-Qaddafi propaganda into Libya in 1976.

In January, 1978 the long-time head of Libya's Security and Military Intelligence Service, Captain Muhammad Idris al-Sharif, a close associate and childhood friend of Qaddafi who had planned the two coup attempts against Morocco's King Hassan, the two attempts to overthrow Sudan's President Nimeiri, countless attempts to kill Egypt's President Sadat and the plot to overthrow the Saudi regime in July, 1977, was arrested on charges of planning the overthrow of Qaddafi himself. According to the accusations against Captain Sharif he had been 'turned' by the Saudis, and in concert with Prince Turki, the chief of the Saudi Secret Service, had organised at least three attempts to assassinate General Qaddafi and his closest supporter, Major Jalloud, in the latter part of 1977. In the ensuing investigation the base commander at Uqba bin Naf'i airbase south of Tripoli, Captain Pilot Muhammad al-Said (Captain Sharif's brother-in-law) and about one hundred officers and men of the 7th Armoured Brigade stationed at that base were arrested, and further arrests were made at the military base in Benghazi.

It is not possible to state the degree of likelihood of a coup against the present Libyan regime, although the possibility clearly exists. The principal causes of dissatisfaction in the officer corps are still the Soviet connection and the apparent waste of money on arms which the armed forces cannot use and which rapidly deteriorate, instead of on a more balanced expansion of military capabilities. A growing additional source of unrest may well be the almost total blockage of promotion caused by the permanent alliance of still relatively young officers who came to prominence in the 1969 coup and who continue to occupy all command positions, together with their insistence on keeping their own former ranks of major/lieutenant-colonel and on not permitting anyone else to advance even to field grade. On the other hand, the officer

World Armies

corps is still relatively small (2500–3000 officers) and relatively easy to keep under surveillance.

In external affairs, there is no sign that Libya proposes any serious change of policy. The military involvement in Chad continues, as does the military confrontation on the Egyptian border. Further armed attempts of Libyan inspiration to overthrow the Sudanese regime, however, seem to have been effectively deterred by the Sudanese–Egyptian alliance of 1975. The dispute with Tunisia over the demarcation of the oil-bearing seabed between the two countries continues to simmer, but is unlikely to flare into open violence. Further afield in the Arab world Libya remains effectively isolated, and unless there were to be radical changes in Egypt there is no way in which the Libyan armed forces could be used for what is proclaimed to be their primary purpose — war against Israel.

GWYNNE DYER

LUXEMBOURG

HISTORY AND INTRODUCTION

A founding member of NATO, Luxembourg revised its constitution in 1948 to abolish its 'perpetually neutral' status. Until 1967 its small army was conscripted; it is now a professional force.

Command and Constitutional Status

The Head of State, Grand Duke Jean, is Commander-in-Chief; executive control is exercised by the Minister of Public Forces, who in the present government also holds the portfolio of Public Health and Environment, and the Civil Service.

Strength and Budget

Population: 360,000
Army: 625; 430 gendarmerie
GNP (1976 estimate): \$2,420,000,000
Defence expenditure (1977): \$25,000,000

Role, Commitment, Deployment and Recent Operations

The Luxembourg infantry battalion is committed to NATO's ACE Mobile Force. It has not taken part in any recent operations.

Organisation

The army is organised as a four-company battalion for air-portable operations; there is also an independent company.

Recruitment, Training and Reserves

Recruitment is by voluntary enlistment for a minimum of 3 years. Conscription was abolished in 1967. Personnel were formerly trained by the Belgian army (but the son of the Grand Duke, himself a former Irish Guards officer, was recently commissioned from the Royal Military Academy, Sandhurst). On mobilisation, the country could begin to form a mobile brigade from reserves allotted to the Belgian army, but only after delay.

Equipment and Arms Industry

Although proportionally to population the most heavily industrialised country in Europe, Luxembourg has no arms industry. The battalion is equipped with NATO small arms and American infantry support weapons.

Rank, Dress and Distinctions

Ranks and rank insignia follow the British system, to brigadier. Dress is also British in appearance — service, battle and combat dress — worn with peaked cap or dark-blue beret. The badge is a crowned cypher 'J'.

Current Developments

The Luxembourg battalion, being all-regular, is a high-quality component of the ACE Mobile Force. But, though NATO has an air base and a logistic base in the Grand Duchy, the State's chief importance to the alliance is industrial.

JOHN KEEGAN

MALAGASY REPUBLIC*

History and Introduction

This vast island attained independence from France in 1960 as the Malagasy Republic. On account of a tradition of revolt against French rule it had not produced units of any size for the French Colonial Army, and its military establishment at independence and since has remained very small. Defence was seen, until 1972, to be primarily a French responsibility; France had posted to the Malagasy Republic a foreign legion and a marine regiment, together with air force and naval units. Malagasy political life remained stable under President Tsiranana until 1971 when a left-wing revolt broke out in the south-west Monima area, causing a major political crisis. This worsened in 1972 when riots and student demonstrations on a large scale took place, as a result of which a Merina aristocrat, General G. Ramanantsoa, the Minister of Defence, took effective power into his hands as Prime Minister with the left-wing gendarmerie Colonel R. Ratsimandrava, a non-aristocratic Merina, as Minister of the Interior. A few months later Tsiranana retired completely. The restlessness, however, continued with ethnic conflict occurring in December, 1972 when the coastal peoples attacked Tamatave as a gesture against the Merina domination of Malagasy life. The military government too, was divided, an abortive coup of dissident officers was suppressed in January, 1975, but with a fresh crisis occurring in the following month, when Ratsimandrava took over from Ramanantsoa, to be assassinated almost immediately, and in turn being replaced by the brief regime of General G. Andriamahazo. Ratsimandrava had been assassinated by police rebels, the remainder of a small unit especially raised for his own use by the former President Tsiranana; four days of fighting took place before the army finally suppressed this unit. In June, 1975 Andriamahazo was replaced by a left-wing naval officer, Commander D. Ratsiraka, as Head of State. Ratsiraka comes from the coast and has greatly reduced the plateau Merina hegemony. His policy is the introduction of 'Malagasy revolutionary socialism' based on local democracy, but in practice the military very closely supervise all political activities.

Strength and Budget

Population: 8,000,000 (approximately)

Armed forces: accurate information is difficult to obtain; until 1972 the armed forces stood at the 4500 mark. An expansion has taken place since 1972, and a strength as high as 10,000 has now been reported. There is also a gendarmerie believed to be between 7600 and 8000

GNP (Estimated): \$1,700,000,000

Command and Constitutional Status

President Ratsiraka is Head of State, the Minister of Defence is Captain (Naru) G. Sibon.

Role, Commitment, Deployment and Recent Operations

The government has announced a specific role for the army in the development of a socialist Malagasy Republic. 'Forces of development' are to be established, drawn from six battalions based on provincial capitals. A small intervention force composed of a parachute unit is to be retained, as also is the air force.

Organisation

Up to 1975 the army was organised on the basis of an armoured-car squadron, an artillery battery, two infantry regiments, one engineer battalion and one logistics battalion.

Recruitment, Training and Reserve

A system of national service (military or civic) for 18 months, is in operation; from this soldiers are selected. Both soldiers and officers have in the past been largely Merina.

French training assistance was provided until 1972. The Ramanantsoa government, compelled by pressure of public opinion, sought a new military agreement with France by which the French troops were withdrawn almost at once and the naval facilities shared for only an interim period. It is not known whether regular French army personnel are working with

* For general notes on African armies, see Appendix 1.

the Malagasy army, but there is a considerable French resident population and some of these possessing military experience may be engaged on contract. One report, yet to be confirmed, claims that a small Cuban training team has arrived.

Equipment and Arms Industries

The armoured-car squadron possesses American M3 and British Ferret vehicles, otherwise all equipment is French.

The Malagasy Republic possesses no armaments industry, but the considerable former French installations include ordnance repair facilities. The air force includes 20 transport and communication aircraft and four helicopters.

Rank, Dress and Distinctions

Service uniform follows the French pattern. Ceremonial uniform is white with a coloured busby and plumes.

Current Developments

The army's officers have traditionally been largely drawn from the upper *bourgeoisie* of the plateau Merina; many have French connections — personal, land or commercial. It remains to be seen how these officers will fit in in a coastal-dominated government committed to revolutionary socialism.

L. L. MATHEWS

MALAWI*

History and Introduction

On the dissolution in 1963 of the Federation of Rhodesia and Nyasaland, Nyasaland reverted to the status of a protectorate which it had held since 1891. In July, 1964 it became independent as Malawi, and in 1966 became a republic. Its armed forces consisted initially of the 1st (Nyasaland) Battalion of the King's African Rifles. This was slightly extended to form the Malawi army. In the colonial period battalions of the 1st K.A.R. fought in the World War I German East Africa Campaign where they suffered particularly severe casualties, and in Italian East Africa and Burma in World War II. A unit of the 1st K.A.R. also participated in the force sent to suppress John Chilembwe's rising against British rule in Nyasaland in 1915, one of the very few serious risings against British colonial rule in Africa. Since independence the army has had to assist the police force in foiling an attempted rising by the followers of H. Chipembere, a former Cabinet Minister with left-wing views, in the Fort Johnstone area in 1965, and in foiling a second attempted rising planned by another ex-Cabinet Minister, Y. Chisiza in 1967; this latter attempt took place on the Shire river, Chisiza's small party all being killed or captured.

Strength and Budget

Population: 5,500,000

Army: 2400; there is also a small barrack police unit

Estimated GNP (1977): \$400,000,000

Command and Constitutional Status

The Life President, Dr Hastings Banda, formerly held the title of Minister of Defence. Although he no longer does so, the title is held by no-one else and it is unlikely that he has ceased to exercise the function. Malawi is a one-party State, and the President is head of the party and government, as well as of the State.

Role, Commitment, Deployment and Recent Operations

The army's role is frontier defence and internal security but, apart from minor technical frontier disputes with (based on the frontiers of the old Maravi African kingdom) Moçambique, Zambia and Tanzania, Malawi has had few major security problems, internal or external.

Organisation

The army is organised into 1st and 2nd Battalions, The Malawi Rifles (the battalions are small), a reconnaissance squadron of armoured cars, an infantry workshop, a military hospital and an ordnance depot. The permanent barrack installations are at Zomba, Lilongwe and Mzuzu. There are six transport aircraft.

Recruitment, Training and Reserves

Recruitment is by voluntary enlistment for 7 years, followed by 5 years with the reserve. British personnel formed a training team and European ex-Federation officers remained in post for some years after independence. An African battalion commander was only appointed in 1970 and Malawi's first African army commander only in 1972. Some Malawi officers are trained in Britain, the cadets on the Sandhurst short course and other officers at the Staff College and in specialist schools.

Equipment and Arms Industry

Malawi does not manufacture arms, equipment nor munitions. Infantry weapons are the normal British range; there are nine Ferret scout cars, some of which, together with some of the army's small arms, were provided by South Africa in 1971 to contain Frelimo insurgents.

* For general notes on African armies, see Appendix 1.

Rank, Dress and Distinctions

These follow the British system; the uniform is broadly that of the former King's African Rifles.

Current Developments

Malawi faces severe economic and geographic problems. A realignment of its foreign policy began in 1972, the formerly cordial relations with Portugal and South Africa becoming strained. This realignment was timely in view of the subsequent collapse of Portuguese power and the arrival of a new government in Moçambique, through which all rail traffic to Malawi must pass.

L. L. MATHEWS

MALAYSIA

HISTORY AND INTRODUCTION

The Federation of Malaysia came into being in September, 1963. It was formed by enlarging the already existing Federation of Malaya to include the British Colonies of Singapore, Sarawak and Sabah (formerly British North Boreo). Singapore seceded from the Federation in 1965 and today Malaysia comprises 13 States. The two Borneo States of Sarawak and Sabah are collectively referred to as East Malaysia and the 11 States of Malaya as Peninsular Malaysia.

From the sixteenth century onwards until independence the Malaysian territories were inextricably bound up with the development of the European Far Eastern colonial empires. In 1824 the British influence was to become paramount in the territories making up the Federation and the Malaysian army properly speaking traces its origins back to the British period when in 1920 a proposal to form a Malay regiment was first put forward to the Council of the Federated Malay States. The idea was sponsored by the Sultan of Perak and the Yang di-Pertuan of Negri Sembilan and other lesser members of Malay ruling houses. It was only after considerable delay that on March 1st, 1933 an experimental company of Malay soldiers was formed and commenced training. Recruiting went ahead rapidly and by 1937 the unit had reached battalion strength. In that year it joined the 2nd Battalion of the Loyal Regiment and the 1st Battalion of the 17th Dogra Regiment to form the 1st Malayan Infantry Brigade. In July, 1941 the unit was officially named the 1st Battalion of the Malay Regiment. Recruiting continued and by December, 1941 the 2nd Battalion of the Malay Regiment was in existence and a regimental headquarters had been established on the west coast of the Malayan peninsula at Port Dickson in Negri Sembilan.

Both battalions of the Malay Regiment, though scarcely fully trained and totally without experience of active service, fought with the British army in the attempt to stem the advance of the Japanese forces down the Malayan peninsula to Singapore in December, 1941. They surrendered with British and Indian army units in Singapore on February 15th, 1942 but not before they had distinguished themselves in several minor clashes with Japanese troops invading the island.

The Regiment was reformed in 1946 when it was quickly brought back to its pre-war strength. With the outbreak of the Malayan Emergency in 1948 steps were taken to increase the strength of the Regiment to take on a bigger responsibility for anti-terrorist operations alongside the British battalions deployed throughout the peninsula. A third battalion was formed in February, 1949 and a fourth in November of the same year. In 1950 the first Malay officer cadets were sent to England for training at the Royal Military Academy, Sandhurst and by 1953 two more battalions had been formed making six in all.

As the name implies, the Malay Regiment was recruited solely from the Malay population of the Malayan peninsula. In 1953 it was decided to enlist into the army recruits from other sections of Malaya's multi-racial population in which the Chinese almost equalled the Malays in number and the Indians formed a not inconsiderable minority. It was agreed that the Malay Regiment should continue to recruit only Malays but that two new multi-racial units should be formed — the Federation Regiment of Infantry and the Federation Armoured Car Regiment. By the end of 1954 both these units were committed to anti-terrorist operations and they quickly proved that racially integrated regiments were a feasible proposition.

In 1954 a further battalion of the Malay Regiment was formed and in the same year two Malay Staff Officers took up appointments at the Headquarters of the 1st Federal Division, having qualified at the British Army Staff College at Camberley. In 1954, also, the Federation Military College was established to train officer recruits. It was initially formed at the original Malay Regiment Headquarters at Port Dickson but at an early stage it was transferred to a permanent location at Sungei Besi, closer to the Federal Capital of Kuala Lumpur.

In 1956, as a step towards Malayan independence, the Federal Armed Forces Council was created and in 1957, the year of independence, the Yang di-Pertuan Agong (the Paramount Ruler) of the Federation of Malaya became Supreme Commander of the Federation of Malaya Armed Forces.

Between 1957 and 1963 when the wider Federation was formed the army continued to expand. While considerable numbers of British army personnel remained seconded to fill crucial appointments, gradually more and more of these key jobs were taken over by Malayan officers and men.

In the early 1960s Malayan units saw service with United Nations forces in the Congo and at that time the Federation Regiment was amalgamated with the Federation Armoured Car Regiment to form the Malayan Reconnaissance Corps.

The foundation of the Federation of Malaysia in 1963 saw a further build up of military forces. The birth of the new State was confronted by the Indonesians who challenged the right of the Federation of Malaya to bring the territories of Sarawak and Sabah into a Malaysian Federation. President Sukarno felt that with the British departure from Borneo the whole island should fall naturally into the Indonesian sphere of influence.

Part of the plan to increase the size of the army to deal with 'confrontation' included the obviously necessary political move to recruit from the newly acquired East Malaysian States of Sabah and Sarawak.

Throughout the years of the Communist Emergency in Malaya the British army had employed Dayaks from Sarawak to

assist British units as trackers and expert advisers in surviving and operating in jungle conditions. By 1955 these trackers, who had by then proved their great value, were organised into a small unit of company strength which adopted the title of the Sarawak Rangers. The name had first been used by the last white Rajah of Sarawak when for a brief period in the 1920s and 1930s he had raised a small military force largely to perform ceremonial duties and to act in support of the police in the suppression of minor internal disturbances.

On Malaysia Day the Sarawak Rangers were transferred to the new Malaysian army and renamed the 1st Battalion, the Malaysia Rangers. Recruiting, entirely in Sarawak, raised the unit to battalion strength and at the same time the 2nd Battalion, the Malaysia Rangers was recruited from Sabah. Since 1963 the number of battalions of the Malaysia Rangers has been increased to nine and the territorial and racial connections of the original two battalions have withered away in the general process of expansion. In essence, the Malaysia Rangers have been used to further develop multi-racial recruiting from the whole of Malaysia. Commanding officers and most company commanders are found from the Malay Regiment which itself has in a sense remained élitist in that it is exclusive to the Malays.

STRENGTH AND BUDGET

Population: 12,950,000 (44% Malay, 36% Chinese, 10% Indian and Pakistani, 8% indigenous tribes (other than Malay) and 2% others)

Army: 52,500 (rising to 58,500 by 1980) regulars; reserves: approx. 26,000

Navy: 5500 regulars; 1000 reserves; two frigates, 44 smaller craft

Air force: 6000; 34 combat aircraft

GNP (1976 estimate): \$8,600,000,000

Defence expenditure (1977): \$544,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

The Supreme Head of State of Malaysia (the Yang di-Pertuan Agong) is elected for a period of 5 years by the Conference of Rulers of the Malay States of Peninsular Malaysia. He is a constitutional monarch and is, *ex officio*, Supreme Commander of the Malaysian Armed Forces. The three services operate independently but their activities are controlled and co-ordinated by the Armed Forces Council under the Chairmanship of the Minister of Defence. Since the Federation was formed in 1963 successive prime ministers have retained the office of Minister of Defence in their own hands.

The Ministry of Defence

The Armed Forces Council is responsible for command, discipline and administration of the armed forces. It is chaired by the Minister of Defence and includes the Chief of the Armed Forces Staff, the three service chiefs and two other senior military officers, the Secretary General of the Ministry of Defence, a representative of the State Rulers and an appointed member.

The Chief of the Armed Forces Staff's Committee, established by the authority of the Armed Forces Council, is responsible for joint planning and co-ordination of the armed forces. The committee is chaired by the Chief of the Armed Forces Staff, and its membership consists of the Chiefs of Staff of the Army, the Navy and the Air Force, the Chief of Personnel Staff, the Chief of Logistic Staff and the Chief of Staff of the Ministry of Defence.

There are nine staff divisions in the Ministry of Defence:

- | | | |
|------------------------------------|---|---|
| 1. Joint Services Staff Division | } | These function on a combined service basis |
| 2. Personnel Division | | |
| 3. Logistics Division | | |
| 4. Army Division | } | These function for their own services and as service command headquarters |
| 5. Navy Division | | |
| 6. Air Division | | |
| 7. Finance Division | } | These are the civil service divisions |
| 8. Secretarial Division | | |
| 9. General Administration Division | | |

Constitutional Status

The Malaysian Constitution provides for the government of the Federation on Westminster lines. Parliament comprises

World Armies

the Yang di-Pertuan (Head of State), the Dewan Rakyat (House of Representatives) and the Dewan Negara (Senate). While the army owes its allegiance to the Yang di-Pertuan Agong it is controlled by the government of the day formed from the majority party in the Dewan Rakyat.

There is one anomaly which perhaps deserves comment. According to the Constitution the Yang di-Pertuan is elected for a 5-year period by the Conference of Rulers of the Malay States of the former Federation of Malaya. This in effect means that the Governors of the States of Malacca, Penang, Sarawak and Sabah who are not the heads of hereditary houses, can never become the Yang di-Pertuan Agong. While this situation is not likely to create problems within Malacca or Penang, it is possible to envisage difficulties over divided loyalties for soldiers from Sarawak and Sabah if ever tensions were to build up between Peninsular Malaysia and East Malaysia.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitment

The roles of the armed forces are to provide for the close defence of Malaysia against external attack, to secure the lines of communication between and within Malaysian territories and to support the police in ensuring that the authority of the lawful government of Malaysia can be effectively enforced.

While the armed forces are well equipped and trained to cope with the defence of the country against external attack they are hardly strong enough to provide a credible deterrent to a major power with aggressive intentions. Indeed, a former Prime Minister of Malaysia, Tunku Abdul Rahman, is on record as having said he would rather surrender than involve his whole country in widespread destruction.

Until the British withdrawal from Malaysia in 1971, the Anglo-Malayan Defence and Mutual Assistance Treaty of 1957 (extended in 1963 to cover the whole of Malaysia) offered some degree of security as was demonstrated during the period of Indonesian confrontation. After 1971, however, this security was considerably reduced despite the Five Powers Defence Agreement signed in 1971 between Malaysia, Singapore, Great Britain, Australia and New Zealand, which guaranteed consultations in the event of external attack.

The announcement of the British decision to withdraw forces from the Far East coincided with a renewed campaign by the Communist Party of Malaya's military arm, the Malayan National Liberation Army. Since 1968 the number of major incidents involving attacks both against members of the public and the security forces has steadily increased. The attacks have largely been mounted from jungle hideouts on the Thai-Malaya border and have spread further and further out into the peninsula. The resurgence of terrorist activity has led to more and more units of the armed forces being committed to internal security operations and also to moves by the government to increase the size of the armed forces.

Deployment

For some time now the army has been organised on a two divisional basis with the 1st Malaysian Infantry Division deployed in East Malaysia and the 2nd Malaysian Infantry Division in Peninsular Malaysia with its headquarters at Sungei Besi. As a result of an increased security and defence budget incorporated in the Third National Five Year Plan (1976-80) a third division is currently being formed. The two divisions were made up of eight brigades but with the creation of a third division a further three infantry brigades are to be formed. These plans are likely to result in an overall increase in manpower from the 1976 level of 52,500 to somewhere in the region of 58,500 by 1980. While the redeployments resulting from the increased size of the army are not yet clear, it may reasonably be assumed that the new division will be available to support existing forces in both Peninsular and East Malaysia as the internal security situation demands.

Recent Operations

Units of the army have since 1968 been deployed on anti-terrorist operations on the Thai border where incursions by Communist groups have been and continue to be made. In the same way that terrorists use the remote Thai border areas as a sanctuary in the Peninsula, so do armed guerrillas use the even more inaccessible border between Sabah and Sarawak and Indonesia with the result that the armed forces are similarly deployed in that area.

There have been few spectacular successes for the army in these border operations. Just as during the Malayan Emergency from 1948-60 the terrorists retain the initiative and have the advantage of surprise. This allows them to strike at will in so many different places that it is almost impossible with the limited forces available to bring them to a decisive battle.

ORGANISATION

Arms of Service

There are 12 fighting arms and administrative corps in the army: infantry, reconnaissance, artillery, engineers, special

service (commando), signals and intelligence; service corps (supplies and transport), ordnance corps, electrical and mechanical engineers, general service corps (medical, dental, pay and clerical) and provost.

The infantry comprises 20 battalions of the Royal Malay Regiment and nine battalions of the Malaysia Rangers (multi-racial).

There are a number of training schools and establishments which include the Federation Royal Military College at Sungei Besi and the Recruit Training Centre at Port Dickson.

Operational Organisation

The present order of battle of the army is as follows: two divisions (to be increased to three) of eight brigades (to be increased to eleven) of 29 battalions (to be increased); three reconnaissance regiments; three artillery regiments; one special service unit (to be increased to two); five signals regiments; and five engineer and administrative units.

RECRUITMENT, TRAINING AND RESERVES

The army is a volunteer force. The terms of service for both officers and men are very similar to those of the British army. Soldiers enlist for a period of full-time service followed by a stipulated number of years with the reserve. Currently the army reserve is estimated to be approximately 26,000. There is no requirement for training during reserve service unless a state of emergency is called. Within the Federation there is a territorial army, some units of which have, since 1968, seen extensive periods of mobilisation.

Recruitment

Any citizen of Malaysia of whatever race may present himself for recruitment into the army. The Royal Malay Regiment only accepts Malay recruits but all other arms and corps recruit on a multi-racial basis. Recruiting officers find no problem in obtaining volunteers and the general physical and mental ability of recruits is consequently high. Few Chinese youths, however, volunteer and the majority of those that do, opt for service in one or other of the technical arms.

Training

Officer training is carried out for the most part at the Federal Royal Military College although a few cadets from each intake are selected for training at overseas military schools and academies usually in countries of the British Commonwealth. Several are still sent each year for training at the Royal Military Academy, Sandhurst. More senior officers selected for staff training attend courses overseas often at the British Army Staff College at Camberley. Soldiers newly recruited receive their basic training at the Recruit Training Centre at Port Dickson followed by further training in the units to which they are posted. Specialist training is carried out at a variety of schools including the Catering School, Motor Transport School, Administrative School, E.M.E. School, Signal School, Air Dispatch School and Intelligence School.

EQUIPMENT AND ARMS INDUSTRY

At the time Malaysia came into being in 1963 virtually all arms and equipment in use in the armed forces originated from British sources. Since then, as replacements and additions have become necessary, the army has looked further afield for its requirements. Today the major items comprise: 600 Ferret scout cars; 200 Commando APCs; 140 AMC/M-3 APCs; 45 25 pounder field guns; 10 5.5in medium guns; 80 105 mm howitzers; 30 4.2in mortars; and 35 40 mm anti-aircraft guns.

There is currently no capacity for the manufacture of arms and equipment in Malaysia.

RANK, DRESS AND DISTINCTIONS

Rank

General	Crown and star over crossed kris and sheath
Lieutenant-general	Crown over crossed kris and sheath
Major-general	Star over crossed kris and sheath
Brigadier-general	Crown over three stars
Colonel	Crown over two stars
Lieutenant-colonel	Crown over one star
Major	Crown

World Armies

Captain	Three stars
Lieutenant	Two stars
Second-lieutenant	One star

The badges of rank follow the British army pattern and are worn on the epaulette. The kris is a traditional Malay two-edged fighting dagger now carried on ceremonial occasions only by Malay royalty and dignitaries. The crown and star emblems are based on Malay Islamic designs.

Dress

For ceremonial parades the uniform basically comprises a white drill tunic and trousers. The Royal Malay Regiment in addition wear a brightly coloured Sarong from waist to knee over the white uniform. The head dress for the Royal Malay Regiment is a songkoh (traditional Malay headwear), while non-Malay troops wear either a peaked cap or beret.

Jungle-green bush jackets or shirts and slacks are worn for normal parade and barrack dress. Shorts with boots and puttees are an alternative within barracks and for drill parades.

On operations combat dress is worn. This consists of camouflaged bush jackets and slacks with a jungle hat (soft brimmed) and jungle boots. The latter are made of light canvas with rubber soles and lace up to below the knee.

Distinctions

A number of orders and medals are awarded for bravery and distinguished service both by the Federal Head of State (the Yang di-Pertuan Agong) on the advice of the Armed Forces Council and by the rulers of the various States within the Federation.

CURRENT DEVELOPMENTS

The Malaysian army is organised largely after the British model and the traditional British military values and ways of working appear to have been assimilated into almost every aspect of army life whether in the officers' mess, on the parade square or in the planning and conduct of operations by the staff. Most of the senior officers in the army received their military education either at Sandhurst or at Camberley and quite frequently at both.

The army is recruited on an entirely regular basis. While it is not easy to recruit from all races (the Chinese in particular are loath to come forward in any number), there is no shortage of suitable volunteers from among the Malays in Peninsular Malaysia or the indigenous tribes of East Malaysia.

The loyalty of the army to the government is currently beyond question but for it to remain so in the future depends on whether or not the government, which is dominated by Malays, can resolve the major political problems centering on the racial minorities within the country. It is not simply a question of whether the Malays can satisfy the political ambitions of the other races generally without weakening their own position. There are two distinct and separate problems: the first involves the Malaysian Chinese and the second the indigenous peoples of East Malaysia.

The Chinese element of the population causes problems in two directions. On the one hand there are those who look, perhaps, to Taiwan for their political ideals and who, since they tend to dominate the Malaysian economy, now want more say in the government. In contrast, there are those Chinese who look to Peking and seek (as they have done since 1948) to destroy the existing political system and set up one on the Peking Model.

The assimilation of the Borneo territories (Sarawak and Sabah) into the Federation has created a physically divided State (to be perhaps compared with Pakistan after 1947) in which one part, Peninsular Malaysia, is so dominant as to result in a distinct sense of imbalance between the two. The people of Sarawak and Sabah, where the Malays are very much in a minority, are inclined to be suspicious of the Kuala Lumpur government because of its domination by the Malays. Their feelings are exacerbated by the fact that their two States were, when they entered the Federation in 1963, and still are, far less well developed in terms of communications, hospitals, schools and other social amenities, than the States of Peninsular Malaysia.

If government succeeds in finding solutions to these problems the army will remain loyal to it. While all ranks, particularly the non-Malays, remain loyal the army will in all probability be effective in carrying out its internal security duties though the experience of the earlier Communist Emergency (1948-60) suggests that there could be difficulties in sustaining the morale of the army should it be subjected to a lengthy and exhausting commitment to arduous and frequently inconclusive anti-terrorist jungle operations.

F. A. GODFREY

REPUBLIC OF THE MALDIVES

The Maldivian archipelago is a chain of 1196 coral islands with a total area of 115 square miles, located in the Indian Ocean about 400 miles south-west of India, and stretching almost 500 miles from north to south. The population of about 140,000 constitutes a distinctive nationality of Indo-Aryan stock speaking its own language, Divehi.

The Maldives have been settled by this population, making its living primarily by fishing and maritime trade, for about two millennia, and their relative geographical isolation and lack of important foreign resources have preserved them from any long-term colonial occupation. The Portuguese seized the islands in 1558 but were driven out in 1573, and a conquest by pirates from Malabar in 1752 lasted only 4 months. In 1887 the Maldives became a British protectorate, handing over responsibility for their defence and foreign affairs to the British governor in Ceylon, but the Sultans continued to exercise full internal control. Originally Buddhist, the islands have been 100% Sunni Muslim since 1153, when the ruler of the time was converted to Islam by a travelling Moroccan saint and ordered the entire population to follow suit.

The autocratic rule of the sultans was restricted by a constitution in 1932 following a court rebellion, and a short-lived republic was created in 1953 only to be reversed by a royal counter-coup within a year. From 1957 the islands were in fact ruled by the Prime Minister, Ibrahim Nasir, who became President when a referendum in 1968 approved the creation of the Second Republic. There is no official opposition nor any political parties, and there has been no Prime Minister since Ahmed Zaki fell foul of the President in 1975 and was banished to a distant island.

From 1957 to 1965 the Maldives were locked into a dispute with Britain over the terms, agreed in 1956 just before Ibrahim Nasir came to power, on which Gan Island in Addu Atoll at the extreme southern end of the archipelago was leased to the Royal Air Force as its main staging base to the Far East. During this period the 15,000 people of the three southernmost atolls seceded from the Maldives under the leadership of one Afif and declared an independent Republic of Suvadiva.

The dispute was finally resolved in July, 1965 when protectorate status was ended and the Maldives became fully independent and joined the United Nations. The secession was formally ended and Afif went into exile in the Seychelles. However, full control from Male, the capital, was not re-established until Britain prematurely terminated the lease and withdrew the RAF from Gan in March, 1976. Southern hostility to Male remains considerable, and has been exacerbated by the drastic fall in living standards occasioned by the closure of the base and the loss of over 800 jobs.

The primary role of the Maldivian National Guard, combining army and police functions, is internal security, and a considerable proportion of it has been deployed in these southernmost atolls since 1976. It is under the control of the Ministry of Public Safety whose head is Abdul Hannan, a close associate of the President. No details are available on the National Guard's size, training or equipment.

The Maldives' major strategic asset is the large air base at Gan. Immediately after the British left in March, 1976 thereby depriving the Maldives of an estimated \$600,000 in foreign exchange per year (20% of total foreign income), the government began advertising in the international press that Gan was available for lease. It was withdrawn from the market after the Maldives joined the Non-Aligned Movement with Libyan sponsorship in August of that year, however, and in October, 1977 President Nasir rejected a \$1,000,000 Soviet offer for the lease of the base.

In the growing international competition for Indian Ocean bases Gan has become one of the more attractive targets, and the Maldives was honoured by visits from the Iranian, United States, Indian and Sri Lankan navies in 1976-7. During the same period Libya, India and Pakistan opened the first foreign embassies in Male. However, President Nasir has stated that he does not wish to lease the island base to a superpower (nor, presumably, to a superpower's ally), and is seeking alternative ways of exploiting the facilities there. So long as his own power base remains secure and the National Guard loyal, it is unlikely that Gan will again be used as a military base.

GWYNNE DYER

MALI*

History and Introduction

Mali attained independence from France in 1966; in the colonial period it was known as Soudan. For a few months a Federation of Mali, composed of the present Mali and Senegal, existed but this proved unworkable. During its brief period of life the Mali Federation sent a battalion formed of companies from both States to the UN Congo Force where it gained a great reputation.

From 1960 to 1968 Mali was ruled by President M. Keita; in 1968 he was overthrown by a military coup led by Lt. Moussa Traoré, who formed a Military Committee for National Liberation, mostly of officers of captain and subaltern ranks. More senior officers were retired, others who opposed the coup were arrested. The reasons for the coup appear to have been the radical socialism of Keita, economic stagnation, and the formation of a Chinese-trained and equipped People's Militia. Keita also enjoined the army to participate in radical political education and rural agricultural developments. In 1969 further arrests of dissident army officers said to be in a conspiracy followed, and in 1971 Traoré's principal aide and fellow conspirator of 1968, Diakite and one other senior officer, both of right-wing, Francophile views, were arrested for treason, and sentenced to long terms of imprisonment. More arrests followed in 1974.

In 1974 a new constitution promising a return to political rule in 5 years was promulgated, and arrangements for this have been set in hand. In February, 1978 the Minister for Defence, Colonel Doukara, the Chiefs of Staff of the Army and Gendarmerie and other senior members of the military government were arrested; there have been other reports of restlessness both in the army and the nation as a whole.

Strength and Budget

Population: 6,000,000 (approximately)
Armed forces: 4200 plus a gendarmerie of 5500
GNP (estimate): \$500,000,000

Command and Constitutional Status

The Head of State is Colonel Moussa Traoré. A military governor is head of the administration in each of the country's six regions.

Role, Commitment, Deployment and Recent Operations

The roles of the Mali army are defence against external threats and internal security. In 1974-5 Mali's border dispute with Upper Volta reached a crisis and troops were sent to the disputed area. Clashes took place, but mediation by other west African States has succeeded in reducing the tension. The army performed well in Sahel drought relief work in 1974. More recently troops have been moved to the country's northern border. One major reason for this is the desire to prevent Polisario activity and recruiting; another reason may well have been the desire of the government to have personnel whose loyalty was in doubt some considerable distance away.

Organisation

The army comprises four infantry battalions, a tank company, a 'parachute' company, an artillery unit, an engineer unit, a flotilla of three river patrol boats and an air wing. A fifth battalion is to be raised.

Recruitment, Training and Reserves

A random system of 2 years' military or civic service exists.

Very early in her independent existence, Mali decided not to use French training aid or facilities, the French being asked to leave in 1961. The result was then a mixture of assistance from elsewhere superimposed upon pre-independence French training. In 1963 a number of officers were sent to the USA. By 1964 Keita had opted for Soviet help, and personnel were being sent to the USSR. Since the coup some limited training aid has been obtained from France.

An officers' school exists at Kati and an academy at Bamako.

* For general notes on African armies, see Appendix 1.

Equipment and Arms Industry

Mali has no arms industry. Most of its military equipment dates from the Keita period and is Soviet. It includes a small number of T-34 tanks, BTR 152 APCs, and BRDM and BTR 40 vehicles; the artillery possesses 85 mm and 100 mm guns, 120 mm mortars and 57 mm anti-aircraft guns; the infantry units possess Soviet battalion weapons and 81 mm mortars. The air wing operates six Soviet MiG-15 and 17 fighters, two Soviet transports and two helicopters; its main airfield is at Bamako.

Rank, Dress and Distinctions

These follow the French patterns, except that the *képi* is replaced by a peaked cap.

Current Developments

The Mali army is no longer the force which gave French Soudanese troops their redoubtable reputation. Ethnic rivalries and jealousies are strong and affect efficiency. The serviceability of much of the old Soviet equipment is doubtful.

L. L. MATHEWS

MALTA

As a group of three small islands commanding the relatively narrow passage between the eastern and western Mediterranean, most of Malta's history has been spent under one imperial rule or another, as maritime predominance in the Mediterranean passed from nation to nation. Over most of the past two centuries, therefore, it was under British rule, serving as a naval base and later also as an air base. During World War II it withstood the latest of a long series of sieges, and the entire island was collectively awarded the George Cross, Britain's highest civilian decoration for valour.

Even after Malta gained its independence in 1964 the mainstay of the economy remained the extensive British military facilities in the island, and a 10 year agreement was signed regulating the terms of the British military presence which also provided for Malta's defence. It was only with the election of a socialist government under Prime Minister Dom Mintoff in 1971 that the country began to pursue a non-aligned course in its international relations, and adopted the ultimate aim of ensuring its security and its income without the need for foreign military bases.

A new bases agreement was negotiated under which the rent paid by Britain (with contributions from other NATO powers) was greatly increased to £14,000,000 per annum. Only British forces were to use the bases, and they were to be used only for the purpose of defending the United Kingdom and NATO. Under no circumstances would they be used against any Arab country, and all British forces were to be withdrawn on termination of the new agreement in 1979. The last British troops left the island in March, 1979.

This leaves Malta with two rather large problems: to restructure the economy so as to make up for the lost income from the foreign military presence, and to find an alternative means of providing its military security. Some progress has been made on the first: the proportion of Malta's foreign exchange earnings derived from the British bases had fallen drastically to only 16% by 1975 (though their total contribution to the economy was still some \$80,000,000 a year, a rather large sum for a country with only a third of a million people). On the question of security after the departure of the British forces, however, arrangements are still incomplete.

A small army has been founded — the Malta Land Forces (headquarters St. Andrew's Barracks) with a present strength of some 500 men. The army's air component consists of four Alouette III and two super Frélon helicopters, all donated by Libya and operating from the former Royal Navy base at Hal Far where a helicopter base has been established with Libyan assistance. There is also a paramilitary Pioneer Corps (*Dirghazn il-Maltin*), currently enrolling some 8000 men on a voluntary basis, whose main purpose is to keep down the unemployment rate. Together with a 1300 man police force, these formations seem more than ample to assure the internal security of the country.

Obviously, however, they have virtually no capability for external defence, although Malta remains a most desirable piece of strategic territory. Prime Minister Mintoff announced just before he was narrowly re-elected in 1976 that he intended to seek a guarantee of Malta's security through a treaty with all its immediate neighbours: France, Italy, Algeria, Tunisia and Libya. Not only would these powers guarantee the country's independence and neutrality, he suggested, but they might do so jointly through some yet-to-be-defined Mediterranean alliance. He even hinted that they might make use of Malta's extensive military facilities from time to time on a temporary basis, though there would be no permanent basing of foreign troops on the island in the future. They were to pay an annual sum of \$56,000,000 in return for Malta's neutrality and occasional use of the bases.

The response of these proposed guarantors has so far been mixed, and immense difficulties would lie in the way of any military guarantee linking NATO powers with radical Arab regimes. Libya and Italy in particular take a close interest in Malta's security, however, and even without a formal treaty the substance of the Maltese government's plan may well be realised, thus obviating the need for more substantial (and ill-affordable) Maltese armed forces.

GWYNNE DYER

MAURITANIA

HISTORY AND INTRODUCTION

The Islamic Republic of Mauritania is one of the more artificial legacies of the colonial era. Like several other Sahel States its population is divided between a nomadic, Berber–Arab-related stock in the north of the country and a sedentary black African population in the extreme south, but uniquely amongst the Sahel States it is the northerners who have dominated the government.

When the country attained independence from France in 1960 Moors made up about 70% of the population, but by 1978 the far higher birth rate amongst the African peasants along the right bank of the Senegal River in the far south had increased their share of the 1,500,000 population to about 50%.

The persistent droughts of the early 1970s had meanwhile virtually destroyed the traditional Moorish nomadic economy, wiping out 90% of their cattle and about half of their camel herds, thus forcing at least half of the Moorish population to adopt a sedentary and economically marginal existence on the fringes of the capital, Nouakchott (which has been growing since 1970 at 20% a year) and the other main towns. Nevertheless, the Moorish element of the population still dominates the government and the officer corps of the armed forces.

From the day of its independence Mauritania's existence has been threatened by the nature of its population. Morocco, to the north, did not drop its claim to all of Mauritania as a traditional Moroccan domain in the pre-colonial era until 1969, and the country was only admitted to the Arab League in 1973. Senegal, to the south, did not raise any equivalent claim to the southern areas of Mauritania which are inhabited by people who are racially, linguistically and culturally akin to the Senegalese, but there was nevertheless an implicit pull in that direction. As Mauritania's unity became ever more strained by the war it has been involved in since 1975, Senegal's President Léopold Senghor stated explicitly for the first time in January, 1978 that if the Mauritanian State should be destroyed as a result of the war over the Western Sahara, he would have to demand self-determination (i.e. union with Senegal) for Mauritania's black population in the far south.

Despite the inherent fissiparous tendencies of the country, Mauritania enjoyed a remarkably stable internal political situation — apart from the 1966–7 clashes between the then majority Moorish population and the negro southerners over the question of (Arabic) language instruction in the schools — until 1976. The government headed since 1960 by Moktar Ould Daddah effected a successful reconciliation over this question (while not losing its essentially Moorish character), and also succeeded in creating a significant export sector in the economy through the development of the Zouérate iron ore mines and the Akjoujt copper ore mines, although the country remained amongst the poorest in the world. Ould Daddah pursued a socialist policy in domestic affairs which won his single party, the Parti du Peuple Mauritanien, the tacit support of the clandestine Marxist Party, the Kadihines. In international affairs he followed a policy of prickly independence, terminating a defence treaty with France in 1972, and withdrawing from the French African currency bloc and creating a separate Mauritanian currency, the ougiya, in 1973. He subsequently nationalised the French mining interests. He maintained close links with Algeria in order to ward off the territorial pretensions of Morocco (which maintained its claim to a 'Greater Morocco', incorporating Mauritania as well as the Sahara, south-western Algeria and northern Mali, until 1969), and generally adhered to the positions of the radical bloc in inter-Arab affairs.

Mauritanian international policy underwent a radical reversal in October, 1974, however, when President Ould Daddah concluded a secret agreement with Morocco for the partition of the Spanish colony of (Western) Sahara which lay between the two countries. It was all the more extraordinary in that hitherto Mauritania had provided bases, support and much of the personnel for the guerrilla movement Frente Polisario which was fighting (not very effectively) for the independence of that Spanish colony. The abrupt switch of policy has been variously attributed to a mistaken belief that Algeria approved of the agreement, to a conviction that Morocco was determined to annex the territory anyway and that a Mauritanian-controlled buffer zone was therefore essential, and to sheer personal folly on the part of President Ould Daddah. The result, in any case, was to embroil Mauritania in a war which could yet destroy it entirely.

Following the adroitly stage-managed Moroccan 'Green March' into the Spanish Sahara in 1975, Madrid hastily concluded a tripartite agreement with Morocco and Mauritania in November granting them the territory (and ignoring the United Nations' demand for a referendum on independence) in return for a continuing interest in the territory's rich phosphate mines at Bou Craa. This agreement, signed 6 days before Franco's death, was followed by the physical occupation of the territory by Morocco and Mauritania in early 1976. The southern area allocated to Mauritania was named Tiris el-Gharbia, and Nouakchott claimed that the support for the Mauritanian government expressed in the general elections which were held throughout the expanded national territory in August, 1976 obviated any need to hold a referendum in the former Spanish territory.

Well before that, however, it had become evident that the Marxist guerrilla organisation Polisario was determined to resist the partition and annexation of the territory by Morocco and Mauritania, and that it enjoyed the whole-hearted

World Armies

support of Algeria in its struggle. Much of the scanty Saharan population (totalling less than 100,000) fled or was removed to refugee camps across the Algerian frontier around Tindouf, and arms and military bases were provided to Polisario in the same area. A government-in-exile of the 'Saharan Arab Democratic Republic', claiming sovereignty over the newly acquired Moroccan and Mauritanian territories, was set up in Algiers, and was recognised by Algeria and a number of other radical African States. By mid-1976, moreover, it was clear that Polisario's strategy was to strike primarily at the weaker of its two opponents, Mauritania, in the hope of destroying the alliance which had thwarted Saharan independence. (For details of the fighting in Mauritania, see Recent Operations.)

In the course of the succeeding 2 years the Mauritanian armed forces, a small constabulary force inherited from the era of French colonial rule, were expanded more than ten-fold to cope with Polisario's assaults, and military expenditure rose to exceed 50% of the national budget, but no decisive result was obtained. Polisario columns continued to strike deep into Mauritania proper, as well as Tiris el-Gharbia, from their Algerian bases, and Mauritania's iron-ore exports were seriously curtailed by guerrilla raids on the railway between Zouérate and the sea. The formation of a joint defence pact with Morocco and arrangements for a joint military command (inevitably dominated by the Moroccans) in May, 1977, followed by the introduction of large numbers of Moroccan troops into the northern areas of the country, failed to end the raids, while rousing dormant Mauritanian suspicions about Morocco's annexationist desires. The provision of French air support and reconnaissance from bases in Senegal beginning in December, 1977 had a much more visible effect in restricting Polisario attacks, but it was nevertheless the case that both the Mauritanian armed forces and the populace at large were extremely demoralised by mid-1978.

Apart from the sheer strain and cost of the war effort, the ruling party's position was being undermined by the increasing alienation of its more radical erstwhile supporters, including the Kadihines and its own youth wing, as Moroccan and French influence grew increasingly pronounced in the country. (By the end of 1977 there were 300 French troops, and up to 10,000 Moroccan troops, in the country.) A considerable proportion of the Moorish population was in any case secretly sympathetic to the Polisario cause, and many actually had friends or relatives fighting with Polisario. Within the armed forces, the predominantly Moorish officer corps were equally affected by these influences, while the mainly negro enlisted ranks showed little enthusiasm for dying in a Moorish quarrel.

President Ould Daddah's anxiety about a coup was shown by his constant shuffling and reshuffling of senior officers' appointments, but by late 1977 he was no longer able to resist the military demand that he break with precedent and appoint an officer as Defence Minister. On July 10th, 1978 he was overthrown in a bloodless coup led by the Army Chief of Staff, Lieutenant-Colonel Mustapha Ould Muhammad Salek, who enjoyed general support within the army. A military *junta* of 18 officers, known as the Military Committee for National Recovery, took control and appointed a 16 man cabinet (including eight officers) to administer the affairs of the government. Two days later Polisario unilaterally declared a ceasefire (to apply to Mauritania only, not to Morocco), in the hope that the new Mauritanian regime would be willing to negotiate a peace settlement giving the guerrillas most of what they wanted.

The new Mauritanian regime is politically considerably to the right of Ould Daddah, and has strong links with the powerful former Emir of Mauritania, the major Hodh tribe in the east of the country, and other conservative forces. Despite its instant affirmation of adherence to Ould Daddah's close links with France and Morocco, it is clearly a nationalist regime that fears excessive Moroccan influence or even take-over. While quite prepared to relinquish the empty and valueless Tiris el-Gharbia in return for peace with Polisario, the *junta* is quite aware that the large numbers of Moroccan troops already on Mauritanian soil — certainly more than a match for the Mauritanian armed forces — do not permit it to seek a separate peace against Morocco's wishes. (For further comments, see Current Developments.)

STRENGTH AND BUDGET

The Mauritanian army in early 1979 was estimated to number about 12,000 men, to which should be added around 6000 paramilitary gendarmes and nomad units whose participation in the war has been just as great. The air force numbers about 150 men, and the navy 300.

The army has expanded at an extremely rapid rate since 1975, when its strength, stable since independence, was about 1500. The most rapid period of growth was in mid-1976 to mid-1977, when it grew from 3000 to its present total, after France had taken over almost the entire responsibility for training the new recruits. Even now the armed forces amount to only 1% of the national population, but two constraints suggest that there will be little further expansion: (1) the enlisted ranks are mainly drawn from unemployed black Mauritians living in the far south, and there have been signs that recruitment from this more relevant but smaller pool of potential soldiers is now reaching its natural limits; and (2) the country simply cannot afford to support larger armed forces under any circumstances.

The defence budget for 1977 was \$50,000,000, a figure representing 60% of government expenditure, and approximately a fifth of the entire GNP (which was variously estimated at \$210,000,000 — \$290,000,000 for 1976). It would not be surprising if the GNP had actually declined since then, since the principal target of Polisario's strategy has been precisely the Mauritanian economy.

By far the most vulnerable target has been the iron ore mines at Zouérate, which earn about 80% of Mauritania's foreign exchange, and the 400 mile railway connecting them with the country's main port at Nouadhibou. Constant Polisario

attacks cut output by 12.4% in 1977, and possibly by an even greater amount in 1978. The loss of revenue caused by this and the fall in world prices of iron ore, combined with the closure of the country's only copper ore mine at Akjoujt and the continuing severe effects of the prolonged Sahelian drought on the country's agriculture, resulted in a drastic reduction of government revenue at a time when military expenditure was making unprecedented demands upon it.

The Société Nationale Industrielle et Minière, managing the iron ore mines, proved incapable of paying over the 10% of its income which normally amounted to one-third of the government's revenue, and recourse had to be had to a special national defence tax of 10% of income levied on all Mauritanian citizens. Even then government revenue amounted to only about half of budgetary appropriations in 1978. Without financial support amounting to a reported \$400,000,000 in 1976–8 from the conservative Arab States, principally Saudi Arabia, the United Arab Emirates and Kuwait, the government would have gone bankrupt; even as it was, some civil servants were going unpaid for as much as 6 months, and it is beyond question that the severe economic hardships brought by the war played a large part in paving the way for the July, 1978 coup.

The new government has done all in its power to preserve the ceasefire, and has accelerated the trend back towards a liberal, private-enterprise economy that was already evident in the last year of Ould Daddah's rule, in an attempt to attract desperately needed foreign capital. Iron ore production is now being raised from the 8,400,000 tonne low of 1977 to 11,000,000 tonnes, and good progress has been made on securing the necessary \$460,000,000 in foreign loans to open large new iron ore mines at El-Rhein in the Guelb area north of Zouérate. Both these improvements and the somewhat lower level of military demands on the tottering economy, however, are critically dependent on the maintenance of the ceasefire and an eventual peace settlement with Polisario.

COMMAND AND CONSTITUTIONAL STATUS

The constitution in effect since 1960 provided for a strong President elected by direct, universal suffrage for 5 years, who exercised control over the armed forces through a Minister of Defence (the incumbent of the latter post being always, until 1977, a civilian). The senior army officer was the Chief of Staff, who exercised executive command. The Inspector-General of the Armed Forces was chiefly responsible for matters of discipline and training. The country is divided into three military regions, with headquarters at Nouakchott (the south), Atar (the north) and Néma (the east). The navy and air force were subordinate to the army, but the Commander-in-Chief of the Gendarmerie was responsible to the Minister of the Interior.

Since the coup of July, 1978 however, the former President and most of his ministers have been in detention, and the constitution has been suspended. Colonel Ould Salek, while remaining Chief of Staff, also heads the 18 member Military Committee for National Recovery, which in turn dominates the 16 member cabinet. Parliament has been dissolved and the precise relationship between the present organs of government has not been defined, but it is clear that the army makes all important decisions.

Since May 13th, 1977 the Mauritanian armed forces have been closely linked with those of Morocco by a defence agreement which provides for the stationing of Moroccan troops on Mauritanian soil and the co-ordination of military activities by means of a joint command organisation. The formal body known as the High Defence Committee meets once a month, but at least until Polisario's ceasefire in Mauritania in July, 1978 there were informal consultations between the military staffs of Mauritania and Morocco (and French liaison officers co-ordinating French air force reconnaissance and strike sorties out of Senegal) on a daily basis. Despite the formal equality of representation, Mauritania is clearly the junior partner in this arrangement.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role of the Mauritanian army, which was almost exclusively internal security until 1975, is now primarily defence against external threat, though all the fighting has been taking place within Mauritania. The fighting opened in December, 1975, when the Mauritanian army encountered Polisario resistance in the Nouadhibou–Agüera region and inland at Fort Gouraud while occupying its share of the former Spanish Sahara. It acquitted itself well in these early encounters, and control was soon established over all centres of population in the territory. Soon afterwards, however, Polisario began to employ its since standard tactic of sending motorised raiding columns numbering up to 100 men or more long distances across the desert from their Algerian bases around Tindouf to carry out hit-and-run raids on targets within the former Spanish colony, and within Morocco and Mauritania proper. Given the vast distances and sparse population of Mauritania, discovering and dealing with these mobile raiding columns proved to be a task of considerably greater difficulty.

Early on in the war Polisario settled on Mauritania as its main target, on the grounds that it was much the weaker of its two enemies and that there existed a substantial sympathy for the organisation's aims amongst the members of the R'guibat, Izarguen and Touareg tribes of northern Mauritania—the same major tribes from which Polisario draws most of its Saharan recruits. For the same reason, the Mauritanian army has been unable to rely heavily on Moorish recruits for the war, and has depended mainly on black Africans from the Senegal River valley, who were both unenthusiastic about the war and unaccustomed to the desert conditions in which it was fought.

World Armies

The extent of concealed opposition to Ould Daddah's Moroccan alliance was indicated by the daring Polisario raid which was mounted across hundreds of miles of open desert in June, 1976 against the Mauritanian capital, Nouakchott. The powerfully armed column was led in person by Polisario's Secretary-General, Ahmed el Wali, and the raid would probably not have been risked had not Polisario been counting on some form of rising in the capital co-ordinated with its attack. In the event, no such revolt occurred, however, and the bulk of the Polisario column, some 600 strong, was cut off and destroyed on its way back to Algeria, el Wali himself being amongst the dead. This was a major setback to Polisario, which confined itself to minor operations for the rest of the year while recruiting and training more troops, but by the spring of 1977 it was ready to launch a full-scale offensive against Mauritania.

Polisario's raids, often cutting across the uninhabited north-western corner of Mali to strike into Mauritania from the east, were intended to isolate Morocco, either by forcing Nouakchott out of the war or by compelling Morocco to occupy its neighbour. They soon achieved notable success: on May 1st, 1977 Polisario forces took and held for several hours the mining centre of Zouérate, the best-defended site in the country, killing and capturing some French mining technicians and compelling the evacuation of most of the rest. (The Mauritanian garrison did not leave its barracks.) Within days, 600 Moroccan troops were flown in to defend Zouérate, and on May 13th a joint defence agreement was signed by Rabat and Nouakchott permitting the permanent stationing of Moroccan troops on Mauritanian territory. In June Polisario forces again struck at Nouakchott, and Zouérate was hit twice more during 1977, while the railway from there to Nouadhibou was repeatedly cut and various smaller centres, including the military base at Tmeichatt, were the targets of other successful raids.

The Mauritanian army's casualties during 1977 probably totalled fewer than 500, but its inability to stop the Polisario raids, coupled with the resentment it felt at being largely supplanted by Moroccan troops and controlled by French advisers (the Moroccan expeditionary force in Mauritania had risen to about 10,000 troops by the end of 1977, while the number of French advisers had grown from 60 to over 300), contributed to a marked demoralisation of the Mauritanian armed forces. France also had 1200 troops in neighbouring Senegal ready for instant intervention if the military need arose, but the key step proved to be the stationing of a squadron of Jaguar fighter-bombers and a detachment of Breguet Atlantique reconnaissance aircraft in Senegal in December for operations over Mauritania.

During the first half of 1978, the combination of garrisons of tough Moroccan troops throughout northern Mauritania, good intelligence on Polisario movements provided by French reconnaissance aircraft, and on at least two occasions the annihilation of Polisario columns by Jaguar airstrikes, all served to reduce very considerably the guerrillas' freedom of movement in Mauritania. It did not, however, prevent the Mauritanian military coup of July 10th, 1978, since when Polisario has observed a ceasefire throughout the country in the hope that the new government will offer acceptable peace terms. The Moroccan garrisons remain in place, however, so Mauritania is far from a free agent in this regard.

The Mauritanian army's deployment during 1975-8 kept the airborne company and the paratroop commando company in the capital together with one of the three reconnaissance squadrons, the other two being stationed in the Néma and Atar military regions. The great majority of the motorised infantry squadrons which comprise the bulk of the army was deployed in the northern (Atar) military region, including Tiris el-Gharbia. Since the ceasefire a substantial number of the latter have been pulled back to Nouakchott, especially from Tiris el-Gharbia, for reasons which may not be entirely unconnected with the dispositions of Moroccan forces in Mauritania.

About 3000 Moroccan troops are in the extreme north of Mauritania, based in the towns of Ain ben Tili, Bir Moghrain and Dakhla along what has since 1976 been the Moroccan-Mauritanian border. There are two Moroccan battalions at Zouérate, the iron-ore mining centre in the north, and two more protecting the rail line to Nouadhibou and the port itself. A detachment of Moroccan F-5 fighter-bombers is also based at Nouadhibou. The most significant Moroccan garrisons politically, however, may be the two battalions stationed at Atar and Akjoujt. The latter town has never been threatened by guerrillas, but is only 150 miles from the capital by a good road; the introduction of Moroccan troops there in January, 1978 caused demonstrations by the Mauritanian army. Almost all of Mauritania's main towns except Nouakchott itself now have Moroccan garrisons which are numerically comparable to their Mauritanian army garrisons, and are considerably superior to them in combat ability.

Mauritania is a member of the United Nations, the Arab League and the Organisation of African States. There are no Mauritanian military commitments beyond the country's own borders, however.

ORGANISATION

The arms of service are modelled on those of the French army. The army is organised operationally into one airborne company, one paratroop/commando company, three reconnaissance squadrons and 30 motorised infantry squadrons. At least one camel squadron has also been reported.

RECRUITMENT, TRAINING AND RESERVES

The traditional recruiting pattern of the Mauritanian army was to draw its officers primarily from leading families in the Arab-Berber tribes of the desert north and centre, and to recruit its enlisted men from the black peasant population of the

Rosso area near Senegal. In recent years the army began making a belated effort to balance its ranks more evenly between the country's major ethnic communities, but the demand for rapid expansion created by the war and the reluctance of many northern tribesmen to engage in what is essentially a Berber civil war have caused a reversion towards the old pattern of recruitment. This has had certain unfortunate effects, as the black recruits have no personal commitment to the war and little even to the country itself, as they regard themselves with some justice as second-class citizens of Mauritania. There is legal provision for 2 years' compulsory national service to be enforced nationwide, but in fact the army's needs are generally satisfied by the flow of volunteers from the Rosso area seeking refuge from unemployment.

From the time of independence France has provided training staff and assistance, and the majority of the present generation of Mauritanian senior officers were trained at French military academies. Since the war began in 1975 France has quintupled the number of its military advisers in the country and assumed the major part of the responsibility for training. A combined officers' and NCOs' school has been opened at Atar, with French instructors and a French-language curriculum.

There is no formal reserve organisation, but recent reports indicate that a new local home defence reserve has been created. The 6000-strong Gendarmerie, armed and equipped rather like the army, functions as an immediate reserve.

EQUIPMENT AND ARMS INDUSTRY

The army's equipment is predominantly French. Its reconnaissance companies use 15 EBR-75s and a larger number of recently acquired AML-60/-90 armoured cars and French-made APCs. Infantry weapons are French, and light support weapons include 60 mm and 81 mm mortars and 57 mm, 75 mm and 105 mm recoilless rifles. The army has no artillery or tanks, and is organised for mobile counter-insurgency warfare only.

The small navy has four patrol boats and two small patrol craft, with two modern FPBs on order. The air force at present has no combat aircraft, although four IA-58 Pucará COIN aircraft are on order from Argentina; the transport element includes eight Britten-Norman Defenders, one C-54, three C-47, two DHC-5D, one Caravelle and two Skyvan aircraft. There are four Cessna F-337 and one AL-60B aircraft for liaison and reconnaissance duties.

There is no arms industry at all in Mauritania.

RANK, DRESS AND DISTINCTIONS

Ranks in the Mauritanian armed forces follow the French model, and both service and combat uniforms are patterned on their French equivalents. No information is available on medals and distinctions.

CURRENT DEVELOPMENTS

In early 1979 the ceasefire declared by Polisario (applying to Mauritania only) after the July, 1978 coup in Nouakchott was still holding, if precariously. Peace negotiations had been held with Polisario through a variety of intermediaries, including France, Libya (which furnished financial aid to Mauritania both before and after the coup despite its support for Polisario) and a committee of five 'wise men' (the Heads of State of Sudan, Tanzania, Guinea, Ivory Coast and Nigeria) set up by the Organisation of African Unity. No positive results have been achieved, however, probably due to the fact that the presence of 10,000 Moroccan troops in Mauritania, including some stationed at Akjoujt which could be seen as a force poised to intervene in Nouakchott if required, imposed a decisive limitation on the concessions Mauritania could make in order to gain a peace settlement.

It was clear throughout 1978 that Morocco itself was desirous of a peaceful solution to the Saharan war — indeed, there were abortive direct contacts between Morocco and Algeria — and despite Morocco's public protestations to the contrary Rabat would probably have accepted the plan proposed by France in late 1978. This proposed that Morocco should hold a referendum on the 1976 annexation in its part of the former Spanish Sahara, while Mauritania's share would be granted a special federal status (in which, though it was not explicitly stated, Polisario would be permitted to exercise power). This proposal was rejected by Polisario representatives in negotiations in Paris in September, 1978 however, and since then there have been several threats by Polisario to renew the war against Mauritania if a more satisfactory offer is not forthcoming. The death of President Houari Boumedienne, Polisario's strongest supporter in Algeria, in December, 1978 makes any assessment of Polisario's ability to wage such a renewed campaign problematical.

It is, however, clearly the case that it would be very difficult for the Mauritanian army to start fighting again. The Mauritanian garrison in the new Saharan territory of Tiris el-Gharbia has been substantially reduced, and the new attitude of the relatively few troops remaining there can best be described as 'very relaxed'. Both there, and in the northern part of Mauritania proper, it was Moroccan troops who bore the brunt of the fighting in late 1977 — early 1978, while on at least one

World Armies

occasion Mauritanian troops were involved in a demonstration against the Moroccan military presence. A renewal of the fighting, therefore, would probably lead quite rapidly to the establishment of *de facto* Moroccan control over much of northern Mauritania.

GWYNNE DYER
L. L. MATHEWS

MAURITIUS

History and Introduction

Mauritius, a former British colony, attained independence in 1968. It possesses a very complex ethnic mixture — the largest group being Hindus (in a slight overall majority), with Creoles (descendants of Europeans and Africans) and Indian sub-continent Muslims as the next groups in order of size. There are very important small Franco-Mauritian and Chinese minorities.

In the colonial period a small Territorial Force existed for home defence; it did not serve outside Mauritius in either World War.

Strength and Budget

Population: 850,000 (approximately)

Army: a special mobile force of between 700 and 800.

Command and Constitutional Status

H.M. Queen Elizabeth II is Sovereign of Mauritius. Authority locally is vested in the Governor General, who is titular Commander-in-Chief, and a prime minister and cabinet.

Role, Commitment, Deployment and Recent Operations

The tasks of the Special Mobile Force are seen as anti-riot and counter-insurgency, together with disaster relief and some civil-aid work.

Organisation

The Special Mobile Force is not an army in the formal sense but a general-service barrack police force trained on military lines. Its two senior officers are a British army lieutenant-colonel and a major as his deputy. The Special Mobile Force is a little under 800 strong.

Recruitment, Training and Reserves

Recruitment is by voluntary enlistment for which there is no shortage of volunteers from all communities.

Some of the officers have been trained in military academies and schools, a few having passed through Sandhurst.

Equipment and Arms Industry

There is no arms industry. The force's small arms are all of British origin; its transport consists of Land Rovers and light scout cars.

There are two helicopters, gifts respectively from France and India.

Rank, Dress and Distinctions

These generally follow the British pattern.

Current Developments

This force exists only for internal law and order.

MEXICO

HISTORY AND INTRODUCTION

The Mexican army differs both in its founding role and present status from almost all those of the major Spanish-American States. It did not, unlike the armies of Venezuela or Chile, win independence from the Spanish colonial government by force of arms — though its changing sides at a crucial moment was decisive in the struggle for independence. And it is not now, nor has it been for 50 years, a direct or even important influence on Mexican political life. On the other hand, its political role in the years between the gaining of independence in 1821 and the establishment of the modern Mexican governmental system in 1920–40 predominated over that of any other sector of Mexican society, making Mexican *caudillism* an exaggerated caricature of that distinctive feature of the nineteenth century Latin-American scene.

Because the cause of Mexican independence succeeded by a reversal of loyalties rather than military victory, the modern Mexican army can claim a line of descent, however attenuated, from the royal army of the Viceroyalty of New Spain. But that army was not very ancient. Before the Seven Years' War (1756–63) Spain had maintained no effective army in the Viceroyalty (which then included the territory of the modern central American republics and much of the south-western United States). As a result of the difficulties experienced during that war in defending her overseas possessions, Spain decided to create an army for service in the Viceroyalty. It was to be composed of two classes of regiments: Spanish or 'peninsular' regiments, sent to America in rotation for a fixed period, and local or '*fijo*' regiments, raised in the Viceroyalty for permanent service there. It was also decided to retain and expand the units of urban and rural militia which hitherto had constituted Spain's only source of local military power, a very inadequate one at that. The result was that, after a number of false starts, the Army of New Spain numbered in 1800 about 30,000, organised into four regular regiments of infantry and two of dragoons, 10 militia regiments of infantry and nine of dragoons and cavalry, and numerous companies of coastal, frontier and town militia. The soldiers were recruited from the poor mestizo class and the officers from the white middle-class.

It was this army which moved into action against the rebels who, from 1810 onwards, rejected the rule of Napoleon's puppet government in Madrid and proclaimed their independence. They were too badly armed for the regular army, which was reinforced from Spain, to have much trouble beating them, but their cause was popular among the mestizo and Indian villagers, and became popular with the wealthier whites after the Liberal Revolution of 1820 in Spain. Independence was then made to look a way of preserving a conservative regime in Mexico and the conservative leaders cast about for a military man who might help them safely towards it. They found him in the person of a young captain, Agustín Iturbide, who secretly made contact with the principal guerrilla leader, Guerrero, agreed a programme for the country's political future with him and in 1821 presented the representatives of the Spanish government with a *fait accompli*.

A minority of the Spanish regular soldiers in the country resisted, but the remainder did not and were eventually repatriated. Meanwhile, the viceroy had conceded defeat and signed a treaty recognising Mexican independence and, though the Spanish government disowned it, Mexico did effectively become a sovereign State from that date, first as an 'empire' under Iturbide (ruled 1821–2), then, when he was overthrown by his erstwhile henchman, Santa Anna, as a republic.

Santa Anna was to dominate political life from 1825 to 1855, through his control of the army, though not always as Head of State. A talented soldier, he defeated a Spanish attempt at reconquest in 1829, a French punitive expedition in 1838 and numbers of internal revolts, allegedly in the name of Centralism against Federalism, a familiar conflict in post-independence Latin America. But he failed to stop the secession of Texas, its accession to the United States, or the subsequent invasion of Mexico by American troops in 1846, designed to force Mexico to accept the new frontier. The costs of the war bankrupted the country, forced the government to appropriate church property and thus provoked new civil war in the country, which Santa Anna was recalled from exile to quell. Continuing internal disorder and foreign indebtedness prompted Napoleon III to intervene, ostensibly to recover European monies owing, actually to install his nominee, the Habsburg Maximilian, as emperor.

This extraordinary episode lasted from 1862 to 1867, when Juárez, one of Santa Anna's liberal opponents, led the patriotic armies to victory against their foreign emperor and re-established the republic. He ruled as president until 1872, but the coming man in the State had by then revealed himself to be the most successful of the anti-Maximilianist generals, Porfirio Díaz. It was he who had entered Mexico City as conqueror, and in 1876 he was elected president, largely through his military backing. He stood down in 1880 but was re-elected in 1884 and thenceforward ruled without interruption until 1910. Although the spirit of his government was supposed to be 'scientific', by which was meant modernising, he and his *Científicos* in fact depended upon military power to maintain themselves in office. Díaz showed originality in the way he managed it. Recognising that the real danger to political stability lay in the ambitions of generals, not the discontents of their soldiers, he kept the generals docile by frequent transfers from one part of the country to another, sweetened by high

salaries, honours and opportunities for graft. At the same time he shifted the responsibility for maintaining law and order from the army to a newly created armed police, the *rurales*, who were more directly under his thumb. He also, when opportunity offered, retired officers, thus reducing the very swollen size of the officer corps. By 1910, when he had held power for 30 years, the army consisted of 4000 officers, largely white and middle-class, 20,000 Indian soldiers, and 4000 *rurales*. The provincial armies, loyal to local *caudillos*, the bane of national life in the Santa Anna period, had disappeared.

But the end of the Díaz regime, which came in 1910, largely through popular resentment of its unfeelingness, summarily brought about a recreation of those armies. Revolutionary generals, like Zapata and Pancho Villa, claimed parity of status with career generals who had cannily changed sides at the right time, and the fighting between them and the regular army returned Mexico to the state of chaos it had known in the worst periods of the Santa Anna era. By 1920 there were 80,000 armed men abroad, few of them owing loyalty to the central government, commanded by generals who each claimed to embody political legitimacy. Taming this collection of disorderly bands was to be the main work of the anti-Porfirian government during the 1920s and early 1930s.

The period from 1920 to 1940 is known in modern Mexican history as the Revolution and, though there had been many before, it deserves that title for the real, irreversible changes which it worked in Mexican society. Foremost among these were the return of communal lands (*ejidos*) to their original village holders, the distribution of latifundia land to landless labourers, the energetic attempt to provide truly universal free education and, eventually, the expropriation of much foreign-owned extractive industry. None of this, least of all the land programme, could have been achieved without the subjection of the army to central government control. That this was eventually achieved was very much to the credit of a young Indian general of the anti-Porfirian revolution, Joaquín Amaro, who served as Secretary for War to President Calles in 1924–8. His methods resembled those which Díaz himself had used to tame the army 60 years before. He began by reforming the *Colegio Militar*, so that the new officer intakes should be properly educated, and he also opened a staff college (*Escuela Superior de Guerra*) and sent officers abroad to study. He improved the conditions of the soldiers, by raising their pay, modernising their barracks and generally working to attach their loyalty to the central government instead of the local commander. Finally, at the instigation of President Calles, he began a policy of frequent transfers of generals, denying them the chance to build a power-base in any one area. The predictable result was a generals' revolt in 1927. It attracted the support of only a quarter of the officers, most of whom were instantly dismissed.

The work of Amaro and Calles was carried on after 1934 by the latter's successor, General Cárdenas. He instituted promotion by merit and examination for officers up to the rank of colonel, and sent back to school those who failed. And in 1937 he institutionalised the political subservience to which he had reduced the officer corps by reorganising the Revolutionary Party on a basis of four 'sectors' — labour, peasant, popular and military. When accused by his critics of having brought the army into politics, he replied, 'It was already there. In fact, it has been dominating the situation and we did well to reduce its influence to one vote out of four'. Some senior generals, discerning the nature of the trap which this corporative arrangement had sprung on the army, raised a last banner of revolt, but it was easily put down. Against the danger of further trouble, the government permitted the raising of a workers' militia, which quickly came to outnumber the army two-to-one, but it proved not to be needed. Though a group of senior generals made a concerted effort to win the 1940 presidential elections for their man, the anti-army candidate, Camacho, himself a former general, easily won. He completed the work of Cárdenas by eliminating the short-lived military 'sector' from the official party (now renamed the Institutionalised Revolutionary Party), breaking up the military bloc in congress and retiring the remaining military trouble-makers.

The outbreak of World War II brought an additional boon to the party in that it gave the army, though it took no actual part in the fighting, the stimulus to concentrate on strictly professional matters: its training to defend the national territory, in concert with the United States, against foreign invasion. By the end of the war, the army had put its political past firmly behind it and was set fair on a course to become the least political in Latin America, a title which over the last 30 years it has unquestionably earned.

STRENGTH AND BUDGET

Population: 64,440,000

Army: 72,000

Navy: 17,500 (including 2000 marines); 23 major vessels, 64 smaller

Air force: 6000; 105 combat aircraft

Paramilitary: 22,000 national police; 120,000 rural militia; 250,000 part-time 'conscripts' (see text)

GNP (1976 estimate): \$93,200,000,000

Defence expenditure (1977): \$543,000,000

The proportion of the national budget spent on defence is one of the lowest in Latin America. In 1973 it stood at 3.4%, of which the army took the major share. Most of the spending goes on personnel and for fixed charges, since there has been very little investment in new equipment for many years.

World Armies

COMMAND AND CONSTITUTIONAL STATUS

Mexico has a highly presidential system of government, with most executive power concentrated in the hands of the Head of State. He appoints not only ministers but also state governors and all military officers of the rank of colonel and above. He has the power to mobilise, with senatorial approval, and to suspend constitutional guarantee, under the same proviso. He is Commander-in-Chief of the Armed Forces, but day-to-day control is exercised by the Minister of Defence, to whom the army and air force commanders answer directly (the navy answers to the Minister of Marine).

Mexico, though by every test a democratic country, is also effectively a one-party State. The party is the Institutional Revolutionary Party (PRI), which is organised on occupational lines. It has three 'sectors' — Popular, Farm and Labour, which by arrangement divide the constituencies between themselves before elections, i.e. in a constituency which has by agreement between the sectors been allotted to a Farm candidate, the other sectors will swing their vote behind him, in return for the Farm Sector's support in constituencies allotted to another. Until 1945 there was also a Military Sector, which resulted in the direct election to congress of servicemen (usually officers) on active duty. Although this arrangement has been dropped, officers continue to be elected to congress. Out of its 273 seats, between 20 and 30 were usually held by officers during the 1950s and 1960s.

Officers also often hold posts in the bureaucracy, either while on leave from the service or occasionally on active duty. The commanding general of a military zone, who is appointed by the President, is also his personal representative in the department (departments and military zones coincide) and is used by the population on occasions as a direct channel of communication with the Head of State when it is felt that the governor is not adequately representing the citizens' interests. He also acts as commander of the rural militia, which is both a counterweight to the regular army in the zone and a channel of intelligence to the central government.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

As a result of the measures successfully taken since the revolution of 1910 to depoliticise the army, it no longer plays any role in the choice or administration of government in Mexico. (It does, however, maintain order during elections.) Because of the cordial relations prevailing with the United States, that country's effective control of the Caribbean and eastern Pacific, and the weakness of Mexico's southern neighbours, the army has no external defensive role either. It is not deployed on the frontiers to any significant extent, but in the interior. This is a reflection of its principal mission, which is to deter, and if necessary suppress, rural and urban subversion, violence and disorder. It also carries out certain developmental duties, notably the reduction of illiteracy, not only among its soldiers, but also their families. Ceremonial figures largely in its activity; it is not unknown for a quarter of the strength of the armed forces to be assembled in Mexico City for a State occasion.

The army is responsible for the Sunday training of the 'conscripts'. But as the significance ascribed by the government to this activity is difficult to estimate, so too is its importance in the army's tasks.

Commitment

Mexico is a signatory of the two Latin American security treaties — the collective security treaty of Chapultepec and the non-aggression treaty of Rio. It also has a military assistance agreement with the United States. It has no military commitments to other nations.

Deployment

Mexico is divided for military purposes into 35 military zones. These correspond with the 31 States, except that three (Oaxaca, Veracruz and Guerrero) contain an additional military zone, and the Federal District is also a military zone. The State capital is in almost every case the military zone headquarters, in which resides the general commanding the zone. Most zones contain two infantry battalions, and some a cavalry regiment. The Presidential Guard brigade, the infantry brigade and the parachute brigade are stationed in the vicinity of the capital. The 19 marine security companies are stationed in the ports.

Recent Operations

Mexico's last foreign war was with the United States in 1846, unless the expulsion of the Emperor Maximilian in 1867 and the American punitive expedition of 1916 are included. In recent years, the army has been involved in a number of internal disturbances. Some of these partake of the character of traditional, localised 'social banditry', such as the insurrection by Lucio Cabanas in Guerrero State in 1967–74. He gave his group the name of the Party of the Poor. Other, more genuinely

ideological groups which have attracted the attention of the army or police are the Communist League of September 23rd and the Revolutionary Action Movement (MAR). Many of the disturbances have been caused by university students, of which the worst was at Mexico City on the eve of the 1968 Olympic Games. There have been others at Morelia, Hermosillo and Tlaxcala in 1966, 1967 and 1973, respectively. The army has also been called in to quell local electoral disturbances, in Sonora in 1967, Tijuana in 1968. The army was also active in 1972 on the border with Guatemala, across which guerrillas had strayed from the neighbouring State. None of this activity has exceeded the scale of low-level police action.

ORGANISATION

The army is organised domestically into a number of branches: *Infantería*, *Caballería*, *Artillería*, *Zapadores* (Engineers, including *Ingenieros Constructores* and *Ingenieros Industrialies*), *Servicio de Transmisiones* (Signals), *Intendencia* (Administration), Medical, Veterinary and Military Justice Services.

Operationally, the largest formation is the brigade, of which there are three. Most of the army consists of isolated battalion-sized units, stationed in State capitals.

The navy has a marine force, organised into 19 security companies, stationed at the major ports. The air force has a parachute battalion.

The police are organised on a Provincial (State) basis, but there is also a national police force of 22,000, the General Direction of Police and Traffic. It comes under the Ministry of Government.

In addition to the full-time organisations, there exists also a rural militia, originally raised by the governments from among the peasants to protect them from the 'White Terror' of the landlords at the time of the land distribution programme after the revolution of 1910. It was later used by the government in the 'war' with the church in 1926, and in 1929 received the name of the Rural Defence Corps. Its unit is the *peloton* of 11 men, which is under the immediate control of the governing body of the *ejido* (land-holding commune). The unit cannot be used outside the *ejido* to which it belongs without the permission of the Military Zone Commander, who then gives it orders. The militia is raised from volunteers aged between eighteen and fifty, is armed with obsolete weapons, but commands great respect within the *ejidos*. It is also greatly valued by the government as a source of intelligence from the countryside. In 1975 there were 80,000 mounted militiamen and 40,000 foot militiamen.

RECRUITMENT, TRAINING AND RESERVES

The recruitment and training of the Mexican army is highly individual. In theory, under the National Military Service Act of 1942, all males become liable for a year's service at the age of eighteen. In practice, this consists of some very simple marching and drill, without weapons or uniforms, in a park or the streets on Sunday mornings, supervised by a junior officer of the local garrison. The only end-product of the *conscriptos'* efforts is their acquisition of the *cartilla*, a document certifying completion of service, which must be produced when changing employment or address. Life without the *cartilla* is difficult for the Mexican male, and the control it offers the government over the male population seems to be the principal reason for maintaining the practice of Sunday morning training. However it also appears to be valued as a means of impressing the *conscriptos* with their status as citizens and children of the revolution.

The real army is regular, recruited from volunteers for 3 years. Re-enlistment is common. Most of the regulars are rural mestizos or Indians who have failed to find work, enjoy the army and re-enlist in the hope of promotion, which brings considerable benefits. Recruits are trained in their units, though there are a number of specialised schools for enlisted men, of which the most important is the *Escuela de Clases* (NCO School).

Officers are generally recruited from the urban middle or lower-middle class; a very large number are officers' sons. In this respect Mexico adheres to the modern trend for the profession to become self-recruiting. The military academy, founded in 1823, refounded in 1867, is the *Heroico Colegio Militar de Mexico*, at Chapultepec, Mexico City; 'heroic' refers to the spirited defence of the college against the American invaders in the war of 1846. Specialised training is given at the arms school (*Centro de Aplicación y Perfeccionamiento*) and staff training at the *Escuela Superior de Guerra*. The course at the academy and the staff college lasts 4 years and 3 years, respectively. Observers judge that Mexican officer training is more specifically military than that common in most large Latin-American countries today. This may be deliberate government policy to inhibit the growth of political consciousness in the army.

The long-service army generates few reserves, although the ex-conscripts in theory form one.

EQUIPMENT AND ARMS INDUSTRY

Mexico has a small-scale arms industry, manufacturing a few infantry weapons; the *Fabrica Nacional de Municiones* manufactures arms ammunition. But most of its equipment, which is generally obsolescent or actually obsolete, was

World Armies

bought in the past from the United States. The army's equipment is sufficient for its role, but is much inferior to that in general use in Latin America.

Rifle: 0.30in M-1 Garand (USA)

Machine-gun: 0.30in RM2 (Productos Mendoza SA, Mexico City)

Artillery: 105mm M-101 howitzer (USA) and 105mm M-7 self-propelled howitzer (USA; obsolete)

Armour: HWK 11 APC; M-8 armoured car (USA; obsolete); M-3A1 half-track (USA; obsolete); M-5 Stuart light tank (USA; obsolete); M-4 Sherman tank (USA; obsolete)

The air force operates about 30 helicopters and 15 military transports.

RANK, DRESS AND DISTINCTIONS

General de Division	Three silver stars, eagle and wreath
General de Brigada	Two silver stars, eagle and wreath
General Brigadier	One silver star, eagle and wreath
Coronel	Three gold stars
Teniente Coronel	Two gold stars
Mayor	One gold star
Capitan Primero	Three gold bars
Capitan Segundo	Two and a half gold bars
Teniente	Two gold bars
Subteniente	One gold bar
Sargento Primero	Three horizontal stripes
Sargento Segundo	Two horizontal stripes
Cabo	One horizontal stripe
Soldado Primero	One vertical stripe

Uniforms are tunic style, and vaguely Spanish in cut, for formal wear. Combat dress is American style; the American helmet is worn. Distinguishing colours are red for infantry, blue for cavalry, purple for artillery and black for engineers.

CURRENT DEVELOPMENTS

The internal state of Mexico is not entirely pacific. There were disturbances at the universities of Mexico City and Oaxaca in early 1977, and popular outbreaks in Juchitán in February, during which, it is alleged, 29 peasants were killed by the army. But to a surprising degree the country is free of serious threats to political stability and of organised sedition. The consistently unpolitical behaviour of the army over the last 40 years reflects this condition. Close observers nevertheless feel that the political consciousness of the army remains high, and that the involvement of individual officers in the processes of government is quite widespread. They also claim to detect a coming crisis of the 'institutionalised revolution', through its failure to adapt to changing times, unresponsiveness of its bureaucracy to popular needs, and overcentralisation of executive power in the presidency, which it will require force to overcome. All that can be said is that the signs of such a crisis are no clearer now than they have been for two or three decades, and that the army gives no evidence of an inclination to precipitate or forestall it.

JOHN KEEGAN

MOÇAMBIQUE

HISTORY AND INTRODUCTION

Moçambique attained independence in June, 1975 after 12 years of insurgency struggle against Portugal, almost entirely waged by Frelimo, now the ruling party. Frelimo is a revolutionary socialist organisation, and post-independence Moçambique is a State organised on its principles. The first years of independence have been eventful. Moçambique is harbouring, feeding, training and equipping insurgent groups operating on Rhodesia; there have also been incidents on the border with South Africa. The country has suffered the humiliation of two major and several minor Rhodesian 'hot pursuit' operations. In December, 1975 some 400 troops mutinied in Maputo (formerly Lourenço Marques) but were put down with small loss of life. Units of the Tanzanian People's Defence Force, probably two battalions, were reported to have arrived in Moçambique in May, 1976. Assistance of various types is being obtained from Cuba and the USSR, but until 1978 the Moçambique authorities appeared to have resisted all Soviet requests for permanent air and naval installations, although an East German radar watch system was installed. In March, 1978 however, reports of permanent Soviet air and naval installations under construction at Beira and Nacala began to appear.

STRENGTH AND BUDGET

Population: 9,500,000 (approximately)

No further reliable information is available; references to a force of 20,000 have been noted

COMMAND AND CONSTITUTIONAL STATUS

A. J. Chipande is Minister for Defence. It is intended that all citizens are to have politico—military training, but how this is to be effected is not yet clear. The Frelimo insurgent forces are being reorganised to form standing forces (FPLM), and a surveillance security organisation entitled the National Service of Popular Security — with power to recommend the arrest and detention of individuals — was also established in late 1975.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The major role for the reorganised forces will obviously be the holding and security of Moçambique's frontiers with Rhodesia and South Africa to prevent crossings of the border in pursuit of insurgents or in punitive strikes. Other forces are likely to be deployed on the Malawi border as it seems that non-communist opposition groups, opposed to Frelimo, are forming in this area. To date the FPLM, either through poor command and training or perhaps due to sheer lack of manpower, has proved quite incapable of dealing with the Rhodesian airborne assaults — the two most notable recent examples being at Chimoio and Tembue in November, 1977. Nor have the two Tanzanian battalions reported to be in Moçambique been committed; the role of these latter may well be simply the maintenance of the regime.

ORGANISATION

No firm information is available at present. Three of four 'divisions' are reported on the Rhodesian border, but their size, and indeed their existence, are conjectual.

RECRUITMENT, TRAINING AND RESERVES

Men from the Makonde ethnic group formed a large part of Frelimo's military strength before independence; men from the Makua and Yao peoples figured conspicuously in Portuguese units. Although many of the Frelimo groups were demobilised and returned to their villages in 1974–5, and there also appears to have been some attempt to recruit former colonial African troops into the FPLM, the ethnic divisions of the insurgency period may well affect the composition of the new force.

World Armies

A report of serious unrest and mutinies in units in the northern Cabo Delgado province early in 1976 has been received. The report claimed Tanzanian units' help was used to restore discipline. Political instruction is to play an important part in training.

EQUIPMENT AND ARMS INDUSTRY

Soviet and Chinese weaponry, including small arms, RPG-7 rocket launchers, 75 mm recoilless anti-tank guns, 82 mm mortars and SAM 7 (Grail) surface-to-air missiles were supplied to Frelimo, who also captured considerable quantities of Portuguese equipment in the final months. Some Portuguese military personnel were briefly employed in 1975 to instruct in the use of these weapons; this arrangement appears now to have ceased. Russian and Cuban military training staff have been reported. It seems likely that the Cubans are training the Rhodesian insurgents and the Russians (assisted, according to some reports, by an Egyptian mission) are training the Moçambique personnel.

Reports of recently arrived Soviet equipment have suggested that it has included the whole range of Soviet motor-rifle division weaponry: T-34 and T-54 tanks; PT 76, BRDM, and BTR 152 and 60 APCs; 76 mm, 85 mm, 100 mm and 122 mm guns; BM 21 rocket launchers; Sagger anti-tank guided missiles; 60 mm, 82 mm and 100 mm mortars; 82 mm anti-tank guns; 23 mm, 37 mm and 57 mm anti-aircraft guns; and Gainful SAM 6 triple rocket tracked anti-aircraft missiles. SAM 7 Grail man-pack anti-aircraft missiles have also been reported, and it is possible that one of these secured the destruction of a Rhodesian aircraft. Lorries and amphibious load carriers (Soviet K61s) have also arrived.

The quantities of this equipment, and whether it is destined for the FPLM or the Nkomo insurgents, remains far from clear. The experience of Ethiopia, however, suggests that equipment is not committed piecemeal, but the loss of terrain and casualties will be accepted until newly formed and trained units are capable of using the material to full advantage.

Moçambique is also reported to be developing a small air force; MiG-21 aircraft will form the main strike component. Pilots are said to be in training in Egypt and the USSR.

RANK, DRESS AND DISTINCTIONS

No information is available at present. An important part of Frelimo policy and rhetoric is opposition to anything suggestive of *élite* status, but, nevertheless, officers with Portuguese rank titles have been reported.

As Rhodesian forces are reported to attack in FPLM uniform, FPLM units change shoulder bands or brassards, or the angle at which caps are worn, very frequently.

CURRENT DEVELOPMENTS

Moçambique's economy, damaged in the insurgency period, further damaged by the loss of the Rhodesian transit profits, and now subjected to revolutionary changes that must, for at least an interim period, impose further losses of revenue, will create difficulties in meeting the costs of armed forces. It seems likely that armed forces will only be raised, paid and equipped with substantial foreign assistance.

A report circulating at the time of going to press suggested that a transfer of Cubans from Ethiopia to Moçambique was in progress.

L. L. MATHEWS

MONGOLIA

HISTORY AND INTRODUCTION

Mongolia, in modern times a subject State of the Chinese Empire, secured its independence from Peking by unilateral action, and with Russian encouragement, in 1912. A small army was created with Russian assistance but it was unable to resist the Chinese when they returned to re-assert their suzerainty in 1919. However in 1921 a small revolutionary army, sponsored by a Soviet mission, defeated and expelled the Chinese garrison. The government established by the revolutionaries co-existed with the existing theocratic structure until the 1930s, when radical measures were taken to transform the country on the Soviet model. One of the most important measures was a purge of the high command of the army in 1937. Two years later the army took part in the Russian clash with Japanese troops at Kholkin Gol. It was also engaged during the short period of Russo-Japanese hostilities in 1945.

Russian troops have been stationed in Mongolia since 1932 (with a short intermission from 1956 to the early 1960s). The Mongolian People's Army is very much a product of Red Army training.

STRENGTH AND BUDGET

Population: 1,535,000

Army: 28,000

Air force: 2000; 10 combat aircraft

Paramilitary: 18,000 border guards; 3000 security police

GNP (1974 estimate): \$2,800,000,000

Defence expenditure (1977): \$120,000,000

COMMAND AND CONSTITUTIONAL STATUS

The High Command is organised on the Soviet model. The Minister of Defence, a member of the politburo, is a serving general and Commander-in-Chief of the Mongolian People's Army. A Political Directorate (commissar system) ensures Communist Party supervision of the army from within.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The vast size and small population of Mongolia make its defence by the People's Army quite impossible. Soviet power guarantees its borders, and considerable numbers of Soviet troops are stationed on its soil (perhaps four divisions, plus air defence, strategic missile and engineering units). Mongolia renewed its treaty of friendship and mutual defence with the Soviet Union in 1966, to last for 20 years. The location of Mongolian People's Army units is not known but its engineering units (and perhaps others) have recently been engaged on construction work at the new industrial and coal-mining centre at Darkhan. Development work and literacy teaching are a major role of the army. It has taken no part in military operations since 1945.

ORGANISATION

The army is organised completely on Soviet lines. It comprises two small divisions and a construction brigade.

RECRUITMENT, TRAINING AND RESERVES

Recruitment is by conscription for 2 years at the age of eighteen. Conscription was introduced in the 1930s when it had the undesired effect of greatly increasing the number of Buddhist monks, since they were exempt. The dissolution of the monasteries after 1937 closed that line of escape from duty.

A Society for the Promotion of the Army, modelled on the Soviet DOSAAF and founded in 1961, has 100,000 members. Trained reserves are thought to number about 30,000.

World Armies

EQUIPMENT AND ARMS INDUSTRY

Mongolia imports all its military equipment from the Soviet Union. Major items are: T-34 tanks (30 in service) and T-54/55 tanks (100); BTR 60/152 APCs (90); SU-100 assault guns (10); 37mm and 57mm anti-aircraft guns; Snapper anti-armour missiles; and 76mm, 100mm, 130mm and 152mm guns and howitzers. The air force has 10 MiG-15 fighters, 30 transports, 10 helicopters and a battalion of SA-2 air-defence missile launchers.

RANK, DRESS AND DISTINCTIONS

These are entirely Soviet.

CURRENT DEVELOPMENTS

A buffer State between Russia and China, which still maintains its historic claim to suzerainty, Mongolia is necessarily committed to its Russian alliance. The tiny Mongolian People's Army is chiefly a symbol of national sovereignty.

JOHN KEEGAN

MOROCCO

HISTORY AND INTRODUCTION

For much of the past thousand years Morocco has been the great power of north-western Africa, and its armies were often to be found in Spain, in the rest of the Maghreb, and far south into the Sahara. After almost a century of European domination, the country is beginning to re-emerge in this role, with a concomitantly great expansion in the size of its armed forces. The initial popular response to the policy has been almost universally favourable, but the need to provide greatly increased military expenditure out of an economy that is still relatively poor will almost certainly place considerable restraints on this role.

In the Arab world Morocco has always been isolated by its distance from the heartland of Arabic culture; even within the Maghreb it is effectively cut off from the east by the Atlas mountains. The original Berber inhabitants embraced Islam during the first wave of Arab conquest early in the eighth century, and took a large part in the succeeding conquest of most of Spain for Islam, but there was no extensive Arab settlement in this period. The great Idrisid, Almoravid and Almohad dynasties of medieval Morocco, whose rule extended at various times to central Spain, Libya and the Senegal River, were all based on Berber tribal support, and had their origin in religious movements of various kinds. The large-scale Arabisation of the Moroccan population did not commence until the eleventh and twelfth centuries, when bedouin tribes originally from Arabia, notably the Banu Hilal and Banu Suleim, began to penetrate into the Maghreb; the great bedouin invasions that thrust through the Atlas mountains and devastated the Moroccan lowlands only occurred in the declining years of the Merinid dynasty in the late thirteenth century. Even then, though the westward-facing lowlands along the central Moroccan coast became thoroughly Arabised, the mountains containing them to the north, east and south remain solidly Berber to this day. In 1978, Berber-speakers constituted at least 35% of the Moroccan population.

Political power, moreover, continued to be based on religion and on the support of Berber tribes. The present ruling dynasty, the Alawi Sharifs, arose in the late seventeenth century out of yet another wave of popular religious sentiment; it had its origin and tribal power base, like the Almoravids before it, in the Berbers of Saharan Morocco (the Tafilalet) in the far south. The loyalty of the army to the dynasty was ensured, as usual, by drawing most of its members from the Berbers of that region, and their special loyalty was repaid by giving their tribal leadership access to high office and virtually exclusive control of the hierarchy of the regular military establishment. The French and Spanish colonial authorities continued and reinforced this pattern of recruiting, as did the monarchy after the restoration of Moroccan independence in 1956. As recently as 1971 about 80% of the enlisted strength and over half of the officers in the Moroccan armed forces were Berber. Only in the rapid expansion of the armed forces since 1975 has there been any significant dilution of this policy.

Various coastal towns in Morocco had come under shorter or longer periods of European control from the time of the Spanish Reconquest and the rise of the European overseas empires onwards, but the actual encroachment of French and Spanish influence into the interior of the country only commenced after the French conquest of Algeria in 1830. The process was effectively completed when France and Spain divided Morocco into spheres of influence in 1904, although the formal French Protectorate of Morocco (with Spain deriving its authority over its share from France, not from the Sultan) was only proclaimed in 1912. In the earlier of these agreements, in 1904, the southern border of Morocco was fixed at 27° 40' N, beyond which began Spain's Saharan territories: this division cut off all those southern desert regions sparsely inhabited by 'Moorish' tribes which had traditionally been regarded as Moroccan, though often not effectively controlled by the central government, and thus laid the ground for the various border disputes which have now brought war to the western Sahara.

It took the French colonial authorities only 2 years to establish firm control over lowland Morocco, but a further 20 years of hard fighting, punctuated by such formidable revolts as that led by Abd al-Krim in the Rif mountains in 1921-6, to pacify all the Berber-inhabited mountain and desert areas. They had scarcely finished this when they were confronted with a more modern form of nationalist resistance, the *Comité d'Action Marocaine*, drawing its support mainly from the towns. This organisation was dissolved in 1937, but nationalist agitation continued, leading to the creation of the Istiqlal (Independence) Party in 1943, whose aims enjoyed the full support of the powerless Sultan Muhammad V. However this movement did not find much favour amongst the conservative Berber tribesmen of Morocco, who were anti-foreign but even more opposed to Western-style modernisation, thus confirming the French and Spanish in their preference for maintaining the old royal system of recruiting troops from amongst the rural Berber population.

Morocco rallied to the cause of France in 1939, and to the Free French movement after the Anglo-American landings in 1942. Over 300,000 Moroccan troops fought with the French armed forces in North Africa, Italy and France, and large numbers subsequently served in the first Vietnam war. During the early 1950s, however, the nationalist agitation in Morocco became far more active, and in 1953 the figurehead Sultan refused to issue decrees on behalf of the actual French authorities. He was forced to go into exile after Berber tribesmen led by conservative local leaders began to converge on

World Armies

Morocco's main cities, and another member of the royal family was recognised as Sultan by the French. Outbreaks of anti-European violence spread, however, and following two attempts on his life the pretender to the throne renounced his claim in November, 1955 and Muhammad V returned to be acknowledged by the French as the legitimate Sultan.

Just prior to his return, a force known as the Army of Nationalist Liberation (*Armée de Liberation Nationale* — ALN), formed around a core of Berber tribesmen who had fought in the French army in World War II and Vietnam, and loosely associated with the Istiqlal Party, began waging a large-scale guerrilla campaign in the mountains against the occupying forces. Proclaiming that it was fighting for the liberation not only of Morocco but of all north Africa, it had succeeded by March, 1956 in wresting from the French control of the Rif and much of the Middle Atlas range. Faced as they were with a nationalist rising in Algeria that threatened their interests more closely, the French decided to cut their losses in Morocco.

A Franco–Moroccan declaration of March, 1956 decreed the Protectorate at an end and recognised Moroccan independence. An agreement with Spain ending the Spanish Protectorate followed in April, though the southern parts of the country were not evacuated by Madrid until 1958. In 1957, the Sultan assumed the title of King, and declared Prince Moulay Hassan heir to the throne.

Throughout the period of the Protectorate the armed forces in Morocco had consisted of French and Spanish forces, both of which accepted Moroccans in enlisted and commissioned grades along with French and Spanish nationals; at the time of independence there were about 50,000 Moroccans serving with these armies. The sole force under the control of the Sultan was the small Royal Guard, so after independence a military commission was appointed by the Sultan, including himself, the Crown Prince, ranking cabinet ministers, and French and Spanish army officers, to decide on the details of establishing national armed forces. Reda Guédira, a close associate of the Sultan, was named Minister of National Defence, and Crown Prince Hassan became Chief of the General Staff (the former has been one of the closest advisers of the latter since he became King in 1961).

In negotiations with the French and Spanish it was agreed that Moroccan units might transfer from their own forces to form the new Royal Moroccan Armed Forces (*Forces Armées Royales* — FAR), and that French and Spanish troops would remain in the country to safeguard order during the transitional period. During the first year attention was concentrated on creating an army: a small air force was founded at the end of 1956, and an even smaller navy in 1960, both of them being initially subordinate to the army. Fourteen thousand Moroccan personnel were transferred from the French army, and 10,000 from the Spanish armed forces; approximately 2000 French officers and NCOs remained on short-term contracts until crash training programmes at St-Cyr and Toledo Military Academies and the former colonial military academy at Dar al Bayda had produced a sufficient number of Moroccan officers. During 1956 Prince Hassan also negotiated the integration of the guerrilla ALN into the new army; about half of the 10,000 strong force joined the regular forces, bringing their total strength at the end of 1956 to about 30,000 men. All ALN personnel were sent on a 6 month training course, which for many included being taught how to read and write, and a limited number were granted commissions.

Another urgent task for the new government was the renegotiation of the Franco–American agreement of 1948 which had permitted the USA to create four large military bases in the country. These were the objects of vigorous protests by Moroccan nationalists and leftists, but despite talks between Hassan and American representatives in 1957, three of the bases were actually transferred to the USAF's Strategic Air Command and transformed into nuclear bomber bases in 1958. The issue was not resolved until late 1959, when the United States agreed to remove combat forces from Morocco; this was carried out in 1963 and the bases were formally transferred to Moroccan control, although small American military detachments remained at Kenitra and two nearby sites to man United States communications and monitoring facilities.

The principal external preoccupations of Morocco in this period, however, were the problems arising out of border disputes as the European colonial presence in north-western Africa gradually withdrew, leaving behind arbitrary boundaries that had been imposed on the area from outside. The more immediate problems had to do with the remaining Spanish enclaves in traditionally Moroccan territory: the Spanish-inhabited cities of Ceuta and Melilla on the Mediterranean coast, dating from the high tide of the Reconquest; the enclave of Ifni south of Agadir; and the huge desert areas of Saguia al Hamra and Rio de Oro lying to the south of Morocco's internationally recognised border.

In addition to these, however, Morocco also laid claim at independence to Mauritania, much of French Sudan (later Mali) and substantial areas of south-western Algeria, all of which were then still under French administration. Rabat's case rested on the traditional links of suzerainty and religious loyalty which the Muslim and largely Berber nomadic tribes of these areas had had with Morocco before the carving of colonial boundaries had begun. (It was never made entirely clear whether the claim extended to the extreme southern areas of Mali and Mauritania, where the population consists of sedentary black Africans.) Morocco further alleged, accurately enough, that Algeria, as a much earlier French possession and one which had been incorporated into France itself, had been consistently favoured by Paris in the drawing of the Saharan border between the two, so that Algeria's boundary had been pushed far west into areas whose inhabitants had traditionally looked to Morocco.

Morocco's newly forming regular army could not at first devote any attention to these concerns, since it was called on to suppress a widespread rebellion in the Rif in 1958–9. Prince Hassan took personal command of operations, and around 20,000 troops had to be committed to quell the rising. It would have been impolitic to pursue border claims against the French and Spanish empires with regular troops in any case in this period, when many officers and NCOs were still on loan from the armies of those two countries.

Moroccan irregular forces (the *Armée de Liberation du Grand Sahara*) attacked Ifni and raided into Spanish Sahara and the

northern fringes of Mauritania in late 1957–early 1958, but hostilities ceased after the conclusion of a treaty in April, 1958 between Rabat and Madrid. Morocco did not recognise Spain's right to Ifni, Ceuta, Melilla or the Spanish Sahara, nor would it extend recognition to Mauritania when it became independent within the French Community in 1960 (thus long delaying Mauritania's acceptance into the Arab League), but it did not actively pursue these claims by military force during the 1960s.

Morocco's claims against Algeria, however, brought the two countries to war soon after the latter received its independence from France in 1962. The border south of Figuig had never been properly defined, and Moroccan forces entered the region south of Colomb-Béchar in Algeria in July, 1962. Fighting spread to the iron ore-rich Tindouf area in Algeria's extreme south-west in September, 1962 and by the latter part of 1963 Moroccan auxiliary forces had seized extensive areas for some 250 miles south-west of Colomb-Béchar. In October there was sharp fighting in this region. Morocco did somewhat better militarily, but a ceasefire on October 30th was followed by agreement on the creation of a demilitarised zone in February, 1964. Although the two regimes remained extremely hostile to each other on ideological grounds the border tension continued to abate, and in June, 1970 final agreement was reached on the delineation of the frontier, the disputed Gara-Djebilet area being assigned to Algeria but with provision for Morocco to have a share in a joint company to be established to exploit the rich iron-ore deposits in the area. This agreement, however, was never ratified.

The Moroccan government invariably enjoyed the unanimous support of all political parties and of the general populace in these border disputes, but in almost every other respect the monarchy's position deteriorated steadily almost from the moment of independence. The dominant conservative party, Istiqlal, was continuously frustrated in 1956–8 in its struggle to reduce the monarch's almost absolute powers, causing its more radical members to break away in 1959 under the leadership of Mehdi Ben Barka to create the National Union of Popular Forces (UNFP). This party at once became the object of severe repressive measures by the army and police, and in 1960 the King himself assumed the post of Prime Minister with the Crown Prince as his deputy. The latter assumed the title of King Hassan II and the post of Prime Minister on his father's death in February, 1961 and proceeded to push through a new constitution which theoretically established a constitutional monarchy with guaranteed personal and political freedoms. Istiqlal Party members were also removed from the cabinet in the succeeding year, however, and in the dubious 1963 elections a newly formed pro-monarchical party won the largest number of seats. Repressive action was then taken against both main opposition parties, and following an alleged coup attempt, almost the entire leadership of the UNFP was arrested. Many of them were held in solitary confinement, tortured and eventually sentenced to death, while Ben Barka himself, who had escaped to France, was kidnapped and murdered in 1965.

Faced with grave political unrest exacerbated by economic hardships in the cities, King Hassan created the paramilitary Mobile Intervention Companies within the *Suret  Nationale* (national police force), and these units together with elements of the regular army were used to suppress large-scale students' and workers' riots in Casablanca in March, 1965 that left over a hundred dead. The kingdom continued through the latter half of the decade as a virtual police State, with the King depending for support primarily on his regular and paramilitary armed forces. Army officers also came to dominate the administration: by 1970 most of the 19 provincial governors were soldiers, as were also a large proportion of middle- and senior-level administrators in government departments. The state of emergency continued, with all political activity suppressed, until 1969, when a new constitution was followed by elections for a single-chamber legislature in 1970. The elections, however, were boycotted by all the opposition parties, and produced a meaningless chamber packed with 'King's men'.

Even the monarchy's main prop, the army, began to look extremely shaky in 1971, when a bloody coup attempt involving five of the thirteen serving generals almost succeeded. The precise motives of the coup have never been adequately explained: probably some combination of personal ambition, the temptation posed by a regime that seemed both weak and corrupt, and Libyan encouragement, would supply the answer. An additional motive that has been suggested is the concern of these right-wing generals at the relative political radicalism of some of the younger officers of urban background who were brought into the army in the 1960s to cope with the increasing technical demands of the more modern weapons that were being acquired.

The coup was headed by the Minister of the Royal Military Household, General Muhammad Medbouh, who led some 1400 military cadets in an attack on the King's palace at Skhirate in July, 1971 while he was celebrating his birthday in the company of government ministers, the foreign diplomatic corps and many other guests. At one point the rebels captured the King and his ministers, the Interior Ministry and the radio station, but loyal units overwhelmed them in less than 24 hours with the aid of many of the cadets, who had not initially been informed of the purpose of the operation. Four loyal generals, a minister and an ambassador were killed and large numbers of guests wounded, and over 150 rebels were killed in the fighting, but the King escaped unhurt. Those of the five conspirator-generals who survived the fighting were summarily executed immediately afterwards, and over a thousand other army officers and men were sentenced to terms of from 1 year to life in prison.

The King's response to this upheaval, which left only four army generals alive, was to make General Muhammad Oufkir, long the regime's leading hatchetman (he had been found guilty *in absentia* of Ben Barka's murder by a French court), Minister of Defence and Chief of Staff, with almost complete control of the army and administration. He also launched an attack on corruption in the State services, and attempted to reach a reconciliation with the political opposition.

World Armies

Yet another constitution was declared in early 1972, but Istiqlal and the UNFP, briefly united in a National Front, boycotted the fraudulent referendum on it, and the planned elections were cancelled. In August, 1972 King Hassan narrowly survived a second coup attempt planned by General Oufkir himself: air force fighters tried to shoot down the plane in which he was travelling, and strafed the airport and the royal palace in Rabat. General Oufkir's death, together with that of the other leading conspirators, occurred immediately afterwards.

In late 1972 the Moroccan monarchy seemed to be nearing the end of the road: it had no support whatever from the country's organised political forces, and was so unable to trust the armed forces that most units were not allowed to have any ammunition under their own control. The senior officer corps were decimated and apparently almost totally disaffected, and civilian unrest was on the rise. There were serious student riots in January, 1973, and in March the capture of what were described as Libyan-supported rebels in the Atlas mountains led to widespread arrests of radicals in the major towns. Civil rights were even further curtailed, and 157 people, mainly UNFP militants, were tried by the Kenitra military tribunal on charges of terrorism and subversion: most received heavy sentences, and 15 were executed.

The regime's remarkably successful recovery from this desperate situation depended almost entirely on adroit appeals to Moroccan nationalism. One component, certainly, was an increased participation in pan-Arab affairs. This had already begun in 1967, when the Arab defeat in the Six Day War caused popular outbursts against the large and hitherto untroubled Jewish community in Morocco, leading to the emigration of about 90% of the Moroccan Jews (although, to its credit, the Moroccan government sought to protect the Jews and condemned the unofficial commercial boycott against them — the 25,000 who remain still have no legal restrictions against them, and there are indeed Jewish officers serving in the Moroccan air force). Morocco took a far more active role in Arab affairs thereafter, however, hosting Islamic and Arab League summit conferences in 1969, and recognising Mauritania and repairing its relations with Algeria in 1970. In February, 1973 at the very lowest point of the monarchy's popularity, King Hassan sent a Moroccan infantry brigade to the Syrian front. He was soon rewarded with a surge of popular support when it fought with distinction around Mount Hermon on the Golan Heights in the October, 1973 Yom Kippur War. (It was brought home in 1974.)

This success set the pattern for all that followed, but the focus then moved closer to home and to the emotional first priority of Moroccan patriotism: the creation of 'Greater Morocco'. Ifni had already been returned by Spain in 1969 without recourse to force. Moroccan attention now turned to the huge Spanish Sahara to the south, which had been the subject of a UN resolution in 1967 demanding that Spain should hold a referendum on self-determination for the territory in consultation with Morocco and Mauritania, both of which maintained claims against it. Algeria also had an interest in the territory, as offering the only practicable route to the sea from its own vast Saharan interior, and by 1971–2 all three neighbouring Arab States were supporting rival Saharan liberation movements. The Spanish project for a large-scale phosphate-mining enterprise in the territory was a further motive for Moroccan concern, as it threatened to cut into the market for Morocco's own phosphate exports, which are the country's principal source of foreign exchange.

The main impetus to Moroccan action, however, was nationalism (and the government's main hope was that the issue would create national unity). In July, 1974 the King held talks with the leaders of all the political parties as well as military and government officials to concert plans for a campaign to annex the Spanish Sahara, which Madrid was planning to erect into an independent State (with a population certainly much less than 100,000) which would remain closely linked to Spain. The immediate and unanimous reaction was enthusiasm and a quite remarkable degree of co-operation across the political spectrum: opposition leaders agreed to act as government envoys to foreign capitals, and made no serious protest when the King once more postponed promised elections until the crisis was past. In October, 1974 Morocco secured Mauritania's co-operation in a secret agreement for the partition of the territory, and in January, 1975 it increased the pressure on Spain by extending its campaign to include the enclaves of Ceuta and Melilla.

Algeria, as always Morocco's principal rival for influence in the Maghreb, responded by greatly increasing its aid to the Frente Polisario, the pro-Algiers, Marxist contender amongst the rival Saharan guerrilla movements, and there is some evidence of a secret agreement between Algeria and the moribund Spanish regime in October, 1975, as Franco lay dying, whereby Polisario would move in as the Spanish left to establish what would have amounted to an Algerian protectorate with privileges for Spanish investment. On October 15th, 1975 the United Nations' investigative mission reported that a majority of the Saharans favoured independence (which effectively rejected the Moroccan claim, based on historical rights). King Hassan's long-prepared riposte was to stage the so-called 'Green March' in which 350,000 unarmed Moroccans were trucked down to the desert frontier and marched across the border to take possession of the territory. The Spanish authorities allowed the marchers to advance some distance before halting them, and on November 14th the Madrid government signed an agreement by which it would withdraw from the territory in early 1976 without holding a referendum, and hand it over to a joint Moroccan–Mauritanian administration.

The Moroccan army marched in on December 11th, followed shortly by the tiny Mauritanian army, while the bulk of the population, some 30,000–70,000 people, fled, or were persuaded by Polisario to flee, to refugee camps near Tindouf just across the Algerian border. The Polisario guerrillas at once commenced a war of hit-and-run raids against the occupying forces from Algerian bases. As early as January, 1975 the Moroccan and Algerian armies clashed at Amgala inside the Saharan territory, but despite recurrent claims about a full Algerian–Moroccan war the struggle soon settled into a pattern of attritional warfare waged by the Algerian-supplied guerrillas against Moroccan and Mauritanian forces deployed mainly in fixed defensive positions. In March, 1976 a government-in-exile of the Saharan Arab Democratic Republic was set up on Algerian territory, recognised by Algeria (and subsequently by almost a dozen other radical Third

World States), and a few days later Morocco broke off diplomatic relations with Algeria. The partition of the former Spanish territory between the two occupying powers was completed in April, 1976, Morocco receiving the northern half containing the phosphate reserves and most of the population.

Taking advantage of the new spirit of national unity, the King then embarked on yet another attempt to reintroduce representative institutions. Municipal elections in November, 1976 were followed by national elections in June, 1977, the participation of all the opposition parties being ensured by making the party leaders Ministers without Portfolio in the pre-election period. The so-called Independents (the Royalist Party, in fact) secured the largest number of seats, but the main opposition parties are also represented in the cabinet apart from the third-ranking Socialist Union of Popular Forces (USFP), a breakaway group from the old UNFP and the only genuinely radical grouping with any significant following. The election also served as a substitute for any specific referendum on annexation in the newly acquired Saharan territories, now transformed into the three Moroccan provinces of El Aaiún, Smara and Boujdour.

The political benefits of the Saharan annexation for the monarchy have been huge, but its longer-term costs are also proving very considerable. To cope with the continuing guerrilla war, which extends into southern Morocco and almost all of Mauritania as well as the former Spanish territories, the Moroccan armed forces have increased by 50% in size since 1975. To meet the costs of the arms race with Algeria and to deal with the possibility of wider war, the defence budget has almost quadrupled since 1974. At a time when Moroccan finances are already severely strained by a sharp fall in the price of the country's main export, phosphates, the burden of these defence expenditures on the economy and on popular living standards may prove great enough to shatter the front of political unity that has been created.

The annexation of Spanish Sahara contravenes the basic rule of the Organisation of African Unity that colonial borders are inviolable, and as a result Morocco and Mauritania have become the focus of a bitter quarrel within that organisation which ranges them against the radical and many of the moderate members. The obligations of the developing alliance of conservative pro-Western States within the OAU, together with the need to keep the favour of Western arms suppliers, has caused Morocco to send large military expeditionary forces to the aid of the Zaïre government in 1977 and again in 1978. The pressures of the guerrilla war against fragile, impoverished Mauritania have necessitated the stationing of a 10,000 man Moroccan force in that country — which in turn inevitably reawakens Mauritanian fears of Moroccan expansionism, thus endangering the vital alliance with Mauritania. (For further comments on recent events, see Role, Commitment, Deployment and Recent Operations, and Current Developments. See also the entry for Mauritania.)

STRENGTH AND BUDGET

The total strength of the Moroccan armed forces in 1978 was 89,000 men, of whom 81,000 were in the army, 6000 in the air force and 2000 (including 600 Marines) in the navy. This does not represent an inordinately large proportion of the population in arms for a country of Morocco's size, with 18,590,000 people, but it is a very sharp increase on the 1974 figure of approximately 50,000. The great bulk of the increased numbers is accounted for by the troops now deployed in Morocco's newly acquired Sahara territories and in Mauritania, who number approximately 30,000 men. Paramilitary forces number 30,000, including 11,000 *Suret  Nationale*.

The growth in the defence budget has been even steeper, from \$258,000,000 in 1975 to \$980,000,000 in 1978. This latter figure consists of \$640,000,000 for the security forces in the ordinary budget and \$340,000,000 for defence in the separate budget for economic development, which is mostly intended to finance the Saharan war. The greater part of the increased expenditure in the ordinary budget has been devoted to the acquisition of new weapons, as part of the urgent programme of military modernisation necessitated by the military confrontation with Algeria over the Sahara. The air force, which was particularly weak in comparison to its Algerian counterpart, has received the lion's share of the expenditure on new equipment: the order for 50F-1 Mirages from France alone amounts to \$650,000,000. Further large sums outside the military budget, amounting to \$81,000,000 in 1978, have been devoted to civil development in the new Saharan provinces as part of a pacification programme.

The strains these expenditures have imposed on the Moroccan economy, already suffering from 4 years of bad harvests and a fall of about half in the world market price for phosphates, have been heavy. The growth rate fell from 8.5% in 1976 to only 1.3% in 1977, and foreign debt has quadrupled to \$1,600,000,000 in the years 1974-7. This has necessitated a 30% cutback in the government's general expenditure on economic development, a wage freeze and an austerity programme causing a further sharp rise in the unemployment rate — unofficially 10% in the cities, but actually more like twice that. With a 3.4% annual growth rate in the population, this problem can only worsen, and there were signs in 1978 that popular enthusiasm for the expansion of Morocco was being gradually outweighed by distress at the economic hardships for which it is partly to blame.

COMMAND AND CONSTITUTIONAL STATUS

The armed forces (FAR) are under the direct command of the King, who is also the Chief of the General Staff. They continue to be part of the royal household, and are not technically an instrument of the government. The Ministry of

World Armies

Defence, which is under the government, is outside the chain of command, and concerns itself principally with logistics, supply, pensions, payrolls and related matters. Generally, however, the post of Minister of Defence is held by a general, and is combined with that of the Chief of Staff, an office currently held by General Ahmad Dlimi. In practice it is the Chief of Staff who controls all three armed forces, acting as the King's principal channel of command, and controlling individual units down to brigade and even battalion level.

Prior to 1971 the country was divided into six military zones, but these area commands were suppressed after the coup attempt in that year as providing too good a local power-base for aspiring coup-makers. There is little lateral co-ordination between military units, nor does the actual chain of command conform to the usual pyramidal structure, primarily in order to make the organisation of a coup more difficult. The Royal Air Force and Royal Navy are nominally separate services, but in practice their orders from the Chief of the General Staff (i.e. the King) also pass through the Army Chief of Staff.

The Royal Guard, a force of a few hundred men under the King's personal command, is technically part of the FAR. The Royal Gendarmerie, the principal rural police force, is an integral part of the army, and its commander and most of its officers are army officers. Its main unit structure is the company, each one being located in a different rural area; the companies are sub-divided into sections and brigades, and a special Mobile Group is maintained for rapid deployment in riot control and other emergencies.

The *Suret  Nationale* (national police) has primary responsibility for internal security and political intelligence, and shares with the FAR the duty of maintaining law and order in the major urban areas. The Director-General is usually an army officer, appointed directly by the King; the *Suret * is not under the Ministry of the Interior and is, like the FAR, directly commanded by the King. Two-thirds of the 11,000 men are in the Urban or Judiciary Corps, performing ordinary police duties, but the Sixth Subdirectorate acts as the Kingdom's main secret police force, while the Mobile Intervention Companies (CMI), an active reserve police force of about 3000 officers and men, are employed both for riot control and to guard the King and senior officials.

The other main armed force in Morocco is the Auxiliary Forces, which are commanded by an inspector-general who is responsible to the Minister of the Interior. However he and most of his senior officers are serving on detached duty from the army, and are appointed directly by the King.

It is the King's general policy to avoid a clear demarcation of duties and authority amongst his various armed and paramilitary forces in order to retain a maximum degree of personal control. This includes the apparently intentional overlapping of the territorial boundaries within which individual army units, *Suret * detachments, Royal Gendarmerie elements and Auxiliary Forces companies operate, despite the operational difficulties and jurisdictional disputes which not infrequently result from such a state of affairs. In sum, the security forces are organised with an intricate and sophisticated system of internal checks and balances designed to reinforce the authority of the King and to counter any dangerous effects of the strong centralisation of control within each separate force.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The principal roles of the Moroccan army are internal security and external defence; the emphasis has shifted markedly from the former to the latter during the past 3 years, and almost one-half of the army is now deployed in a semi-combat role in the areas under attack by Polisario guerrillas.

Polisario's raids into the former Spanish Saharan territory, and also into Mauritania and the far south of pre-1976 Morocco, have required the stationing of some 30,000 FAR troops in the desert areas of Morocco's old and new territories, and a further 10,000 in allied Mauritania. In both cases the troops are deployed mainly in fixed positions defending the few targets worth attacking in these vast, empty territories, although they will occasionally sally forth when Polisario's small, highly mobile columns are located by reconnaissance aircraft. Claims issued by each side for casualties inflicted on the other are grossly inflated, but in some months Moroccan casualties may have amounted to as much as 100 men.

There is no military possibility that Polisario could physically dislodge Moroccan forces from their positions in the former Spanish Sahara, although they have consistently succeeded, since 1976, in preventing the operation of the extremely long and vulnerable conveyor belt which conveys phosphates from the Bou Craa mines, the territory's one significant economic resource, to the sea. (In the prevailing depressed state of the world phosphate market, this caused Morocco no distress, as it is well able to meet demand with production from other sources.) Polisario's strategy, as defined by the late Algerian President Boumedienne who was its principal supporter and supplier, was to wage an attritional battle which would cause a slow 'haemorrhaging' of Moroccan resources.

There are indications, however, that it is Polisario that has been suffering most heavily from attrition of its scanty manpower resources, with diplomatic sources in Algiers suggesting an average loss rate of 60% on Polisario raids into Moroccan-held areas. Small numbers of Algerian troops have sometimes been killed or captured in clashes with Polisario columns near the Algerian border, and King Hassan has repeatedly asserted the right of hot pursuit and warned that he was prepared to contemplate full-scale war with Algeria, but in fact the Algerian armed forces have generally been careful to avoid offering direct provocation to Morocco in the area of operations.

Largely due to the relatively effective defence presented by Moroccan troops, Polisario began to concentrate on attacking the weaker partner in the Sahara partition agreement, Mauritania. A daring raid across hundreds of miles of desert to strike

the Mauritanian capital of Nouakchott in June, 1976 ended in disaster when the returning column was caught by Moroccan and Mauritanian forces before reaching its Algerian bases, and Polisario's leader, Ahmed el Wali, was killed. Nevertheless, the strategy of striking at Mauritania's fragile economy and small, inexperienced army enjoyed considerable success, particularly by interrupting for long periods the movement of trains bearing the iron ore which is Mauritania's principal source of foreign exchange from the mines at Zouérate to the port of Nouadhibou. A direct attack on the mining compound at Zouérate in May, 1977 overwhelmed the inadequate Mauritanian defences, and though the Polisario column withdrew before reinforcements could arrive, they succeeded in causing the evacuation of most of the 400 French technicians needed to run the mines.

It was in response to this attack that Morocco and Mauritania signed a military assistance agreement on May 13th, 1977 setting up a High Defence Committee to co-ordinate defensive measures. Its principal practical effect was to permit the permanent stationing of Moroccan military garrisons at threatened points of Mauritania. This agreement has now led to the deployment of some 10,000 Moroccan troops in Mauritania (a number not far short of the total strength of Mauritania's own army), located not only in Zouérate, along the railway line to Nouadhibou, and at other centres in the north, but also at Akjoujt, a town linked to the capital by a fast road. As Mauritanian war-weariness has increased, and particularly since the coup of July 10th, 1978 in Nouakchott brought a new Mauritanian government to power which was clearly interested in a peaceful compromise settlement to the dispute, these Moroccan troops have served as a form of guarantee against the defection of Rabat's smaller ally. Not unnaturally, they also revive amongst Mauritanians memories of earlier Moroccan claims against their entire country.

Even the presence of such a considerable number of Moroccan troops did not suffice to end Polisario raids into Mauritania. It was only after France sent several Atlantique long-range reconnaissance aircraft and a squadron of Jaguar fighter-bombers to Dakar in neighbouring Senegal in December, 1977, to assist in the defence of Mauritanian territory, that the defending forces began to gain the upper hand. Following the coup of July, 1978 Polisario declared a ceasefire against Mauritania, in the hope that a peace settlement relinquishing Mauritania's share of the Spanish Sahara could be negotiated with a new Nouakchott government, and shifted its military operations to Moroccan territory. Peace talks did indeed follow, although they were broken off in December, 1978 by Nouakchott, but throughout this period the Moroccan garrisons have remained in place throughout Mauritania. (*See also Current Developments.*)

The Saharan dispute has also created a need for Morocco to gain favour with potential Western arms suppliers and to prevent automatic application of the OAU rule on the inviolability of former colonial borders in Africa (which would result in condemnation of the Moroccan-Mauritanian partition agreement). The latter concern has caused Morocco to become *de facto* leader of a group of relatively pro-Western States within the OAU which are anxious about Soviet penetration into Africa, and to carry out military interventions in Africa in opposition to alleged Soviet initiatives. Thus in April, 1977 Morocco dispatched 1500 troops to Shaba province in Zaïre to repel an invasion by a rebel army returning from a long sojourn in Angola. The same troops were hurriedly reintroduced to Zaïre in early June, 1978 to deal with a renewed incursion from Angola; they were carried by American transport aircraft, and operated in conjunction with French and Belgian troops. Morocco has strongly supported French proposals for an inter-African intervention force to come to the aid of regimes which suffer attack from outside, and in November, 1978 King Hassan offered to organise and staff a pan-African army of 20,000 men to protect Angola's borders if Angola would send home the Cuban troops on its territory. These activities have won Morocco the strong support of France in particular, and have been successful in gaining the passive support of a group of African States in preventing the Saharan dispute from being officially considered and adjudicated upon by the OAU.

Apart from those in Zaïre and Mauritania, no Moroccan troops are deployed abroad. There are no foreign military bases on Moroccan territory, the last remaining United States communications facilities at Kenitra having been evacuated by American forces and handed over completely to the FAR in September, 1978.

ORGANISATION

Arms of Service

The internal organisation of the army into combat arms and services follows the French model; so does the branch structure of the navy. The air force, however, follows the American pattern. The Royal Gendarmerie and the Royal Guard constitute additional arms within the army.

Operational

The army consists of 18 infantry battalions, nine motorised infantry battalions, five armoured battalions, one paratroop brigade, one light security brigade, two Royal Guard battalions, seven camel corps battalions, two desert cavalry battalions, seven artillery groups and two engineer battalions. The air force has no wing organisation; its squadrons consist of two fighter-bomber, one COIN, one transport and two helicopter squadrons. Principal air bases include Kenitra, Sidi-Slimane, Ben-Guerir, Benslimane and Nouasser.

World Armies

RECRUITMENT, TRAINING AND RESERVES

Although the King decreed an 18 month period of service in the armed forces for all fit Moroccan males at the age of eighteen in 1967, it has always been possible to get almost all the recruits required on voluntary long-term enlistments. This is hardly surprising in view of the considerable unemployment in the Moroccan civilian economy. In addition, there exists a tradition of army service in some of the rural Berber areas from which the army has always drawn the bulk of its recruits. In 1971 it was estimated that only some 4000 conscripts were being inducted each year; the rapid expansion of the armed forces since 1975 may have increased the proportion of conscripts to some degree, but the majority of recruits are certainly still volunteers.

The principal source of officers for the FAR is the Royal Military Academy at Dar al Bayda near Meknès, where the course of instruction is modelled on that of St-Cyr. Some regular officers are also trained at approved foreign military academies, and individuals holding university degrees in certain subjects, such as engineering, or doctor's degrees in medicine, dentistry, veterinary science and chemistry, may receive direct commissions from civilian life on completion of a 6 month course at Dar al Bayda. There is also provision for NCOs with 12 years' service (of which 2 years must have been in one of the warrant officer grades) to receive commissions.

The officer corps still includes some dozens of senior officers who originally held commissions in the French or Spanish armies, and there is a small group of former NCOs, but the bulk of the middle- and junior-officer grades is now made up of post-independence graduates of Dar al Bayda. By and large this group tends to be of urban background, and to take a greater interest in politics.

Since 1971 pay rates for officers have been made comparable with those in the civil service (behind which they had previously lagged), and the pay of enlisted men and NCOs is comparable to, or better than, what they would receive in the civilian economy. There is the usual structure of allowances and special duty pay, and a pension programme exists for all military personnel. Maximum age-in-grade limits are forty-five for privates, fifty for warrant officers, and between fifty-one and sixty-one for officers of various ranks. The rate of re-enlistment is high, and soldiers tend to remain in the services until forced out by age.

The Moroccan army is a largely professional force whose training, done principally within the units, is adequate to the relatively undemanding technical level of its equipment. Its soldiers are mostly of a rural background, conditioned to hardship and harsh discipline, and have a reputation as fierce and tenacious fighters.

There is no organised reserve in the Moroccan army, but there exists a system for recalling ex-soldiers to active duty in an emergency.

EQUIPMENT AND ARMS INDUSTRY

The army is relatively short of armour for a force of its size: it has 50 M-48 and 40 T-54 medium tanks and 80 AMX-13 light tanks. It also possesses: 36 EBR-75 and a total of 50 AML and M-8 armoured cars; and 40 M-3 half-track, and 60 OT-62/64, 30 UR-416 and 100 M-113 APCs. In an attempt to match the far larger provision of armoured vehicles in the Algerian army, Morocco now has on order 60 M-60 medium tanks and 234 M-113 APCs from the USA, and about 100 AML-90 and AMX-10 RC armoured vehicles from France.

The artillery strength of the Moroccan army consists of a total of 150 75 mm and 105 mm howitzers, and 34 M-114 155 mm howitzers, plus 20 AMX-105 and 36 155 mm self-propelled howitzers. Mortars are 81 mm, 82 mm and 120 mm; recoilless rifles are 75 mm and 106 mm.

The army's anti-tank weaponry consists of ENTAC, Dragon and TOW ATGWs. Its anti-air defences include a total of 50 37 mm, 57 mm and 100 mm guns, and SA-7 and Chaparral SAMs. An unspecified number of Crotale SAMs are now on order from France.

It will be observed that in almost every category the army operates a mixture of French, Soviet and American equipment, which certainly complicates its logistical problems greatly. This is a consequence of its arms-purchasing history. Initially it was equipped with inherited French arms and was the recipient of considerable United States military aid, but at the height of the Algerian War Rabat, feeling that these supplies were inadequate and too slow in coming, turned to the Soviet Union for arms in 1960-61. The reversion to predominantly American and French arms in the 1970s has served to compound the problem further.

Under the threat of war with Algeria, the Moroccan air force has undergone a crash expansion programme since 1975 to make it capable of facing its much bigger Algerian counterpart. It now has two fighter-bomber squadrons flying 34 F/RF-5As and five F-5Bs (26 of the former were transferred from Iran via Jordan as a stopgap measure in 1975, and the rest were subsequently supplied by the USA). There is one counter-insurgency squadron newly equipped with 22 Fouga Magisters, and two helicopter squadrons flying 40 AB-205As, two AB-206s, two AB-212s and 40 recently delivered Puma helicopters. The transport squadron has 12 C-130H Hercules, eight C-119G, eight C-47, one Gulfstream, six King Air and 12 Broussard aircraft. Trainers include 12 T-6, 12 T-34C, and 10 AS 201/18 Bravo aircraft. The standard air-to-air missile is Sidewinder, but R.550 Magic is on order from France.

Aircraft now on order will double the combat strength of the air force. The first of 50 Mirage F-1CH fighters was

delivered by France in mid-1978 (Morocco has an option on a further 25 Mirages), and 24 Alpha Jet armed trainers and six CH-47 helicopters are also on order. In addition, Morocco sought to order 24 Rockwell OV-10 Bronco COIN aircraft and 24 Huey Cobra armed helicopters from the USA, but this request was refused by the United States Congress during 1978 on the grounds that the 1960 United States–Moroccan agreement on arms sales limits the use of United States weapons to within Morocco's legal borders, whereas these aircraft were clearly destined for use in the guerrilla war in the former Spanish Sahara. (The United States has not recognised the new borders declared by Morocco in 1976.) There are still Moroccan discussions with Westinghouse, however, for the construction of a \$250,000,000 computer-controlled air-defence network, including air-control radars, to cover the entire country.

The Moroccan navy is relatively small, having only five large patrol craft (two French-built PR 72-type, one Al Bachir class, one old El Sabiq class and one under 100 tons), with four more of the Lazaga class (275 tons) on order from Spain. There have also been discussions with Spain concerning the purchase of a Descubierta class frigate. Other vessels include three new French-built landing ships (logistical), one landing craft, one coastal minesweeper and 15 coastal patrol craft.

There is no arms industry in Morocco.

RANK, DRESS AND DISTINCTIONS

The rank structures of the Moroccan army and navy correspond to those of their French equivalents, except that there are only seven enlisted ranks. The rank structure of the air force, however, is modelled on that of the USAF.

Army and navy uniforms closely resemble the French, except for army officers' semidress and service uniforms, which are more like those worn in the United States army. The field uniform for all ranks is of olive-drab cotton, consisting of a jacket with web belt, straight trousers generally tucked into short canvas leggings, and a steel helmet or green beret. Service and semidress uniforms are also of olive-drab gabardine or wool; the former has a short battledress for all ranks, while officers' semidress uniform includes an open-necked shirt or a jacket, white shirt and black tie. In semidress uniform officers wear a service cap with visor, enlisted men the green beret. Traditional Moorish uniforms are retained for ceremonial wear.

Air force uniforms are of the same blue cloth worn by the USAF. Officers wear a blue service cap or beret, enlisted men a blue beret.

Army officers rank insignia is worn on shoulder boards of various colours denoting the various branches, red being the colour of the combat arms; air force officers' epaulettes are grey. Officer ranks in the army are indicated by various devices on the shoulder boards, but by sleeve stripes of gold braid in the air force. Warrant officers wear a silver star insignia on the shoulder loops of the coat or shirt, and enlisted men's ranks are shown by green diamond-shaped patches overlaid with a gold crown and various combinations of red and yellow chevrons, worn on the upper left sleeve of the winter uniform, and suspended from the left breast pocket of the shirt in the summer uniform. A gold crown is included in all insignia for all ranks.

CURRENT DEVELOPMENTS

On the available evidence, the Moroccan army has performed well in the low-level fighting in the Sahara region since 1975, though it has not been subjected to any severe tests there. There have been no recent instances of the sort of military indiscipline that threatened the throne in 1971–3, and popular support for the post-1975 Saharan policy and the consequent liberalisation of domestic political controls which it made possible have contributed to a very substantial relaxation in political tensions in Morocco. All Moroccan political parties, including even the communists, support Rabat's policy in the Sahara.

There is no possibility that Morocco could lose its new territories because of the efforts of the Polisario guerrillas, but the economic strains of preparing for a potential war with Algeria growing out of that dispute have been very great — particularly as they have come at a time when bad harvests and declining world phosphate prices put the Moroccan economy under considerable pressure. These strains will doubtless continue until Morocco's control over its new territories is internationally recognised, a goal towards which Rabat has been striving with mixed success.

Neither the USA nor the Soviet Union recognises Moroccan sovereignty over its share of the former Spanish Sahara. French support seems steadfast, but Spanish support has been wavering due to the greater economic importance of trade with Algeria, while the leader of the main Spanish opposition party, the socialists, has stated that he will repudiate the 1975 tripartite agreement between Spain, Morocco and Mauritania disposing of the territory if he should win power. (It was partly in response to that that Morocco reopened its claim to the Spanish enclaves of Ceuta and Melilla in October, 1978.) Morocco has hitherto succeeded in stalling a definitive OAU condemnation of its action in Sahara by threatening to withdraw from the organisation, but has no visible prospect of gaining approval from the OAU.

Rabat's problem was compounded by the coup of July, 1978 in Mauritania, where the new regime, despite its lip-service to the Moroccan alliance, was clearly desirous of concluding a peaceful settlement to the destructive war even at the expense of relinquishing its share of the former Spanish territory. Polisario, eager to split the allies, at once announced a ceasefire

World Armies

(applicable to Mauritania only) and talks took place in Mauritania in September and October. At the same time a *Comité des Sages* consisting of a mediating team from five African countries (Guinea, Ivory Coast, Nigeria, Tanzania and Sudan) was attempting to find a negotiated resolution to the conflict. Morocco's troops on Mauritanian soil are an effective guarantee against the latter's unilateral defection (and indeed Mauritanian discussions with Polisario broke down in December, 1978), but at the same time they provide an additional stimulus to Mauritians anxious about Morocco's longer term ambitions to discover an exit from the conflict as quickly as possible.

Morocco's main concern must be to find some way of settling the Saharan quarrel peacefully without renouncing the gains that have restored the monarchy's popularity, and before a denunciation of the 1975 tripartite agreement by either Spain or Mauritania removes even the colour of legality that now attaches to its presence in those territories. Thus Morocco became involved during 1978 in direct secret negotiations with Algeria, seeking a settlement that would exchange guaranteed Algerian access to the Atlantic across the Sahara and some form of autonomous status within Morocco for the new Saharan provinces (presumably ratified by some form of referendum) for Algeria's recognition of Moroccan sovereignty in the area and the ending of Algiers' military support for Polisario. The death in December, 1978 of Algeria's President Boumedienne, Polisario's strongest supporter in Algiers, may have made this goal more attainable. However, it would also create a powerful temptation for Morocco to solve its problems by seeking a direct military confrontation with Algeria if the latter should be weakened by a lengthy succession struggle: in December, 1978 Algeria accused Morocco of using air force planes to drop arms to potential rebels amongst the discontented Berber tribes in the Kabyle east of Algiers.

If it should come to open war between Morocco and Algeria, Morocco's military situation is considerably more favourable than it was in 1975, and will continue its relative improvement as further arms deliveries take place. It is not to be anticipated, however, that it will match the Algerian forces in sheer numbers of tanks and combat aircraft, at least for the foreseeable future, and Rabat must also reckon with the possibility that Algiers might receive emergency shipments of arms from the Soviet Union in the event of war far more rapidly and in much larger quantities than Morocco could expect from France and the USA (if, indeed, it could expect anything at all from the United States in those circumstances — one of the curious aspects of the Maghreb's present alignments is that Algeria has a far more important commercial relationship with the United States than does Morocco).

Morocco's inferiority in military equipment *vis-à-vis* Algeria, however, is to a considerable extent compensated for by geographical and other considerations. In any fighting in the far south, Algeria's supply lines from the populated centres of the country would be considerably longer than Morocco's and for almost their whole length lie vulnerably exposed to attack from adjacent Moroccan border areas. Morocco's own lines of communication with the south, on the other hand, run along the coast, and are protected from Algerian interference by considerable mountain ranges.

In a full-scale war between the two, fighting would tend to shift northwards to the areas near the Mediterranean coast (where most of that part of the Moroccan army not committed in the far south, and a reported two-thirds of the Algerian army, are already concentrated). In this region, however, the terrain is eminently suitable for defence, and it is unlikely that any major advances would be possible by either side. In any case, it is improbable that either country would allow a clash over the Sahara to escalate to this extent.

GWYNNE DYER

NEPAL

HISTORY AND INTRODUCTION

The Gurkhas of Nepal are the Swiss of south Asia, a mountain race famous for their bravery and military temperament who have fought as mercenaries in British and Indian service for 150 years; they are still eagerly recruited by both armies and also work as policemen and guards throughout the region. Yet, despite the existence of special military treaties with Britain and India — comparable to the military capitulations between Switzerland and France of former times — Nepal is and always has been a sovereign State, with its own army. It was indeed, through the prowess of that army that, alone among the smaller neighbours of British India, it retained its independence throughout the imperial era. For, although victorious in the Anglo-Nepalese war of 1814–16, the British found Gurkha resistance (admittedly much favoured by the mountainous terrain) so difficult to overcome that they did not push their victory to the point of annexation. Non-annexation remained their policy even though Anglo-Nepalese relations stayed troubled until the middle of the nineteenth century.

The Nepalese Kingdom of the war of 1814–16 was a recent creation, forged by the success of the Shah family of Gurkha, one of 46 small, neighbouring Himalayan States, in several decades of war with its neighbours which ended in 1769. It was the extension of this imperialism westwards into Garwhal and Kumaon, eastwards into Sikkim and southwards into the Terai, the border region between the Himalayas and the Indian plains, which brought Nepal into conflict with the British. The war brought an end to expansion, led to the expulsion of the Gurkhas from Sikkim and the annexation of part of the Terai and some of their hill conquests, but did not put a stop to quarrels among the leading families of Nepal itself. A succession of weak regencies resulted eventually in the extinction of royal power altogether in Nepal for over 100 years, when in 1846 Jung Bahadur Thapa became *vizir* (Prime Minister) and prevailed on the King to confer hereditary powers on his Rana family. Thenceforward the royal family lived virtually prisoners within the palace while the Ranas, as a sort of Himalayan shogunate, exercised all functions of government on their behalf. It was during the early Rana years that relations between Nepal and British India were normalised and that Gurkhas, whose loyalty during the Indian Mutiny of 1857 contributed significantly to its suppression, became such a prized element in the Indian army. By World War I there were 20 battalions of Gurkha Rifles on its strength, and the actual numbers of Gurkhas who served during the war reached 200,000. In World War II 160,000 men served and, on the granting of independence to India in 1947, the new government of India and Britain jointly reached agreement with the government of Nepal to keep the regular battalions in existence, 12 going to India and eight to Britain. India and Britain were allowed to maintain the former imperial government's special recruiting rights within the country, and administer arrangements for the payment of pensions to discharged soldiers, which are an important element in the national and local economies of the Kingdom.

The Rana system did not survive the departure of the British from India. The monopolisation of all important posts in the civil service and the army by inner members of the family created, since the numbers of such posts did not increase proportionately with propagation, a body of disinherited but well-educated men who turned naturally for consolation to the Indian national movement south of the border. Organising themselves as the Nepali National Congress, they initiated an armed insurrection in the Terai in 1950. It received the tacit support of the Indian government which granted asylum to King Tribhuvan in its embassy in Nepal and then arranged for him to take residence on its soil when the Ranas deposed him. His declaration of sympathy with, and Indian support for, the insurrection ensured its success and in 1951 he returned to the throne and announced the institution of democratic government.

'Democratic' government as practised in Nepal has not taken a form recognised in the West, since political parties are not allowed to exist; the national assembly is indirectly elected and sits *in camera*, and the King generally appoints ministers, besides remaining constitutionally the executive head of government. King Mahendra (1955–72) was a consummate politician and, besides amending in 1960 the 1952 Constitution so as to increase the power of the executive, successfully maintained royal authority by day-to-day manoeuvres. However, there is no suggestion that the King depends for his power on the support of the army or any other armed force. Obedience to the King derives from his divine status and to the religious respect which a deeply conservative people pay him. The army, loyal to the Ranas throughout their period of government, automatically transferred its loyalty to the King on his resumption of executive power in 1951, but obeys him for the same reasons as do the rest of his subjects. There is certainly no question of it conceiving itself to be a power behind the throne.

The Gurkhas in Foreign Service

Five battalions of Gurkhas (the 1/2nd and 2/2nd, 6th, 7th and 10th Gurkha Rifles) form part of the British army, the Gurkha Brigade in all numbering about 6000. Apart from one battalion serving on rotation in Britain and one in Brunei,

World Armies

financed by the Sultan, the remainder are stationed in Hong Kong. Their numbers have declined steeply in recent years and their future is uncertain. Eleven regiments of Gurkhas (the preferred spelling) serve in the Indian army (the 1st, 3rd–5th and 8th–11th), and each has several battalions. The exact number is not revealed. The Assam Rifles, a paramilitary force of many battalions, is largely formed from Gurkhas and others serve as individuals in non-Gurkha units of the Indian army. It is believed that there may be 100,000 Gurkhas altogether in Indian service. They also serve in the army and the armed police of Burma, where settlements of Gurkhas pensioned from the British-run Burma Rifles and Military Police grew up in the early twentieth century. The chief motive for enlistment among emigrant Gurkhas is to accumulate savings with which to add to family land holdings at home and to earn pensions. Landless Gurkhas are never enlisted in British regiments nor, it is believed, in Indian ones.

STRENGTH AND BUDGET

Population: 13,185,000

Army: 20,000

GNP (1972 estimate): \$1,000,000,000

Defence expenditure (1975): \$13,000,000

COMMAND AND CONSTITUTIONAL STATUS

The Constitution of 1962, superseding that of 1952, declares the country to be a 'Constitutional Monarchical Hindu State'. The King, H.M. Mahārājādhirāja Birendra Bir Bikram Shāh Dev (King Birendra), is both titular and executive head of state, who chooses his council of ministers from an indirectly elected national *panchayat* (assembly). The last King, Mahendra, held the post of minister of defence for a long period after his resumption of direct rule in 1960. Moreover, the King is empowered, under Article 81 of the Constitution 'if (he) is of the opinion that a grave emergency exists whereby the security of the whole of Nepal or any part thereof is threatened by war, external aggression or internal disturbances, . . . by proclamation (to) suspend any of the articles of the constitution indefinitely until such time as (he) is satisfied that grave emergency no longer exists'. In such circumstances the army would come directly under the control of the King. In practice it is always answerable to him, both because the government remains fundamentally monarchical in character and because the senior officers of the army are still drawn in the majority from court families.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Although several battalions of the army served the British outside Nepal under a special arrangement during World Wars I and II, three battalions fought on the Burma front in 1942–5 and 10 battalions did garrison duty in India during the partition crisis of 1947–8, the army's role is in practice an internal one. The special relationship with India, the Treaty of Peace and Friendship with China and the anxiety of both to preserve Nepal as a buffer zone effectively guarantee its frontiers — though Nepali dissidents based in India have been responsible for occasional disturbances in the south. For its part, Nepal, though not formally a neutralist State, has pursued a policy of non-alignment *vis-à-vis* the two countries since the Sino-Indian Himalayan war of 1962.

The army is deployed in four areas: the Royal Palace Brigade and No. 1 Brigade with service and support troops at Kāthmāndu, the capital, in central Nepal; No. 2 Brigade at Dharan and No. 3 Brigade at Biratnagar, both in eastern Nepal; and No. 4 Brigade at Nepalganj in western Nepal. Apart from a clash between a Nepalese and a Chinese patrol in the Kor La pass in 1960, for which China apologised, and sporadic action against Nepali Congress dissidents in the south, the army has not been involved in operations in recent years. Nepal's last war was that with the British in 1814–6.

ORGANISATION

The army is essentially a collection of units of battalion size or smaller. An artillery, an engineer and a signals regiment (all small), a parachute battalion and the Household Cavalry are at Kāthmāndu. Distributed between the five brigades are 12 battalions of infantry, most with long histories and distinctive names, such as: the Sri Nath (raised 1763), Purano Gorakh (1763), Sher (1807), Kali Bahadur (1831), Mahindra Dal (1845), Shamsher Dal (1845), the First Rifles, the Devi Dutt and the Gorakh Bahadur. The latter and the Kali Bahadur were formerly royal guards, stationed in the palace grounds, but in 1971 the late King Mahendra, in order to calm jealousies in the army, arranged for all battalions to do royal guard duty in rotation. Like those of the British and Indian armies, the battalions tend to recruit from particular areas; the Purano Gorakh, for example, recruits mainly Magars from western Nepal and the Kali Bahadur mainly Gurungs from the centre.

There is a small Army Air Support Transport Wing, under the command of the army headquarters. Headquarters is commanded by a chief of the army staff (a full general) with under him a chief of the general staff, adjutant general, quartermaster general and military secretary (all major-generals). The brigades are commanded by brigadier-generals; they consist of two (sometimes three) battalions, which are organised into three rifle and one support companies.

RECRUITMENT, TRAINING AND RESERVES

Nepal is a caste society and, though caste is much weaker than in India, its influence on army recruiting is strong. As in India, there are recognised 'martial races' — most upper caste and mainly agriculturalists. Unlike India, however, Nepal has a majority of martial races among the population, and its army is therefore fairly representative of the country's social character. Ranas, the traditional ruling class of the State, are, however, over-represented among the officers and particularly in the higher ranks, while soldiers are recruited from the land-owning peasantry. The landless classes are not enlisted. As already mentioned, individual regiments have their own recruiting areas, which confers a distinct local character on each of the battalions.

Soldiers are trained in their units. Officers are trained at the Indian Military Academy, and occasionally at Sandhurst. Some Indian officers serve as training advisers with the army in the Indian Military Liaison Group.

Service is entirely voluntary. The reserve structure is not known, but probably consists simply of the pool of time-expired regular soldiers.

EQUIPMENT AND ARMS INDUSTRY

Nepal has no arms industry. By Paragraph 2 of a letter exchanged with the copies of the Treaty of Peace and Friendship of 1950, between India and Nepal, 'any arms, ammunition or warlike material and equipment necessary for the security of Nepal that the Government of Nepal may import through the territory of India shall be so imported with the assistance and agreement of the Government of India. The Government of India will take steps for the smooth and expeditious transport of such arms and ammunition through India'. As all Nepal's importing routes lie through Indian territory, this agreement in effect obliges Nepal to purchase arms exclusively through India. In 1965 the country nevertheless purchased some weapons from Britain and America but, it is believed, by agreement between all four governments.

The army is equipped with British and Indian small arms, including the Ishapur 7.62 mm self-loading rifle and the Bren gun converted to the same calibre. There is a little British heavy equipment: four 3.7 in pack howitzers, four 4.2 mm and 18 120 mm mortars, and two 40 mm anti-aircraft guns. The air transport wing has four small transports and five helicopters.

RANK, DRESS AND DISTINCTIONS

The army wears khaki. The officers have a service dress of British style; the soldiers wear Indian-style khaki drill and pullovers, with the broad-brimmed Terai hat. Ranks follow the British system and are indicated for officers by a system of blazing-sun and crescent-moon symbols worn on the shoulder strap; generals also wear crossed swords and baton.

CURRENT DEVELOPMENTS

The army lives somewhat in the shadow of the two others which recruit Nepali mercenaries to serve in their ranks: the Indian and the British. It also lacks a distinctively military role, being confined to internal duties in a country which is generally very law-abiding and where disturbances, even transborder ones, fall well within the ability of the police to contain. In the circumstances, it might well be expected that the army would be deeply involved in political intrigue, there being no other outlet for the energies of its senior ranks, but this is not the case. The army, though 'political' in the sense of being deeply conservative and, in its upper ranks, socially exclusive, plays no part in Nepalese political life at all. It has a record of unswerving loyalty to constituted authority and the gradual change in the composition of its officer body since the end of Rana government shows no sign of altering that tradition.

JOHN KEEGAN

THE NETHERLANDS

HISTORY AND INTRODUCTION

The founding of the 'Union of the Provinces' in 1477 and the declaration of the 'Republic of the United Provinces' a century later preceded the establishment of a kingdom which, with other changes of name and constitutional status, has become the Netherlands we know today. The long, narrow and flat country, with some land below sea-level, is wedged between Germany and the sea. The sea is held back by dykes; the land is crossed by innumerable canals and drainage systems constructed over the centuries, and now by a comprehensive network of modern roads and railways. These physical features, together with so many bridges, make an appreciation of the country's potentiality for the defender and for the attacker a challenging and interesting proposition.

During the kingdom's early years it was the Dutch navy that stole the limelight with several decisive victories at sea, and the marines, still part of the navy, also gained fame and repute. As the nation's eminence as a trading and colonial power grew, so did the navy's prominence. But while this was happening Dutch armies were fighting battles too, mainly against the Spanish and often in concert with the British. Yet the history of the Netherlands, though full of minor conflicts in earlier times, is not characterised by any underlying military aggressiveness. The Dutch have never been a martial race. The army has not been regarded as highly as the navy and, in peacetime, has not received the same recognition. Today, the Dutch army is the cause of disquiet in certain respects within the nation, and is viewed with some concern within NATO: it achieves another kind of prominence.

A Dutch army of some 28 infantry battalions, seven cavalry regiments and nine artillery batteries fought in the Waterloo campaigns. It was during the Napoleonic wars when the first efforts were made, nationally, to raise a new 'standing' army. This was to be a volunteer force to supplement the home guard, or *Landstorm*, which already existed. Recruiting problems caused this experiment to fail but here was the beginning of a new military structure that was to develop in concept, if not in actual armed strength, over the next century and a half; the beginning of a permanent cadre of regular officers and NCOs serving within a predominantly conscript militia, the *Landweeer*.

At the Congress of Vienna in 1815, the Dutch and Spanish Netherlands were joined to form a 'buffer' State between France and Germany. The Kingdom of the United Netherlands broke apart only 15 years later when the Belgians revolted and the frontiers as we know them today were drawn at a conference of the Great Powers in London. The modern Dutch army can be said to date from 1830. Throughout the rest of the century efforts were made to create a volunteer army, but the manning requirements were never met. When mobilisation was called at the outbreak of the Franco-Prussian War in 1870 other military and administrative shortcomings were exposed. Dutch forces were not committed in this war, but clearly improvements were necessary. Liability for service with the colours was raised temporarily from 5 years to 7 years, but not all the intended reforms succeeded. At the turn of the century universal service was introduced in order to provide 23,000 men in the *Landweeer*. In 1911, a *Landstorm* bill was passed in the States-General whereby all male adults, up to the age of forty, became liable for service in the home guard. This bill also gave the Crown the power to call out the *Landstorm* in a national emergency.

No real emergency arose, however, during World War I because the Netherlands' neutrality was respected. The government mobilised a home defence force comprising: a field army of four divisions and a cavalry brigade; a considerable number of infantry battalions and fortress artillery companies for static protection; and a sizable reserve. It was asserted at the time that the 458,000 troops embodied could have been doubled had further expansion been necessary. Following demobilisation at the end of World War I, there were repeated demands for drastic reductions in military expenditure. In fact, throughout the 1920s and 1930s the budget allocation to the land forces remained an acrimonious subject; during this period the army became run-down and ill-equipped, and particularly weak in artillery weapons. By that time, the Dutch army (or *Landmacht*) was organised on a militia basis. Some 20,000 men were called up for military training which varied in duration according to arm, but all were liable over a period of 6 years to undertake two spells of refresher training. In this way a reserve was established. The small regular cadre provided the commanders, staff officers, instructors and administrators. Between the wars, the *Landstorm* continued, on a volunteer basis, with a considerable commitment of training and home guard duties each year.

Events began to tell. In 1938, the government authorised a large increase in military funds mainly to cover the purchase of weapons and equipment needed quickly and in increasing quantity. That year, evidently, some 73,000 men were declared liable for military service, of whom only 43,000 were found to be available, and of these 19,500 were actually embodied. In 1939, an 'emergency' programme was drawn up even though great dependence was placed upon the country remaining neutral. In the event of war, elsewhere in Europe, some security forces would nevertheless be required. Hitler had affirmed, outwardly, that neutrality would be respected; it is known now that as early in the 'phoney' war as October 9th, soon after the British and French declared war on Nazi-Germany, the *Führer* had issued his Instruction No. 6 which

contained orders for the invasion of the Netherlands as well as Belgium and France. So it came about.

On May 10th, 1940 German forces invaded the Kingdom. A home defence force of about 400,000 men (10 divisions mainly infantry, four horsed cavalry regiments and a few 'bicycle' units as well as artillery and supporting services) faced the enemy. After 5 days of fighting the position on land and in the air had become so hopeless that despite stout resistance the Dutch were forced to capitulate. The occupying power was not slow taking a variety of repressive measures. For example, regular army officers had to sign a parole undertaking not to engage in any anti-German activity. This was strengthened when, in 1942, former regular officers had to report periodically; in this way they were kept under surveillance and some were transported to prison camps. Nevertheless, a strong underground movement became established in the country during the war. The Dutch were active outside their country too.

During 1944, the *Prinses Irene* Brigade was training in Britain and later that year took part in the Normandy landings as part of the British 21st Army Group. The Brigade fought through Belgium and assisted with liberating their home country. It was disbanded in 1945 but the title *Prinses Irene* remains as the name of a guards regiment in the current regular army order of battle.

After the liberation of the southern provinces of the Netherlands, Dutchmen were recruited and trained for allied lines of communication duties. When the Germans surrendered in May, 1945 the Dutch government decided to raise an armed force of some 200,000 men to help with the occupation of Germany and the liberation of the Dutch East Indies which still remained in Japanese hands. Once again, military strengths did not match the plans and by December, 1946 the Dutch army amounted to about 117,000 excluding 47,000 serving in the Royal Netherlands Indies Army at the time. From the time the campaign in north-west Europe closed, attention was diverted to the Far East. Two divisions were raised, and were British equipped and trained, but as soon as they were ready to go, the war against Japan ended abruptly. However, three Dutch divisions arrived in the East Indies in 1946 to join two formed locally.

The Royal Netherlands Indies Army was a long-serving colonial force maintained by conscription and a large regular cadre. After the Japanese invasion many of its officers and soldiers were imprisoned. After the war and following liberation the State of Indonesia became independent and the Dutch forces were withdrawn. Many former members of the Indies army regular cadre therefore found themselves serving in Europe for the first time, and to this day there remains a strong East Indies element in the Dutch army. In 1974 the last colonial garrison force returned home when troops left Surinam. So, in 1975, the role of the Royal Netherlands Army (RNA) has become solely concerned with NATO and Europe, apart from a small component earmarked for United Nations duties.

To return to the troubled period in Europe of the late 1940s. The Netherlands joined her neighbours — Belgium, Britain, France and Luxembourg — in signing the Brussels Treaty of March, 1948. This mutual assistance pact was aimed at guaranteeing the collective security of the signatory nations. They felt threatened by the growing Russian military menace just as much as, if not more than, their fear of any German *revanchisme*. The creation of a Western Union Defence Organisation quickly followed, with its headquarters at Fontainebleau in France. Field-Marshal Montgomery became Chairman of the Commander-in-Chief Committee, and the French General de Lattre de Tassigny was appointed Commander-in-Chief Land Forces which included elements of the RNA. So began a movement away from Dutch neutrality and the process of integrating allied forces. NATO superseded the European organisation and Headquarters Allied Forces Central Europe (AFCENT) was set up at Fontainebleau; the endeavour to construct some form of collective defence as quickly as possible in the Central Region continued.

Also, in 1951, the Dutch government approved a 4 year armament programme and increased conscription from 12 to 18 months*. About that time a battalion joined the United Nations force in Korea. The main objective of the new programme was to produce five divisions for NATO of which one only would be activated at any time during peace. This one division was filled with conscripts and had a regular cadre. By 1954, the reserve of trained soldiers had grown to 220,000 (140,000 field army; 60,000 home defence; 18,000 anti-aircraft defence), and it claimed that all were mobilisable within 48 hours. During the 1950s the Dutch army changed over to certain NATO organisations and procedures like those operative now among their headquarters' staffs; it also began to switch from British to American equipment. Later the number of divisions in the field army order of battle were reduced to four and then, more recently, to three but with two activated divisions instead of just one. These two divisions comprise some reserve as well as active units. In the 1960s, the RNA adopted the brigade group as its basic field army fight formation and this remains so today, except that the detailed composition and readiness status of combat and support units within each brigade have changed. Initially, brigades were grouped within a modified Landcent divisional framework†. Later the division, as a formation, became only a means for tactically commanding a number of brigades. There is no combat support or logistic support resources at this level. The present structure will be described in more detail later.

In 1967, HQ AFCENT moved from Fontainebleau to Brunssum, in Dutch Limburg. RNA formations and units serve and train currently with their Belgian, British and German counterparts in Northern Army Group, and Dutch officers and NCOs serve on NATO's international staffs and in several multinationally manned support units.

* Article by Major Edgar O'Ballance, 'In Defence of Holland', *Army Quarterly* (1961).

† HQ LANDCENT was the Land Forces headquarters for NATO's Central Region subordinate to HQ AFCENT. The 'LANDCENT division' was an attempt to produce a 'standard' division. The trouble was, and has been ever since, that NATO did not insist on its implementation. Hence, many national versions, and the situation as it exists today.

World Armies

The declared defence policy of the Dutch government, as described in its 1974 'Defence Note', is to support NATO strongly. A nation-wide opinion poll taken in 1974 indicated that over half of the nation supported NATO*. Stress is given to two particular points of universal interest in current defence policy: the 'specialisation' of military tasks within NATO and the role of tactical or battlefield nuclear weapons.

Apart from any 'rationalisation', like recent measures to amalgamate the certain functions of the medical services within the Dutch armed forces, defence policy emphasises that the armies of smaller countries may, in the future, have to relinquish an entire branch or capability, or even the whole of one armed service. In consequence the government has suggested that the Dutch navy takes over certain German commitments at sea in return for the *Bundeswehr* assuming Dutch land force commitments in Northern Army Group. This proposal is being studied. In parallel, the Belgian government has announced that it too will support 'rationalisation' and 'specialisation' along similar lines within NATO. The encouraging feature about these moves is that they are being conducted through Alliance channels.

Netherlands defence policy accepts the strategy of flexible response as the basis for military planning and the tactical conduct of operations, with the proviso that the role assigned to tactical or battlefield nuclear weapons should be relegated more to the background. The requirement to possess these weapons is accepted, but the need to raise the 'nuclear threshold' is stressed. This thoroughly sensible sentiment raises the vital issue of the conventional strength of the Dutch and other land force components assigned to, or earmarked for, the Central Region. Present Dutch defence policy does not seem to be aimed at any dramatic strengthening of the combat readiness or effectiveness of the conventional element.

STRENGTH AND BUDGET

Population: 13,948,000
Army: 75,000 (plus 145,000 reserves)
Navy: 17,000 (including 2900 marines); 23 major vessels, 50 smaller
Air force: 17,700; 162 combat aircraft
Paramilitary: 3700 gendarmerie
GNP (1976 estimate): \$85,100,000,000
Defence expenditure (1977): \$3,360,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

The Queen is Commander-in-Chief. The Government controls the Dutch army (*Koninklijke Landmacht*) through a Minister of Defence and a Defence Ministry. Also in The Hague, but in a separate location from the Ministry, the Army Headquarters exercises command over subordinate formations and installations (see Figs. 1 and 2).

Constitutional Status

Apart from the normal enactments prolonging the existence of armed forces and approving their financing, the main constitutional feature concerns conscription which is perhaps natural within forces primarily based on a universal service system. Conscription is based on Section 194 of the Constitution which states that 'all Netherlanders who are able shall be bound to collaborate for the maintenance of the independence of the Kingdom and for the defence of its territory'. All male citizens of the Netherlands living in the country are registered for national service on February 1st of the year in which they reach the age of eighteen. About 10% of men registered are exempted before being called for medical examination for reasons such as service by brothers (i.e. if two brothers are serving or have already served) or because of training for Holy Orders. The Defence Minister has announced recently that anyone liable for military service after July 1st, 1976 will not be called up if he has become a married man or a provider for a family before that date. The Netherlands Constitution offers the possibility of exceptions from military service on the grounds of serious objections of conscience.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitment

The RNA has three main tasks: to provide an army corps of three divisions and supporting troops for Northern Army Group; to defend the Netherlands; and to furnish logistic and all other forms of support required by the Dutch contribution

* For detailed results of the polls and other related information see C.C. Van den Heuvel's article 'Defence Motivation in the Netherlands', *NATO Review*, October (1975). The 'Defence Note' mentioned refers to the Government White Paper on Netherlands Defence Policy 1974-83, entitled *Our Very Existence at Stake*, The Hague, July 9th (1974).

Figure 1 HIGHER DEFENCE ORGANISATION

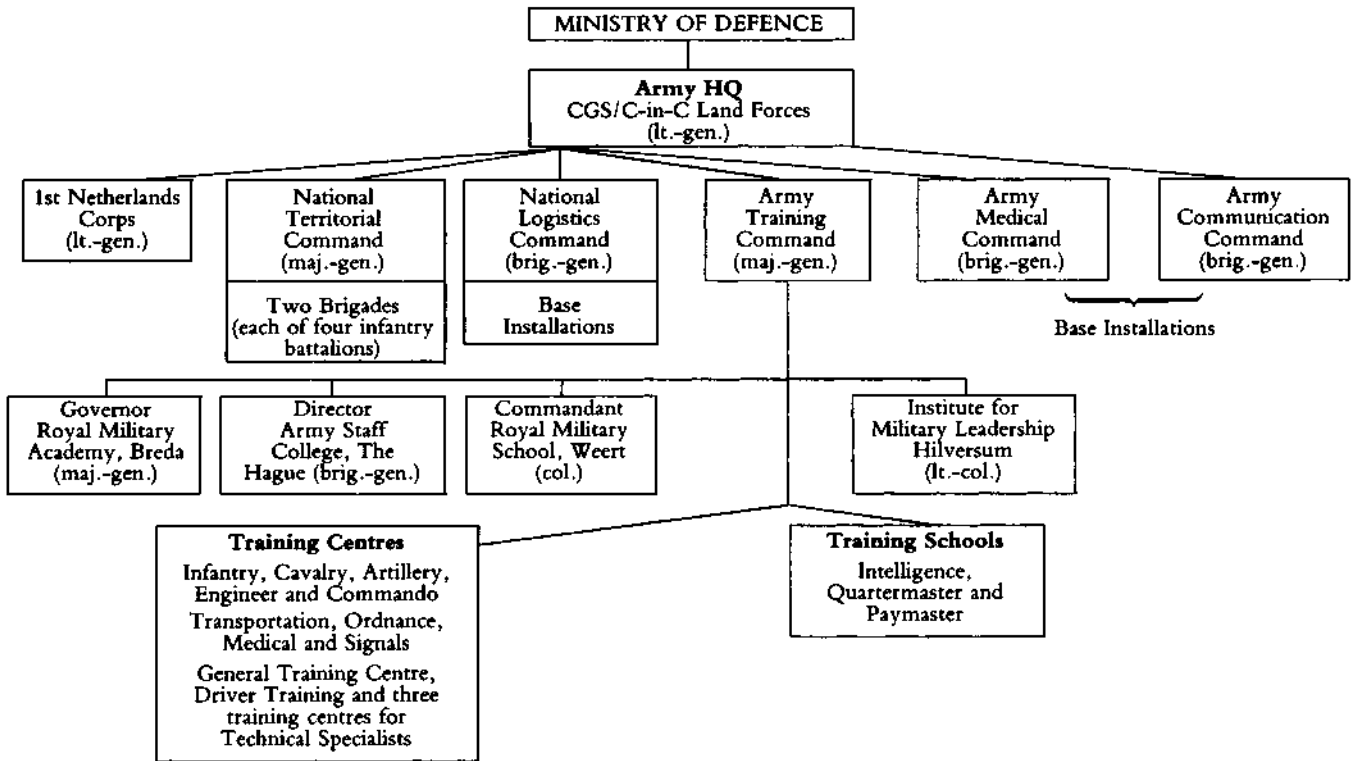

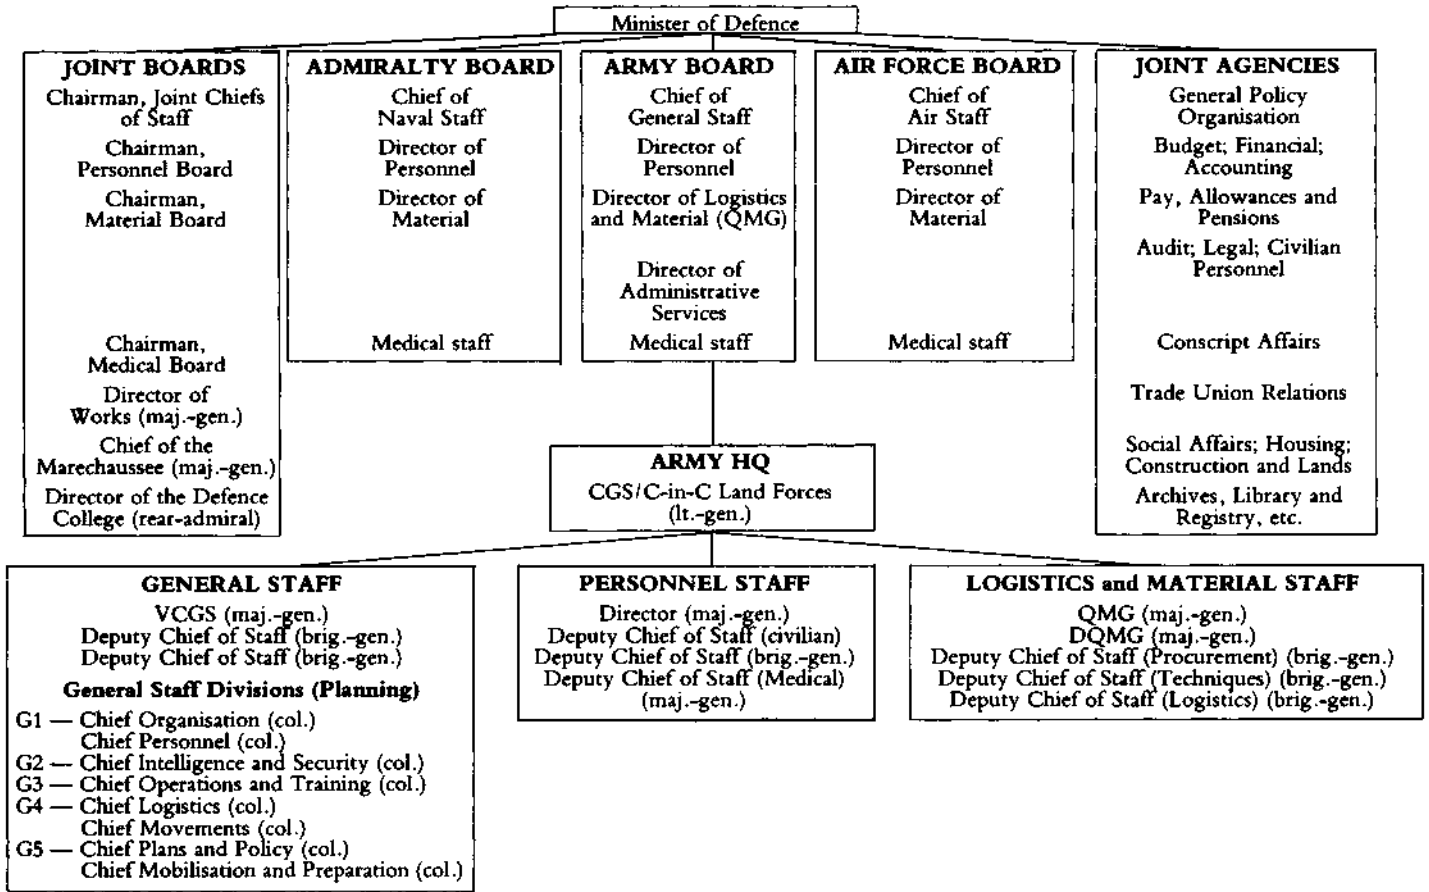

Figure 2

World Armies

to NATO's Central Region and by the home defence force. Because some two thirds of the Dutch army consists of conscripts, their training is a heavy commitment; hence the separate training command and the many training establishments (Fig. 2). It may be the eventual intention to amalgamate the Army Training Command with the National Territorial Command.

Deployment

With the exception of one armoured brigade and a small number of other units stationed in Germany, the remainder of the 1st Netherlands Corps is located at home in peacetime. Therefore, most regular officers and NCOs spend the longest part of their service in barracks in the Netherlands, as do the conscripts. Exercises are conducted in the Federal Republic where troops become acquainted with their operational areas and tasks. In 1972, a commission of defence experts unanimously recommended that a second brigade and a second reconnaissance battalion should be stationed in the Federal Republic. They also pointed to the need for the earliest provisions of training areas in the Netherlands. Neither of these two improvements have so far been possible. The problems associated with the 'maldeployment' of NATO's land forces in the Central Region are well known and led the commission to state that, 'Permanent presence, preparedness and fast reaction capability should be the main features of our army' (Dutch White Paper, 1972). The time it would take the 1st Netherlands Corps to deploy to its operational areas means that an emergency arising, by surprise, would cause very great concern and difficulty.

Recent Operations

Dutch forces saw active service in the Dutch East Indies 1945–8 and Korea (1950–3) but since the early 1950s the RNA has received no experience of active service operations.

ORGANISATION

Arms of Service

The RNA comprises infantry (including a commando corps), cavalry, artillery, engineers, ordnance or technical service, signals, transportation, medical service, quartermasters and catering, military administration (including military finance, pay, education, etc.) and a legal service. The *Koninklijke Marechaussee* or Royal Military Constabulary, a predominantly volunteer force, not only has a joint service function but also exercises certain civil powers over public order and at national frontiers. Objections to military service relating specifically to conscience over the use of arms are recognised and men are posted to the Mobile Columns Corps which is a branch of the army dealing with such things as disaster relief, clearing of debris and medical assistance. The total length of service is the same as in the Arms.

The regiments and corps of the Royal Netherlands Army are as follows:

Infantry: *Garde Grenadiers, Garde Jagers, Garde Fuseliers Prinses Irene, Regiment Chassé, Regiment Oranje Gelderland, Regiment Menno Van Coehoorn, Regiment Johan Willem Friso, Stoottroepen, Limburgse Jagers, Regiment Van Heutsz, Korps Commandotroepen*

Cavalry: *Huzaren Prins Alexander, Huzaren van Boreel, Huzaren Sytzema*

Artillery: *Veldartillerie*

Air Defence: *Luchtdoelartillerie*

Engineers: *Genie*

Technical Engineers: *Technische Dienst*

Signals: *Verbindings Dienst*

Transport: *Aan en Afvoer Troepen*

Medical: *Militair Geneeskundige Dienst*

Supply: *Intendance*

Military Administration: *Militaire Administratie*

Justice: *Militair Juridische Dienst*

There are also some small corps (technical staff, mobile columns corps (civil defence), bands, chaplains, women's service (*Milva*) and military police supplied by the *Marechaussee*).

Operational

The RNA is at present undergoing an extensive reorganisation and is being reduced in size; full details are contained in the Defence White Paper already mentioned. The 1st Netherlands Corps is organised in three parts: command and control

elements, fighting elements and support elements. Like the Belgian army, the RNA has no divisional headquarters as such, but staffs are provided at divisional level to command tactically a number of brigades. The divisional commander has no combat-support or logistic-support resources of his own; these are either integral ('organic' is the military term) to brigades or allocated from corps level as the situation demands. Aviation, provost and signals support, although 'pooled' at corps level, have standard affiliations to divisional staffs.

At present only the two activated divisions are mechanised; the third, a reserve division, is being gradually converted and re-equipped to bring it to the same status. When the modernisation programme is complete, the 1st Netherlands Corps's three armoured brigades and six armoured infantry brigades will be fully mechanised with all infantry APC-borne and all artillery self-propelled, with the exception of a reserve infantry brigade. The armoured brigades will consist of two tank battalions, each equipped with 53 Leopard tanks, and one armoured infantry battalion of 67 APCs; the armoured infantry brigades will have one tank battalion and two armoured infantry battalions. Both types of brigade have a self-propelled artillery battalion and other organic combat support, as well as some signals and service support facilities. This makes the brigades, as the Dutch basic fighting formations, self-contained to an extent.

Only the two armoured brigades and four armoured infantry brigades belonging to the 1st and 4th Divisions are 'active'; the three in the 5th Division and the one additional infantry brigade are 'reserve' formations. Not all battalions in each brigade are 'active' or combat ready; some are 'RIM' and some 'mobilisable' which places them in 'reserve' status. The proportion of 'RIM' battalions is increasing under the current restructuring. 'RIM' units comprise conscripts who have left an 'active' battalion and are transferred as part of a complete company for a period of 18 months. 'RIM' units have a nucleus of regular officers and NCOs, whose permanent appointments in peacetime are in training centres and similar establishments, and have a proportion of former conscripts commissioned as officers or promoted to NCO rank. 'Mobilisable' units consist of a small regular element, and former conscript officers, NCOs and soldiers, who have either completed their 'RIM' tour, or who have been transferred direct from 'active' to 'reserve' service, where they complete the remainder of their military liability. 'Active' or combat-ready units, such as tank or armoured infantry battalions, have a headquarters company, a training company and three 'manoeuvre' companies. Each manoeuvre company is filled with conscripts from the same national service intake and, apart from a small regular cadre, are replaced *en bloc*. This means that the standard of training is uneven within a battalion; also because conscripts automatically go on 'short leave' at the end of their service term, a complete company will be missing from the battalion at any one time. Hence, in peacetime an 'active' battalion is, at best, manned only up to two-thirds of its wartime establishment. The same type of structure and procedure applies to artillery, engineer, logistic and signals units. Under-implementation adds to the considerations of time and distance in any appreciation of combat readiness. Finally, 'active' units hold and use their own equipment, 'RIM' and 'mobilisable' units have their equipment stored in central locations. The procedures for drawing equipment are regularly practised.

When the current reorganisation of the 1st Netherlands Corps is complete in the early 1980s, strengths will be:

Active (present in peacetime)	27,100	
Active (in other peacetime appointments)	700	
On 'short leave'	5,300	
RIM	17,600	} Reserve {
Mobilisable	31,200	
Total wartime strength	81,900	

or, expressed another way:

Combat units	Active	Reserve		Total
		RIM	Mobilisable	
Tank battalions	5	5	2 ¹ / ₃	12 ¹ / ₃
Armoured infantry battalions	7	7	1	15
Infantry battalions	—	—	3	3
	12	12	6 ¹ / ₃	30 ¹ / ₃

Finally, the Corps Headquarters at Apeldoorn and the two 'active' Divisional Headquarters at Arnhem and Harderwijk in the Netherlands, are organised upon NATO standard staff system. In addition to the chiefs of staff — at corps a brigadier-general, and at division a colonel — there is the normal complement of staff officers organised into G-1, G-2, G-3 and G-4 branches backed by specialist staffs. A G-5 branch, at corps level only, deals with civil-military co-operation (CIMIC).

World Armies

RECRUITMENT, TRAINING AND RESERVES

Recruitment

From February 1st, 1976 the term of national service was reduced from 16 to 14 months and, if MBFR negotiations produce firm agreements, conscription may be reduced to a year after February 1st, 1977. The current universal service system involves a period of military training and employment (14 months) followed by 'short leave' (8 months), when the former conscript is liable to instant recall, maybe to a 'RIM' unit.

Every year about 45,000 young Dutchmen are called to the colours to national service; they represent about 40% of the total in their age group. Call-up is normally in the year in which the man reaches the age of twenty within the regulations of a selective system. About 30% of registered men summoned for medical examination are rejected as unfit for service.

The RNA runs a 'Technical Specialist' scheme involving a 4-6 year engagement and providing training in such key specialist functions as tank driving, mechanical maintenance, and so on. The target for recruitment is 5500 and, at present, the scheme is 60% successfully recruited.

The Mommersteeg Commission is currently examining the desirability and possibility of an all-regular army: how sufficient numbers of the right quality of men can be recruited (some 40,000 is the estimated requirement); the financial implication; the organisational structure; and how to make the transition from a mainly conscript to an all-regular force. The Commission was due to report late in 1976 and may return a favourable verdict. Reliable sources convey the impression that, although the majority of regular officers would welcome such a change, there is an understandable clash of opinion between the acute desire for genuine military professionalism, heightened by recent experiences with conscripts, and serious doubts that recruitment would prove inadequate to maintain a worthwhile army peacetime strength.

The subject has been hotly discussed, and will no doubt rise again to prominence when the report appears. The supporters of the scheme are mainly those who feel that the so-called 'democratisation' of the army may have gone too far and may now adversely affect the combat value of units and formations. Clearly, the Dutch army of today does find itself in an increasingly precarious situation regarding the maintenance of discipline over its conscripted soldiers. In 1971 long hair and hair nets were approved; now hirsute conscripts demonstrate, with or without banners and placards. Saluting is no longer obligatory, and to make a protest in a variety of unmilitary ways seem to typify certain sections of the conscript force. Those who support an all-regular scheme contrast what they see of conscripts with the Dutch army's regular cadre of officers and NCOs, which is a well-trained efficient body of military professionals who function smoothly together. The military bearing and proficiency of the regular army officers is a notable feature; the average officer stands out and takes a pride in his army.

The supporters are opposed by elements (mainly with left-wing political persuasions) within the Netherlands, who argue that the army should reflect the character of the population. To the outsider, this is clearly not the case at present, for most conscripts do not identify in appearance or attitude with the majority of the Dutch nation. The opponents of an all-regular army fear that if it was established it would grow away from the nation as a whole and become an *élite*. The Minister of Defence himself has said, '... a purely professional army also poses problems. Young people can use their period in the army to learn a profession, but what about those who have spent 30-35 years in the army? How are they going to find a job outside? In any case do we really want to create a purely professional army composed of old warriors forming a potential military class?*' The debate continues and covers ground familiar to those of other nations who have grappled with the same problem and who, like next-door neighbour Belgium, are at present facing similar divisions of opinion. There seems little doubt which is the best choice from a strictly military viewpoint, but it is clearly not a strictly military problem.

Training

Initial basic training is conducted in central establishments (Fig. 2) and special to-arm training in units. Each 'manoeuvre' battalion (tank and armoured infantry) and many other supporting units have an organic training company. A conscript remains a private soldier throughout his service. If he is recommended for employment as a reserve officer, he must start his national service earlier and then holds the rank of 'underofficer' during the period of his 'active' service. All officers and NCOs in the 'active' army are regulars and their standard of individual training is high.

Potential regular army officers spend 4 years at the Royal Military Academy, Breda. Later in their careers, officers may attend the Army Staff College course in The Hague. This lasts for 1 year and trains 10 students a year. All graduates are guaranteed a subsequent 'command' tour as lieutenant-colonels and the recent reduction of the Staff College's annual intake will enable the army to prolong the present over-short command tours (about 18 months) made necessary in order to fit in all those qualified. The Royal Military School at Weert provides centralised instruction for NCOs, and there is an Institute for Military Leadership at Hilversum.

* Interview with Mr Henk Vredeling, Dutch Defence Minister, published in the *British Army Quarterly*, April (1974).

Reserves

Under the provisions of the Conscription Act former conscripts remain on the reserve until their 35th birthday, although some officers continue until they are forty-five and some senior NCOs until they are forty. Reserve commitments vary, possibly incorporating an 'RIM' tour after the former conscript's 'short leave' has expired at the end of his period of national service. The majority of reservists will spend most of their period of reserve liability in 'mobilisable' units which are part of the field army or the home defence force (Fig. 2), or as individual reinforcements to convert other units from a peacetime to a wartime basis during a period of tension.

EQUIPMENT AND ARMS INDUSTRY

The Netherlands has never had a significant armaments industry, and even now, when electronics firms are producing more military equipment and DAF is manufacturing army vehicles, the percentage of national output devoted to defence represents a very small proportion compared to some other western European countries. The German Leopard tank is purchased complete, but a 'national' radio system is fitted in its turret.

Equipment currently in service includes:

Leopard and Centurion main battle tanks. M-113, YP 408 (DAF) and AMX VIP (tracked) APCs. Honest John free flight rocket. 8in self-propelled howitzer (M-110), 175 mm self-propelled gun, 155 mm self-propelled howitzer (M-109), 155 mm towed howitzer (USA), 105 mm self-propelled howitzer (AMX) and 105 mm towed howitzer (USA). L40/70 anti-aircraft gun and radar. 120 mm mortar, 4.2in mortar and 81 mm mortar. TOW anti-tank guided missile and 106 mm recoilless anti-tank rifle. 0.5 in Browning machine-gun (APC mounted). 9 mm sub-machine-gun (USA). 9 mm Browning pistol (FN). 7.62 mm self-loading rifle. General-purpose machine-gun. Light machine-gun (FN).

The future re-equipment programme includes the replacement of Honest John with Lance, but without a nuclear capability. The Netherlands is facing the same problems as her allied neighbours in providing sufficient financial resources to keep a credible military capability. In 1974, defence expenditure accounted for 3.8% of the GNP while the proportion of government expenditure going to defence has fallen over the last 20 years from one-fifth to one-eighth. Concurrently personnel costs have risen steeply during recent years as in all related forces, but none more so than in the Dutch case. The Dutch national serviceman is the best paid conscript in Europe and bonus payments for special terms of service engagement are commensurately high. All this means that proportionally less of the available defence budget remains for essential re-equipment and other operating costs. The recent governmental decision not to call up married men is said to stem from the desire to save some 25,000,000 guilders in subsidies paid to married national servicemen at present.

RANK, DRESS AND DISTINCTIONS

Ceremonial dress for officers is dark midnight blue. The jacket is high-collared with facings, badges and buttons; the trousers in the same shade have stripes in arm or regimental colours down their side. Service dress has a dark brown khaki jacket and fawn-grey trousers in heavy-weight material; officers and soldiers wear the same pattern uniform and convert it to shirt-sleeve order when appropriate. Officers also wear a light-weight summer uniform in a stone-coloured shade of material. Brown shoes are worn with all these forms of dress except ceremonial dress when black footwear is worn. Field service uniform comprises an American-style helmet, an olive combat suit, dark-green webbing and brown combat boots.

Rank badges are worn by officers, adjutants (senior warrant officers) and underofficers (national servicemen who will become reserve officers) on shoulder epaulettes, and by NCOs on the upper part of the right sleeve. Coloured arm or regimental patches behind badges are worn on the collar of service dress jackets.

CURRENT DEVELOPMENTS

The army's strength is given officially as 75,000 but at the time of writing has reduced to a figure nearer to 69,000, of which roughly 60% are conscripts. The army, like the navy and air force, is currently reorganising. It is the government's intention to create a 'new look' about the services by skimming military superstructures, creating a new training organisation, streamlining logistics and carrying out some inter-arm and inter-service integration. Simultaneously, the possible conversion to an all-regular army is being considered.

All of this is set against an unsettled background where basic principles of a military society have been challenged by large numbers of young Dutchmen. The concept of 'authority' is changing, there is growing pressure by conscripts to take part in the decision-making process, and armed forces are becoming compared with industrial undertakings. There is developing, mainly through Conscript Trade Unions, a process of questioning values and institutions and an increasing preparedness among representatives of younger generations to speak out more openly in favour of certain values and

World Armies

institutions in replacement of old, former ones. On the other hand, there is evidence of subversion by 'sleepers' which increases and fosters the signs of dissolution in the RNA.

In each west European country the same challenges to 'established' society exist; there is a feeling inside and outside the Netherlands that the 'movement' among their young has been allowed adversely to affect the army, in particular the three Dutch services, to an unreasonable extent. Unmilitary behaviour, ill-discipline and an almost deliberate show of military semi-competence are impressions engendered no doubt by a minority of conscripts, but they are impressions which have foundation in fact. How much this undermines military proficiency and combat readiness is outside the scope of this entry. A senior American general quite recently, and seriously, referred to the army as the 'Dutch Hair Force'; Mr Van der Heuvel optimistically reputed allegations of a disintegration of morale — on the contrary, he sees signs of the armed forces becoming more closely integrated with the people. In referring to external criticism of the long hair, untidy uniforms and undisciplined behaviour of Dutch soldiers, he has this to say: 'In certain circles in the Netherlands these articles are read with approval as they reflect their own views, but at the same time with a certain sense of shame because it hurts national pride. In other circles, however, such articles cause irritation, as they present — in their view — a very one-sided picture of the Dutch soldier. It is felt that even if long hair is regarded as a symptom of a certain attitude, it goes much too far to use this as an essential element in criticism of the value of the Dutch armed forces. In this connection it is usually pointed out that he meets the requirements, and not infrequently achieves more than is expected from him'.

The two conscript trade unions are described in this article. The *Vereniging voor Dienst plichtige Militairen* (VVDM) is all-conscript and generally militant; it is the main trade union concerned with the armed services. The *Bond van Dienstplichtigen* (BVD) started as a protest group of socialist soldiers and former conscientious objectors and now lacks recognition and support. A third union, the *Algemene Vereniging van Nederlandse Militairen* (AVNM) is a moderate association mostly of conscripts, but some regulars, and is growing. Members of unions may demonstrate outside their barracks, but only inside if they have the permission of their commanding officers.

With so much emphasis also placed upon restructuring within the army itself, this is indeed a busy, eventful and challenging time for the competent regular cadre of officers and NCOs. In these matters, the RNA has traditionally looked towards the British army for guidance and a lead. However, it seems that the restructuring plan adopted for the British corps in Northern Army Group has left Dutch officers perplexed and uncertain. Some feel that this will cause their army to swing even more towards the *Bundeswehr*.

No Netherlands government this century has felt much confidence in the feasibility of an autonomous defence policy. After World War II old neutralist aspirations were put away to be replaced by strong support for NATO and now hearty endorsement of any move to bring European union nearer to reality. It is not surprising, therefore, that defence policy should encourage developments along the lines of greater 'rationalisation' and 'specialisation' within NATO and a more pronounced degree of European interdependence in defence matters. Government spending on defence has never commended itself much to Dutch hearts and the current 'squeeze' is due in no small amount to generous pay scales, and even a '40-hour week' for servicemen from March 1st, 1976. Apparently there is now a campaign to pay soldiers the national minimum wage and this may help to share out defence funds available on a more equitable basis between personnel, equipment and operating costs. Financial forecasts up to 1980 put the defence share of national income at 3.7% which is the same as it is at the moment. There is pressure from left-wing politicians to reduce the proportion to 3%.

The uneasiness of the conscript force, tribulations of structural reorganisation and financial stringency make this a difficult time for the Dutch army. Even the Defence Minister makes no secret of his dislike for his job and has described himself as allergic to uniforms. Soldiers in other armies closely connected with the RNA have nothing but admiration for their colleagues of the Dutch regular army and feel sure that this is a time to express confidence in, and not criticise, their efforts. It is not their competent efforts which make the news however; there are other problems which cause them concern and spike their professional pride. Let us hope that the Royal Netherlands Army grows out of its current troubles and emerges again as a military institution totally beyond reproach on any score, whether by becoming all-regular or remaining a predominantly conscript force.

JOHN SKINNER

NEW ZEALAND

HISTORY AND INTRODUCTION

New Zealand enjoys a number of military advantages. The country is relatively isolated within the south Pacific, far from other powers; there are no land frontiers to protect; and since the Maori war of the 1860s internal harmony has been the norm. But these very advantages, if they are to be enjoyed, make the maintenance of armed forces essential. New Zealand has little heavy industry, so has to procure, through the channels of trade, many of its needs abroad, bringing the items in by sea. Sea lanes are vulnerable to attack, however, and armed forces are needed to protect them. In addition, if an enemy power did contemplate direct attack, the islands, with their 2000 miles of coast-line, would be difficult to defend, leaving the deterrent value of a capable armed force, working in conjunction with its counterparts from other interested States, the only guarantee of long-term security. The maintenance of a small but professional regular army, backed by a fully trained reserve, is an integral part of this deterrence.

The islands of New Zealand became a British colony in 1840, and between then and a London decision of 1870 to make white colonies responsible for their own defence, regular troops of the British army constituted the bulk of the protecting force in the new settlements, achieving a maximum strength of over 10,000 during the Maori war. These regulars were supported, however, by locally raised troops, divided from an early date into two classifications which have always formed the basis of the New Zealand military structure. On the one hand there was a small Permanent Force, composed chiefly of artillery and engineers stationed in coastal regions, and on the other a group of part-time volunteer Militia units, based and recruited in local areas. When the British garrison was withdrawn in 1870, these forces were all that remained, but the strength of their organisation was shown 30 years later when a total of 10 contingents of mounted rifles (6500 officers and men), commanded from the Permanent Force but drawn from the Militia, were sent to assist Britain in the South African war. It was during this conflict that the resourcefulness and bravery of New Zealand soldiers first became manifest; characteristics associated with them ever since.

Nevertheless, with the growth of the colony and the forging of trade links, particularly with Britain and Australia, it soon became apparent that some form of military expansion and reorganisation was needed. Following the British pattern of the previous year, therefore, in 1909 the Militia was disbanded and a new force of part-time soldiers, known under the British title of Territorials, set up in local areas, subject to central control. In order to fill these new units, compulsory part-time military training for the entire male white population between the ages of eighteen and twenty-five was introduced, it being hoped thereby to preclude the need for a large regular army within the islands. At the same time the Permanent Force, although basically unchanged, began to take on the responsibility of staff duties, forming a skeleton command structure for the Territorials should they ever be mobilised.

The success of this scheme can best be seen in 1914, for New Zealand, responding to the British call-to-arms as eagerly as her Australian neighbour, was able to raise a complete infantry division, commanded from the Permanent Force and manned by the Territorials, in a very short time, with minimum recourse to civilian volunteers. This division (known as the New Zealand Expeditionary Force), in partnership with the 1st and 2nd Australian Divisions, formed what was known as ANZAC (Australian and New Zealand Army Corps), and as such was committed to the ill-fated Gallipoli campaign of 1915. Here it acquitted itself very well indeed, reinforcing the opinion of its troops first gained in South Africa a few years before. But casualties were heavy, and in 1916, by which time the remains of the Expeditionary Force had been moved to France, full-scale conscription for service overseas was regarded as the only way to maintain the necessary flow of reinforcements. This remained in force until the end of the war in 1918, by which time some 99,000 New Zealanders had been despatched abroad, with 16,700 losing their lives. From a colony containing little over a million people when the war broke out, this was no small sacrifice, especially in aid of a cause not directly affecting the south Pacific.

Once World War I was over, all ideas of full-scale conscription were abandoned, although the 1909 scheme did continue. Due to the economic recession, however, even that was dropped in 1930, causing the Territorials to revert in all but name to the old Militia system. Numbers dropped significantly, leading to a cut in the size of the Permanent Force, with the result that when war broke out again in 1939 the New Zealand government, although always strong in its advocacy of collective action to check aggression, particularly in concert with Britain, could do little but promise military aid. It was not until the re-introduction of conscription in June, 1940 (by which time, it should be added, some 66,000 volunteers had already come forward) that a 2nd New Zealand Expeditionary Force, once again commanded from the Permanent Force and manned by the hastily augmented Territorials, could be formed for service overseas.

This Expeditionary Force, known also as the 2nd New Zealand Division, was sent initially to the Middle East to reinforce British efforts in that theatre, and saw hard service throughout the campaign. It suffered severe casualties in 1941 in Greece and Crete where the defence of the island was entrusted to its commander, Major-General Freyberg. After evacuation from Crete the division took part in the advance into Libya, and in June, 1942 played an important role, at

World Armies

Minkar Kuaim, in stemming the Axis advance into Egypt. It was one of the assaulting divisions at Alamein and was prominent in the pursuit of Axis forces until their surrender in Tunisia. In October, 1943 the division crossed to Italy where it saw further hard fighting, particularly around Monte Cassino. Meanwhile another division, numbered the 3rd, had been raised in New Zealand, and with the threat of Japanese expansion appearing nearer home, this force was committed solely to the war in the Pacific, fighting chiefly in the Solomon Islands. Altogether some 135,000 New Zealanders served overseas during World War II, and although the casualty figure of 10,000 killed did not match that of the previous war, the events of 1939–45 had a more profound effect upon military thinking.

The main reason for New Zealand's post-war reassessment of her armed forces was a realisation that they were needed, not merely as a reinforcement to the British army in times of crisis, but more importantly as protectors of the home islands themselves. The New Zealand authorities had not reacted to the Japanese threat in the same way as the Australians, who had withdrawn forces from the Middle East for service in the Pacific, but they were aware that the country was no longer as invulnerable as had been supposed. In addition, New Zealand, in co-operation with other powers, was expected not only to provide troops for occupation duties in the Far East immediately after the war, but also to contribute to the collective security of south-east Asia, a factor which led initially to the ANZUS Pact of 1951, followed by the SEATO Treaty of 1954 and Five Power Defence Arrangements of 1971 (see later). All of these commitments required the existence of armed forces on a relatively large scale, and although the basic military pattern of Permanent Force/Territorials was not altered, a degree of reorganisation had to be introduced. Consequently in 1949 all male New Zealanders were made liable to a 14 week period of military training (altered to 10½ weeks in 1956) on becoming eighteen, to be followed by 60 days' service in the Territorials over the next 3 years. This persisted in essentials until 1968 when conscription by ballot was brought in, based on the law that all 'British subjects ordinarily resident in New Zealand' were liable for part-time service upon reaching 19 years of age. Those selected by this method — the average was reckoned to be about 2250 out of a possible 15,000 every year — were then called upon to do 12 weeks' training, followed by 3 years' Territorial service and 3 years in the Reserve. The scheme, and with it the whole idea of National Military Service, was abandoned in March, 1973 since which time the New Zealand army has been an all-volunteer force.

It will be noticed from the above description that at no time between 1948 and 1973 did conscription apply to the Permanent Force. That body (known more recently as the Regular Force) retained its voluntary status throughout, acting as a training and staff cadre, theoretically for use only when the Territorials were mobilised. In practice, however, it became usual, whenever the government's policy of collective security in the Asian theatre necessitated a commitment of troops, for volunteers to be called for from the Territorials. These men, under the command of officers and NCOs from the Regular Force would then form a special unit for service overseas: a traditional and well-tried New Zealand idea. Such units saw service in Korea (1950–53) with the United Nations force; in Malaya during the emergency (1948–60), and, between 1964 and 1971, in South Vietnam, where they joined an Australian task force in a mini-ANZAC. The system, distinctively New Zealand as it is, appeared to work well, and despite the change of government in 1973 which ended conscription and led to a policy more of home defence, its potential remains. Indeed, one infantry battalion continues to be deployed in Singapore as New Zealand's contribution to the Five Power Defence Arrangements, and there may be little doubt that it could be reinforced quickly, by the traditional method, should an emergency occur. In addition the Territorials, although now volunteers, are fully mobilised for the relatively long period of 12 weeks a year, giving them the training and experience to fill out and augment the Regular Force, preparatory to service in defence of the national interest.

STRENGTH AND BUDGET

Population: 3,200,000

Army: 5457 Regular Force; 5834 Territorials (mobilised for 12 weeks every year); 1540 Reserve Force

Navy: 2741; four frigates, five smaller craft

Air force: 4268; 34 combat aircraft

GNP (1977): \$12,560,000,000

Defence expenditure (1976–7): \$221,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

The Governor-General of New Zealand, as representative of H.M. Queen Elizabeth II, takes on the role of Commander-in-Chief and is empowered to raise and maintain all armed forces within the country. His duties have tended to be nominal, however, especially since 1964 when the command and administration of all three services (navy, army and air force) was placed under the central control of a Minister of Defence, appointed by the political party in power and charged with the formulation of an overall defence policy. He is aided in this task by a Secretary of Defence and Chief of Defence Staff as

principal civilian and military advisers respectively, and operates within the context of a Defence Council, the membership of which is:

Minister of Defence (Chairman)	
Chief of Defence Staff	} (Deputy Chairmen)
Secretary of Defence	
Chief of Naval Staff	} (Chiefs of Staff Committee)
Chief of General Staff	
Chief of Air Staff	

The Secretaries of Foreign Affairs and the Treasury, as interested parties in defence decisions, are also vote members, and the Council may appoint other members at its discretion. It holds responsibility for both the command and administration of the armed forces, while assisting the Minister in formulating defence policy.

Below the Defence Council there exists a Defence Headquarters, comprising the Naval, Air and Army General Staffs and six functional branches (now in the process of being centralised) covering policy, personnel, support, administration, finance and management for each of the three services.

Constitutional Status

Following closely the patterns laid down in both Britain and Australia, all service personnel in New Zealand owe direct allegiance to H.M. Queen Elizabeth II as Commander-in-Chief, although for purposes of convenience the Governor-General, as already stated, is invested with the power to raise and maintain the armed forces. This is not designed to undermine the autonomy of the New Zealand government in defence matters and does not pre-suppose automatic support to Britain in time of crisis in Europe, for unless government decisions are obviously alien to Commonwealth interests, the Governor-General does not interfere. By owing allegiance not to the government in power but to a higher, permanent authority, however, the military forces are less likely to be used for purely political ends.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The roles and missions of the New Zealand armed forces are officially stated in the *New Zealand Official Yearbook* as:

1. To maintain an ability to deploy, in the area immediately around New Zealand and in the south Pacific, forces to deal with situations affecting New Zealand's interests for which her allies would expect New Zealand to assume primary responsibility.
2. To contribute to the protection of the air and sea communications vital to New Zealand.
3. To maintain an ability to contribute in time of war to the fullest extent possible towards the collective defence of the friendly countries in the areas of primary strategic importance to New Zealand.
4. To contribute forces as appropriate to assist the United Nations, partners in defence arrangements and other friendly countries in keeping the peace and/or preventing escalation.

Commitment

The majority of New Zealand's defence commitments are centred upon the continent of Asia, and since the end of World War II she has become a member of several multi-national defence arrangements. These range from the ANZUS Pact of 1951, whereby New Zealand, Australia and the United States agreed to support each other in the Pacific area, through the SEATO Treaty of 1954 (now being phased out) which covered collective defence in Asia, to the Five Power Defence Arrangements of 1971, designed to protect Malaysia in the event of further communist aggression. The last-mentioned agreement led to the formation of ANZUK, a combined force of New Zealand, Australian and British troops, and although both the Australians and British have allowed their commitments to lapse, New Zealand forces remain in Singapore under the title of NZ Force South East Asia.

Beyond the provisions of actual treaties, New Zealand also co-operates in defence matters with Indonesia, Papua New Guinea, Fiji and Tonga under the terms of a Mutual Assistance Programme, and feels very strongly her obligations under the United Nations Charter. Recently there have been nine New Zealand officers on UN duty in Kashmir and the Middle East.

Deployment

The key to New Zealand defence thinking appears to be the idea of maintaining within the home islands the bulk of the

World Armies

army, ready to move at relatively short notice to carry out UN or treaty obligations. The exception to this is, of course, NZ Force South East Asia, comprising the 1st Battalion, Royal New Zealand Infantry Regiment with air and naval support, stationed at Singapore.

Recent Operations

New Zealand military forces have been actively involved in campaigns on the continent of Asia three times since 1945. In 1950, at the start of the Korean war, a voluntarily recruited field regiment of artillery, with auxiliary units, was sent to join the United Nations force, remaining in action until the ceasefire in 1953. Between 1955 and 1960 New Zealand troops aided the British in countering communist insurgency in Malaya. Finally, between 1964 and 1971 New Zealand forces became involved in South Vietnam, reaching a maximum strength of 550 personnel, drawn chiefly from artillery and infantry units, in 1967. These campaigns, particularly in Vietnam, provided useful training and experiences in counter-insurgency, a type of operation in which the New Zealanders, with their Australian allies, enjoyed considerable success. In addition to active service, however, the New Zealand army has gained a well-deserved reputation for aiding other countries in its area, particularly in the development of roads, harbours, reservoirs and pipe-lines as well as disaster relief. Army engineers have been stationed for development purposes in Thailand, the Gilbert and Ellice Islands and the Cook Islands, while all elements of the armed forces have contributed to disaster relief in Bangladesh, Fiji and Australia.

ORGANISATION

Arms of Service

Taking Regular and Territorial units together, the army comprises:

Royal Regiment of NZ Artillery, Royal NZ Armoured Corps (two squadrons), Corps of Royal NZ Engineers, Royal NZ Corps of Signals, Royal NZ Infantry Regiment (eight battalions), NZ Special Air Service, NZ Army Air Corps, Royal NZ Army Service Corps, Royal NZ Army Medical Corps, Royal NZ Army Ordnance Corps, Corps of Royal NZ Electrical and Mechanical Engineers, Royal NZ Dental Corps, Royal NZ Chaplains Department, NZ Army Pay Corps, NZ Army Legal Service, Royal NZ Provost Corps, Royal NZ Army Education Corps, Royal NZ Nursing Corps and NZ Women's Royal Army Corps.

Of these units, two infantry battalions and one artillery battery are all that are officially listed as Regular Force, but many of the corps and departments are permanently at cadre strength for administrative and preparation purposes.

Operational

In New Zealand the army is now organised into two commands, each directly responsible to Defence Headquarters for the performance of its functions:

1. *Home Command.* This provides the home support for the army in New Zealand; this Command is responsible for the function of the static organisation of the army, which it administers through seven geographical Army Area Commands, three major corps and the Army Training Group based at Waiouru.
2. *Field Force Command.* The army is structured to provide a Field Force of brigade size with associated support and logistic units for operational deployment in time of crisis, and Field Force Command, with its headquarters at Fort Cautley near Auckland, is responsible for those elements earmarked for this duty. The Field Force is basically non-regular, but the infantry battalions and artillery battery which make up the Regular Force act as its core. In an emergency one brigade, with logistic support, could be mobilised almost immediately by adding Territorial units to the Regulars, and it is calculated that a second brigade, made up almost entirely of Territorials, would soon be ready as reinforcement.

Units and personnel in Singapore are under the command of NZ Force South East Asia.

RECRUITMENT, TRAINING AND RESERVES

Regular Force

Military service has always been voluntary in the Regular Force, and because of its relatively small size the authorities are able to indulge in fairly rigorous selection of recruits at both commissioned and enlisted levels. Military careers are popular with the Maori community, which provides about 25% of the enlisted strength and 40% of the infantry. Those who wish

to become officers, presuming they do not rise through the ranks, have to pass aptitude and education tests before agreeing to serve an initial term of at least 8 years. They are then sent either to the Royal Military Academy Sandhurst in England or the Royal Military College Duntroon in Australia for training, as New Zealand possesses no military academy of its own. After graduation the officers return to New Zealand for specialist training in their units, although they may well be sent overseas again later in their careers, particularly when they rise to the level of staff duties.

Regular soldiers volunteer for a minimum period of 3 years (after which re-enlistment is favoured) and receive their training at corps schools or depots and in army units stationed within New Zealand or overseas. In certain cases specialised training may be received at overseas training establishments in England, Australia or the United States.

Regular servicemen, both officers and soldiers, are expected to enter the Reserve Force, presuming they do not join the Territorials, at the end of their enlistment period.

Territorial Force

Since the end of Territorial conscription in March, 1973 recruits have been attracted to the force, with some success, by financial incentives. Males or females between the ages of 17 and 36 years may volunteer for Territorial service, enlisting for a minimum period of 3 years or until retirement age for rank achieved (normally fifty-five). After initial training within the units they join, these volunteers are expected to turn out full-time for 12 weeks a year (during which time their civilian jobs are protected by law) and to do a minimum of 20 days' training beyond. Officers for the Territorial Force are usually chosen from among the volunteers during the annual period of full-time training, although Regulars may transfer their commissions at the end of their period of service. Territorial specialist training is normally conducted within the units, but soldiers can be sent to the schools and depots of the Regular Force.

EQUIPMENT AND ARMS INDUSTRY

Possessing little heavy industry of her own, New Zealand has a very small arms-manufacturing potential and has to depend almost entirely upon other countries for the supply of equipment. The traditional source has been Britain (as recently as June, 1976 an order was placed for 10 Andover light transport aircraft) but both Australia and the United States provide certain essential items.

Pistol: 9 mm automatic L9 A1 (UK)

Rifle: 7.62 mm L1A1 (Australia)

Machine-gun: 5.56 mm M16A1 (USA; heavy), 7.62 mm FN automatic L2A1 (USA; light), 7.62 mm L4A4 Bren gun (UK; light) and 7.62 mm L7A1 and L7A2 (UK; general purpose)

Mortars: 2 in OML (UK) and 81 mm OML L16A1 (UK)

Anti-tank weapons: 66 mm M72 rocket (USA; light) and 106 mm RCL M40A1 (USA; heavy; 23 in service)

Artillery: 25 pounder field gun (UK; 17 in service), 5.5 in field gun (UK; 10 in service) and 105 mm howitzer (UK; 28 in service)

Armour: M-41 light tank (USA; 10 in service), Ferret scout car (UK; 9 in service) and M-113 APC (USA; 66 in service)

RANK, DRESS AND DISTINCTIONS

Rank

General	Crossed sword and baton, one crown, one star
Lieutenant-general	Crossed sword and baton, one crown
Major-general	Crossed sword and baton, one star
Brigadier	One crown above three stars
Colonel	One crown above two stars
Lieutenant-colonel	One crown above one star
Major	One crown
Captain	Three stars
Lieutenant	Two stars
Second-lieutenant	One star
Warrant Officer I	Royal Arms
Warrant Officer II	Crown
Staff Sergeant	Crown above three chevrons
Sergeant	Three chevrons

World Armies

Corporal	Two chevrons
Lance-corporal	One chevron
Private	—

Note: rank badges are worn by officers on shoulder straps, and on the upper arm by other ranks.

Dress

In common with the British and other Commonwealth armies, most patterns of dress take khaki as their basic colour. The only distinctive item of dress is an American-style steel helmet, the old bush hat, with its very high crown, appearing to have been phased out. Combat dress is uncamouflaged (except for certain styles of jungle warfare). Officers' mess-dress follows the British pattern and exists in both winter and summer styles.

Distinctions

Each unit or corps within the New Zealand army wears a distinctive cap badge, with matching collar devices and, in working-dress especially, some form of cloth or metal shoulder-title.

CURRENT DEVELOPMENTS

Because of its relatively small size and apparent isolation within the south Pacific, it would be tempting to dismiss the New Zealand army as an insignificant force. This would be something of a mistake. Successive New Zealand governments have formulated their defence policies well, realising the limitations of their country in both geographical and manpower terms, and have organised the armed forces accordingly. As a result, although the army, particularly in its Regular elements, is small, it is well-trained, widely experienced and capable of fairly rapid mobilisation in the event of emergency; characteristics shown on a number of occasions since 1945. Taking the priorities of New Zealand defence policy to be collective security in south-east Asia and the Pacific, the defence of the home islands and the protection of air and sea communications, those portions allotted to the army seem to be carried out well. When it is added that the same army contributes willingly to the United Nations and to the development of friendly countries in its area, it may be appreciated that it is a force of which New Zealand may be justly proud.

JOHN PIMLOTT

NICARAGUA

HISTORY AND INTRODUCTION

Nicaragua is, together with Paraguay, the last remaining stronghold of the Latin American *caudillo* tradition, the wholly personal rule of a strong military leader who controls the national army as a private fief. Indeed, it considerably surpasses most previous examples of the type, for the Somoza family is a veritable dynasty of *caudillos* that has now ruled Nicaragua for more than 40 years, during which time the National Guard has always been under the command of a family member.

The apparently eternal rule of the Somoza family is a relic of the United States policy of intervention in the Caribbean area in the early decades of this century, which pursued the disastrously misguided policy of creating efficient, well-armed, non-political constabulary forces (National Guards) to end the endemic political turmoil which beset various countries of the area. In all five countries where the policy was applied, the result was to create armed forces far more capable than before of maintaining semi-permanent control over their country's government — an ability they all proceeded to exploit — but only in Nicaragua is the son of the original National Guard commander still in charge today.

It is hardly surprising that Nicaragua should be the country where the creation of a United States-trained National Guard has had the longest-lasting effect, and it could be argued that the present form of military rule at least represents a marked improvement on what had gone before. For Nicaragua for practical purposes had no professional, national army in its first hundred years of independence, and suffered to an extraordinary degree (even by Central American standards) from innumerable civil wars waged by the private armies of the main political factions.

It would be tedious and pointless to catalogue these upheavals, but the main outlines were simple. Nicaragua, like most of Central America, was in Spanish colonial times a country in which a large, illiterate, utterly impoverished mestizo population (now 69%) was dominated by an educated white minority of Spanish descent (now 19%), and in which all economic and political power was monopolised by a handful of extremely rich land-owning families. These families were divided into factions labelled 'liberal' and 'conservative' (more for convenience than because of any ideological distinctions), whose violent competition for power formed the substance of politics after independence from Spain in 1821.

In Nicaragua, however, these factions had a distinct territorial base in what were then the two main cities — the liberals in Leon, the conservatives in Granada — and warfare between them was chronic even before the Central American Republic collapsed and Nicaragua became fully independent in 1838. Both factions were inclined to summon military aid from abroad, which explains why Nicaragua was particularly prone to invasion. In 1845, for example, the conservatives sought aid from the armies of El Salvador and Honduras to topple a liberal government, and the invaders obligingly sacked the city of Leon. In the 1850s, the liberals invited in an army of adventurers commanded by the North American insurrectionist William Walker, who proceeded to have himself elected President before being ejected by the combined forces of the other central American States.

There were intervals of relative peace when one or other party established a lasting stranglehold on power — the conservatives in the 1870s and 1880s, the liberals under José Santos Zelaya in 1893–1909 — but there was never anything created that would fit the description of a national army; rather one party's militia was expanded and dignified with that title, while the other went underground. The armies were totally unprofessional, commanded by white officers prominent in the political factions and with the ranks filled by illiterate Indians pressed into service without distinction of age, fitness, or sometimes even of sex. Recruiting methods are summed up in a letter written by a young officer in the interior to his superior: 'Dear Colonel, I am sending you herewith forty volunteers who will fight for the cause so dear to us . . . It will greatly help me, by the way, to secure others if you will make sure to return the ropes.'

Matters might have continued thus indefinitely, but the building of the Panama Canal and the growth of American investments in central American agriculture in the early years of this century created a new United States concern to end the turbulence in Nicaragua. In 1909 the USA precipitated the downfall of President Zelaya (who had been intriguing in the liberal tradition to bring about Central American union), and in 1912 it sent in the Marines to suppress a revolt against his conservative successor. Some of the Marines remained under the guise of a 'Legation Guard' until 1925, and as the most efficient armed force in the country they effectively assured the USA the right to choose Nicaragua's presidents, supervise the elections and secure its growing financial, military and governmental interests in Nicaragua.

In 1925 the Marines were withdrawn, leaving behind a training mission that was to create a new, impartial National Guard that would supplant the traditional army and ensure democratic rule. Within months the government were overthrown by a coup, and the country reverted to all-out civil war, with the tiny new National Guard supporting one side and substantial Mexican aid being sent to the other. United States Marines were landed again in force in 1927, with the task of stopping the fighting and training a really powerful National Guard that would be led in its formative stages by Marine officers and NCOs.

This they duly did before they were withdrawn in 1933, and the Guard was indeed impartial (in the old sense, at least).

World Armies

The man selected as commander was Anastasio Somoza García, the American-educated son of a prosperous land-owning family; due to the relatively high wages offered and the difficulties of rapid expansion, numbers of criminals were among those enrolled in the ranks. All Nicaraguan political factions were disarmed, and the National Guard was soon committed to action alongside the Marines against the rebel general César Augusto Sandino, who had taken to guerrilla warfare in the north-western mountains against the American occupation. About 50 Marines and 50 Guardsmen were killed in combat against the guerrillas, but they were unable to eradicate them.

An officer training school was opened in 1930, and by dint of accelerated training programmes there were just enough Nicaraguan officers to command the Guard when the USA withdrew in 1933. This left the 2500-strong Guard as the main armed force in the country, and it was already totally loyal to its politically astute commander, Anastasio Somoza. The only possible rival was Sandino's 1000-odd guerrillas, who had had considerable success in their fighting against the Americans and had made their peace with the government as soon as the Americans were gone.

Sandino was removed first, by assassination in 1934; then the President himself (one of Somoza's uncles, by chance) was besieged in his palace in 1936 by the Guard and forced into exile. In December, 1936 Somoza was 'elected' President of the Republic (while remaining head of the National Guard, of course), and both offices have stayed in the family ever since. The old parties have been virtually extinguished (though Somoza's own following calls itself the Liberal Party), and the National Guard is the only source of political power in Nicaragua.

The elder Somoza ruled unchallenged for 20 years, successfully riding out the Depression, World War II and border troubles with both Costa Rica and Honduras (*see* Role, Commitment, Deployment and Recent Operations) thanks to his total control of the National Guard. He was assassinated in 1956, but the Presidency passed smoothly to his elder son Luís while the younger, Anastasio Jr, succeeded to the command of the National Guard.

There was a brief interregnum following Luís Somoza's death due to a heart attack in 1963, during which the Presidency was filled by René Schick Gutiérrez, a close ally of the family. Following his death in 1966 and a violent election campaign, the younger son, Major-General Anastasio Somoza Debayle, succeeded to the Presidency in 1967, and has occupied it ever since (except for an interval in 1972-4 while a triumvirate was installed to alter the constitution to permit his re-election). His present term expires in 1981.

The Somoza dynasty has accomplished a certain amount in developing Nicaragua economically, but its main achievement has been to make the family stupefyingly rich. It is estimated to be worth up to \$300,000,000, owning between 500,000 and 1,000,000 acres of land and controlling 44 of the country's most important companies. A considerable amount of this wealth, as well as much public money, has been employed in lavishing favours on the National Guard, which has gradually grown to its present size of 7100 men.

The system worked to ensure the loyalty of Guard officers to the regime, and of the men to their officers, apparently with complete success. Besides monetary rewards and social prestige, Guard officers often secured important government posts after leaving the service. There had never been any indication of anti-regime opinion or serious factional division within the Guard, and it always showed itself ready and able to carry out whatever tasks of suppression of internal dissent it was required to perform. Lately, however, a growth in guerrilla activity and a significant cooling in the traditionally warm United States support for the Somoza regime have created a new instability in the Nicaraguan internal situation.

The deterioration may have begun as long ago as December, 1972 when a disastrous earthquake destroyed the centre of Managua, killing 10,000 and rendering up to a quarter of a million people homeless. This emergency elicited large sums in international aid — at least \$30,000,000 in the first 4 months — but reconstruction proved very slow. More than a year later the central area of Managua was still a virtual wasteland, and rumours were circulating that a very substantial proportion of the relief money had ended up in the pockets of the National Guard. The resurgence of guerrilla activity in 1974-6 contributed further to the unpopularity of the regime and the Guard, for it was met by martial law, strict censorship and widespread repressive measures that were not always aimed at the right targets.

The real crisis, however, began with General Somoza's heart attack in July, 1977 which removed him from circulation for several months. In October the FSLN guerrillas opened a new and much more serious offensive, concentrating on bold armed attacks on Guard forces in Managua and the large provincial towns, which sometimes caused dozens of casualties. At the same time the guerrilla organisation broadened its programme from a narrow Marxist base to a 'national front' appeal, declaring itself 'pluri-classist' and 'pluri-ideological', and changed its strategy from a protracted guerrilla campaign to the goal of immediate 'popular insurrection'. It claimed (accurately) to have practising Catholics in its ranks, as well as members of the traditional Liberal and Conservative Parties. A group of prominent non-Marxist Nicaraguans from the business and professional community fled into exile in Costa Rica and issued a call for a new popular-front government which would include the FSLN.

Somoza's announcement in January, 1978 that he would not step down before his term expires in 1981 failed to quell the growing sense that his regime was tottering, and the murder of a prominent newspaper editor and opposition leader by pro-Somoza forces only intensified the wave of protests. Rioting in the main provincial towns by impoverished Indians, who appear to have been mobilised by the FSLN, was met by the National Guard with counter-violence that killed dozens of the rioters, and in February there was a 2 week national strike against the government in which employers and workers co-operated openly. In March Somoza's senior military aide, General Reynaldo Pérez Vega, was kidnapped and killed.

During the first seven months of 1978 over 300 persons were killed in the continual protests in the cities, and on August 11th Somoza attempted a reconciliation with moderate opposition opinion by relieving 30 of the 35 senior Guard officers of

their duties on the grounds that they had used excessive force. Less than 2 weeks later on August 22nd, however, 25 guerrillas under the command of the FSLN's senior field commander Eden Pastora ('Commander Zero') seized the National Palace in central Managua, killing eight National Guardsmen and taking almost 1000 hostages including Congressmen and close relatives of the President. They succeeded in bartering their hostages for \$500,000, the release of 59 jailed guerrillas, and a flight to Panama.

The impression of weakness this created had two immediate effects. One was on the National Guard, where a number of senior officers were furious that Somoza had yielded to the guerrillas' demands and, fearful that Somoza might be planning to resign, immediately set about organising a coup to ensure that it should be they who replaced him. This plot was instantly discovered and crushed by Somoza, with the arrest on August 28th of 85 members of the Guard including 12 senior officers. The loyalty of the rest of the Guard remained unshaken.

The other effect of the guerrilla success at the National Palace, however, was to embolden civilian opponents of the regime. With only the loosest of co-ordination with the FSLN, if any, the Broad Opposition Front (*Frente Amplio de Oposición* — FAO), an alliance of middle-class and professional opponents of the regime, embarked on another nation-wide general strike, and citizens of the inland town of Matagalpa rose in open revolt. Both the strike and the revolts spread rapidly, and by the beginning of September, 1978 the nation was plunged into civil war. (For further details, see Role, Commitment, Deployment and Recent Operations.)

STRENGTH AND BUDGET

The National Guard numbers 7100 officers and men, including 1500 in the air force and 200 in the coast guard (which are organisationally part of the same single service). This amounts to about 0.3% of the Nicaraguan population of 2,300,000.

The National Guard also incorporates 3000–4000 civilian members who carry out its many non-military functions, including the control of the national radio, postal service, telephones and telegraphs, ports and airports, plus various civic action programmes such as the support of road construction and education and the provision of medical services in outlying areas. There is a trained reserve of about 4000, and there are also paramilitary gendarmerie forces numbering approximately 4000.

The 1976 defence budget was \$30,900,000, slightly over one-tenth of government expenditure and 1.7% of the GNP of \$1,800,000,000. These proportions have remained fairly stable for a number of years.

COMMAND AND CONSTITUTIONAL STATUS

The President of the Republic is the Supreme Commander of the Armed Forces; in his absence abroad, the Minister of the Interior assumes his duties. He exercises his authority through the Ministry of Defence, which controls both the military components of the National Guard and its largely civilian appendages performing various civil functions. The Minister of Defence in 1977 was Colonel Heriberto Sánchez Barquero.

The urban and rural police, the main paramilitary force, fall under the Ministry of the Interior. A smaller paramilitary body, the security guards, is administered by the Ministry of the Treasury. They both count as part of the armed forces, however, and thus are under the authority and control of the National Guard.

The Guard is headed by a Chief Director (General Somoza, who combines this office with that of President). Under him there are Chiefs of Staff, Operations, Finance and Material, a Judge Advocate General and an Adjutant General. The air force, founded in 1938 and semi-independent since 1947, has its own chief, but is not a separate service. There is no navy as such, but the port commanders and some 200 coast-guardsmen belong to the Guard.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The principal role of the National Guard is the defence of the regime, and thus its first priority is internal security. This was mainly a matter of coup prevention and anti-riot measures prior to 1958, but since then there has been a certain amount of rural guerrilla activity. The main revolutionary movement is the Sandinist National Liberation Front (FSLN), named after the nationalist hero who resisted the American occupation in 1927–33, which was founded in 1958 by Carlos Fonseca Amador.

The activities of this Havana-based group grew slowly, but by late 1967 it had created a considerable base for rural guerrilla operations in the mountains and jungles around the north-western city of Matagalpa. Large National Guard forces were committed to combat the guerrillas in 1968, however, and the guerrilla activity had been reduced to a low level again by 1970.

The anxieties raised by this local manifestation of the wave of Castroite rural guerrilla forces that swept Latin America in the 1960s caused Nicaragua to strengthen its military commitments to the outside forces on whom it might need to call for aid. Thus Nicaragua made its territory available to the USA in the early 1960s as a launching base for the Bay of Pigs

World Armies

invasion of Cuba, and a company of the National Guard took part in the peace-keeping force sent to the Dominican Republic by the Organization of American States in 1965. In 1969 General Somoza even offered to send military training units to assist the USA in the Vietnam War. Nicaragua's links with CONDECA (the Central American Defence Council, a subordinate body of the Organization of Central American States) were deliberately strengthened, and a series of joint exercises on land and sea were conducted in co-operation with the right-wing governments of Guatemala and El Salvador, which dominate that organisation.

The deployment of National Guard forces is largely determined by the guerrilla threat. A large proportion are stationed in and around the capital of Managua, which has increasingly become a target for urban guerrilla attacks in the 1970s, and another large force is stationed in the north-western province of Nueva Segovia, the principal centre of rural guerrilla operations. By comparison the border dispute with Costa Rica is a low priority (although Nicaraguan aircraft attacked a Costa Rican river vessel in the disputed area in late 1977, in an apparent attempt to divert domestic attention from the guerrilla crisis). Territorial disputes along Nicaragua's other frontier, with Honduras, led to armed clashes in the 1950s, but this boundary was defined by mutual agreement in 1960.

After some years during which guerrilla activity was at a low ebb, there was a sharp resurgence of FSLN attacks in 1974, most notably a mass kidnapping of United States Embassy guests at a Christmas party, and strict martial law was imposed. During 1975 the guerrillas managed to seize the most important radio station for a brief period and to expand their operations in the northern mountains considerably, but 1976 was a bad year for them, with many leaders being killed including their founder, Fonseca Amador.

At the end of 1976 guerrilla fighting strength was estimated to be only 400 men, and Nicaragua cancelled its request for 3000 troops from Guatemala and El Salvador to take part in joint counter-insurgency operations in the Nueva Segovia department. It was during this period, however, that the splits took place within the guerrilla movement that prepared the way for the national insurrection of 1978.

The initial split began in 1974–5, when some Sandinistas began to cast doubt on the long-haul, basically Maoist strategy of 'accumulation of forces' espoused by the then-dominant *Guerra Popular Prolongada* faction — that is, of slowly building up guerrilla *focos* in the rural areas supported by propaganda operations, extortion of funds and a certain amount of terrorism in the cities. These critics, who became known as the *Terceristas*, believed that in the years after the earthquake the great expansion of Somoza interests into the new fields of construction and banking and the adoption of economic policies which unfairly favoured other Somoza concerns were beginning to cause serious conflict between the regime and those Nicaraguan businessmen who were not members of the Somoza clan. Therefore, they argued, it was now possible to proceed directly to a broad front organisation and a national insurrection, thereby greatly shortening the revolutionary process. A third, smaller, group, the *Tendencia Proletaria* (Proletarian Tendency), the most orthodox in Marxist–Leninist terms, while criticising the GPP for its practical failures, refused to accept the broad-front strategy of the *Terceristas* either.

The very successes of the National Guard in combating the rural insurgency in 1974–7 guaranteed that the *Terceristas* should emerge as the dominant group, and when they and the GPP were effectively reunited in early 1978 it was the insurrectionist, broad-front strategy which was adopted. Thus the FSLN established a *de facto* alliance with *Los Doce*, the group of twelve prominent 'capitalist' Nicaraguans who fled into exile in Costa Rica, denouncing the Somoza regime, in October, 1977 (see History and Introduction), and accepted non-Marxists into its ranks. It also accepted that the revolution, if successful, would lead only to the formation of a provisional government which 'would grant democratic guarantees and would be forced to make concessions to the workers and peasants, which would enable them to organise and develop another kind of struggle'. When the spectacular raid on the National Palace succeeded in triggering a national strike in late August, 1978 the FSLN not only supported it, but yielded to the temptation to try for a violent overthrow of the regime.

The FSLN has since said that it had little to do with organising the 'spontaneous rebellion' of Nicaraguans in cities throughout the country in September, 1978; if they had planned it, one leader explained, 'the people would have been better armed and prepared'. It is understandable that the FSLN did disclaim responsibility, as the risings failed with terrible losses, principally because the rebels were so poorly armed — they were mainly young people aged between twelve and twenty armed with pistols, shotguns and home-made explosives, plus some captured Guard weapons — but it is a fact that the FSLN has had great difficulty with weapons supply anyway. (With no regular external source of supply, it has to buy its weapons out of limited funds in the international black market). There can be little doubt that local FSLN cadres did much to stimulate the revolt, however, as four of the five main cities involved — Matagalpa, Chinandega, Estelí, Leon and Masaya — lie in the north-west region where the guerrillas were strongest in the rural areas. There was, significantly, no outbreak in the capital, where the guerrillas are very weak.

Despite these weaknesses the revolt came very near to success. All five cities fell almost entirely into rebel hands, and certainly after the first few hours the FSLN was visibly present helping to organise the resistance. Most of the National Guard's troops had little real combat training, and were in any case required to stay in the capital to defend the President, who conducted the campaign from his fortified 'bunker' by the main infantry training camp. Some 700 troops newly graduated from the Training School and operating under the personal command of the President's son, Major Anastasio Somoza Portocarrerra, had to do most of the actual assault work, and so the rebel cities had to be reduced one at a time. Particularly in view of the shortage of manpower, the Guard relied heavily on the indiscriminate use of firepower to reconquer the rebel cities: as the column commanded by Major Somoza arrived outside of each in turn during the first 3 weeks of September, the rebel-held areas, invariably including the centre, were subjected to several days of bombardment

by artillery, bombers and rocket-firing helicopters. Only then would the troops move in, allowing time for many of the hard core of guerrillas plus numbers of new recruits to slip away into the mountains or across the borders into Honduras and Costa Rica (there are now estimated to be 6000 refugees in Honduras and 7000 in Costa Rica). Those who remained to offer resistance were massacred, together with large numbers of others suspected of collaborating with the rebels. The Inter-American Commission on Human Rights, reporting in November, 1978 in its investigations in Nicaragua after the war, reported that 'the National Guard bombing of the population was done indiscriminately and without prior evacuation of civilians . . . resulting in innumerable deaths of people uninvolved in the conflict'. In the subsequent mopping-up operations, according to the Commission, the National Guard performed 'summary and mass executions' of people guilty only of being in neighbourhoods which the guerrillas had briefly controlled. By the end of September, when all urban resistance had been crushed, the central areas of all five major rebel cities plus several smaller ones were in ruins, and the death toll, overwhelmingly civilian, was estimated at between 3000 and 8000.

Since September, 1977 there have been no further revolts on a similar scale, although the guerrilla war in the rural areas continues at a higher level of intensity than before. (For further comments, see Current Development.)

ORGANISATION

The army element of the National Guard consists of the Presidential Guard, one infantry battalion and 16 independent infantry companies (including a motorised detachment), one motorised engineer battalion, one artillery battery and one anti-aircraft artillery battery. Headquarters are in Managua.

The air force has two squadrons. The principal air bases are at Managua and Puerto Cabeza, with airstrips throughout the country. The coastguard has eight patrol craft divided between the Atlantic and Pacific coasts.

RECRUITMENT, TRAINING AND RESERVES

The Nicaraguan constitution permits military service to be made obligatory for males at any time, but in practice the National Guard has always been able to fill its ranks by voluntary recruitment. Enlisted men usually volunteer for 3 year terms, and are drawn almost entirely from the lower classes, for whom the pay and living conditions are very attractive. They are paid wages well above those for jobs requiring comparable skills in the civilian economy, and receive free or subsidised housing and food, clothing, medical care and retirement benefits. They are trained at the National Guard Training School in Managua, which is commanded by President Somoza's son, Major Anastasio Somoza Portocarrera. Since the war in September, 1978 the Guard has also been recruiting numbers of American mercenaries.

The material benefits and prestige of an officer's career provides an ample supply of cadets for the national military academy. Numbers of officers attend the Chilean Military School, thus renewing a training relationship between the Nicaraguan and Chilean armies that commenced in the days before the United States military intervention and the creation of the National Guard. United States army and air force missions in Nicaragua provide further training, and many Nicaraguan officers attend the United States army courses in the Canal Zone and in the USA.

Serving members of the National Guard may not vote or hold any political office. There is a trained reserve of some 4000 men.

EQUIPMENT AND ARMS INDUSTRY

The army component of the National Guard is equipped with standard United States infantry weapons. It also possesses 10M-4 medium tanks, 40 armoured cars, 10 APCs, four 105 mm howitzers, and 12 20 mm and eight 40 mm anti-aircraft guns.

The air force has 12 combat aircraft, consisting of four T-33A and four T-28D counter-insurgency aircraft and four B-26K light bombers. Transport aircraft include three C-47s, four C-45s, four DHC-3s, one HS-125, five CASA-212, two IAI Arava and 10 Cessna 180s. There are three CH-34, one Hughes 269 and four OH-6A helicopters, and about 20 training aircraft.

The coastguard element has eight patrol craft.

Most Nicaraguan arms have been acquired through United States military assistance programmes. United States military aid in the years 1950-70 amounted to \$12,000,000 plus \$300,000 in excess stocks, considerably larger sums than were made available to most other Central American countries. United States arms sales and military aid were ended in 1976, but Israel quickly filled the gap, providing a variety of small arms and some aircraft and naval patrol craft. In the aftermath of the civil war, however, Israel announced in December, 1978 that it too was ending arms sales to Nicaragua.

There is no arms industry in Nicaragua.

World Armies

RANK, DRESS AND DISTINCTIONS

The Nicaraguan rank structure is similar to that of the USA; the highest rank in the National Guard is that of General de División, which corresponds to lieutenant-general. In normal times Congress must appoint all officers of brigadier-general grade and above, but in wartime the President has the right to appoint officers in all ranks. Enlisted men's insignia and officers' rank insignia for company-grade officers are similar to those in the United States army. Officers from the rank of major up to full general (i.e. lieutenant-general) wear one to five silver stars, with the exception that lieutenant-colonels are distinguished from full colonels by two gold stars.

The standard field uniform is cotton olive-green fatigues; the basic uniform for normal garrison duty is khaki shirt and trousers, with tan tie for enlisted men, black tie for ground officers and blue tie for air force officers. Officers wear a standard military single-breasted coat on ceremonial occasions, and possess white uniforms for formal wear.

Guard personnel receive coloured enamel medals upon graduation from the Military Academy and for each 5 year increment of service.

CURRENT DEVELOPMENTS

The National Guard is a well-trained and disciplined force which has now had more than 10 years of experience in counter-insurgency operations, and it has direct control over almost all national communications and telecommunications facilities. Both its privileged status and its apprehensions about what might befall it under a civilian successor regime seem to guarantee its loyalty to the Somoza family and the Liberal Party establishment. In a crisis Nicaragua might well be able to summon military aid from the sympathetic regimes in Guatemala and El Salvador. Nevertheless, there has been a marked deterioration in the stability of the existing political system in Nicaragua since mid-1977, and the regime now faces an extremely serious challenge.

Since the violent repression of what amounted to a national uprising against the Somoza regime in September, 1978 the guerrilla war has continued in the countryside, especially in the El Tular mountains along the Honduran border, killing at least 200 people by the end of 1978. The guerrillas have approximately tripled their combatant strength to almost 1000 due to the flood of young recruits they received from the blitzed cities, and the refugees in Honduras and Costa Rica constitute a further large reservoir of potential recruits. While the Opposition Front (FAO) has lost some of its cohesion, the Group of Twelve business, professional and church people in exile in Costa Rica is making progress in seeking to unite the Sandinistas with all parts of the spectrum of civilian opinion — conservative, christian democrat and liberal — in an anti-Somoza Patriotic Front. Somoza enjoys almost no visible support beyond his own extensive clan, their limited number of business allies, and his private army (the National Guard), which is playing the role of a virtual army of occupation in its own country.

The regime's position is as grave on the international front. The Costa Rican border was closed in November, 1978 after Nicaraguan National Guard units invaded Costa Rican territory in pursuit of Sandinista guerrillas, and the other border with Honduras has also been closed. Nicaragua's last foreign source of arms, Israel, has announced that it will sell Managua no further weapons, while it has been reported that several Latin American States, notably Venezuela and Panama, were providing the Sandinistas with arms and training facilities.

An attempt to achieve some kind of national reconciliation in Nicaragua under the auspices of a three-nation mediation team (the USA, Guatemala and the Dominican Republic), after obtaining an amnesty for some 60 political prisoners and arranging talks between the regime and the Opposition Front in December, 1978, finally collapsed on President Somoza's refusal to absent himself from the country while a plebiscite on his continued rule was held under international supervision. Thereupon the USA ended all economic aid to Nicaragua in February, 1979 and halved the number of its embassy personnel. It was also instrumental in causing the World Bank and the International Monetary Fund to refuse to consider requests from General Somoza for loans of about \$56,000,000. The country is virtually bankrupt, business is at a standstill, and there has been almost no reconstruction in the war-shattered cities.

Despite all this, the regime has shown astonishing ability to survive. So long as the pampered National Guard remains loyal, it will be very difficult for even the most powerful coalition of other domestic forces to remove General Somoza from power. It cannot be ruled out, however, that at some point the Guard may decide to remove Somoza and compromise with the opposition forces in the interest of its own corporate survival, for fear that it might otherwise face the fate of total disbandment that befell the Costa Rican army in 1948 in the event of an opposition victory.

GWYNNE DYER

NIGER*

History and Introduction

Niger, a former French colony, attained independence in 1960. At the time its government was headed by Hamani Diori, who, as President of the Republic, remained in power until 1974 when he was overthrown by a military coup. The main reasons for this were stresses created by the Sahel drought and dissatisfaction with the slow rate of national development, occasioned, according to some arguments, by excessive French profits from Niger's one economic asset, uranium, together with the general French dominance of the administration and the economy. Ethnic factors (the exclusion of Hausa-Fulani, Tuareg and Kanuri from effective power in the ruling party, largely Jerma and Sanghai dominated) may also have played a part. Further factors were corruption in the suite of the President, a project of Diori's to use the army for agricultural work and create a 'party militia' to reinforce his own position, and an unpopular defence pact with Libya. The death of President Pompidou in France gave the military conspirators a belief that France would not oppose the coup. Diori's long rule had earlier seen a military mutiny and insurrection in 1963 and an assassination attempt in 1965. The new government took the form of an eleven-member Supreme Military Council, presided over by Lieutenant-Colonel S. Kountche.

An attempt by the Vice-President of the Council, Major Sani, to replace Kountche by himself in July, 1975 was foiled, and Sani was imprisoned. A further attempt to overthrow Kountche, headed by a Hausa army major and alleging Jerma domination of the army and government, took place early in 1976 and was equally unsuccessful. Libyan support for this attempted coup appears almost certain.

Strength and Budget

Population: 5,000,000 (approximately)

Armed forces: army 2000; air force 100 plus a gendarmerie of about 500, a ceremonial Republican Guard of 1100 and a Presidential Guard of 160

GNP (1974 estimate): \$489,000,000

Command and Constitutional Status

The Supreme Military Council headed by Colonel Kountche, as Head of State, is the supreme authority. Colonel Kountche is also Minister of Defence. The Chief of the Armed Forces is Major Ali Seibon.

Role, Commitment, Deployment and Recent Operations

Internal security and defence against any external threat are the army's two roles; internal security has had implications affecting the army itself, as already noted. Niger had no border problems with its seven neighbours and the army has not been deployed to meet any perceived threat since independence.

In 1974 army units distributed food and transported people from areas of extreme drought with noteworthy efficiency.

Organisation

The country is divided into three military districts, West (Niamey), North (Agadès) and East (Zinder).

The army is deployed into five company sized infantry detachments (at Niamey, Agadès, Zinder, N'Guigmi and Tahoua) and an armoured squadron, a parachute company and an engineer company (all at Niamey). A sixth company is to be raised for Dirbon.

The gendarmerie's headquarters is at Niamey with four regional groups for Niamey, Maradi, Zinder and Agadès. Further regional groups for Tahoua, Diffa and Dosso are proposed.

The Republican Guard operates 'pelotons nomades' based on Agadès, Tasker, Tchin-Tabaraden and Bilma.

Recruitment, Training and Reserves

Men are liable for call-up for 2 years; the system appears to be somewhat random.

French training assistance has been provided since 1960; in 1974 the French training personnel numbered 12 officers and

* For general notes on African armies, see Appendix 1.

World Armies

60 NCOs. These were all ordered out by the new military government but this demand may well have been only a gesture. West German assistance was provided for the engineer unit.

Equipment and Arms Industry

Niger's equipment is mainly French, and the infantry weaponry, including 81 mm mortars, is entirely so. Some of the armoured cars of the reconnaissance squadron are American M-8 vehicles, others are Panhard. Their state of serviceability is very doubtful. Transport is British, German and French. The air force includes a few medium transports and smaller personnel and liaison machines.

Rank, Dress and Distinctions

These follow the French pattern, except that the *képi* is not worn.

Current Impressions

A very small military force, which is unlikely to be committed to anything more than internal security.

L.L. MATHEWS

NIGERIA*

HISTORY AND INTRODUCTION

Nigeria's vast size and population give it an especial political and military significance in Africa; the size and population, however, represent aggregations of ethnic groups of sharply divided cultures and traditions. The preservation of unity will remain Nigeria's major problem for the foreseeable future, affecting every aspect of national life.

Britain's creation, the Federation of Nigeria, attained independence in 1960; the constitution of the Federation favoured the Muslim Northern Region. This northern domination, after a series of dramatic political events, came to an end with the first military coup of January, 1966. In this coup, young army officers (mostly Ibo from the Eastern Region) murdered the northern political leaders, one of whom had an especial religious significance in addition. Before long the peoples of the big northern cities started wreaking vengeance on their resident Ibo communities. The slaughter of the Ibos strengthened the already existing secession movement in the east, a movement based on resentment against the former northern political control, on the enterprise and energy of the Ibo people, on school leavers for whom no work could be found, and on a new economic self-confidence based on the oil industry. The result, in 1967, was the attempt by the Eastern Region to secede as Biafra, and the consequent civil war which lasted until 1970, from which the Federal government emerged as victorious. Nigerian unity was both preserved and strengthened by the generous conciliation and reconstruction programme of the Gowon government towards the Ibo, a programme for which oil profits could, fortunately, pay.

At the first military coup in January, 1966 the Army Commander of the time, Major-General J. Aguiyi-Ironsi, an Ibo, assumed power. He was, however, murdered by northern officers in July, 1966 principally for failing to discipline the young majors of January. The events of this month remain confused, but two disintegrative processes can be seen: pure ethnic hatred at the senior-officer and ordinary-soldier levels, and an anti-senior-officer radicalism at junior-commander levels. In the power vacuum, Colonel (later Major-General) Y. Gowon proclaimed himself Head of a Supreme Military Council. This Council ruled Nigeria until July, 1975 when Gowon, whose amiable but indecisive personality made him an ineffective political leader — and one perceived by many as too pro-Western — was removed from office. A reformed Supreme Military Council headed by Brigadier (later Major-General) Murtala Muhammad (a Kano Hausa) assumed responsibility for the country. In an abortive coup in February, 1976 Murtala Muhammad was killed and his place as Head of Government and President of the Supreme Military Council was taken by Lieutenant-General O. Obasanjo. Among those alleged to have been involved in the abortive coup was the Commissioner for Defence, Major-General Bissalla; he and a number of other, mostly Middle Belt, officers of all levels were executed publicly, the shooting being prolonged. The strains (ethnic, political and ideological) and the personal relationships created by these events are testing both nationally and in the army; periodic reports of unrest or conspiracies in certain units persist. The new constitutional arrangements envisaged for the 1979 return to civilian rule will (provided they are approved by the Constituent Assembly) ensure that the armed forces 'reflect the federal character of Nigeria' (i.e. are recruited proportionately), and will also provide for a National Defence Council to be composed of the nation's President and Vice-President, the Minister of Defence and the Chiefs of Staff. It is also intended that national service in some form (to include a military option) will be obligatory.

The army and its own internal unity is of crucial significance: it is difficult to see in the present condition of Nigeria the unity of the country surviving without its iron framework. It seems to have been an acceptance of this reality that led Gowon to renege on his previous undertaking to return to civilian rule in 1976, and to the decision of the July, 1975 coup planners to remove Gowon since the military government headed by him was not solving the nation's problems and if the unity of the nation was to survive, a military reshuffle was imperative. The Murtala Muhammad government promised a return to civilian rule in 1979, a promise reiterated by Obasanjo in an expressed belief that by that time conditions would have improved to permit it. There are signs of such an improvement; some evidence suggests that the civil war, like that of the USA, may have had an affect more unifying than divisive. But military unity and discipline will be essential, as will some curbs on bribery and corruption which are only slightly less prevalent in the army than elsewhere in Nigerian life. Indeed, at the time of writing, one of the most disturbing features of the Nigerian scene is the repeated evidence of a new public disrespect, even contempt, for the army, expressed in anti-military riots.

The Nigerian army has its origin in the Nigeria Regiment, later The Queen's Own Nigeria Regiment, of the colonial Royal West Africa Frontier Force. Nigerian units participated with distinction in the Cameroun and German East Africa campaigns of World War I, in the Italian East Africa and Burma campaigns of World War II and also in the United Nations Congo Expeditionary Force. A battalion served briefly in Tanzania after the 1964 army mutiny there. For the bulk of the colonial period there were only two, sometimes three, battalions; in the 1950s expansion to a two-brigade army began but was not complete at independence, or even by 1966. The civil war saw a prodigious expansion of the army to three

* For a general note on African armies, see Appendix 1.

World Armies

divisions of some 200,000 men, at a time when many of the army's most professional officers had been killed off. The size of the army remains one of the nation's major problems — the demobilisation of a force often poorly trained and poorly officered daunted the Gowon government; its successors planned a phased reduction to 100,000 men, but very little has been achieved. The latest plan provides for a more cautious reduction to some 160,000, but even this may prove too difficult and reduction left to wastage by age — with the consequence of a not-so-young army.

STRENGTH AND BUDGET

Population: 68,000,000–73,000,000 (approximately; the 1973 census produced a provisional total of over 79,000,000, but this is almost certainly an exaggeration)
Army: 210,000 plus a navy of 3500 and an air force of 6000
GNP (1977 estimate): \$30,000,000,000
Defence expenditure (1977–8): \$2,670,000,000

COMMAND AND CONSTITUTIONAL STATUS

After the overthrow of Major-General Y. Gowon's government in July, 1975 the Supreme Military Council, which decides policy, was reconstituted to include Murtala Muhammad as President, Head of State and Commander-in-Chief of all armed forces; it also includes the Chiefs of Staff of the Army, Navy and Air Force, the Chief of Staff Supreme Headquarters, the Commanders of the four divisions and the Lagos garrison, and 12 other officers. Below this supreme authority a Federal Executive Council was appointed; this 25 member body executes policy. Among its members was a Commissioner for Defence; this was General Bissalla, whose execution has already been noted.

These arrangements have been altered little since the events of February, 1976. Lieutenant-General O. Obasanjo, until February Chief of Staff Supreme Headquarters, became President of the 31 strong Supreme Military Council, Head of State and Commander-in-Chief. He is a Yoruba from the West Region. The Chief of Staff of the Army, General T. Danjuma, is from the Middle Belt. The new Chief of Staff at Headquarters is Brigadier Shehu Yar'Adua from Sokoto in the North Region; he is a very powerful figure indeed with strong following both among Muslim personnel and those of radical views.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

This reference book is no place for a history of the Nigerian Civil War. A few notes on the Federal army's performance do, however, seem relevant to any reader attempting an evaluation of the army.

The organisation of the Federal army in the civil war was a bizarre mixture of professional skill and chaos. It could hardly have been otherwise in view of the lack of trained officers and NCOs, the raw-recruit soldiers, the terrain and the climate. The Federal GHQ, rarely in touch with events on the ground, moved at a very leisurely pace. The three divisional commanders were almost autonomous warlords, maintaining rival staffs at ports to commandeer newly arrived equipment, and even maintaining rival purchasing missions abroad. Each division commandeered recruits, stores, etc. as it pleased. The bills were sent somewhat vaguely to GHQ. The front-line fighting in its casualness and inefficiency was equally strange to Western military minds — little or no fighting at night, no street fighting and few hand-to-hand encounters; military vehicles were embellished with fetishes of bones and feathers as well as camouflage nets. Attacks were preceded by a bombardment — almost a code-signal for the defenders to withdraw, which they usually did, to appear elsewhere later. The attack would be launched and a victory proclaimed. The hurriedly recruited poorly trained soldiers wasted prodigious quantities of ammunition. The Saracen and Ferret armoured cars spent more time in workshops than in action; the Federal's successes were gained by their small arms and mortars, and to some extent the artillery. While excesses and atrocities undoubtedly occurred, particularly in the heat of battle, it is however more accurate to say they were exceptional; there was certainly no genocidal policy and little of the mindless murdering that occurred in the Congo in 1960 and 1961. The Federal army on the march was described as 'the best defoliation agent ever known', its columns were often supported by women camp-followers of the traditional type. Beer fuelled the soldiers; marijuana was also used. Towns occupied were instantly looted. Officers and NCOs were corrupt, selling stores and loot, and on occasions drawing the pay of soldiers killed in action. The air force aircraft frequently lost their way. But despite the creaking and confusion, the Federal military system did work; there was an overall strategy, divisional commanders conformed to it for most of the time, discipline of a sort was generally maintained, soldiers were usually supplied with food and ammunition, signal communication systems worked more often than not, engineers constructed roads and bridges, and infantry brigade and battalion officers often injected some tactical originality, for example feint attacks and ambushes into their moves.

The Nigerian army's present role appears to be the maintenance of unity, and internal law and order. An interest is maintained in the affairs of neighbouring States (particularly those in which are resident members of ethnic groups also

resident in Nigeria), but no serious frontier threats of any type exist or are perceived. Irritation with the Cameroun Republic occurs from time to time, the border-guard firing occurring in two recent incidents, but this does not seem to have resulted in any military deployment. The Nigerian government does, however, watch Equatorial Guinea, and is under some internal Ibo pressure to occupy the island of Macías Nguema (formerly Fernando Po) where a large Nigerian labour force (mainly Ibo) has been very poorly treated. Units may also be sent to Angola and possibly also to Moçambique, according to recent statements by Nigerian leaders.

ORGANISATION

The Nigerian army is organised into four divisions. The divisional HQs are reported to be at Kaduna (1st Division), Ibadan (2nd Division), Jos (3rd Division) and Lagos (4th Division). Brigade HQs are to be found in other large towns, for example the 1st Infantry Brigade at Minna, the 3rd Brigade at Kano, the 13th Brigade at Calabar and the 23rd Armoured Brigade at Bauchi. A reorganisation of the brigade and divisional structure was completed recently.

There are four reconnaissance regiments, four artillery regiments and four engineer battalions. The infantry division headquarters are believed to be at Jos, Lagos, Ibadan and Kaduna. Brigade arrangements are being reorganised parallel with the army reductions.

The division of the army into arms of service closely follows the British pattern: the arms are infantry, artillery, reconnaissance, engineers, signals, electrical and mechanical engineers, supply and transport, pay and ordnance. A chaplain's department exists of military priests, ministers and imams, and there is also an Army Medical Corps.

The Corps of Infantry includes a Guards Brigade, but no battalions are linked to any particular town or region.

The air force is being organised into six groups and two supporting administrative units.

RECRUITMENT, TRAINING AND RESERVES

Recruitment (except in the period of the civil war) has hitherto been voluntary in Nigeria, indeed in the colonial period so popular in certain regions was military service that 'dash' (a bribe) would often be paid to ensure acceptance. The colonial-period pattern of the infantry and other teeth-arm units' soldiers being preponderantly Tiv, Idoma and other Middle Belt peoples with other significant contributions from the Kanuri and Hausa, continues; however a very high percentage of Yoruba in the engineers and other logistics units has recently been noted. Under the draft constitution for civilian rule (to be introduced in 1979) a compulsory national service with a military option is proposed.

The tumultuous events of the period since 1960 have left the Nigerian army with formidable problems. Until the late 1950s, merit was seen as the main criterion for a commission: the Northern Region objected to this and in 1961 a proportional system favouring the north was introduced. But this meant that by 1966 many of the middle-rank officers were either easterners or other able men from the southern half of the country irritated at the political control of the north — one cause of the dramas of January, 1966.

In purely career-structure terms, promotion was at first fast, due to Africanisation and expansion; for those who survived 1966 the promotion then became even faster. An immobilisme then ensued: the supporters and comrades-in-arms of General Gowon were rewarded but others felt frustrated. The July, 1975 coup removing Gowon also retired 17 colonels, 52 majors and 60 lieutenants.

Distortions caused by events have also affected the NCOs' training; junior- and middle-level NCO's became neglected in the whirl of events and now the best warrant officers and sergeants, trained in the British period, are elderly. Their successors appear poorly trained.

For several years after independence the Nigerian army (and initially also its units) was commanded by a British officer; this system lasted despite the abrogation of the formal defence treaty, as a British general avoided the question of the region or origin of a successor. Cadets were sent to Britain for training both at Sandhurst and Mons O.C.S.; they were also sent to India, Ethiopia, Pakistan, Canada and Australia, while officers were sent to Britain, Canada and Pakistan for staff training. In the civil war the best that could be arranged was emergency courses of 3 to 4 months' duration. This is now the only training of vast numbers of Nigeria's officers: the education qualification was then (and it still remains) West African School Certificate. During and since the civil war use has been made of Soviet facilities, particularly for artillery and transport personnel, and of course, extensively in the air force. However, small numbers of cadets and staff officers are still sent to Britain (and occasionally elsewhere, for example, Ghana) for staff and higher-command training. A Nigerian Staff College recently opened at Jaji, near Kaduna, drawing heavily on the help of British Loan Service Personnel. The first of two 6 month crash courses began in June, 1976 with 40 student officers including two brigadiers, 12 colonels and 26 lieutenant-colonels. A regular 1 year course system was introduced in 1977. A few students from other African armies may be accepted. A Nigerian Defence Academy, also at Kaduna, trains officer cadets on short-service (6 months) and regular (2½ years) courses. A number of Indian army instructors assist in the cadet training. There are several schools of infantry and other separate arms schools. The Nigerian navy owns a 350 ton tank landing craft; occasional small amphibious exercises take place, probably with an eye on the Macías Nguema situation.

World Armies

Readers will now have realised that many political, educational and ethnic factors will combine to determine promotion; it remains but to mention one more (already briefly noted) — corruption. The securing of attractive postings, or even passing promotion examinations, may all be governed by the local 'going-rate' as much as any other factor.

EQUIPMENT AND ARMS INDUSTRY

Nigeria has no arms industry. Until the civil war equipment for the army was purchased exclusively from Britain. With the outbreak of the civil war weapon sales to Nigeria became controversial in Britain, and the Nigerian army began the purchase of artillery pieces (76 mm and 122 field guns) from the USSR to supplement their small numbers of British 25 pounder and 105 mm guns. Britain's overall policy was the preservation of the Federation, seen as a British creation and as an area of the world containing a massive British investment. British policy for weapons sales was the supply of equipment viewed as 'traditional' (i.e. material sold before the conflict began) and at a total cost less than that supplied by the other major weapons supplier, the USSR, which supplied far fewer items of very costly equipment such as fighter aircraft. This arrangement enabled the Nigerians to purchase all they required of the material they needed most — infantry weapons and ammunition; further, since this material came from Britain it connoted British support for Federal policy and aims.

The result, however, has been an army whose equipment now lacks homogeneity. The reconnaissance regiments have British Saladin and Ferret armoured cars, and French AML 245, H60 and H90 armoured cars; these are slowly being replaced by British Scorpion light tanks and the Fox light armoured car; the artillery consists of British 25 pounder and 105 mm guns, together with Soviet 130 mm, 122 mm (various models) and 76 mm guns, and there are British 40 mm and other light anti-aircraft guns as well. There are also a small number of British Saracen APCs in service.

The army's major weakness is that of logistic support and transport. 'The Nigerian army today is completely immobile, without the right equipment and without shelter', admitted General Danjuma recently. This would affect, in particular, the ability of units to serve outside Nigeria.

The Nigerian air force also has a wide variety of sources and suppliers: Soviet built MiG-15, -17 and -21 aircraft, and Ilyushin 28 bombers; Czechoslovakian L29 Delfin air-to-ground strike aircraft; British Whirlwind and French Alouette helicopters; and British and West German training aircraft.

RANK, DRESS AND DISTINCTIONS

The rank structure of the Nigerian army follows that of Britain, though successive rulers have tended to promote themselves further up the ladder, Murtala Muhammad becoming a general after the 1975 coup, and his successor, O. Obasanjo, being a lieutenant-general. Rank badges are patterned on those of the British army, the Nigerian eagle replacing the crown. Gold braid on the cap is also worn in accordance with British usage. The service and training uniform is also British patterned, though the ceremonial uniform, of a dark-green tunic with a patrol collar and very-light-coloured trousers, is a post-independence introduction. Staff officers wear red gorget patches of the British style. Some battalions wear distinctive plumes or hackles in their berets. Gloves are worn and swords are carried on ceremonial parades.

The Nigerian air force recently discarded military rank titles in favour of those in use in the British RAF.

CURRENT DEVELOPMENTS

More perhaps than in any other African army, the transfer of the colonial army model has proved a very difficult experience. Reasons for conflict and jealousies abound in a vast land such as Nigeria with its diversity of peoples. There are additional frictions between soldiers of different cultures, languages and levels of education. Further frictions can arise from different foreign national training systems or hurried local courses through which officers have passed. Outside the barracks the officers may be seen as an expensive *élite* and even the soldiers as a 'labour aristocracy', a feeling in turn arousing resentment within the barrack gates. These frictions can affect all civil-military relationships at national, regional and local level particularly in a situation of economic scarcity (since, for all Nigeria's oil wealth, huge areas of the territory remain in abject poverty). The maintenance of an efficient, united, well-trained army is a formidable task.

Students of the period 1966-70 will endlessly come across instances in which a Nigerian officer, NCO or soldier said 'He was my closest friend in the army, now I see he was a traitor'. This comment would be made by a soldier of impeccably militant Nigerian patriotism in respect of another with similar views. Nigeria's army, and indeed the Nigerian nation, will depend in the future on some political consensus for an answer to the Austrian Emperor Franz Joseph's famous question 'Patriot for whom?' Consensus may take varying forms with perhaps also in Dr. Azikiwe's words a 'watchdog army' to prevent political excesses.

L.L. MATHEWS

NORWAY

HISTORY AND INTRODUCTION

The official date of formation of the Norwegian army is 1628, but it remained small — as did the population — and unimportant, a mere local appendage of the much stronger and farther-faring Danish army, until the transfer of national sovereignty from Denmark to the 'joint' kingdom of Sweden–Norway occurred in 1814. The Norwegians had resisted the forced union, compelling the Swedes to fight a token war for its consummation, and they made it a condition of their eventual acceptance that the Norwegian army should remain separate from the Swedish, and be officered exclusively by Norwegians and employed solely for the defence of Norway proper.

The separate identity of the army, and its role as effectual guarantor of national independence within the joint kingdom (of which the Swedish King was head, but the legislatures, bureaucracies and budgets distinct) ensured it a privileged place in Norwegian political life during the nineteenth century, and a consequential evolution along the lines current in major European armies during the same period. Initially established (by the *Storting* in 1816) on a basis of limited conscription (by lot among country dwellers only) for a long term (5 years) and with a sizeable regular element (the *hvervede*), it was placed in 1854 on a basis of universal conscription. The first-line was still to be recruited by lot, with purchase of substitutes permissible, but those escaping the draft were placed on the reserve (*landvern*, formed in 1837) and given a short military training. In 1885, the duration of the military obligation was further extended (though the training period was shortened, from 162 to 90 days). The male population was classed in 13 year groups, the first five of which were assigned to the line, the next four to the militia (*landvern*) and the last four to the territorial reserve (*landstorm*); at the same time, the regular *hvervede* was abolished. The parliamentary left would have preferred to make the army an even more popularly based institution, by transferring the burden of defence to the volunteer rifle clubs, whose emergence was a current pan-Scandinavian phenomenon, and which in 1884 had stiffened the *Storting's* resolve in its battle with the King to abolish the royal power of veto. But the Norwegian establishment were suspicious of their political stance and rightly doubtful of their usefulness in a military crisis, of which the most probable was a confrontation with Sweden over the future of the union.

When that confrontation was brought on in 1904–5, the government made effective use of the power at its disposal, by ordering mobilisation, and the threat of war played its part in bringing Sweden to agree, eventually amicably, on the union's dissolution. Thereafter, the Norwegian army entered into a decline. The government perpetuated the policy of neutrality on which the joint Kingdom's diplomacy had been conducted since mid-century and which was entrenched by the powers' guarantee of Norwegian territorial integrity in 1907; protected thereby from aggression, and threatened no longer with political absorption by Sweden, the Norwegians progressively weakened their armed force. The trend was accelerated by the country's already strong and internationally recognised commitment to pacifist causes (for which reason Nobel had vested adjudication of his Peace Prize in the *Storting* in 1901), and by the Norwegian left's dislike of the army as a symbol and, by its account, agent (actual or potential) of capitalist oppression. The left-wing youth movements had adopted the 'broken rifle' as their symbol in 1905 and made heroes of those who resisted conscription on ideological grounds (that trend was to reach its head in 1924–5, when 50 recruits refused training, and Tranmael, Secretary of the Labour Party, was imprisoned for sedition).

The first defence act after independence largely perpetuated the system of 1885, and actually extended the duration of military obligation (to the age of fifty-five) and of training (to 144 days). It also brought regiments into being and localised them in the six military districts into which the country was now divided. But after World War I, during which Norway joined Denmark and Sweden in declaring her neutrality, the country, under a left-wing government, adopted a defence policy of 'every reduction consistent with national safety'. In real terms this meant that in 1927 the intake of conscripts was cut by 30% and the cadre of officers and NCOs halved, and in 1935 the number of officers was again reduced to 470. Of serving soldiers, only a minute 'neutrality guard' was left on duty, though in theory 100,000 could be mobilised in an emergency.

The left's suspicions of the army (and the left was dominant in Norwegian politics throughout the inter-war years) had been heightened by its use by the short-lived Agrarian government of 1931–3 against strikers (e.g. in the 'battle of Melmed' in 1931) and by the activities of Vidkun Quisling, an ex-army officer, briefly Minister of Defence, 1931–3, the founder first of a voluntary militia (*Leidangen*) and then of a domestic Nazi party (*Nasjonal Samling*). As the events of April 9th, 1940 were to prove, however, the weakness to which the left had reduced the army was far more injurious to the nation than any imagined political reaction its regular officers might have essayed. Despite his military past, Quisling formed no following among the officers, 1700 of whom were deported to concentration camps during the German occupation. Also, it was regular army officers rather than the leaders of the left who did what could be done to oppose the unheralded German invasion. One of them, General Fleischer, earned the distinction, with the French General B  thouart, of inflicting on the Germans their first land defeat of the war, in the battle of Narvik.

World Armies

Such was the state of Norwegian unpreparedness, however, that though half the army (50,000) managed to mobilise somehow and sustain the campaign for 2 months, it was unable to offer a co-ordinated resistance to the Germans and, despite British and French help (on the ground less effective than the action organised by the country-wise Norwegians themselves), was eventually forced to capitulate, take refuge in Sweden or escape to England. Out of the survivors the Norwegian government-in-exile raised a Norwegian brigade, based in Scotland, a unit of which, under a remarkable leader, Martin Linge, undertook daring and very effective commando raids against German installations in Norway, a campaign which culminated in the destruction of the Norske Hydro plant in 1943, the only source of heavy water for German nuclear weapons research. At the same time the Norwegians at home were organising their own partisan organisation, *Milorg* (an ironic allusion to the socialist minister Koht's words of 1936, 'every one is agreed that we cannot and will not have any strong military organisation'), which maintained the most active resistance consistent with the presence of 300,000 German troops in the country (one for every 10 Norwegians).

The occupation was brought to an end by the capitulation of Germany, rather than by liberation or national uprising. Nevertheless, its effects were decisive. Derry* wrote, 'National pride was deeply wounded by the ease with which their country was overrun. The short-term result was to blacken the reputation of the (left-wing) government of 1940 as inept blunderers, if not worse; the long-term result was to make the Norwegians defence-minded'. Every left-wing government since the war, and the complexion of government has remained generally left-wing, has given the full weight of its authority to building up and sustaining a respectable defence capacity; the only minister to have lost the confidence of the *Storting* during the same period was Hauge, the post-war Defence Minister, over his failure to establish smooth relations with the high command. Norway, after flirting briefly with the idea of helping to form a Scandinavian defence union, abandoned its habit of neutrality and joined NATO in 1949. The army, the navy and particularly the air force, were modernised with generous American help, but at a considerable cost to the Norwegian budget. In addition, out of the resistance movement grew an impressive parallel force to the army — the Home Guard, 80,000 strong, largely voluntary in composition and yet even today, when it must recruit chiefly from ex-conscripts who might be expected to have had their fill of military life, of an average age of under thirty. The Norwegians thus present an interesting example of a people whose attitudes to national military policy and personal military involvement have been transformed in a single generation.

STRENGTH AND BUDGET

Population: 4,075,000

Army: 20,000, of which 17,250 are conscripts; 120,000 reserves

Navy: 9000; 15 coastal submarines; five frigates; 64 smaller craft; 1600 coastal artillerymen manning 64 batteries

Air force: 10,000; 115 combat aircraft

Home guard: 85,000, of whom 90% are in the army branch

GNP (1977): \$36,200,000,000

Defence expenditure (1978): \$1,300,000,000

Norwegian defence expenditure, at 3% of GNP and 11% of the budget, is comparatively low by NATO standards, but should be contrasted with the very small percentages spent in the decades between the wars. Post-war figures demonstrate an altogether higher degree of readiness on the part of Norwegians to spend for national military purposes. The defence budget has, nevertheless, declined since the 1960s when nearly 20% — admittedly offset by American aid — was spent in several years while re-equipment was proceeding. Recently most of the budget has been absorbed in personnel, logistic and administrative costs, leaving little for procurement. Replacement of equipment is hindered by Norway's lack of domestic defence industries and the consequent need to import. An adverse balance of payments, though compensated by invisible earnings, has yielded insufficient foreign currency to meet the ever growing costs of major defence items. The domestic oil boom may, however, henceforth make available the sums necessary to replace ageing equipment and fill gaps in the inventory.

COMMAND AND CONSTITUTIONAL STATUS

The King is Commander-in-Chief of all three services, but executive control is vested in the elected government and exercised by the minister of defence; the defence committee of the *Storting* (parliament) has strong investigatory and advisory powers. The Norwegian command structure is an integrated tri-service organisation of which the head is the Chief of Defence, who is also the commander of the civilian defence services and whose deputy is the chief of the defence staff. The heads of the individual services (army, navy, air force and home guard) have the title of Inspector-General and their own staffs, but their role is restricted to recruitment, administration, organisation, tactics and doctrine. Operational command is in the hands of the Commanders North Norway (COMNOR) and South Norway (COMSONOR), who

* Derry, T.K., *A History of Modern Norway*, Oxford, 1973.

control integrated headquarters in which the individual service commanders have authority over their own forces. COMNOR is also the Commander of the Allied Task Force North Norway and, in certain circumstances, brings his national forces directly under the control of CINCNORTH, the NATO commander of the 'Northern Flank', always a British general whose headquarters are at Kolsaas outside Oslo.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The several roles of the Norwegian army have been defined as: maintaining an efficient surveillance and warning system; guarding the sovereignty of Norwegian territory, by the deterrence, limitation or repulse of any violation; the rapid reinforcement of forces in exposed areas, and the maintenance of the necessary means; preparing and holding facilities for the reception of allied (i.e. NATO) reinforcements; providing contingents to the peace-keeping mission of the United Nations; in so far as possible, to render all assistance 'to society as a whole'. Norway, like Sweden and several other European States (e.g. Switzerland, Austria, Yugoslavia and West Germany), propagates a doctrine of 'total defence', which aims to create, in time of war: 'the largest possible military force with the highest possible quality; the best possible civilian support of the military; the best possible protection of civilian life and property; and the preservation, to the greatest extent possible, of national sovereignty'. With this in view, the operations of the army are to be integrated with those of the other services, the joint defence agencies, Civil Defence, the police, the health services and concerned economic and administrative organisations. In practice, the roles for which the army most frequently trains are the defence of Finnmark (the area bordering Russia in the far north), the reinforcement of the Finnmark force, the defence of southern Norway against airborne attack and the defence of the coast against seaborne invasion.

Commitment

Norway is a founder member of NATO and its Brigade North, the largest standing element of the army, is a NATO-earmarked force, which would come under command of CINCNORTH in case of emergency. Most of the rest of the army is also earmarked, but would remain under direct national control. Like Sweden and Denmark, Norway also has earmarked for United Nations emergency duty a number of military units, including an infantry battalion, and support and medical elements.

Certain restrictions have been unilaterally imposed on the stationing of foreign troops and weapons on Norwegian soil. On February 1st, 1949, on the eve of its joining NATO, the government assured the Soviet Union that it would not permit the stationing of foreign troops on its territory 'as long as it was not attacked or threatened with attack', and in 1957 it also declared that it had no plans to set up stockpiles of nuclear weapons or to install launching sites for rockets. However, NATO forces, particularly the ACE Mobile Force, regularly exercise in Norway, and individual foreign servicemen in numbers gain experience of winter-warfare conditions there.

Deployment

Norway is divided into Northern and Southern Commands. The Southern (HQ Oslo), which contains most of the population, is also where the training organisations are based. The standing Brigade North (HQ Bardufoss, near Tromsø) is stationed in Northern Command (HQ Bodø). The mobilisation brigades and local defence forces are based on the centres of population, under four regional headquarters which are in process of establishment. The Home Guard (army) is organised into 18 districts, which correspond with the counties (*fylker*), divided into 90 sub-districts and about 500 local areas, the last roughly coterminous with the parishes (*kommuner*).

Recent Operations

Norway sent medical troops to Korea during the war of 1950-3; Norwegian battalions or observers have operated under the United Nations Emergency Force in Kashmir (1949-71), the Congo (1960-64), the Lebanon (1958), the Yemen (1963-4) and in the Middle East on the Israeli border (1948-71).

ORGANISATION

Arms of Service

The army is organised into infantry, cavalry, artillery, engineers, signals, transport, army aviation, logistics, repair and medical troops; the coast artillery forms part of the navy. Unlike the neighbouring Swedish and Danish armies, it has not

World Armies

maintained its historic regiments of infantry and cavalry, except for the Royal Footguards (*Hans Majestet Kongens Garde*); the reconnaissance units, however, preserve the title of 'dragoons'.

Operational

The standing Brigade North is organised into three infantry battalions; there are some standing armoured squadrons and artillery regiments and the Royal Footguards Battalion in Oslo. The 11 mobilisation brigades (Regimental Combat Teams) are organised as the Brigade North, but are less mobile. The Home Guard (army) has as its basic operational unit the platoon, of which there are three to six in each local area, divided into sections of eight men and equipped for local defence only.

RECRUITMENT, TRAINING AND RESERVES

All fit male citizens are liable for military service from the age of twenty until forty-five; conscription has been imposed in Norway since before the union with Sweden in 1814 and has been universal since 1854. The term of service since 1973 has been 12 months. About 15,000 of the army's 18,000 soldiers are conscripts, who pass thence to the mobilisation brigades of the reserves. Service in the Home Guard is voluntary; only about 400 of its members are regular servicemen.

Training lasts 3–8 months, the length depending on branch and specialisation, and takes place at the schools and training centres, which are located in southern Norway. The training centres provide basic training, which is completed after the conscript is transferred to his standing unit, and also contain officer- and NCO-candidate units; the schools are run by the respective corps, and train specialists, as well as providing advanced courses for their own officers and NCOs. The Infantry and Signal Schools run frequent winter warfare courses for foreign students. Great emphasis is laid also on winter warfare in the training of all conscripts (whose general fitness on arrival is anyway higher than in most European armies); all must complete a 30 km cross-country ski test, and they are taught to survive blizzards without artificial shelter on the Arctic uplands.

Regular officers, who must be qualified for university entrance, have passed officer candidate school and served a year as NCOs, are trained at the Military Academy in Oslo, where the Staff College is also located.

Reserves number 130,000, the youngest of whom would form the 11 mobilisation brigades. The older are assigned to local defence units; far more important in local defence, however, is the Home Guard (*Heime Verneet*), which numbers 80,000, 90% of which belongs to the army branch (and 3% to anti-aircraft units). It is recruited partly by voluntary enlistment, partly by transfer of reservists from the mobilisation lists; a few conscripts are transferred directly. Its boast is that it can mobilise 10,000 men in 45 minutes, 40,000 in 2 hours, 60,000 in 3 hours and the whole in 4 hours. It is a completely voluntary body, whose members do 50 weekend hours, or six consecutive days, training each year. Home Guard officers and NCOs undergo an additional 14 days' training every 3 years at the two Home Guard Central Schools at Dombas and Torpo.

EQUIPMENT AND ARMS INDUSTRY

Most of the Norwegian army's equipment is imported; the Raufoss factory manufactures the 66 mm M-72 LAW anti-armour weapon.

Pistol: P38 Walther (West Germany)

Sub-machine-gun: MP40 (West Germany)

Rifle: G3 CETME (West Germany)

Machine-gun: MG42 (West Germany)

Mortars: 81 mm M-29 (USA) and 107 mm M-30 (USA)

Anti-armour weapons: 66 mm LAW M-72, 84 mm Carl Gustav (Sweden), 106 mm M-40 RCL (USA), ENTAC ATGW (France) and TOW ATGW (USA)

Air-defence weapons: Rh-202 20 mm cannon (West Germany; 300 on order); 40 mm L/60 and L/70 guns (USA; in the army, air force and Home Guard air-defence units); and Nike Hercules missiles (in the four air force SAM batteries)

Artillery: 105 mm howitzer (250 in service) and 155 mm M-109 SP howitzer (USA; 130 in service)

Armour: M-113 APC (USA); M-24 light tank (USA; upgunned model of which there are 70 in service); M-48 tank (USA; 38 in service); and Leopard 2 tank (West Germany; 78 in service)

Aircraft: Piper L-18 and Cessna L-19 (USA) light aircraft

Note: the Home Guard is still equipped in part with older weapons.

RANK, DRESS AND DISTINCTIONS

Rank

General (general)	Three stars on gold lace
Generalløytmant (lieutenant-general)	Two stars on gold lace
Generalmajor (major-general)	One star on gold lace
Oberst (colonel)	Three stars with silver lace edging
Oberstløytnant (lieutenant-colonel)	Two stars with silver lace edging
Major (major)	One star with silver lace edging
Kaptein (captain)	Three stars
Løytnant (lieutenant)	Two stars
Fenrik (second-lieutenant)	One star
Stabsersjant (sergeant-major)	Three chevrons, crown and bar over
Oversersjant (staff-sergeant)	Three chevrons, bar over
Sersjant (sergeant)	Three chevrons
Korporal (corporal)	Two chevrons
Vize korporal (lance-corporal)	One chevron

Stars are silver and are worn on the collar; chevrons are worn on the upper arm.

Dress and Distinctions

Officers wear a khaki British-style service dress. Every-day wear for all ranks is a khaki British-style battle dress, bearing a flash in the branch colour: cavalry, green and yellow; artillery, red and blue; engineers, blue and red; signals, blue and white; infantry, red; transport, blue and yellow; repair, red-blue-red; logistics, yellow; and medical, crimson. Combat dress is olive-green smock and trousers or, for winter, white ski overalls. Peaked cap, ski cap, beret or NATO helmet are worn as appropriate. The *Kongensgarde* preserves its magnificent early nineteenth century uniform with white crossbelts and bearskin cap. Veterans of the famous World War II raiding unit wear a shoulder title, *Kompani Linge*.

CURRENT DEVELOPMENTS

Norway is the only country in NATO, apart from Turkey, to share a frontier with Russia. Its neutralist past and its government's desire not to arouse Soviet antagonisms have combined to moderate its full military commitment to the alliance, by forswearing the basing of foreign troops or the stockpiling of nuclear weapons on its territory; and there is a small but consistent group of electors, about 5 to 7%, who are hostile to the country's membership of the alliance. It is from this same group that those are drawn who insist in seeing in the army's cadre of regular officers a potential source of threat to the country's democratic institutions. The army is confident enough of its standing with the population at large, however, to have allowed representative officers to appear in debate on radio and television with their accusers to rebut their charges, and it does not seem likely that they are widely believed. The Norwegians, indeed, though not a military people, are strongly committed both to a strong defence policy within the NATO ambit and to personal involvement in their own defence. Hardy and athletic, they make excellent individual soldiers, skilled particularly in winter warfare, accept conscription without complaint (the rate of conscientious objection is far lower than in neighbouring Denmark or Germany) and, by voluntary effort, have made the Norwegian Home Guard a popular militia of real military value. The asymmetric settlement of the country, which puts most of the population in the south while the military frontier is in the far north, indeed 250 miles north of the nearest railhead and connected with it by only a single road, makes the framing of a workable mobilisation plan difficult, and all the more so in view of the gross disparity between Norwegian and Soviet strength in the north (at least two divisions to one brigade). Norway counts upon the arrival of NATO help to hold the north if it were invaded, and hopes only to win enough time to allow such help (initially the ACE Mobile Force) to arrive. If the invasion were confined to the locality, and not part of a more general war, it might well prove that the Norwegian army, assisted by its excellent small navy and air force, might succeed in winning the time desired.

Seaborne or airborne landings anywhere in the populated areas would meet stiff resistance from the Home Guard. A danger with which Norway has not yet had to deal, but must, like Britain, prepare against, is terrorist sabotage or covert foreign attack on her off-shore oil installations. Primarily a naval task, it is judged nevertheless to require the commitment and training of soldiers. Norway may well find it necessary to raise a force of marines, something at present she does not possess.

JOHN KEEGAN

OMAN

HISTORY AND INTRODUCTION

Since the late eighteenth century, Oman's close relationship with Great Britain relieved it of the need to provide its own defence against external attack. Its last reason to maintain armed forces capable of deployment beyond its borders disappeared when its east African possessions (including Zanzibar and Mombasa) were separated from it as a result of a disputed succession in 1856. For the next century, as the collapse of the country's maritime trade brought it ever deeper into poverty, the Sultan maintained only personal mercenary forces sufficient to secure his position at least in the coastal regions.

The Sultan's Armed Forces (SAF) have expanded nearly four-fold since Sultan Qabus overthrew his traditionalist father in a coup in July, 1970. Both the scale and the character of the expansion were almost entirely conditioned by the insurgency in the south-western province of Dhofar, and the wider possibilities of a development of that revolt northward into Oman proper, or a confrontation with the South Yemeni supporters of the revolt.

In 1970 the army was a wholly mercenary force of under 4000 men. Rather more than half the other ranks were Baluchis, recruited through the port of Gwadar in Pakistan, while the officers were almost entirely British, under contract or on secondment, with a few Pakistani officers at lower administrative levels. There were only 16 Omani officers, all lieutenants.

The old Sultan, whose faith in his subjects' loyalty was epitomised by this mercenary army, ran the province of Dhofar virtually as a private fief, with a separate, locally recruited defence force commanded by Pakistani officers. The province, whose 50,000–100,000 inhabitants speak south Arabian dialects related to Arabic and possess a distinctive local identity, has been permanently attached to the Sultanate of Oman since 1879, but it is separated from historical Oman by several hundred miles of virtually uninhabited desert and has strong separatist tendencies.

A local rebellion against the Sultan, beginning in 1963, gained much greater momentum after the departure of Britain from Aden in 1967 and the establishment of the Marxist-oriented Popular Democratic Republic of Yemen (PDRY) on the Dhofar frontier. With training and arms supplied by the People's Republic of China and Iraq, and a logistical base at Hauf just inside South Yemeni territory, the Popular Front for the Liberation of Oman (PFLO), as the Dhofar rebellion now calls itself, had established control by 1970 over almost all of Dhofar. Only about 10 miles around Salalah, the capital and main port, remained under the Sultan's control.

The old Sultan finally admitted the SAF to Dhofar in the late 1960s, but no noticeable improvement in the security situation followed. His steadfast refusal to grant any form of local autonomy to the Dhofaris, which was seen as the key problem, was a principal cause of his overthrow in 1970. Since then there has been an extremely rapid programme of expansion in the armed forces, largely paid out of newly available oil revenues, and a parallel programme of Omanisation to transform a mercenary force into a national army.

STRENGTH AND BUDGET

Oman's army had 16,200 officers and men in mid-1978, in a total armed force numbering 19,200 (including expatriate personnel). The air force has 2100 personnel, and the navy currently has 900. There are 1000 paramilitary gendarmerie, and an irregular tribal force in Dhofar — the *firqats* — now numbering about 3300. The population of Oman is 800,000.

The 1977 defence budget was 158,000,000 Omani rials (\$457,000,000), a decrease of about one-third since the peak year for defence expenditure in 1975. The fall is due to the completion of a major programme of equipment purchasing, the end of large-scale military operations in the Dhofar war, and the considerable financial difficulties which the country was encountering in maintaining such a high rate of military spending. It rose again to \$767,000,000 in 1978, however, mainly due to large Saudi subsidies.

The very heavy expenditure on defence, amounting to about three-fifths of Oman's annual oil revenue (which in turn accounts for 98% of total Oman government revenues), had forced Oman into deficit to the tune of \$355,000,000 by 1975. It has had to borrow \$124,000,000 on international markets since 1973, and reportedly received a special loan of \$100,000,000 from Saudi Arabia in May, 1975.

Oman's oil receipts are steadily declining, and are expected to fall to only \$1,250,000,000 a year by 1980. Defence spending remains at approximately 40% of government expenditure, however, bolstered by \$250,000,000 in Saudi Arabian defence aid in 1977 alone. Saudi Arabian aid, motivated as much by competition for influence with Iran as by concern for Oman's military security, is predicted to reach a total of \$3,000,000,000 by 1979.

So long as the rich and conservative oil States of the Gulf and Saudi Arabia see Oman as the front line in the struggle against Marxist revolution, it is not likely to go short of funds for defence.

COMMAND AND CONSTITUTIONAL STATUS

Lacking a constitution, Oman also lacks a formal constitutional status for its army. The Sultan, as ruler of an absolute monarchy, is Supreme Commander; his commanders-in-chief since his accession have been British officers on secondment, due to the absence of trained Omani officers of suitable rank and experience. The present Commander-in-Chief is Major-General Kenneth Perkins.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The primary role of the Oman army in the past 5 years has been the suppression of the Dhofar rebellion, though after 1973 offensive operations in Dhofar were increasingly dominated by the Iranian expeditionary force. The army's secondary role is the maintenance of internal security in Oman itself.

The latter mainly involves ensuring that there should be no resurgence of a separate centre of power in the mountainous inland areas, the former Imamate, whose fiercely independent and fanatical tribes were almost entirely free from control by Muscat between 1920 and 1955, and briefly again in 1957. Included in this role is the prevention of infiltration northward by PFLO cadres.

In support of these commitments the six infantry regiments (battalions) of the army are deployed into a Northern Command and the Dhofar Brigade. Omani battalions are rotated through the Dhofar operational area on a 9 month cycle. The tribal levies or *firqats* are returned to their own areas of Dhofar after training, and are not subject to rotation.

Oman's armed forces are not greatly inferior to those of the PDRY. The role of protecting power against larger threats from further away (and of a willing second in a possible clash with South Yemen) had largely passed from Britain to Iran by 1973; it has now presumably passed again to Saudi Arabia and Egypt, although Iran is bound to retain a keen interest in the area.

Iran's intense interest in Oman's security arises from the fact that these two States control the Strait of Hormuz, through which all Persian Gulf traffic must pass. (Two of the three deep-water tanker channels actually pass through Oman's territorial waters.) It is the Iranian navy whose presence dominates in the waters round Oman, and the Shah guaranteed Oman's air-space.

In support of the latter commitment, Iran built a radar station in central Dhofar and stationed eight F-5 aircraft at the Thmarit airbase there until Oman took delivery from Britain of 12 Jaguar fighter-bombers equipped with the American-made Harpoon anti-ship missiles (range 60 miles) in 1977. During the Shah's visit to Oman in December, 1977 the two rulers declared that they would henceforth be jointly responsible for the security of the Straits of Hormuz.

A complete Iranian brigade of 3500 men began operating in Dhofar in December, 1973 supported by their own artillery and heavy-lift helicopters. It was unquestionably the arrival of these troops, with their own self-contained logistics, that gave the Sultan's armed forces the numbers to go on the offensive.

Iranians subsequently comprised about half the actual combat troops in Dhofar. Though some progress had already been made in recovering control of the coastal plain from the rebels, it was only after the Iranians' arrival that sustained operations in the mountains which were the guerrillas' stronghold became possible year-round.

The operations were of an entirely conventional nature. First, control was regained of the road running inland from Salalah through the Qara mountains to Thamarit, and a barrier established along that line while guerrilla forces to the north-east of it were starved, hunted or bribed into submission. The operation was then duplicated on lines successively closer to the South Yemeni border across which all supplies flowed: the Hornbeam line (50 miles from South Yemen) in 1974, and the Damavand line (25 miles) in the autumn of 1975.

The first Iranian air attack on the South Yemeni supply centre of Hauf (which also houses the headquarters of the PFLO) was launched on October 17th, 1975, and a further military advance in late November brought Omani and Iranian forces right up to the South Yemen border. On December 11th, 1975 the Sultan declared that the war was won and the PFLO had been driven from Oman. British, Omani and Iranian casualties in the preceding two and a half years were about 500, the PFLO well over twice that figure. At the end of 1977, it was estimated that there were only about 40 guerrillas still active in Dhofar, and perhaps 200 more in camps across the South Yemen border. Approximately 1000 Iranian troops remained in Oman, apparently on a semi-permanent basis, but they were all withdrawn after the Iranian revolution of 1979 and replaced by 200 Egyptian troops.

While South Yemen and the PFLO may remain the principal threat to Omani security, the recent focus of military attention has been within the Gulf. Oman has always considered that the smaller shajkhdoms to the west form part of Omani territory; although it did not actively pursue this claim when the United Arab Emirates was created in 1971, and accepted a UAE ambassador in Muscat, it has never returned the compliment. Recent events in the UAE, which emphasised the fragility of that State's unity, have probably played a part in the more determined line taken by Oman

World Armies

(although specific disputes have also played a part). There is no doubt that Oman would hope to gain at least the UAE territory separating the main body of the country from the strategically important Musandam peninsula commanding the southern side of the Straits of Hormuz in the event of the UAE's disintegration, if not Omani domination over the larger, oil-rich shaikhdoms lying further to the west.

Potentially the more serious Oman-UAE border dispute, since it directly involves Saudi Arabia as well, is over the Buraimi oasis. The long historical dispute between Abu Dhabi and Saudi Arabia over the ownership of the oasis, which lies on the UAE-Oman border, was settled between the two countries in 1975, but it was subsequently discovered that Shaikh Zayid of Abu Dhabi had also inadvertently signed away a considerable chunk of land which actually belonged to Oman. Intense pressure by Oman's Sultan Qabus, who has extensive influence in the shaikhdoms, obliged the UAE to convince Saudi Arabia in 1977 of the necessity of redrawing the maps defining the border in the 1975 treaty.

A more acute dispute arose in 1977 over the activities of Shaikh Saqr of Ras-al-Khaimah, the easternmost of the shaikhdoms, who has long been in the habit of nibbling at the borders of his neighbours both within the UAE and with Oman. The latter has long contended that Ras-al-Khaimah had illegally annexed certain border areas in Oman's detached territory of Ras Musandam, that it was prospecting for oil in Omani offshore zones and that it had expelled a number of Omanis from their homes. In November, 1977 an Omani naval vessel forced the suspension of drilling work at a Ras-al-Khaimah-licensed oil rig in the disputed offshore zone, and units of the Omani army, ostensibly on manoeuvres, lodged themselves 3 miles inside what Ras-al-Khaimah claims to be its territory. The incidents were resolved when Shaikh Zayid, the President of the UAE, strongly supported the Omani claims, but that cannot have helped the shaky cohesion of the seven 'united' emirates.

Zayid had little choice in the matter, however. Not only was the Omani claim probably correct, but a very large proportion of the enlisted and junior officer ranks of the UAE army are in fact Omanis, whose loyalty to their original homeland is strengthened by lavish promises of free land and residences when they ultimately return. Beyond this seemingly minor dispute lay two much more serious facts, however: first, that the break-up of the UAE is now seen as possible, and that Oman is clearly and inevitably interested in the future of these far weaker shaikhdoms with the oil in plenty that Oman is now running out of; secondly, that behind Oman stands Iran (which endorsed the Omani claims), and that behind the UAE stands Saudi Arabia, which is intensely suspicious of Iranian activities on the southern side of the Gulf. If the UAE actually began to fragment, there is a substantial probability of the two big rivals of the area becoming directly embroiled on opposite sides in that region.

ORGANISATION

Arms of Service

The Oman army is organised largely on British models. The regular force consists of eight infantry battalions and one Royal Guard regiment with very similar equipment. The artillery is organised in a single regiment, and there is a signals regiment, an armoured car squadron, a paratroop squadron and an engineer squadron. An air-defence regiment is now being formed, and a separate women's army corps is being set up (the first in the Arab world). The gendarmerie are a paramilitary force, nominally organised as a battalion, but of course never concentrated.

The *firqats* are bands of armed Dhofari tribesmen, the majority of whom are former rebels. They vary in strength from 50 to 150 men, all drawn from the same tribe. They receive modern rifles and are trained by a detachment of 60 Special Air Service troops (soon to be withdrawn) on loan from Britain, after which they are returned to their tribal areas as a form of regularly paid Home Guard.

The air force consists of one FGA/reconnaissance squadron, one FGA squadron, one COIN/training squadron, one tactical transport squadron, two transport squadrons and a helicopter squadron. There are two SAM squadrons for airfield defence duties.

Operational

There are two brigade headquarters organisations: one in the north and the other in Dhofar.

RECRUITMENT, TRAINING AND RESERVES

The programme of Omanisation of the SAF dominates all aspects of recruitment and training. At the moment there are still almost 450 British personnel serving with the SAF, including half the officer corps. In the ranks, progress has been rapid: mixed regiments have been separated into Omani and Baluchi units, and probably less than a third of the force is now mercenaries recruited from Pakistan. Pay and conditions of service have improved radically; a pension scheme, including widow's and disablement pensions, has been introduced, and regular accommodation including married quarters is now being provided.

Omanisation of the officer corps has inevitably been slower, in a country which had only three primary schools in 1970. At the end of 1975, however, there were 330 Omani officers, several dozen of whom had achieved the rank of major by accelerated promotion. The first Omani lieutenant-colonels were made during 1976, and by the end of 1977 all the infantry battalions (previously commanded by British officers) were under Omanis. Most other units are to be fully Omanised in the following 4 years, and the commander-in-chief of the SAF should be Omani in 1981.

Recruit training, including general education, is done for all the services at the SAF training centre near Muscat. Basic officer training is also done there (all officer candidates must first serve at least a year in the ranks), while specialist training is done abroad — in Britain, Egypt, Jordan, Saudi Arabia and the Union of Arab Emirates. A services boys' school has been established, enrolling 200 pupils, from which many of the future officers and NCOs of the Omani forces will be drawn.

A technical school has been established for the air force, and the navy has begun to do its own training on a special-purpose training vessel. In view of the higher technological requirements of those services and the sophisticated equipment Oman has recently acquired, however, it seems probable that Oman (which had one fully qualified native-born pilot in early 1975) will remain dependent on foreign contract officers for some considerable time in the other two services.

Military service in Oman is voluntary, and there are no reserves.

EQUIPMENT AND ARMS INDUSTRY

Oman's military equipment is almost all of British manufacture. The army has 68 Saladin and some V-100 Commando armoured cars, and also Ferret scout cars. The artillery includes 24 75 mm pack howitzers, 25-pounders, 36 105 mm and three 5.5 in guns, and some 120 mm mortars. Anti-tank defence is provided by American-made TOW missiles.

The air force's contribution to army operations is 12 Hunter ground-attack aircraft (transferred from Jordan), 12 Jaguars and eight BAC-167 COIN aircraft. Tactical transport is provided by 20 AB-205, two AB-206A, and five AB-214 helicopters, and 15 Skyvan aircraft. Longer-range transport is the role of the air force's three BAC-111s, one VC-10, seven Britten-Norman Defenders and one Gulfstream. The SAM squadron has 28 Rapiers SAMs and Blindfire radar.

The navy has three patrol vessels (the Royal Yacht and two ex-Dutch MCMs), one training ship, three fast patrol boats, four coastal patrol craft and three small landing craft. There are two minesweepers and a logistical support ship on order.

There is no local arms industry and only limited repair facilities.

RANK, DRESS AND DISTINCTIONS

Rank structure and badges of rank follow British practice. Uniforms are largely modelled on British patterns, with local headgear.

CURRENT DEVELOPMENTS

There are still some active guerrillas in Dhofar, equipped with, amongst other things, SA-7 missiles that have succeeded in bringing down several SAF aircraft. The years during which it had a monopoly on indoctrination in the mountains guarantee the PFLO some residual passive support there for years to come. The *firqats*, though a useful force, are given to using their weapons against each other in tribal feuds, and as poachers turned gamekeepers could easily change sides again if it seemed advisable to do so.

Omani control of Dhofar will depend for a number of years, therefore, on either a large regular force in the province or an agreement with South Yemen. It is this latter which the Saudis, who are extremely unhappy about the Iranian presence in the Arabian peninsula, were recently trying to arrange, by offering substantial financial aid to the impoverished Aden regime. At the end of 1977, however, this attempt had met with failure and lapsed at least temporarily, while South Yemen became actively involved alongside the Soviet Union and Cuba in sending military aid to the Ethiopian government in the war in the Horn.

The high defence expenditure of Oman will probably not drop drastically in the future even if the PFLO problem ends. Such levels of expenditure are quite commonplace in Oman's neighbourhood, where almost all the neighbours dispose of oil revenues far exceeding its own, and the need to keep up will make itself felt. This is especially the case since the possibility exists of conflict with UAE, or of intervention in that neighbour in support of Omani claims if it should actually disintegrate.

Sultan Qabus has been extremely successful in cultivating Iran for military support and as a counter-weight to Saudi Arabia, while simultaneously extracting very large amounts of money as aid from the Saudis. It is possible that he will continue to be able to do this despite the recent change of regime in Iran, and to play a disproportionately large regional role compared to his State's population and despite its relative oil-poverty, so long as the present balance persists between the larger Gulf powers.

PAKISTAN*

HISTORY AND INTRODUCTION

The Pakistan army is the Siamese twin of the Indian, from which it was surgically separated in the Partition of 1947. (For the history of the old Indian Army before 1947, see the entry on India.) Even now, it bears a closer resemblance to the Indian army than to any other (except perhaps the British, from which they both inherited many of their shared institutions and their predominating tone). This common inheritance has in some senses been enhanced by the fact that they have fought each other three times in their three decades of existence.

Other striking, if intangible, characteristics of both successors to the old Army of the Indian Empire, which set them apart from almost all others of the 'third world', are highly professional perspectives and the weight of tradition which mould their behaviour. They are not creations of recent vintage oriented primarily towards internal security — in the complexity of their internal structures and their attitudes towards the external world they more closely resemble the great historical armies of the industrial world — British, French, American or Russian. That is scarcely surprising, for they are the heirs of one of the premier military institutions of the last century and a half — the old Indian Army — which indeed began as just another instrument of colonial control, but in the twentieth century held its own in the biggest military leagues of the world — in Flanders against the Imperial Germany Army, in the western desert against Rommel, and in south-east Asia against the Japanese.

The domestic careers of the two armies have diverged radically since 1947 — while the Indian army has remained the loyal servant of the State, the Pakistan army has spent about half of the intervening period as its master. This was probably inevitable, given the comparative weakness and immaturity of the institutions of the new nation of Pakistan, its extreme vulnerability, and the relative shortage of competent civilian administrators and politicians. What is noteworthy, however, is that the army, because of its apolitical traditions and its responsibility for external defence against very real threats, has usually managed to maintain its focus on its professional rather than its political roles. When it has intervened, it has done so corporately, at generals' level, for pragmatic reasons of efficiency and State security, and not from petty motives. The chain of discipline and command has never been broken, and the great bulk of the army has not become involved in the debilitating intrigues of the political arena.

In all its long life, nothing so became the old Army of the Indian Empire as the manner of its leavetaking. During all the turmoil of 1946–7, culminating in a horrible communal civil war, its discipline never broke. It is impossible to overestimate the importance of this fact, for by the middle of 1947 nothing else stood between the subcontinent and the sort of catastrophe, on a vastly larger scale, that engulfed the Congo in 1960. The human cost of Partition was atrociously high — over half a million dead, and about 14,000,000 refugees — but it could have been far worse but for the devotion to duty of almost all ranks, Hindu and Muslim alike, in the last months of the old Indian Army.

Not all echoes of the political strife rending the Indian Empire in its last years had been muffled by the Army's physical and political isolation from the civilian population, of course. The appallingly mishandled exemplary trial of three 'Indian National Army' officers (one Muslim, one Hindu and one Sikh) in late 1945 badly shook discipline in the armed forces. (Almost 30% of the 70,000 Indian Army prisoners taken by the Japanese in the debacles in Singapore and Burma had eventually been persuaded to fight for the Japanese as the Indian National Army.) A chain reaction of mutinies in early 1946 swept almost every ship and establishment of the Royal Indian Navy. The remarkably rapid recovery of morale and discipline in the forces was at least partly due to the fact that both the Congress Party and the Muslim League, when they shortly afterwards realised that the British Labour Government really intended to leave India soon, drastically curtailed their agitation within the armed forces in order not to destroy an instrument they expected to inherit. Though discipline in the Army had undoubtedly become rather brittle, it held firm, and the Army was all the law and order there was in large northern areas of the subcontinent during the last desperate weeks of the British withdrawal.

A more fundamental reason for the unbroken discipline of the old Indian Army down to the end, however, was that the idea of Pakistan had grown with extreme rapidity, and had not had time to penetrate fully into the enclosed and distinctively different world of the Army by 1947. The word 'Pakistan' itself had only been coined in 1933, by a young Muslim Indian at Cambridge University, and the partition idea only began to gain wide support in the Muslim community in 1938, after the first provincial elections under the new Government of India Act aroused its dormant anxieties about Hindu domination. From then on the momentum of the partition idea grew with amazing speed — the 'Pakistan' resolution was accepted by the Muslim League, then being rapidly transformed from a debating society to a mass movement by Muhammad Ali Jinnah, in 1940 — but as late as 1946 even most Hindu leaders of the nationalist Congress Party did not take it seriously.

* See also Appendix 2.

Their incredulity was understandable, for carving a Muslim Pakistan out of the Indian Empire would result in an astonishingly clumsy and improbable political entity, of doubtful economic viability and sharing no unifying characteristic except religion. The British administrators of India were proud and protective of their handiwork, a subcontinent unified for the first time in its history, and therefore were equally loth to take the idea of partition seriously. In adopting this attitude, both the British and the Hindu leadership were showing a willful ignorance of the subcontinent's history and social realities.

In the Indian Empire of 1947, Hindus outnumbered Muslims three-to-one. There were Muslim majority areas in the north-west and north-east, but over most of northern India, and to a lesser extent in the south, Hindus and Muslims lived in an intimate geographical intermingling, and had done so for centuries. Despite their physical proximity and their common ancestry (for most Indian Muslims were the descendants of local converts at some past time), there had never been any tendency towards intermarriage, or even a convergency of customs. No two philosophies, no two sets of traditions and assumptions about life could be more alien to each other than the Hindu and the Muslim, and for most Indians these considerations loomed larger than shared language, race and circumstances.

History, too, sharpened the antipathy of the two communities. For 1200 years, and in unbroken succession from the twelfth to the eighteenth centuries, India's Hindus had been the victims of wave after wave of Muslim conquest, and the subjects of Muslim empires that had brutally subjugated and exploited the Hindu majority. Hindu prosperity and status had grown greatly under the British Raj, however, while the Muslim community's once-proud position had fallen disastrously. For a long time after the Mutiny of 1857, which was seen by the British as an attempt to restore the (Muslim) Moghul Empire, Indian Muslims had been mistrusted and consequently discriminated against by the British authorities, while their own reluctance to collaborate with the new imperial power had allowed Hindus to gain a predominating position in all the modern spheres of activity — administration, industry, the professions — which grew up under British rule. Even in the Army, Muslims were under-represented in the officer corps, and especially in the more technical branches.

A Muslim cultural renaissance got underway in India in the late nineteenth century, with the foundation of the great Muslim education institutions (though early on there occurred the split between secularist modernisers and those who stressed the traditional values of Islam which was to plague independent Pakistan's early history). By the twentieth century there was a small class of Muslim professionals and intellectuals, and the Muslim League was founded in 1906. But it was only when the Congress Party's campaign for Indian independence began to show signs of making progress in the 1930s that India's Muslims began to consider seriously what their future would be in an independent India.

Many found it an extremely unattractive prospect. Congress was a secular party (as is the India it ruled after 1947 a secular State) but its leadership and membership were overwhelmingly Hindu, and it was generally oblivious to the special anxieties of the Muslim minority. Both within it and outside it to the right, moreover, there was a body of Hindu extremists who were actively anti-Muslim. Taking into account the age-old antagonism between the two communities, and the prospect of the 'tyranny of the ballot-box' that would be exercised by the Hindu majority after independence, a great many Indian Muslims came to see their prosperity, their cultural survival, and even their mere physical safety as lying only within an independent Muslim-majority State. After 1940, under the single-minded leadership of Jinnah, this view was adopted by the Muslim League and rapidly came to dominate the political perceptions of Indian Muslims. Partition was, however, a solution to the communal problem which was wholly and utterly unpalatable to all India's Hindus, both because the problem was not theirs, and at a deeper level because of the immense significance of India's territory, and its rivers above all, in the Hindu religion. To divide the country was not merely a political device to be judged on its merits, it was a violation of Mother India.

The latent conflict went critical in 1946, when the realisation suddenly burst in upon Indian political leaders that the British rulers, their credit and their will to rule quickly ebbing away, were on the brink of departure. The Muslim leadership's demands for partition before independence became ever louder, and in its dissatisfaction with the Stafford Cripps mission of March and with the intransigence of the Congress Party it decreed August 16th, 1946 as Direct Action Day. In teeming Calcutta the Muslim demonstrations led to the worst communal riots for generations, with perhaps 5000 killed in 3 days, and the civil war was on. For the next year communal mass killings flared in one locality after another, in a crescendo of violence that culminated in the horrors of August–November, 1947.

Throughout those 16 months the Indian Army was committed in aid to the civil power virtually to the last man, while the politicians gradually came to terms with the inevitability of partition. It was grossly overstretched, and often unable to arrive in time when the sudden spasms of communal fear and hatred led to massacres, especially in rural areas, but its impartial and disciplined presence held the ring long enough to give the political leaders time to work out a deal. Indeed, the final shove which compelled the Indian leaders to agree — the British announcement in February, 1947 that the timetable for independence would be drastically speeded up, with a final British withdrawal no later than June, 1947 — was greatly influenced by the fact that London feared the Army might not hold together much past that date. Owing to demobilisation the number of British officers in the Indian Army, war-swollen and already much Indianised, was due to drop from 11,400 to only 4000 over the 12 months from June, 1947.

By the end of April, 1946 Congress had come round to recognising the inevitability of partition, as the only possibility for creating a strong central government in India. It did demand and get the concession, however, that the Punjab and Bengal, the two largest of the six provinces the Muslim League demanded for Pakistan, must themselves be partitioned (the

World Armies

undivided old Punjab was only 57% Muslim, and Bengal also contained a huge Hindu minority). The Viceroy, Lord Mountbatten, formally announced the decision on partition on June 4th, to take effect 11 weeks later, and by the end of the month government committees had been established to apportion between the two successor States all the institutions and resources of the Indian Empire — including the army.

The firm decision that the armed forces must split was reached by the Partition Council on June 30th, and detailed instructions were sent out to all units and formations. A Joint Defence Council and the Armed Forces Reconstitution Committee were appointed to administer the division. It was intended to have a single Supreme Commander until the final sorting out of the Army on communal lines in April, 1948, but at Jinnah's insistence each country was to have some troops under its operational control on its own territory from independence day, August 15th, 1947. Both successor armies would have British officers as Commander-in-Chief for a transitional period, and it was clear that Pakistan in particular would need to retain numbers of British officers in its Army for a while, because of the severe shortage of trained Muslim officers.

Some special difficulties lay in the way of creating a Pakistan army out of the old united force at Partition. Pakistan was to receive an agreed portion of the military stores held by the Army of the Raj, but the new Indian government refused to deliver them after the outbreak of the Kashmir conflict. Almost every ordnance factory lay on the wrong side of the new frontier, as did most of the instructional schools except the Quetta Staff College. Pakistan had to create at once a new junior military academy at Kakul to replace Dehra Dun, a new engineer centre at Risalpur, and all the other schools and depots required by a modern army.

There had never been homogeneous Muslim units in the old Army: the so-called 'class units' were entirely Hindu (Maharattas, Dogras, etc.) and went to India intact. Pakistan got only fragments of units, so it took far longer to reconstitute its army on an organised basis. Eventually it ended up with about a fourth of the personnel, but there was much confusion as individual officers, hitherto isolated from the communal disputes, hesitated between opting for India or Pakistan.

The problem was particularly acute because the main recruiting ground for the old Army had always been the north-west, and especially the Punjab (48% of the Army had come from that province in 1939, and even in the vastly expanded Army of 1947 well over a quarter did), so that many individuals found their homes and property on one side of the partition line in the Punjab, and their religious loyalties on the other. As a result of all this, there was still hardly a single completely formed unit of the Pakistan army in existence when the Kashmir troubles erupted in October, 1947. Several units in Pakistan still had Hindu or Sikh commanding officers, and there were Hindu officers holding appointments at Pakistan Army General Headquarters.

Another problem for Pakistan arising out of the old Indian Army recruiting patterns, though it did not become acute until after the military seizure of power a decade later, was that virtually all the officers and troops it inherited were Punjabis or Pathans (from North-West Frontier Province). There was hardly any representation of the Bengalis, a 'non-martial race' in the old parlance, though they constituted over half the population of the new country, and this extremely lopsided character of the army continued to plague Pakistan's politics down to the separation of East Pakistan in 1971.

With its small army, Pakistan on its foundation took over the bulk of the former defence tasks of the old Army — the Afghan frontier and the tribes — besides what rapidly became a far more pressing matter, the 'internal frontiers' with far more powerful and increasingly hostile India. A degree of hostility was inevitable because of Hindu opposition to the whole idea of partition, not to mention the mutual slaughter of Muslims, Hindus and Sikhs that wracked the Punjab and neighbouring areas after independence day on August 15th, 1947, but the trigger for open and early military confrontation was the Princely State of Kashmir.

Most Princely States had been persuaded to opt for incorporation in the country more appropriate to their religion and location before independence day, but three held out. The two Muslim-ruled States of Junagadh and Hyderabad, which had largely Hindu populations and were physically surrounded by India, were forcibly brought into the Indian Union before the end of 1947 by short, sharp military operations, despite Pakistan's protests. Kashmir was in the opposite situation, with 77% of its 4,000,000 people Muslim and all its communications running westwards into West Pakistan, but ruled by a Hindu dynasty.

For a time the Hindu ruler played with the idea of full independence, but following an incursion of Muslim tribesmen from West Pakistan in October he hastily opted for India. The Delhi government at once responded by airlifting troops into Srinagar, the capital, which they narrowly saved from the invading Pathan irregulars. For the first months Pakistan was at a distinct disadvantage in the conflict that ensued, since it was unable to commit any regular units from its own army, still in the throes of reorganisation and fully occupied with escorting refugee columns in the Punjab, but over the succeeding 14 months there was a steady escalation in the fighting. The first Pakistani regular units were committed in March, 1948, and by the autumn of that year each side had forces committed amounting to several divisions. Just when full-scale war appeared inevitable, however, in December, 1948 the two sides suddenly agreed to an in-place ceasefire to be supervised by the United Nations which left the wealthier and more populous half of Kashmir in Indian hands. (For details of military operations in Kashmir and elsewhere, see *Role, Commitment, Deployment and Recent Operations*).

Three decades later, despite two further rounds of fighting between India and Pakistan, the ceasefire line has not budged, and each country still claims all of Kashmir. UNMOGIP (United Nations Military Observer Group in India and Pakistan) still provides officers to supervise the ceasefire, and the two countries have never ceased to regard each other with intense suspicion. From its very foundation, therefore, the security preoccupation of the Pakistan army has been predetermined.

Afghan invasion might be an occasional worry (it was in the early 1960s, and again to some extent since 1973), but Pakistan's main military problem has invariably been defined by the army as Indian military capabilities and intentions.

'The basic difficulty in Indo-Pakistani relations seems to be the very existence of Pakistan', one observer has remarked. If so, Pakistan's military problem was an enormous one, for at Partition India emerged as a State with four times Pakistan's population, ten times its industrial potential, and three times the armed forces. Almost as many Muslims remained in India as ended up in Pakistan, and practically all the processing plants for Pakistan's main cash crops (cotton in the west, jute in the east) ended up on the Indian side of the border. The two halves of Pakistan were separated by a thousand miles of northern India (and East Pakistan was virtually surrounded by Indian territory), while the sea voyage between the wings took 3000 miles and 10 days.

In this extraordinary State, a curious pattern of military perceptions emerged almost at once. East Pakistan, with 42,000,000 people, was far more vulnerable to Indian military action than West Pakistan, which then held 39,000,000. Indeed, it was probably indefensible militarily, but that makes it no less strange that there should have been no attempt to defend it. Until 1971, only one out of (eventually) 15 Pakistan divisions was based in the East. There was virtually no shooting there either in 1948 or in the 1965 war.

All military attention was focused on West Pakistan, where the great bulk of army personnel originated, and where the Kashmir confrontation was a physical fact. Lahore itself is only 15 miles from the Indian border, and the Kashmir ceasefire line follows the 150 mile Grand Trunk Road and railway between Lahore and Rawalpindi, the most important artery in Pakistan, at an average distance of around 50 miles. Given this acute geographical vulnerability and a bitter territorial dispute with a neighbour vastly more powerful than itself, it is scarcely surprising that Pakistan has always lavished unusually great attention on its armed forces. This was certainly reinforced by what might be called the ideological element in Pakistan.

The sole twentieth century parallel for Pakistan — a State created entirely by an idea — is Israel, which emerged only 10 months later. Both States got their opportunity because of the collapse of the long-established British empire, and both were founded against the violent opposition of the dominant population in the region. Both see their survival as threatened by the hostility of those more numerous neighbours, and a large proportion of the populations are refugees from places abroad where they suffered discrimination and violence. So in both States the prestige of the army is high, military affairs attract much attention (reinforced by the experience of recurrent war, in which both Israelis and Pakistanis see themselves always as innocent victims of aggression), and much is spent on the armed forces.

There is even a further parallel in domestic politics. The fundamental political tension in both States has been between those modernists, predominant in the civil service, the economy and the army, whose outlook is basically secular, and the traditionalists whose defence of old values and ways is immeasurably strengthened by the explicitly religious basis of the State. But two great differences stand out between Israel and Pakistan.

One was the lack in the Pakistan of 1947 of any unifying ideology or spirit more comprehensive than religion, for it possessed none of the cultural and even racial unity implied, and to some extent actually present, in the Zionist movement. Though West Pakistanis varied even among themselves, collectively they were as different in culture, temperament and appearance from the Bengalis of East Pakistan as Bavarians are from Portuguese. West Pakistan was six times the size of the East, but in the latter population densities were seven times higher. Geographically the Western Wing belonged to the Middle East, the East to south-east Asia: the West Pakistani villager got around by camel, the East Pakistani by boat. Shared religion was a bond, but Islam is a universalist religion, not the badge of a tightly defined chosen race, and so was a far less suitable definition for the boundaries of a State — especially one with a 1000 mile gap in the middle.

The second great distinction between Pakistan and Israel, which was in large part a consequence of the first, was that the army became increasingly involved in active politics, and was used to enforce the unity that was not instinctively felt. But its perspectives and its personnel were mostly Punjabi, and the consequences were ultimately fatal for the Pakistan of 1947.

Pakistan suffered a grave loss when its founder and only experienced leader, Muhammad Ali Jinnah, died only a year after independence. When his chief lieutenant, Liaquat Ali Khan, the Prime Minister, was assassinated in 1951, there remained no one of sufficient eminence to give the new and disparate country a clear lead. There followed the 'bad years' of 1952-8, when revolving door governments engaged in shady political deals amidst ramifying general corruption. Power lay in the hands of 'parties' that were mere personal followings ever splintering and reforming, and in the hands of influential civil servants. The Muslim League, always less cohesive organisationally than its Congress rival, disintegrated entirely in 1955, and the mere question of making a constitution deadlocked politics in the country for almost a decade. One of the two or three great issues, even then, was whether the federal assembly should be elected according to population (which would give East Pakistan the dominant voice) or whether the two wings should enjoy equal representation; until that issue was decided elections were out of the question.

By 1958 parliamentary democracy, so-called, was utterly discredited (though in fact the parliamentarians were merely the appointed representatives of provincial legislatures, long since dissolved, which had been elected before independence). As early as 1954 the army began to be drawn into politics, when the then Commander-in-Chief, General Ayub Khan, was opted into a Cabinet as Defence Minister after one of the 'civil service coups'. In 1958 the Prime Minister abruptly abrogated the new constitution (which had provided parity of representation between East and West), banned political parties, abolished the legislature, and proclaimed martial law. But he himself was tainted by the prevailing miasma of

World Armies

corruption and intrigue, and a few days later the martial law administrator, General Ayub, removed him and declared himself President.

The coup was efficient, bloodless and certainly popular. The new cabinet consisted of President Ayub, three other generals and eight non-political civilians. There was a quick, thorough purge of the civil service, in which more junior army officers became directly involved in administering the State for a brief period, but by late 1959 they were almost all back in their cantonments. One of Ayub's guiding principles was that the army should concentrate on its professional duties, and not get tangled up in politics any more than absolutely necessary. Martial law prevailed until 1962, when a new constitution was introduced proclaiming 'Basic Democracies', a form of indirect representation. Ayub was duly 'elected' President.

Pakistan's foreign policy was altered scarcely at all by the change of regime, for it had been largely determined by the confrontation with India from the beginning. For the first couple of years after 1947 the country followed a policy of formal non-alignment, seeking in vain to ensure its security through links with the Commonwealth and with other Muslim countries, but crises in 1950 and 1951 in which India concentrated forces on the Punjab border gave even greater urgency to finding an external source to provide the modern weapons Pakistan could not afford. Accordingly, in May, 1954 Pakistan concluded an agreement on military aid with the USA. Shortly afterwards, it joined the two pro-Western alliances in the region, the Baghdad Pact (later CENTO) and SEATO.

From the beginning the Pakistan-American alliance concealed a fundamental (and to some extent deliberate) misunderstanding. The United States was pursuing its policy of containment against what it perceived as a threat of Soviet expansionism, and sought to build up the Pakistani armed forces against that threat. To a lesser extent it sought military facilities on Pakistani territory (until 1968 it shared the use of Peshawar airbase, and until the 1960 incident in which Captain Gary Powers was shot down over Russian territory it flew secret U-2 reconnaissance missions over the Soviet Union from that base). Pakistan, on the other hand, was hardly at all concerned about the Soviet Union, with which it does not even share a common border, and wanted American military aid to assist in expanding and equipping its army to create a military balance within the subcontinent. Each party tactfully ignored the other's purposes, however, and under the 1954 agreement America promised to arm five and a half divisions with modern weapons, of which two would be armoured divisions. The build-up was remarkably prolonged, and the final completion date was eventually set for 1967. A further bilateral treaty with the United States followed in 1959.

The growth of Pakistan's armed forces over the later 1950s did establish a rough military balance in the subcontinent, although India, with its policy of non-alignment, was intensely suspicious of Pakistan's American link. The Indian military attack on the Portuguese colony of Goa in 1960 re-awakened Pakistani anxieties about New Delhi's tendencies towards military expansionism, and led it to begin cultivating relations as well with the People's Republic of China, then entering the bitterest phase of its frontier disputes with India. A further source of Pakistani anxiety about military security was deteriorating relations with Afghanistan (they were broken off completely in 1962) over the latter's claim to the Pathan-inhabited areas of Pakistan's North-West Frontier and Baluchistan provinces, but the most important cause for Islamabad's growing military worry was the 1962 Sino-Indian War.

During that conflict, which was seen at the time in the West as an unprovoked Chinese invasion, American and British military aid flooded into India. This was seen from Pakistan as misplaced sympathy, a poor repayment for its own open adherence to the Western alliance system, and a process which, if continued, would overthrow the military balance it had managed to establish between itself and India. Though Western military aid to India tapered off rapidly after 1962, its place was more than filled by a growing volume of Soviet military aid, as the Sino-Russian cold war came into the region, and the Indian armed forces began to undergo a rapid expansion and re-equipment. By 1965 an acute fear of impending Indian military superiority had gripped the Pakistani government and armed forces.

The trigger for the 1965 war was once again Kashmir. In December, 1964 the Indian government abolished the special status it had granted in 1950 to the zone of Kashmir under its occupation, and it became effectively just one more Indian State. The original Indian promise of a plebiscite amongst the predominantly Muslim population had never been honoured, and New Delhi's move was seen in Islamabad as an attempt to close the question of Kashmir once and for all as an international issue. Coupled with Pakistan's anxieties about India's growing armed forces (and at the same time its knowledge that a substantial proportion of them would be pinned down on the Himalayan frontier, and that the Chinese forces there would deter any Indian attack on East Pakistan), the Kashmir developments caused Islamabad to have recourse to military means to prevent the final incorporation of the State within India.

It is doubtful if Pakistan initially intended to wage full-scale regular warfare over the issue, but its introduction of guerrillas into the Indian-controlled sector of Kashmir in an attempt to stimulate a general revolt there in August, 1965 led to a rapid succession of counter-moves that transferred the focus of the fighting southwards to the Punjab border. There, in September, 1965 India and Pakistan fought a 22 day war involving the greater part of their regular armed forces and causing around 10,000 casualties. (For details, see *Role, Commitment, Deployment and Recent Operations*.) Neither side gained a decisive advantage, and on September 22nd, they both accepted a United Nations truce proposal. At Tashkent in the Soviet Union on January 10th, 1966 President Ayub Khan and Prime Minister Lal Bahadur Shastri of India signed an agreement for the exchange of prisoners and the mutual evacuation of territories seized during the fighting.

During the fighting Britain and America imposed an embargo on arms deliveries to both combatants, despite Pakistan's status as an ally of the latter. The British arms embargo was lifted in 1966, but the American ban on arms deliveries, except

for spare parts, was maintained until 1975. This did not cause India any major difficulties, as its principal arms supplier was rapidly becoming the Soviet Union in any case, but for Pakistan it was a most serious matter. (Though in 1965, as again in 1971, it did receive some assistance in circumventing the United States embargo from the sympathetic Muslim States of Turkey, Iran and Indonesia). Much of the gap was filled by Chinese military aid, including tanks, combat aircraft, and enough equipment for about three divisions, on extremely favourable sale terms, but Pakistan was also forced to begin spending scarce foreign exchange on commercial arms purchases from France.

There was no immediate domestic reaction in Pakistan after the 1965 war, but when the military regime made the grave error of organising large-scale celebrations on its 10th anniversary in 1968 it released a wave of pent-up resentment at the autocracy, corruption and nepotism that had flourished increasingly in Ayub Khan's later years as President. Students and religious elements, followed by urban workers and even peasants (especially in the East) took part in a mounting wave of agitation and demonstrations. President Ayub Khan made concession after concession, but could not quell the popular unrest or restore law and order. Within weeks he was compelled to resign by General Agha Muhammad Yahya Khan, his successor as Commander-in-Chief of the Army, who became President and reinstated martial law. His avowed (and apparently genuine) intention was to withdraw the army from politics and return the country to parliamentary, democratic rule. It was a decision that brought on the ultimate catastrophe for a united Pakistan.

Under Yahya Khan the 'Basic Democracies' were abandoned, and elections for a new Assembly were called. In deference to the intense resentment in East Pakistan at the way in which the West had dominated and exploited the more populous wing of the country, especially since the 1958 coup, it was decided that seats in the new Assembly should not be allocated on a basis of parity between the two wings, but in direct relation to the population of the country's main regions. (For further details on the growth of secessionist sentiment in East Pakistan, and the army's role in that phenomenon, see the entry on Bangladesh.) This decision meant that East Pakistan would control 56% of the seats in the Assembly.

Pakistan's first ever federal general election was held in December, 1970. The Pakistan People's Party headed by Mr. Zulfikar Ali Bhutto (who first came to prominence as Ayub Khan's Foreign Minister) swept the heavily populated areas of West Pakistan, but Shaikh Mujibur Rahman's Awami League won an even more total victory in the East.

The Awami League won 288 out of 300 seats for the Provincial Assembly; much more importantly, it won all but two of West Pakistan's 162 seats in the National Assembly (303 seats). Shaikh Mujibur Rahman thereby gained the right to become Prime Minister and to enact his Six Point programme, embodying an extreme form of provincial autonomy and decentralisation and leaving only defence and foreign affairs to the federal government. Most Punjabis saw this programme as treasonable, and President Yahya Khan, with the encouragement of Mr. Bhutto, refused to convene the National Assembly until the Awami League modified its radical proposals for constitutional change.

In March negotiations broke down, and the Awami League then forced the issue by seizing effective power in the eastern wing following a general strike by the local police and civil service. On March 26th, 1971 the independence of Bangladesh was declared in Dacca, but the Indian support which was its only hope of success was not immediately forthcoming. Many of the Bengali troops in the single resident army division also supported the new State, but Islamabad had by then begun moving in three further divisions from the West, arrested Shaikh Mujib, and began a programme of vigorous repression. With the aid of the Razakars (a force of irregulars raised mostly from amongst the non-Bengali Muslim minority in East Pakistan) the army in the East embarked on systematic terror which seemed to be aimed at little short of the extermination of the Bengali political *élite* (and, incidentally, of the Hindu minority). By the time international war ended the army's efforts to maintain control of the East, in December of that year, an estimated 10,000,000 East Pakistanis — about a sixth of the population, including about half of the Hindu minority — had fled across the frontier to refugee camps in India.

The probability of Indian intervention in East Pakistan was great, both because of the eventually intolerable burden of refugees from the Pakistan army's operations in the East and because it presented Delhi with a once-in-a-lifetime chance to dismember its great rival in the subcontinent. Pakistan sought a Chinese guarantee (Mr. Bhutto went to Peking in November, when the crisis was reaching its peak), but China's attitude was more reserved than in 1962 or 1965. India, on the other hand, got wholehearted Russian support (a 20 year Indo-Soviet Treaty of Peace, Friendship and Co-operation was signed in August), and for months before December was arming, supporting and assisting large East Bengali guerrilla forces to operate across the border. The USA sought to prevent at least the dismemberment of West Pakistan, which it believed India to be considering at the time, and if possible to persuade the Pakistani government to grant autonomy and seek a peaceful settlement in the East. Washington believed it had got President Yahya's consent to this in November, and so informed New Delhi, but Indian forces struck in the East on December 4th.

The war lasted only 13 days in the East, concluding with a total debacle for the Pakistani forces and leaving 85,000 Pakistani troops as prisoners of war in Indian hands. Fighting in the West was also intense, with Pakistani forces at first on the offensive, but they gained little ground in the Punjab and Kashmir areas, and later suffered considerable territorial losses further south. With the surrender of Pakistan's forces in the East and the independence of Bangladesh, which at once got world recognition, large Indian forces became available for transfer to the Western front, and Pakistan concluded an armistice before the balance of forces there turned overwhelmingly against it. (For details on the 1971 war, see Role, Commitment, Deployment and Recent Operations.) Pakistan plummeted abruptly from a formidable rival to India and the fifth most populous State in the world, to a rump-State with only a tenth of India's population and approximately proportionate military and diplomatic leverage.

The speed with which Pakistan has reconciled itself to its losses and recovered its equilibrium is remarkable, however. Its

World Armies

economy quickly readjusted, and judgement against those responsible for Islamabad's blunders and the reconstruction of a semi-democratic political system were completed in little more than a year. Moreover, Pakistan has already rebuilt its military forces to a size larger than in 1971, though possessing less than half the previous population and a narrower economic base.

President Yahya Khan was dismissed from politics amidst universal execration, and Shaikh Mujibur Rahman was released from prison and allowed to go to Bangladesh one month after the war's end. Mr. Bhutto took over as Prime Minister, and the National Assembly met (less the members from the East) to agree a constitution setting up a federal, parliamentary system. Bhutto sought *rapprochement* with India, concluding the Simla Agreement for the withdrawal of both Pakistani and Indian troops from occupied areas along the common border in July, 1972. A further agreement in August, 1973 provided for a three-way repatriation of all prisoners of war held in India, Pakistan and Bangladesh, and in February, 1974 Pakistan formally recognised Bangladesh. In June, 1974 Mr. Bhutto paid his first state visit to Dacca.

Pakistan left the British Commonwealth in early 1972, in dissatisfaction with Britain's studiously neutral attitude during the 1971 war, and it also withdrew from SEATO within a short time of Mr. Bhutto's coming to power. However it has continued as an active member of CENTO and also maintains close bilateral relations with Saudi Arabia and the Gulf States, for whom it constitutes a major source of important military and civilian technical expertise.

Formal *détente* with India has continued: India and Pakistan again exchanged ambassadors in July, 1976 after a gap since 1971, and in September air and rail links between the two countries were restored for the first time since 1965. Since 1973, however, security preoccupations have re-emerged to plague Islamabad. On the one flank, the revolution in Afghanistan in that year brought back to power Muhammad Daud, the most ardent Afghan proponent of the Pakhtunistan State which would involve autonomy or independence for the Pathan areas of the North-West Frontier and Baluchistan, and Daud's overthrow in April, 1978 by a communist coup has further intensified Pakistani anxiety. Afghanistan is now a far more formidable military proposition than it was during the 1950s, and even short of direct conflict is in a position to lend aid and encouragement to the turbulent and anti-authoritarian tribes of the border regions. This has played at least some part in the persistent low-level insurgency Islamabad has had to contend with in Baluchistan since 1973, and in more sporadic upheavals in the North-West Frontier Province. As a result Mr. Bhutto banned Pakistan's main opposition party, the National Awami Party, in February, 1975. (Its strength was centred in those two provinces, where it formed the provincial governments until dismissed by Islamabad, and it was accused by the central government of autonomist and even secessionist tendencies.) The continuing troubles also led to the re-emergence of that quaint old British custom on the Frontier: local administration by fighter-bomber, with some recalcitrant tribes being disciplined by air raids on their villages (see Role, Commitment, Deployment and Recent Operations).

Pakistan discerns an even more serious threat in the Indian nuclear test of May, 1974 which it fears may portend the eventual development of Indian nuclear weapons despite New Delhi's vehement assurances to the contrary. It has given rise to a determination in Pakistan to obtain at least an option on nuclear weapons of its own, and the danger of nuclear proliferation thus created was a principal factor in the USA finally lifting its arms embargo on Pakistan in late 1975. Really large purchases of American arms, however, seem to be closely linked to a Pakistani commitment to forego this nuclear weapons option, so the situation remains unclear.

Between 1971 and 1977 the Pakistan army abstained from political involvement, both officers and civilians having learned some salutary lessons about its disadvantages in the period immediately preceding. Its personnel continue to be predominantly Punjabi (and to a lesser extent Pathan), but this now more closely reflects the character of the civilian population, as in post-1971 Pakistan Punjabis alone constitute over 60% of the population. The army's primary commitments continue to be to the maintenance of military forces of a size and efficiency adequate to deter any Indian pressures, and to the physical integrity of (former West) Pakistan.

Allegations of widespread vote-rigging in the March, 1977 national elections by the ruling Pakistan People's Party, however, led to the emergence of a coalition of all the opposition parties as the Pakistan National Alliance, and a prolonged period of violent rioting and civil disobedience campaigns in all of Pakistan's main cities. When Prime Minister Zulfikar Ali Bhutto and the opposition alliance finally failed to agree on the terms for a new election in October, 1977 to resolve the crisis, the Pakistan armed forces intervened on July 5th under the leadership of the Army Chief, General Zia ul-Haq, to forestall open civil war. The armed forces' original intention was to supervise the October, 1977 elections and then return to its barracks, but Mr. Bhutto was subsequently placed on trial for murder and the elections postponed. In March, 1979 Pakistan was still under military rule.

STRENGTH AND BUDGET

The strength of Pakistan's armed forces is 428,000 men. Within this total, army strength is 400,000, including 29,000 Azad Kashmir troops. Navy strength is 11,000 men and air force strength is 17,000 men. The army's trained reserves are approximately half a million strong, while naval reserves number 5000 men and air force reserves 8000 men.

There are paramilitary forces totalling 109,100, consisting of 65,000 Frontier Corps, 15,000 Pakistan Rangers, 2000 Coastguard, 5100 Frontier Constabulary and 22,000 National Guard. The 25,000-strong Federal Security Forces, created by Mr. Bhutto in 1973, were disbanded by the martial law authorities in November, 1977 on the ground that they

had been used by Bhutto as a personal instrument of repression and political intimidation (most of the members have been absorbed into the civil police force). In addition, there are four voluntary organisations which function as a form of home guard and second line of defence (*see* Recruitment, Training and Reserves).

The defence budget for 1978–9 was 9,150,000,000 rupees (\$936,000,000). This represents approximately 8% of the GNP, and continues a pattern of accelerating growth since 1972–3, when the defence budget was only 4,440,000,000 rupees.

Pakistan's armed forces are actually larger numerically than they were in 1971, before the more populous half of the country was lost. Both in manpower and in defence expenditure Pakistan's military effort is about 40% of that of India, though the latter State has nine times Pakistan's population and GNP. The population of Pakistan is 78,000,000.

COMMAND AND CONSTITUTIONAL STATUS

By the Federal Constitution adopted in April, 1973 the President is Head of State, but the advice of the Prime Minister, answerable together with his Cabinet to the Federal Legislature, is binding in all circumstances. The Prime Minister is automatically Defence Minister as well, and in time of war exercises Supreme Command over the armed forces.

The Higher Defence Organisation of Pakistan was reorganised in 1975, in the light of the experience of military catastrophe in 1971. It was brought into effect on March 1st, 1976 when General Muhammad Shariff assumed office as First Chairman, Joint Chiefs of Staff Committee (JCSC), a post which supersedes the old office of Commander-in-Chief. The general reorganisation rationalised a series of changes which had already seen the creation of a separate Defence Production Division within the Defence Department, the transfer of Naval Headquarters to the capital and preliminary arrangements to move Air Headquarters there as well, and the promotion of the Chief of Naval Staff and the Chief of Air Staff to the same rank as the Chief of Army Staff, to allow the three services equal say in defence planning. The structure is as follows.

As Minister of Defence, the Prime Minister is assisted by a Minister of State for Defence, who in addition to any duties particularly delegated to him, is responsible for military preparedness, defence planning, civil defence and the defence industries. The Defence Ministry's permanent head is the Secretary-General (Defence), who sits *ex officio* on the Defence Committee of the Cabinet and the Defence Council. The Defence Ministry is made up of the Defence Division, Defence Production Division, the Joint Chiefs of Staff Committee, and the three Service Headquarters (now all physically and administratively contained within the Ministry).

The supreme political authority in defence matters in Pakistan is the Defence Committee of the Cabinet (DCC), chaired by the Prime Minister, and including as permanent members the Ministers of State for Defence and Foreign Affairs, the Ministers of Finance, the Interior, States and Frontier Regions, Kashmir Affairs, Information and Broadcasts, Communications, Commerce, Industries and Production. The Chairman of the JCSC, the three Chiefs of Staff, the Secretaries-General of Defence and Finance and the Secretaries of Defence, Foreign Affairs and Finance are also in attendance. The DCC's responsibility is to determine general strategic and defence policy and force goals, co-ordinate them with the actions of other Ministries, and to supervise the conduct of war. Executive supervision of military policy is carried out by a narrower body, the Defence Council, consisting of the Prime Minister, the Ministers of State for Defence and Foreign Affairs, the Minister of Finance, and the same soldiers and civil servants as attend the DCC. The Defence Council is also in direct charge of policy for the development of Pakistan's arms industry.

The highest military body is the JCSC, whose Chairman in wartime would also serve as Principal Staff Officer to the Prime Minister, and exercise such authority over the conduct of operations as was delegated to him by the latter. His term of office is normally 3 years, and he may be selected from any Service. Other members of the Committee are the three Service Chiefs of Staff, and the Secretary of the Defence Division. Beyond strategic and logistical matters, the JCSC is responsible for generating proposals on force size and structure, and advising the government on strategic communications, the siting and dispersion of major industries, and industrial mobilisation plans. The Secretariat of the JCSC is an inter-Service body organised into eight Directorates, of which the more important are (A) Operations/Plans, (B) Training, (E) Logistics and (G) Personnel.

The individual Service Chiefs of Staff continue to exercise command functions over their respective services through their Headquarters within the Ministry, and to have the right of direct access to the Prime Minister as Military Advisors.

It is difficult to assess how much of this formal structure has been functioning since the military coup of July 5th, 1977. General Muhammad Zia ul-Haq, the Army Chief of Staff, is Chief Martial Law Administrator; immediately after the coup he appointed a four-man military council led by himself to assist President Chaudhury in administering the country until the promised October elections. The other members were General M. Shariff, Chairman of the Joint Chiefs of Staff Committee; Admiral Muhammad Shariff, Navy Chief of Staff, and Air Marshal Zulfikar Ali Khan, Air Force Chief of Staff. After the indefinite postponement of those elections, this military council appointed an advisory council subordinate to itself, whose 16 members (generals, senior civil servants and a few retired politicians) act as departmental ministers. General Zia himself retained the posts of Chief Martial Law Administrator (presumably corresponding to that of Prime Minister in the above-described administrative structure), plus the portfolios of Defence, Defence Production, Information and Broadcasting, Atomic Energy and seven others. Other senior armed forces officers hold the portfolios of

World Armies

Interior, National Security, Industries and Production, Petroleum and Natural Resources, Kashmir Affairs, and States and Frontier Regions, so most of the committees listed above effectively consisted of the armed forces talking to themselves.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role, Commitment and Deployment

The principal role of the Pakistan army continues to be the defence of Pakistan against India, a task considerably simplified militarily by the loss of the virtually indefensible eastern half of the country in 1971. Pakistan also recognises the possibility of a military threat from its opposite border with Afghanistan, however, and if it indulges in 'worst-case' contingency planning (as it almost certainly does) must allow for the improbable but daunting contingency of a co-ordinated attack and a two-front war. In such a case, it would have to place its hope for survival in a military intervention by China to draw off the weight of the Indian armed forces.

The army has also been used repeatedly in internal security operations, most notably in the savage war of repression it fought against Bengali nationalists in what was then East Pakistan between March and December of 1971. More recently, it has been employed in fighting guerrillas in Baluchistan, the empty south-western province of Pakistan, and in less continuous operations against insurgents in the North-West Frontier Province.

Pakistan is still formally linked to the USA by a military assistance agreement, and it remains a member of CENTO in alliance with Turkey, Britain and the USA. It has no specific commitments to lend aid beyond its own borders, however, and no Pakistani troops are deployed outside the country.

Recent Operations

1948

The Pakistan army fought its first war within 8 months of its creation, in the State of Kashmir which was disputed between India and Pakistan. Due to the chaotic conditions in the refugee-thronged Punjab and the rudimentary state of organisation of the new armed forces, however, the regular army did not participate in the first (and as it turned out, decisive) round of fighting in Kashmir.

The troubles in Kashmir, then still a Princely State, began in July, 1947 when the Ruler enlarged his army, which was almost exclusively Hindu and Sikh despite a predominantly Muslim population, and moved it towards the Punjab boundary. Muslim civilians there were ordered to surrender their privately held arms, and this was answered in Poonch province in September by a peasants' revolt which quickly overthrew the Ruler's control. That in turn contributed (together with the massacres in the neighbouring Punjab) to the outbreak of systematic anti-Muslim pogroms in Jammu, the southernmost part of the State and the only region with a Hindu majority. During the succeeding 11 weeks virtually the entire Muslim element of the population there, some half a million people, were killed or fled to the Western (Pakistani) Punjab.

With the connivance of at least some senior officials in the new Pakistani government, Pathan tribesmen from the frontier were transported to the borders of Kashmir, arriving there on October 19th. Their initial attack was badly mismanaged, many Muslims as well as Hindus being killed as they paused to loot on their way to the State's most important region, the Vale of Kashmir, but within a week they were approaching the outskirts of the capital, Srinagar. The Ruler fled, declaring his accession to the Indian Union as he did so, and airlifted Indian troops arrived in Srinagar on October 27th just in time to save the city. They then counter-attacked and drove the tribesmen back for a considerable distance.

Mr. Jinnah ordered the Pakistan army into Kashmir on October 27th, but his acting Commander-in-Chief, General Sir Douglas Gracey, refused to obey. After consulting with Field Marshal Auchinleck, officially Supreme Commander of both armies during the partition period, he pointed out that such a move, which would inevitably mean conflict with the Indian army (also then under a British Commander-in-Chief) would cause the instant withdrawal of all the British officers in the Pakistan army. Recognising that the Pakistan army could not do without British officers at that stage (and recognising also, perhaps, that it would probably lose in a confrontation with the Indian army, which was much larger, had numbers of all-Hindu units undisturbed by the uproar of partition, and enjoyed ample supplies of munitions, while Pakistan's share was being withheld by New Delhi), Mr. Jinnah withdrew his order. During the succeeding months he made do with supplying arms and other aid to the Pakistan fighters and the Azad ('free') Kashmir irregulars, who dated from the time of the Poonch revolt, and included large numbers of ex-soldiers. The fighting continued as a battle of attrition along a fairly stable front over the winter.

With the coming of spring and a major Indian build-up of forces in Kashmir, the first few Pakistan army units were sent into Kashmir in March, 1948. In response to a two-division Indian attack in May, which got within 18 miles of the Azad Kashmir capital of Muzaffarabad, much larger Pakistan regular forces were committed to battle (with the private approval of General Gracey). Reinforcements on both sides continued over the summer, and a further strong Indian offensive in October in Poonch province gained much ground, causing a large new wave of Muslim refugees. Pakistan's response was

boldly to pull out most of its forces in the Punjab plains guarding Lahore, leaving its largest city only lightly guarded, and to move them into positions for a possible decisive counter-attack against Indian communications in Poonch, the sole land link with Indian forces in the Vale of Kashmir. The attack never came, though, perhaps because of fear of an Indian counter-thrust against Lahore, and a ceasefire was suddenly agreed at the end of 1948. The positions held by the two armies in Kashmir have hardly changed at all since that time, and have gradually hardened into a *de facto* international frontier.

1965

The 1965 war was in large part a replay of the 1948 conflict with much greater forces, the military phase being initiated once again by Pakistani concern over the growing assimilation of Kashmir into India, an attempt to reverse the trend by the introduction of irregulars, and rapid escalation to the use of regular forces. After an initial border clash in April in the Rann of Kutch, a worthless area of salt desert well to the south of the Punjab, in which Pakistan came off best, the actual hostilities in Kashmir were initiated in August by the introduction of several thousand Islamabad-backed irregulars who, it was hoped, would trigger an anti-Indian rising amongst the overwhelmingly Muslim population of the Vale. The Indian army easily contained these incursions, however, and its counter-measures included several crossings of the ceasefire line and the seizure of strategic positions in Azad Kashmir.

Full-scale operations began on September 1st with a Pakistani attack by two brigades supported by tanks at Chhamb, at the extreme south-west of the ceasefire line, in an attempt to cut one of the two roads which were vital to the whole 150,000-man Indian garrison in Kashmir. It made significant progress, and the Indians expected it to be followed by a second thrust in Jammu to cut the only other road supporting their Kashmir positions. As Mr. Nehru had previously warned Pakistan, New Delhi's response was to launch an all-out attack on the Punjab border. It began on September 6th, with a three-pronged advance on Lahore, followed the next day by a second offensive against Sialkot, an important road and railway centre 50 miles to the north. By September 8th fighting had spread along a 1200 mile front, with an Indian advance underway as well in the uninhabited deserts of the Sind-Rajasthan border region 400 miles south of the Punjab.

At the outbreak of hostilities, it was estimated, there were eight (larger) Indian divisions on the West Pakistan border, plus three in Kashmir, against a total of seven divisions in West Pakistan. There were another six Indian divisions stationed in the Himalayas and containing East Pakistan (where hardly any fighting occurred, probably due to the possibility of a Chinese reaction to an Indian attack there), and at least some of these forces were later brought west. In armoured forces the two sides were approximately equal, and India enjoyed air superiority at least in numbers. In the circumstances it is surprising that Pakistan should have felt any optimism, but it was misled by a certain conviction of the innate superiority of its own Muslim forces, and by a serious underestimation of the degree to which the Indian forces had already improved since their 1962 disaster at the hands of the Chinese. Far from being concerned at the possible outcome of a war with India, Field Marshal Ayub Khan, who personally directed Pakistan's military operations, had been known to boast that his tanks could reach New Delhi along the Grand Trunk Road (a distance of some 200 miles) in a matter of hours.

During the next 17 days the fighting was extremely heavy in the Punjab, but no decisive results were gained by either side. The Indian drive on Lahore got to within 5 miles of the city in places, but was effectively halted by the Pakistan action of blowing some 70 bridges across the BRB canal just east of the city. The main Pakistani counter-attack was made by their First Armoured Division south of Lahore, with the intention of swinging round behind the Indian forces and cutting the Grand Trunk Road east of Amritsar, but it was stopped by Indian forces just across the border. The second main Indian attack, which led to large and sustained tank battles over a period of a week, was made by the Indian First Armoured Division around Sialkot, and countered mainly by the Pakistan Sixth Armoured Division. At the ceasefire Indian forces were still fighting on the BRB canal east of Lahore, and the city of Sialkot was partly enveloped, but neither army was at the end of its strength. There were no major air raids on urban areas, and the Pakistanis generally got the best of the air battles with their superior aircraft.

At the end of the war India controlled about 720 square miles of Pakistani territory, most of it in the Punjab, while Pakistan held around 300 square miles of Indian territory of which most was empty Rajasthan desert. (The occupied territories were evacuated by the terms of the Tashkent agreement of January, 1966.) Indian casualties were estimated at 4000-6000, with up to 300 tanks and around 70 aircraft destroyed; Pakistani casualties numbered around 3000-5000, with about 250 tanks and 20 aircraft destroyed. Nevertheless, by the end of the fighting the Pakistan army was hurting badly; most of the important terrain lost had been Pakistani, and ammunition was beginning to run low, while fresh Indian forces were arriving on the scene. At lower ranks both sides had fought bravely, though sometimes displaying a certain awkwardness in the use of advanced items of weaponry; it was generally agreed by outside observers that Indian commanders had displayed somewhat more imagination and flexibility in their tactics. One unarguable consequence of the war was to fix even more firmly the popular conviction in Pakistan that India's ultimate political purpose was the destruction of the country.

1971

The 1971 war was an unmitigated disaster for Pakistan, and a humiliating defeat for its army. It not only lost in areas where victory was not to be expected (i.e. East Pakistan), but it failed to do even as well as it should have done.

World Armies

Once the declaration of Bangladesh independence was made in March, 1971 and the Pakistan army in the eastern wing of the country began its savage campaign of repression, the fate of united Pakistan was effectively sealed. Even given the acute need for troops in the East to contain Bengali nationalism, Islamabad could not afford to weaken West Pakistan's defences in the general war with India which would, as President Yahya Khan announced in the autumn, be the certain consequence of Indian armed intervention in the Bengali province. That meant that General Niazi, the Pakistani commander in the East, had only four divisions plus about 20,000 irregulars, a total of some 93,000 men, and 23 aged jet fighters to defend 1400 miles of border and to contain the ever-swelling guerrilla forces operating within East Pakistan.

It is unquestionable, however, that his own tactics before the war increased the magnitude of his problem. From March onwards there was virtual civil war in the East, with Bengali villagers massacring the so-called 'Biharis' (non-Bengali-speaking Muslims who had come from India at Partition and were mostly loyal to a united Pakistan), and the Biharis in turn being organised into irregular units called Razakars by the Pakistan army to return this treatment with interest. The millions of refugees who fled to India constituted the raw material from which various guerrilla forces were created and armed by the Indian government, notably the Mukhti Bahini (People's Liberation Army), and sent back into East Pakistan to tie down Pakistan army forces. The most appalling slaughter took place during this phase of irregular fighting before the Indian invasion, with estimates of dead (mostly Bengali-speakers, and particularly Hindus) ranging from 300,000 to 1,500,000.

Pakistan's strategy, such as it was, took the form of a plan to launch a pre-emptive attack in the Punjab when the Indian invasion of East Pakistan seemed ready to proceed at last. There was plenty of notice of this, as Indian forces were gradually built up on East Pakistan's frontiers and border crossings by Indian regular troops became more frequent (the first occurred as early as October 27th). The final indication was given by the shift of four out of the ten Indian divisions on the Himalayan frontier to the East Pakistan border (the Himalayan passes were closed by snow at least until March, so no direct Chinese intervention would have been possible even if Peking had wished it).

Accordingly, Pakistan launched a co-ordinated series of air strikes on military airfields in north-west India at dusk on December 3rd, in emulation of Israeli tactics in 1967. After some delay, these were followed by a strong ground offensive in southern Kashmir and the northern Punjab. The Indians had also studied the 1967 war, however, and their aircraft were mostly well protected or dispersed. The following morning, December 4th, they invaded East Pakistan with about eight divisions — some 160,000 men — accompanied by perhaps 50,000 Mukhti Bahini.

All Pakistani air strength in the East was immobilised at once by an Indian raid that put the only jet runway out of commission, and the Indian advance, crossing the whole length of the frontier in more than 20 columns, advanced rapidly against weak opposition. General Niazi, recognising the impossibility of holding the frontier, had deployed his forces in defensive groups protecting the main towns and river crossings. The terrain was ideal for prolonged defence, but Indian forces avoided frontal assaults and moved round his positions in rapid flanking manoeuvres, assisted by an imaginative use of helicopters and paratroops. Position after position was abandoned by its Pakistani garrisons, but Indian forces reached the two main rivers — the fall-back Pakistani defensive line — before the bulk of the Pakistani defenders.

Cut off in a hostile countryside, with no possibility of reinforcements and no good news from the Western theatre of war, the Pakistan army's morale in the East began to crumble rapidly. Although the outcome of the campaign was a foregone conclusion after the first week, General Niazi's largely undamaged forces could have held on in Dacca and other strong defensive positions for weeks, perhaps months. But their will to fight had vanished, and General Niazi surrendered his whole force in Dacca on December 16th, only 13 days after the invasion had begun. Approximately 85,000 Pakistan army officers and troops became Indian prisoners of war.

The absence of any counterbalancing Pakistani successes in the West was in part a reflection of the way the military balance in the subcontinent had swung against Pakistan since the Indian army's reorganisation and expansion, begun after 1962, had been completed. While maintaining forces on the Chinese frontier and employing a 2:1 superiority against Pakistan's forces in the East, India was also able to provide a 3:2 superiority in troops in the West, and almost 2:1 in tanks (1270 for India against 700 for Pakistan). Indian air superiority was complete in the East and almost 2:1 in the West, while at sea the Indian navy was hardly challenged at all.

As a result, Pakistan's initial armoured thrusts in southern Kashmir and the Punjab were halted almost at once, and a costly war of attrition ensued along the border. Further south in the Sind Desert the Indian army captured about 2750 square miles of territory, useful for post-war bargaining purposes, whereas the Pakistan army ended the war holding a mere 50 square miles of Indian territory. The much smaller Pakistan navy suffered severe losses (22 vessels) at the hands of the Indian navy, which lost only one ship, and the concentration of the Pakistan air force over the Punjab battlefields and in the air defence of Islamabad left large Pakistani cities like Karachi open to punishing air raids. The military situation was already becoming extremely serious for Pakistan in the West on December 16th when its forces in East Pakistan surrendered, raising the prospect that Indian forces could now be concentrated in the West. President Yahya Khan agreed on December 17th to the ceasefire which India had already announced, and was placed under house arrest the same day. Pakistani losses in the war, quite apart from the immense bag of prisoners taken by India in the East, were around twice those of the Indians.

An American carrier task force was deployed in the Bay of Bengal during the war in an attempt to moderate India's actions, but it was clear to all that this was entirely bluff, and that the USA would not contemplate the use of military force against India under any conceivable circumstances. Neither did China offer Pakistan anything more than commiserations.

India, on the other hand, received the enthusiastic support of the Soviet Union, and demonstrated the transformation in its military strength that had been accomplished in the preceding 8 years by the programme of armed forces reorganisation and the creation of its own defence industries. The 1971 war did not create a radically new military balance in the subcontinent; it gave proof of one that had already come into existence.

Pakistan at once set about the lengthy process of rebuilding its military strength, but it also recognised that the disaster had been made more complete by a high degree of incompetence in the senior ranks of the army, caused in part by their pre-occupation with politics and consequent abandonment of their military duties. The 1976 White Paper on the Higher Organisation of Defence was scathing in its criticisms of the defence organisation prevailing in 1971: 'The defence policy had virtually become the responsibility of one man and his coterie . . . The system of control and direction of the armed forces was a hodge-podge of colonial and totalitarian features . . . The Defence Ministry itself was no more than a routine co-ordinating agency.'

There were, the White Paper revealed, no joint army-air or navy-air plans; there was not even a regular system of consultation between the services. All power had become concentrated in the General Headquarters (army), which was the base of operations of the Commander-in-Chief and Chief Martial Law Administrator, President Yahya Khan, and inter-service communications were so bad that the Chief of Naval Staff only heard of the outbreak of war through a radio news bulletin. The Army Chief of Staff had spent several days trying in vain to get in touch with the Commander-in-Chief before the initial Pakistani air strikes in the West, and stated later that he had 'not the faintest idea' what strategy his superior intended the army to follow them up with. 'The logical outcome of this state of affairs,' concluded the White Paper, 'was the whimsical, unplanned, partial and ill-fitting measures that were resorted to in the 1971 war and which resulted in the loss of half the country.'

It remains to be said only that martial law is the canker of armies, and that the Pakistan army by 1971 had been through three martial laws. There is little doubt that the glaring defects revealed in 1971 have since received close attention (the reorganisation of the higher command structure is detailed under Command and Constitutional Status). There is now once again martial law in Pakistan, however.

Internal Security Operations Post-1971

There were sporadic rebellions against the central government between 1958 and 1967 in the south-western province of Baluchistan, an extremely backward, mainly tribal area the size of Italy, but with only 2,500,000 people. The Baluchis are a distinct people, who also live across the border in south-eastern Iran and southern Afghanistan, and their leaders have always sought a wider autonomy within Pakistan from what they see as Punjabi control. Like the Pathans further north in North-West Frontier Province, their main political organisation since before Pakistan's independence has been a party now known as the National Awami Party (NAP).

The NAP, long banned, was legalised by Mr. Bhutto in early 1972, and formed the provincial government in both provinces following the elections later that year. The central government's suspicions about its eventual political purposes were soon reawakened, however, and the NAP was soon being accused by Bhutto of propagating the seditious notion that there were 'four or five nations' within Pakistan. The central authorities also concurred with Pakistan's neighbour, Iran, in seeing Baluchi nationalism as part of a complex conspiracy headed by India, the Soviet Union and Iraq to dismember Pakistan, merge the North-West Frontier Province with Afghanistan, and create an independent Baluchistan, thereby providing a pro-Soviet corridor to the Indian Ocean.

The pretext for moving against the NAP governments in the two provinces was provided by the 'discovery', on February 10th, 1973 of a huge cache of Soviet arms allegedly destined for Baluchistan in the Iraqi Embassy in Islamabad. There are strong grounds for believing that they were planted there with the complicity of the Pakistan authorities. Two days later President Bhutto dismissed the coalition government formed by the NAP in Baluchistan and removed the NAP governor of North-West Frontier Province (the coalition government there resigned in protest). Thereupon elements of the Bizenjo, Marri and Mengal tribes who had provided the backbone of political support for the NAP embarked on a guerrilla campaign in Baluchistan. The coup in Afghanistan later in the year, leading to the revival of the Afghan campaign in support of Pakhtunistan, caused further anxiety in Islamabad, and by the end of 1973 substantial Pakistan army elements had been committed to the fighting in Baluchistan.

For the first year of the fighting, which began seriously in May of 1973, the army was largely on the defensive, suffering serious losses in ambushes and unable to prevent frequent bomb explosions even in Quetta, the provincial capital. By early 1974, however, Pakistan army strength in Baluchistan had risen to about 50,000-60,000 troops, and reliable reports state that 25 Chinook helicopters provided by Tehran, complete with Iranian pilots, were also based in Quetta for use in the counter-insurgency operations. (Iran, with its own Baluchi minority across the border, took the revolt extremely seriously from the first.) In May, 1974 the government launched the first of the 'encirclement and suppression' operations, codenamed the Chamalang Campaign, and by the end of the year had succeeded in pushing the guerrillas out of the lowlands back into three mountainous areas, the tribal strongholds of the three major insurgent tribes.

The fighting then continued at a lower intensity, with up to 20,000 Baluchi guerrillas associated with the NAP or the more explicitly Marxist Baluch People's Liberation Front holding out in three mountainous areas east and south of Quetta: Marri-Bugti, Sarawan and Jhalawan. All main routes were guarded by blockhouses, towns were heavily garrisoned, and in

World Armies

the most affected areas much of the civilian population were resettled in so-called 'people's colonies' which, despite the army's denials, closely resemble the 'strategic villages' of classic counter-insurgency theory. Bhutto made no political moves towards reconciliation (the NAP was banned nationally in February, 1975 and its main civilian leaders arrested), and the federal forces were not successful in rooting out the hard core of the guerrilla units in the interior of their mountain strongholds.

In October, 1976 a Government White Paper stated that the Baluchistan rebellion had collapsed, with the surrender of 5500 rebel tribesmen, but this seems an excessively optimistic assessment. The casualty figures provided by the government — 385 killed in the preceding year, of whom 144 were members of the security forces — likewise seem improbably low. Reliable private Pakistani sources put Pakistan army dead and wounded since 1973 at between 3000 and 6000 men.

In the North-West Frontier Province disorders have been more sporadic and isolated, but nevertheless persistent. In September, 1976 there were reports that up to two divisions were used in Dir State in the tribal regions, in conjunction with the Pakistan air force, in a 10 day military operation which killed between 300 and 600 rebels and civilians. The following month tanks and aircraft were used to flatten the village of Wana, where tribesmen had been resisting army attempts to build a strategic road in the area.

Though these problems in the disaffected regions of the two western provinces were a steady drain on the army's resources and a thorn in the government's side, they were not in themselves a threat to the country's integrity. In Baluchistan, where the military difficulties were far greater, Mr. Bhutto's basic strategy was to hold the line militarily while cutting away at the roots of the tribal system (in April, 1976 he decreed the abolition of the Sardari — tribal chieftain — system) and to foster rapid development. Federal government investment in the province has increased greatly since the outbreak of fighting, and assistance from anxious Iran (\$76,000,000 in 1975 alone for development projects in Baluchistan) is even larger than that from Islamabad.

Mr. Bhutto's overthrow by the army in July, 1977 has led to a substantial decrease in the intensity of fighting in Baluchistan. At the end of the year the military government amnestied all 50 leaders of the National Awami Party from Baluchistan and NWFP who were under trial on charges of sedition (although the ban on the NAP itself was maintained).

However, the left-wing coup in Afghanistan in April, 1978 has been followed by some early signs that the new government in Kabul is inclined to renew Afghan support for the independence movements in the two border provinces. This has revived the nightmare of 1973–5 in Pakistan: the fear that a pro-Soviet Afghan regime might succeed in creating an independent Pakhtunistan and Baluchistan out of Pakistani and Iranian territory, with the purpose of establishing a corridor of Soviet-aligned States down to the Indian Ocean coast. Moreover the fall of the Shah in Iran in early 1979 virtually guarantees that there will be no help available to Pakistan from that quarter for some time to come should Afghanistan pursue this goal.

Whatever the actual intentions of Kabul may be, this possibility is taken very seriously in Islamabad. Pakistan's ability to deal with such a challenge is severely circumscribed by the present domestic political situation: during 1975–6 over two divisions were employed in dealing with the Baluchistan revolt alone, but now 14 out of 17 division-equivalents in the Pakistan army are deployed in Punjab and Sind provinces, the main centres of population, to deal with the internal crisis. Given this duty, and the permanent necessity of maintaining large forces on the Indian frontier, the Pakistan army is not able to provide a comparable counterweight on its western frontier to the 13 divisions of the well-equipped Afghan army, which are mainly based near the passes across the frontier. This latest panic may ultimately prove as ill-founded as that of 1973–5, but at the moment it is probably the western rather than the eastern border that constitutes the first strategic priority in Islamabad.

ORGANISATION

Arms of Service

The Pakistan army inherited from the British, and has largely preserved, a 'regimental' system of internal organisation. At Partition, those regiments with a majority of Muslim soldiers became Pakistani, while the corps were divided proportionately (30% of the old Indian Army was Muslim in 1947). In all, eight out of the 23 British–Indian infantry regiments (each being of several battalions) came to Pakistan, eight out of 21 cavalry regiments, and eight and a half out of 27 artillery regiments.

Unlike the Indians, however, who have preserved their regiments intact, the Pakistanis have somewhat amalgamated their infantry, which is now grouped into four multi-battalion regiments: the Punjab Regiment, the Frontier Force Regiment, the Baluch Regiment, and a new formation, the Azad Kashmir Regiment. The East Bengal Regiment (infantry) ceased to be part of the Pakistan army in 1971. The cavalry remain unchanged: 5th Horse (Probyn's), 6th Lancers (Watson's), 10th Cavalry (Guides), 11th Cavalry (Frontier Force), and 13th, 15th, 19th and 20th Lancers; four new regiments have been raised — 22nd, 23rd, 24th and 25th Cavalry. The other arms and the corps are: Pakistan Artillery, Engineers, Signals, Electrical and Mechanical Engineers, Ordnance, Military Police, Medical, Education, Clerks and Supply Services.

The air force is divided into Flying (operations), Administrative and Training Commands. Like the navy, its internal structure largely preserves the British pattern.

Operational

The army is organised into corps, divisions, brigades and battalions on British lines. There are two armoured divisions, 14 infantry divisions, three independent armoured brigades, three independent infantry brigades, two air-defence brigades and five army aviation squadrons. A corps consists of two or more divisions commanded by a lieutenant-general, provided with a complete headquarters staff. Infantry divisions are made up of infantry, artillery, engineer, signals and supply units required for sustained independent action, and are organised into three brigades each consisting of three battalions. Divisional artillery and engineer units of battalion size are usually referred to as regiments. Armoured divisions contain a varying number of tank battalions (also referred to as regiments), plus mechanised artillery and the usual support services.

Those units definitely identified as being in the West in 1971 were I, II and IV Corps; 1st and 6th Armoured Divisions, and 7th, 8th, 10th, 11th, 12th (Azad Kashmir), 15th, 17th, 19th, 23rd (Azad Kashmir) and 33rd (Infantry) Divisions; and 8th Independent Armoured Brigade. The divisions lost in Bangladesh were the 9th, 14th, 16th and 36th; some, if not all, of these divisions have now been re-raised in the West.

Army headquarters has been moved from Rawalpindi to the Ministry of Defence in Islamabad. The present Chief of Army Staff is Lieutenant-General Zia ul-Haq.

The air force's former general headquarters at Peshawar, and naval headquarters in Karachi, have now also been transferred to the Ministry of Defence in Islamabad. The principal naval base and dockyard remains in Karachi. The air force is divided into two groups, with headquarters at Peshawar and Lahore; air force installations are at Chitral, Derg Road (Lahore), Gilgit, Kohat, Malir, Mauripur, Miramshah, Peshawar, Risalpur, Samundri and Sargodha. There are four fighter squadrons, eight fighter-ground attack squadrons, one reconnaissance squadron, one light bomber squadron and one maritime reconnaissance squadron.

RECRUITMENT, TRAINING AND RESERVES

Recruitment in the armed forces is voluntary; enlistments are permitted from the age of seventeen and are usually for 7 year periods. The three services recruit separately, and have no difficulty in maintaining units at full strength, although the navy and air force sometimes have difficulty in getting recruits with the required special skills.

Officers must pass qualifying academic and physical examinations before appearing before the Inter-Service Selection Board for interview. A large proportion of successful candidates are graduates at the cadet colleges which were founded in the 1950s to raise the educational qualifications of applicants, or former members of the University Officers Training Corps, although these institutions carry neither the obligation nor the guarantee of admission to the Pakistan Military Academy.

The Academy, founded in 1948 at Kakul (near Rawalpindi) is the main source of regular officers, and provides a two and a half year course in military and academic subjects leading to a BA or BSc degree. The degrees are of a standard comparable to or higher than those awarded by Pakistani universities. The principal exception to this method of entry is in the procurement of officers for the Army Education Corps, charged with raising the educational standards of recruits entering the army: they are generally university graduates who attend a short military course at Kakul before being commissioned.

Newly commissioned Academy graduates are then given basic training in their arm or service at the appropriate corps school. These schools, which also provide subsequent specialist courses for officers and NCOs, include: the School of Infantry and Tactics and the School of Electrical and Mechanical Engineers at Quetta; the School of Artillery and the Armoured Corps School at Nowshera, the School of Signal Communications at Kohat and the School of Military Engineering at Risalpur (all in the vicinity of Peshawar); the Army Administration School at Murree, the Army Education School at Topa and the Army School of Music at Abbotabad (all around Rawalpindi); and the Army Aviation School (which gives a 5 year course in flight training and artillery observation) and the Army Apprentice School both in Rawalpindi itself. The Apprentice School runs a 4 year course training technicians for the Signal Corps, Engineer Corps and the Corps of Electrical and Mechanical Engineers.

Higher military education is provided by the Command and Staff College at Quetta, originally established in 1905 for the British Indian Army. It offers a 10 month course in tactics, staff duties, administration and command up to division level, and attracts numbers of officers from other countries. Considerable numbers of senior Pakistan army officers also attend staff colleges abroad.

Pakistan navy officers attend the Military Academy for about 6 months, followed by about 18 months of academic instruction and naval training at the Naval Academy, which is located aboard the old light cruiser *Babur*. Further training is done on-the-job in the ships of the fleet. Naval ratings are trained in Karachi naval base at the Basic Training Establishment, known as *The Bahadur*, and subsequently at sea. The fleet periodically conducts joint exercises with other CENTO navies.

The Air Force College at Risalpur provides a 2 year course in academic and technical subjects and flying training, after which most students pass to the Fighter Leaders School for advanced flying and weapons training. The Air Force College of Aeronautical Engineering, affiliated to the University of Karachi, was opened in 1965 at Korangi Creek in Karachi to provide aeronautical engineers for the air force and the civil airlines, and grants a BSc degree in electrical and mechanical engineering; the associated apprentices' school gives technical training to air force NCOs. The highest level of instruction is

World Armies

provided at the Air Force Staff College at Dergh Road (near Karachi), which was opened in 1959 to give a 10 month course in higher command to selected senior officers. The air force has conducted joint exercises with fellow CENTO members Iran and Turkey.

Army recruits receive their basic training at the training centre maintained by the unit to which they are assigned, and with which they will generally remain throughout their service careers. Most regimental-sized garrisons have their own training centres, and basic training lasts from 4½ months to 12 months depending on the branch of service. Subsequent specialist training for NCOs is provided by the schools maintained by each arm and service. The army-wide annual training cycle starts with individual training from spring to autumn, commences unit training in October and frequently culminates in divisional or corps exercises in January.

The Army Education Corps operates schools in almost all company-sized units to improve the educational level of enlisted men and NCOs. The curriculum, which extends flexibly over a number of years, is designed to qualify participants for the Army Special Certificate of Education, approximately equivalent to graduation from secondary school. Specific educational qualifications are required for promotion in grade and for desirable duty assignments, and a large proportion of army enlisted men take part in the programme.

Army pay and welfare benefits compare favourably with those for similarly qualified people in civilian occupations, and much attention is paid to sport and recreation facilities. Retiring servicemen benefit from pre-release vocational training, pensions and welfare funds, a degree of preference in selection for some civil service posts, and land resettlement schemes. Morale is generally excellent, as is the relationship between soldiers and civilians, who hold them in high esteem.

The Pakistan armed forces possess a much more comprehensive and competent military training establishment than most Asian or Middle Eastern countries, and as a result their officers are in high demand in the small Arab States of the Gulf which are in the process of creating new armed forces. A large proportion of the combat aircraft of these countries, for example, is flown by ex-PAF pilots serving on loan or contract.

The regular army's reserves are extremely large at approximately 500,000 men, but there is not much by way of an organisation to deal with their mobilisation and deployment. Air force reserves are 8000 and navy reserves 5000. There are also 109,100 men in paramilitary regular forces in Pakistan, including some 65,000 hill tribesmen of the North-West Frontier Province are organised into the irregular Frontier Corps along the Afghanistan and Iran borders.

For those who have never done regular military service, or whose reserve liability has expired, there are four voluntary home defence corps. They have been reorganised since 1972, since their predecessors failed to give good service during the 1971 war, and together are supposed to constitute a second line of defence. They consist of a women's corps, a Mujahid (Crusaders) force, a Janbaz (Janissaries) force and a national cadet force.

In this scheme, which is based on the concept of a 'nation in arms', the women's corps is open to all fit persons of that gender, while the national cadet force is for male college and university students. The Mujahid force is open to men of eighteen to thirty who have no regular service experience, and provides them with a few month's initial training followed by periodic refresher courses of a month each. The Janbaz force is open to men from eighteen to fifty, and it is expected that ex-servicemen whose reserve liability has expired will form its backbone. These forces would be used primarily for civil defence and home guard duties in their own home districts in wartime.

EQUIPMENT AND ARMS INDUSTRY

Equipment

Pakistan's armed forces have one of the widest and most awkward mixtures of military equipment in the world, in terms of national origin. It is a logistical nightmare, involving major American, British, French, Russian and Chinese weapons, with Swedish thrown in for good measure. Pakistan's weapons, like geological strata, contain the history of its diplomatic triumphs and difficulties ever since its foundation.

From 1947 to 1954 Pakistan's military equipment was British, after which its equipment came from the USA until 1965. Between 1954 and 1970 Pakistan received \$2,800,000,000 in American military aid, but after 1965 the United States' arms embargo restricted deliveries to spare parts. It then received Russian arms aid for a brief period, and Chinese military aid including Chen-6 fighters (an advanced Chinese version of the MiG-19), T-59 tanks and enough equipment for three infantry divisions. The Chinese aid still continues at a slower pace, and Pakistan also commenced buying arms from France (and, in one case, Sweden). Full-scale American arms sales to Pakistan (and India) also became possible in 1975, when the United States' embargo was finally lifted.

The Pakistan army's major equipment includes 250 American M-47/48 medium tanks, 50 Russian T-55s and 700 Chinese T-59s. It also operates 50 M-24 light tanks, some M-4s and 15 PT-76s. It has 550 M-113 APCs.

The army's artillery strength consists of about 1000 25-pounder, 75 mm pack, 100 mm, 105 mm, 130 mm and 155 mm guns and howitzers, M-7 105 mm SP guns, and 270 107 mm and 120 mm mortars. It possesses 57 mm and M-36 90 mm SP anti-tank guns; 75 mm and 106 mm RCL and Cobra ATGWs (TOW ATGWs on order); and ZU-23, 30 mm, 37 mm, 40 mm, 57 mm and 3.7 in AA guns. It also has nine batteries of Crotale SAMs.

The Army Aviation Wing has 40 O-1E light aircraft, and 12 Mi-8, 35 Puma, 12 UH-1H, 20 Alouette III and 20 Bell 47G helicopters.

The navy has four *Daphne*-class submarines and five SX-404 midget submarines. It operates six destroyers, one frigate, 19 patrol boats and seven coastal minesweepers of British and Chinese manufacture, and four Alouette II and six Sea King SAR helicopters.

The air force has 257 combat aircraft. There are four fighter squadrons with 21 Mirage III EPs/DPs and 28 Mirage VPAs, and nine fighter-ground attack squadrons with 40 F-86s and 135 MiG-19s/F-6s. There is one reconnaissance squadron with 13 Mirage III RPs, one light bomber squadron with 11 B-57B Canberras, and one maritime reconnaissance squadron with three Br 1150 Atlantic aircraft and two HU-16B helicopters. Air transport includes 12 C-130Bs, one L-100, one Super King Air, one Bonanza, one Falcon 20 and one F-27. Helicopters include 10 HH-43Bs, 12 Alouette IIIs, one Puma, 12 Bell 47s and 10 CH-47s. Trainers include 45 Saab Supporters, 12 T-33s and 30 T-37s. The air force has on order 10 Mirage VPA fighters, four Super Frelon helicopters and Sidewinder AAMs.

Arms Industry

Pakistan's arms industry at the moment is largely restricted to repair and maintenance, and the manufacture of small arms, spare parts and ammunition for its wide variety of weapons types, this being carried out in two State arms factories, the larger of which is at Wah, near Rawalpindi. It has major projects underway to increase its capabilities, however, and envisages an eventual ability to manufacture submarines and missile boats, tanks, artillery and tank guns, military vehicles, missiles, radar and sophisticated electronic equipment. Seven new arms factories are already scheduled to be opened, and there is no doubt that Pakistan does have the skilled personnel gradually to achieve its ambitions. A major question is money, for large sums are clearly involved, but some assistance has already been made available by the wealthier Arab States. In November, 1976 for example, Saudi Arabia agreed to provide Pakistan with \$1,100,000,000 to finance economic and military projects.

There is also the possibility of joint projects with Western manufactures. In November, 1976 an agreement was concluded to manufacture about 60 Cessna T-41 basic trainers and 50 Hughes 500 helicopters a year in a factory near Campbellpur in Pakistan. Initially Pakistani input will be confined to the assembly of imported United States-built components, but there are plans to manufacture a gradually increasing number of parts locally. An already established aircraft industry, run by Pakistan Army Aviation at its main base at Dhamial (near Rawalpindi), manufactures Cessna O-1 observation and liaison aircraft (with 60% of components locally produced) and Alouette III helicopters at the rate of approximately one each per month. However, the most ambitious project, a proposal to assemble up to 70 Mirage F-1s a year in Pakistan for domestic use and sale to Middle Eastern countries, much discussed in 1974-5, has apparently run into difficulties because of Dassault's agreement with the Arab Organisation for Industrialisation in early 1977 to build Mirages in Egypt for sale throughout the Arab world. Instead, Pakistan opened a new aeronautical complex at Kamra, 40 miles north of Rawalpindi, in May, 1978 which will carry out all overhaul work on its existing Mirage III and V aircraft and end the need to send them to France for major maintenance work after July, 1979. This factory, which will eventually cost about \$75,000,000, will also undertake the overhaul work on Pakistan's Chinese-built MiG-19s, and will build Swedish-designed Mashaak trainer aircraft under licence.

Whatever the longer-term successes of Pakistan's nascent arms industry may be, the government feels a short-term requirement to buy arms abroad. As a result of the ending of the United States' arms embargo in 1975, it has already ordered some smaller items such as TOW missiles, but the most urgent need is to replace its extremely aged F-86 ground-attack aircraft (and at a rather later date, its MiG-19s as well). In 1976, therefore, it sought permission to buy up to 110 A-7 Corsair II strike aircraft from the USA for \$700,000,000. (These aircraft, like Pakistan's Mirages and MiG-19s, are capable of carrying small nuclear weapons, but they also have the range to reach almost anywhere in India.) There is already some speculation that Pakistan may have to turn to Britain and/or France for about 100 Jaguars instead, for the American government is quite likely to forbid the sale unless it gets greater satisfaction from Pakistan on the key issue of nuclear weapons.

The Nuclear Option

The most controversial and important questions about Pakistan's arms industry revolve around what are still civilian industrial establishments, at least for the moment: can Pakistan's civil nuclear industry give it the capacity to build nuclear weapons, and will the government choose to do so? The question has been acute since India tested what it termed a 'peaceful nuclear device' at Pokaran (untactfully, within 90 miles of the Pakistan border) in May, 1974. The circumstantial evidence suggests that if Pakistan has not yet definitely decided to develop its own nuclear device (and it probably has not), then at least it is determined to obtain an option on such a decision at some later time which would be wholly invulnerable to outside pressure, and to shorten steadily the lead time required between decision and the production of a prototype nuclear weapon.

There are no signs that India is moving rapidly, or at all, from the nuclear device of 1974 to a nuclear weapons capability. Such a move would in any case have to wait until the early 1980s, when substantial quantities of unsafeguarded plutonium

World Armies

for a weapons programme become available with the entry into service of the first large Indian reactors built without foreign aid. Of course the Indian government has always denied any intention to proceed along such a course. But seen from Pakistan, such assurances offer little comfort, particularly since if India changed its mind then it could have nuclear weapons in significant numbers years ahead of Pakistan. Indian explanations about using nuclear explosions for civil engineering purposes ring even more falsely to Pakistanis than to others — though the real Indian motive in the 1974 test may well have been simply prestige, the civil engineering project most Pakistanis see as a likely task for Indian nuclear explosives is an abrupt and drastic programme of slum clearance in Pakistan's cities.

Even at a more realistic level, the possibility of Indian tactical nuclear weapons would pose an insuperable problem for Pakistan's defence forces: their only hope of survival in war would be to operate in extremely dispersed formations, while Indian forces could concentrate at will. Ever since the Indian nuclear test, therefore, Pakistan's civil and military leadership has been determined to acquire at the least a similar 'threshold' nuclear capability for their country, though after the first few months they found it preferable not to voice this determination publicly.

In 1975 it was estimated that Pakistan was 8 years away from a nuclear weapon if it embarked forthwith on a programme leading to that goal, but this was of course conditional upon Pakistan having access to certain key elements of nuclear technology from abroad. It already possessed one working reactor of 137 MW at Karachi, built with Canadian assistance during the 1960s. It has its own uranium ore, and could presumably fabricate the fuel itself if Canadian co-operation were withdrawn, though it currently lacks uranium enrichment facilities. The critical missing item was a fuel processing plant which could extract from the spent nuclear fuel the plutonium with which to make relatively cheap (and relatively small) nuclear weapons. It now appears to have filled that gap, without which Pakistan's nuclear weapons capability would take far longer to achieve, although it was a near-run thing.

Claiming as justification a programme to build five or six large nuclear-power generating stations in the next 10 or 15 years, and 24 by the turn of the century, in order to make up for a lack of fossil fuel reserves and to meet future power requirements, Pakistan ordered a fuel reprocessing plant from France in March, 1976. In fact the first of these 600 MW reactors, at Chashma some 150 miles south of Rawalpindi, only began to be built in early 1977, and will not be completed until 1983. (It is to cost \$527,000,000, including \$222,000,000 in foreign exchange.) As the Canadian authorities observed, it was curious that Pakistan was buying the reprocessing plant before the reactors whose fuel they were to reprocess, especially since it is not economically sensible to run such a plant unless there are at least half a dozen large reactors to supply it. But Pakistan remained committed to the purchase.

The ending of the United States' arms embargo in 1975 was at least partly to give Washington bargaining leverage in Islamabad, so that conventional arms supplies from America might somehow be traded for Pakistani self-denial on nuclear matters. On December 17th, 1976 even France, the last major Western country in the business of exporting reprocessing plants, announced that it would sin no more. The French government stated that it would not cancel the sale of a reprocessing plant to Pakistan which had already been agreed, but indicated obliquely that it would be most grateful to be let off the hook. Islamabad, unsurprisingly, did not oblige.

So long as Pakistan adheres to this policy, American arms supplies on any large scale are unlikely — especially nuclear-capable strike aircraft. Within a week of Pakistan's refusal, Canada announced that it would end its nuclear co-operation with Pakistan, and end its supplies of enriched uranium and spare parts for the Karachi reactor it had helped build (the only large one Pakistan will have until 1983). In January, 1977 Mr. Aziz Ahmed, Minister of State for Defence and Foreign Affairs, replied that alternative sources were available to obtain fuel and spares for the plant, though there could be lengthy shutdowns if faults developed, and added that 'no third country has any right to demand that Pakistan abandon the reprocessing plant'.

It would therefore appear, barring a further change in French government policy, that Pakistan's nuclear option is assured. The French reprocessing plant will of course be provided under French controls which duplicate those of the 1969 International Atomic Energy Agency safeguards, and there is a Pakistani-Canadian agreement whereby the spent fuel from the Karachi reactor cannot be used without Ottawa's permission. But the latter agreement can be abrogated with 6 months' notice from either party, and the French-imposed safeguards on the reprocessing plant repudiated if and when it became necessary. Although the basis for a weapons programme thus created by the turn of the decade will be extremely austere even compared with Indian nuclear resources, it will provide Pakistan with what Islamabad regards as the indispensable option. That is, the ability to proceed rapidly across the 'threshold' to a nuclear explosion — say in 2 or 3 years — should the Indian nuclear programme show signs of turning to weapons development and production, without leaving a lengthy and acutely embarrassing interval when India would be nuclear-armed and Pakistan would not.

RANK, DRESS AND DISTINCTIONS

The rank structure and dress of all three armed services closely follow those of the old British Indian forces from which they are descended. The principal difference from the standard international rank system is the existence of a category of Junior Commissioned Officer (JCOs), promoted from enlisted rank after long and meritorious service. They fall between second-lieutenants and senior NCOs in the hierarchy, and although they rarely advance beyond JCO rank they frequently have responsibilities equivalent to those of junior officers in other armies because of their age and experience. The three

grades of JCO, in descending order, are subedar major, subedar and jemadar; in armoured units the term risaldar is used instead of subedar.

There are two warrant officer grades, Class I and Class II, found only in the technical services. Other enlisted ranks are company havildar major (first sergeant), company quartermaster havildar (staff sergeant), havildar (sergeant), naik (corporal), lance naik (private first class/lance-corporal) and sepoy (private). In armoured units the term dafadar is substituted for havildar.

All military personnel are highly conscious of rank, and relations between officers of different ranks and between officers and NCOs are rather formal.

The highest Pakistani decoration for heroism in the presence of the enemy is the Nishan-i-Haidar: it is conferred regardless of rank, and carries a cash award of 10,000 rupees. The next highest award for valour in combat, given to officers only, is the Hilal-i-Juraat, bearing a cash award of 7000 rupees. The other awards for gallantry and distinguished service in battle are the Sitara-i-Juraat, awarded to officers and JCOs, and the Tamgha-i-Juraat, conferred on NCOs and privates; they carry cash awards of 5000 and 4000 rupees, respectively. For valour or devotion to duty not in active operations against the enemy, officers and JCOs are awarded the Tamgha-i-Basalat Class I, NCOs and lower grades Class II; the cash awards are 4000 and 3000 rupees, respectively.

CURRENT DEVELOPMENTS

Pakistan is an economically viable State, verging on semi-industrialised status. Less than a quarter of its 75,000,000 people are literate, and around three-quarters are villagers, but it possesses a considerable industrial sector and a quite large work force of skilled and educated people. It is a poor country but relatively prosperous by south Asian standards.

It is also a very heavily armed country. Between a quarter and a third of regular budget expenditure goes on defence, and there are further hidden defence costs in the nuclear programme and the military industrial projects. The foreign exchange costs of arms-buying abroad are very heavy, and the consequent enormous trade gap is at present being covered mostly by heavy borrowings from Western and OPEC sources. Thanks to these efforts, however, Pakistan has been able since 1971 to recreate forces which, at least so far as the army is concerned, are not grievously inferior in strength to those that India is capable of deploying on its frontier (so long as a portion of India's forces remain committed to the Himalayan border).

Despite this, Pakistan remains acutely vulnerable to attack in the perceptions of its own rulers and soldiers. Concerted Indian and Afghan military action would be almost impossible to contend with simultaneously, and gave rise to official Pakistani accusations of such a conspiracy during 1975. The possibility of India's developing nuclear weapons has caused a great deal more anxiety recently, and served to sharpen and reinforce the army's corporate image of India as an inveterate aggressor who will strike again when the time is ripe. Nor, given the fact that Pakistan is a Federal State made up of four provinces, each with a different linguistic and cultural group (Punjabis, Sindhis, Baluchis and Pathans), can the possibility of disorder leading to further fragmentation of the country, whether externally aided or not, be entirely disregarded.

In fact, Pakistan is most unlikely to become involved voluntarily in a war with India or Afghanistan in the medium-term future, or to get forced into one by the actions of its neighbours. On the one hand, it no longer believes, as it mistakenly did in 1965 and 1971, that it is capable of inflicting a decisive military defeat on the Indian army in the only theatre that counts, the Punjab. The balance of forces there is too evenly matched (with some slight advantage to the Indian side), and the long road and rail communications running parallel with the Indian border for almost 1000 miles from Karachi to the Punjab proved extremely vulnerable to Indian air action in 1971, as did Pakistan's sea communications to the Indian navy. Pakistan's expectations about the probable character of military operations have shifted significantly towards the strategically defensive since 1971 — only the improbable eventuality of a simultaneous large-scale Chinese attack on India could offer Pakistan any prospects for a big and lasting offensive success. On the other hand, any further disintegration in Pakistan is generally considered to be against New Delhi's interests, and a direct Indian attack would likely invoke tacit Chinese and American guarantees of Pakistan's territorial integrity.

Neither is further fragmentation of the country likely to occur from internal forces alone — while there is a genuine and quite powerful drive for autonomy in both of the western provinces, the population of Baluchistan is only some 2,500,000, and that of the North-West Frontier about 6,000,000. The rest of Pakistan's 78,000,000 people are Punjabis, Kashmiris and Sindhis, who feel their fate to be closely bound together, so the stresses are in no way analogous to those which tore the old Pakistan apart.

The principal instability in Pakistan at the moment lies in its internal politics. The military regime led by General Zia ul-Haq which took power in July, 1977 has had to prolong its intervention long past the brief period it originally intended, and now faces a serious problem of internal unrest.

Initially the coup was greeted with widespread relief, as the country's life and economy had been virtually paralysed by the 4 months of violent popular disturbances following the rigged national elections in March, and there was a genuine fear of civil war. The army felt obliged to intervene in its own defence, moreover, since there was growing restiveness in the junior- and middle-officer ranks at the unaccustomed public opprobrium the military forces were suffering as a result of their constant use in the streets in defence of Mr. Bhutto. But General Zia soon found he was no more able to reconcile the

World Armies

opposing political factions than any other mediator, and at the last moment he postponed indefinitely the re-run of the national elections which he had promised to hold in October, 1977.

There is reason to believe that one factor in the postponement was the fact that Mr. Bhutto's popular support, at its nadir in July, 1977, began to recover as soon as he was removed from office, while the opposition alliance began to disintegrate. This raised the prospect that Bhutto might win an honestly conducted election (as he surely would have, if by a smaller margin, even if the March elections had been free of abuses). That result would present the military regime with the unpleasant alternatives of setting aside the popular verdict by force, or accepting the return to office of a man with a score to pay against those officers who had overthrown and jailed him.

The reason given for postponing the election was the need to settle the charge of conspiracy to murder a political opponent which had been brought against Mr. Bhutto, a charge on which he was found guilty, and sentenced to death, in March, 1978. Whether or not the conviction was justified, this placed the regime in a new quandary: whether Bhutto was more dangerous to it dead or alive.

Meanwhile, the probable duration of military rule continued to lengthen, despite all the army's well-founded concern about the deleterious effects of its prolonged presence in politics on military efficiency and discipline. In August, 1978, however, General Zia replaced his cabinet, which was mainly staffed with generals, with an all-civilian one, most of whose members were drawn from the coalition of conservative Islamic parties, the Pakistan National Alliance. A determined effort was launched to increase the role of Islam in public life and law — compulsory prayers for public servants, the prohibition of alcohol, the introduction of traditional Islamic punishments like amputation for various crimes — in an attempt to curry favour with rich, conservative Arab States and to appeal to the sole unifying force in Pakistan, its Muslim faith (just as Mr. Bhutto had done during the crisis preceding his overthrow). But the economy remained in dire straits, the bitter political divisions did not heal, and the prospect of finding a formula to provide Pakistan with a government enjoying public assent and support continued to recede.

The advent of a new, more pro-Soviet regime in Afghanistan in April, 1978 added to Islamabad's problems, since the problem of autonomy for Baluchistan and NWFP is far from solved. A curious consequence of the Pakistan army's anxiety about the new plans of Kabul and Moscow was a new questioning of the value of the CENTO alliance. While Islamabad fully intends to maintain and even strengthen its ties with its Muslim neighbours and fellow CENTO members (Iran and Turkey), influential military and civilian figures associated with the regime began to suggest that formal alliance with the USA and Britain in CENTO was not a guarantee of security, but a standing provocation to the new Marxist government in Kabul and to the Soviet Union. Perhaps leaving the alliance would dissuade the Russians and Afghans from reviving their support for Pakistan's separatist movements. There has been talk in Islamabad of moving to a well-armed non-alignment in global politics, while retaining the bilateral defence links with Iran and Turkey.

GWYNNE DYER

PANAMA

HISTORY AND INTRODUCTION

Panama differs from other Latin American States in that its independence dates not from the 1820s but from 1903, and that United States influence has not only dominated its experience, but was actually responsible for its creation. Indeed for the first three decades of its existence, Panama was effectively a United States protectorate, and the issue of the 10-mile-wide USA-controlled Canal Zone cutting right across the most populous part of the nation has latterly been a predominating factor in both domestic politics and foreign relations.

Although Panama is now generally considered to be part of Central America, it had no share in the formative experiences of the republics to the north during the nineteenth century, notably the failed experiment of Central American federation. Both in Spanish colonial times and throughout the nineteenth century it was governed from Bogotá, and from 1821 to 1903 was simply the northernmost province of Colombia. There was, indeed, little or no history of separatist sentiment in the province of Panama until a treaty was concluded between the USA and Colombia for the building of a canal across the isthmus of Panama just after the turn of the century.

That treaty, however, promised \$10,000,000 in gold to Bogotá in return for the United States' concession to build and administer the canal, and when Colombia hesitated to ratify it the money potentially became available to any group of Panamanians who could successfully organise a secessionist movement and sign the treaty themselves. A Panamanian revolutionary clique duly organised a rebellion in 1903 with the aid of a French adventurer, Philippe Bunau-Varilla, who hastily signed a treaty in Washington that effectively granted the USA perpetual sovereign rights over the Canal Zone in return for the United States' recognition and \$10,000,000.

This was considerably more than the Colombians had agreed to, and exceeded Bunau-Varilla's instructions, but it was necessary to get the treaty signed before a rival Colombian delegation arrived in Washington. The Frenchman was subsequently able to persuade the new Panamanian government to ratify it, but the treaty's terms and implications have dominated Panamanian life ever since.

The Panamanian army just after independence consisted of a handful of 'revolutionary' troops plus a battalion-strength unit of the Colombian army which had been bribed to desert. Within a year, however, the commander of this force was induced to attempt a *coup d'état* by a disgruntled faction of the civilian *élite*. The USA prevented the coup, and successfully pressed for the outright disbanding of the army. In its place a National Police Corps was created in 1904 to maintain internal security, but it rarely exceeded a strength of 1000 men during the next three decades. The republic relied upon United States troops stationed in the Canal Zone not only for external defence but often also for the maintenance of public order in emergencies as well.

This largely protected the government from the endemic Central American disease of military coups, though the police force soon became caught up in the intense rivalry between competing factions in the rich white oligarchy — the so-called 'first families', sometimes estimated to number around fifty — who totally dominated Panamanian politics. Following two such police interventions in politics in 1917 and 1918, both reversed by United States marines, an American citizen was appointed inspector-general and placed in charge of the entire force from 1919 to 1927. Marine Corps officers thoroughly reformed the Panamanian police, pursuing the elusive goal of turning it into a professional, apolitical force (just as their counterparts were doing in three other USA-occupied Caribbean countries at the same time), while United States military instructors provided it with modern weapons and methods.

In 1930, however, the USA adopted a policy of non-intervention in Panama. The following year, a revolution broke out against the traditional rule of the white aristocracy, and through the 1930s the national police were drawn increasingly into the role of arbiter between the ruling oligarchy and aspiring middle-class groups. By 1940 Panama had completed the transition from provincial backwater to a State abreast of the leading trends in Latin American politics (thanks largely to the Canal-derived economic growth which gave it the second-highest national income per capita in the region). That is to say, the traditional ruling group were on the defensive and seeking to co-opt allies in the new middle classes, while leftist and populist movements were gaining ground in the greatly expanded urban population — and sections of the 'army' (as the National Police Force was already coming to resemble) were becoming infected with their own versions of ultra-nationalist and reformist ideology that augured a much deeper and more continuous involvement in government.

Panama even produced a rough equivalent of Perón in Argentina or Vargas in Brazil, in the form of Arnulfo Arias, who seized power in a coup in 1940. He was an ultra-nationalist, populist demagogue, at that stage in his career inclined towards fascism, who eschewed the support of the prosperous white minority (12% of the population), and found his following amongst the mestizo majority (65%) and above all in the black lower classes of the main cities (mainly descended from immigrants from the British West Indies who had been brought in to build the Canal). The police overthrew him in 1941, and for the rest of the decade Panama was ruled once more by conservative civilian presidents. The real power in Panama,

World Armies

however, was already the well-armed, highly disciplined National Police Corps, now grown to 2000 men, and from 1947 on its commander, Colonel José Antonio Remón, was the undisputed kingmaker in Panamanian politics.

Remón, like most of the force's officers, came from the non-propertied middle social group; moreover, he had been trained at a Mexican military academy, and was of a reformist bent. He actually brought Arnulfo Arias to the presidency in 1949–51, before assuming it himself in 1952. He introduced social-welfare measures and promoted agricultural and industrial development. For support he depended on the votes of the underprivileged, especially the blacks, and on the loyalty of the police force, which he cemented by showering it with material favours, increasing its size to 3000, and effectively granting it the status of an army in 1953 by converting it into the National Guard.

Remón was the commander principally responsible for the professionalisation and deliberate militarisation of the police force, both because of his own professional background (he was the first graduate of a military academy to enter the force) and because it was his principal power base in the country. Thus he established the Police Training School in 1946, completely restructured the force into a five-zone regional organisation, and eventually — with the fortuitous aid of the 'cold war' and United States military aid programmes — transformed it into a national military force.

The National Guard's domination of Panamanian politics was not ended by Remón's assassination in 1955, but the bulk of its officers were not radicals, and readily acquiesced in a reversion to rule by presidents drawn from the traditional civilian oligarchy. The steady progression of the Guard from police force to military organisation was not slowed, however: for the first time it began to attract Panamanian graduates of foreign military academies, and received standardised military equipment from the USA. Even more importantly, large numbers of officers and men received United States military training in the Canal Zone and the continental USA: 89 officers in 1953–62, and 265 in the next 7 years to 1969. The number who were attending police courses halved over the period, while the number attending military courses doubled.

It may be surmised that this training, directed at the officers of what was in fact a brand new military organisation with no native traditions, was instrumental in moulding the National Guard's subsequent political outlook. Especially after the Cuban revolution, these United States-run courses were directed primarily towards counter-insurgency; they stressed the inverse relationships between social justice and social violence, and emphasised the role of the military forces as an integral element in the process of development which might avert revolutionary upheaval.

The increasingly well-armed National Guard dealt easily with an invasion by some 80 Cuban guerrillas in April, 1959, and with several outbreaks of rural unrest in the early 1960s. It was indicative of its growing consciousness of a nationalist mission, however, that it stood aside during the rioting in January, 1964 against the USA's presence in the Canal Zone. This 4 day riot, leaving 18 Panamanians dead, was a turning point not only for Panama but also for the Guard itself, and the nationalist struggle against the USA's presence has played the key role in radicalising the politics of both ever since.

The Liberal (i.e. conservative) government of President Roberto F. Chiari negotiated three draft treaties with the USA in 1964–7 giving Panama a greater degree of control over the Canal. The inadequacy of the USA's concessions became the central issue of the 1968 elections, which were won by Arnulfo Arias, by now portraying himself as a radical leftist, who promptly denounced the treaties and demanded the USA's withdrawal. Significantly, the National Guard did not prevent his assumption of office on October 1st, 1968 and only deposed him 9 days later after he had attempted to reshuffle the Guard's high command to place his own supporters in charge.

The *junta* of three colonels which then took control appointed a fairly broadly based cabinet, but it was evident that the National Guard now contained officers straight out of the then-new *peruanista* mould. They were ultra-nationalists who, like the Peruvian *junta*, were determined on radical domestic reform, including genuine measures of land reform and the elimination of foreign (American) influence over the economy — with the additional, specifically Panamanian goal of the restoration of national sovereignty over the Canal Zone. They intended a revolution from above, for which purpose the army would remain in control for a lengthy period of time. In a coup within the coup, the colonels were replaced by reform-minded captains and majors before the end of 1968.

In Panama's case, however, the radical faction never gained full control. In March, 1969 its leader, Boris Martínez, a member of the newly created General Staff, was abruptly sent into exile. By the end of 1969 Colonel Omar Torrijos Herrera, having survived a coup attempt by other *peruanista* officers, had emerged as sole dictator, a position which he has occupied ever since.

Although there was a nominal return to civilian politics in 1972, when a National Assembly of Community Representatives was elected which drafted a new constitution and installed an indirectly elected civilian president, vice-president and legislative council, Torrijos, now a brigadier-general, remained Commander of the National Guard. He was also granted full executive powers for a 6 year period by a 'transitory provision' of the constitution, and named Chief of Government and Supreme Leader of the Panamanian Revolution. He relinquished the latter positions in October, 1978 when the National Assembly chose Aristides Royo as President. Free elections are promised for 1984, the end of Royo's 6 year term, but meanwhile the regime continues to be dominated by Torrijos from his post at the head of the National Guard.

Under Torrijos both the government and the Guard itself have become a great deal less corrupt than the previous norm. A marked feature of the past decade has been the concentration on land reform and on the integration of the rural half of Panamanian society, hitherto almost totally neglected by the urban-based oligarchy, into national life. The Guard is heavily involved in civic action programmes, and Torrijos has a distinctly populist style (spending most of his weekends in the villages).

Torrijos compensated for his gradualist and generally modest programme of domestic reform by adopting a rhetorically extreme position on the Canal issue ('We are prepared to follow the Ho Chi Minh route if necessary. That means terrorism, guerrilla operations and sabotage in a national-liberation war to regain our territory'), and a flamboyantly radical image (including a visit to Cuba). The National Guard, the vital base of his power, which had doubled in size in the decade before 1968, has since virtually doubled again.

From 1971, in an attempt to appeal to the strong *peruanista* faction in the Guard's officer corps, his government began to express admiration for the (then) socialist trends in the military governments of Peru and Bolivia. Despite the arrest or banishment of more than 70 dissident National Guard officers since Torrijos came to power, his power could still be challenged by either the *peruanista* or the right-wing factions in the officer corps. The ratification of the renegotiated Canal treaties by the United States Senate in April, 1977 however, has undoubtedly strengthened his position greatly.

STRENGTH AND BUDGET

The Panamanian National Guard, which combines military and police functions, has a strength of 11,000 men, a modest 0.55% of Panama's population of 2,000,000. The more specifically military components include five infantry companies specially trained for emergencies, the Presidential Guard, the Public Order Company (a police reserve of approximately battalion strength), the air wing and the coastguard. No rigid separation of external defence, internal security and ordinary police duties is observed, but somewhere around half of the men on strength are primarily occupied in what would ordinarily be seen as military activities.

The budget for the National Guard's military elements (as opposed to such branches as the Traffic Division and the penitentiary service) is not separately identified, but certainly comprises the bulk of the budgetary allocation for Home Affairs and Justice. In 1975 this amounted to \$40,100,000 out of a total government expenditure of \$318,000,000, which was a further sharp increase on the 7–10% share of government expenditure which it received in the late 1960s. Somewhat less than 2% of the 1975 GNP of \$2,182,000,000 was thus being spent on the National Guard.

COMMAND AND CONSTITUTIONAL STATUS

According to the constitution, the President of the Republic is Commander-in-Chief of the National Guard, with the right freely to appoint and dismiss its senior officers and direct its operations. The chain of command passes through the Minister of Government and Justice to the Headquarters Command of the National Guard, which has as its principal officers the Commander (Brigadier-General Omer Torrijos), the Deputy Commander (Colonel Rodrigo García) and the Secretary-General (normally a lieutenant-colonel).

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

To a greater degree even than in most other Latin American armed forces, the Panamanian National Guard's principal role is seen by its leaders to be the maintenance of internal security against possible guerrilla operations and even more importantly against large-scale disturbances amongst the population. As part of its preventive strategy in this regard, National Guard troops spend much of their time on civic action projects, which are administered by a separate section of the General Staff.

There is no remaining problem with Colombia, which recognised Panama in 1914 and ratified a treaty defining its borders in 1921. The other land frontier, with Costa Rica, has occasionally been the scene of cross-border raids by Panamanian political exiles, but since Costa Rica does not maintain a conventional army there is no military threat to be countered. Panama's diplomatic relations with Guatemala were broken in May, 1977 after it stated its support for the independence of Belize, but it is not among those Caribbean nations which have talked of volunteering military contingents for the defence of an independent Belize.

For defence against threats from further away to the strategically important Panama Canal, Panama relies on the United States commitment to hemispheric defence, and specifically on the 10,000 United States troops based in the Canal Zone. These include an infantry brigade, a Special Forces group, two SAM battalions and an air force squadron, in addition to the personnel attached to the various United States educational institutions for Latin American armed forces which are located in the Canal Zone, and the base personnel of the USAF bases at Albrook Field, Coca Sola, Howard and Río Alto, and the naval installations at Balboa and Colón.

Panama is a member of the United Nations and the Organization of American States, but has never contributed troops to any of their peace-keeping operations. As a consequence of its quite different history and orientation, it has not joined any of the Central American institutions — the Organisation of Central American States, its subordinate body the Central American Defence Council (CONDECA) and the Central American Common Market — though invited to do so, and has never participated in CONDECA joint manoeuvres.

World Armies

The deployment of the National Guard is in accord with its primary mission of internal security. Well over half its strength is concentrated in the Panama City—Colón—Tocumén Airport area, which includes the capital, the main communications facilities, and the bulk of the nation's wealth and population. The remainder is distributed amongst the 10 zones into which the country is divided.

The Guard's only recent operations have been anti-riot duties in the capital, which it has performed efficiently.

ORGANISATION

The National Guard incorporates an air arm, with its headquarters and main base at Tocumén Airport, and a small naval service operating on both coasts, but it is administered as a single service from Headquarters Command at the central barracks in Panama City. Headquarters Command has directly controlled the five infantry battalions since 1971, and runs the rest of the force through the Office of the Zone Commander and the General Staff. The former organisation directs the National Guard units in the country's 10 administrative divisions. The General Staff is divided into five sections: G-1, personnel; G-2, intelligence; G-3, operations (which also controls training activities, the Traffic Division, and air force and coastguard operations); G-4, logistics; and G-5, civic action.

There are, in addition, the following specialised units: the Presidential Guard (with quarters in the palace, and responsibility for the president's safety); the Bay Guard (attached to the Presidential Guard, and responsible for harbour security); the Cavalry Squadron (which is mounted only for ceremonial occasions and for crowd control); the Tocumén Airport Guard; the Public Order Company; and the National Department of Investigation (DENI, commonly called the secret police, and numbering about 300 agents).

The Guard's specifically military forces are rarely assembled together except in emergencies.

RECRUITMENT, TRAINING AND RESERVES

The Panamanian constitution permits the government to decree obligatory military service, but the Guard has always been able to achieve its desired numbers by voluntary recruitment. Recruiting is local, though centrally controlled as to numbers, and the requirement that recruits have 6 years of education is generally observed. There is no apparent discrimination on racial grounds either in the enlisted or commissioned ranks. For the great majority of its members the National Guard is a lifetime career, and 40-year-old privates are thus not uncommon.

Recruit training was haphazard until 1954, when the National Guard Orientation School was founded with the aid of a Venezuelan military mission. Recruits now receive there a 3-month course in military and police matters. An officers' school (the Police Academy) and one for NCOs were started in the early 1960s, but most of the existing senior officers have entered the commissioned ranks directly after graduating from foreign military academies (both General Torrijos and his Deputy Commander are graduates of the El Salvador Military Academy). Almost all field-grade officers have attended the command and general staff courses at the United States Army School of the Americas at Fort Gulick in the Canal Zone, and many also go to the USA on courses. Large numbers of NCO's attend technical courses run by the United States Army in the Canal Zone.

Air force personnel are trained in Venezuela and Colombia, and at the Inter-American Air Force Academy in the Canal Zone.

The National Guard is an all-regular force, and there are no organised reserves.

EQUIPMENT AND ARMS INDUSTRY

The ground units of the National Guard are equipped entirely with United States-supplied light infantry weapons and armoured cars. The coastguard runs a number of patrol vessels. Air force equipment includes four C-47, one DC-6, two Islander, one Twin Otter and one IAI Westwind transports, 11 Cessna and five DHC-3 Otter liaison aircraft, and 12 helicopters of the UH-1H, UH-1N and FH-1100 types. Much of the equipment has been provided by United States military assistance programmes, which amounted to \$3,400,000 plus \$100,000 of excess stocks in the years 1950-70.

There is no Panamanian arms industry.

RANK, DRESS AND DISTINCTIONS

Uniforms and ranks are similar to those of the USA, except for the Presidential Guard which has special uniforms for both daily duties and ceremonial occasions. Rank insignia conform to those adopted by the Central American Defence Council: company-grade officers wear one, two or three bars, field-grade officers one, two or three stars, and the Guard commander three laurel leaves on shoulder straps or shirt collar. Air force and coastguard officers wear the same insignia.

The highest award for merit given to National Guard members is the José Antonio Remón Cantera gold medal. There are six lesser awards for meritorious actions, and silver medals, bronze medals and bronze bars awarded for 20, 15, 10 and 5 years' service with the Guard.

CURRENT DEVELOPMENTS

It seems probable that the National Guard will continue to control Panama's affairs, either directly or indirectly, for the foreseeable future. The tenure of the present incumbent, General Torrijos, however, may depend on the public reaction to the treaties providing for the gradual transfer of control over the Canal to Panama which have been negotiated over the past few years.

The recovery of Panamanian sovereignty over the Canal has become the touchstone of Panamanian nationalism, but General Torrijos was obliged to make numerous concessions on his initial demands in order to arrive at treaties which would be acceptable to the United States Senate. Popular impatience and growing disillusionment have led to a gradual attrition of his civilian support in the working-class and student sectors since the severe riots of 1976, the first for 8 years. At the same time his support in the business community has been badly hit by the inflation and slow growth of the economy in recent years, largely due to world trade changes beyond his control.

Even within the National Guard, Torrijos has been encountering difficulties. He has hitherto ensured control by the tactic of dividing power between the Deputy Commander, Colonel Rodrigo García, and the Intelligence Chief, Colonel Manuel Noreiga, but in late 1977 the clash between the two over the acceptability of the treaties became public. While the entire National Guard hierarchy was subsequently paraded before the press to demonstrate its unity, there is no doubt that these officers represent rival factions, or at least trends of opinion, within the officer corps, whose future actions may be governed by the outcome of the treaty controversy.

In April, 1977 the two treaties providing for the gradual transfer of the Canal to Panamanian control by the year 2000, the concomitant ending of the United States military presence and the special status of the Canal Zone, and arrangements for the joint defence of the Zone after 2000, were ratified by the United States Congress. They had previously been accepted by a two-to-one majority in a Panamanian referendum.

GWYNNE DYER

PAPUA-NEW GUINEA

HISTORY AND INTRODUCTION

Papua-New Guinea, the eastern half of the island of New Guinea lying to the north of Australia, was formed in 1919 by the merger of the protectorate of British New Guinea created in the south-eastern portion of the island in 1884 with the German colony established in the north-eastern part of the island (Schutzgebiet Kaiser-Wilhelms-Land und Bismarck-Archipel) in the same year. It then became the Mandated Territory of New Guinea, administered from Australia, and after being partly occupied by the Japanese and extensively fought over during World War II it became the United Nations Trust Territory of New Guinea in 1946. It became internally self-governing in 1973, and achieved independence as Papua-New Guinea on September 16th, 1975.

Over 90% of Papua-New Guinea's population is engaged in subsistence agriculture, and lives still in small tribal communities which even 25 years ago were organised on the basis of a neolithic technology. As a consequence there is no nationwide cultural identity: the population, which is predominantly Melanesian and Papuan, with some Negrito, Micronesian and Polynesian enclaves, speaks over 700 different languages, and the number of ethnic blocs capable of independent political activity probably exceeds this number. The fragmentation is particularly acute in the mountainous interior — the Highlands — where population pressure on agricultural resources is also greatest. Pidgin English (Wantok) and two or three native languages serve as *linguae francae* for over half the population, with literacy amounting to about 15% in one or other of these languages. The threat or hint of secession is one of the principal currencies of political competition.

The Papua-New Guinea Defence Force has its origin in the Pacific Islands Regiment (PIR), of which the first battalion was raised in Port Moresby in 1940, with Australians filling all the officer and most of the NCO positions. Three further battalions were subsequently raised, and the regiment fought with distinction against the Japanese invaders in New Guinea for 3 years, split up for most of the time into small and scattered detachments performing reconnaissance duties for larger Australian and American units. It was disbanded in 1946, after the Japanese surrender.

With the onset of the Cold War, and after serious disturbances on Manus Island, the Australian government reformed the PIR. The first battalion was raised in Port Moresby, the administrative capital on the south coast, in 1951-2; a second battalion was raised with headquarters at Wewak on the northern coast in 1965. The same period, which saw Australia becoming deeply involved in the confrontation with Indonesia in Malaysia, also witnessed the development of major Australian army and air force bases in Papua-New Guinea and the partial refurbishment of the extensive World War II naval facilities on Manus Island.

The principal task of the Pacific Islands Regiment, however, was to provide continuous and wide-ranging patrols of about company strength throughout the mainland and the more important islands of Papua-New Guinea; it had no artillery or other heavy weapons, and the battalions hardly ever operated as a whole. The regiment did not become involved in the suppression of the large-scale civil disorders inspired by the Mataungan Association in the New Gazelle peninsula of New Britain Island in 1970 (although it was placed on alert), and devoted much of its time to 'civic action' enterprises. As late as 1971 it was still predominantly an Australian-officered force, with only 30 indigenous commissioned officers of whom just one had achieved the rank of major (he is now the Commandant of the Papua-New Guinea Defence Force). A Papua-New Guinea Division of the Royal Australian Navy was created at Manus in the Admiralty Islands in the 1960s, and gradually began to produce trained local personnel, but the foundation of an air arm did not occur until 1975, with the transfer of four C-47 transport aircraft from Australia.

Nevertheless, and despite an early record of disorders and disobedience, the PIR grew into what has been called the 'Super Tribe', an *élite* formation with superior pay and career opportunities whose level of efficiency considerably surpassed that of the other Western-style institutions being implanted in Papua-New Guinea, and whose members had subordinated their tribal loyalties to an organisational *esprit de corps* to a noteworthy extent. This characteristic has hitherto been of great assistance and comfort to the government, one of whose principal problems has been to cope with secessionist movements without conceding sovereignty, but also without using excessive military force. In this context, it is significant that some units have been trained in riot-control techniques.

Since the election of Mr Michael Somare as Chief Minister in 1972 on a platform of self-reliance and early independence, Papua-New Guinea's evolution into a viable political entity has been rapidly and remarkably smooth. In 1975, on the eve of independence, Papua-New Guinea was faced with a major secessionist threat in much of Papua, the more developed territory lying to the south of the central Owen Stanley range, which contains the capital, Port Moresby. Less significant in territorial extent, but perhaps even more important economically, was the secessionist movement in Bougainville Island, ethnically part of the Solomon Islands, which contains the copper mines that are Papua-New Guinea's chief source of foreign exchange. When Papua-New Guinea became independent, the Bougainville secessionists dismissed the provincial government and declared a separate Republic of the North Solomons.

A combination of patience, political adroitness and brisk military action succeeded in overcoming these difficulties in a short time, however. The handful of armed Papuan rebels were quickly run to ground, and the secessionist Papua Besena Party, though still commanding major support in the affected areas, is now peacefully participating in the national parliament. After waiting 6 months for the leaders of the Bougainville secession to fall into disputes among themselves, squads of Papua–New Guinea riot police were quickly brought in in April, 1976 and the secession collapsed. While considerable concessions on provincial autonomy were made (which are now being extended to other sensitive areas) the only advance over the terms on offer to Bougainville before the secession was the granting of permission to fly the Bougainville flag alongside the Papua–New Guinea flag. The main leader of the secession, Father John Momis, is now the Minister for Decentralisation in Port Moresby, and the Bougainville secessionist movement seems defunct at least for this political generation.

The post-independence defence relationship between Papua–New Guinea and the former colonial power, Australia, was not the subject of a formal treaty, which would have injured Papua–New Guinea's status as a non-aligned member of the Third World. Australia committed itself to assisting the development of the Papua–New Guinea Defence Forces, however, through a Defence Co-operation Agreement involving about \$14,000,000 per annum in Australian aid, and in February, 1977 Prime Minister Somare of Papua–New Guinea and Prime Minister Malcolm Fraser of Australia issued a joint statement on the two countries' future relationship. It stressed the importance to both countries of continuing close co-operation in defence matters, and specifically provided for the attachment of Australian servicemen to the Papua–New Guinea Defence Force in non-combatant roles until they were no longer needed, the continued basing in Papua–New Guinea of formed units of the Australian armed forces to carry out engineering and air-transport functions still beyond the native forces' capacity, provisions for training of Papua–New Guinea Defence Force personnel both at home and in Australia, and various kinds of Australian assistance with transport, logistical and technical matters. In non-military areas, Australia has promised a minimum of \$930,000,000 aid to Papua–New Guinea in the 5 years from July, 1976.

In the national elections held in Papua–New Guinea in June and July, 1977 both Mr Somare's Pangu Party and his coalition partner, the People's Progressive Party, emerged with increased representation. Later in the year the PPP suddenly withdrew from the coalition, but it was soon replaced by what had hitherto been the main opposition group, the United Party. This fluidity of political allegiances is not untypical of Papua–New Guinea, where politics is much more about regional interests than ideologies, but so far Mr Somare has shown himself an adroit manipulator of these regional pressure groups in the interest of national unity. His principal concern in foreign affairs at the moment — though it has serious potential domestic repercussions — is the troubled situation along the border with Indonesia's West Irian province that occupies the western half of the island of New Guinea. This is undoubtedly also the chief concern of the Papua–New Guinea Defence Forces. (See Role, Commitment, Deployment and Recent Operations.)

STRENGTH AND BUDGET

The strength of the Papua–New Guinea Defence Force in 1978 was 3514 men, of whom about 3000 were serving in the ground forces. This constituted just over 0.1% of Papua–New Guinea's population of 3,000,000 people, and seems to be a stable figure. The defence forces are complemented in the internal security role by the Papua–New Guinea Constabulary, a uniformed force of comparable size whose rural elements have roughly equivalent equipment and patrol duties. The Reserve Constabulary, a part-time volunteer force, is the principal reserve formation available to the government.

Defence expenditure in 1976 was \$22,300,000 (4.3% of the central government budget) out of a GNP of \$1,200,000,000. To this must be added, however, a substantial sum in Australian military aid under the Defence Co-operation Programme.

COMMAND AND CONSTITUTIONAL STATUS

Papua–New Guinea is a member of the Commonwealth, with executive power formally vested in H.M. Queen Elizabeth II. It is exercised on her behalf by the Governor-General, who is appointed by the Prime Minister and acts on the advice of the National Executive Council (the Cabinet) led by the Prime Minister. There is no office of Commander-in-Chief of the Defence Force, which is subject to the supervision and control of the National Executive Council through the Minister for Defence (currently Mr Louis Mona). The Commandant of the Papua–New Guinea Defence Force is Brigadier-General Ted Diro, CBE, who is assisted by a small staff in his headquarters in Murray Barracks in Port Moresby.

The Papua–New Guinea Constabulary is controlled by the National Executive Council through the Minister for Police (currently Mr Patterson Lowa), and is commanded by a Commissioner of Police. Its administrative organisation and rank structure follow British colonial models; below the level of Constabulary Headquarters in Port Moresby, it operates through four territorial commands: First Division (Papua); Second Division (New Guinea highlands); Third Division (New Guinea coastal areas); and Fourth Division (New Guinea island territories).

World Armies

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The functions of the Defence Force are to defend Papua–New Guinea, and to aid the civil authorities in a civil disaster in the restoration of public order, or during a period of declared national emergency. In fact their primary potential role is as a last-resort guarantee of national unity, though they have not often been called on to act in this context. Their willingness to do so will be unquestioned so long as they retain their present character as a 'Super Tribe' which rises above the prevailing regional loyalties, and their ability to control secessionist movements is adequate to deal with the present scale of threats to national unity. Papua–New Guinea can probably also rely on direct Australian support in this context, if necessary, and at least on sympathetic understanding from its other big neighbour, Indonesia.

Papua–New Guinea belongs to the United Nations, the Commonwealth and the group of non-aligned nations, but maintains no foreign military alliances. Nevertheless it can rely upon Australian defence aid in meeting any military threat from outside the region, since its geographical location is of vital strategic importance to Australia itself. There is a continuing boundary dispute between Papua–New Guinea and Australia in the Torres Straits that separate them, arising from the action of Queensland in 1879 in extending the Australian border to encompass all the islands and waters to within a few hundred metres of the Papuan coastline, a disagreement made more serious by the high probability that the seabed in this area contains oil, but it is expected that a negotiated settlement adjusting the boundary in Papua–New Guinea's favour will eventually be reached.

The principal external threat which might engage the Papua–New Guinea Defence Force itself is the 600-mile border with the Indonesian-controlled western half of the island, West Irian. There are two negotiated agreements between Port Moresby and Jakarta delineating the border and the movement of people across it, but the Indonesian government is extremely sensitive on border security due to the persistent guerrilla movement in West Irian seeking secession from Indonesia. It is well aware that the cultural and ethnic links of West Irian are with Papua–New Guinea, not with distant Java, and that there is a reservoir of sympathy for the rebels in Papua–New Guinea. Some of the rebels talk of union with Papua–New Guinea, which disturbs Jakarta even more.

Originally part of the Dutch Empire in the East Indies, the western half of New Guinea was not granted its independence at the same time as Indonesia; it was handed over to Jakarta by the Dutch in 1962 after a lengthy but low-intensity Indonesian military campaign, mainly disguised as a 'liberation movement'. Indonesian annexation of 'West Irian' was theoretically approved by a referendum in 1969, but the domination of all levels of the administration by Indonesian outsiders and the flood of Indonesian immigrants (250,000 Javanese and Sumatrans have now settled amongst the 850,000 dark-skinned Melanesian natives) had already led to the emergence of a local guerrilla resistance movement 4 years earlier, in 1965. This movement, the Organisasi Papua Merdeka (OPM), carried out numerous raids through the later 1960s against Indonesian forces, concentrating its activities particularly in the area around the administrative capital of Jayapura, on the northern coast just west of the Papua–New Guinea border, where it enjoyed the greatest popular support. Numbers of refugees from Indonesian reprisals entered Papua–New Guinea along with the usual illegal immigrants seeking to benefit from its higher level of economic development, and the leaders of the OPM were from time to time in Port Moresby, where they got a sympathetic hearing in many circles.

After a period of relative inaction the OPM began operating again in the jungle mountains adjoining the Papua–New Guinea borders in 1975, and by 1977 its operations had caused the Indonesian government to carry out large-scale reprisal raids on villages suspected of harbouring rebels, including air attacks. A new wave of refugees began to cross the Papua–New Guinea border; the small units of the OPM, which may total no more than 200 full-time combatants, also began to use inaccessible parts of Papua–New Guinea just across the border as sanctuaries and, despite denials from both Jakarta and Port Moresby, it is clear that Indonesian troops repeatedly crossed the border in pursuit of them.

The Papua–New Guinea government is extremely anxious to avoid a clash with Indonesia, but the views of its own population prohibit it from active collaboration with Indonesian forces in suppressing the guerrillas using the cross-border area. An attempt to dissuade the West Irianese guerrillas from using Papua–New Guinea soil in their operations, involving an interview in Port Moresby between OPM leader General Seth Jafet Rumkoren and Papua–New Guinea Defence Force Commander Brigadier Diro (which led to intense speculation in the press about the Defence Force's loyalty to the civil government), failed to end the problem, nor did a further round of government discussions with Rumkoren and the rival OPM leader, Jacob Prai, in Port Moresby in April, 1978. Prime Minister Somare discussed the border problem with the Indonesian President, General Suharto, in a visit to Jakarta in May, 1977 and the Papua–New Guinea government subsequently sent 218 refugees back to West Irian, but the problem continued to worsen.

In May, 1978 the OPM abducted nine high Indonesian officials, including the Military Governor of the Jayapura district, the provincial intelligence chief, and the chairman of the provincial assembly. Indonesian forces repeatedly crossed the jungle border between Wutung and Bewani during the large-scale search and reprisal operations that followed, and at least one Papua–New Guinea village was bombed in error by Indonesian aircraft. Forced to react officially at last, the Papua–New Guinea Defence Force abruptly raised the force deployed in the northern border area to three companies — almost half the army's infantry strength — and transferred much of its air transport from Port Moresby to the area. This deployment was well advertised in advance, however, in order to give both the OPM guerrillas and any Indonesian patrols that were across the border time to get out of the way. At the end of 1978, the Papua–New Guinea Defence Force was still heavily concentrated along this border.

ORGANISATION

The Papua—New Guinea Defence Force consists of a ground element comprising two infantry battalions based at Port Moresby and Wewak, an engineer battalion, a signal squadron and some logistic units. Other main bases are at Lae and Manus. Arms of service and internal organisation follow British/Australian patterns. The same is true of the air component, consisting of a single Air Transport Squadron based at Port Moresby, with other bases at Lae, Madang, Rabaul and Wewak, plus more than 400 usable airstrips throughout the country. The main landing strips within 20 miles of the border with West Irian in the north are Wutung, Bewani, Amanab and Green River. The naval component consists of a Patrol Craft Squadron based at Manus Island, and a Landing Craft Squadron based at Port Moresby.

RECRUITMENT, TRAINING AND RESERVES

All Papua—New Guinea Defence Force personnel are volunteers serving long engagements. Pay and promotion prospects are superior to those available in most civilian occupations, and competition for vacancies is keen. There is considerable Australian training assistance provided both at recruit level and within the operational army units, each of which has two medical officers and two training officers from the Australian armed forces attached to it. In 1978 the number of seconded Australian servicemen in Papua—New Guinea had fallen below 400, and it was expected that they would almost all be phased out by 1980. Papua—New Guinea Defence Force technical personnel, especially in the air component, continue to be sent to military and civil establishments in Australia for training, and it is anticipated that the requirement for direct Australian support for the air element will continue for a longer time. It is intended that a basic flying school should eventually be established in Papua—New Guinea, however.

Officers of all components are trained at the Papua—New Guinea Joint Services College at Lae, where the curriculum is a modified version of the Australian model and the bulk of instructors are furnished on loan by the Australian and New Zealand armed forces. For instruction in technical specialities and for higher military education, Papua—New Guinea Defence Force officers still go mainly to Australia.

The Papua—New Guinea Constabulary gives its recruits 6 months of training at the Central Police Training Centre at Bomana, and conducts year-long courses for officer candidates at the Police Training College on the same site. There is an additional on-the-job training period of 2 or 3 years for other ranks and officer candidates. Senior police officers attend courses abroad, in Australia, Britain and other Commonwealth countries.

EQUIPMENT AND ARMS INDUSTRY

The ground element of the Papua—New Guinea Defence Force is equipped with light infantry weapons, and transport and engineering equipment of Australian manufacture; it has no artillery or other heavy weapons. The naval element has five Australian-built Attack-class patrol craft and three LCHs. The air component flies three ex-RAAF C-47 transports and three GAF Nomad Mission Masters.

A plan to establish a national aircraft production capability by assembling Nomads in Papua—New Guinea was announced in late 1976, but there has been no significant progress towards achieving this goal. There is no arms industry in Papua—New Guinea at present.

RANK, DRESS AND DISTINCTIONS

The rank structure and uniforms of the Papua—New Guinea Defence Force follow Australian models.

CURRENT DEVELOPMENTS

The internal political situation in Papua—New Guinea is considerably more stable than was expected at independence in 1975, especially as regards secessionist movements, and there is no indication that the Papua—New Guinea Defence Force will be called on to act in its primary role of internal security in the near future. The guerrilla activity on the border with Indonesia is becoming increasingly worrying to Port Moresby, however, because the government is caught between the practical need not to give Jakarta cause for anger, and its inability to deal decisively with the guerrillas in view of the sympathy they enjoy amongst its own population.

It must be of special concern to the government that this sympathy may extend into its own armed forces: following the public admonishing of Brigadier Diro for having 'unauthorised' contacts with the leader of the West Irian guerrillas in late 1977, the officer corps reportedly held a meeting in which they expressed their continued support for their commander. Moreover, there may be some doubt in Port Moresby as to whether it could count on Australian military support,

World Armies

automatic against any other conceivable external threat, if Papua–New Guinea unfortunately became involved in a military confrontation with Indonesia, in view of the emphasis Canberra lays upon maintaining good relations with Jakarta. In practice, however, Australian support probably would be forthcoming, and this probability undoubtedly has a pronounced deterrent effect on Indonesian policy towards Papua–New Guinea. The odds on a direct military confrontation between the two countries, therefore, must be reckoned to be very low.

GWYNNE DYER

PARAGUAY

HISTORY AND INTRODUCTION

Paraguay is a military dictatorship, now the longest lived in Latin America, the present ruler, General Alfredo Stroessner, having come to power in 1954. The army is the dominant institution in the country. Its officers, serving or retired, are strongly represented in the Council of Ministers and hold senior positions in the civil service and state enterprises. Although opposition parties exist, the ruling Colorado party consistently wins overwhelming majorities at elections, and the only effective voice of opposition in the country is raised by the church, with which the government is on bad terms. President Stroessner is now in his fifth term of office. A constitutional convention was elected to amend the constitution so as to allow him to serve a sixth, from 1978. Though there have been several attempts, real or merely reported, to overthrow him from within the armed forces, his position appears unassailable, and this despite the well-attested fact that the Paraguayans are perhaps the most bellicose people in the sub-continent.

Paraguay, completely land-locked, remote, poor and sparsely inhabited, has one of the most curious histories in South America. In the seventeenth and eighteenth centuries it was the main centre of the Jesuits' missionary efforts among the Indians, whom they organised in large, autonomous communes and protected against the depredations of the colonists. Their success and consequent unpopularity with the whites led to their expulsion in 1768, but they had ensured the survival of the indigenous population (*Guaranis*) almost intact, with the result that Paraguay has today a homogeneous population of largely Indian descent, and a living local language spoken by the majority of the inhabitants and supporting a lively national literature. Paraguay also became the first country to declare its independence of Spain, in 1811, largely by reaction against the efforts of the Argentinians to incorporate it in their own independence movement. The leader of the local movement was an extraordinary Spanish-educated lawyer, Francia, who defeated an Argentinian invasion and made himself dictator, which he remained until his death in 1840. His rule was completely arbitrary. He expelled all foreigners, allowed none in, and prevented Paraguayans from leaving the country. He severed trade links with the outside world, promoted self-sufficiency of a subsistence sort, persecuted the church and punished ferociously all disobedience to his whims and the least disrespect to his person. But his rule spared Paraguay the frightful civil and foreign wars which racked so much of South America in the independence era and left it a peaceful if not prosperous country. He was succeeded by the López presidents, father and son, whose policy was outward looking. But the father, Carlos, though he quarrelled with his neighbours, Argentina and Brazil, avoided war. The son, Francisco, overestimated his power. He built up between 1862 and 1864 an army of 50,000, the best in South America, and provocatively declared support for the anti-Brazilian party in Uruguay, over the control of which Brazil was in dispute with Argentina. The outcome of his intervention was to unite Brazil, Argentina and Uruguay against him in the War of the Triple Alliance, 1865–70. It was in this war that the Paraguayans first showed their ferocious and indomitable military prowess. Time after time they attacked at hopeless odds, to lose terribly but to continue the struggle elsewhere. It was ended only by the death in action of Francisco López himself. The country was bankrupted and devastated and had lost 300,000 of its 500,000 people. Among the survivors, women and children outnumbered men by nine to one. The new generation was fathered by the Brazilian army of occupation which remained in the country until 1876.

The war, which transferred large tracts of territory to Brazil and Argentina, also broke that country's tradition of settled, if autocratic, government. Francisco López had not waged war without internal opposition and the parties which subsequently came into existence, the Colorados and Liberals, reflected those divisions. They were pushed to ridiculous, if familiar, extremes in the next 40 years, during which twenty-two presidents held office; there were no less than four in 1911. The army was the most frequent instrument of political change, and the chief source of political power. After 1912 there was a period of comparative stability, when the army sustained a succession of Liberals — Schaerer, Franco, the two Ayalas (the so-called 'literary presidents') — for their full terms, but the promise of peaceful progress was dashed by the onset of Paraguay's second great disaster, the Chaco War, in 1932. The Chaco, the northern extension of the pampas, had been claimed by Bolivia since 1811 but the claim had not been pressed. In the 1920s, however, Bolivia was alerted to the possibility of oil strikes in the Chaco. She had also long wanted a foothold in the River Paraguay, to restore her access to the sea lost in the war with Chile in 1883, and the failure of her claims to regain that coast in 1929 redoubled her interest in the river. There had been border clashes in 1927 and a serious shooting in 1928. In 1932 a full-scale war broke out. Bolivia brought her German-trained army out of the Andes into the low-lying Chaco where her brave soldiers died in thousands. So too, unfortunately, did Paraguay's for, though better acclimatised to the region, they were greatly outnumbered. Though they gained a victory and 20,000 square miles of territory, the male population was again reduced by tens of thousands. Bolivia, however, had been granted railway access to the river, which the population regarded as a humiliation. There followed as a result a succession of coups and counter-coups so frequent that the Paraguayans themselves described the period 1936–9 as *confusionismo*.

World Armies

Confusionismo began with a seizure of power by a veteran of the war, Colonel Rafael Franco, in February, 1936. His policy was to inaugurate an Italian-style fascist regime, in which he was supported by many young officers in the army but, after provoking a series of revolts, he was removed by an army counter-coup in August, 1937. The *golpistas* replaced him with the president of the university, Paiva, who managed to hold peaceful elections in 1939. These returned the hero of the Chaco War, General Estigarribia, to power but his promising presidency was cut short by his death in an air crash the following year. In the meantime, however, he had replaced the comparatively liberal 1870 Constitution with a strongly presidential one and his successor, General Higinio Morínigo, the Minister of War, used it on his assumption of power to rule autocratically. He was elected to the presidency in 1943 in army-run elections, despite several armed uprisings against him. The disorder continued spasmodically, culminating in 1947 in a large-scale revolt by the Liberals and Febreristas (a left-wing party), who came to control wide areas of the country before they were defeated. In 1948 the army bought to power a Colorado candidate, González, but replaced him the following year with another Colorado, Chavez. He was eventually judged to be too influenced by Perón of Argentina and in 1954 was turned out by the Minister of War, General Alfredo Stroessner, a member of the small but powerful German immigrant community. The general has held power ever since, largely by his skill in manipulating the officer corps and rewarding chosen members with lucrative posts in government and State-controlled business enterprises. He has many opponents both inside the country, where the armed forces and his own Colorado party regularly produce dissidents, and outside, where a United Front for National Liberation occasionally stages cross-border raids from Argentina or Brazil. The best organised took place in 1960 and 1964. But he has crushed all opposition and has apparently no difficulty in retaining power, thanks to his absolute domination of the army. He has been careful to maintain cordial relations with the United States, from which he receives military and investment aid, and has cultivated friendship with authoritarian regimes abroad, notably those of South Africa and Taiwan, which also invest in Paraguay. Partly because of the difficult geographical approaches to the country, which lie across broad, easily patrolled rivers or inhospitable terrain, he has not been troubled by major guerrilla incursions. As long as he retains the loyalty of his officers, his government appears unshakable.

STRENGTH AND BUDGET

Population: 2,765,000
Army: 12,500
Navy: 2000 (including 500 marines); 15 small craft
Air force: 2500; 12 combat aircraft
GNP (1976): \$1,200,000,000
Defence expenditure: \$36,100,000

Over the last 15 years, Paraguay has consistently spent between 1.6 and 2.2% of its gross domestic product on defence, and about 20% of the national budget; of the latter figures, however, about a quarter is allotted to the upkeep of military farms and ranches, from which the armed forces are fed. The country has received appreciable quantities of United States military aid. The most recent deliveries were five Douglas DC-6s and 12 AT-6 Texan aircraft in 1975, all surplus to United States requirements.

COMMAND AND CONSTITUTIONAL STATUS

Under the 1967 Constitution, the President is Commander-in-Chief of the Armed Forces, and exercises dictatorial authority through his power to impose a 'state of siege' for prolonged periods over the whole area of the republic or designated parts of it. The western half of the country, the sparsely inhabited Chaco, is under permanent military government. The inhabited eastern half has been intermittently in a 'state of siege' since General Stroessner's assumption of power. He has the right to declare the 'state of siege' unilaterally, the only restraint on it being a requirement to inform Congress within 5 days of his reasons for declaring it and the areas of the country to which it extends.

The president directly controls the Armed Forces General Staff, to which the staffs of the army, navy, and air force are subordinate. The Ministry of National Defence, headed by a serving or retired officer, is outside the chain of command and concerns itself with budgetary, logistic and legal functions. The President also, through the Ministry of the Interior, controls the National Police, the detachments of which are commanded by the government representative (*delegado*) in each department.

The president chairs all meetings of the officer promotion boards, which meet twice yearly on May 14th and December 31st, and personally approves or disapproves every promotion. He also makes all the more important military appointments, including those of serving or retired officers to governmental positions.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitments

Now that Paraguay's frontier disputes with its neighbours have been settled (in the Triple Alliance and Great Chaco Wars), the army's role is chiefly an internal one. It provides, as it has done since 1870, the principal and perhaps only support of the ruling president, assists the police in the maintenance of internal law and order and, with the navy, exercises surveillance over the frontiers. In recent years it has also come to have an important developmental and civic role. Through its training of conscripts it reduces illiteracy in the population and teaches useful trades; and it performs direct civic aid, by the building of dams and bridges in the interior, the sinking of wells and provision of building materials for new settlements and village improvement. Its supervision of Indian affairs in the Chaco has given rise to hostile foreign comment; charges have been laid (by the British Anti-Slavery Society) of a deliberate policy of extermination of some tribes. The army has no external commitments. Argentina and Brazil maintain military missions in the country, and it also receives United States military aid.

Deployment

The country is divided militarily into six divisions, five east of the River Paraguay, one to the west. An infantry 'division' (battalion) is stationed in each division, and two additional battalions in the Chaco (in which military service for conscripts is reduced from 18 months to 1 year). There is a Presidential Escort Regiment (battalion), a Cavalry 'division' of two armoured regiments with obsolete vehicles, and an artillery regiment in Asunción (the capital), together with a signal command and a transport command. Five engineer battalions operate in the interior, largely engaged on the improvement of roads. There are also two horsed cavalry regiments (which may form part of the cavalry 'division'). The air force has a small parachute unit at its main base, Campo Grande, Asunción, and the navy maintains a small marine battalion which operates afloat along the Paraguay and Alto Parana rivers.

Recent Operations

Apart from the suppression of internal disturbances, of which the most serious of recent times was in 1947, the army has not been in action since 1936.

ORGANISATION

There are infantry, cavalry, artillery, engineer, signal, transport and technical branches. Operationally, the largest unit is the battalion, though divisions exist in name. There are about 8000 armed police, of which 3500 police the departments, 4500 the capital. The latter group includes a Security Guard of three companies organised on military lines.

RECRUITMENT, TRAINING AND RESERVES

Recruitment of soldiers is by universal conscription, under Article 125 of the 1967 Constitution. The term of service is 18 months. Those exempted or living abroad must pay a military service tax, either to the Office of Internal Taxes or to a consulate. The annual contingent is about 20,000 strong, of which rather less than half is called for service, a proportion, nevertheless, much higher than in most South American countries; conscripts also serve in the police.

Soldiers are trained in the unit to which assigned. NCOs are chosen from promising conscripts and are trained at a variety of schools, including the Armaments School, the Engineer School and the Signal School, all located at Asunción. Officers, selected by competitive examination from high-school graduates, are trained at the *Colegio Militar*, Asunción (tri-service, 4 year course). Because of the civil as well as military career opportunities open to officers, admission to the military academy is eagerly sought for their sons by middle-class families. Many of the entrants are graduates of the *Liceo Militar*, a military boarding school at Asunción. Higher training is provided at the Army and Air Force Command and General Staff College, and at the National War College (tri-service and civil service, founded 1968). Officers also attend the United States School of the Americas, and the Inter-American Defence College, Washington. The USA, with Brazil and Argentina, maintains a military mission in the country.

The army releases about 6000 trained conscripts each year but does not appear to maintain a reserve training programme or organisation.

EQUIPMENT AND ARMS INDUSTRY

Paraguay has no arms industry and appears to import even its small arms ammunition. The majority of equipment used is

World Armies

American or Western European.

Sub-machine-gun: 9mm Madsden (Denmark)

Rifle: 7.62mm FN (Belgium)

Artillery: 75mm M116 pack howitzer (USA, obsolete) and 105mm M101 howitzer (USA, obsolete)

Armour: Sherman tank (USA, obsolete; nine in service); M-3 light tank (USA, obsolete; six in service); some M-113 APCs (USA)

Aircraft: the air force has a counter-insurgency squadron with 12AT-6 Texan aircraft, 20 transports (largely used to provide internal civil communications) and 17 helicopters (Bell UH-13As, H-12Es)

RANK, DRESS AND DISTINCTIONS

The army wears a dark green service dress; the officers wear white for ceremonial.

CURRENT DEVELOPMENTS

The Paraguayan army is, with the national police, essentially the chief prop of the incumbent regime, which is almost wholly military in character. The Colorados, though in theory the ruling party, are not an independent political force, but the captives of their nominee, General Stroessner. As long as he retains the loyalty of his military subordinates, which he has very skilfully done so far by a judicious allocation of rewards and punishments, he appears irremovable. And while he holds power, domestic political life will remain stultified. External threats to the regime are negligible; the neighbouring regimes are also military in character and well disposed towards the person of the president, while exiled dissidents have little hope of launching successful attacks against the regime across the country's difficult borders, or of establishing safe bases for guerrilla activity within the territory.

The army is not, however, simply an agent of repression. It is deeply committed to civil action and development. An important element in the training of conscripts is the teaching of literacy and of useful tasks, particularly building work and machine maintenance. And many units are devoted to development work in the interior. The army's five engineer battalions are committed to civil engineering projects, including the building of roads and bridges, the digging of wells, building of water storage tanks, installation of pumping equipment and the fabrication of bricks, tiles and other building materials for village schools and churches. The signal corps provides radio and telephone communication to outlying settlements, the military medical service furnishes medical care throughout the interior (as does the navy's medical service to communities along the rivers), while the army's veterinary service is responsible for all veterinary care in the country. The air force runs an internal air line, which provides subsidised travel between isolated communities, and conducts the national meteorological service.

The president's dual employment of his armed forces, in repression and civil action, effectively nullifies internal opposition to his regime, from all save one direction — that of the church. The Paraguayan archdiocese of the Roman Catholic church, once one of the most politically subservient in South America, has become in recent years a frank and open critic of authoritarian government and, because of its national standing, a threat which Stroessner can neither punish nor ignore. The archbishops of Asunción have thrice excommunicated the Minister of the Interior for the mistreatment by his police of priests, and the present archbishop, Rolon, has consistently condemned the regime for 'arbitrariness, oppressiveness, monopoly of the media, favouritism, corruption and severe mistreatment of prisoners'. The provincial clergy have identified themselves with the cause of the landless peasants and have set up a number of co-operative enterprises aimed at recovering land from absentee landlords. Their work has involved them in direct clashes with the army and police, particularly at Jejuí, 190 miles north of Asunción, in February, 1975. Hostility between the military regime and the church may be expected to harden.

JOHN KEEGAN

PERU

HISTORY AND INTRODUCTION

Peru is certainly not alone among Latin American republics in possessing an army which intervenes in politics, nor in that army regarding itself as the guardians of the nation's destiny and instrument of its economic and social development. But whereas most Latin American armies intervene in government only to bridge some political crisis, the Peruvian, which came to power by *coup d'état* in 1968, has proclaimed its determination to remain in power until fundamental and irreversible changes in the nature of the Peruvian State and society have been achieved; and, while most armies' political programmes are modest in shape and piecemeal in content, the Peruvian army does indeed appear to have a comprehensive and fully thought-out programme of social and economic development policies which it intends to implement.

What is most surprising about the Peruvian army's recent and wholehearted involvement in politics is that it should come some 70 years after the definitive exclusion of the army from government had, in theory, been brought about. Until that moment its political role had been paramount from the foundation of the Republic in 1821, firstly because the Spanish combined power was stronger in Peru, the historic heartland of its South American empire, than elsewhere and the winning of independence demanded a constantly greater military effort, and secondly because the early years of the Republic's life were wracked by wars with neighbours (Colombia 1827, Chile 1838 and Bolivia 1841), incursions by exiled dissidents and internal struggles for power between armed parties. Stability was not imposed until the presidency of General Roman Castilla (1845–51), who took the important step of putting the army into a more regular basis. Like the other territories of Spanish South America, Peru had not been garrisoned by a properly constituted military force until the Bourbon administrative reforms of 1764. The force then constituted was made up of three elements: Spanish regiments serving temporarily abroad, Spanish regiments on permanent colonial service (*fijo* regiments) and colonial militias. The garrison proved far too small, however, to deal with the armies raised by Bolívar and Santa Cruz and new regiments were hastily raised after 1810, the men being mainly Indians and the officers creoles or mestizos. These regiments had defeated San Martín early in his campaign and had played a major part in the defeat of the Spaniards. Their leaders naturally expected to fulfil a similar role in the political life of the new Republic; they quickly squashed the *grandees* of the coastal cities, who regarded themselves as the legitimate inheritors of power, and thereafter used their military skills and resources to battle between themselves for control. As long as the army remained a collection of personal factions, such internal strife was inevitable. Castilla's efforts to regularise it were therefore crucial and, though only partially successful, pointed the way to the future.

Castilla allowed himself to become associated, however, with the liberal, anti-clerical interest among the coastal *grandees* and, through the conflict with the church and its supporters which ensued, to provoke a fresh round of internal strife which lasted until 1868. Internal differences were then overlaid by a sudden surge of economic development. Peru is immensely rich both in mineral resources and in deposits of guano (sea-bird manure), a by-product of its proximity to the richest fishing grounds in the world. It was guano and nitrates which generated the boom of the early 1870s, attracting capital from Europe and America for their exploitation, and for the creation of the railways to carry the materials to the coast. But the boom was mishandled by Colonel Balta (President, 1868–72) and at the presidential election of 1872 he was succeeded by Manuel Prado, the first civilian to hold the office and the leader of a new force in Peruvian politics, the Partido Civilista, a party drawing its support from the coastal *grandees* and dedicated to the establishment of constitutional government uninterrupted by military coups. One of Prado's first acts was to create a National Guard, recruited from the civilian population, to act as a counterweight to the army. The country's affairs continued, however, to be dominated by economic questions which led it in 1875 into a disastrous war with its neighbour Chile. It was not the first war she had fought. In 1859 there had been a border war with Ecuador, and in 1866 a local naval war with Spain, which was then attempting belatedly to reassert its influence in the Pacific; but neither had been serious. The War of the Pacific (1879–83) was to bankrupt and exhaust the country. The precipitating cause was a boundary dispute between Chile and Bolivia over a mineral-rich border province, in which Peru sided with Bolivia. Obligated to make good her guarantee of support, Peru at once lost her navy to a Chilean naval attack (Admiral Grau's death on the bridge of the monitor *Huascar* made him a Peruvian national hero), then lost her southern nitrate and guano regions on which she depended to finance the war to a land attack, and eventually the capital itself which the Chileans occupied in January, 1881. After 2 years of guerrilla warfare, the Peruvians were obliged to make a costly peace. In the aftermath, the country returned to military rule, but of so corrupt and inefficient a sort that in 1895 a civilian president was elected by an overwhelming majority. The era of military rule seemed to be over for good, and one of the first acts of the new civilian president Pierola was to import a French military mission and found a military college to teach the army European manners.

The ensuing 'golden age' of the oligarchy (1895–1919) was so called because it at last brought to the rich of the coastal cities and to the large estate owners ('the forty families') political power to control the social standing and wealth they had

World Armies

enjoyed since Spanish times. Unfortunately for their enjoyment of it, their inheritance also coincided with the rise of popular political power. Peruvian franchise was based on a literacy test in Spanish (and so remained until the last election of 1963). But the majority of the population, Quechua-speaking Indians of the Sierra and the Andean belts, were illiterate even in their own language, and therefore doubly disqualified. And until long after primary education was made compulsory in 1906, many of the Spanish-speaking mestizos of the Sierra and coast remained unable to pass the literacy test and so unable to vote. The literate lower and lower-middle class was, however, growing and the Partido Democrática, which had made common cause with the *civilistas* in the overthrow of the last military president, drew its strength largely from their votes. In 1912 it won its first election and one of its first acts was the reduction of the military budget. This was sufficient to provoke a Colonel Benavides to overthrow the President in 1914 and sponsor a *civilista* as his successor. And this development defined a trend which was to dominate Peruvian politics until World War II. The army had recognised that the lower class parties were hostile to its interests, that in combination with the upper class party they could assume civilian rule (chiefly by the use of the strike as a political weapon) and that the army's interests therefore lay in making common cause with the upper class party of which it became in effect the protector. Its tactics were to allow the upper class party to hold power, in return for concessions and favours, and they worked remarkably well for 30 years.

Government during those years was by no means strictly constitutional. Leguía, who became President in 1919, made himself effectively a dictator, until overthrown by a military coup in 1930. Cerro, leader of the coup, was assassinated and replaced by a soldier, Benavides, appointed by Congress. But the army remained generally in the background. Moreover, in 1939 the political process produced a president, Manuel Prado, who began to achieve success in what had become the major problem of Peruvian political life, the reconciliation of the working and lower-middle classes. Since the end of the 'golden days of the oligarchy' in 1919, those classes had found their political home in a remarkable home-grown party, the Alianza Popular Revolucionaria Americana (American Popular Revolutionary Alliance — APRA). Left-wing (but not orthodox Marxist), anti-American (since America was seen as the selfish exploiter of the country's resources) and pro-Indian, the party was founded in Mexico in 1924 by an outstanding Peruvian ideologist, Haya de la Torre, and was intended by him to become pan-Latin American in its influence, but took root only in his own country. Its early activities, which included the fomentation of lower rank mutinies in the army and navy in 1932, made it hated and feared by the military but it gained such widespread support that by 1939, although outlawed, it was a force in Peruvian politics which could not be ignored. Prado, by playing its anti-fascist feelings, persuaded it to support his pro-Allied and therefore pro-American policies during World War II (which Peru entered in the last months) and eventually led it to participate in the 'negotiated' election of his successor in 1945. The new president, Bustamante, represented a new idea in Peruvian politics — Christian Democracy currently fashionable in Catholic Europe. But it lacked South American roots, failed to find a following and left its leader poised uncomfortably between the demands of the *Apristas* and the army. When he refused army demands to ban APRA a section of the army rose against him and, though the majority remained loyal, the generals decided he must go. He was replaced by Marshal Odría in October, 1948.

This return of the army to politics, legalised by Odría's winning of the presidential election of 1950, provoked a realignment of interests in Peru which has been compared to that between the *Civilista* and *Democrática* parties in 1895. The 'forty families' had come to accept that *aprismo* could not be dealt with by repression and that their own long-term interests required an accommodation with the left; APRA for its part had tired of underground politics and was anxious for legitimacy. They therefore jointly agreed in 1956 to support Manuel Prado, the wartime President, for a second term. He was elected, but only by a narrow margin, over the representative of a new party, *Accion Popular*. Its leader, Fernando Belaúnde, stood, as APRA had originally done, for the emancipation of the Indian peasantry, and at the 1962 elections again came close to winning with Haya de la Torre just ahead of him, and Marshal Odría (the *golpista* of 1948) a close third. The closeness of the elections threw it into the congress, which chose de la Torre, but the army were unwilling to accept their old *aprista* enemy and took power, announcing that new elections would be held in 1963. These returned Belaúnde. He did not, however, command a majority in either house of congress, was forced to borrow abroad to finance his ambitious development programme, was confronted with extreme left-wing guerrilla risings in the interior and was prevented by his principles from offering the army the cabinet posts which would have guaranteed its support. Inflation eroded his popularity, while the army's involvement in the problems of the interior lent substance to the political theories its young leaders were imbibing at its new staff college, the Centre for Higher Military Studies (CAEM). On October 3rd, 1968 General Juan Velasco Alvarado, Chairman of the Joint Armed Forces Command, had Belaúnde put on an aeroplane for Buenos Aires, and announced the installation of a new military government.

This government demonstrated from the onset that it was unlike any military regime which the country had known before. Its justification for its seizure of power was the economic and administrative chaos into which Belaúnde's government had plunged the country, its pretext the unfavourable terms of the agreement he had recently signed with the American International Petroleum Company. But instead (as in 1962, or even in 1912) of declaring its intention of intervening only as a caretaker, it announced that its aims were revolutionary and its programme long term. Broadcasting on July 28th, General Alvarado stated that the revolution was not Marxist (a strange disclaimer for a Peruvian officer to make, and evidence of how greatly its internal temper had changed under the influence of the CAEM) but nationalist, and aimed at eliminating privilege and implementing the better distribution of wealth. He favoured the making of a new constitution, universal suffrage, nationalisation of selected national assets and the investment of foreign capital only on condition that the State shared in the profits. These were elements of the army's secret so-called 'Inca Programme' which

was to be made public in 1974. Its preamble was then revealed to state that 'the armed forces, as executor and mainstay of the Peruvian revolution, will carry out the processes of change until they are irreversible'.

By 1974 the military government had shown how radical its programme in fact was. It had set the following as its specific aims: land reform and redistribution, particularly in the latifundia; expropriation of foreign oil and mining interests; the declaration and vigorous defence of a 200 mile fishing limit; administrative reform and an end to corruption; raising of lower-class living standards; the extension of educational opportunities to all; and, in general, the achievement of economic independence for the whole country. The principal object of its attentions were the foreign-owned exploitative corporations, in particular the Cerro de Pasco Corporation (which mined 50% of Peru's copper, lead and zinc), the International Petroleum Company (IPC, which had a virtual monopoly of oil production), the large haciendas (some over 200,000 hectares in area), the foreign-owned rail and telecommunications networks and the long-established coastal families whose wealth derived from arranging the export of the country's raw materials. In its first 6 years of power the military government expropriated the IPC's holdings (1969), established the 200 mile fishing limit and fired on American fishing vessels in its defence (1969), set up a State Corporation (Mineproperu) to control mineral exports (1971) and nationalised the telephone network, the largest railway company (1972), the Cerro de Pasco Corporation and all foreign fishmeal companies (1973), and the cotton industry (1974). As a token of its general distancing from the USA, it had also opened diplomatic relations with the USSR (1970), and China and Cuba (1971).

The explanation for this dramatic reversal of its hitherto rigid defence of the traditional order cannot lie in the influence upon it of the CAEM, important though that institution undoubtedly was, nor in its exposure to the realities of life in the Sierra and Selva during the anti-guerrilla campaign of 1962-6, for all the impression that it left. It had certainly lost patience with the political parties of all complexions, and it was moved by a growing disgust for the foreign exploitation of the country's resources felt by most professional Peruvians. But these factors cannot be regarded as precipitating causes. What seems to have happened is that the army came to see itself as used by the rich, even when the rich appeared to be under its protection, decided that the policies of the rich were slowly but surely exciting a disastrous revolutionary condition and that the army alone possessed the cohesion, expertise and national standing necessary to avert the crisis. This decision to act 'in the national interest' is certainly not unique either in or outside Latin America. What made the Peruvian army's intervention unusual was that it did not seek to place itself at the head of an existing political movement nor to create its own, but 'in a country with the deepest political cleavages, both countrywide and along class lines . . . to set itself apart from, and from its point of view on top of, the domestic political struggle'. Its stance is that of platonic guardians, and its belief apparently is that by the disinterested implementation of the right policies it can make the Peruvians, willy-nilly, one people, free and prosperous in their own country.

Whether its beliefs are justified, whether it can sustain a healthy and developing economy, whether it can continue to deny a highly political people a normal political life, and whether it can, above all, itself avoid falling into political disunity, time alone will tell.

STRENGTH AND BUDGET

Population: 16,900,000

Army: 46,000

Navy: 1400 (including 1000 marines); 10 major vessels, eight submarines and 15 smaller vessels

Air force: 10,000; 136 combat aircraft

Paramilitary: 20,000 armed police

GNP (1976 estimate): \$10,700,000,000

Defence expenditure (1977): \$406,000,000

COMMAND AND CONSTITUTIONAL STATUS

The military leaders who overthrew the government of President Belaúnde in October, 1968 suspended Congress and promised a new constitution, which has not yet been published. Under Article 213 of the old, the armed forces were entrusted with 'the protection of the rights of the Republic, the enforcement of the constitution and the law and maintenance of public order' and it is under this provision that the junta presumably claimed legitimacy for its action. The Revolutionary Government of the Armed Forces now rules by decree. It is headed by a general, as president. The cabinet is composed of military officers (though a civilian was admitted after the cabinet coup which overthrew President Alvarado in August, 1975). The Minister of War (Army) acts as prime minister and is a serving officer, as are the ministers of the navy and air force. In 1968 these ministers were also commanders-in-chief of their respective services. The posts are now separated but the Commander-in-Chief of the Army apparently has the succession to the premiership. The Head of the Office for Social Mobilisation, in effect the junta's own political movement, is a serving officer who sits as a minister in cabinet.

A major element in the system of military government is the group of corporations the government has set up to control

World Armies

the nationalised industries, of which the most important are Mineroperu (1971) which controls mining and mineral exploitation and exporting, and Pescaperu (1973) which controls fishmeal and fish oil production. The government has also taken full or partial control of the petroleum, cotton and cement industries, and of the Central Reserve Bank, telecommunications and railways, and has instituted State investment in, and worker-management of, many other enterprises. Officers hold key positions in all State institutions and the nationalised enterprises. In government itself a major role is played by the Corps of Officer Advisers to the Presidency, which is responsible for conceiving and directing the government's long-term policies.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The army's political role is now so preponderant that its distinctive military role is difficult to isolate. All the more is this the case since the most talented officers are naturally employed in government. The army retains nevertheless some explicitly military tasks. First, is the maintenance of internal order, which it was last called upon to carry out on a large scale in the 1960s (*see* Recent Operations). Next is the supervision of borders, particularly that with Ecuador. The army engineers carry on major developmental work in the Andean interior begun in the 1960s, the experience of which was of crucial significance in committing the army to political intervention. Interestingly, the army does not appear to regard itself as a 'school of the nation', no doubt because its conscript intake is so small, proportionate to the population, and because it now has more direct means of forming public opinions.

Commitment

Peru has no external military commitments; as a member of the United Nations it offered a contingent to the Emergency Force set up to police the Middle East ceasefire line in 1956, but it was not among those chosen.

Deployment

Peru is divided into five military regions, with which the police (Guardia Civil) districts now correspond. These comprise the following provinces:

First (HQ Piura): Tumbes, Piura, Lambayeque, Cajamarca, Amazonas

Second (HQ Lima): La Libertad, Ancash, Lima, Huancavelica, Ica, Callao

Third (HQ Arequipa): Arequipa, Moquegua, Tacna

Fourth (HQ Cuzco): Puno, Cuzco, Apurimac, Junín, Pasco, Huánuco, San Martín, Ayacucho, Madre de Dios

Fifth (HQ Iquitos): Loreto

Little is published on the deployment of units within the regions, but it is believed that: the armoured brigade is stationed at Piura, First Military Region, near the border with Ecuador; the jungle brigade in the Fifth Military Region, on the headwaters of the Amazon (where the Peruvian navy also operates); the cavalry and para-commando brigades at Lima (Second Military region); and the infantry brigades are distributed two in the Third and Fourth Military Regions and one each in the First and Second.

Recent Operations

Apart from a minor frontier conflict with Ecuador in 1941, the Peruvian army has not been at war since its bitter struggle with Chile in the War of the Pacific (1879–83). Between 1962 and 1966, however, it waged a successful campaign against left-wing guerrilla risings in the interior of the country. The first of these, which took place in La Convención valley in Madre de Dios province in 1962–3, was led by Hugo Blanco. A Trotskyist, he had formed his own movement, the Frente de Izquierda Revolucionaria (Left Revolutionary Front — FIR), with the object of leading the landless Quechua-speaking peasants to seize their holdings on the giant haciendas. The government did not at first oppose the activities of the FIR organisation syndicates and much land was effectively transferred to those who worked on it, but after Blanco had attacked a police post at Pucará in November, 1962 the military government, which had come to power in June, moved against him and his followers. He was captured and imprisoned in May, 1963 by which time the rebellion was extinct. But President Belaúnde, by then in power, formed the view that the dispossession of the peasants who had taken land was both unpolitic and unjust, and allowed most of those who had seized land to retain it. The army, whose eyes had been opened to the agrarian problem by its experience in the campaign, acquiesced in this judgement. It formed a harsher judgement however of the movements which rose in Ayacucho, Cuzco and Junín provinces in 1965–6. These were led by Cuban-inspired revolutionaries rather than aggressive reformers like Blanco, and were seen to pose a more distinctive and alien threat to the

State, and were dealt with accordingly. The first of these was the *Movimiento de Izquierda Revolucionaria* (Movement of the Revolutionary Left — MIR) led by Luis de la Puente and other dissatisfied members of APRA. De la Puente, who had spent some time in Cuba, attempted to start a Castro-style guerrilla campaign in the foothills of the Andes in Cuzco province, but at once attracted strong military action and was defeated and killed in the period September–October, 1965. A collaborator, Guillermo Lobaton, whose group was called *Tupuc Amaru* after an Inca hero (and from which the Uruguayan Tupamaros take their name) was defeated and killed in Junín in January, 1966 after a 6 month pursuit by the army. In the same month another group, belonging to the *Ejercito de Liberacion Nacional* (National Liberation Army — ELN), led by Hector Bejar and called Javier Heraud after the leader of an abortive rising who was killed in 1962 was decisively broken up. Despite the army's vigorous reaction, none of these groups was a serious military threat to the State; they failed to find a following among the peasants and were held at arms length by the orthodox (and most of the unorthodox) left-wing parties. Their revolt was intellectual in the extreme and utopian.

The army was briefly involved in the repression of a strike (for better pay) by Civil Guards in Lima in February, 1975. The majority of the Civil Guard remained unaffected.

ORGANISATION

Arms of Service

These are infantry, cavalry, artillery, engineers and services. The two cavalry regiments of the Presidential Guard are known as the Cuirassiers and the Hussars of Junín.

Operational

The operational formations of the Peruvian army have increased in number during the 1970s. In 1970 it counted one armoured brigade, four infantry brigades and one commando brigade. The brigades (called divisions) have now been increased to eight infantry (which include some mechanised units), one airborne, one jungle and one cavalry, to which the Presidential Guard regiments belong. There are also some separate artillery and engineer battalions, and three armoured reconnaissance squadrons. Brigades are organised into three battalions. The total strength of the army is about 30 battalions, with supporting troops.

The police (*Guardia Civil*) is 20,000 strong, armed and organised on provincial lines.

RECRUITMENT, TRAINING AND RESERVES

Recruitment and Training

The majority of the army (40,000) is composed of conscripts, who serve for 2 years. They are selected from a much larger annual contingent, by ballot among the white and mestizo population. Officers, most of whom come from middle-class mestizo families to whom an army career offers free education and a valued means of social elevation, are trained at the military academy at Chorrillos, near Lima (founded 1896) where the Staff College is also situated. By far the most significant element in the Peruvian military education system in recent years has been the *Centro de Altos Estudios Militares* (Centre for Higher Military Studies — CAEM). Founded in 1958, with a mainly civilian faculty, as a joint-services staff college it rapidly developed into a 'military school of public affairs'. Originally seven of the 10 months' instruction were devoted to social and economic affairs, and though the government later insisted on a reduction of the proportion, the threat of the school's instruction remained unchanged. It took as its basis Article 213 of the Constitution, which charges the army with the guardianship of national rights and sovereignty, analysed the prevailing social and political conditions to show how dominant were foreign and narrowly sectional interests, and outlined 'developmental' solutions to the country's besetting problems. It also implicitly preached the doctrine that the army, as the only truly disinterested national institution, was uniquely fitted to design and implement a development programme. Its influence in post-1968 government has been central — 13 of the first 19 cabinet ministers appointed after 1968 were CAEM graduates, and they almost entirely staff the Council of Presidential Advisers.

The director of the school is appointed by the Joint Command of the Armed Services. It is divided into directorates — Academic, National Strategy, and Research and Development; the latter is a political and economic research department.

Reserves

These consist of the Reserve in which conscripts spend 10 years after active duty, and the National Guard, a second-line reserve, to which reservists then transfer. Both bodies appear, however, to be purely paper organisations.

World Armies

EQUIPMENT AND ARMS INDUSTRY

Peru is a classically underdeveloped country in that her economy has depended upon the export of raw materials (in her case valuable and diverse) to pay for the importation of almost all manufactured goods. The military government has set as one of its foremost tasks the industrialisation of the country, but manufacturing is still in its infancy (though there is now a local ship-building industry and government-owned steel mill). All military equipment is still imported with the exception of small-arms ammunition — the NATO 7.62mm × 51 mm round is known to be manufactured domestically, as may be other types also.

The USA has been Peru's traditional supplier of arms, but the military government in its efforts to diminish the country's economic and political dependence on the USA has, during the 1970s — to Washington's expressed disquiet — purchased equipment from the USSR, as well as from other non-American suppliers. Its long-term aim is national self-sufficiency in arms, but it is unlikely that it will, for many years, be able to produce armoured vehicles or aircraft. Its needs, in any case, ought to be quite modest.

Rifle: 7.62mm FN (Belgium), 7.62mm G3 (Germany) and 7.62mm AK-47 (USSR)

Machine-gun: 7.62mm FN (Belgium)

Mortar: 120mm (source unknown, probably France)

Anti-armour weapons: Cobra missile (Germany)

Air-defence weapons: SA-7 missile (USSR)

Artillery: 105mm M-101 howitzer (USA), 130mm M-46 gun (USSR) and 155mm M-114 howitzer (USA)

Armour: M-3 Scout Car (USA — 50 in service); a total of 300 Mowag Roland APCs (Switzerland), M-113s (USA) and Commandos (Cadillac Gage, USA); M-4 Sherman medium tank (USA — 60 in service); AMX-13 light tank (France — 110 in service); and T-54/55 tank (USSR — 250 in service)

Aircraft: five Helio U-10B helicopters, eight Bell 47G helicopters and five Cessna 185 light aircraft are in service; the air force has about 50 other helicopters and 24 Cessna A-37 Dragonfly strike aircraft for use in the counter-insurgency role. Most of its other combat aircraft (c. 75) could also be used for ground attack

RANK, DRESS AND DISTINCTIONS

Rank badges and uniforms follow the American pattern. Rank titles also follow the American system. The cavalry of the Presidential Guard wear the nineteenth century ceremonial uniforms.

CURRENT DEVELOPMENTS

Two questions override all others in the life of the Peruvian army today. The first is whether it can avoid the use of outright force to keep itself in power which it has now held since 1968, and under which many sections of Peruvian society have begun to chafe. The second and perhaps more important is whether it can maintain its own unity as it struggles to apply its solutions to the country's social and economic problems. These problems, though by no means insuperable, are large. Peru is a country of great actual wealth and enormous potential wealth. She produces 45% of the world's fishmeal, and large quantities of lead, copper, iron, silver, zinc, petroleum, guano and chemicals. Her land area is the fourth largest in Latin America, but under 5% of the land is actually cultivated (much of it at subsistence level), while the raw materials are almost all exported and the return from their sale enjoyed by a minority of the population. The military government's stated aim is to equalise the population's enjoyment of the national wealth and to conserve a growing share of its raw materials in domestic industry. To do so it must find ways of integrating the three zones — coast, sierra and Andean jungle — into which the country divides, and to make the illiterate Quechua-speaking Indians of the interior the cultural equals of the white and mestizo population of the coast. An important step has been the recognition of Quechua as an official language. But those who speak it remain for the most part outside the cash economy at a distressing level of poverty, and while they do, their predicament threatens the stability of the State.

The army has, so far, managed to avoid the use of force against the population on any large scale, though their units were obliged to intervene in 1975 against police strikers who were victims of a pay pause imposed to correct inflation. It has not, however, altogether succeeded in maintaining its own unity. There was evidence of a sharp left-ward move in May, 1974 when several members of the revolutionary military government (Admiral Caballero, Minister of the Navy, who had spoken for greater press freedom, and two other admirals who were opponents of nationalisation measures) were forced to resign. On August 29th, 1975 General Alvarado was overthrown in a bloodless coup, and this was again seen as a leftward move, after a period in which a state of emergency had been declared to cope with outbreaks of extreme left violence (by groups like the Vanguardia Revolucionaria and the nascent MIR). In February, 1977 however, there were signs of a rightward reaction among those who replaced Alvarado and his supporters in the military government. Four officers who supported the manifesto of a new party — The Revolutionary Socialists — were obliged to resign, including General

Figueroa (the leader of the 1968 revolution), Admiral Ocampo (who had introduced the Industrial Community Law) and General Palacio (who had introduced the Social Property Laws of 1973–4).

It seems, therefore, that the Peruvian armed forces, in which the army is the dominant element, will fail to achieve the Platonic guardian status which they believed they could when they embarked on their military revolution of 1968, and will increasingly find themselves behaving as the leaders of a one-party orthodox authoritarian State. But the success or failure of their experimental excursion into politics will ultimately turn on their management of the Peruvian economy, and above all on their efforts to transform it from raw material exporting to self-sufficiency.

JOHN KEEGAN

PHILIPPINES

HISTORY AND INTRODUCTION

The Philippine Islands, today an independent republic, were for most of the previous five centuries ruled by a foreign power: first Spain, then America, lastly if briefly by Japan. Spain conquered the islands, which number about 7000, at the end of the sixteenth century and ruled them until the end of the nineteenth. From the middle of that century, however, their rule was accepted with decreasing docility by the Filipinos. There was a serious mutiny among their native troops at Cavite in 1872, a major nationalist rising in 1896 and 1898 a further and successful nationalist rising which coincided with the outbreak of war between Spain and America. The Americans won a crushing naval victory over the Spanish fleet at Manila Bay but when their troops landed they found the Filipino insurgents in control of the mainland. The latter had declared their independence of Spain but they and the Americans soon fell out and, after a short but bitter war, the islands came under American rule. In 1935 the Americans raised the islands to the status of a Commonwealth under their protection, with its own army and an embryo navy and air force. But it continued to maintain on the islands its own garrison, which contained regiments of locally enlisted Philippine Scouts. It was these troops, with the Philippine army, which were attacked by the Japanese in December, 1941 and, after a heroic defence of the Manila area, on the Bataan peninsula and the island of Corregidor, were forced into surrender in February, 1942.

The Japanese, like the Spaniards and Americans, did not rule the islands without resistance. Foremost among the resistance groups which emerged during 1942 was the *Hukbo Ng Bayan Laban Sa Hapon*, or *Hukbalahaps*, or *Huks*, the People's Army against Japan. It was communist controlled, but supported by the Americans, and it had some success against the Japanese, though it more often attacked officials and policemen who had transferred their allegiance to them than the Japanese army itself. At the end of the war, the Americans conferred independence on the islands but disowned the *Huks* and entrusted power to parties which had flourished under the Commonwealth. The new government's failure, however, to institute reform of the land tenure system, which kept the majority of the population in poverty on share-cropping tenancies, raised the fortunes of the *Huks*. Renamed in 1949 the *Hukbo Ng Mapagpalaya Sa Bayan* or People's Liberation Army, it had raised by 1950 a force of 15,000 armed men, enjoyed the support of half a million peasants in the rice-growing area of central Luzon, north and south of Manila, and stood poised to attack the city itself. The national armed police, the Philippine Constabulary, had lost the power to oppose it, and the Philippine army was not organised or equipped to engage it. Under the dynamic leadership of a new Secretary of Defence, Ramon Magsaysay, however, the army was transformed into an effective counter-insurgency force, while an enlightened land reform and resettlement programme was instituted at the same time to alleviate agricultural distress. By 1954 the back of the insurgency had been broken and by 1957, when Magsaysay had achieved the Presidency, the army was reorganised as an external defence force.

Filipinos, of whatever of the many ethnic groups inhabiting the islands, are renowned for their individual courage and warlike character. But they do not possess a long military tradition. The Spaniards raised few local regiments, and those chiefly from the Macabebe tribe of Pampanga province, a minority among the dominant Tagalogs of Luzon. The Americans, on their arrival, formed their first local units, *Batson's Scouts*, from the same tribe, and the Philippine Scouts, from which that force grew, remained an element of the United States army until 1941. The Army of the Commonwealth, established by a National Defence Act of December, 1935 was still in a formative stage when the Japanese attacked. It was a conscript force, inducting 40,000 recruits a year, and designed by its first commander, Douglas MacArthur, to deter a potential aggressor from landing on the islands. Its credibility depended, however, on the support of the United States Fleet and, when that was removed by the attack on Pearl Harbour, its defeat by the Japanese was predestined. Reformed after the war, it consisted until 1950 mainly of administrative, service and training elements, and had only two combat battalions. The Philippine Constabulary, established by the Americans in 1901, and organised on a provincial basis, bore the responsibility for maintaining law and order. From 1950 Magsaysay rapidly brought into being, with American aid, 26 battalion combat teams, equipped as light infantry. After their victory over the *Huks*, they were reorganised into conventional defence formations in 1957 and entered on the ground strength of the South-East Asia Collective Defence Treaty (SEATO). The Philippine Constabulary then resumed responsibility for internal security. But the outbreak of a separatist rebellion among the Muslim Moros of the southern Philippines, and the declaration of martial law in 1972, obliged the army to deploy its forces internally again, and greatly to increase their strength. Despite considerable success, the army and the Constabulary are still heavily committed in the southern islands of the republic.

STRENGTH AND BUDGET

Population: 45,295,000

Army: 63,000

Navy: 17,000 (including 7000 Marines); 10 frigates, 87 small craft

Air force: 16,000; 104 combat aircraft

Paramilitary: 40,000 Philippine Constabulary; 25,000 Civilian Home Defence Forces

GNP (1976-7): \$16,500,000,000

Defence expenditure (1976-7): \$419,000,000

The expenses of suppressing the rebellion in the southern islands has raised the defence budget from \$92,000,000 in 1972 to its present figure. An important offset is provided by the American government which granted \$32,000,000 in aid in 1975 and \$41,000,000 in 1977.

COMMAND AND CONSTITUTIONAL STATUS

The Philippines has a constitution modelled on that of the USA, which confers executive power on an elected President, who is Commander-in-Chief of the Armed Forces. In January, 1973 following the declaration of martial law in the previous September, a constitutional amendment named the incumbent President, Ferdinand Marcos, President and Prime Minister without a fixed term of office (it had previously been 4 years). The Armed Forces of the Philippines, which include the army, navy, air force and Philippines Constabulary, are under the command of a single Chief of Staff and administered by a unified Department of National Defence. Its Head, a Departmental Secretary, is an assistant to the President.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The official role of the army is to preserve the territorial integrity of the islands, of which there are over 7000. It has also played in recent years an important part in rural development, by the building of roads, wells and dams and by setting up schools and medical centres in the villages. Since 1972, however, it has been heavily engaged in the suppression of the Muslim rebellion in the southern islands.

Commitment

The Philippines are signatories of the 1954 SEATO treaty, but are not committed to deploy troops outside the islands. During the Korean war, however, it sent a representative force to the theatre of operations, maintaining an infantry battalion there (first the 10th Battalion Combat Team, then in succession the 20th, 14th and 2nd) between September, 1950 and May, 1955.

America is committed to the defence of the Philippines against external aggression, under the terms of a Mutual Defence Treaty of 1952, and to provide equipment and advice under a Military Assistance Pact. It enjoys in return, under an agreement first signed in 1947 and renewed in 1966, the use of two important base areas, and the Subic naval base of 40,000 acres on the west coast of Mindanao. It lease runs until 1991, but President Marcos is anxious to retrieve Philippine sovereignty over the bases, which would allow him to join the ranks of the officially unaligned countries. The treaty is therefore under renegotiation.

Deployment

The bulk of the army is at present deployed in two recently established commands — CENCOM (Cotabato and Lanao provinces on Mindanao) and SOWESCOM (Zamboanga province on Mindanao and the Sulo archipelago). It is reported that there are 25 battalions in each command, as well as sizable Constabulary forces. The rebels are currently most active on Jolo island in the Sulus. The Constabulary is also engaged against a renascent Huk force, the Maoist New People's Army, on Luzon, where about 1500 dissidents are active in Isabella province and smaller numbers in Camarines and Sorsogon.

Recent Operations

The war against the Muslim dissidents (Moros) of the south is of so intermittent and irregular a character as to defy easy description. The Moros, who are kin to their fellow Muslims in northern Borneo, were never properly subdued by the Spaniards and fought a serious campaign against them as late as 1840. They also sustained a guerrilla campaign against the Americans until 1913 at least. Their recent grievances appear to be the result of large-scale Christian immigration into Mindanao, ironically prompted by the government resettlement of former Huk supporters there in the late 1950s. In 1960 only 370,000 Christians lived in Cotabato province against 650,000 Muslims, but now there are 750,000. The

World Armies

2,500,000 Moros were alarmed by the influx, but appear to have taken up the banner of separatism after the Philippines government itself laid claim to British North Borneo during the Anglo-Indonesian confrontation of the 1960s. Many now support the Moro National Liberation Front and its Bangsa Moro Army (Army of the Moro Nation). The BMA was reported by *Le Monde* in December, 1976 to have 72 battalions in the field, armed with M-16 and FLN rifles, 81 mm mortars and rocket launchers. The government was reported by *The Far Eastern Economic Review* in April, 1976 to have deployed 50 battalions against them and to have raised 50,000 local members for the Civilian Home Defence Forces. The rebels are openly supported by Libya, which until 1976 transmitted supplies to them through Sabah, formerly British North Borneo, now a Federal State of Malaysia. The lull which fell over the war in 1976 is attributed to the failure in the Sabah elections of Mustafa bin Harun, its chief minister and a strong supporter of the Moros. Government and rebel versions of their activities are so much at variance that even casualty figures can only be guessed at, but a figure quoted by *The Times* (London) in September, 1976 is of 50,000 Muslim dead, 4000 government soldiers killed and 1,000,000 refugees. At present the Moros seem active only on the island of Jolo, inhabited by the Tausugs, a tribe of legendary bellicosity, who fought the last battle against the American conquest in 1913. The other tribes involved have been the Maguindanaos of Cotabato, the Maranos of Lanao and to a lesser extent the Samal of the southern Sulu archipelago.

The Maoist New People's Army, which has been active on Luzon since the early 1970s, is small enough to be contained by the Constabulary.

ORGANISATION

The army, navy, air force and Constabulary form the Armed Forces of the Philippines under a single Chief of Staff. The army comprises infantry, armour, artillery, engineers, signals and logistics branches. Operationally it is organised into divisions and brigades, but the effective operational unit is the battalion. They are individually numbered, in a series from 1 to 50, and now apparently beyond.

The Constabulary has traditionally been organised into companies on a provincial basis, but larger units may have been formed for operations in the south. The Civilian Home Defence Forces are organised on a local basis.

RECRUITMENT, TRAINING AND RESERVES

Recruitment, until the outbreak of the war in the south, was by selective conscription. The very rapid expansion of the army from 16,000 in 1972 to over 50,000 in 1976, has been achieved by conscription on a much larger scale, but it has not yet become universal.

Recruits probably receive most of their training in these units. Officers are trained at the Philippines Military Academy at Baguio in northern Luzon. The class of 1974 was graduated 3 months early to provide officers for the war in the south.

EQUIPMENT AND ARMS INDUSTRY

In 1975 President Marcos announced his intention of making the Philippines self-sufficient in the production of small arms and ammunition, and in March, 1976 it was reported that the American Colt Industries had set up a factory in the country, with a credit of \$8,000,000 from the United States Foreign Military Sales fund, to manufacture M-16 rifles. All other equipment is imported from the USA. It consists of the normal range of American infantry weapons, including 75 mm and 106 mm recoilless rifles, 100 105 mm howitzers, 40 4.2 in mortars, M-41 tanks and 35M-113 APCs. The BMA claim to have destroyed some of the latter with rocket launchers.

RANK, DRESS AND DISTINCTIONS

The army and the Constabulary are dressed in American style khaki, use American ranks and wear American pattern badges of rank. But under the Commonwealth (1934-41) the most senior rank was field-marshal, held by Douglas MacArthur.

CURRENT DEVELOPMENTS

Filipino society is traditionally abnormally violent. Both major parties (Liberal and Nationalists) are inured to their supporters being killed in dozens at elections, but everyday life is also marked by frequent murder and kidnapping, inspired by mercenary, political or personal motive. President Marcos used the first 3 years of martial law (1972-5) to act against entrenched lawlessness, and it was reputed in 1976 that he had in that period put down 200 'private armies' and 250 'crime

syndicates' and recovered over 630,000 firearms from private hands. Experts regard the latter figure as in no way exaggerated.

The army and the Constabulary are not therefore undertaking a wholly unfamiliar task in their attempt to put down Moro rebellion in the south or Maoist insurgency on Mindanao. Being Filipino, they are accustomed to haphazard everyday violence. The rebellion in the south did, however, during 1974–5, assume proportions alarming even by Filipino standards, and the army appears at first not to have made an effective response to it. President Marcos expressed his own dissatisfaction by dismissing 40 generals of brigadier rank and above in November, 1975 and by earmarking the Commander of the Constabulary, Fidel Ramos, a West Point graduate, as next Chief of Staff. Since 1976, and assisted by the unseating of the Moros' chief foreign supporter in Sabah, the army has made considerably better progress in putting the rebellion down. It probably cannot be quelled for good without political concessions to the Moros and without direct development work in their regions to raise their standards of living. As a result of experience gained in the Huk campaign, the government is conscious of the importance of moderating military action with political inducement (Magsaysay called it the 'left hand, right hand method'), while the army is deeply experienced in rural development engineering. Its long-term prospects of success in the south appear favourable.

JOHN KEEGAN

POLAND

HISTORY AND INTRODUCTION

If pre-*Risorgimento* Italy was little more than a geographical expression, it was in a more fortunate position than the Poland of 1914 which, divided between Prussia, Austria and Russia, lacked even geographical unity. The Polish Republic gradually coalesced, in the chaotic circumstances attending the collapse of tsarist Russia and the subsequent defeat of the Central Powers, between 1916 and 1919. In the latter year a constituent *Sejm* (Parliament) met, and the socialist Josef Pilsudski, the dominant figure in Polish history until his death in 1935, was confirmed in power.

The disordered state of eastern Europe made the creation of an effective army one of Pilsudski's first priorities, and the new Polish army, officered as it was by men who had gained valuable military experience in other armies, gave proof of its mettle when, in the summer of 1920, it hurled the Red Army back from the gates of Warsaw. This may have been the first major victory of the army of the Polish Republic, but it was by no means the first example of Polish military ability. For the previous century and a half, Poles, denied a national army of their own, had fought vigorously in the armies of other nations and had appeared, like the stormy petrels of revolution, in insurrections on both sides of the Atlantic.

The Constitution of 1922 was modelled on that of France, and its provision for a weak executive and strong legislature proved fatal in a nation beset by factionalism and lacking external security. Pilsudski, with the army's backing, staged a coup in 1926 and remained, for all practical purposes, dictator until his death. Poland was an excellent target for German aggrandisement following Hitler's annexation of the Sudetenland, for the free city of Danzig was a German-speaking enclave within Poland, and much of the population of western Poland was also of German origin. The German-Soviet pact of August 23rd, 1939 cleared the way for the German invasion of Poland, and the *Wehrmacht* struck only a week later. The Polish army had changed all too little since 1920; its excellent cavalry were no match for German armour, and the '18-day campaign' of September, 1939 witnessed its almost total destruction. On September 16th-17th the Russians moved into eastern Poland, most of which they formally annexed in November.

The occupation and division of Poland did not end Polish resistance. A government in exile, based first in France and later in Britain, controlled its own army in exile as well as a 'Home Army' of resistance fighters within Poland. The Russians, having initially interned Polish military personnel in their area of occupation, consented to the formation of a Polish army under General Wladyslaw Anders, but this force, after repeated disagreements between its commanders and the Russians, was eventually allowed to depart, by way of Persia, for the West.

Relations between the Russians and the Polish government in exile deteriorated steadily, and in 1943 they broke down altogether. This breakdown was due partly to Polish suspicion of Soviet involvement in the Katyn massacre, and partly because of fears that the Russians had no intention of recognising Polish sovereignty east of the Curzon Line (which ran roughly Grodno-Brest-Lvov) once the Germans were expelled. In May, 1943 a Soviet-sponsored Polish division was formed under General Zygmunt Berling, and by the summer of 1944 the 'First Polish Army' was serving in Marshal Rokossovskii's First Belorussian Front. The Russian-backed National Council of Poland, which included the Polish communists Boleslaw Bierut and Wladislaw Gomulka, formed a 'Lublin Committee' which took over the administration of Polish territory west of the Curzon Line as the Russian advance continued. In August, 1944 General Tadeusz Bor-Komorowski's Home Army rose in Warsaw, but, for reasons which remain disputed, the Russians failed to press forward to assist Komorowski, and the rising was suppressed.

A Government of National Unity was formed in June, 1945. It is significant that this body contained only two members of the British-backed government in exile. The Potsdam Conference of July-August, 1945 confirmed the Soviet view of Poland's boundaries, which were to run from the Oder and Neisse rivers in the west to the Curzon Line in the east. In the words of the German historian Hans Roos, 'The great powers had, therefore, moved the home of the Polish nation some 150 miles, on an average, to the west'. Large numbers of Germans were deported from the newly acquired territory on Poland's eastern borders, and the area was resettled by Poles. An obvious, if superficial, consequence of the changed status of the area was the large-scale change of place-names: Breslau became Wrocław, Liegnitz became Legnica, and so on.

In early 1947 elections were held, and the constituent *Sejm* produced a new constitution. A government was formed by Jozef Cyranciewicz, and it was no accident that its most influential members were also members of the Politburo of the Polish Workers Party (PPR). Nineteen-forty-seven witnessed the arrest of many of the PPR's opponents and the flight of both former members of the government in exile. In December, 1948 the communists consolidated their position when the PPR merged with the Polish Socialist Party (PPS) to form the Polish United Workers Party (PZPR).

The Polish army, formed around the nucleus of the Soviet-sponsored First Polish Army, numbered some 16 under-strength divisions in 1946. It was used largely for internal security duties and assisted with the deportation of Germans from eastern Poland. It was, naturally enough, Russian-equipped, but many of its Russian officers were gradually replaced by Poles, including some senior officers from the pre-war army and a few officers from the army in exile. Many of these were,

by Soviet standards, politically questionable, and in November, 1949 the Russians intervened to ensure the army's reliability. Marshal Rokossovskii, commander of Soviet forces in Poland, became Polish Minister of War and Commander-in-Chief: he was given Polish citizenship and the rank of Marshal of Poland. Officers of doubtful political views were ousted, and a thorough campaign of political indoctrination was commenced. Soviet officers, most of them, like Rokossovskii, of Polish extraction, were moved into the overwhelming majority of senior command and staff appointments, and the Polish army was thus firmly brought under Soviet control.

It was not until the autumn of 1956, when the 'October Revolution' swept Gomulka to power, that the Polish army managed to gain a measure of independence. Rokossovskii, and almost all the Soviet officers serving in the Polish army, returned to the Soviet Union on Gomulka's insistence. Gomulka was, however, well aware that only a limited degree of Polish autonomy would be acceptable to the Soviet Union, and he was swift to confirm that Poland would remain a member of the Warsaw Pact. In February, 1957 though, he concluded a status-of-forces agreement with the Russians: Soviet troops stationed in Poland were, by the terms of this, unable to interfere in Polish sovereignty, subject to Polish civil law for crimes committed off duty, and required Polish approval of their movements.

Conscription had been reintroduced in February, 1950 and between 1950 and 1956 the army grew steadily in both size and efficiency. In 1956--7 Gomulka reduced the army from about 275,000 to 200,000, a total which it exceeds only slightly today. The replacement of Gomulka by Edward Gierek, following the bread riots of 1970, had no marked effects upon the Polish army.

STRENGTH AND BUDGET

Population: 34,950,000

Army: 222,000, with 500,000 reserves

Navy: 25,000, with 40,000 reserves; four submarines, one destroyer, about 100 smaller craft

Air force: 62,000, with 60,000 reserves; 745 combat aircraft

Internal Security Corps and Frontier Guard: 80,000

Citizen's Militia: 350,000

GNP (1976 estimate): \$68,100,000,000

Defence expenditure (1977): \$2,440,000,000

Many of the problems which prevent accurate evaluation of the Soviet defence budget also apply to that of Poland.

COMMAND AND CONSTITUTIONAL STATUS

Command

The Polish High Command bears a strong resemblance to that of the Soviet Union and other Warsaw Pact States. The *Sejm* is 'the supreme organ of State authority'; it passes laws, and exercises control over the other organs of State authority and administration. It appoints, and may dismiss, the government and its ministers. The 15 man Council of State is elected by the *Sejm*, and its chairman is titular Head of State. The Council of State closely resembles the Supreme Soviet of the Soviet Union: it has wide powers, particularly when the *Sejm* is not in session. Executive power is exercised through the Council of Ministers. The real source of power is, however, the Politburo of the PZPR, and the Party's First Secretary, Edward Gierek, is undoubtedly the single most important figure in Polish politics.

The Minister of Defence is assisted by a number of Deputy Ministers, and his Ministry is composed of directorates and central directorates on the Soviet pattern. The Chief Political Directorate provides a link between the army and the Party. The Operational Branches — Air Defence, Ground Forces, Air Force and Navy, are subordinate to the Ministry of Defence. Poland is divided into three military districts. The First is based on Warsaw, the Second, covering Pomerania, has its headquarters at Bydgoszcz, and the Third, in Silesia, is commanded from Wrocław.

Constitutional Status

The Polish Constitution of July 22nd, 1952 is very similar to the current Soviet constitution. Article 6 declares that the Polish Armed Forces 'safeguard the sovereignty and independence of the Polish nation and its security and peace'. Article 78 announces that military service is 'an honourable patriotic duty', and Article 84 affirms that serving soldiers have the right to vote.

World Armies

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitment

The Polish Armed Forces have the twin roles of national defence and the maintenance of internal security. The troubled history of Poland, and in particular its unfortunate position in terms of military geography, points to the significance of the former role. In recent years, though, Poland has had little to fear from external enemies. Her relations with the Federal Republic of Germany have consistently improved: in 1970 the West Germans recognised the Oder–Neisse line, and diplomatic relations between Poland and West Germany were opened in 1972. Poland's membership of the Warsaw Pact is likely to deter any attack by a non-Pact State. Although Poland's sovereignty might, *in extremis*, be compromised by Soviet intervention in the event of excessive liberalism on the part of the Polish government, it should be noted that in 1956 Gomulka and his associates managed to prevent a projected Soviet invasion. There have been a number of civil disturbances in post-war Poland, notably Poznań rising of June, 1956, the October Revolution of 1956, and the bread riots of 1970. There has, however, been no indication that military and internal security forces, given the requisite political impulsion, might prove unwilling or unable to maintain order.

Deployment

The Polish army includes five tank divisions, eight motor rifle divisions, an airborne division and an amphibious assault division. Most of these formations are probably at 75% of their establishment strength, and these are stationed in the Pomeranian and Silesian Military Districts. Formations in the Warsaw Military District seem to be of only cadre strength. Two small Polish detachments are currently deployed outside Europe, on United Nations duties in Egypt and Syria.

Recent Operations

Two Polish divisions and one Polish air division participated in the invasion of Czechoslovakia.

ORGANISATION

Arms of Service

These are grouped into combat arms, technical and supporting services, and military specialities.

Operational

The operational organisation of the Polish army is patterned closely on that of the Soviet army. The wartime tasks of the Polish army would almost certainly be laid down by the Russians, but it is possible that the headquarters of each military district would form the staff of a tank or combined-arms army. The Polish army's present establishment would permit it to form one tank and two combined-arms armies on Soviet lines.

RECRUITMENT, TRAINING AND RESERVES

Recruitment

The forces were voluntarily recruited, mainly from former members of the Russian-sponsored Polish army, until the reintroduction of conscription in 1950. All males have a general liability for military service between the ages of eighteen and fifty; young men are normally called-up for 2 years' service in the army and air force, or 3 years in the navy and Territorial Defence Force. There are numerous grounds for exemption or deferment, and only about half the male population of conscript age actually serves with the colours.

Training

Young Poles are, like their Soviet counterparts, liable for pre-conscription military training, and young men who escape regular service altogether are required to undergo part-time training. Individual training is very similar to that in the Soviet army, with a considerable proportion of training time being devoted to political instruction. Combined training with Soviet units commenced in 1955, and joint exercises have now become a standard feature of formation training. In September, 1973 for example, the Poles joined Soviet, East German and Czech troops in exercise *Quartet*, and the same nations participated in the larger exercise *October Storm* 2 years later. This pattern of joint exercises within the 'northern tier' of Warsaw Pact forces has continued to the present day.

Reserves

There are 510,000 reservists with recent service experience, and, given adequate time for training, the forces could be substantially increased in size by the mobilisation of men without recent experience but still within their general military liability. There is also a 350,000 man Citizens' Militia, armed mainly with small arms.

EQUIPMENT AND ARMS INDUSTRY

Equipment

Much Polish equipment is of Soviet origin, but considerable use is made of both Polish and Czech-produced equipment.

Small arms: Soviet, with the exception of the Polish-produced M-63 9mm machine pistol

Artillery: Soviet, though for some years the Poles produced the Mazur D350 artillery tractor

Armour

Tanks: some obsolescent JS-3 and T-10 heavy tanks. About 3800 main battle tanks, T-54/55s and T-62s. A few elderly T-34/85s are still in service, but are probably used for training

Reconnaissance vehicles: about 300 PT-76 light tanks. The Soviet BRDM and Czech-designed FUG M-66 are also in use

APCs: a variety of APCs are in service, including the Soviet BTR-152, and the Polish-Czech OT-62 and OT-64

Aircraft: Poland has about 785 combat aircraft. Most of these are interceptors: the MiG-17, -19 and -21 (500). The majority of the remainder are fighter-ground attack: MiG-15, -17, Su-7 and Su-20. There are about 50 transports and well over 100 helicopters. The single Regiment of Naval Aviation operates MiG-15s, Il-28s and helicopters

Missiles: about 80 Frog-7 and Scud tactical missiles are in Polish hands. The Swatter, Snapper and Sagger anti-tank missiles are in widespread use

Arms Industry

Poland's arms industry is, among the satellite States within the Warsaw Pact, second only to that of Czechoslovakia. Several Soviet-designed items are produced under licence in Poland: these include the T-54/55, MiG-21, Yak-18 and Il-18. Other items are Polish-designed as well as Polish-built. The Star range of trucks is widely used, and the Poles produce the Polish-Czech OT-64 APC. The aircraft factories at Okęcie and Swidnik have produced the LiM-1 and LiM-5, Polish versions of the MiG-15 and MiG-17, and the Polish-designed TS-11 Iskra jet trainer. There is considerable collaboration in weapon design and production between Poland and Czechoslovakia.

RANK, DRESS AND DISTINCTIONS

Rank

Badges of rank are worn on the epaulette and, in most orders of dress, on the headgear.

Officers

Marshal of Poland	Crossed batons above twisted silver lace
General	Three silver stars above twisted silver lace
Major-general	Two silver stars above twisted silver lace
Brigadier	One silver star above twisted silver lace
Colonel	Three silver stars above two silver bars
Lieutenant-colonel	Two silver stars above two silver bars
Major	One silver star above two silver bars
Captain	Four silver stars
Lieutenant	Three silver stars
Second-lieutenant	Two silver stars

Soldiers

Warrant officer I	Two stars on braid-edged epaulette
Warrant officer II	One star on braid-edged epaulette
Senior sergeant	Two chevrons on braid-edged epaulette
Sergeant	One chevron on braid-edged epaulette
Junior sergeant	Three bars

World Armies

Corporal	Two bars
Lance-corporal	One bar
Private	Plain epaulette

Dress

The turmoils of Polish history have not prevented the survival of numerous traditional features of Polish military uniform. The unmistakable silhouette of the *czapka*, an item of headgear which inspired the nineteenth-century lancer's cap, may still be seen above the more mundane field dress. The eagle cap-badge differs from that worn under the Grand Duchy of Warsaw only in having lost its crown, and the silver lace worn by generals has changed little since the same period.

Parade Dress. All ranks wear short khaki tunics with open collars, four patch pockets, and silver buttons. Collars and ties are khaki, as are the breeches or trousers which are worn tucked into high black boots. The flat forage-cap, with coloured band and black peak, bears badges of rank and the eagle cap-badge. Officers wear Sam Browne-type belts, and carry sabres on certain occasions. Walking-out dress is similar, but shoes are worn instead of boots.

Everyday Dress. Khaki jacket and trousers tucked into boots, khaki side-cap. In summer the jacket may be replaced by a light-grey shirt.

Field Dress. Combat jacket and trousers, field-grey with black dashes for camouflage. Black equipment, boots and anklets. The square-topped *czapka* is replaced, when necessary, by a steel helmet.

Tank and NBC suits are of Soviet design, but a distinctively Polish tank helmet is worn. Berets are popular: tank crews, when not wearing their helmets, wear black berets, airborne troops have red berets and marines blue berets. All berets bear, like the field-service *czapka*, the eagle badge. Carpathian-mountain units have their own characteristic uniform, which includes a broad-brimmed khaki hat with a plume and a long khaki cape clung over the left shoulder.

The Arm of Service to which an officer or soldier belongs may be seen from the insignia worn on his collar. All of these are, with the exception of the insignia of the Medical Corps, made of white metal, and most are self-explanatory. The badge of armoured units is a tank, artillery wear crossed cannon-barrels, construction united crossed pick and shovel, and so on. Arm of Service colours are worn on the cap-bands of forage caps. Most Arms of Service have red cap-bands, but among the exceptions are:

Armoured troops	Black with red piping
Internal Security Corps	Dark blue
Frontier Guard	Green
Military Police	White

Distinctions

Qualification and specialist badges, similar to those of the Soviet Armed Forces, are worn on the right breast. The Polish Democratic Republic has numerous orders and decorations, some of which are of traditional style and design and antedate communism in Poland. Among these are the prestigious orders of *Virtuti Militari* and *Polonia Restituta*. Decorations may, like the Cross for Valour, be awarded for bravery in the field or, like the Armed Forces in the Service of the Fatherland Medal, reward long and meritorious service.

CURRENT DEVELOPMENTS

Poland is, after the Soviet Union, the second strongest power within the Warsaw Pact. Historically, the fighting record of the Poles is impressive: it is no accident that Napoleon's Polish Lancers were imitated throughout Europe. It seems likely that the Russians regard the Polish army as well-trained and battle-worthy. The two Polish divisions which took part in the invasion of Czechoslovakia were allowed to operate with relatively little Soviet interference, while East German, Bulgarian and Hungarian divisions were split up into regimental groups under the command of Soviet formations.

RICHARD HOLMES

PORTUGAL

HISTORY AND INTRODUCTION

On April 25th, 1974 a *coup d'état* by junior officers in the Portuguese army (and to a lesser degree the navy and air force), overthrew the authoritarian and corporatist government of Marcello Caetano, the political heir of Dr Antonio Salazar, who as effective ruler of Portugal for some 40 years was the most durable of modern dictators. The ensuing 18 months of political volatility, institutional instability and almost continuous military upheaval was characteristic more of the regimes of Latin America than those of Europe. Although at present it seems that the armed forces are returning to the conventional role of defence against external threat, it is by no means certain that the Western tradition of military subordination to civilian authority has triumphed over the tendency toward military praetorianism.

The origins of the Portuguese State are usually traced back to Alfonso I, who took the title of King of Portugal in 1139, whilst the institution of the *permanent* army in Portugal dates from 1640. Prior to this, the King's Army consisted of a cavalry, drawn from the nobility and their private forces, and an infantry of men of humbler origins. In each case their loyalty and responsibility to the king were based on the usual reciprocal obligations built into the feudal system. For some centuries the militia was the basis of Portuguese military organisation, it being completed in 1570.

The restoration of the Portuguese monarchy under John III after a period of Spanish domination (1580–1640) was the occasion for the creation of a permanent army to ensure national independence. All able-bodied men aged fifteen to sixty were eligible for conscription into new provincial defence forces. Although there were a number of methods of exemption from this duty, 4000 cavalrymen and 20,000 infantrymen were soon raised.

Cavalry were officially organised into regiments after 1707 and artillery, a form of which dates from as early as 1515, were more regularly organised from 1677 onwards. Artillery regiments, as such, first appeared in 1708. The Military Engineering Corps consisted of officers skilled in fortification and was later called the Royal Corps of Engineers. In 1812, during the Peninsula War, the initial permanent unit was formed, the Battalion of Artificer Engineers.

The first School of Fortifications and Military Architecture dates from the middle of the seventeenth century. After a number of name changes it became the Army School in 1837 and is now the Military Academy. In 1803 the *Colégio de Freitoria* was founded for the education of the sons of the officers of the Court Artillery Regiment. This became the Royal Military College in 1814 and now, as the Military College, prepares people for entry into the Military Academy. In the middle of the nineteenth century weaponry was rapidly improved and the forerunner of the present Practical Artillery School was set up at Vendas Novas to the east of Lisbon. In 1911 after the creation of the Republic (1910–26), the principle of compulsory military service was introduced, to be completed by all adult, fit males. In the same year the Central School for Officers (now the Institute for Higher Military Studies) was founded together with an organisation for the education of the sons of officers, NCOs and other ranks of the army and navy (now known as the Technical Military Institute for Army Trainees). In 1916 the first Military Aviation School was opened and in 1917 an Air Arm of the army was formed together with the introduction of naval aviation. An independent air force was finally created in 1925. The Royal Portuguese Navy can be dated from the reign of King Dinis, 1279–1325.

The army saw service in World War I after Germany had declared war on Portugal in March, 1916. Almost immediately an Expeditionary Corps began training and it sailed for France in January, 1917 under General Tamagrini de Abreu e Silva. Initially 25,000 strong, and later 40,000, it was divided into two divisions and suffered heavy losses in April, 1918 at the Battle of Lys.

Portugal officially remained neutral during the Spanish Civil War although Salazar was clearly more sympathetic to the Nationalists, whereas neutrality in World War II, although studiously expressed, was more pragmatic. In 1942, under severe pressure from Germany, Portugal agreed to sell the Nazis the scarce mineral wolfram whilst in the summer of 1943 the British government invoked its ancient alliance with Portugal to claim use of the Azores. Salazar complied with this request immediately.

Salazar formally took office as Prime Minister in 1932 but had been Finance Minister and *de facto* Premier since 1928. The government of which he became head had its origins in a military coup of 1926 which had brought to an end 16 years of perpetual economic and political crisis during which time the military had involved itself in politics on numerous occasions. General Carmona became President and Head of State in 1928, an office he held until 1951, whilst the Fascist or New State was inaugurated with the Corporativist Constitution of 1933. But whatever the egalitarian sounding rhetoric of that philosophy, Salazar's Portugal was dominated not by the institutions of corporativism but by the traditional power holders in Portuguese society: the church, the financial interest and the army. Of these three pressure groups the latter two were the more influential, especially considering the strong family links between the economic and military *élites*. Indeed numerous officers followed combined military and financial careers.

However, by the very nature of its control over armed force, it was the influence of the army that made Salazar's position

World Armies

secure, though its loyalty was never certain and his attitude to it was ambivalent. As we have seen, Salazar rose to power in the wake of an army coup, and at times, as an arch traditionalist, he could extol the virtues of the military. Thus he argued, 'The army has the secret of perpetual youth, and like the great and ancient family of noble descent it maintains and passes on its traditions so unimpaired and alive that it forms one in the same moral unity'.

How far Salazar was the creature of these forces is difficult to discern. In a recent book Neil Bruce has argued that Salazar was always, 'The front man of the right-wing generals, and the constitution he drew up . . . ensured that the ultimate arbiter in Portuguese politics would be the armed forces . . . it was the condition of the retention of his office as Prime Minister . . . from his appointment in 1928 he (Salazar) was only free to create policies, to innovate, to govern indeed, so long as he had the blessing of the army, the navy and later the air force'.

The constitutional position on which Bruce places so much importance was Article 81 of the 1933 Constitution, which grants to the President the power of appointment and dismissal of the Prime Minister. Certainly it is true that all Portuguese Presidents until 1974 (and afterwards as it happens) were either Generals or Admirals and that in 1973, before the publication of his book *Portugal and the Future*, it was widely assumed that the successor to the ageing Admiral Tomás would be none other than General Antonio de Spínola. However, to read into all these arguments the conclusion that Portugal was, in effect, controlled by the military, is mistaken. Until Salazar's illness in 1968 the Presidency was merely a titular position, the winning candidate being the nominee of the National Union, an organisation created and totally dominated by Salazar. And, as Mario Soares points out, Salazar was a civilian and the military could never see him, unlike Franco in Spain, as themselves personified. Indeed Soares believes that at root Salazar despised soldiers.

Nor were civil-military relations in the Salazar years as harmonious as the outward stability of the regime would indicate. Military revolts and attempted coups were a common feature of the period, there being at least nine in Salazar's time and three in Caetano's. Of the military leaders in the post-1974 period, both Generals Gonzalves and Gomes are reported to have been implicated in earlier attempts to overthrow the government. Furthermore, a cursory glance at a list of oppositionists in the Salazar era would indicate how many were military men, the most notable being General Delgado and Captain Galvão. Portugal under Salazar was not a particularly harsh dictatorship, least of all when it dealt with opposition, military or otherwise, which emanated from the dominant groups in society. Thus although much has been written of the repressive nature of the PIDE (Secret Police, later renamed the DGS—Directorate General of Security), their viciousness was not on the whole vented on officers who had participated in failed coups. Confinement to barracks was a common punishment and more severe sentences such as exile were rare. Thus fear of draconian punishment would not be a major impediment in the planning of a coup.

Prior to 1958, the Portuguese officer corps had been a highly elitist, class ridden organisation, drawing its candidates from the economic aristocracy of the solid middle class. The army prohibited the recruitment of black officers and carefully scrutinised any prospective wife of an officer (she had to bring a dowry of £875 or have a university degree), and forced him to marry in church. This highly traditionalist and autocratic mode of officer selection was broken after 1958 when Salazar decided to remove all tuition fees from the Military Academy and for the first time provided the cadets with a salary. The effect of this was to draw into the officer corps and provide a career structure for men who had more tentative links with the regime than previous generations of officers.

During the 1960s the loyalty of the Portuguese armed forces which, as we have seen, was always tentative, was further shaken by two specific events: the expulsion from the Indian colony of Goa and the onset of the African wars. Both bit deep into the mystique of Portuguese colonial ideology and its concept of a Pan-Lusitanian community. The loss of Goa in December, 1961 affected the army in two ways. In simple military terms it was a humiliating defeat but of greater importance was its political impact. Salazar, who was then also Minister of Defence, held the army commander publicly responsible, a slight and shame which the army never forgave him.

But in the long term the more profound influence was that engendered by the colonial wars in Africa which began with an uprising in Angola in March, 1961. In retrospect it is clear that the Portuguese administration had neither the resources nor the political will-power to sustain a prolonged guerrilla war although at the time the great emphasis placed on the ideological content of Portuguese policy obscured the harsher realities of economic decline coupled with growing military dissatisfaction.

The particular events which brought unrest to a head and precipitated the coup were to be narrowly based professional ones, involving in the main regular army officers, but equally important was the long-term socialising effect of the African wars which were to reawaken the political ideas generated by the modest social upheaval of the 1960s. Many young officers, and especially the conscripts, started questioning the legitimacy of the war. How widespread or thorough going this radicalisation was to vary from person to person, and in many it instilled little more than an opposition to a colonial war which by 1974 was unlikely to be won. But for some such as Captain Diniz Almeida its effect was dramatic. He argued: ' . . . in Angola and Moçambique we came across black men living very poorly and found it difficult to shoot a man who is fighting with all his senses. And there developed an important phrase, we said to one another, "If I were a black man I too would be a terrorist. We had no cause to fight them."'

Clearly, if attitudes such as these were at all wide spread, and many commentators argue that they were, then the morale and effectiveness of the army must have been crucially undermined.

However, as important as the politicisation of the army was the standing of the officer corps itself. Changes in the pattern of regular officer recruitment proved insufficient to provide enough officers to staff an army in Africa of over 150,000.

Fewer and fewer of the traditional *élite* volunteered to join the army and evasion of conscription was enormous. Admissions to the Military Academy dropped dramatically; in 1961–2 there had been 257, in 1973–4 only 88. (At the time of the coup over 400 places were unfilled.) To combat this deficiency more and more university students were conscripted, many as officers and some of whom as noted political activists had been given the choice of the army or prison! Therefore by the early 1970s the preconditions for revolution had been satisfied. A major pillar of the regime had been infiltrated and its loyalty eroded. The regular officer corps were dispirited and disillusioned by a war which could not be won and many of the conscript officers felt little allegiance for a regime of which they had never been a part.

In July, 1973 the Defence Minister issued Degree Law 353/73 which allowed university-trained conscript officers to convert to regular commissions, avoid the 4 years' regular officer course and maintain the seniority they held as conscripts. The regular officers regarded this as yet another humiliation to their professional status; meetings were hurriedly called and protests sent to the government. Initially the meetings merely discussed professional grievances, but by December, 1973 when the government had refused to compromise, the discussions became overtly political, and one group, calling itself the Co-ordinating Committee of the Captains' Movement, accepted that no change would occur without the overthrow of Caetano's government.

A coup became all the more likely when the Deputy Chief of Staff, General Spínola, published his book *Portugal and the Future*, which although highly conservative in basic outlook contained an attack on traditional colonial policy. At the same time Caetano faced opposition from a number of well-known figures on the right of Portuguese politics (including it is said the President, Admiral Tomás and the former Commander-in-Chief in Moçambique, General Kaulza de Arriaga).

On March 14th, 1974, in a last despairing effort to gain support, Caetano ordered senior officers to attend a ceremony at the Presidential Palace to endorse the overseas policy. The Chief of Staff, Costa Gomes and his deputy, Spínola, refused to attend and on Tomás's insistence they were dismissed. Two days later there was an abortive coup by the Fifth Infantry at Caldas da Rainha and on April 25th, 1974 the Armed Forces Movement (MFA) overthrew the Caetano government.

STRENGTH AND BUDGET

Population: 9,110,000

Army: 40,000 (reducing to 26,000)

Navy: 12,800 (including 2500 marines) (reducing to 8000); three submarines, seven frigates and 58 smaller craft

Air Force: 10,000 (reducing to 8000); 52 combat aircraft

GNP (1977 estimate): \$16,400,000,000

Defence expenditure (1978): 21,790,000,000 escudos (\$533,000,000)

Paramilitary forces: 30,000 armed police (approximately 9700 National Republican Guard, 13,700 Public Security Police and 6500 Fiscal Guard)

Unlike any other NATO country, Portugal was continually involved in colonial wars in Africa from 1961 to 1974. Consequently although the Portuguese contribution to NATO has been slight, the size and expense of the Portuguese armed forces was disproportionately high when related to population and GNP. In 1974 the population was about 8,500,000, a decline of over 500,000 from the 1962 figure, caused by widespread emigration to avoid conscription and to enjoy a higher standard of living in the EEC. (The present population is probably over 9,000,000 since it includes 500,000–1,000,000 colonial expatriates.) GNP in 1974 was estimated at \$11,100,000,000.

At the watershed point of 1974 the total size of the Portuguese armed forces has been estimated at 217,000, a not wholly reliable figure and one which excludes black African troops in the colonies. The white army was between 170,000 and 180,000, which was about 12% of the men aged between eighteen and forty-five. This was made up of two tank regiments, eight cavalry regiments, 25 infantry regiments, one coastal artillery regiment, three AA artillery regiments, eight engineer battalions and eight signals battalions.

The air force (1974) was 16,000 strong, had 800 aircraft (152 combat) and contributed one maritime reconnaissance squadron to NATO. There was a parachute regiment of 4000 under air force command. The navy of 19,500 included 3300 marines. Reserves for all forces numbered nearly 500,000.

The Republican National Guard (GNR) were an *élite* paramilitary corps concerned with internal security. In 1974 these numbered 9700 and were not disbanded in the post-coup period, although the leadership was changed. The armed border patrol (*Guarda Fiscal*) had 5600 of all ranks, and the Police 13,700. In 1936 Salazar established the Portuguese Legion, a voluntary, armed, Home Guard which strongly supported the ideology of the regime. This was abolished in 1974 as was the 14,000 strong special riot police (PSP), the *Mocidade* (a quasi-fascist youth movement) and, of course, the Secret Police (DGS).

No fully accurate statistics are available as to how many Portuguese troops served in the African colonial wars. Prior to 1961, about 50–75% of the Colonial Army was African and the European troop level in each colony was never more than 3000 (and usually much less). In April, 1974 Portugal probably had 33,000 troops in Guinea (of which 17,000 were white), 70,000 in Angola (40,000 white) and 60,000–65,000 in Moçambique (20,000–25,000 white). A very high percentage of the European men were regular and conscript troops whereas the African figure includes a wide range of paramilitary militia

World Armies

and police groupings. One estimate was that about 35% of the army units were black African. The Portuguese did compile official statistics of African troop levels and put them at 60% of the total, though this seems somewhat on the high side. It may well be that these were produced to substantiate the Portuguese ideology of non-racialism and the claim that all inhabitants of the overseas provinces (officially not colonies) were citizens of a wider and united Portuguese community. Indeed it is the case that in some instances the Portuguese conscripted Africans since the conscription law made no distinctions based on colour or birth-place.

Africans were deployed in a variety of units: local militia in defence of fortified villages known as *aldeamentos*; regular and usually racially integrated army units; and certain *élite* units (mainly African although commanded by Europeans). Of this latter group the most controversial were the *Flechas* (arrows) who operated in Moçambique as a long-range reconnaissance group and were reportedly controlled by the security police, the DGS. (It is reported that 1116 DGS personnel operated in Angola and 665 in Moçambique.) The *Flechas* and other *élite* African units were distinct in both their role and the higher degree of political indoctrination they received. In addition they were granted special privileges, the *Flechas*, for instance, being exempt from taxation. Over and above those formations cited above a number of white paramilitary, home-guard-type organisations operated in the colonies.

In 1973 it was estimated that total Portuguese casualties since 1961 were 13,000 dead and 65,000 wounded. If these figures are correct it suggests a very high rate in relation to population numbers involved. The period of army national service was 2 years, though at times soldiers had to serve for up to 4 years. (The air force period was 3 years, the navy 4 years.) In practice, many soldiers remained in uniform rather longer than necessary as attractive incentives were offered for further periods of colonial service. However, as early as 1967 it was admitted that of 80,000 men called up as many as 14,000 had evaded conscription. This manpower loss and the consequential emigration of the young from Portugal steadily increased until 1974.

Table 1 *Armed forces' budget for the years 1954-73*

Year	Amount (millions of escudos)	as a % of national budget	as a % of GNP
1954	2100	—	—
1960	3023	26.9	4.2
1961	4922	36.5	6.4
1962	5744	38.5	7.0
1963	5724	37.3	6.5
1964	6451	38.4	6.7
1965	6680	40.9	6.2
1966	7393	41.3	6.3
1967	9575	41.9	7.3
1968	10692	42.4	7.3
1969	10779	40.7	6.7
1970	12538	38.9	7.0
1971	14699	36.5	7.4
1972	16046	33.4	6.9
1973	16736	30.0	5.9

The armed forces' budgets for the years 1954-73 are shown in Table 1. The figures published for 1974 and 1975 are unreliable and range between 14,630,000,000 escudos and over 20,000,000,000 escudos. The percentage of the national budget probably declined in 1974-5. Table 2 shows the occupational forces' budget in the colonies for various years.

Table 2 *The budget in Portuguese colonies for occupational forces (millions of escudos)*

Force	Angola (1973)	Guinea-Bissau (1973)	Moçambique (1971)
Army	1595	48	822
Air force	311	58	230
Navy	130.5	90	86

The Post-1974 Period

Since 1974 conscription was first reduced and is now being abolished. The Portuguese army was systematically demobilised as independence was granted to the African colonies. In January, 1976 it was reported that the army was to be reduced from its post-coup size of 40,000 to 26,000. Of these, 10,000 highly trained troops with sophisticated weaponry will form an Intervention Force for NATO use. A further 9500 will form a unit whose role is described as that of 'Territorial Guerrilla Warfare' (*The Times* (London), January 26th, 1976).

The 1978 defence budget was 21,790,000,000 escudos (\$533,000,000).

COMMAND AND CONSTITUTIONAL STATUS

Self-evidently, the period since April, 1974 has been dominated by constant upheaval in both institutions and personnel. During this time there have been 10 governments, six prime ministers (two military) and three presidents (all military), together with an almost infinite range of competing political ideologies.

The programme of the MFA which ushered in 2 years of intense, and at times revolutionary, political activity was not in itself particularly radical. It promised the removal of the more repressive institutions and personnel of the previous regime; it guaranteed the creation of wide-ranging civil liberties including the freedom of speech, association and the press; it promised a more equitable distribution of the wealth of the society; and the election within 12 months, by universal suffrage, of a Constituent Assembly. On external matters the programme committed Portugal to previously negotiated international treaties and to the peaceful solution of the overseas wars. In the manner which now seems obligatory for military governments, the MFA promised to return to barracks after the election of the assembly. At no stage did the document mention socialism nor did it commit Portugal to granting the colonies sovereign independence.

The programme had been drawn up by Major Melo Antunes, the most politically sophisticated of all the MFA officers and the man who was later instrumental in removing General Gonzalves from office in August, 1975. Antunes was once thought of as a communist or Marxist, then as a moderate and is now one of the few senior MFA officers who wish the military to remain in politics.

The Spinola period in office is too well known to reiterate in detail here; suffice it to say that whilst he had his supporters in the country and the air force, his brand of autocracy, individualism and conservatism found little favour with the increasingly radical MFA. But to talk of the MFA as if it were a monolith is of course mistaken. Political views differed amongst individuals, from unit to unit, and between services, the air force being regarded as the most conservative, the navy the most radical.

Spinola's Presidency was to last a mere 5 months, a period in which he was unable to secure a firm base for his authority. He had wide popular appeal but in crucial sections of the community, particularly the industrial working class, he was viewed with suspicion for his association with the previous regime. Constitutionally, his position was uncertain for it rested on appointment by the 'Junta of National Salvation', a body composed of seven senior officers, whom he himself had nominated. Theoretically the most important institution of the new polity was the Council of State, which had legislative authority and which consisted of the *junta*, seven members of the Co-ordinating Committee and seven 'public figures', also chosen by Spinola. But despite this superficial institutional dominance Spinola was never able to reconcile the competing interests and policies in post-coup Portugal. His first Prime Minister, Palma Carlos, resigned in July, unable to obtain approval for a Presidential election (which would legitimise Spinola's position) and increase powers for himself as Premier. He was succeeded by Colonel (later General) Vasco Gonzalves, the choice of the MFA, not Spinola, and a man whom many thought was a card-carrying member of the Communist Party.

Whilst the MFA were undoubtedly politically inexperienced, they knew what they opposed, namely a return to fascism, and in Spinola they increasingly saw a man who might do just that. Thus each clash between them was seen by the MFA as an attack on the legitimacy of the revolution, and in each dispute they were further radicalised. Internal strife was exacerbated by industrial unrest and Spinola's opposition to colonial independence, which culminated in September, 1974 in Spinola's attempt to rally support by a march of his supporters, the 'silent majority'. In this he failed and under extreme pressure resigned, to be replaced by his friend and far more politically astute colleague, General Costa Gomes.

The Spinola/MFA struggle was not the only significant feature of this period. Perhaps even more important was the increasing influence of the Portuguese Communist Party (PCP) on the MFA and the process of *saneamento* (purging or cleansing) which in the first weeks after the coup removed nearly 100 generals and admirals regarded as potential opponents of the new government.

The first few months after the coup also saw the formation of Copcon and the decision to turn the 5th Division of the General Staff into a propaganda unit. Copcon (Operational Command for the Continent) operated as an internal security force and played an ever increasing role in Portuguese politics until it was disbanded in November, 1975. It was headed by Major (later General, now Major) Otelo Carvalho, the architect of the coup and the chief proponent of the Cuban or Castroite solution for Portugal. The Fifth Division was dominated by the PCP and was later to gain control of much of the press, radio and television and to be foremost in the process of cultural dynamisation (the attempt to radicalise the traditionalist and highly conservative Portuguese peasantry).

In the wake of the attempted Spinola counter-coup of March, 1975 and as a reaction to it, the MFA moved increasingly to the left, agreed to a further period of *saneamento* and made major institutional changes. The *junta*, Council of State and MFA Co-ordinating Committee were dissolved and replaced by a Supreme Revolutionary Council (SRC) with full legislative powers.

The intention of the military to institutionalise further and implant their position was made clear by the pact the MFA forced the political parties to sign on April 11th, 1975, 2 weeks before the Constituent Assembly elections. The pact, in the form of a draft constitution, was a complete *volte-face* from the programme the MFA had issued a year earlier. Whereas the original intention had been for the military to return, after elections, 'to their specific mission of external defence', they were now to be given a political role which ensured their supreme authority for 5 years. Thus the power of the elected Constituent Assembly to draft its own constitution was severely limited.

World Armies

Any lingering unity within the armed forces was rapidly eroded in the post-election months as Premier Gonzalves moved Portugal towards Eastern European style communism, whilst after some hesitation General Carvalho appeared to opt for a policy modelled on Castroite Cuba, which he had recently visited.

The rapid drift to the left was halted in mid-summer by a resurgence of the latent conservatism of the Portuguese north and resulted in the burning of numerous Communist Party offices. At the same time a group of MFA officers under the leadership of Melo Antunes called for a reversion to a democratic and leftward-looking socialism, which was neither elitist and bureaucratic as the Eastern European model, nor bourgeois and capitalist as a liberal democracy.

In late August the Gonzalves government collapsed and the Fifth Division, the most vocal, influential and radical mouthpiece of the communist element in the MFA, was abolished. A new administration under Admiral Azevedo was formed but was unable to govern in the near anarchy of the mounting crisis. During this period military discipline reached its nadir with the formation of the left-wing soldiers' organisation, the SUV (United Soldiers Will Win). Their support for Carvalho's individualistic tactics and refusal to obey orders without prior 'democratic' discussion were to prove unacceptable to a number of more conservative officers.

The chain of events in November and December, 1975 are difficult to unravel but it seems that some senior officers at last recognised that continual political involvement on the scale existing at that time was incompatible with the survival of the armed forces as a structured, disciplined and credible entity. Some attempt was made to dismiss Carvalho as Military Commander of the Lisbon Region, resulting in an abortive revolt by paratroopers and Carvalho's arrest.

Since November, 1975 the role of the armed forces in politics has been progressively reduced, as have the number of soldiers under arms. On numerous occasions the SRC has been reorganised, usually to include less radical personalities. In February, 1976 a new pact was signed between the armed forces and the political parties. Nominally the SRC remained the second most important institution after the President, but except in military matters its role was reduced to that of little more than a consultative body. The President was to remain Chief of Staff of the Armed Forces and President of the SRC. In June, General Eanes, an austere and essentially non-political figure, was elected President of the Republic (the voting was Eanes 61%, Major Carvalho 16.5%, Admiral Azevedo 14%, Sr Pato (communist) 7.5%). In August, 1976 it was announced that membership of the SRC was incompatible with holding a regional command post and on November 25th, 1976 President Eanes announced that any serving officer who took part in political activity would be dismissed.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

In the period after April, 1974 the Portuguese army shrank from a predominantly externally based force of 200,000 (all units) to a domestically based one of 26,000. It now exists to fulfil two basic roles: that of contributing, however modestly, to NATO; and in providing a counter-insurgency force for domestic use. Portugal has been a loyal member of NATO since its formation in 1949, this support being based on both ideological and military considerations. Salazar was a staunch anti-communist and naturally this found expression in an ardent support for NATO, but membership of the Alliance also afforded the intensely nationalistic Portuguese an opportunity to satisfy their yearnings to play a role in great-power politics. At the more instrumental level, NATO membership gave not only basic defence but also provided her with more sophisticated and expensive weaponry than would otherwise have been available.

Portugal's main contribution to Alliance security has been through the strategic importance of the Azores, already noted in the context of World War II and vital for the use of the air base at Lajes by the Americans to resupply Israel during the 1973 Middle East War. On April 8th, 1975 Prime Minister Vasco Gonzalves said that this facility would not be granted again. In addition to the obvious ideological reasons for this decision, the loss of Angolan oil makes Portugal vulnerable to any Arab boycott. In the context of a less-radical government in Portugal, this policy may have been quietly reversed or dropped, although in 1975 the Socialist Party (the present government) had a policy of 'progressive disassociation from political and military blocs as at present constituted, thus leading to a policy of non-alignment'. However, times and circumstances have changed and on June 11th, 1976, the United States Secretary of Defense, D. Rumsfeld, said that the Portuguese forces would be progressively reshaped to a NATO defence role. Certainly the great unease felt by the West during 1975 concerning the apparent communist domination of the Portuguese government no longer pertains. However, as yet, Portugal has not returned to the crucial NATO committee, the Nuclear Planning Club, from which she tactfully absented herself.

NATO has Atlantic naval command bases in both Lisbon (IBERLANT) and Madeira; and the Germans have an air force training base at Beja, though none of these can be considered crucial to the Alliance. Nevertheless, Portugal remains important in its geographical location on the Iberian peninsula particularly because Spain was, on political grounds, denied membership of NATO, a policy which has yet to be reversed despite the change of regime following Franco's death. And in a negative sense NATO would always wish to prevent the expansion of Soviet bases in either Portugal or more generally in the Atlantic area. However, the Soviet Union does now have an important strategic foothold in Guinea.

For recent operations, see History and Introduction.

ORGANISATION

In January, 1970 the Ministry of the Army was incorporated within the Ministry of Defence, which was given full responsibility for defence matters. The Chief of the General Staff was given command of operational troops which had previously rested with individual service chiefs. Also in 1970 the territorial organisation of the army was reformed into six military regions with headquarters in Coimbra, Oporto, Tomar, Euora, Lisbon and the Algarve. Metropolitan Portugal also included commands in Madeira and the Azores. Overseas Portuguese military regions were in Moçambique (divided into five Territorial Commands) and Angola (divided into three). Further territorial commands existed in Cape Verde, São Tomé and Príncipe, Portuguese Guinea, Macao and Timor.

In 1975 the Portuguese metropolitan regions were abolished and replaced by North, Central and South, each commanded by a senior MFA officer in the Supreme Revolutionary Council (now called the Council of the Revolution). Today command of a region and a seat on the SRC are incompatible.

The President of the Republic (General Eanes) holds the title of Chief of Staff of the Armed Forces. In July, 1976 Brigadier-General Vasoc Vieira became Chief of Staff of the Army. At the end of 1976 the Northern Command was held by Brigadier Antonio Veloos, the Central by Colonel Artur Beirao and the Southern by Lieutenant-Colonel Hugo dos Santos. Subsequently further changes were made, in particular the resignation and demotion to Captain of General Lourenco, the Commander of the Lisbon Region, in March, 1978. With his departure all MFA officers promoted for political reasons have left command positions.

In 1975 all army regiments which had been known by number alone were renamed after their local recruitment catchment area. To some extent this formalised a pre-existing situation since traditionally units have recruited on a regional basis. During the crisis period of 1974-6 the political stance of particular regiments depended as much on this (i.e. regiments from the north tended to be conservative, as did that area) as on factors such as the political influence of individual officers.

As suggested under History and Introduction, the recruitment pattern for officers changed significantly in the early 1960s, resulting in a less elitist officer corps and one which was both more susceptible to politicisation and mindful of low pay and poor career prospects in the army.

RECRUITMENT, TRAINING AND RESERVES

Recruitment is by conscription, the current term (reduced from the 4 years it reached at the height of the African wars) being 15 months to 2 years, depending on the arm of service. Recruits are trained in the Recruit School and then in the units. Conscripts may become corporals (*Cabo Miliciano*) and, by competition, sergeants, but NCOs are usually recruited from volunteers. Some of these come from the military preparatory school (*Pupilas do Exercito*). Corporals must attend the corporals' school (*Escola de Cabos*). Sergeants are trained in the school of their arm (*Escola Practica*) and, for promotion, at the Central School for Sergeants.

Officers are trained at the Military Academy. They are recruited in a variety of ways: some are sergeants from the Central School, most are high-school graduates. Conscripts who have been selected for and have passed the conscript officer course may also become regular officers, and careers in the technical arms are open to *Pupilas do Exercito* with technical qualifications. Officers are trained subsequently in their arm's school, and staff officers, selected by competition, are trained at the Institute for Higher Military Studies. The Military Academy and the Institute are located in Lisbon.

Reserves number on paper about half a million, but as the Portuguese army is in the process of reduction its reserve strength and organisation are at present not of practical interest.

EQUIPMENT AND ARMS INDUSTRY

Portugal produces most of the light weaponry and ammunition she requires and has a thriving export business, particularly in ammunition. Other equipment she produces include: 9mm model 48 and 9mm model 63 sub-machine-guns (made by Fabrica Militar de Braco de Prata — FBP); 7.62mm G3 rifle on licence; grenades made by FBP; and 61 mm and 81 mm FBP mortars. In 1961 Germany arranged the transfer of 10,000 Israeli Uzi sub-machine-guns. Heavier equipment used is as follows.

Anti-armour weapons: 106mm M-40 recoilless rifle (USA; 18 in service) and SS-11 guided missile (France)

Air-defence weapons: L60/70 Bofors gun (Sweden; USA)

Artillery: 25pounder gun (Britain, obsolete; 10 in service), 5.5in gun (Britain, obsolete; 30 in service), 105mm M-101 howitzer (USA; 50 in service) and 105mm M-52 self-propelled howitzer (USA)

Armour: M-709 Commando APC (USA; 40 in service), EBR armoured car (France), M-24 light tank (USA; 10 in service), M-47 tank (USA; 100 in service) and M-48 tank (USA; five in service)

The air force operates some military transports (C-130s and DC-6s), and 34 Alouette III and 12 Puma helicopters.

World Armies

RANK, DRESS AND DISTINCTIONS

The service dress of the army is grey. A camouflaged combat dress is worn.

Marshal	Four gold stars
Chief of the General Staff	Four silver stars
General	Three silver stars
Brigadier	Two silver stars
Colonel	One wide and three narrow gold bars
Lieutenant-colonel	One wide and two narrow gold bars
Major	One wide and one narrow gold bar
Captain	Three narrow gold bars
Lieutenant	Two narrow gold bars
Sub-lieutenant	One narrow gold bar

It should be noted that the rank of general is not subdivided into full, lieutenant- and major-generals. Prior to 1974 this conglomeration of officers in one rank resulted in some confusion as to status and hierarchy.

The orders and decorations of Portugal in 1974 reflected the religious tradition and the emphasis on history in Portuguese nationhood. The decorations include the Ribbon of the Three Orders (worn by the President as Grand Master of all Portuguese military orders; first instituted in 1552); Military Order of the Tower and the Sword (the most important Portuguese decoration for valour in battle, and courage, service and command on campaign; 1495); Military Merit (a recent creation); Military Order Avis (oldest Portuguese military order; established in 1162); Military Order of Christ (awarded for distinguished service to Portugal and mankind; 1356); Military Order of St. James of the Sword (for artistic and academic merit, 1175); and the Order of Prince Henry the Navigator (for academic and other merit in regard to the sea; 1960). Other medals of valour and good service include the Military Valour Medal, the Exemplary Conduct Medal, the Distinguished Service Medal and the War Cross.

CURRENT DEVELOPMENTS

As yet it is still impossible to say with certainty what the future role of the Portuguese army will be. The drift into a Moscow-orientated communism or a Third World (Cuban) Marxism, both stimulated in part by elements within the army, has been stifled, and today social democrats are in the ascendancy. Many of those on the extreme left in the Portuguese army have lost command and have been purged from the forces, and the vast majority of soldiers, including the most radical, have been demobilised. Many more traditionally minded officers clearly believed that the Portuguese army of 1975, whilst assuredly highly democratic in its methods, fulfilled none of the prerequisites of an army — order, discipline, structure and hierarchy. Thus those who had joined the coup of 1974 for professional rather than ideological reasons, in order to enhance the dignity and status of the army, found that quite the opposite was happening — it became a mockery.

By early 1976 the tension between those who wished 'to return to barracks' and those who wished the armed forces to continue in a political role, seemed to be evolving in favour of the former. During 1976 the institutional devaluation of the SRC and the decision to separate membership of the SRC from regional command positions further emphasised the development, as did the election of General Eanes as President. Eanes is a military figure (as has been every President since 1926), and although the new constitution grants him considerable authority, he has no party political or ideological ties, nor does he believe in a politically dominant army. Thus the military future would seem to be that of a minor, if strategically valuable, partner in the NATO Alliance. However, it must not be assumed that this trend will necessarily continue. The praetorian tradition in Portugal has always been strong and recent developments must surely have sown the seeds of future discontent amongst the more radical and politicised officers remaining in the army.

MATTHEW MIDLANE

QATAR

HISTORY AND INTRODUCTION

See the entry under United Arab Emirates for the history of all the Trucial States of the Gulf until 1971 (p.747).

A provisional constitution for Qatar was introduced in 1970, a year before independence. The first Cabinet, formed in accordance with it, contained the Ruler as Prime Minister and Minister for Oil, and Royal Family members in six of the other nine ministries. This was known as constitutional monarchy.

Sheikh Ahmad bin Ali al-Thani, the ruler for 15 years, was deposed in February, 1972 in a bloodless coup by his cousin Sheikh Khalifa bin Hamad al-Thani, who had gained the support of most of the Family. He now governs as Prime Minister, in a Council of Ministers nine of whose other 13 ministers also belong to the al-Thani family. There is also an Advisory Council of 20 appointed members, who will one day be elected instead.

STRENGTH AND BUDGET

The strength of the Qatar armed forces is 4200 excluding expatriate personnel. There are maritime and air components, but all are part of the army.

The defence budget for 1976-7 was announced to be around \$25,000,000. Counting capital expenditures, however, including over \$100,000,000 for new barracks, a naval base and an air base, plus contributions to the Arab Organisation for Industrialisation (intended to finance the creation of an Arab arms industry based in Egypt), Qatar's actual military expenditure each year is probably twice the announced figure or even more. Qatar's population is 200,000 and its GNP in 1975 was estimated at \$425,000,000.

COMMAND AND CONSTITUTIONAL STATUS

The Ruler, Sheikh Khalifa bin Hamad al-Thani, is Supreme Commander. His son, Major-General Sheikh Hamad bin Khalifa al-Thani, is Commander-in-Chief and Minister of Defence.

The Deputy Commander, who exercises operational control, is Brigadier-General Muhammad Attiyah. He is a member of a leading local family.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The only serious role of the Qatar army is internal security. The limited external defence capability which currently exists serves principally to avoid offering the invitation to external threat which would be presented by the complete absence of defences. The rather more ambitious air-defence capability which is envisaged by present arms-purchasing plans is not so much related to the direct defence of Qatar itself as to a co-ordinated inter-State programme to create a credible air defence for the Arab side of the Gulf. Qatar has no commitments nor forces deployed abroad, and has never fought a war.

The internal security problem arises mainly from the fact that only 50,000 of the 200,000 population are actually native Qataris. Almost half the residents are skilled or unskilled workers on fixed-term contracts, who pose no political problem, but there are permanently resident populations of about 20,000 Palestinians and between 30,000 and 50,000 Iranians.

There is a major territorial dispute with neighbouring Bahrain over the small island of Huwar, which lies only a few miles off Qatar's coast but is currently garrisoned by Bahrain. The principal significance of the dispute lies in the island's implications for the demarcation of territorial waters in which oil might be found. Saudi Arabia has offered to mediate, but has strained relations with Qatar and has recently built an air base in Bahrain.

ORGANISATION

The army is made up of two armoured car regiments, one guards infantry battalion and one mobile regiment. There are also maritime and air elements, and the latter is about to undergo a considerable expansion.

World Armies

RECRUITMENT, TRAINING AND RESERVES

The Qatari personnel of the army are drawn largely from non-urban members of the leading tribes, and many officers belong to the Royal Family. The majority of the enlisted ranks are recruited from the bedouin tribes who move freely between Saudi Arabia and Qatar. There are numbers of expatriate personnel from Britain, other Arab countries and Pakistan. There are no reserves, but the tribes are armed.

EQUIPMENT AND ARMS INDUSTRY

The army has 12 AMX-30 medium tanks, 30 Saladin and 20 EE-9 Cascavel armoured cars, 12 AMX-10P MICVs, eight Saracen APCs and 10 Ferret scout cars. The artillery has four 25 pounder guns and the infantry has 81 mm mortars. The maritime forces have six large and five small patrol craft. Air-defence forces have four Hunter fighter-ground attack aircraft, one Islander transport, two Whirlwind, four Commando, six Lynx and two Gazelle helicopters, and Tigercat SAMs. There are four Saracen APCs, 30 Mirage F-1C fighters and improved Hawk surface-to-air missiles on order.

There is no arms industry.

RANK, DRESS AND DISTINCTIONS

Qatari military ranks follow the standard eastern Arab nomenclature. Uniforms are similar to those in the other Gulf sheikhdoms.

CURRENT DEVELOPMENTS

The most important question in Qatar for several years has been the dispute within the Royal Family over the succession to the present Ruler. The latter succeeded in having his eldest son, who is also Commander-in-Chief of the Armed Forces (*see* Command and Constitutional Status) named Crown Prince in 1977, but the rival claim of the ruler's younger brother, Sheikh Suhaim, has continued to unsettle Qatari politics. In the course of the dispute Sheikh Suhaim has armed many of the more distant branches of the extensive Royal Family, and has sought Saudi Arabian support with some success. There is a precedent for a Saudi show of armed strength along the border to influence the internal politics of Qatar: it happened in 1972, when Saudi Arabia supported the inter-family coup, organised by Sheikh Suhaim, which brought the present Ruler to power.

See also the comments under Current Developments in the entry on the United Arab Emirates, which are largely applicable to Qatar.

GWYNNE DYER

RHODESIA

HISTORY AND INTRODUCTION

Southern Rhodesia, a British colony, declared independence unilaterally in 1965 and became a Republic in 1970; it now styles itself Rhodesia. It is a white-settler-dominated political and social order that was created in the 1890s under the (chartered) British South Africa Company, and it became a self-governing colony in 1923. White and black Southern Rhodesian units fought in the World War I German East Africa Campaign and in the Italian East African and Burma Campaigns of World War II. Since 1945, Southern Rhodesian African troops served — in a second-line role — in the Canal Zone in Egypt in the late 1940s, and as a combat unit in Malaya in 1956–7. Since 1966–7, and particularly since the fall of the Portuguese colonial system in Moçambique, the Rhodesian armed forces have been heavily involved in counter-insurgency work.

The defence services of Southern Rhodesia consist of four components: the Rhodesian Army, the Rhodesian Air Force, the Police and a Guard Force. The police has retained its (confusing) colonial title of the British South Africa Police.

Of Rhodesia's white population, approximately one-fifth are of South African origin; many of these are Afrikaans-speaking.

STRENGTH AND BUDGET

Population: 6,500,000 of which some 265,000 are white

Armed forces: army approximately 9000 at any one time but capable of being stretched, by full call-out of all reservists to a much higher figure, perhaps 20,000. Air force 1500. Police 8000, with a part-time reserve which at full expansion and commitment might provide a further 27,000 to 30,000. Guard force 1500 (approximately). Security Service and Prisons Department not known.

GNP: \$3,500,000,000 (estimated)

Defence expenditure: it becomes difficult to offer a precise figure. If the total emergency expenditure is added together — the cost of the armed services, police, guard force and emergency administration (costs of headquarters, special roads, the defended village arrangements, clandestine forces and compensation payments) the total expenditure was in the order of £180,000,000 in the 1977–8 financial year. The costs have risen very sharply in the last 3 years

COMMAND AND CONSTITUTIONAL STATUS

In the eyes of the British government, authority in Southern Rhodesia is illegal and usurped. By Rhodesian criteria the President of the Republic, J. Wrathall, is titular Commander-in-Chief. After various rearrangements and changes in 1976 and 1977 the present arrangements provide for a War Council, presided over by the Prime Minister, I. Smith, and composed of the Minister of Defence and Combined Operations, R. Hawkins, two or three other ministers and the police, army and air force commanders. The fieldcommander is Lieutenant-General P. Walls (Commander, Combined Operations and until 1977 Army Commander) and the Army Commander is Lieutenant-General J.S. Hickman. The former Air Force Commander, Air Marshal M.J. McLaren, is Deputy Commander of Combined Operations. The Commander of the 1st Brigade is Brigadier John Thompson.

At provincial level five major military commands cover the border areas, while further into Rhodesia district Joint Operations Committees — of police, administrative officials, service officers and local interests direct operations.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

It is convenient to divide the present series of operations into three phases; it seems probable that a fourth phase may be about to begin at the time of writing.

The first phase was one of unrest, beginning in 1960, with riots on a limited scale in African townships, followed by petrol-bomb attacks on government offices and other buildings in 1962, and with rather more serious violence, including further arson, intimidations and killings in 1964 and 1965. All of this was contained by the police; only occasionally were the army's services required.

World Armies

The second phase commenced with the first 'full-time' insurgents appearing in 1966, and can be said to have lasted to the fall of the Portuguese colonial government in Moçambique in 1974. Small groups operating from Zambia penetrated into Rhodesia in the north, with the aims of cutting the Kariba power line and the oil fuel pipe-line from Moçambique, and also attacking farms. None was successful. The oil pipe-line and farms were the targets of further small Zambia-based groups in 1967, with again an almost total lack of success. Some of these groups were in fact South African black nationalists (ANC), which led to the despatch of auxiliary police and prison-guard detachments from South Africa to help the Rhodesian forces. The destruction of these insurgents secured Rhodesia a quiet year in 1969, but insurgent operations, again mounted from Zambia, were resumed in 1970 with a partly successful attack on a police camp at Chisuma, and an unsuccessful attack on the railway line to Salisbury. The following year saw — with Portugal's grasp of Moçambique weakening — the first significant insurgent groups crossing into Rhodesia from Moçambique, but the next major escalation occurred in 1973 when new insurgent tactics scored several successes and casualties among Rhodesian forces. These new tactics were the use of landmines, particularly on roads, and hit-and-run attacks using small rocket launchers, grenades and automatic small arms on isolated farms, with mines laid on the access roads to destroy police or military rescue units. These tactics were often accompanied by terror attacks on farm labour, which appear to have been counter-productive from the insurgents' point of view. There was at this time little evidence to suggest any general popular support for the insurgents (this did not, however, mean support for the Salisbury regime). In this period the Rhodesian forces gained experience to prove invaluable in the next phase.

The third phase, representing the consequences of the fall of the Portuguese military position in Moçambique and its replacement by a regime friendly to insurgents, profoundly affected the campaign; the situation was worsened from Salisbury's point of view by the South African decision, in 1975, first to withdraw their units from the combat zones and then from Rhodesia altogether. From late 1974 onwards much-larger-sized insurgent groups, many (but not all) better-trained, better-equipped and better-led, produced a series of attacks, sometimes well-planned and co-ordinated with other groups. Some of these groups were up to 100 men in size. These began their operations on the Eastern border, with smaller groups also aiming at the newly completed Beitbridge—Rutenga railway line, a line of vital importance to Rhodesia as it is the only secure link with South Africa, the former main line passing as it does through Botswana. These attacks killed a number of black Rhodesian civilians, a few whites and several members of the security forces each month. In late 1976 Rhodesia began to face a fresh military challenge, insurgent attacks across the Zambezi from Zambia being resumed, and new attacks mounted via Botswana.

To meet the Moçambique border situation, three military commands were set up, the northernmost 'Hurricane' at Bindura, 'Thrasher' covering the Eastern Highlands and 'Repulse' responsible for Fort Victoria and the railway line to South Africa. With the opening of the Botswana front a fourth command 'Tangent' was created, and a fifth, name unknown, has now been set up for the Zambezi area.

The effect of the intensification of the campaign in this third phase has been that the Rhodesian security forces have virtually lost control of the African trustland in the north-eastern area, and over most of the rural areas of Rhodesia farms have to be heavily protected with trip-wires, mines, electronic devices, floodlights, barbed wire and ballast. Roads, railway lines and bridges are all liable to occasional destruction or attack, and troop movements by road have to take place in armed convoy. Perhaps most serious of all for the Rhodesian authorities, the insurgents, by a mixture of admiration gained for their achievements and fear impressed upon the population by bloody and painful executions, now have some sizeable measure of popular support; this in turn provides the insurgents with cover, replenishment and recruits. In certain areas, in particular in the south, insurgents can even occasionally hold political meetings by daylight, and attacks on schools — to gain recruits — occur on occasions.

Provided with only relatively small forces and equipment sometimes both obsolescent and elderly, General Walls, first as Army Commander and then as Commander Combined Operations, has waged a campaign of extreme professional competence that will deserve a place in the world's Staff College courses for many years to come. Accepting inability, since 1974, to control terrain, and using the particular advantages and qualifications of the forces under his command to their best individual and unit advantage, the mounting insurgent challenge has been held in check. But it would seem at the time of writing that a fourth phase of the campaign, a phase likely to be more akin to limited conventional warfare (or in African terms, the final stages of the PAIGC campaign against the Portuguese or the Ethiopian ejection of the Somalis from the Ogaden) may open shortly and for this the Rhodesian forces are likely to prove inadequate.

The main features of Rhodesian tactics have been the generally (but not invariably) efficient organisation and processing of intelligence: ambushes; reconnaissance; tracking from the air; the speedy despatch by lorry, aircraft, or helicopter of patrols to areas in which terrorists are reported, or a bomb, napalm, rocket or cannon air-to-ground strike; pursuit; and the use of pseudo-gangs to penetrate and confuse. Defensive minefields have been laid, often with considerable success. Air-to-ground strikes, using rockets or napalm by-aircraft or by means of helicopter gun-ships, have also proved effective. The tactical concept of 'hot pursuit', if necessary across an international border, or a sudden airborne raid also across an international border, form an important part of this doctrine — the first major strike being that of August, 1976 when a Rhodesian force penetrated into Moçambique. Since then several strikes across both the Moçambique and Zambian borders have been made. In most cases troops were transported by helicopter and landed a little distance from the objective. In some cases, to achieve total surprise, the attack was launched after a journey begun by vehicle and completed on foot, with a helicopter evacuation. These strikes have been exceedingly efficiently mounted with minimal Rhodesian casualties;

the most recent examples however suggest that they inflicted heavy casualties on women and children as well as insurgents.

Much propaganda has been offered the world on the subject of the standards by which the campaign has been fought. It would seem in general terms that excesses by the security forces in the first two phases (i.e. to 1974) were exceptional. From 1974 standards appear to have declined very sharply — three major reasons for this decline being: passions aroused by casualties within Rhodesian units, both black and white; similar anger, both black and white, at excesses, usually of intimidation, committed by the insurgents; and an attitude of mindless negrophobia present among many white soldiers, notably those recruited from outside Rhodesia. Sometimes this latter is justified by its practitioners as a proper instilling of fear and respect. A less implausible excuse is the difficulty, when insurgents live in communes with dependants, of ensuring that only the men are killed or injured in the *mêlée* of a strike.

The casualties sustained by the Rhodesian forces remain light in the context of the scale of operations: 176 soldiers killed in 1976 and over 100 in the first 6 months of 1977.

ORGANISATION

The Rhodesian army generally follows the British pattern of division into arms. The infantry consists of: the Rhodesian Light Infantry (white, conscript and regular (RLI)); the Rhodesia Regiment (white, and recently Asian and coloured reserve (RR)); and the Rhodesian African Rifles (black with white officers and some NCOs (RAR)). The Rhodesian Artillery (Rh.A.), the Rhodesian Corps of Signals (Rh.Sigs.), the Rhodesian Engineers (Rh.E.), the Rhodesian Army Medical Corps (Rh.A.M.C.), the Rhodesian Intelligence Corps (Rh.I.C.), the Rhodesian Army Education Corps (Rh.A.E.C.), the Rhodesian Army Pay Corps (Rh.A.P.C.), the Rhodesian Military Police (Rh.M.P.), the Rhodesian Women's Service (Army) (R.W.S.) and the Rhodesian Army Service Corps (Rh.A.S.C.) are all white officered with some white NCOs. The Rh.A.S.C. also deals with ordnance. There are, in addition, the special forces: three Special Air Service squadrons (all white), the Selous Scouts and Grey's Scouts (both mixed). The S.A.S. specialises in laying ambushes for insurgent groups on their way in or out (for which mobility and good intelligence are essential) while the Selous Scouts are used for long-range tracking and pseudo-gang and counter-gang duties. The Selous Scouts now have a majority of black soldiers. Other units are withdrawn from areas in which this force operates to avoid confusion. Selous Scouts also operate clandestinely as observers and intelligence gatherers in Mozambique. Grey's Scouts are a (horse) mounted-infantry tracking and pursuit unit. They appear to have been deployed in the north-east near Mukumbura, where a double wire fence with a minefield between the fences is laid out. Grey's Scouts patrol the fence area looking for evidence of mine-clearing or crossings. In 1972 the Rhodesian Armoured Car Regiment was formed; this unit's duties are reconnaissance, cordons, patrolling, escort for convoys, crowd control and road blocks. This unit is mixed black and white.

There is also the Rhodesian Air Force with its attendant Rhodesian Women's Service (Air Force). The air force possesses regular squadrons numbered one to seven, and eight reserve squadrons numbered 101 to 108.

The army was formerly based on an organisation for two brigades (Salisbury and Bulawayo) expanded later to three. The R.L.I. is a battalion approximately 1000 strong, now organised into three companies, called commandos, and a support group equipped with mortars and surveillance equipment. The eight Rhodesia Regiment battalions (numbered 1, 2, 4, 5, 6, 8, 9, 10) are now mainly holding and drafting units from which reservists (many no longer young) can be called forward for turns of duty either as individuals or to an active company of the battalion. Originally the urban-based battalions had a higher level of training, but now all are on the same level of training and obligation. The Rhodesian African Rifles, originally one battalion, were expanded to three in 1974 and 1977; a fourth battalion is under formation. Each battalion is some 600–700 strong. In the field, all battalions, black and white, are broken down into independent companies; these in turn go out on patrol in 'sticks' of 5 to 7 men. The white battalions' 'sticks' usually have black trackers attached to them, and the black battalions often have white NCOs. All live closely together for days, often weeks. The Rhodesian Artillery's unit, the 1st Field Regiment, consists of one regular and one reserve battery, the former equipped with 105 mm pack howitzers, the latter with 25 pounders. The S.A.S. squadrons are some 60 each in strength with especial training in parachute operations, demolitions and boats and canoes. African language training is also included. Selous Scouts are over 1000 strong, with a large majority of black soldiers; their training is said to be especially severe. Grey's Scouts are a much smaller force, between 150 and 200. The Rhodesian Armoured Car Regiment may be surmised to be some 400 strong. The R.W.S. number some 300.

The army also operates a small Psychological Warfare Department. In addition to the dissemination of literature, leaflet raids, etc. the department offers advice on tactics from a psychological angle — for example the sudden harassing of insurgents accustomed to evading air-strikes by unexpected artillery bombardment.

In considering the security forces the B.S.A. Police must also be noted. It is not possible to say what percentage of the regular and reserve police are engaged in military operations — and indeed precise definitions of 'police' and 'military' in these operations would also be impossible. But two types of police combat units have been observed: the Police Support Unit (PSU) and the Police Anti-Terrorist Units. The PSU provides men for patrols of some thirty in size; these are mostly black regulars but also include some white regulars and some conscripts. Their role is, once again, ambush and tracking. The PATUs are organised into 'sticks' of some four or five men, white but with one black tracker; these form intelligence-gathering reconnaissance patrols usually on the borders. Both operate away from bases for several weeks on

World Armies

end. The various types and categories of Police reserves — both for Africans and Europeans — also have internal security roles such as the security of buildings, offices, factories, farms and villages, convoy escort, supply of PATUs and PSUs. A Women's Field Reserve for catering and clerical duties exists, and two other noteworthy specialist police reserve units are a small sharpshooter/sniper team and an air wing for pilots of light aircraft. The Police Special Branch has an important role in the intelligence fields. Other specialist police detachments are Dog and Tracker Dog Sections (one each), Police Signals, a small sub-aqua team and the mounted ceremonial troop.

The Guard Force, created in 1976, is a form of 'Home Guard' modelled on the Kenyan Emergency Kikuyu Guard of the 1950s, tasked with the protection of the protected villages into which many Africans have been obliged to move. This force is now some 1500 strong; detachments of 20–40 men under older white reservists are posted to the different villages. The Guard personnel receive a brief basic training in minor tactics and shooting. Some of the abuses of power and authority which earned the Kikuyu Guard a mixed reputation have been observed in Rhodesia.

RECRUITMENT, TRAINING AND RESERVES

The present situation poses a crushing manpower commitment upon the peoples of Rhodesia. The system at the time of writing can briefly be summarised as follows.

Whites

Compulsory service for 18 months at 18 years of age (with numerous checks to preclude a departure from the country prior to call-up). In normal times this service is followed by part-time territorial force commitments, firstly 3 years in an urban-based battalion with a 35 day commitment, then a reduced obligation in a rural unit. In practice men aged 18–25 years may now have their 18 months extended for very long periods. Men aged over 25 years are at present liable for recall on a '6 weeks on, 6 weeks off' basis until the age of 38 years. After this age a liability of 10 weeks service per year exists up to the age of 50 years. Men over 50 years are expected to volunteer for part-time police, prisons or guard force duties.

Coloureds and Asians

As for whites; many of these serve in support units or the ground services of the air force.

Africans

The African units, and African members of the police and air force, are all volunteers. Before 1970 the African soldiers traditionally came from the Katanga ethnic group (one of the Shona peoples) who live in the Chilimanzi–Fort Victoria area, but recruiting has progressively become much broader based. There is no shortage of recruits, long queues waiting to join at Balla Balla. One report noted that a third of the recruits were Ndebele.

The rates of pay and attached perquisites (housing, schooling for children and medical facilities) are well above the level of unskilled labour in Rhodesia.

Foreign mercenaries

Between a quarter and a third of the R.L.I. and a number of white individuals in other units have been recruited, covertly, by contacts abroad. These men come from Britain, West Germany, the USA, Canada, Australia, France, Belgium, New Zealand and South Africa. Ex-service organisations of various types are a common channel of communication; in certain countries carefully drafted press advertisements appear. Some of the men recruited from Britain have British army Ulster training and experience; many of the Americans have Vietnam experience. Those with this previous service record generally serve in the S.A.S. or Selous Scouts.

Former Portuguese colonial personnel

A number of people (black, *mestiço* and white) who left Moçambique after the events of 1974 are now serving with the Rhodesian forces. Their special knowledge of terrain and language has proved useful.

Postings of personnel can be summarised as follows: the younger and more fit a (non-African) person, the more likely that he will be drafted to the army unless he has some special qualification to offer. Some deferment is given for post-secondary education, and medical, legal and other professional men may be used according to their skills.

The European soldiers from the R.R. and R.L.I. are given their basic training at Llewellyn Barracks, Bulawayo; the course includes a battle camp in the Matopos Hills. This centre also trains Europeans who will serve in other arms. The R.A.R.'s depot and (recruit training) is at Balla Balla, the permanent barracks of the 1st Battalion is at Methuen Barracks, Bulawayo and of the 2nd Battalion at Fort Victoria. R.A.R. recruit training lasts 3 months. The S.A.S. are trained at

Inyanga, and the Selous Scouts and Grey's Scouts at Inkomo Barracks, Salisbury. Selous Scouts also have a field training camp at Wafa Wafa, near Kamba. A School of Infantry exists at Gwelo; the school houses an officer cadet training wing and provides also a staff course, a company commander's course and a joint services counter-insurgency course. The whole complex is known as 'Hooterville'. Conscripts' continuation training and junior leaders' tactical courses are also held at Gwelo, but junior NCOs training courses are held at Bulawayo. A Bushcraft and Trackers Course takes place at Victoria Falls.

Air force stations are at New Sarum (Salisbury), Thornhill (near Gwelo), Bulawayo, Chiredzi and Umtali. In normal times the transport and reconnaissance squadrons are based at New Sarum, and the strike aircraft and training details at Thornhill.

In late 1976 14 out of 24 African applicants were selected to begin a 6 months' officer training course, the first African officers; since then two further courses of approximately similar size have been held. It is understood that Africans selected for these courses are experienced soldiers and not school-leavers. At present the position appears to be that these officers are posted to the R.A.R., staff posts or mixed units, but not to the R.L.I. or the special forces. Certain officers' messes have therefore become mixed, as are many warrant officers' and sergeants' messes, and billets in the operational areas. The senior coloured rank is still warrant officer. Officers and senior NCOs have a common rate of pay, but there are considerable differences in the pay of other ranks. Recently parades with white and black soldiers passing-out and marching alongside each other have been photographed, an event inconceivable in the Rhodesia of, say, 1970.

War-weariness and some resentment against military discipline is reported among Rhodesia's whites, but the extent does not seem to be serious. Occasional desertions occur. A major factor for white morale — indeed all the security forces' — is the exceptional efficiency of the army's medical and helicopter casualty evacuation arrangements. In this connection it is useful to note the Rhodesian casualty statistics are accurate (larger casualties would be virtually impossible to conceal) while the insurgents' claims of casualties inflicted are exaggerated, frequently wildly so.

It seems overall that the Rhodesian African forces underwent a difficult period in the late 1960s and early 1970s when African security force members were reported as deserting, and other signs of ill-ease — 'warning noises' on patrol, rifles aimed high, prisoners being allowed to escape and areas left unpatrolled — were alleged by some deserters and personnel discharged. Fewer indications of this pattern of behaviour are now reported; whether this is due to closer security and censorship or whether (as seems more likely) those Rhodesian blacks who have joined the army are more convinced of the rectitude of their cause, is not clear. All that can be said is that insurgent cruelties and excesses have created feelings of revulsion as marked among sections of the black population as among the white. The only recent open evidence of dissatisfaction has concerned the small number of coloured personnel, who it appears, are dissatisfied with racially discriminatory treatment in the army, and with conscription.

Some South African training assistance, principally connected with South African weapon systems, has been provided, but otherwise no foreign assistance is available — and probably not needed. Many of the senior Rhodesian officers received British training at Sandhurst, the Staff College and arms schools in the years prior to 1965; some served in Malaya. Promotion examinations, of severity, are set for advancement to field rank. A few other officers, for example Colonel Reid-Daly of Selous Scouts and Kenya-born Colonel Rooker-Smith of the Armoured Car Regiment, served in the British Army — Reid-Daly in the S.A.S. and Rooker-Smith in the cavalry.

One final feature of army training — and overall command — merits mention: the maintenance skill with which ageing army and air force equipment is kept in operational service.

African police constables are trained at Tomlinson Depot, Salisbury, white policemen (and women) at Morris Depot, Salisbury. In 1977 the first Africans were trained and promoted to the rank of patrol officer.

The Guard Force owns a training centre at Chikurubi, its officers and NCOs, as already noted, are often elderly white and black reservists with previous military service. Undoubtedly some coercive pressures are used by the regime to oblige male villagers to join the Guard Force.

It should in conclusion be noted that almost all European males in Rhodesia, and a very large number of women, are trained to shoot with one or other form of firearm. Most adults possess at least one, and local rifle clubs receive military and police assistance.

EQUIPMENT AND ARMS INDUSTRY

Prior to 1965 and sanctions, Rhodesia had no arms industry. As a consequence of the worsening situation and sanctions, a small local pistol-manufacturing industry has grown up, chiefly to supply the civilian population. Napalm is made locally, and an efficient small arms and armoured-car repair service exists.

All important military, police and air force equipment has, however, to be imported, mostly from or via South Africa but also one or two other nations not greatly concerned with the weapon-trading activities of some of its citizens. No difficulties — other than foreign exchange — exist for the purchase of any stores required. The infantry use the standard NATO FN rifle (manufactured in South Africa) and the MAG (the South African made GPMG), and some units have old 0.303 in Bren guns converted to 7.62mm ammunition. Some old 2 in mortars remain in service. French battlefield radar surveillance equipment arrived in Rhodesia in the late 1960s. Some 60 Panhard AML 90 armoured cars made under licence

World Armies

in South Africa and known as the Eland and some elderly British Ferret armoured cars are used by the Armoured Car Regiment. French-designed UR 416 lightly armoured personnel carriers made in South Africa are used by the R.L.I. and other infantry units and are particularly suited for internal security work as they stand high off the ground, so reducing the risk of casualties. These vehicles are known under the local name of Hippo. Israeli-fashion, armoured cars and APCs are often locally improvised from civilian vehicles; two such machines are the Rhino and the Leopard armoured troop carriers. The anti-tank capacity of the Rhodesian army would appear to be weak, though one unconfirmed report suggests the acquisition by Rhodesia of British army MOBATs from a friendly power. The Rhodesian artillery is equipped with a small number of 25 pounders and 105 mm pack howitzers.

The air force's three strike squadrons are equipped with Canberra light bombers, and Hunter and Vampire fighters modified for air-to-ground support work, respectively. A squadron of Provost aircraft and a second Vampire squadron combine the functions of reconnaissance and training. There are two squadrons of transport aircraft — one medium and one light, and two helicopter squadrons each of over 20 Alouette II helicopters. Numerous private light aircraft are at the disposal of the police air wing. An unconfirmed report claims that Rhodesia recently acquired 12 French-built Mirage fighters, precise type unknown.

The PATU and PSU police combat units are equipped with infantry-type weapons. More static police units have older British army No. 4 rifles, Greener Guns, pistols, etc.

The Guard Force is equipped with the No. 4 rifle, and other ill-assorted weapons dependent on locality.

RANK, DRESS AND DISTINCTIONS

Rank follows the British pattern, and rank badges are generally identical to those of the British army except that the crown is replaced by the 'dog and bone' of the Chartered Company — a lion carrying an ivory tusk crest. Sometimes this is surrounded by a laurel wreath. Uniforms and headgear are generally similar in cut and style, except that the parade uniform for regimental officers does not have a patrol collar but is worn with a white shirt and black tie. General officers' uniforms retain the patrol collar with red gorgets. The army fights in an open-necked camouflaged combat kit.

A local honours system of medals and decoration for bravery and merit has been introduced: a Grand Cross of Valour, Conspicuous Gallantry Decoration, and others; a Legion of Merit with Grand Officers, Officers and Members in divisions military and civil; long service meritorious medals and commemoration medals.

CURRENT DEVELOPMENTS

A major feature of Rhodesia in the 1970s, poorly reported in the British press, has been the emergence of an African middle class: this (like its Kenyan counterpart 20 years earlier) is nationalist — but non-revolutionary. This middle class finds political expression with Bishop A. Muzorewa and the Reverend N. Sithole — but it should not be assumed that this class is the only basis of these leaders' strength which is undoubtedly much more broadly based both in ethnic and social-class terms. Parallel with the emergence of this middle class has been the silent but revolutionary change in the Rhodesian army. It is no longer a white burgher force, but a mixed race force determined, if it can, to oppose revolutionary change imposed by violence — particularly the violence of aliens and non-Africans. The fact that so many units and 'sticks' are composed of both white and black men has led to a new comradeship in the field. This may have considerable implications for the destruction of older racial attitudes and the country's future political development.

It remains very doubtful whether the Rhodesian forces (soon to be re-styled Zimbabwe and probably with Z replacing R or Rh) could withstand for long a new 'conventional war' phase in which sizeable Soviet or Cuban armour and airpower was deployed — though whether in such conditions South Africa would remain neutral is an open question.

If, however, the insurgent activity remains at, or even just a little above, its present level of intensity, in military terms the territory's forces would seem to be the likely victor — after some period of attrition. The major difficulties they would have to face are, however, not military and may be briefly summarised. First and foremost as a difficulty is foreign exchange; this difficulty could only be overcome by a lifting of sanctions which is unlikely unless a change of government occurs in London. Secondly, Rhodesia, despite its recently developed self-reliance in many fields, remains almost wholly militarily dependent on South Africa: without South African transport facilities fuel could not arrive, without South African-supplied weaponry the Rhodesians would be quickly reduced. The dependence was highlighted by Vorster's threat to withhold supplies unless Smith attended the 1976–7 Geneva conference. The European population declines in number steadily. With it follows a decline in the nation's economy: whether the country can survive this decline, the service of so much of its most productive manpower (largely white but also black) in the forces, and the prodigious cost of the counter-insurgency effort, is equally doubtful. There is also the fact of strain: for a while indigenous unrest is psychologically exhilarating for white settlers; it provides an opportunity for white reassertion. As time passes, and white supremacy disappears, tension and strain replace the exhilaration.

And even assuming the present exceptional professional competence in command could be maintained, several difficult military problems will need solution. If insurgent missile or mortar attacks are increased, the defence of the large number of

isolated farms, the Kariba power-station and the town of Umtali will become virtually impossible. An urban bombing or arson campaign would be difficult to contain, hostages might be seized to be held elsewhere in Black Africa. From a purely military point of view, if the insurgents receive (and are trained to use) SAM-7 Grail man-pack surface-to-air missiles the main plank of the Rhodesian army's tactics would be endangered. Mines, too (particularly those designed to wound in the lower body which achieved devastating results upon Portuguese morale in Guinea-Bissau), may prove a critical weapon; at present the ill-trained insurgents appear to regard them as too dangerous to themselves.

Divisions among the insurgents still assist the Rhodesians; these seem likely to continue. And the effect of the internal settlement agreement on insurgent morale — and recruitment — is as yet impossible to ascertain. The overall danger is that for reasons of great-power politics and with a disregard for the lives and well-being of Rhodesia's peoples, alien forces will be tempted to embark upon a conventional war campaign.

L. L. MATHEWS

ROMANIA

History and Introduction

The Danubian Principalities which were to form Romania became autonomous within the Ottoman Empire in 1859, and the nation gained independence in 1878. Prince Karl of Hohenzollern-Sigmaringen became King, as Carol I, in 1866, and it was largely due to the predilections of the Royal Family that Romania did not enter World War I on the side of the Allies until the Summer of 1916. Romania's adherence to the Allied cause brought her the territories of Bessarabia and Transylvania.

Romania, as a member of the Little Entente, was subject to a good deal of French influence during the inter-war years, but the government was also under growing pressure from the right. In 1940 Romania was forced to yield considerable territory to Russia, Hungary and Bulgaria; Carol II abdicated in September, and the pro-German Marshal Ion Antonescu came to power. Romania entered the war in June 1941, and sent more troops to the Eastern Front than did all Germany's other allies combined. The Romanian army suffered heavy losses in the fighting in the east, particularly during the Stalingrad operation, and by the summer of 1944 it had been forced back to the eastern border of Romania. Soviet forces had already entered the country through the Iasi gap when, on August 23rd, King Michael and his adherents overthrew Antonescu and joined the Allies. This *volte face* came too late to avert Soviet occupation and, as in many other eastern European countries, the presence of Soviet troops proved a useful asset to local communists. The communists secured the most important government posts following the 1946 elections; Michael was forced to abdicate in December, 1947 and Romania was declared a People's Republic.

The Russians had raised two divisions from the numerous Romanian prisoners-of-war in Russia. These formed the nucleus of the Romanian armies which accompanied the Soviet forces on their victorious advance into Germany; they also provided a framework around which the post-war Romanian army was reconstructed. The Sovietisation of the army followed a familiar pattern: politically unreliable officers were removed, a network of political control was established, and large quantities of weapons and equipment were imported from the Soviet Union. The army was at its peak size in 1953-5; it was reduced in 1955-8 and again in the early 1960s.

In 1952 Romania adopted a constitution similar to that of the Soviet Union, and from then until his death in 1956 Gh. Gheorghiu-Dej dominated Romanian politics. He was succeeded as First Secretary of the Party by Nicolae Ceausescu. A new constitution, introduced in 1965, made Romania a Socialist Republic, and in 1974 a constitutional amendment introduced the office of President, a post currently held by Ceausescu. Romania has pursued an increasingly independent line on foreign policy, particularly with regard to her relations with China and the West, since 1963. In 1964 Romania reduced the basic term of military service, probably against the wishes of the Warsaw Pact command. Romanian troops did not participate in the invasion of Czechoslovakia, and Ceausescu criticised not only the invasion itself but also the subsequent Brezhnev doctrine.

STRENGTH AND BUDGET

Population: 21,700,000
Army: 140,000
Navy: 10,500; 82 small craft
Air force: 30,000; 327 combat aircraft
Border troops and internal security forces: 37,000
People's Militia: about 700,000
GNP (1976): \$45,300,000,000
Defence expenditure (1977): \$824,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

The constitutional amendment of March, 1974 states that the President is Supreme Commander of the Armed Forces and Chairman of the Defence Council. Day-to-day command of the armed forces is in the hands of the Minister of the Armed Forces whose ministry resembles those of other Warsaw Pact nations. Political control of the army is achieved through the Ministry's Central Political Office, whose officers are attached to all formations and units. Romania is divided into three military districts.

Constitutional Status

Supreme authority is vested in the unicameral Grand National Assembly, elected every 5 years. The State Council, the permanent executive body, is elected by the Grand National Assembly, as is the President. The Council of Ministers is the supreme administrative body. Both the Grand National Assembly and the State Council can appoint and recall the Supreme Commander of the Armed Forces. In addition, the State Council establishes military ranks and grants the ranks of marshal, general and admiral. Article 40 of the Constitution states that military service 'is a duty of honour for the citizens of the Socialist Republic of Romania'.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role, Commitment and Deployment

The armed forces have the tasks of safeguarding the regime and defending Romania against external enemies. All Romanian forces are stationed within the borders of Romania, and there have been no Soviet troops permanently stationed in Romania since 1958. Although Romania remains a member of the Warsaw Pact, she has shown some disinclination to follow the Soviet lead in military matters.

Recent Operations

Romanian forces have been involved in no military operations since the end of World War II. They participate in large-scale Warsaw Pact exercises.

ORGANISATION

Arms of Service

These include armour, artillery, administration, cavalry, engineers, infantry, medical, motor transport, rear services, signals and technical troops.

Operational

The army currently comprises two tank divisions, eight motor rifle divisions, two mountain brigades and an airborne regiment. Some of these formations are considerably below establishment strength. All are organised after the Soviet pattern with some slight differences. They are grouped into three corps, each of which coincides with a military district.

RECRUITMENT, TRAINING AND RESERVES

Recruitment and Training

Officers and the majority of NCOs are professional; the remainder of the army is conscript. Conscription is for 16 months in the army and air force and for 2 years in the navy. Training and tactics resemble those of the Soviet ground forces.

Reserves

There are about 450,000 regular army reservists who would be used to bring the army's field formations up to strength on mobilisation. The Soviet invasion of Czechoslovakia gave impetus to the law of November 12th, 1968 which created the present People's Militia and territorial defence system. There is a wide liability for service in the People's Militia which is armed with a variety of weapons, most of them obsolescent, and carries out part-time training. It is probably considerably less effective than its Yugoslav counterpart.

EQUIPMENT AND ARMS INDUSTRY

Equipment

Small arms: of Soviet origin, although the People's Militia uses World War II German weapons
Mortars: 82 mm and 120 mm (USSR; 1000 in service)

World Armies

Anti-armour: 57 mm, 85 mm and 100mm Soviet towed anti-tank guns (USSR); Sagger, Snapper and Swatter missiles (USSR; 120 in service)

Anti-aircraft: 30 mm, 37 mm, 57 mm and 100mm Soviet AA guns (300 in service)

Artillery: a wide range of Soviet guns, including 600 122 mm and 150 152 mm; large numbers of the 132 mm Soviet BM-13 rocket launchers are still in service

Armour

Tanks: T-34/85 and T-54/55; about 1800 total. Some obsolescent JS-III and T-10 heavy tanks may still be in service

APCs: BTR-40, -50, -60 and -152 (USSR) and OT-62, -65 and -810 (Czech; 1600 in service)

Reconnaissance vehicles: PT-76 light tanks

SP guns: 100 mm Su-100. 57 mm ASU-57 and 85 mm ASU-85 airborne

Aircraft: about 250 combat aircraft; all are of Soviet origin, although some Alouette helicopters are on order

Missiles: Frog and Scud SSM (about 50); SA-2 Guideline SAM; Snapper, Swatter and Sagger ATGW; Styx naval SSM

Arms Industry

Romania has almost no domestic arms industry. It is, moreover, the only Warsaw Pact State to have reduced its defence expenditure over the past 5 years.

RANK, DRESS AND DISTINCTIONS

Rank

Officers' ranks and badges of rank are similar to those of the Soviet ground forces. Epulettes are, however, smaller than their Soviet equivalents, and are piped with arms-of-service colours rather than with red.

Non-commissioned ranks are indicated by bars of gold braid worn on the epaulette.

Senior NCOs — bars are worn on epaulette of arm-of-service colour

Plutonier-adjutant Three broad braid bars

Plutonier-maior Two broad braid bars surmounted by one narrow braid bar

Plutonier Two broad braid bars

Sergent-maior One broad braid bar surmounted by one narrow braid bar

Junior NCOs and men — bars worn on plain epaulette

Sergent One broad braid bar

Caporal Two broad braid bars edged with arm-of-service piping

Soldat-fruntas One broad braid bar edged with arm-of-service piping

Soldat No badge of rank

Specialists — a number of specialist technician's ranks exist in the armour, artillery, signals, motor transport and technical troops. Badges of rank are worn on an epaulette of arm-of-service colour.

Maistru militar principal Three gold chevrons surmounted by three short gold bars

Maistru militar clasa Ia Two gold chevrons surmounted by three short gold bars

Maistru militar clasa IIa Two gold chevrons surmounted by two short gold bars

Maistru militar clasa IIIa Two gold chevrons surmounted by one short gold bar

Maistru militar clasa IVa Two gold chevrons with no bars

Dress

Parade dress consists of a Soviet-pattern steel helmet, light-brown tunic worn with khaki shirt and tie, together with light-brown trousers tucked into black boots. Officers wear Sam Browne belts. Walking-out dress is similar, but a brown peaked cap with a band in the arm-of-service colour replaces the steel helmet, and black shoes replace boots. Both officers and men have a working uniform based on a single-breasted tunic with a fly front, high collar and four concealed pockets worn with brown trousers tucked into boots: officers generally wear peaked caps and soldiers sidecaps. A camouflaged combat dress is gradually replacing the old-style long-skirted blouse. Equipment, tank suits and NBC protective clothing are of the Soviet pattern. Mountain troops are distinguished by large grey berets.

Arm of service is indicated by a system of badges and colours worn in parade, walking-out and every-day dress. Badges are made of white or yellow metal: they are worn on the epaulette and are, in the main, self-explanatory. Arm-of-service colours are worn on the collar patches, epulettes and peaked cap. The most common colours are:

Red — infantry, rear services and administration

Black — armour, artillery, engineers, signals, technical troops and motor transport

Distinctions

A number of orders and decorations are awarded to members of the Romanian armed forces. The senior award is the Order of the Star of the People's Republic of Romania, instituted in January, 1948; this order may be conferred on soldiers or civilians, foreign as well as Romanian.

CURRENT DEVELOPMENTS

The Romanian armed forces are far from being the staunchest allies of the Soviet Union. Although reasonably trained and equipped, there is no reason to suppose that they would participate in Warsaw Pact operations with any great enthusiasm unless Romanian interests were directly involved.

RICHARD HOLMES

RWANDA

HISTORY AND INTRODUCTION

Rwanda was one of East Africa's pre-colonial interlacustrine kingdoms in which in the sixteenth century a Para-Nilotic pastoral people, the Tutsi, established an ascendancy over a Bantu agricultural peasantry, the Hutu. With its similarly constituted neighbour Burundi, Rwanda passed into German hands in the 1890s, and then into Belgian hands in 1919. The Belgians followed the German policy of 'indirect rule' through the Tutsi *Mwami* (king) and the Tutsi hierarchy until the very end of the colonial period, when policy was abruptly changed to favour the very much more numerous Hutu. Bloodshed and the exile of thousands of Tutsi in late 1959 ensued. Further massacres of Tutsi followed in 1963 and 1965-6 following incursions by groups of armed Tutsi refugees. The country then appeared to settle down until 1973, when early in the year further massacres of Tutsi occurred. In July, 1973 the National Guard (army) seized power; the coup was said to reflect dissatisfaction with President Kayibanda's limited gesture of conciliation to the Tutsi which had retained a certain number of them in positions of importance. General Habyarimana, a northern Hutu opposed Kayibanda's southern Hutu moderation; in his government real power lies outside the formal cabinet and in a nine-army-officer-strong committee presided over by the Head of State. This committee is called the 'Committee of Peace and National Unity', but is entirely Hutu.

Strength and Budget

Population: 4,500,000 (approximately)

Army: 3800 plus a further 150 air personnel who form part of the army, plus a barrack police of 1200

GNP (1977 estimate): \$500,000,000

Command and Constitutional Status

The President, Major-General J. Habyarimana, holds the portfolios of Prime Minister and Minister of Defence.

Role, Commitment, Deployment and Recent Operations

Since independence in 1962 the Rwanda army has been engaged in defending Hutu majority rule against Tutsi *inyenzi* (i.e. literally 'cockroaches') incursions.

Organisation

The army is composed of a reconnaissance squadron, eight infantry companies and one styled a 'commando' company.

Recruitment, Training and Reserves

Recruitment is by voluntary service, but in practice is almost entirely limited to Hutu.

A small Belgian training cadre has been assisting with training.

Equipment and Arms Industry

The army is equipped with 12 ex-Belgian Panhard AML 245 armoured cars, and very small numbers of 57 mm guns and 81 mm mortars. A few obsolete British 6 pounder guns have also been reported. The air unit has six light transport/liaison aircraft and two or three helicopters.

Rank, Dress and Distinctions

These generally follow the Belgian pattern.

Current Developments

Rwanda's army exists to assert the power of the Hutu ethnic majority.

L. L. MATHEWS

EL SALVADOR

HISTORY AND INTRODUCTION

The Salvadorean army has much the longest tradition of professionalism in Central America. Its comparatively extensive reserve and Territorial Army organisation, in a compact and relatively cohesive nation, give it a highly visible role in all parts of the Republic, which has been further enhanced by its continuous control of the government since 1931. The generally high esteem which the army has enjoyed amongst the population has been reinforced by its successful combat performance in the 1969 war with neighbouring Honduras and by the subsequent continuing tension with that country. In the past few years, however, this image has been considerably tarnished by its repressive operations against growing revolutionary movements and those presumed to be sympathetic with their aims.

The first genuinely Salvadorean army was created in 1824, shortly after the Spanish withdrawal in 1821, when General Manuel Arce, first president of the Central American federation, drew together the large number of independent dragoon squadrons that had been combatting the incursions of the Mexican Emperor Iturbide under a centralised command. El Salvador has always been the most devout advocate of federation amongst the Central American States, and this force was extensively used in the numerous military campaigns needed to hold the federation together. When it finally disintegrated in 1838–9, the independent republic of El Salvador inherited most of the federation's forces as the nucleus of its own army.

The country spent the remainder of the nineteenth century almost incessantly at war either internally, or with its neighbours, or both at the same time, in a sort of mutual intervention process with Honduras, Guatemala and Nicaragua, as the rival political cliques of liberals and conservatives struggled for power in each country. (This tradition has not entirely died: the Guatemalan air force is believed to have made bombing raids in defence of the ruling military government in El Salvador during the attempted rebellion of 1972, and Guatemala, El Salvador and Nicaragua are widely believed — especially by Honduras — to have a clandestine military alliance against the spread of radicalism in the isthmus under the cloak of the looser and broader Central American Defence Council.)

In the circumstances of perpetual warfare which prevailed in the nineteenth century, geographically vulnerable El Salvador had strong incentives to raise the professional standards of its armed forces. It turned repeatedly to foreign military missions for assistance, including a French mission in the early 1860s that effected a drastic army reorganisation and assisted in the foundation in 1867 of Central America's first military academy (now the Military Polytechnical School), and a German military mission in the 1890s to train artillery units.

By far the most important influence in shaping the Salvadorean army until the 1950s, however, was the succession of Chilean military missions which directed military training and operations almost continuously between 1901 and 1957. A close rapport between the two national officer corps was created by the participation of a number of Chilean officers in the 1906 war against Guatemala (El Salvador's last campaign until 1969). The Chilean influence was enhanced by the creation of the War College (now the Command and General Staff College) in 1941, which was directed by Chilean officers until 1957. The result was the wholesale transfer of the largely Prussian-derived military ethics and procedures of the Chilean army (dating from General Emil Koerner's reform of the Chilean army in 1885) to the Salvadorean army.

Although the United States army has taken over the provision of foreign training assistance since 1957, leading to the adoption of United States procedures and doctrines by the Salvadorean army, and although there is now little institutional contact between the Chilean and Salvadorean military establishments, this heritage is still discernible in the remarkable *élan* of the Salvadorean officer corps. It is strongly conscious of the Salvadorean military tradition (a generally successful record in war, and a deserved reputation for efficiency) and is imbued with a powerful sense of its own professional and *élite* status. The rigid Salvadorean military code of honour, with its stress on selfless patriotism and a Spartan dedication to duty, continues to be a major if intangible factor distinguishing the army from its counterparts in neighbouring countries.

The presence of the Salvadorean armed forces in politics as an independent actor rather than a mere instrument is of relatively recent origin. Until the 1920s the officer corps were drawn almost exclusively from the same tiny white minority of Spanish-descended 'creoles' who dominated the nation's economy and politics. The yawning gap between this rich white minority, dominated by the 'fourteen families' — actually about thirty extensive clans — who own most of the land and control around 50% of the national income, and the impoverished peasant mass of the population, 90% of them landless and almost all of them mestizo, grew even wider as the country's overwhelmingly agricultural economy became devoted to growing coffee for export after the turn of the century, but it was some time before the political danger grew severe enough to necessitate direct military control.

The impetus to military intervention was provided by the catastrophic fall in coffee prices and hence in national income during the Great Depression, which led to widespread peasant revolts (characterised by the government as 'communist') in 1930 and 1931. In response to this emergency the Minister of War, General Maximiliano Hernández Martínez, staged a military coup in 1931, ruthlessly restored order in the countryside, and ruled the country until 1944. His emphasis on

World Armies

political stability and financial solvency gratified the civilian economic *élite*. At the same time his extensive programme of public works (including schools, roads and public services, although definitely not land reform) and his appealing personal eccentricities — he was a theosophist and a practising wizard, claiming the ability to read minds and producing magical formulae to improve the harvest or halt a smallpox epidemic — provided him with a genuine popular following.

By the time he was ousted in 1944, by a general strike in the capital city, the basis for a more permanent and uniquely Salvadorean form of military rule had almost matured. The growing pressure of population on limited rural resources, the rise of urban labour and middle-class commercial and professional groups, the changing composition of the officer corps, and above all the influence of the 1944 leftist military revolution in neighbouring Guatemala very nearly led to a similarly radical transformation of the Salvadorean political scene, but after a sharp struggle within the army the generals reasserted control and brought one of their number to the presidency. It was not until 1948 that a coup by reform-minded colonels and majors seized power and inaugurated an era of 'controlled revolution' under military direction which has continued to today.

What has been remarkable about this regime is that it has sought to transform the national economy, raise the living standards of the masses, and thus avert violent social revolution by seeking the (often unwilling) co-operation of the land-owning *élite*. It has generally avoided the excesses of totally reactionary military regimes, on the one hand, and the dangerous experiments of the *peruanista* school on the other, thus making some modest progress while ensuring its own stability. While there are undoubtedly more radical officers in the Salvadorean army (they were involved in revolts in 1960 and 1972) as well as ultra-conservative ones, the dominant group of moderate reformers has managed to pass the presidency down from one hand-picked successor to another through three decades of rule. It has avoided both the violent changes of government and foreign intervention that have plagued Guatemala, and (at least until recently) the widespread peasant insurgencies and the urban guerrilla warfare of right and left that have characterised that unfortunate country.

Part of the explanation for this phenomenon undoubtedly lies in the strong sense of national mission which permeates the Salvadorean officer corps: it naturally prefers a policy which allows enough change to avert the risk of social upheaval, which would be damaging to the armed forces and could expose a weakened nation to various dangers of external intervention, while it eschews a radical programme for wholesale change for precisely the same reasons. (The Salvadorean military ethic stresses the army's ultimate responsibility for the well-being of the State, and raises no explicit barrier to full military control of the country.) Other factors which have made this policy possible include the relatively enlightened self-interest of the Salvadorean *élite*, which can usually be made to see the dangers that worry the army, and to acquiesce in the measures of social reform necessary to avert them (so long as extensive land-reform is not among them), and the homogeneous, close-knit quality of Salvadorean rural society — no Indian population to speak of, and dense agricultural settlement over the whole surface of the country — which enhances the sense of national unity and provides little scope for guerrilla activity.

By far the most significant factor in determining the middle-of-the-road reformism of the Salvadorean army since 1948, however, has been the unusual direction of the change in the recruitment base of the officer corps since the 1920s. While in most Latin American countries rising educational standards in military academy admission policies have shifted the source of officers overwhelmingly to the urban lower middle classes, who are typically hostile to the old land-owner monopoly of power but neglectful of the needs of the rural masses of the population, the change in El Salvador had a different character. There the officer corps has gradually come to be recruited predominantly from the mestizo majority living in the rural areas, while very few come from the capital. It is especially noteworthy that many young men have been sponsored for military careers by land-owners who considered them reliable and promising, and that these ties are subsequently maintained both socially and, to some extent, politically.

Thus, for example, Major Oscar Osorio, one of the leaders of the military *junta* after the 1948 revolution and President from 1950 to 1956, began life as a peasant farm-worker, enlisted in the army, and rose through the ranks. Under his rule public housing projects were begun, urban labour was given the rights to organise and bargain collectively, an extensive programme of public works was inaugurated, and the army began to be involved in 'civic action' work — but no land reform measures were introduced, and peasant unions were not permitted. The army sponsored the creation of the Revolutionary Party of Democratic Unification (PRUD) to co-opt the support of the urban middle classes in particular, and in 1956 the Presidency was passed on to Osorio's Minister of the Interior, Lieutenant-Colonel José María Lemus.

A sharp decline in the prices of coffee and cotton brought economic hardship and widespread political unrest in the late 1950s, causing the government to impose extremely harsh repressive measures, and prompting a bloodless coup by left-wing officers and allied intellectuals led by Colonel Cesar Yáñez Urías in 1960. It was in turn overthrown by more moderate army officers anxious about its 'Castroite' tendencies in January, 1961, and a new constitution was adopted in 1962. The officially sponsored PRUD was refounded as the Party of National Conciliation (PCN), and Lieutenant-Colonel Julio Adalberto Rivera, the *junta*'s leader, assumed the presidency. In the face of the increasing danger posed by the example of the Cuban revolution a number of civilians (technocrats) were admitted to the cabinet, which pursued an extensive programme of social legislation (including minimum wage laws, progressive income taxes, and credit for small farmers) and even made an extremely modest start on land redistribution. The pattern was continued by Colonel Fidel Sánchez Hernández, the PCN candidate, chosen by Rivera, who succeeded to the presidency in 1967.

The attention of the Salvadorean army, which had been focussed on internal dangers for a generation, was abruptly shifted to external defence by the brief war with Honduras in 1969 (*see* Role, Commitment, Deployment and Recent

Operations). The aftermath of the war brought economic hardship, due to a large influx of refugees and to the continuing closure of the Honduras border, which severely crippled El Salvador's attempt to turn itself into the export-oriented industrial heartland of the Central American Common Market. These difficulties were greatly aggravated by the slump in coffee and cotton prices after 1968, and conspired to cause a serious deterioration in the security situation in El Salvador.

Sánchez Hernández's personal secretary, Colonel Arturo Aranda Molina, was duly elected President as his successor in February, 1972, but barely survived an attempted coup a month later by left-wing *peruanista* officers in favour of his left-wing opponent, José Napoleón Duarte. Over 100 people were killed in the fighting, and dissident military officers have since become involved in the left-wing guerrilla movements and right-wing death squads which have sprung up in El Salvador (see Current Developments).

The regime has been forced into an increasingly harsh policy of repression in recent years, and since 1975 the internal security situation has moved steadily closer to that state of chronic civil war which characterises neighbouring Guatemala. Colonel Molina's chosen successor, General Carlos Humberto Romero, was duly elected President in February, 1977, but at least 30 people were killed in post-election disturbances. At the same time, the country must contend with the unresolved dispute with Honduras, whose army has expanded from half to twice the size of El Salvador's over the past decade. It seems possible that the 30-year-old compromise of moderately reformist military rule, acting more or less in alliance with the economic *élite*, may be nearing its end.

STRENGTH AND BUDGET

The Salvadorean army in 1979 had a strength of 6000 men; the air force numbered 1000 and the navy 130. There is a regular National Guard of some 3000 men under army command, which bears primary responsibility for internal security operations, and an extensive reserve organisation. The strength of the armed forces is fixed each year by the Legislative Assembly (and may not be less than 3000 men, according to the constitution); actual army strength has increased by 33% since 1970. Regular military manpower is only 0.22% of the population of 4,500,000.

The expenditure for defence and internal security in 1974 was \$26,000,000 out of the total budget of \$197,000,000, a rise from 9% to 13% of government expenditure since 1965. It still only represents a modest 1.5% of GNP, however.

COMMAND AND CONSTITUTIONAL STATUS

The President of the Republic is Commander-in-Chief of the Armed Forces, and appoints the Minister of National Defence and his under-secretaries. He is not constitutionally permitted to be an army officer on active duty, but in practice this has simply meant that all the presidents since 1944 have resigned their military commissions immediately before campaigning for the presidency. The Minister of National Defence is always an officer and is in the chain of command, with responsibility for executing the President's orders. The Deputy Minister of National Defence is charged with administrative duties, but has no command functions.

The Chief of the General Staff is the senior serving officer, and commands the forces in the field directly. He is himself the Chief of the Army, and has operational control over the Chiefs of the Navy and the Air Force. His headquarters also controls the reserves and the three internal security forces: the National Guard, the National Police and the Treasury Police (which are all usually commanded by army officers).

In 1979 the President of the Republic was General Carlos Humberto Romero, and Minister of National Defence and Public Security was Colonel Federico Castillo Yañes. Following an embarrassing incident in 1976 when the then Chief of Staff of the Armed Forces was arrested in New York on a charge of attempting to sell 10,000 sub-machine-guns to criminal elements in the USA, he was replaced by the present incumbent, Colonel Armando Leonidas Rojas.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The principal military role of the Salvadorean army, unusually for Central America, has always been seen as external defence. This orientation has been encouraged by its distinguished record in local wars (a source of great pride to all Salvadoreans), by its higher level of professionalism imbibed through close training associations with the armies of much larger nations, and not least by the sheer physical vulnerability of El Salvador, a nation only 200 miles long and a maximum of 62 miles wide. By the same token the densely populated Salvadorean countryside offers few of the conventional physical sanctuaries for internal guerrilla movements, and the security problem is even further reduced by the fact that rural districts are semi-militarised through the extensive reserve and Territorial Army organisations.

In these circumstances, the armed forces have been able to leave internal security to the various police forces under their control, with direct military intervention in civil disorders only invoked as a last resort. These forces are: the National Police, a conventional police force organised in its present form in 1945 to provide police protection in the larger cities and towns; the National Guard, formed in 1912 by Spanish officers who modelled it on the Spanish Civil Guard, whose

World Armies

3000 men are responsible for rural constabulary duties; and the Treasury Police, a small force of 500 men organised in 1926 to carry out customs and anti-smuggling duties. All three are paramilitary in organisation, but only the National Guard has military significance: it wears army uniforms and carries standard infantry weapons, and is organised into 14 companies distributed geographically throughout the country in five infantry commands. It works in close co-ordination with the army in anti-guerrilla operations, but is not expected to take part in combat operations.

The regular armed forces concentrate on training for regular military operations, but much effort is also expended on civic action projects, which are administered by a separate organisation directly under the Minister. The army's Corps of Engineers is largely responsible for the country's relatively comprehensive and well-maintained road network, and other units operate over 500 literacy centres throughout the country and assist in public health projects. These tasks are facilitated by the army's pattern of deployment, which distributes units fairly evenly across the country in permanent association with particular districts, and provides some military presence in even the smallest communities to carry out reserve training. This deployment does not clash with the major defence concern since 1969, namely the possibility of another war with Honduras, since about three-quarters of El Salvador's land borders are with that country, and no point in the country is more than 100 miles from Honduras territory.

El Salvador is a member of the UN, the Organization of American States, and the various Central American institutions: the Organization of Central American States; its military organ, the Central American Defence Council (CONDECA); and the Central American Common Market. The CACM has been virtually paralysed since 1969 by the Honduras-El Salvador dispute, however, and the OCAS and CONDECA have decreasing relevance as neither Costa Rica nor Honduras subscribes to the right-wing military orientations of the dominant members. Effectively El Salvador now forms part of a bloc of relatively conservative military-ruled States, together with Guatemala and Nicaragua; there is extensive co-operation in anti-guerrilla operations, and there may be provisions for mutual intervention against attempts to overthrow the regimes. In July, 1977 El Salvador promised military assistance to Guatemala in the event of war over the Belize dispute.

The dominating factor in Salvadorean military thinking, however, is still the confrontation with Honduras. Although the incidents that sparked the 1969 war took place at World Cup soccer matches between the two countries, prompting the press to name it the 'football war', the real motives were much more serious, and have not since been removed. The basic problem is that El Salvador is the second most densely populated nation in the Western Hemisphere, with over 500 people per square mile and a population growing at 3.5% a year; land hunger is acute, and can only grow more so. Honduras, by contrast, is a larger country with much empty land and an average population density only one-tenth as great.

Illegal Salvadorean immigration into Honduras grew extremely rapidly during the 1960s. By 1969 the immigrants numbered some 300,000 (one-eighth of the Honduras population), and had become the target of intense hostility in the cities of Honduras. The Salvadorean government made no attempt to control this flow, and became vocally resentful when legislation was passed in Tegucigalpa excluding the immigrants from the benefits of the Honduras land reform programme. The intense nationalism on both sides was heightened by the expansionist ideas of many Salvadoreans: before the war maps were circulating in El Salvador showing the country more than doubled in size, with Honduras cut off from the Pacific coast and confined to the area north and east of Tegucigalpa. The rioting against Salvadorean immigrants in Honduras in 1969, touched off by the mistreatment of a Honduran football team in San Salvador, was only the spark that ignited a war that had been brewing for some time.

The El Salvador government called up the reserves and President Sánchez took to the field to direct operations, as Salvadorean refugees poured across the border. Salvadorean forces struck across the border on July 14th at three separate points, while the two countries' air forces each struck at military, communications and industrial targets in the other (both capitals' international airports were bombed, and El Salvador's main oil refinery at Acajutla on the coast was severely damaged). On the ground the Salvadorean army was successful from the first, driving some 25 miles east along the Pan-American Highway, and seizing the major Honduras town of Ocotepeque across the northern frontier (most of its inhabitants fled into Guatemala).

Honduras instantly accepted the OAS ceasefire call issued on July 14th, but El Salvador continued its advance at a slower pace and refused to consider withdrawal until Honduras gave guarantees of safety for the Salvadorean immigrant population. The fighting continued at a diminished intensity until July 29th, when the OAS formally branded El Salvador the aggressor and threatened to institute full economic sanctions against the country if its troops were not withdrawn from Honduras territory. The Salvadorean withdrawal began on July 30th under the supervision of OAS observers, and was completed by August 5th, 1969.

The war left 3000-4000 dead (including civilians), and saddled El Salvador with the burden of at least 100,000 refugees. It also resulted in the permanent closure of the border (despite numerous mediation attempts by other Latin American States), which has caused grave damage to the Central American Common Market and the growing Salvadorean industrial sector which was founded on the assumption that that larger market would be available. Above all, it has stimulated a more than threefold expansion of the Honduras armed forces since 1970, adding greatly to El Salvador's external security problem.

Border clashes between the two countries continued until 1971, when a 1.8 mile (3km) demilitarised zone was agreed along the common frontier. In early 1976 El Salvador and Honduras agreed to place their boundary dispute in the hands of a mediator, but later in the year there were renewed border clashes, with Honduras accusing El Salvador of launching an invasion. Despite renewed mediation attempts the situation continues to be tense, and both armies view another war as a genuine possibility.

ORGANISATION

Arms of Service

The Salvadorean army is a predominantly infantry force organised in three infantry 'brigades' containing six infantry 'regiments' of battalion strength and one airborne 'battalion' of company strength. There is an artillery 'brigade' of two battalions, an armoured cavalry battalion, an air-defence battalion and two commando/ranger companies. Combat support elements include an engineer company, a signal/supply company and a medical detachment.

The navy, created in 1952 as successor to the Coast Guard that was founded in 1913, is a small force for coastal patrol and fisheries protection with little combat capability. It is organised into four port captaincies spread along the coast; navy headquarters is within the Ministry of National Defence in San Salvador, and there is a Naval School.

The air force's operational elements are organised into a single composite squadron. Headquarters are in the capital.

Operational

The country is divided into three military defence zones: western, central and eastern, whose boundaries coincide with those of political departments. Departmental commandants are civilians appointed by the Ministry of National Defence, and serve in a military capacity with full charge of the garrisons, bases, equipment and personnel within their areas of jurisdiction. They are responsible for the upkeep of installations, housing and logistical arrangements.

The Chief of the General Staff has direct operational control of the army, navy, air force and the three military zones, as well as the paramilitary security forces. As army commander, he also has the arms (infantry, artillery, armour, engineer and communications) and services (administration, material, transportation, sanitation and medical) under his direct command.

Regular Army garrisons are found in all main towns (*see also* Reserves). The main air force base is at Ilopango International Airport near San Salvador, but flight elements are also stationed at several other airfields. Airstrips are scattered throughout the country.

RECRUITMENT, TRAINING AND RESERVES

Although the constitution provides for universal military service, in practice the armed forces are a regular professional force maintained on a volunteer basis. Conditions for the serviceman compare favourably with those in civilian life, including relatively good pay, ample leave, decent food and quarters, strict but not harsh discipline, medical care and retirement benefits (50% of base pay after 20 years, 100% after 30), so there is no shortage of volunteers. Vacancies are filled as they occur, by lot amongst qualified applicants for regular status from the semi-annual class of conscripts.

The remainder of the conscripts fulfil their constitutional obligation to perform 18 months' military service between the ages of eighteen and thirty by participating in weekly training sessions conducted by the regular army in or near their own home community. Training is usually limited to drill, weapons familiarisation and military discipline, but all military personnel released from active duty are also placed on this 'active reserve' list to constitute a nucleus of trained men. This reserve of 30,000 men has a battalion structure and an efficient mobilisation organisation; during the 1969 war the army was rapidly expanded in this way from five to eighteen infantry battalions.

At the age of thirty 'active reserve' members are reassigned to the Territorial Service, in which obligations theoretically continue until sixty. Its main function is to provide a framework of military authority throughout the rural areas of the country.

Regular officers of all three services are trained at the military academy, to which entry is by competitive examination for candidates with a minimum of 4 years' secondary schooling. The syllabus is divided between academic and military subjects, with the students' time devoted in about equal portions to classroom work and field exercises. Academic standards are good, and they graduate with a bachelor's degree after 4 years and receive commissions as sub-lieutenants in the army. The academy is located just west of the capital, and the student body averages 150; only 15–20 officers are graduated into the Salvadorean army each year, however, and there is a substantial contingent of students from other Central American countries.

In 1968 the government created a para-military peasant organisation, ORDEN, which is used both as an intelligence-gathering network and a counter-insurgency force in rural areas. Its strength in 1978 was estimated to be 80,000 men.

Salvadorean navy and air force officers get additional specialised training at the Navy School and the Aviation School. Like army officers they may also attend U.S. armed forces courses in the Panama Canal Zone, but El Salvador is uniquely well endowed with military higher educational facilities in Central America. These include the Arms and Services School providing a 6 month course in advanced military subjects (stressing joint and combined operations) for field-grade officers, individual service schools providing advanced technical training in their various specialities, and the Command and General Staff College, which provides graduate studies in military science and a variety of academic subjects to students of lieutenant-colonel or colonel level.

Regular NCOs receive instruction at the Non-commissioned Officers' School, created in the 1890s and an independent

World Armies

institution since 1908, as well as at branch schools of the various arms and services. Numbers of senior NCOs are also sent abroad for advanced courses.

Recruit training includes literacy courses where necessary, and there is a considerable in-service programme to raise the academic standards and technical competence of enlisted men. Many garrisons open their literacy centres to the local population.

EQUIPMENT AND ARMS INDUSTRY

The army uses standard U.S. infantry weapons and equipment. The artillery brigade is equipped with 30 105mm howitzers. Armoured vehicles include three M-3 and 12 AMX-13 light tanks, 18 armoured cars and 20 UR-416 APCs.

The navy has four small patrol boats. The combat strength of the air force consists of 17 Ouragon and four Magister jet FGAs, all recently acquired from Israel; transport aircraft (with a limited paratroop-dropping capability) include two DC-6s, 12 C-47s and four Aravas. The air force has one Alouette III and three Lama helicopters, and a variety of training aircraft (some armed) including 13 T-5s and some T-34s.

There is no arms industry in El Salvador, so the country has been almost exclusively dependent on military aid and purchases from the USA for its equipment until recently: United States military financial assistance from 1950 to 1970 totalled \$5,900,000, plus the transfer of excess stocks valued at \$300,000. In 1977, however, in rejection of pressures from Washington for better observance of human rights in the country, the government of El Salvador abrogated all its military assistance agreements with the USA. Its arms purchases, as in a number of nearby States, are now primarily made from France and Israel. Although the logistical system worked fairly satisfactorily in the brief 1969 war, the country might now experience severe difficulties during extended operations.

RANK, DRESS AND DISTINCTIONS

Army and air force officer ranks are identical, and follow the usual international system with the exceptions that second-lieutenants are known as sub-lieutenants, and that there is only one general officer grade, with the title simply of general. Rank insignia (in order of increasing seniority) are one, two or three bars; one, two or three gold stars; and a single laurel leaf, worn on shoulder straps. There are four NCO ranks: corporal, sub-sergeant, sergeant and technical sergeant, for which the insignia are two red chevrons, one gold chevron, two gold chevrons and two gold chevrons over the letter 'T', respectively.

Naval officers have the same ranks as the United States navy, with the exception that there is only one grade of flag rank, known simply as admiral. Naval NCOs and enlisted men, however, are known by their equivalent army grades.

The basic army garrison uniform is khaki shirt and dark-green trousers, with a garrison cap; the air force uniform is the same in a light-blue colour. With the addition of leggings, helmet and field equipment, the garrison dress becomes the combat uniform. Army and air force officers and technical sergeants also have service uniforms of coat and trousers in their respective uniform colours, and dark-blue dress uniforms for both services. The navy wears the traditional navy-blue uniform in winter, and whites in summer. There is also a khaki service uniform.

The highest Salvadorean decoration is the National Order of José Matías Delgado, established in 1916, which is presented in five grades (the highest being reserved for Heads of State). The award is limited to 25 living nationals, including military personnel. Other military decorations, all created in 1946, are the Laureate Medal of Military Merit, awarded for valour in combat, the Medal of Military Merit, granted for distinguished services, and the Military Cross, a decoration presented in various grades for 10–25 years of active service.

CURRENT DEVELOPMENTS

Although the army's main concern is still external defence, it has been drawn increasingly into internal security operations by the deteriorating political situation of recent years. The principal cause of the troubles is unquestionably the grave shortage of land in a thickly populated country with an overwhelmingly rural population, and the reluctance of successive military governments to confront the economic *élite* openly by undertaking large-scale redistribution of land. Rural insurgency has been on the rise since the beginning of the 1970s, and latterly the army has faced growing opposition from university students and urban intellectuals as well.

The most active of the armed revolutionary movements is the People's Revolutionary Army (ERP), an originally Castroite group which concentrates on assassinations and raids on rural police stations. It simultaneously seized eight local radio stations in the capital and provincial towns to broadcast its message for an hour in late 1975, and has latterly shown considerable effectiveness in stimulating peasant seizures of land on the great estates, relying on over-reaction by the security forces to win it more recruits. It is reported to have a national directorate of five members, and three regional committees for the western, central and eastern districts. A breakaway organisation, the Farabundo Martí Popular Forces

of Liberation, has been more active in the cities, and there are also at least two other small splinter movements.

In 1978 there appeared a new guerrilla organisation, the Armed Force of National Resistance (FARN), whose relationship with the two older movements is not clear. It pursues a campaign of assassination of government supporters, and has recently taken to kidnapping foreign businessmen.

Since 1975 El Salvador has also seen the emergence of ultra-right-wing terrorist groups, first the Falange and latterly the White Fighting Union (UGB), which seems to have absorbed its predecessor. Its death squads are almost as hostile to the government's limited programme of land reform by compulsory purchase as to the extreme left-wing movements. During 1977 the guerrillas killed an ex-President and the Foreign Minister, while numbers of prominent leftist intellectuals were murdered by the death squads. The government also came into increasing conflict with the Roman Catholic Church (a majority of whose priests in El Salvador are foreign missionaries), and especially with the Jesuit order: in May, 1977 the Archdiocese of San Salvador reported that six priests had been killed and 25 others arrested, tortured or deported in the previous 6 months.

The situation in El Salvador may well be sliding towards the state of chronic low-level civil war that has afflicted neighbouring Guatemala for the past 20 years. A military victory for a rurally based guerrilla force is scarcely conceivable in the countryside of El Salvador, which has no remote, sparsely populated areas to serve as bases, while urban guerrilla activity by itself can scarcely do more than intensify the present polarisation of the nation.

The one source of possible change is probably the army itself, whose comparatively well-educated and sophisticated officer corps may be presumed to contain numbers of closet radicals. As the regime's leadership is driven farther and farther to the right, their position grows increasingly untenable, and they may be tempted to try to seize power. Whether they could succeed, however, and especially whether Guatemala would not come to the regime's aid, must remain open questions.

SÃO TOMÉ and PRINCIPE

It is understood that this small ex-Portuguese State maintains a miniscule barrack police unit.

L. L. MATHEWS

SAUDI ARABIA

HISTORY AND INTRODUCTION

Between 1964 and 1976 Saudi Arabian spending on defence increased approximately one hundredfold to a total of \$10,360,000,000, a figure comparable to the British or French defence budget. In the same period, the Royal Saudi Army no more than doubled, to a mere 40,000 men. The contrast not only highlights the enormous scale of Saudi Arabia's oil-derived wealth, but also its relatively recent advent. Even more importantly, so far as defence is concerned, it illustrates the point that wealth is not directly translatable into military power unless other resources are also present. The native Saudi Arabian population is only some 4,000,000–5,000,000 people, most of them only emerging from a medieval society in this generation, spread across almost a million square miles of territory. The population is in no way adequate to support pretensions to major military power, and Saudi Arabia does not have such pretensions.

Nevertheless the kingdom does have a strong military tradition, not only because of the warrior customs of the bedouins who made up much of its population until recently, but also because it was created by military conquest within living memory. It was created, moreover, by a unique and extremely effective military institution, known as the *Ikhwan*, which lives on even today as the National Guard, one of the kingdom's two parallel armies.

The fortunes of the al-Saud dynasty first rose in the eighteenth century when an ancestor of the present ruler concluded an alliance with Muhammad ibn Abd al-Wahhab, the founder of a militantly puritanical religious movement which sought to 'cleanse' the Islam then practised in the Nejd (the north-eastern part of Arabia) of various abuses which had become established there. The appeal of Wahhabism to the nomadic tribesmen combined with the military leadership of the first Saud enabled him to establish his rule and the Wahhabite doctrine over the larger part of the peninsula. By the latter part of the nineteenth century, however, internecine strife and local rivalries had destroyed the grip of the Saud family, and it was left to young Abdul Aziz ibn Saud (born 1880) to reconquer the peninsula and unite it under one rule for the first time in many centuries.

The first step was taken in January, 1902, when the young Abdul Aziz and a small band of followers recaptured Riyadh, the former seat of the Saudi emirate, which had fallen to rival tribes of the great Shammar tribal confederacy of northern Arabia (extending also into Iraq and Syria) under the leadership of the Rashid family. By 1906, the Saudi forces had regained the central Nejd.

Recognising his need for a more reliable source of support than fickle tribal alliances, Abdul Aziz sent Wahhabi missionaries to encourage the tribes to settle in Ikhwan (religious brotherhood) communities to which he gave seed, farm tools, money, arms and ammunition, in return for the support of their warriors in his campaign to unite the peninsula. In each community mosques, schools and homes were built and religious teachers were provided.

The villages grew rapidly in number, and soon it was possible for Abdul Aziz to mobilise 25,000 men in 96 hours, although in most of his campaigns only 5000–10,000 were actually employed. The Ikhwan were first used in battle in 1913, to quell a revolt by the Mutayr tribe, force out Ottoman occupying troops and win the Saudi emirate access to the Persian Gulf, thus bringing under its control the Eastern Region where all the country's oil wealth now lies. During World War I, Abdul Aziz concluded a treaty with Britain in 1915 that gave him the money and arms to pursue his battle against the rival Rashid dynasty, which culminated in the Saudi capture of the Rashidi capital, Hail, in 1921. Abdul Aziz thus became Sultan of Nejd, recognised and endorsed by the British who were the dominant power in the Persian Gulf, and by 1922 the Ikhwan forces were in control of all the desert lands from the 'fertile crescent' in the north to the 'empty quarter' in the south-east.

Abdul Aziz's only remaining rival in the Arabic peninsula was the Hashemite Kingdom of the Hejaz, in the west along the Red Sea coast, which contained the holy cities of Mecca and Medina. When King Husain of the Hejaz laid claim to the Caliphate of Islam in 1924, the Ikhwan forces were sent against him by Abdul Aziz, and after 15 months the last besieged strongholds of the Hashemites surrendered in December, 1925. All of Arabia was united under Saudi rule, save the British protectorates along the Persian Gulf coast and the thickly populated Yemen in the south-west.

Abdul Aziz's next great task was to unite this kingdom, in which tribal loyalties were still strong and few outside the Nejd adhered to the Wahhabi doctrine, and to bring under control the unruly instrument of his victories, the Ikhwan. These warriors had always had a tendency to get out of hand, committing some brutal massacres like that at Taif in the Hejaz in 1924, and they were not willing to stop raiding simply because the kingdom had now expanded to its practical limits, its borders having reached British-protected territories to the north, east and south. Throughout the later 1920s undisciplined tribal Ikhwan forces raided into Kuwait, Iraq and Transjordan, all British mandates or protectorates, despite Abdul Aziz's orders to stop. Meanwhile, however, the monarch laboured to build up the small regular army he had founded as a counterweight to the Ikhwan in 1926, and in January, 1930, with air support from four newly acquired aircraft flown by British pilots, his regular army decisively defeated the Ikhwan in battle. The chronic internal warfare which had

World Armies

been Arabia's lot for centuries then effectively ceased, except for a small border war between Saudi Arabia and Yemen in 1931–4.

The foundations of the future prosperity of the kingdom were laid in 1933, when the first oil fields were discovered in the Eastern Province and Saudi Arabia granted a huge concession to the Standard Oil Company of California. (It was considered a severe blow to Britain's hitherto monopoly position in the Gulf, but the King explained: 'The U.S. is far away from Arabia, and unlike any European power has no designs on it'.) Its political independence was thus safeguarded, but through the 1930s and 1940s Saudi Arabia remained a barren, backward, impoverished country in which no influences from the modern world were permitted to enter. What money came from the oil was hoarded, and virtually no development occurred except in the armed forces.

These, being the foundation of the dynasty's power, received close attention. After the Ikhwan had been smashed in 1930, they were permitted to reappear in the guise of the 'White Army' (renamed the National Guard in 1962) as a bedouin militia under much tighter royal control. They thus served as a counterbalance to the small and lightly equipped units of regular troops and the Royal Guard which were maintained throughout the 1930s at a modest strength, and were then taken in hand by Britain and the USA during World War II with the intention of forming a professional army in Saudi Arabia along the lines of the Jordanian Arab Legion. For this purpose, training missions were sent to the Kingdom to instruct the troops in the use of communications, light ordnance and military transport, and a small number of Saudis, almost all members of the royal family, were sent to Sandhurst for further training. After 1952, the USA took exclusive charge of military training with the explicit purpose of creating a modern regular army and a small air force, and numbers of Egyptian officers also collaborated with this training project until the growing political hostility between Nasser's radical government and Saudi Arabia's ultra-conservative regime forced their withdrawal. None of the targets that the USA had set for the growth of Saudi Arabian forces was met, however, principally because of manpower bottlenecks.

The problem was that the main pillar of the Saudi tribal confederation which ruled the country was the Nejdi tribes, but very few Nejdīs had the background and education to make them promising material as officers or technicians in a modern army, let alone an air force. The solution which was eventually adopted was to permit generally better qualified men from the Hejaz, with its relatively sophisticated cities, to be recruited in large numbers to fill the gap. This trend has been accelerating, and Hejazis now form the backbone of the Saudi regular army and are an even larger proportion in the technologically more demanding air force. Senior command positions still remained almost exclusively in the hands of members of the large royal family, but it was rightly felt that Hejazis were less instinctively loyal to the Saudi dynasty and more open to the political influences sweeping the rest of the Arab world, so it was unsurprising that the National Guard based on the Nejdi tribal levies should have been expanded in parallel with the regular army as a precautionary measure. It was only in about 1965 that the regular army exceeded the National Guard in total strength. Even today the latter is under an entirely separate chain of command, and has exclusive responsibility for guarding the crucial oil fields in the Eastern Province, where there are no regular army troops whatever.

The reason for the more rapid expansion of the regular army in the 1960s was the civil war in North Yemen, where Egypt and Saudi Arabia ended up supporting different sides. Saudi Arabia had sent a token battalion to participate in the 1948 war in Palestine, but had remained generally aloof from the concerns and trends of the wider Arab world. In the late 1950s and the 1960s, however, with monarchies being overthrown or attacked throughout the Arab world and the fortunes of the 'revolutionary' regimes in the ascendant, the kingdom found those concerns arriving at its own doorstep. Following the overthrow of the Imam of (North) Yemen in 1962, the Saudis armed and supported conservative tribal forces resisting the new republican military regime, and Egypt introduced a large expeditionary force into the country to support the republicans. Units of the National Guard and the regular army were posted all along the Yemeni border, although none became directly involved in the fighting, and the regular army began to be built up as quickly as possible.

After the Arab–Israeli war of June, 1967 the need for Egypt to keep its army closer to home made itself felt, and Egyptian troops were withdrawn from the Yemen leaving a shaky compromise settlement in that ravaged country, but the radical outside forces seeking to revolutionise the Saudi kingdom did not cease their incitements to revolt. In June and September, 1969 there were serious attempts to carry out a military coup against the dynasty, both originating in the air force where the influence of the outside world was inevitably at its greatest.

That the monarchy survived these pressures to emerge in the 1970s apparently stronger than ever — to the great surprise of so many who had predicted its fall throughout the 1960s — is probably due mainly to the fact that it had reformed itself in time. Abdul Aziz, who died in 1953, had kept his money in iron coffers, but his successor King Saud bin Abdul Aziz proved irresponsible, dissolute and profligate, and permitted many other royal princes to behave in a similar fashion. As before, there was little development of the kingdom, but there was now also scandalous contrast between the ruler's luxurious wealth and the subjects' poverty. What saved the dynasty was the fact that headship of the family (and thus the throne) is granted in Arabian custom not by primogeniture but by consensus of the family's leading members. King Abdul Aziz had left 42 living sons, so the family already numbered over a thousand, and many members were well aware that under Saud the kingdom was heading for disaster: in March, 1964 the family transferred the administration of the kingdom to King Saud's younger brother, Crown Prince Faisal, and in November of the same year Saud was deposed.

Under King Faisal bin Abdul Aziz, who ruled from 1964 until he was assassinated by a deranged nephew in March, 1975, the kingdom's somewhat compromised fortunes were restored. A firm grip was taken on the administration of the country, and systematic development of its human and natural resources began for the first time (although always with care

not to introduce destabilising foreign influences). The carefree spending habits of individual princes were controlled, oil production was raised and the kingdom's share in the oil profits was increased, thus greatly increasing available revenue in the late 1960s. Much of this was devoted to the modernisation of the army, and some also to providing aid for those Arab countries directly involved in the confrontation with Israel, thus purchasing external goodwill that had previously been absent. A more active, although still very cautious foreign policy was adopted: closer links with Egypt, an attempt to persuade Bahrain and Qatar to join with the other seven lower Gulf emirates in the United Arab Emirates in 1971, and mediation between Jordan and the Palestine Liberation Organisation during the civil war in Jordan in the same year. An attempt by the new Marxist regime of South Yemen to assert a border claim against Saudi Arabia in 1969 was rebuffed by armed force, but the kingdom clearly recognised the limits of its military power: it made no attempt to intervene when Iran seized the Gulf islands of the Tumbs and Abu Musa in November, 1971.

The Saudi-led embargo imposed by the Arab oil-producing States against the USA and the Netherlands after the 1973 Arab-Israeli war, together with progressive cuts in oil production for other customers which at one point reached 30%, demonstrated to the entire world the potentially decisive effect of the 'oil weapon'. Saudi Arabia, as the second-largest producer and largest exporter of oil in the world, with reserves amounting to an estimated quarter of the world's remaining supply (and where new discoveries have exceeded production each year since 1933), was universally seen as the sole real owner of the oil weapon, and its diplomatic importance accordingly soared. So did its wealth: the first consequence of the embargo was the four-fold rise in oil prices, which suddenly conferred on Saudi Arabia an annual income of over \$10,000 per capita (in a country with 85% illiteracy). The most striking feature of this wealth, moreover, was its extreme fluidity: even now Saudi Arabia's Gross National Product, around 95% of which is derived from oil revenues, is only about half the size of the Netherlands', but almost all of Saudi Arabia's money is available to be spent or given in aid abroad — indeed, very little of it can possibly be spent at home. Thus a country whose actual GNP is less than Switzerland's has a world economic importance as an importer of goods and services and a provider of foreign aid comparable to that of West Germany, Japan or the Soviet Union.

A very substantial proportion of post-1973 Saudi Arabian expenditure abroad has gone on military goods and services — in the 5 years 1973–8 Riyadh spent \$15,000,000,000 on these in the USA alone — but it is frequently overlooked that despite the lavish expenditure the military ambitions of the country are quite modest. About 90% of the money spent abroad on military purposes has been devoted to contracts for construction work on support facilities and training assistance, and only about one-tenth on actual weaponry. When the current expansion and re-equipment programme is completed in the early 1980s Saudi Arabia's army will be roughly comparable in numbers and quality of equipment to that of Jordan today, and its navy and air force will be of similar size and sophistication to Algeria's. There is simply not the qualified manpower available for anything more ambitious, and so Saudi military policy aims only at a credible defensive capability on its own territory and a degree of military superiority in its own immediate neighbourhood, the Arabian peninsula.

For influence further abroad, Riyadh has relied principally on its own version of 'dollar diplomacy' — the provision of very large amounts of financial aid (almost certainly equalling its military expenditure in the post-1973 period) to the other States of the Arab world in order to create a stable political environment which is congenial to the survival of conservative monarchies like itself. In an Arab world which outside the Arabian peninsula is populated for the most part with ageing 'revolutionary' regimes that have outlasted their natural spans plus a few delicately poised monarchical survivors, this policy has had notable success. Massive Saudi subsidies have not only allowed President Sadat to retain control of desperately impoverished Egypt, but have been of great help in assuring the survival of Jordan's King Husain and Syria's President Asad. Other Saudi subsidies have helped King Hassan of Morocco in his confrontation with Algeria and Sudan's President Nimeiri in his struggle to avoid overthrow by radical neighbours in Libya and Ethiopia, while the North Yemen regime is virtually a Saudi pensioner.

Nearer home Saudi diplomacy has been rather more activist. The closure in 1975 and 1976 of the elected assemblies of Bahrain and Kuwait, the only two such representative bodies in the Gulf, is widely attributed to Saudi anxieties about the possible growth of radical influence through them and its transmission to Saudi Arabia itself. It is possible that there was Saudi encouragement for the coup that overthrew North Yemen's President Ibrahim al-Hamdi in 1977 just as he was going to enter serious talks on reunification with radical South Yemen. But even in the Arabian peninsula Riyadh has eschewed the use of its own armed forces: it tacitly accepted the presence of Iranian troops in Oman to fight the Marxist guerrillas in Dhofar in 1973–7, restricting itself to providing Oman with financial aid, and it made a determined if ultimately unsuccessful attempt to buy off the Marxist government of South Yemen in 1977 with promises of large sums of money for development aid in that extremely poor country. A similar financial inducement undoubtedly did have an effect in inducing the Somali regime to expel its Soviet military advisers in 1977.

On the key question which divides the Arab world, the Arab-Israeli dispute, as in most other intra-Arab disputes, Saudi diplomacy has sought to avoid total commitment to one side or the other, preferring to assume the role of a rich mediator who can ease the pains of compromise with large sums of money. Thus, for example, it played a key role in instituting the final and more or less effective ceasefire in the Lebanese civil war in October, 1976 by first putting the Syrian regime in serious financial straits by cutting its subsidies, and then providing ratification for the dominant Syrian position in Lebanon by approving the designation of the Syrian army there as an 'Arab Deterrent (peace-keeping) Force' in return for Syria's acceptance of Egypt's second disengagement agreement with Israel. Equally nervous of the ultimate intentions of then

World Armies

imperial Iran and of Ba'athist Iraq, its two militarily far more powerful neighbours to the north, Riyadh declined to participate in any Gulf security pact which excluded either, thus dooming the initiative to create such a pact which was launched by some of the smaller Gulf States in 1976.

Saudi Arabian foreign policy, aimed at maintaining a safe and stable environment in its own region, recognises three imperatives. First, the advance of communist influence (which it regards as synonymous with Soviet influence) in the area must be prevented. Secondly, there must not be another Arab-Israeli war. Thirdly, the West, which is Saudi Arabia's main market for oil and principal supplier of goods, must not undergo a severe economic decline. All three of these objectives, which are substantially interrelated in Saudi eyes, dictate a close 'special relationship' between Saudi Arabia and the USA.

Riyadh no longer regards any of the so-called radical regimes in its vicinity except South Yemen as a serious political threat, even despite the close relationship of Iraq and Syria with the Soviet Union as principal arms supplier, for it recognises that they have become fundamentally conservative in defence of their own positions. It is even happier, of course, when it can help to persuade former Soviet arms clients to turn to the West instead, as in the cases of Egypt, the Sudan and North Yemen, or to dissuade existing Western clients like Kuwait and Jordan from embarking on the purchase of Soviet arms. Saudi Arabia has become extremely alarmed by recent Soviet advances in the region — the communist coup in Afghanistan, the advent of Soviet, Cuban and East German troops in considerable numbers in Ethiopia and South Yemen, and above all the possibility that revolutionary Iran might slide into the hands of the pro-Moscow left. Thus it tried unsuccessfully to obtain Western arms aid for Somalia, and in early 1979 was still subsidising the Eritrean rebels who restrict Ethiopian access to the Red Sea coast and make the establishment of Soviet bases there improbable. It secured United States arms aid for the government of North Yemen in order to help contain the menace of South Yemen, and in late 1978 made a little-noticed security arrangement with Iraq against the possibility of an expansionary Iran.

In general, Riyadh regarded a revival of Islamic observance, with the full support of law, as a major prophylactic against the spread of communism, and had successfully encouraged many of its major aid recipients in the Middle East, from Pakistan to the Sudan, to take steps in that direction. (It recognised, however, that in at least two neighbouring States — Iraq and Syria — where the regimes were drawn from a religious minority, such pressures were not without their own dangers.) In only one instance, concerning perhaps the two most fragile Arab regimes of all — those of Egypt and the Sudan — did Saudi Arabia give direct support to a mutual security pact designed to ward off threats from radical forces (in Libya and Ethiopia, which both enjoy Soviet support), but even in that case Riyadh was unable to offer direct military support. Its funds are virtually limitless, but its military means are very modest.

Saudi Arabia is well aware that most of the regimes whose survival it is attempting to guarantee in the interests of stability are very weak and brittle — indeed, its own ability to wield such influence over them by mere promises of money is a measure of their isolation and desperation — and rightly fears that another Middle East war would bring tumbling down the whole rickety structure of regional security it has been trying to create. Not least, it would virtually compel Saudi Arabia itself to institute a new oil embargo, thus destroying the relationship with the USA which it regards as crucial to its survival, even if it did not mean Israeli attacks on the oil fields (as it well might). Saudi Arabia has therefore regarded an Arab-Israeli peace settlement as a high priority since 1973, and either openly or tacitly supported Egypt's President Sadat in his efforts to achieve it. (Soon after King Faisal's assassination in 1975, the new government stated that the existence of Israel could be accepted by it if all occupied Arab territories were returned and proper provision were made for the Palestinian people.)

Saudi Arabia is also well aware, however, that any separate Egyptian-Israeli peace settlement which effectively neglects the Palestinians will be fundamentally destructive of the whole edifice of mutual security it has been trying to construct, and since the inception of the Sadat initiative in November, 1977 which seemed to Riyadh to be aimed at just such a peace (however well disguised) it has climbed back up on the fence. With substantial numbers of immigrant Palestinians in its own population and far larger proportions in some of its small Gulf neighbours, Saudi Arabia has always been fully conscious of the need to maintain relatively good relations with the Palestine Liberation Organisation, and in November, 1978 it was a leading participant in the Arab summit meeting in Baghdad which sought to persuade, bribe or frighten Egypt back into the Arab fold.

But both in its anti-Soviet activities (Riyadh has not had diplomatic relations with Moscow since 1938) and in its efforts to assist the achievement of a lasting Middle East peace settlement, the Saudi government is fundamentally dependent on United States government support and assistance. To a far greater extent than between the Americans and any other non-industrial State, the relationship is one of recognised mutual dependency, for Saudi Arabia supplies a quarter of the USA's oil and has over \$40,000,000,000 invested in the USA. Riyadh not only recognises this mutual dependency, but does all in its power to increase it. After all, it is only United States arms sales and political and economic support that can really contain the expansion of Soviet influence in the region, at least in Riyadh's view, and it was also felt that only American pressure could extract the concessions from Israel for a peace treaty which would be acceptable to all the directly involved Arab participants in the struggle.

Riyadh therefore welcomes the prospect that its ambitious military and civil development programme may require 100,000 Americans to be resident in Saudi Arabia by the early 1980s. It seeks to make itself indispensable to the West by keeping its oil production consistently at a far higher level of daily output than would be required by its own current financial needs, and by campaigning in OPEC, often with considerable success, to hold the price of crude oil down so as not

to damage the economies of its main customers, the industrialised States. In return for all these services, Saudi Arabia expects strong Western and especially American support, not only in its own efforts to create adequate defensive armed forces, but also in its broader objectives: the effective containment of Soviet influence in its region and the achievement of an Arab–Israeli peace which will be genuinely stabilising. Although it has suffered considerable disappointment in both these latter objectives in the past few years, it still seems bound to stick to this strategy as no obvious alternatives exist. This situation has undoubtedly created a dangerously large amount of psychological dependence on United States support in the Saudi *élite*, however, of just the type which paralysed the Iranian ruling group when United States support seemed to be weakening noticeably in the last months before the Shah's overthrow in early 1979. It was noteworthy that the Riyadh government requested and got a visit by a squadron of USAF F-15s in early 1979 as a token of continuing United States commitment to its security.

However well or ill the Saudi government manages its external security environment, it will be irrelevant if internal stability should become seriously disturbed, and yet it is inevitable that massive dislocations must be caused by the course of rapid economic transformation, paid for by vast amounts of money, that Saudi Arabia has chosen. For one thing, it has involved the importation of about 2,000,000 foreigners, amounting to about one-third of the population and ranging from Yemeni labourers to American financial consultants. Even if groups within this immigrant community do not grow to represent an internal security threat themselves, their presence in such numbers could well accelerate the erosion of the traditional values of Saudi society which provide the underpinning for the existing patriarchal political system.

Even before King Faisal was succeeded by the present ruler, King Khalid bin Abdul Aziz, in 1975, the basic decision had already been taken that the only possible response to the vast new wealth conferred by the oil price increase of 1973 was to adopt a policy of rapid economic development in every field. The risks of plunging an ill-prepared Saudi population into the bewildering complexities of a fully-fledged late-twentieth century industrialised welfare State, great though they were, were still seen to be less great than the probable consequences of denying them the fruits of the kingdom's wealth and leaving the country a weak and backward place exposed to every sort of economic exploitation and external threat. Accordingly, the 1975–80 development plan allotted \$142,000,000,000 to the creation of infrastructure, industry and welfare services and the education and training of young Saudi Arabians to manage their wealthy new society. At the same time, every precaution has been taken to ensure that the population's moral values, social customs and political attitudes, grounded in the fundamentalist Wahhabite interpretation of Sunni Islam, should not be subverted by this new society. There is no doubt that this is a goal which has been adopted by the government for its own sake, but it cannot escape notice that success or failure in achieving it also closely affects the future of the existing system of rule.

The largest single share of this immense development expenditure, between a quarter and a third of the total, has been budgeted for the security forces (and since the Defence Ministry usually manages to spend its annual budget, whereas most other ministries habitually underspend by as much as 50%, the actual defence share may be greater than that). In view of the government's known concern about the effects of rapid modernisation, it is not surprising that such a large proportion of this expenditure has gone on the comforts rather than the weapons of the armed forces: military pay and allowances are extremely high, and the amounts devoted to living quarters, recreational facilities and supporting infrastructure are staggering, e.g. Assad Military City near Al-Kharj, one of half a dozen 'military cities' being built around the country, will cost an estimated \$15,000,000,000. Nor is it surprising that expenditure on the National Guard, although much less in absolute terms, has risen just as sharply as that on the regular army.

The degree of alarm felt about the possible consequences of extremely rapid change for the stability of Saudi Arabian society and the security of the regime is, indeed, the principal policy issue which divides the political leadership of Saudi Arabia — that is to say, the Saudi royal family, which by now numbers some 7000 members. There are few advocates of no change whatever, and no advocates of total and deliberate Westernisation, but there is a clearly discernible dividing line between supporters of the present pace of change and those who believe a more measured rate would be safer for the society and the dynasty. This difference of opinion has tended, for not particularly logical but excellent political reasons, to congeal along the same lines as the rivalries between various branches of the royal family. The armed forces are intimately concerned in it, for while the supporters of the present commitment to ultra-rapid development control the regular armed forces, those traditionalists who are opposed to this approach are naturally more influential amongst the tribes, and their leading representative controls the National Guard. This is not to suggest that the two rival armies are in any sense in confrontation with each other (although each was indeed originally intended to be a check on the other), but it does mean that military policy is to an extent influenced both by the broader policy dispute and by the factional manoeuvres of the rival branches of the Saudi family.

The man who actually conducts the day-to-day government of Saudi Arabia is Crown Prince Fahd bin Abdul Aziz. King Khalid is far from a figurehead, but he is not a well man, having had two open-heart operations in the past 10 years, and is in any case more strongly attracted to the traditional desert life and the affairs of the tribes than to the economic, administrative and international political concerns which preoccupy the modern Saudi government. There is no dispute about the fact that Crown Prince Fahd will succeed him if he dies or retires; as usual in such Arabian royal families, the succession dispute centres upon who will become Crown Prince when the present holder of that office ascends the throne.

There are at least 2000 princes in the House of Saud, but the principal rivalry has traditionally been between two branches descended from different wives of the kingdom's founder, King Abdul Aziz bin Saud. Such rivalries are not merely intra-family, but also to a considerable extent inter-tribal rivalries, as King Abdul Aziz followed the usual custom of

World Armies

selecting his wives from the most powerful tribes in order to cement their loyalty to him. One branch, headed by the sons of a wife belonging to the powerful Jilwa family of the north-eastern Shammar tribe, includes the late King Faisal, King Khalid and the Second Deputy Prime Minister and Head of the National Guard, Prince Abdullah bin Abdul Aziz.

The other important branch, descended from Abdul Aziz's favourite wife, Hassa bint Sudairi of the influential Sudairi tribe, includes seven full brothers who monopolise control of the kingdom's regular armed forces. The most senior of the 'Sudairi Seven' is Crown Prince Fahd himself, who is also First Deputy Prime Minister (the King is Prime Minister). Others include: Prince Sultan, Minister of Defence and Aviation and Inspector-General of the Armed Forces; Prince Turki, Deputy Minister of Defence and Chief of Military Intelligence; Prince Nayif, Minister of the Interior (and thus in charge of the police, the Frontier Force and the Coast Guard); Prince Ahmad, Nayif's deputy; and Prince Salman, the governor of the capital, Riyadh. An effective ally of the Sudairis is Prince Saud al-Faisal, Foreign Minister and son of King Faisal who was assassinated in 1975, who is a leading advocate of the training and employment in government service of an *élite* group of (mostly non-royal) technocrats and administrators who will enable Saudi Arabia to make the transition from a tribal society to a modern State as smoothly as possible. His own ministry is the leading example of this policy.

By and large, the Jilwa branch of the family tends to be more closely identified with the conservative tribes and is considerably more anxious about the impact of the present rate of change in Saudi Arabia, while the Sudairi branch are supporters of rapid socio-economic development and modernisation. Prince Fahd has filled the Council of Ministers (cabinet) not only with his brothers but with other princes and technocrats loyal to himself, while the concern of the Jilwa branch at this excessive Sudairi domination was the main reason that King Khalid appointed Prince Abdullah Second Deputy Prime Minister in addition to his post as Commander of the National Guard.

While the royal family invariably closes ranks against the rest of the world, and is far too conscious of the need to maintain solidarity easily to split in even the most intense circumstances of internal rivalry, it cannot be ignored that a considerable part of military policy is determined by the desire of the Sudairis and the Jilwas to enhance the relative importance of the armed forces under their control and consolidate their authority over them. They are both deeply entrenched in their respective positions — Prince Sultan has been Minister of Defence, and Prince Abdullah Head of the National Guard, since 1962 — and each strongly resists any attempt to expand the influence of the other.

In view of his ill-health King Khalid is widely believed to wish to abdicate, but this has not been possible until the question of who shall be Crown Prince upon Fahd's succession to the throne has been decided. King Khalid and the Jilwa branch wish to counterbalance the Sudairi influence by selecting Prince Abdullah as the next Crown Prince, but the Sudairi predominance which succeeded in ensuring the selection of Prince Fahd as Crown Prince in 1975 has effectively thwarted this compromise. In a series of meetings of senior princes in August, 1977 it was proposed that the King eventually go into retirement, retaining the royal title but leaving all real power in the hands of Crown Prince Fahd; when Crown Prince Fahd finally succeeded to the throne, Prince Abdullah would then become Crown Prince in his place. As his price for agreeing to this arrangement, however, Crown Prince Fahd stipulated that Prince Abdullah could only become his eventual successor if he at once relinquished his control of the National Guard in favour of a Sudairi, Prince Salman, who would proceed to integrate it into the regular army. Since this would place all the armed forces of the kingdom under the exclusive control of the Sudairis, and required Prince Abdullah to relinquish his power base now in return for a future promise, it proved unacceptable, and the question of King Khalid's retirement or abdication had to be postponed.

Since that time the Sudairis have worked to reduce the effectiveness of the National Guard or even integrate it into the armed forces proper, while advancing the claim of Prince Sultan, or perhaps Prince Turki, to be the next Crown Prince. In July, 1977 Prince Fahd is reported to have presented a plan to restrict the purchase of heavy armaments to the regular armed forces, simultaneously curtailing the complement of the National Guard and limiting its weaponry to light equipment so as to convert it into something much closer to a police force than its present status as an autonomous paramilitary organisation. There is no evidence that this plan was accepted, however, and indeed the National Guard has expanded significantly over the past several years.

STRENGTH AND BUDGET

The total strength of all Saudi Arabian regular forces is 58,500, of which the Royal Saudi Army accounts for 45,000. The air force has 12,000 personnel, and the navy's strength is 1500 men. All three services are chronically below authorised strength due to recruiting problems. There are about 15,000 militia reserves.

The National Guard has a strength of about 35,000 men. The paramilitary Frontier Force and Coast Guard number an additional 6500 men. Thus uniformed personnel may account for as much as 7% of native Saudi manpower. This represents a very considerable proportion of the population for a country whose manpower shortages have compelled it to import a foreign labour force of over 2,000,000 — so that there are more foreigners than natives in the employed adult male population — and it is unlikely that even conscription could radically increase the present military manpower figures.

Saudi defence expenditure in 1978–9 was \$9,630,000,000, a slight decline from the previous year's figure of \$10,360,000,000, but still representing a sharp increase on 1976–7 defence expenditure of \$6,711,000,000. In all three years, spending on the regular forces took the great bulk of the budget (\$7,630,000,000 in 1978–9), with between 8 and

12% going to the National Guard, under 5% to the Frontier Force and Coast Guard, and the remainder to the Saudi intelligence services.

COMMAND AND CONSTITUTIONAL STATUS

Saudi Arabia is an absolute monarchy, with no parliament or political parties. The King is Commander-in-Chief of the Armed Forces. He appoints a Council of Ministers (cabinet), which he leads as Prime Minister; the Crown Prince is First Deputy Prime Minister. The Council of Ministers serves as the instrument of royal authority in both legislative and executive matters; about half the ministers are princes.

The Council of Ministers has been in existence since 1953, but its role is largely to formulate policy and recommend its execution, not to decide itself. Actual decision-making on matters of high policy is concentrated within the royal family. On day-to-day matters the King may consult only with Crown Prince Fahd (on government matters) or Prince Abdullah (on tribal matters). Other decisions might involve all forty or so members of the Council of Elder Princes. In all cases professional advice would be sought from ministers or advisers (Kamal Adham, for example, has advised both King Faisal and King Khalid on defence matters), but the ultimate decisions lie within these royal conclaves.

Defence policy is formally set by the High Defence Council (established in 1961), whose members are the King, the Ministers of Defence and Aviation, Finance and National Economy, Communications and Foreign Affairs, and the Chief of Staff. The Minister of Defence and Aviation, and Inspector-General of the Armed Forces since 1962, Prince Sultan bin Abdul Aziz, exercises supervision and control over the army, navy and air force as well as control of all civil aviation. There are two deputy ministers, one for military affairs and one for civil aviation; the former is Prince Turki, the brother of the minister, who also has charge of military intelligence.

Within the ministry, a Chief of Staff (invariably an army officer) is directly responsible to the minister for the supervision of the activities of the three forces. The present Chief of Staff is General Uthman al-Humayd. He also exercises direct command over the army, but the other services have their own commanders. The Commander of the Air Force is General Assad Zuhair. The Chief of Staff is assisted by four staff directors responsible for personnel (G-1), intelligence (G-2), operations and training (G-3) and logistics (G-4). Saudi military staff organisation exactly duplicates that of the United States armed forces. The country is divided into nine area commands, which serve as intermediate headquarters between the Ministry of Defence and Aviation and units in the field.

The National Guard is under the personal control of the King through a commander appointed by him: since 1962 the Commander of the National Guard has been Prince Abdullah bin Abdul Aziz. He also holds an appointment within the Ministry of Defence and Aviation as Controller of Militia Reserves; whether these would be added to the National Guard or the regular army upon mobilisation is not clear.

The Frontier Force, the Coast Guard and the internal security forces are controlled by the Ministry of the Interior.

Senior members of the royal family invariably hold the highest command positions in both the armed forces and the National Guard, and the armed forces as a corporate entity have little or no influence on the government or the regime. There are some 40 younger princes serving in various branches of the armed forces, who together with numerous members of families closely allied to the royal family serving in the officer corps, constitute an extremely effective informal network for intelligence-gathering and, if need be, control.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The armed forces have the mission of safeguarding the integrity of the national boundaries and seaward frontiers to protect the country from invasion. In times of internal disorder, they also have the responsibility for restoring the internal security of the kingdom. The National Guard has exclusive control of the oil-producing Eastern Province, and the general mission of supporting and assisting the forces responsible for maintaining internal security. It is also intended to assist the regular armed forces in repelling an invasion. However, its most important, if unstated, mission is to suppress military insurgencies. Special anti-insurgent units are maintained within both the National Guard and the regular army.

There are two possible sources of internal threat to the security of the regime: the armed forces themselves, and certain elements within the large immigrant community. The former are permeated at all levels with members and adherents of the royal family, and are lavishly rewarded. Moreover, a substantial part of the regular army as well as all of the National Guard is recruited from bedouin groups who owe tribal loyalty to the regime (though the continuing steep decline in the kingdom's genuinely tribal population, now down to half a million, is quickly eroding this reliable recruiting base). The two armies are sufficiently closely matched to preclude any easy military takeover of power, and too separate in command and composition to make co-ordination between them easy. The air force is recognised by the regime as the most likely source of a coup attempt because its personnel are so much more exposed to external influences — and it is indeed where all three known coup plots have originated — but it is relatively easily immobilised by the withdrawal of indispensable technical support provided by Britain and the USA.

The question of the immigrant community is a complex one. The more rapidly Saudi Arabia develops its economy, and

World Armies

thus both its defence capability and the means with which to improve the education, skills and well-being of its own population, the more rapidly will this alien population also rise. It already exceeds 2,000,000, on most estimates, and hardly one in three employees in industry is a native Saudi. But the immigrant community is in fact a variety of separate communities doing different sorts of things: over a million Yemenis employed mainly in manual labour, together with Sudanese, Koreans and others; around 250,000 Egyptians mostly working as teachers, civil servants and technical specialists; some 150,000 Indians and Pakistanis working as artisans, technicians and in the liberal professions; up to 100,000 resident Europeans and Americans in a variety of commercial, managerial and training functions; plus Palestinians, Philipinos, Syrians, Chinese from Taiwan, Lebanese and many others. For Saudi Arabia, the potentially dangerous groups are seen as the Yemenis — because of their sheer numbers, and because South Yemen is a Marxist State — and to a much lesser extent the Palestinians. Other immigrant groups are seen as being too small, or politically too uninvolved in Arab affairs, to represent a serious threat to stability. Two recent indications of Saudi concern were a decree forbidding resident Yemenis from engaging in retail trade — as numbers had been doing for up to 20 years — and a new preference for construction contracts of the type concluded by South Korea and Taiwan, in which the labour force is imported by the contractor when work begins, and is taken away again when it finishes.

Riyadh views the Arabian peninsula as a single political arena, however, and it is clear that the smaller Gulf States are more seriously threatened by this problem of immigrants than is Saudi Arabia itself. Fully one-third of Kuwait's residents are Palestinians, and as little as 20% of the population of some of the shajhdoms further east may still be native. Any political upheaval there could not help but affect Saudi interests. Thus the Saudi Interior Ministry maintains a very close liaison and co-ordinates security measures with the internal security forces of its Gulf neighbours, while the Foreign Ministry is keenly aware of the potentially disastrous effects of policies which were seen to betray Palestinian interests. In a regional conflict with any potential opponent except Israel, moreover, Saudi Arabia might have to reckon with the possibility of an internal 'Fifth Column', which would have to be dealt with primarily by the National Guard.

As regards direct military challenges as opposed to subversion, Saudi Arabia identifies four areas of potential conflict: the Red Sea—south-eastern Arabia region, where the Marxist, Soviet-aided and Cuban-aided regimes of Ethiopia and South Yemen are considered a potential strategic threat; the Persian Gulf, where Iranian intentions have always been viewed with suspicion; Iraq; and Israel.

The rapid growth of a Soviet and Cuban presence in Ethiopia and South Yemen in recent years has caused great concern in Riyadh. It was in response to this development that Saudi Arabia has come closest to making a defensive alliance, when it acted as sponsor and principal financial contributor to the Egyptian—Sudanese alliance of July, 1976. The possibility of a blockade of the southern entrance to the Red Sea, the Bab-el-Mandeb, has led to a concentration on increasing Saudi naval strength on this coast, and major land—air bases are being built in the previously neglected south-west of the country. Great attention is given to ensuring the continued friendship of North Yemen, by far the more populous of the two Yemens and the home of most of Saudi Arabia's Yemeni immigrants.

Until the mid-1978 coup which brought a more rigidly Marxist faction to power in Aden, Riyadh was also attempting to purchase the neutrality of South Yemen with offers of temptingly large amounts of aid. The rearmament of the North Yemeni armed forces with United States weapons is being paid for by Riyadh, and when border clashes broke out between the two Yemens in early 1979 Saudi Arabia placed its armed forces on alert and quickly obtained Washington's permission to use its United States-supplied weapons in defence of North Yemen if necessary. This is the area in which Saudi Arabia would be least reluctant to engage in military operations, both because of its extreme sensitivity and because, barring a massive influx of Soviet and Cuban military personnel, it could reasonably expect at least to hold its own against South Yemen's forces. Saudi aid also continues to flow to Eritrean guerrilla movements in order to prevent re-establishment of full control by Ethiopia over its Red Sea coastal regions.

The Gulf is another matter, both because any serious fighting there could damage the vital oil fields and because Saudi Arabia would be gravely overmatched. While in the latter days of the Shah's regime Riyadh had a decent working relationship with Iran on the question of maintaining Gulf security, there was always a considerable degree of Saudi unease and suspicion about the sheer size and eventual purposes of the Iranian armed forces. The Iranian revolution of early 1979 at least temporarily destroyed the effectiveness of those forces, but it could be quickly recreated by a regime in Tehran enjoying full authority. Moreover, it is not possible for Riyadh to foresee what the character and policies of such a regime might be, so the question of defence against Iran has certainly not disappeared from the Saudi strategic lexicon.

Apart from the potential internal security problem posed by the presence of large Iranian communities in some of the smaller Gulf shajhdoms, the principal direct military threat from Iran would be an air threat. In addition to making what arrangements it can to defend its oil fields with its own air force, Saudi Arabia has therefore actively pursued the creation of what amounts to an integrated air-defence network on the southern side of the Gulf. Thus, for example, it contributed \$50,000,000 to the cost of the Omani air-defence system in 1977, and encouraged tiny Qatar (population 200,000, of whom only 40,000 are Qataris) in its purchase of 30 Mirage F-1 fighters, which only make sense in the context of an integrated air defence of the southern Gulf. It was for the same purpose that Saudi Arabia began constructing its first military base abroad in 1978: an air base with a capacity for 25 aircraft on the site of the old British air strip south of the Awali—Zalaq road in Bahrain.

Beyond purely military measures, Saudi Arabia has since 1974 taken a consistently moderate stance in its own share of the numerous border disputes along the frontiers of the 10 emirates between Kuwait and Oman, and has assumed a

mediating role in others, in order to minimise the opportunities for the intrusion of Iranian influence into the many territorial quarrels that bedevil the emirates. Riyadh can do little, however, about the geographical position of Iran which allows it to dominate the exit from the Persian Gulf, and it is at least partly as a measure of strategic precaution against the blockade of the Strait of Hormuz that a pipeline is now being constructed from the oil fields of the Eastern Province across to the Red Sea coast of the country. In view of the vulnerability to blockade of the Red Sea as well, negotiations have also taken place with Oman for the construction of a pipeline that would take Saudi oil directly across the 'empty quarter' and the mountains to the coast of Dhofar on the Arabian Sea.

While the ostensibly militant radicalism of the Ba'athist regime in Baghdad since 1968, combined with the very impressive Soviet-equipped armed forces at Baghdad's disposal, might suggest that Iraq was a principal strategic pre-occupation of Saudi Arabia's, it has almost never been so. Virtually the only possible cause of conflict between the two has been the lengthy territorial dispute between Iraq and Kuwait, in which Riyadh has a commitment to preserve the independence, and perhaps also the territorial integrity, of the latter. In view of Iraq's enormous military problems elsewhere, however, the Kuwait dispute has never attained the level of a fully-fledged crisis since 1961, and would be most unlikely to do so in the foreseeable future. In any case, the triumph of revolutionary Shi'ite nationalism in Iran poses a mortal threat to the survival of the Ba'athist regime, based as it is on a small clique within the Sunni Arab minority around Baghdad, in a country where over two-thirds of the population are Kurds or Shi'ite Arabs. In early 1979, indeed, Iraq and Saudi Arabia came to a semi-clandestine arrangement for co-operation in security matters.

The fourth potential enemy of Saudi Arabia is Israel, although as always Riyadh may be depended upon to avoid a direct military role in any future Arab-Israeli war if possible. This is the merest common sense, since its compact ground and air forces would make very little difference to the balance between the huge military machines of Israel and the Arab 'confrontation States', while it would stand a very good chance of losing a high proportion of its scarce skilled-weapons operators. A few days' intensive combat in a war like that of 1973, for example, could cost Saudi Arabia half the trained fighter pilots whom it has managed to produce over the past 10 years. The disincentives to direct Saudi participation in such a war have grown far greater, moreover, since the Israeli air force has acquired aircraft with the range capabilities to make heavy strikes against the Eastern Province oil fields.

For Israel to take such an extreme step, of course, would imply that it was sufficiently desperate to ignore the wrath of its American ally which would thus lose its major source of imported oil for an indefinite period, so it may be argued that it is not a very likely eventuality, and therefore not such a serious disincentive to Saudi participation in war against Israel after all. On the other hand, the destruction of the Gulf oil fields would also deprive the Arab front-line States of the principal source of financial aid which would allow them to pay for a war and for the subsequent massive re-equipment programme that would be necessary, so there would not be any pressure from them on Saudi Arabia to take an active part in a war against Israel and thus put those vital assets at risk. The most that one would be likely to see by way of Saudi participation in a future Arab-Israeli war would be the dispatch of token Saudi ground forces to the reserve echelon, like the 4000 Saudi troops who were stationed on the Golan Heights and the 7000 who were based in Jordan from October, 1973 until the end of 1976.

The principal military threat to Saudi Arabia in the event of another Arab-Israeli war, therefore, would be that of Israeli air attack. Indeed, following the announcement in May, 1978 that the USA would sell Saudi Arabia 60 F-15 fighters for delivery beginning in late 1981, Israel warned that it might be necessary in another war to launch 'pre-emptive strikes' against Saudi military facilities. This was probably part of the Israeli campaign to abort the sale, however, as the F-15s being bought by Saudi Arabia are not at all the same aircraft as the F-15s that have been sold to Israel. They lack the multiple wing-racks for delivery of air-to-ground weapons, they have only three instead of five 'hard points' in order to limit the amount of payload, they have a simplified avionics system with reduced capabilities and they lack the 'fast pack' special fuel system which extends the aircraft's range. They are, in other words, F-15s in name only, and they have been chosen by Saudi Arabia to replace its ageing Lightning interceptors partly for prestige reasons, and partly because they require only one pilot and are actually simpler to fly and maintain than the very complex Lightnings. Only forty-five are fighters (the other fifteen are trainers), which is hardly an excessive number to provide interceptor capabilities over a million square miles of territory. Moreover, United States restrictions on the geographical deployment of the F-15s apparently do not permit them to be based at Tabuq in north-western Saudi Arabia, the only air base from which they could reach even Eilat within Israel (even despite the fact that there are currently Lightning interceptors at that base). In practice Saudi Arabia has not now, and will not have in the foreseeable future, a serious capability to attack Israel by air from its own bases.

Saudi Arabia's air force, therefore, is almost purely defensive. The F-15s, when they arrive, will be based at the same airfields (with the exception of Tabuq) that now operate Lightnings: Dhahran in the Eastern Province, Taif near Mecca and Khamis Mushayt near the North Yemen border. From these bases, in co-ordination with the country's extensive surface-to-air missile defences, they could offer a measure of protection to the Mecca-Medina-Jiddah region, the Riyadh area, and the oil fields around Dhahran. The country's principal strike aircraft, the relatively simple F-5s, are trained mainly for ground-attack missions in support of the army, and for the anti-shipping role (with Maverick missiles) in the Persian Gulf and the Red Sea. The small navy is wholly devoted to the task of holding open those nearby sea lanes of communication, and has no blue water capability.

The army is mainly based in four vast (and vastly expensive) 'military cities' which contain training, maintenance and logistical facilities, as well as housing and all the other facilities required by a large civilian dependent community. They are

World Armies

co-located with air bases in most cases, and are heavily defended by surface-to-air missiles. They are: Tabuq, in the north-west, where the army's existing armoured brigade and its French training mission are located; King Khalid Military City at Hafar al-Batin in the north-east, close to the Iraqi and Kuwaiti borders; Assad Military City at Al-Kharj, about 60 miles south-east of Riyadh, where the nascent national armaments industry is also situated, and Khamis Mushayt in the mountains of southern Asir, some 60 miles north of the North Yemen border. The National Guard, whose logistical system and training facilities are as separate as its command structure, is building two similar military cities at Al-Hasa, just north of Hofuf amongst the oil fields of the Eastern Province which are its prime military responsibility, and at Qassim, south of Buraidah in the centre of Nejd Province from which it draws most of its recruits.

There are up to 30,000 American, British and French military and civilian personnel in Saudi Arabia engaged in training, maintaining and supplying the Saudi armed forces, but no foreign military units are based in the country. In early 1979 the only Saudi units deployed beyond the country's borders were some air force personnel in Bahrain, and a battalion force of 1200 men who were sent to the Lebanon in mid-1976 as part of the Arab Deterrent Force seeking to keep the peace there. Saudi Arabia's only known military commitment to another Arab State was an agreement with Jordan in August, 1977 whereby Jordan could make use of air bases in northern Saudi Arabia (presumably Turayf, Gurayat and perhaps Tabuq) in the event of war with Israel, in order to give the Jordanian air force the strategic depth it lacks on its own territory, where all air bases are only a few minutes' flying time from Israel. It is not known whether the agreement would permit Jordanian aircraft to fly combat missions against Israel directly from these bases.

Apart from one battalion which took part in the Palestine war of 1948, sporadic clashes along the North Yemen border during the civil war in that country in the early 1960s, and skirmishes along the ill-defined South Yemen border in 1974-6, the Saudi armed forces have not been engaged in combat since well before World War II.

ORGANISATION

Arms of Service

The arms and services of the Royal Saudi Army correspond exactly to those of the United States army. The air force and navy branch structure is also identical to the American equivalents. The National Guard, however, has a less elaborately differentiated structure.

Operational

The Royal Saudi Army contains two armoured brigades (one fully equipped with French tanks and one forming, to be equipped with American tanks), four infantry brigades, two paratroop battalions, one Royal Guard battalion (recruited exclusively from tribal sources) and three artillery battalions. There are also six anti-aircraft artillery batteries and 10 surface-to-air missile batteries (the latter operate under air force control). Two of the infantry brigades are in the course of being mechanised.

The air force has three fighter-bomber squadrons with F-5Es, two COIN/training squadrons with BAC 167 Strikemasters, one interceptor squadron with Lightnings, three operational conversion units with F-5B/Fs and Lightnings (of which two also have an operational role), two transport squadrons and two helicopter squadrons. There are also training squadrons and a tanker flight. The major air bases are at Riyadh (HQ), Dhahran, Jiddah, Tabuq, Khamis Mushayt, Taif, Abhar, Medina and Yanbo.

The navy does not have a flotilla or squadron organisation. The principal naval bases are at Al Qatif/Jubail on the Persian Gulf and at Jiddah on the Red Sea. There are other navy bases at Ras Tanura, Dammam and Yanbo, coast guard bases at Ash Sharmah, Qisan and Haqi, and a logistics port under construction at Ras al-Mishab.

The National Guard is organised on tribal lines with tribal leaders in charge, and not all of it serves full time. It has a total of 20 battalions, of which four are in the process of being mechanised by the provision of V-150 Commando armoured cars and Vulcan anti-aircraft guns.

RECRUITMENT, TRAINING AND RESERVES

Service in the Saudi armed forces is voluntary, except in the National Guard where the system of customary tribal levies still persists to some extent. This further complicates the basic manpower problem of the armed forces — that of acquiring sufficient numbers of qualified recruits from a small population where modern education and ways of living are very recent developments. (In 1975, the literacy rate in Saudi Arabia was only 15%.) The lack of compulsion in recruitment means that the armed forces must compete for the small number of qualified potential recruits with a commercial sector where very large rewards may be had for lower qualifications and in conditions of considerably greater comfort.

The armed forces attempt to compete by offering excellent social and medical services, high quality accommodation, an educational system superior to that provided by the Ministry of Education, and relatively high pay. To catch up with

soaring wage rates in the private sector, military salaries were doubled for all ranks in March, 1977 even at a time when the government was trying to restrain pay rises in the public sector to combat inflation. Military pay rates are now higher than in any other part of the public services, but they still do not compare favourably with the money available in the private sector, and all the armed forces are chronically under strength. In February, 1978 the Deputy Minister of Defence and Aviation announced that a law for the introduction of conscription was being considered, but as it is not to be obligatory it is unlikely that it would greatly improve matters.

Recruitment for the regular armed forces is done on a nationwide basis, and units do not have any territorial links; the National Guard, on the other hand, recruits each of its units from a specific area. Enlistments are for 3 year terms. A career as a military officer is open to any Saudi citizen (including those who have been naturalised for a period of at least 5 years) who meets the physical and mental qualifications and is at least 18 years old. A large proportion of officer candidates are drawn from the basic military schools located in the larger cities, like the Military Preparatory School in Riyadh, which since the 1950s have offered a free education in elementary and intermediate subjects to young men who agree to enter the Royal Military College to become officers.

The Royal Military College in Riyadh is the principal source of junior officers for the army. It offers a 3 year course of instruction in academic and military subjects, and grants its graduates commissions as second-lieutenants. Newly appointed second-lieutenants serve on probation for 2 years before being confirmed in rank; if their performance has not been satisfactory they are then transferred to another unit for an additional 1 year probationary period, and if still unsatisfactory are released from the service. Graduates of technical schools may obtain direct commissions as second-lieutenants, and university graduates with science degrees are also granted additional seniority on entry, or even a higher rank, on a scale determined by comparing their years of study with the 3 years of study in the Royal Military College.

Air force pilots are trained at the King Faisal Air Academy at Riyadh airport. Candidates must have secondary school certificates; the 3 year course of military, academic and flying training produces second-lieutenants who are qualified to wings standard and are able to speak good English, in which language almost all subsequent training is conducted. The academy has also trained officers from Qatar, Sudan, Bahrain, North Yemen and Uganda; to relieve the pressure of numbers, some Saudi cadets are sent to the USA each year for flight training.

Naval officers are currently trained in the USA, but the construction of a new naval college has been budgeted for. National Guard officers are trained at the camp at Khasam al-An, about 15 miles from Riyadh, where a \$133,000,000 construction project to build a military academy for the National Guard will be completed in late 1980.

Basic training for army and National Guard enlisted men is provided by Saudi NCOs and officers, but almost all subsequent specialised training comes within one of the numerous contract training schemes provided by foreign armed forces or private companies, with foreign personnel as supervisors or even as instructors. In the case of the navy, the youngest service, most training even for enlisted ranks is still conducted in the USA, particularly at San Diego, California. In late 1975 the air force concluded an agreement whereby 100 Saudi recruits would be sent to Lackland Air Force Base in San Antonio, Texas every 3 months for a course including 4 weeks of basic training, 59 weeks of English, and 1 year of mathematics and science instruction, followed by specialist training at a technical school.

Training in the Saudi armed forces is patterned on that in the United States armed forces, and is controlled by the training section of the G-3 (Operations and Training) Office in the General Staff. This office administers the military school system, which in addition to the army and air force academies includes army branch schools for infantry, armour (at Tabuq), artillery (Khamis Mushayt), communications, physical training, ordnance, engineering, military police, military administration, nursing and military music, and also the air force's Technical Studies Institute at Dhahran, which offers basic and advanced training to air force warrant officers in 43 aeronautical, electronics and air-control specialities. The training section of G-3 also liaises with the national military missions which supervise the large foreign training programmes that provide most of the senior staff for all these schools. The United States Military Training Mission numbers about 250 officers and NCOs of all three services who are responsible for supervising both direct training assistance by United States military personnel and the larger number of civilian personnel working on the extremely large contracts for providing training, construction and logistical support services to the armed forces — a total of perhaps 30,000 Americans. A French training mission performs a similar function for the several hundred French military personnel training the Saudi army's armoured brigade, and a senior British air force officer supervises the fulfilment of British training contracts.

The principal army contract with a private company is with the Bendix Corporation, for the provision of army logistical and maintenance services and the training of Saudi personnel to run them. There is also a contract with the Raytheon Corporation for the maintenance of the army's Hawk and Improved Hawk SAMs and the training of their crews. The air force depends much more heavily on such arrangements: a 4 year, \$1,240,000,000 contract with the British Aircraft Corporation for servicing and maintaining the Saudi air force and operating the Air Academy and Technical Studies Institute, involving some 2000 British civilians and running until the end of 1980, is supplemented by a series of 'Peace Hawk' programmes run by the Northrop Corporation for the maintenance of F-5 fighters and the training of their air and ground crews, and contracts with Lockheed Georgia and Lockheed Aircraft Services to provide similar services for the air force's C-130 aircraft and for various major communications functions. There is also a Pakistan air force advisory mission. The navy is being built up almost from scratch under a package deal signed directly with the United States government in 1974, whose cost has grown to over \$2,000,000,000. The Coast Guard is being trained by the Avco Corporation.

World Armies

The most comprehensive foreign involvement in training is the \$77,000,000 contract with the Vinnell Corporation of California to provide all the training on handling and maintenance of modern weapons and military vehicles necessary to convert four National Guard battalions of about 1000 men each into regular-style formations — three mechanised infantry battalions and one light artillery battalion — and to assist in the modernisation of the entire Guard. About 75 United States army officers are also involved in this programme, but the Vinnell Corporation's civilian trainers (mostly ex-United States Special Forces), numbering not far from a thousand, bear most of the responsibility. The training is being done at Khasam al-An. Small British, Pakistani and Jordanian military training missions also work with the National Guard.

Discipline in the Saudi regular forces is strict but not harsh. In the National Guard it varies widely between units, amongst which regular pay is the only common denominator. (The Guard is partly an institution for making payments to the tribes and getting money to the villages.) Some Guard units will put in only an occasional weekend appearance, while others, like those being trained by Vinnell, are comparable to regular army units. The Commander of the National Guard, Prince Abdullah, can influence standards to a considerable extent, but much depends on the attitude towards training of the local tribal chief who leads each battalion.

Conditions of service in the regular forces are good, and pay is the highest of any armed forces in the Middle East. Cash living allowances, housing allowances and clothing allowances are provided to officers and warrant officers, and officers also receive a servant allowance. Additional allowances are granted to officers in certain positions of command or who perform hazardous duties, and NCOs and privates may qualify for special allowances classified into 16 pay categories according to skills. Officers are entitled to 45 days of regular leave and 60 days of field leave per year, NCOs and privates to 1 month of each. Retirement provisions for officers and NCOs are generous, and they are eligible for retirement after 15 years of service.

The only reserve organisation, apart from the National Guard, is a militia force of 15,000.

EQUIPMENT AND ARMS INDUSTRY

The Saudi army enjoys the dubious luxury of possessing two main-battle-tank systems: 400 AMX-30s acquired from France and 160 American M-60s (100 more on order). It also has 150 Scorpion light tanks (100 more on order), and some AMX-13 and 60 M-41 light tanks. There are 200 AML-60/-90 and some Staghound and Greyhound armoured cars, and some Ferret and 100 Fox scout cars.

The army has 400 AMX-10P MICVs, with a further 100 on order. There are unstated numbers of M-113 and Panhard M-3 APCs; it is believed that the eventual requirement of the mechanised brigades is 1100. The artillery arm, largely French-equipped, has 105 mm pack howitzers and 105 mm and 155 mm SP howitzers. There are also 60 mm, 81 mm and 4.2 in mortars and 75 mm recoilless rifles. Anti-tank guided weapons are TOW, SS-11 and Dragon. Anti-aircraft defence is provided by: M-163 Vulcan 20 mm SP, M-42 40 mm SP and AMX-30SA SP guns; Redeye and Shahine (Crotale SP) SAMs with the combat units; and 10 batteries of Hawk and six batteries of Improved Hawk surface-to-air missiles in fixed locations (total Hawk missiles: 580).

The National Guard is being provided with 150 V-150 Commando APCs and Vulcan AA guns.

The navy has three Jaguar-class fast patrol boats, one large patrol craft (ex-United States coast guard cutter), four mine counter-measures vessels, two utility landing craft and 85 launches. It has on order six Tacoma-class light frigates with Harpoon surface-to-surface missiles, four guided missile fast patrol boats, four gunboats and four landing craft. The Coast Guard has 50 small patrol boats and 10 SRN-6 hovercraft.

The Royal Saudi Air Force's main interceptor strength is one squadron with 16 Lightning F53 and two Lightning T55 aircraft, but the Lightning operational conversion unit, with exactly the same complement of aircraft, also has an operational role. There are three fighter-bomber squadrons with 60 F-5E Tiger IIs; one of the two operational conversion units, which together have 16 F-5Bs and 24 F-5Fs, also has an operational capability. The two training squadrons with 35 BAC-167 Strikemasters similarly have operational capability in the COIN role.

There are two transport squadrons with 35 C-130E/H Hercules, and two helicopter squadrons with 16 AB-206 and 24 AB-205 helicopters. Other aircraft include a flight of four KC-130 tankers; a royal flight with one Boeing 707-320, two Lockheed JetStars, one AB-206 and two Falcon 20s; and 22 Alouette II, six KV-107, one Bell 212 and two AS-61A helicopters. Training aircraft include 12 T-41As. A wide variety of air-to-air weapons are in use — Red Top, Firestreak, Sidewinder, R.530 and R.550 — and the F-5s have Maverick air-to-surface missiles (total order 650 missiles) mainly for anti-ship operations. Some of the 37 batteries of Thunderbird Mk 1 SAMs formerly deployed for airfield defence may still be operational.

Aircraft on order include 45 F-15 fighters and 15 TF-15 trainers, one Boeing 747, four KC-130s and seven Boeing Vertol KV-107 helicopters.

The mixture of American, French and British equipment in use by the Saudi armed forces must create some complex logistical problems, which can only be compounded by the fact that some entire weapons systems, like the air force's F-5s or the army's Hawk missiles, are separately maintained by different private corporations. It will also not escape notice that this scale of equipment, while not unimpressive, does not correspond to an average annual defence budget of around \$10,000,000,000. Spending on infrastructure, most of it going to the United States Army Corps of Engineers (which has

moved its European headquarters to Saudi Arabia because of the volume of business there), accounts for between 85% and 90% of Saudi defence spending in recent years. When the major contracts for the construction of the military cities, logistics ports and other major facilities are completed in the early 1980s, defence spending must drop drastically unless far more ambitious weapons purchases are undertaken. Since the present forces are already at the limit of their absorptive capacity for new weaponry, such a further programme of weapons buying would only be embarked upon if effective conscription were to be introduced to raise sharply the number of qualified recruits available to the armed forces.

The only arms industry in Saudi Arabia is the Al Kharj Arsenal, where United States small arms (M16s, M1s, and M60 0.30in and 0.50in calibre machine-guns) are produced under licence, together with light ammunition and rockets. The factory is government-owned, and staffed with United States and West German advisers. More ambitious arms-production plans all fall under the aegis of the Arab Organisation for Industrialisation (AOI), in which Saudi Arabia is a partner with Egypt, Qatar and the United Arab Emirates (*see* Egypt for details). There have been proposals to locate much of the electronics production of the AOI at Al Kharj.

RANK, DRESS AND DISTINCTIONS

The rank system of the Saudi armed forces corresponds to that of the United States armed forces; standard eastern Arab rank nomenclature is used in all services.

Military distinctions are classified as decorations (which carry a monetary reward payable to the recipient for the rest of his life), achievement medals and medals. Decorations include the King Abdul Aziz ibn Saud Decoration, the King Saud Star and the National Military Decoration. Achievement medals include the Efficiency Medal, the Medal of Merit and the Appreciation Medal. Medals include the Long Service and Good Example Medal, the Exceptional Promotion Medal, the War Wounded Medal and the Palestine Medal.

CURRENT DEVELOPMENTS

Saudi Arabia now possesses compact but very well equipped armed forces of a good professional standard. However, the question of technical proficiency in the use of such sophisticated equipment, and even more in its maintenance, is a problem which takes considerably longer to overcome. The good military aptitudes of Saudi recruits is beyond question, but for at least another generation there will remain a serious problem in the average level of education of the population, which is made far more severe by the intense competition for scarce trained manpower in the Saudi economy. The problem will be further intensified by the rapid decline of the tribal sector of Saudi society from which the forces have always drawn a relatively high proportion of their recruits, and yet the government is reluctant to introduce effective measures of conscription on both political and economic grounds: native Saudi manpower is equally short in the civilian economy, which is increasingly dominated by foreigners, and a wholesale shift of the base of recruitment towards towns and cities would tend to bring politically disturbing new elements into the armed forces.

In the circumstances, the armed forces are not likely to undergo further dramatic expansion. They are in any case adequate at their present size to offer a stout initial defence of Saudi territory against any likely regional threats. Against a more prolonged attack by a major regional power, or any challenge from an outside great power, the country must continue to rely on its friends and allies, as it lacks the manpower to create an entirely autonomous defence.

A further restriction on Saudi Arabia's military autonomy is its dependence on foreign, principally American, assistance for the maintenance and even the operation of its forces. This is most pronounced in the air force where, for example, it is estimated that the country will depend on American support to operate its F-15s well into the 1990s. Though few in numbers, Saudi pilots are entirely competent to operate the aircraft — many of them have now exceeded 1000 hours in Lightnings, and anyone who can fly a Lightning can certainly fly an F-15 — but despite the most intensive and expensive training programmes the ground support and logistical back-up are still largely dependent on foreign personnel. It may not be true that the Saudi armed forces would instantly cease to function if the USA disapproved of Saudi policy so strongly that it withdrew its personnel, but the air force would certainly lose most of its operational effectiveness after only a week of high-intensity operations, and even the army would be largely immobilised in a month or two.

It is highly unlikely, however, that the regime would ever get into a position so strongly opposed to that of the USA. Saudi Arabia's rulers are not 'pro-Western' in the conventional sense: they quite accurately regard the Western and Soviet blocs as two variants of an alien 'Western' culture, and see themselves as the guardians of Islamic culture and the Muslim community against the pernicious effects of that culture in either manifestation. Both on moral grounds and for practical considerations of political survival, they seek to restrict their dealings with the West to financial and military relationships and technology transfer; they do not want Western political and cultural influences to penetrate their own society, although they are fully aware of the difficulty of preventing this from happening. But both on the practical ground that Western allies are less hostile to the survival of the conservative traditional form of government in Arabia, and on the moral ground that communism in any of its guises is a far more serious threat to Islamic morality (it is, after all, explicitly atheist), the Saudi regime is inevitably allied with the West — which is also inevitably its main commercial partner.

World Armies

This does not mean, however, that the country is in any way an American satellite. Its economic importance gives it considerable freedom of action, and it makes its own judgements about regional affairs. These are sometimes strongly opposed to American policy, as was the case in 1978 when Riyadh viewed Washington's attempt to achieve what amounted to a separate Egyptian–Israeli peace treaty with the utmost misgivings. In the aftermath of the fall of the Shah in Iran, the Saudi regime in early 1979 was also extremely concerned about the willingness of America to come to the aid of its allies in the Middle East — an anxiety that was amply demonstrated in Riyadh's strong reaction to the outbreak of fighting between North and South Yemen in early 1979. Saudi Arabia's armed forces were put on alert and all leave cancelled, and clearance was hastily obtained from Washington to use the country's American-supplied weapons in defence of North Yemen.

The actual scale of external threats to Saudi Arabia's security in early 1979 did not seem very serious, however, nor was it likely that internal security problems of major importance would arise either from the immigrant population or from the dispute over the succession in the royal family. The instinctive solidarity of the royal family and its clear awareness of the grave dangers of an open split seemed certain to contain the succession dispute within reasonable bounds. Despite rapid modernisation the regime retains the respect of almost all Saudi Arabian citizens for its success as the defender of Islamic values, the bringer of prosperity and the author of the great enhancement in Saudi Arabia's position in the world.

As to the possibility of a military coup against the regime, which is probably the most serious of an assortment of potential threats to the regime none of which is very serious, it seemed no greater than before. There was allegedly a plot for a military coup uncovered in May or June, 1977 involving 13 pilots at Tabuq air base, in which air attacks on government buildings and royal palaces in Jeddah and Riyadh would have been followed by the proclamation of an Arabian republic. Two of the implicated pilots reportedly escaped with their aircraft to Baghdad and the remainder were arrested, and for a time all aircraft were forbidden to carry munitions and restricted to enough fuel for only 30 minutes' flying time.

By Libya's own admission this was a plot inspired by the Head of the Libyan Security and Military Intelligence Service, Captain Muhammed Idris al-Sharif. Libya further alleges that al-Sharif was subsequently 'turned' by the Saudis and at the direction of Prince Turki, Chief of Saudi Military Intelligence, organised at least three attempts to assassinate Libya's General Qaddafi before being arrested in early 1978. What proportion of this is true cannot be known; it is, in any case, not exceptional in the normal course of inter-Arab relations, and simply serves to emphasise that the air force's officers and warrant officers are the likeliest source of a military coup in Saudi Arabia. The chances of success for such a coup, however, are very small.

GWYNNE DYER

SENEGAL★

HISTORY AND INTRODUCTION

Senegal attained independence from France in 1960. For a few months Senegal formed part of the Federation of Mali, uniting the two former French colonies of Soudan and Senegal. This union, however, proved unworkable, but during its brief period of life the Mali Federation sent a battalion formed of companies from both States to the United Nations Congo Force, where it gained a great reputation. From 1960 to the present day, Senegal has been ruled by President L. Senghor. In general, Senghor's period of government has been tranquil; somewhat isolated attempts by rivals to overthrow him occurred in 1962 and 1967, and 1968–9 saw major student and labour demonstrations. These events excepted, Senegal has enjoyed remarkable stability.

STRENGTH AND BUDGET

Population: 4,500,000 (approximately)

Armed forces: 6400 of which 200 are air force and 200 navy, plus a gendarmerie of 1600

GNP (1977 estimate): \$1,600,000,000

COMMAND AND CONSTITUTIONAL STATUS

The President of the Republic, L. Senghor, is the Head of State; the Minister for the Armed Forces is A.C. Sall, and the Chief of Staff is General Idrissa Fall.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Senegal has a defence agreement with Gambia (which has no army) which provides for mutual assistance, a Joint Defence Committee and assistance in the training of Gambia's police.

Senegal has committed one battalion for service in the United Nations Force in Egypt.

Until the Polisario insurgency against Mauritania, to the north of Senegal, the Casamance area in the south was the territory's major military problem. Casamance adjoins both Guinea—Conakry, whose regime has always been hostile to Dakar, and Guinea—Bissau. Before the collapse of Portuguese rule insurgents operated against Portugal from the safety of the Casamance, sometimes attracting Portuguese hot pursuit across the border; since 1974 the problem has taken a new form. Former Portuguese African colonial soldiers, in flight from the new regime, have occupied areas of the Casamance and proved an embarrassment to the authorities. With the opening of the Polisario's attacks on Mauritania, with whom Senegal is on friendly terms, anxiety has centred upon the northern border.

For more general defence, reliance has been placed on French garrisons. Until 1974 France maintained a garrison of some 2250, of which over 1000 were soldiers, the remainder being naval and air force personnel. In 1974 the French base at Dakar was transferred to Senegal, though France retained the right to use it. The French garrison was also reduced to its present level — a battalion of marines at Bel Air Camp, near Dakar.

ORGANISATION

The Senegal army consists of four infantry battalions, an armoured car reconnaissance squadron, an engineer battalion, two parachute sub-units, two marine sub-units and an artillery sub-unit.

The country is divided into four military zones: West (Dakar), North (St. Louis), South (Bignona) and East (Tambacounda).

One battalion is at Dakar and one at St. Louis, and the third is in the south (present deployment not known). The marine, parachute, reconnaissance and artillery sub-units are normally posted to Dakar, with the engineer unit broken down into company or smaller detachments all over the territory.

* For general notes on African armies, see Appendix 1.

World Armies

RECRUITMENT, TRAINING AND RESERVES

A random system of national military service operates: the term of service for those selected was extended from 18 months to 2 years in 1974. No ethnic group appears to be in any position of advantage and little ethnic friction is evident.

France has provided the greatest measure of training and equipment assistance since 1960, a mission some 450 strong being at work in the early 1960s. This is now reduced to a level of some 20 officers and 20 NCOs. There has also been a limited amount of United States military assistance, a small United States army team serving in Senegal in the late 1960s.

EQUIPMENT AND ARMS INDUSTRY

The Senegal army is being re-equipped with modern equipment. Panhard AML 245 armoured cars have been issued to the reconnaissance squadron, and the infantry battalions are receiving modern French battalion weapons. The artillery at present consists of French 75 mm guns and 81 mm mortars. The air force comprises nine transports and four helicopters; its major base is at Ouakam, near Dakar.

One report also notes the purchase by Senegal of Berliet VXB wheeled APCs. The number purchased is reported to be twelve.

RANK, DRESS AND DISTINCTIONS

These follow the traditional French colonial pattern.

CURRENT DEVELOPMENTS

The reduction of the French garrison and the presence of a second revolutionary government on Senegal's borders have led Senegal to take a more serious view of defence than seemed necessary in the 1960s.

L. L. MATTHEWS

SEYCHELLES

The Seychelles, a group of 87 islands in the north-western part of the Indian Ocean with a total area of 171 square miles and a population of about 60,000, were first colonised by the French in the middle of the eighteenth century. They subsequently passed under British rule in 1794, though the predominant language remains French. They attained independence as a republic in the British Commonwealth in June, 1976.

The government at independence was led by President James R. Mancham, the leader of the majority Seychelles Democratic Party, but it was a coalition incorporating also the principal left-wing party, the Seychelles People's United Party. The leader of the latter party, Albert René, was Vice-President. Government economic policy concentrated heavily on the development of the tourist industry, in which a large share of new investment came from Saudi Arabian private sources, and foreign policy was distinctly pro-Western. No attempt was made to create armed forces, internal security being left entirely in the hands of the civil police.

While President Mancham was abroad in June, 1977 however, a group of Vice-President René's supporters who are believed to have received training in Tanzania, carried out a sudden coup. Two policemen guarding the police arsenal were killed, control was thereby gained over the few rifles then available in the country, and the coup was complete. Albert René declared himself President, the constitution was suspended and parliament dissolved. Rules is now by presidential decree.

Since its inception President René's regime has shown extreme nervousness about the possibility of a counter-coup, and has formed an army of about 400 men recruited from supporters of his party. In addition, about 150 Tanzanian troops have been brought in as 'advisers', their expenses being paid by the Seychelles government. In early 1979 the Seychelles navy took delivery of its first major vessel, an ex-French minesweeper of 400 tons which will be used as a patrol boat to control the newly declared 200 mile economic zone. A Britten-Norman Islander patrol aircraft has been acquired for the same purpose.

The government takes a politically polarised view of African politics, and in May, 1978 accused members of the Kenyan government of complicity in an alleged plot to mount an invasion of some 200 mercenaries by sea from Mombasa while President René was away on a visit to Peking. At the same time it was announced that large arms caches had been discovered on the main island, Mahé, which were intended for use in the alleged counter-coup attempt, and 21 people were arrested in the capital. The Seychelles army's duties, in addition to the control of internal dissent, are now considered to include defence against an invasion by such a mercenary force as was supposed to have been gathered in Kenya.

Tanzanian support for René's coup in the Seychelles stems partly from ideological sympathy, but also owes much to Dar-es-Salaam's concern that there should be no superpower bases in the Indian Ocean. Although Mancham's government had never suggested that the good harbour at Victoria, the capital, might be made available for such a purpose, his general political stance and in particular his refusal to consider the islands part of Africa, had given rise to suspicions on this account in Tanzania and the Malagasy Republic.

President René has taken a lead in trying to end the growing naval competition in the Indian Ocean, calling a conference of Indian Ocean island States in Victoria in late April, 1978 to bring pressure on the USA to give up its naval/air base on Diego Garcia island and on the Soviet Union to withdraw its fleet from the region. The conference was attended by representatives of the governments of the Seychelles, Malagasy Republic, the Comoro Islands (since overthrown) and of the left-wing opposition parties in Mauritius and Réunion. It is doubtful if this attempt to create an Indian Ocean neutralist bloc under the patronage of the Malagasy Republic and Tanzania will enjoy significant success, but as long as President René's army and Tanzanian advisers are able to preserve his own power there are unlikely to be any foreign bases in the Seychelles.

GWYNNE DYER

SIERRA LEONE*

HISTORY AND INTRODUCTION

Sierra Leone attained independence from Britain in 1961 and until 1967 maintained political stability. In 1967 the governing party was defeated at the polls, but before the victorious former opposition party could assume power, the Army Commander, Brigadier Lansana, intervened. He was, however, overthrown by a group of officers headed by Brigadier Juxon-Smith; these formed a National Reformation Council. This Council survived only briefly to be in turn overthrown by a 'sergeants' coup, in 1968 which imprisoned almost all the officers and facilitated the return of the 1967 election winner, Siaka Stevens, as Prime Minister.

A further crisis arose in 1971: members of the army attempted to assassinate Siaka Stevens; the attempt was mishandled (the major in command admitted subsequently to being inebriated); but the Army Commander, Brigadier Bangura, resentful at growing Guinean influence, attempted to take over. This reaction was repudiated by the battalion commander, and he and other officers were arrested — Bangura and three others being subsequently executed. Siaka Stevens requested protection from Guinea, who supplied troops, and a republic with Stevens as Executive President was proclaimed. The Guinean troops then departed home shortly afterwards.

Sierra Leone units participated in the World War I German East African Campaign and in the World War II Italian East Africa and Burma Campaigns.

STRENGTH AND BUDGET

Population: 2,750,000

Armed forces: 2200 (this total includes naval and air force personnel and a small internal security unit)

GNP (1977 estimate): \$700,000,000

COMMAND AND CONSTITUTIONAL STATUS

The President of the Republic, S. Stevens, is Head of State. Although there is a civilian cabinet there is no Minister of Defence. The Army Commander is Major-General J.S. Momoh.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Since 1968 the Sierra Leone army has been in the process of reorganisation. No political role for it has been defined, nor are there any border disputes with neighbours.

ORGANISATION

The army is based on a battalion group with mortar support and a signals squadron. An air unit of 25 men and a seaward defence unit of 100 men form part of the army.

RECRUITMENT, TRAINING AND RESERVES

Service is voluntary. A pattern existed in the early 1960s, but has now disappeared, by which the small numbers of officers were drawn mainly from the coastal creole community and soldiers recruited from the large hinterland ethnic groups. It is, however, reported that very recently a preference for recruiting ordinary soldiers from the most remote of the inland areas has developed. In 1961 only eight of the army's 37 officers were local, and the government at the time saw no necessity for any rapid localisation. Some of the NCOs involved in the 1968 coup — 'the Anti-Corruption Revolutionary Movement'

* For general notes on African armies, see Appendix 1.

— were commissioned by the Stevens government, and other junior officers released and reinstated. Some Israeli training assistance was accepted in the 1960s.

The result, then, is a mixture of background and training. At present some personnel, including potential officers, are sent to Egypt and to Ghana for training, and a few also to Britain. Chinese and Cuban training teams, representing personal preferences of two leading political figures, have been reported training in different camps near Freetown.

EQUIPMENT AND ARMS INDUSTRY

Sierra Leone has no armaments industry.

The military unit is equipped with a squadron of Swiss Mowag armoured cars, and 81 mm and 60 mm mortars of British and French origin. Four light aircraft and four helicopters, and two motor-gunboats, form the air- and seaward-defence sub-units, respectively.

RANK, DRESS AND DISTINCTIONS

These follow the British pattern.

CURRENT DEVELOPMENTS

The Sierra Leone army is a chastened force; its military value is limited to local internal security.

L. L. MATHEWS

SINGAPORE

HISTORY AND INTRODUCTION

Singapore, the great trading city of the Straits of Malacca founded by the British in 1819, owed its rise in almost equal measure to the military and financial investment in the island made by them during the next 100 years and to the simultaneous immigration of a large and industrious Chinese population. Chosen between World Wars I and II to be the main British naval base in the Far East, it nevertheless fell quickly to the Japanese in 1942 but, at the end of the war, it became again the centre of British power in south-east Asia. When Britain, having defeated a communist insurrection in neighbouring Malaya, decided to withdraw from the country, she therefore excluded the island from the independence arrangements made with the Malaysians. But her reasons were not exclusively strategic. To have included the largely Chinese-settled Singapore in a unitary Malayan State would have been to outnumber the Malays in their own homeland, since the mainland also contained a large Chinese population. Consequently Singapore, when it became fully independent in 1963, did so as a separate entity. Its new Prime Minister, Lee Kuan Yew, impatient with the constrictions this arrangement imposed, was a prime mover in a different solution, which came into force the following year: by it the Malayan Federation became the Malaysian Federation, to include not only Malaya and Singapore, but the largely Malay States in British Borneo, Sarawak and Sabah. But, though this new federation got the racial arithmetic right, it did not cure Malay suspicion of Chinese ambitions and, after only a year of association, Singapore was asked to leave the Federation in August, 1965.

Among the many other problems separation threw up, defence was crucial. As a member of the Federation, Singapore had been protected not only by local old-Commonwealth forces, but also by the Federation's large, experienced but chiefly Malay, armed forces. The protection of the latter had gone and the indefinite presence of old-Commonwealth forces was not guaranteed. Singapore had therefore to begin to plan her own defence. There was virtually no military tradition among the population. The Singapore Volunteer Rifle Corps, the oldest voluntary force in the empire, had become by 1939 the Straits Settlements Volunteer Force, but it was a part-time body, based partly on the mainland and recruited from Europeans and Indians; the Chinese settlers preserved their traditional distaste for militarism. The Force was destroyed in the defence of the island in 1942 and not properly reformed until 1948. But it remained a small, local and chiefly voluntary body. During Federation a Federation Regiment had been formed, in an attempt to recruit Chinese, but it remained Malay dominated. On separation, Singaporean Chinese members of the Federal armed forces returned to Singapore and it was upon these, and the Volunteers (renamed in 1954 the Singapore Military Forces) that the new State's armed forces were built. National service was made obligatory in 1967, much thought given to the form of armed forces the conscripts should man, Israeli advisers invited to train them, and heavy investment made in the purchase of foreign equipment. Firmly democratic though the Republic is, its government is effectively one-party and socialist, and it was not surprising therefore that the government's original idea was to produce forces as popular as possible in character — a militia rather than a regular army. Its thinking cannot have been uninfluenced, moreover, by the Chinese military renaissance and the egalitarian spirit of the Chinese Peoples' Army which had brought it about. The status of officers was therefore minimised and many hopes stored in the development of a part-time citizen volunteer force (the People's Defence Force) to provide the numbers the defence of the island required, without putting the State in thrall to its own guardians. Little has been said explicitly, but the impression is that thinking has changed, perhaps as a result of Israeli advice. A 'people's army' requires space and time if its operations are to be successful, and Singapore has neither. The Singapore Armed Forces have therefore evolved on more conventional lines.

STRENGTH AND BUDGET

Population (1970 census): 2,074,000 (1,580,000 Chinese, 311,000 Malays, 146,000 Indians and 38,000 others)
Army: 25,000 (45,000 reserves)
Navy: 3000; 23 small craft
Air force: 3000; 92 combat aircraft
Police and paramilitary forces: 37,500
GNP (1975): \$US 6,500,000,000
Defence expenditure (1975-6): \$US 340,000,000

COMMAND AND CONSTITUTIONAL STATUS

Singapore is a parliamentary republic with cabinet government. The President, elected by parliament for a 4 year term, is titular Commander-in-Chief. Executive authority is vested in the Minister of Defence, a civilian member of parliament, who is answerable to it. Defence debates are held regularly. The Ministry of Defence oversees the unified armed forces and is divided into general staff, manpower, logistics and intelligence divisions. Until 1970 it was combined with the Ministry of the Interior, which is now responsible for the Vigilante Corps as well as the police.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role of the Singapore Armed Forces is defence of the frontiers, maintenance of internal security and youth training. Two other roles have been hinted at: the concrete one of seizing and holding Singapore's water supplies on the Malaysian mainland in the event of a hostile regime coming to power in that country, and the intangible one of assuring actual and potential investors and traders, both native and foreign, on whom Singapore as a mercantile City-State depends for a living, that its resources cannot be seized by *coup de main*. As the Prime Minister told students at Nanyang University in 1969, 'Without adequate security forces of our own to make a significant contribution to joint security arrangements, investment may slow down. If people believe that we are weak and defenceless, even our own wealthy citizens will move part of their capital abroad.'

At the time he spoke, Singapore was the beneficiary of a bilateral defence agreement between Malaysia and Britain which put Singapore under the protection of British armed forces and stationed units from each of them inside her territory. This agreement was subsequently replaced by the Five-Nation Defence Agreement of 1971 (Britain-Australia-New Zealand-Malaysia-Singapore) which extended weaker guarantees and reduced the size of the Old-Commonwealth force deployed on Singaporean territory. Originally the ANZUK brigade, of one Australian, one New Zealand and one British battalion, even that has now been reduced to a shadow. In the aftermath of the disengagement from Vietnam, Australia withdrew her battalion, while Britain withdrew hers in March, 1976 in pursuance of the 'withdrawal from East of Suez' policy, determined for economic reasons. New Zealand maintains her infantry battalion and an air-transport squadron, and Australia two fighter squadrons, which are integrated in the Air-Defence System for Malaysia and Singapore set up by the 1971 agreement. The crucial clause of that agreement reads 'In the event of any form of armed attack externally organised or supported or the threat of such attack against Malaysia or Singapore, (the five) governments would immediately consult together for the purpose of deciding what measures would be taken jointly or separately in relation to such attack or threat'. Singapore thus still enjoys the benefits of an external defence commitment rather than participating actively in one, but some observers doubt the value of the five-power agreement as an effective guarantee, reading the clause to mean that the old-Commonwealth governments would require a joint appeal from Singapore and Malaysia before feeling free to act in their defence. Because of the nature of Singaporean-Malaysian relations, Malaysia might not join in the appeal if the external threat were directed against Singapore alone.

Singapore's armed forces are deployed exclusively within her own territory, the 55 islands of Singapore. The two senior Singaporean battalions, then forming part of the Malaysian Federal Armed Forces, served in Borneo during the confrontation with Indonesia, but independent Singapore's armed forces have not taken part in any operations.

ORGANISATION

Since 1968, the Singapore Armed Forces have been a unified service, divided into Territorial, Maritime and Air-Defence Commands, which correspond to the army, navy and air force. The latter are small, though Air-Defence Command has 97 combat aircraft, including 42 Hunter and 40 A-4 fighter-ground attack aircraft.

Territorial Command oversees the regular forces, the reserves and the People's Defence Force, a volunteer part-time organisation. The regular forces consist of the Singapore Armoured Corps, Singapore Artillery, Singapore Engineers, Singapore Signals and the Singapore Infantry Regiment, of seven battalions (it is not clear whether the two armoured infantry battalions count as part of the Armoured Corps or the Infantry Regiment, in which case the latter consists of nine battalions). Operationally it is organised into the Armoured Brigade (of one tank and two APC battalions), the 1st Singapore Infantry Brigade (which commands the People's Defence Force) and the 2nd and 3rd Singapore Infantry Brigades (which command the regular units: seven (or 9?) infantry battalions, three artillery battalions, three engineer battalions and one signal battalion). The People's Defence Force consists of six infantry battalions, one engineer battalion and one artillery battery. Two air-defence missile squadrons belong to the Air-Defence Command.

RECRUITMENT, TRAINING AND RESERVES

The army, which has been deliberately modelled upon the Israeli, and trained by Israeli officers, is designed to consist of an

World Armies

active element, led by a small regular cadre and manned by national servicemen, and a much larger reserve element. It appears that originally the People's Defence Force was intended to take charge of the reserves, but the two are now apparently distinct.

National service, which as in Israel is designed to create a sense of common nationhood among disparate groups — here Chinese, Malays and Indians — was fully introduced in 1967 and is a universal obligation on all fit males aged eighteen. The term of service is comparatively long, from 24 to 36 months. National servicemen are trained in the School of Basic Military Training. Officers and NCOs are trained at the Singapore Armed Forces Training Institute, Jurong, which also contains a School of Advance Training for Officers, in effect a staff college. Regular officers are also trained abroad, at the Australian and British military academies and staff colleges. The People's Defence Force has its own training centre.

Army reservists now number 45,000 and there are 18 reserve battalions. National service can also be performed in the police and the Vigilante Corps, set up at the beginning of the confrontation with Indonesia, which is now a civil defence organisation. Their ex-national servicemen become their reservists.

EQUIPMENT AND ARMS INDUSTRY

There is a small arms ammunition factory at Jurong. Other military equipment is imported, from Britain, America, Israel, France and Sweden. The basic small arm is the American M-16 Armalite rifle, and its machine-gun derivatives.

The artillery is equipped with the American 155 mm howitzer (20 in service), the American M-40 recoilless rifle (90 in service) and the Israeli 120 mm mortar. The armoured corps has French AMX-13 light tanks (75 in service, bought from Israel), American M-113 APCs (250 in service) and V-200 Commando armoured cars, made by Cadillac Gage (250 in service).

The air-defence squadrons are equipped with the British Bloodhound and Rapier missiles.

RANK, DRESS AND DISTINCTIONS

There is a common uniform (dark green) for all branches of the armed forces, which use army ranks. These follow the British system and are indicated for officers by a combination of stars and the Singaporean lion crest.

CURRENT DEVELOPMENTS

For its size, the army element of the Singapore Armed Forces is one of the best forces in south-east Asia, well armed and well trained. Defence spending per capita (\$US170 in 1975-6) is among the highest in Asia, and has contributed significantly both to the external imbalance of payments and internal inflation, which are besetting problems of the State. It is the government's judgement, however, that Singapore is a commercially credible entity only if it demonstrates its ability to defend itself, even though the exact nature of the military threat it might face is not spelled out. Against anything but a major attack by a foreign power, the Singapore army appears to offer a convincing defence.

JOHN KEEGAN

SOLOMON ISLANDS

The Solomon Islands, which received their independence from Britain in July, 1978, are two parallel chains of mountainous islands (with some outlying coral atolls) extending south-east of Papua–New Guinea, with a population of about 200,000 people. The six major islands of Choiseul, New Georgia, Santa Isabel, Guadalcanal, Malaita and San Cristobal contain over three-quarters of the population, and one island alone, Malaita, has almost a third. The country's total area is about the same as Belgium's, but spread across an area of sea larger than western Europe.

The population of the main islands, some 90% of the whole, is Melanesian; that of the coral atolls is Polynesian. There are small Micronesian, Chinese and European minorities. English is the official language and Pidgin English the *lingua franca*, but some 40 different languages and dialects are in use. Until the middle nineteenth century there was chronic inter-island warfare, accompanied by headhunting, and in the latter part of the century the islands were extensively raided by 'blackbirders' seeking labour for the Queensland and Fiji sugar plantations.

The Solomon Islands came under British rule between 1893 and 1900 and the population was almost wholly converted to Christianity. Very little development took place until World War II, however, when the area was the scene of intensive fighting between United States and Japanese forces in 1942–3. The former capital, Tulagi, was destroyed, and both the international airport and the new capital and principal port, Honiara, on the island of Guadalcanal, owe their existence to the construction work of the United States forces.

Modest economic development began after the war, concentrated on fish, timber, copra and minerals. The islands are lightly populated with the exception of Malaita, and although most inhabitants live outside a cash economy there is little real deprivation. For almost 15 years after the war the island of Malaita was effectively beyond British administrative control, dominated by an anti-British movement known as 'Marching Rule' (a corruption of *Ma'asina* — brotherhood), a cargo cult which believed that if the British were expelled American ships bearing cigarettes, chocolate and much else would reappear over the horizon. Following the suppression of Marching Rule local councils were created, initiating a process which culminated in the establishment of internal self-government by a Council of Ministers answerable to an elected Legislative Assembly in January, 1976. The remaining British responsibility for foreign affairs, defence and internal security was transferred to Prime Minister Peter Kenilorea's government on independence in July, 1978.

The principal security force under British rule was the Solomon Islands Police Force, and for the moment at least this force of some 350 men continues to function as the sole instrument for defence and internal security. It operates in a gendarmerie role, and would be the only paramilitary force available to deal with attempted insurrection or secession.

The SIPF was always recruited from indigenous Solomon Islanders so far as was possible, but the scarcity of qualified men resulted in most of its officers being British, and many of its enlisted ranks being recruited from the Fiji Islands. These foreigners are now being replaced by Solomon Islanders as rapidly as possible. Training for all ranks is provided at the Police Training School in Honiara, but numbers of officer candidates have also been sent abroad to training establishments in Britain, Papua–New Guinea and Fiji. All officers are promoted from the ranks. Working uniforms are khaki shirt and shorts, blue beret and black sandals; ceremonial dress is a white tunic, blue *sulu* (short sarong) and black sandals. A red sash and superimposed black belt are worn with both uniforms.

The country is divided into four zones for political administration, to which the SIPF districts correspond: Western District (Choiseul Island and the Shortland and New Georgia groups, headquarters Gizo Island); Eastern District (Santa Cruz and San Cristobal, headquarters Kirakira on the latter island); Malaita District (Malaita, Sikaiana and Ontong Java Atoll, headquarters Auki on Malaita); and Central District (Santa Isabel, Guadalcanal, Bellona, Rennell, and the Russell and Florida groups, headquarters Honiara).

The main security problem confronting the country is actual and potential secessionist movements. The strongest such movement is in the Western District, whose 45,000 inhabitants feel themselves both different (they are considerably darker than other Solomon Islanders), and culturally and ethnically superior. They also feel victimised, in that the Western District is by far the most commercially developed region of the country and contributes the greater part of government revenue, but receives a much smaller proportion of government expenditure. Both this secessionist movement and other less-widely supported ones draw added vigour from resentment at the domination of the central government by Malaitans. It may be doubted whether the SIPF at its present strength could contain a serious attempt by the Western District to break away, and there has been some talk of expanding it.

GWYNNE DYER

SOMALIA*

HISTORY AND INTRODUCTION

The Somali Democratic Republic attained independence in 1960. Having been divided by Britain and Italy in the colonial period, the two former colonies were merged to form one territory. After a restless period of civilian political government, the army staged a coup in 1969, and the military-dominated Supreme Revolutionary Council has ruled Somalia since that date.

Somalia's national problems are unique in sub-Saharan Africa. Unlike the vast majority of black African States, Somalia is a nation — a country of one homogeneous ethnic group with its own traditions, culture and language. But sections of the Somali nation lie outside the frontiers drawn by Britain, France, Italy and Ethiopia: the Somalis claim that north-east Kenya, Djibouti and the Haud and Ogaden areas of Ethiopia are also part of the Somali nation. Such divisions as exist in the country itself, and which have been, and in some respects still are, serious, are caused in part also by the differing colonial legacies (a north versus south friction), and, more seriously and in rather larger part, by the complicated clan system of the Somali people — there are six major clans, and until 1969 much political restlessness was caused by clan rivalries. Since the coup, and the heavily Marxist-Leninist pro-Soviet (until 1977) stance of the regime of General Muhammad Siyad Barre, there have also been a few signs of a new friction, that between the Socialist Revolutionaries and more traditional Muslims.

STRENGTH AND BUDGET

Population: 3,500,000 (approximately)

Armed forces (as at July, 1977): 32,000 of which the army is approximately 30,000, the air force 1500 and the navy 500. In addition there is a People's Militia of 2500, a Border Guards Force of 500 and 7000 barrack police

GNP (1972 estimate): \$4,000,000,000

Defence expenditure: \$25,000,000

COMMAND AND CONSTITUTIONAL STATUS

The 19member Supreme Revolutionary Council (S.R.C.), of which General Muhammad Siyad Barre is the President, rules the country; it is assisted by a 'Council of Secretaries' — some 20 quasi-ministerial portfolio holders, mainly civilians. Since 1974 there has also been a Security Committee of the S.R.C., composed of a brigadier and two colonels as members, and one of the S.R.C.'s vice-presidents, Major-General Muhammad Ali Samater, as Chairman. He is also Minister for Defence. General Omar Haji Masala is the Army Commander. Masala is of the same clan as Siyad Barre, Samater comes from a group hitherto underprivileged.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

A major reason for the very large Somali military establishment is the wish to recover the lost, foreign-held, Somali areas. Prior to the Ethiopian Revolution little activity took place against this powerful neighbour, but groups of insurgents (the 'shifto') operated against Kenya in 1964-5. The apparent collapse of power and authority in Addis Ababa, together with Ethiopia's Eritrean and Sudanese border problems led the Somalis to enter Ethiopia in 1977. The operations were entrusted to a 'West Somalia Liberation Front', which by its equipment and training appears to have been largely selected units and personnel of the Somali army under an alias. Another 'Abo Liberation Front' operated in south Ethiopia, and was also a largely Somali army force. The W.S.L.F., clearly meeting with mass popular approval in the Ogaden, took the town of Jijiga and advanced to the gates of Harar. Here it was held in check, Cuban reinforcements and Soviet-led Ethiopian units were brought to the area and in February-March, 1978 the Somalis were ejected, suffering severe losses in both manpower and equipment. The out-of-date Soviet equipment, poorly maintained and used in the hands of poorly trained Somali soldiers or insurgents proved no match for the Cubans and the Soviet-trained Ethiopians with more up-to-date and better-serviced armour and artillery. The Somalis appear to have suffered particularly severely at the hands of the Ethiopian air force, although it must remain in doubt as to how many of this air force's pilots were actually Ethiopian. The shattered Somali forces have withdrawn into Somalia where, at the time of writing, the Ethiopians are leaving them alone.

* For general notes on African armies, see Appendix 1.

ORGANISATION

What form or shape the post-conflict Somali army will assume is unclear. In its pre-conflict shape, the army's establishment provided for seven tank battalions, eight mechanised infantry battalions, a further number variously estimated as between five and 14 lorried infantry battalions, some 15 other infantry battalions, two commando units and 13 field and 10 anti-aircraft artillery battalions.

Even before the Ogaden campaign, these establishments were much larger than the actual force which the army put into the field, much of the equipment being old, unusable or simply non-existent.

There is, however, some reason to think that the Somali government has always entertained some reservations about the Ogaden enterprise; it may have been subjected to a very strong clan/ethnic pressure group. Certainly the photographs available of the Somali equipment used in the Ogaden did not show very much of the more modern Soviet equipment in their possession. Sufficient of this may remain for protection, if not for a more forward military policy.

RECRUITMENT, TRAINING AND RESERVES

Members of the very large Darod clan were preponderant in the military hierarchy in 1969, but the rapid expansion of the Somali army appears to have reduced this. Recruitment is voluntary and so far as is known, no one clan appears to predominate.

At independence Somalia possessed a very small, poorly trained and equipped army. The officers of this army had been trained in Britain, Egypt and Italy; a group of these, from the north, staged an abortive coup in 1961. After the military coup, however, the army was expanded and modernised with the help of Russian and Cuban military and political instructors. A very large number of Somali military personnel were sent to the USSR for training. It was never possible with certainty to distinguish, in terms of numbers, between those Soviet military, air and naval personnel posted to specific Soviet military bases in Somalia and those whose primary duties were the training of Somalis. A formal Somali-USSR treaty, signed in 1974, regularised the arrangements: these it seems provided for a small number of specific Soviet installations in several regions of the country — notably in the Berbera and Mogadishu areas (including the Uanle Uen air field and radar surveillance at Afgoi), the Hargeisa and Galcaio air fields and Birikao harbour. There were also reports of Soviet presence in various off-shore islands. The Somali government denied the existence of the bases.

After the commencement of fighting between the West Somali Liberation Front and the Ethiopians, the Soviets withdrew all their military personnel from Somalia. It appears that a very limited quantity of military equipment for Somalia may have been supplied by Saudi Arabia; this is reported to include small numbers of French AMX-30 tanks. Iranian signals equipment and some West German battalion weaponry have also been reported.

The People's Militia or Gulwadayasha ('Pioneers of Victory') is in a sense an internal security reserve; political loyalty and militancy are its bases and its duties include surveillance of, and reporting upon, political dissidents. To ensure security still further, a National Security Service also exists; Soviet KGB officers were reported to be attached to this organisation at one time. The force was mobilised early in 1977, but does not appear to have been committed. It includes women's units.

EQUIPMENT AND ARMS INDUSTRY

Reports on the quantities of Soviet military equipment delivered to Somalia are as varied as the reports on the serviceability of much of this equipment. It would appear that there may be some 250 tanks (of which 100 are said to be T-54 models, and the remainder T-34s), some 300 APCs (of which over 200 are BTR 152s and the balance BTR 40s), some 100 122 mm guns and another 100 assorted 100 mm- and 76 mm-calibre pieces, and a further 100–150 anti-aircraft guns of various calibres, e.g. 100 mm, 57 mm, 23 mm and 14.5 mm. One report notes the arrival of Soviet SAM-2 Guideline anti-aircraft missiles. The air force includes a squadron of Ilyushin 28 bombers, two squadrons of assorted MiG-15, -17 and -19 aircraft, and a large squadron of MiG-21 interceptor air-to-ground strike aircraft, together with a transport squadron and a helicopter squadron.

Somalia has no indigenous arms industry.

RANK, DRESS AND DISTINCTIONS

Normal uniform is of a light-grey colour; its style follows the Italian pattern.

CURRENT DEVELOPMENTS

Somalia is a country of very limited economic resources, and of a low overall education level. Both these factors will

World Armies

impede recovery. Above all recovery will need a generous patron; despite the Ogaden disaster it is not impossible that the Soviet Union may once again reassume this role. The Soviet Union would certainly like to do so, and there are not likely to be other candidates. The role might even extend to support for some Somali face-saving move against Kenya.

Somalia tends to be a prisoner of its own powerful rhetoric and irredentist passions; these have led the country to overconfidence in its own abilities. Whether the Ogaden events have led to cooler, more realistic appraisals is unclear: such appraisals should certainly not be presumed.

L.L. MATHEWS

SOUTH AFRICA

HISTORY AND INTRODUCTION

The roots of the contemporary South African military system can be traced back through both the British and Afrikaner (Dutch) traditions to the earliest days of European colonisation at the Cape of Good Hope. Although the Dutch East India Company provided a small number of troops to garrison the Cape, their function was seen as that of defence against external threat, and in particular, against possible attack by other European powers. However by 1657, 5 years after the initial settlement by Van Riebeck, it became necessary to raise a force for protection against attack from internal indigenous enemies. Thus began a specific South African contribution to military history.

In 1657 a militia was formed from the free, adult, male Burghers of the Cape for protection against marauding Hottentots and Bushmen. Service in the militia was compulsory and by 1762 included periods of annual training for both foot and mounted units, though organisation did not extend to equipment, for Burghers paraded in their best clothes and provided their own weapons.

Inevitably, organisation and structure were somewhat *ad hoc* in the early years, but one important transitory feature was the practice of Burghers electing their own officers. In the following decades as Burgher settlement moved tentatively inland, a new unit of defence was created — the Commando, a highly mobile mounted force, ultimately to be used against a variety of diverse opponents including Hottentots, Bantu-speaking peoples, and not least, the British. Like the Burgher militia from which it evolved, the Commando system was based on the principle of compulsory service, though in addition often included the non-white servants of the Commandos. (A continuing theme in South African history has been the ever-changing attitude on the part of the Afrikaner to the use of non-white troops, especially in a combatant role.)

Throughout the following two centuries or more, until Union in 1910, South African military history is characterised by a complex mosaic of interaction and warfare between the various peoples of the region. On the one hand this is exemplified by the almost constant battles between black and white in the various frontier and 'Kaffir' wars, essentially being conflicts of territorial expansion and defence, whilst on the other, less frequent but often more bloody struggles within racial groups, culminating with the 2nd Boer War of 1899–1902. During this period the military traditions of the Boer or Afrikaners and the British became even more distinct, the Boers refining their fast raiding commando tactics in the decades after the Great Trek (1834) in both the Orange Free State and the South African (Transvaal) Republic, whilst in the main the Cape and Natal retained the British system (and British troops) of voluntarism, the Drill Book and strict march discipline. In the final analysis, neither tradition has proved individually sufficient and the legacies of both remain within the present South African Defence Force.

The formation of the Union of South Africa in 1910 inevitably foreshadowed the creation of specifically South African armed forces to replace the Imperial garrison of 30,000, although at the request of the new Prime Minister, General Botha, the latter were not finally withdrawn until the onset of World War I in 1914. After discussion with the British government, a Union Defence Force was established by the Defence Act of 1912. From the outset the permanent force was fairly small (2500 mounted police in five regiments and five batteries of artillery), but to be supplemented by a much larger reserve of some 25,000 formed into an active citizen force of embryonic regiments and men formed into rifle associations. This latter group satisfied the desires of those who hankered after the old Commando system, abolished by the British in 1902, as did the stipulation that military service was intended to be compulsory. (Provision at this time was also made for coastal defence, a small branch of the RNVR and a Flying Corps.)

In the period since Union the South African Defence Force (SADF) has been used operationally on a variety of occasions, at times amidst great controversy, particularly in terms of participation in World Wars I and II. In both instances strongly Republican elements within the Afrikaner community opposed entry in support of Britain, in 1914 resulting in a brief mutiny of senior generals. Non-white troops were used in both wars, combatant in World War I, non-combatant in World War II. Elsewhere the armed forces were used to quell a strike on the Witwatersrand in 1922 whilst much later air force squadrons were involved in both the Berlin Airlift and the Korean War.

Since 1948 South African political life has been dominated by the National Party who have won every general election in that period. Committed in their early years to Republicanism (achieved in 1961) and to an ideology of *apartheid* or racial separation, these policies have been of signal importance in the development of the SADF and defence policy.

STRENGTH AND BUDGET

Strength

In 1960, the year of the Sharpeville crisis, the South African government finally recognised that the force of African

World Armies

nationalism, exerted either externally or internally by conventional or guerrilla means, might prove a significant military threat to the security of the Union. At the same time, they claimed that the strategic situation of South Africa makes it a central lynchpin of Western defence and a counter to Soviet military expansionism in the Indian Ocean and littoral States. Consequently the last decade and a half has seen an enormous rise in the strength of, and budget for, the SADF.

Total Population: 26,129,000 with population proportions as follows (1977): Whites 16.5%; Coloureds (mixed race) 9.3%; Asians 2.9%; and Africans 71.3%

Army

White: 18,000 Permanent Force plus approximately 60,000 National Servicemen on 2 year engagements (see below)
White Reserve: 130,000 Citizen Force; 110,000 Commandos (see below); plus rifle clubs, women's pistol clubs and a Cadet Force in over 600 schools. (In 1977 the Minister of Defence announced that the number of cadets would be doubled from the existing 150,000)
Non-White (see below): Cape Corps (Coloured); South African Cape Corps Service Battalion (approximately 600); South African Indian Corps (approximately 150 to be expanded to 266); South African Indian Corps Training Battalion; Black African troops (one battalion)

It is estimated that on mobilisation South Africa could put well over 250,000 whites under arms in a matter of days.

Police

White: 17,812

Coloured: 1721

Asian: 796

African: 14,704

Active Reserves: 14,089

Of these, commissioned officers are as follows: white 2145, all non-white 42.

Many police are trained in paramilitary techniques and some have been used specifically in that role, particularly in Rhodesia and the Caprivi Strip. In recent years non-white police have been armed.

South African Navy

Permanent Force: 3000

National Service: 1500

Citizen Force, reserve: 10,500

Air Force

Permanent Force: 5000

National Service: 3000

Citizen Force, reserve: 3000 plus 12 commando private aircraft squadrons

Budget

For selected years, post war, the budget was as follows:

Year	Amount (millions of rand)	As a % of GNP	As a % of budget
1948-9	23.0		
1952-3	47.0		
1959-60	29.0		
1960-61	44.8		
1961-2	71.5		
1963-4	149.7		
1964-5	216.5		
1969-70	271.5	2.3	16.0
1972-3	335.3	2.1	11.8
1973-4	472	2.6	13.5

Budget — continued

Year	Amount (millions of rand)	As a % of GNP	As a % of budget
1974-5	692	3.2	16
1975-6	1043.5	4.1	15
1976-7	1407.6	4.9	17
1977-8	1711.7	5.1	19
1978-9	1544		

During the 1970s South Africa experienced high levels of inflation. Thus in terms of buying power the real growth of defence expenditure between 1975-6 and 1976-7 was only 3.8%. The defence budget for the years 1975-6, 1976-7 and 1977-8 broke down in the following manner (quantities quoted are in millions of rand):

	1975-6	1976-7	1977-8
Command and Control	100.3	125.0	175.0
Landward Defence	461.9	645.0	907.1
Air Defence	63.0	71.8	125.7
Maritime Defence	85.9	162.2	232.1
General Training	64.4	71.8	68.2
Logistic Support	238.1	297.0	388.3
Personnel Support	27.2	31.1	39.4
General SADF Support	2.7	3.7	4.6
Total Defence Requirements:			
operating costs	568.5	709.5	984.6
capital costs	475.0	698.1	955.8
<i>Totals</i>	1043.5	1407.6	1940.4
(Cash actually voted)	(1043.5)	(1407.6)	(1711.7)

Police expenditure in 1977-8 was budgeted at R204,000,000.

In 1976 the government introduced a Defence Bond saving scheme and in its first year of operation this raised R183,000,000. A second 'bonus bond' (prize-giving) scheme was started in October, 1977.

COMMAND AND CONSTITUTIONAL STATUS

Although the first three prime ministers of the Union of South Africa (Botha, Smuts, Hertzog, 1910-48) were former Boer generals, civil-military relations in South Africa rest on the presumption of military subordination to the civil power. Nor is the military a distinct power group in South African society. Constitutionally the Commander-in-Chief is the President of the Republic, though in practice the executive functions are the responsibility of the Prime Minister and the Minister of Defence (both offices at present held by Mr P. W. Botha who has held the Defence portfolio since 1966). The Chief of the South African Defence Force is Head of the Defence Staff Council, which consists of himself, the Chief of Staff, the three service chiefs and the Chief of Staff Logistics.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

It has become commonplace to point out that in the last fifteen or more years, South African foreign policy and defence policy have been moulded in the face of almost universal condemnation of the policy of *apartheid*, whilst at the same time South Africa has tried to convince the somewhat sceptical Western powers of her crucial strategic importance in any conflict with the Soviet Union.

World Armies

In the years immediately after World War II the picture seemed less depressing for South African policy-makers. The Union had contributed significantly to the Allied war effort, she was an important member of the Commonwealth, General Smuts had been instrumental in helping to create the United Nations, the Afro-Asian countries (later to be hostile to the very existence of the South African State) were not yet independent, and most crucially, in terms of South Africa's perception of the world, her leaders were violently anti-communist. Consequently, South Africa had high hopes of playing a valued role in Western security arrangements. However, these aspirations were soon dashed. South Africa welcomed the creation of NATO (and also SEATO and ANZUS), but was disappointed that its treaty provisions did not cover the south Atlantic. The Union took part in defence conferences concerning the Middle East (MEDO Conference, June, 1951) and in attempts to create some form of African defence community (Nairobi, 1951 and Dakar, 1954). All were abortive; the only positive arrangement which was negotiated was the 'Exchange of Letters on Defence Matters', of July, 1955, the so-called Simonstown Agreement which was later subject to enormous controversy. The Simonstown Agreement was not even an alliance, containing little by way of specific reciprocal commitments, and concerned solely with the use of the Simonstown Base facilities and the limited sale by Britain to South Africa of naval equipment. The agreement was ended by a further exchange of letters in 1975.

During the 1960s, South Africa's isolated position was further exacerbated by the growth of Afro-Asian power at the United Nations which resulted in December, 1963 in the Security Council calling on all member States to ban arms sales to the Republic. Although never fully implemented by all countries, France being the most notable defaulter, the resolution did create enormous difficulties of supply, resulting in part in South Africa's decision to be as self-sufficient as possible in arms production.

Despite the diplomatic stagnation of the early 1960s South Africa's military build-up in that period enabled the Republic to contend that her defence role should be acknowledged as that of guardian of the south Atlantic against the 'menace' of communism. Whilst unable to form a South Atlantic Treaty Organisation (SATO), as she had hoped, the Republic's military and economic preponderance in the southern African region appeared to result in some success for the policy of accommodation towards African States to the north. (This policy, strands of which can be traced even to the era of Malan and Strydom in the early 1950s, has in recent years been called, synonymously, Dialogue, the Outward-Looking Movement and *Détente*.)

The role of the South African Defence Force must be seen in the context of the need to defend the Republic's internal policies against subversion, guerrilla warfare, or conventional warfare, and also in terms of the strategic considerations of Soviet penetration of the Indian Ocean. Whilst the military response to the two threats is essentially distinct, the South African army being concerned very little with the latter, the political implications are obviously interrelated, since the delicate question of *apartheid* inside South Africa, leading as it does to the conventional and guerrilla threat, prevents the West utilising South Africa's geopolitical and strategic advantages to deter the perceived Soviet threat.

The landward defence of the Republic for a number of years relied primarily on the existence of huge buffer States to the north (either white ruled, or, if black controlled, economically dependent on South Africa). Since the Portuguese coup of April, 1974 leading eventually to independence for Angola and Moçambique, this has no longer been the case. Nor do experts feel that white Rhodesia can hold out against black Nationalist opponents much beyond 1979. Consequently the South African army faces a potential threat of attack from the armies of independent African States. At present, this seems rather a remote possibility, but far more likely is the continued infiltration of guerrilla forces. These might be either externally trained members of the African National Congress and the South-West African People's Organisation (SWAPO), or troops of victorious nationalist struggles elsewhere (FRELIMO, MPLA, ZANU-ZAPU). These too might take a variety of forms. Certainly it seems likely that there will be continued unrest in the black townships and that in all probability military and paramilitary forces will be used to quell any such disturbances. It is also likely that there will be sporadic bombings in both urban and rural areas (a few have already occurred) though it seems less probable at this stage that the South African government will have to face a well-organised internally based guerrilla movement.

In the post-war years, the SADF has been mobilised and operational on a number of occasions. In March, 1960 the Permanent Force and the whole of the various reserve forces were placed on stand-by after the Sharpeville disturbances. During that year troops were used widely to seal off black African townships and it is reported that troops were standing by during the recent Soweto riots. It was announced in June, 1974 that the SADF had taken over from the South African Police the defence of the northern borders of South West Africa (Namibia), where SWAPO guerrillas have long been operating. The South African announcement is confirmation of military involvement in the Caprivi Strip which had been reported as early as 1968. The issue is sensitive since the deployment of military forces is contrary to the League of Nations' Mandate, under which South Africa ostensibly rules South West Africa. It was officially announced that in the 2 years from April, 1975 until April, 1977 the following casualties had occurred: 231 alleged SWAPO fighters killed, 53 of the local population killed by guerrillas and 33 security force casualties. The United Nation's Commissioner for Namibia alleged that up to 45,000 South African troops were stationed in Namibia. This was made up of a combat force of 12,800 (one motorised infantry brigade plus special counter-insurgency forces) plus a 5000 man back-up force which included a paratroop battalion, logistical support of over 25,000 men together with two squadrons of Impala II and Mirage aircraft. It was announced in August, 1975 that the last of South Africa's paramilitary police, who had served with the Rhodesian Security Forces since August, 1977, had been withdrawn. It was acknowledged that henceforth the role of the South African forces would be to protect the Republic's borders against infiltration over the Zambeze River.

Despite the South African government's continued insistence on the sovereign integrity of other States, South African combat troops participated in the Angola Civil War on the side of UNITA–FNLA, and opposed to the Marxist- and Moscow-orientated MPLA. Initially, the South African government claimed that troops had only penetrated a few miles into Angola to secure the valuable Cunene Hydroelectric Scheme in which South Africa has an interest, but later it was acknowledged by Mr Vorster that South African forces had been at least 250 miles north of that position. By February, 1976 South Africa had retreated to a line 50 miles inside Angola in a position to defend the dam, and by late March, 1976 all troops had been withdrawn to Namibia. The South African government stated that never more than 2000 troops had been involved (other estimates put the figure at 4000–5000) and that 33 South African soldiers had been killed. The Minister of Defence (Mr Botha) stated that 190 non-White South African troops had also been involved in the action. Another incursion into Angola took place in May, 1978 when South African forces attacked a SWAPO guerrilla base 150 miles north of the Namibian border.

South Africa's reversal in Angola was a political rather than military defeat and stemmed in part from the withdrawal of American support which the Republic firmly believed had been promised. Another consequence was the failure of the *détente* policy which no black African State could any longer countenance. The diplomatic and military isolation of South Africa was further exacerbated by the imposition of a mandatory arms embargo by the United Nations on South Africa in November, 1977.

In July, 1977 the Deputy Commissioner of Police confirmed that a large police taskforce had been stationed along South Africa's borders with Botswana, Rhodesia, Moçambique and Swaziland to prevent the infiltration of men who had left the country for military training. In August, 1977 the Security Police claimed to have destroyed 'terrorist' bases near Durban and Johannesburg.

ORGANISATION

Although consisting of the conventional services of army, navy and air force, the SADF is organised, particularly at its apex, on the basis of tri-service integration. It is intended that this centralisation of administration should continue and be extended.

In recent years the organisation of landward defence has been restructured to meet the main task of countering all forms of insurgency, whilst at the same time maintaining a credible conventional force. Since these two objectives are essentially distinct, the army, and its reserve, has been sub-divided into (a) a counter-insurgency and counter-terrorism force and (b) a conventional force. Given the nature of counter-insurgency, in particular the likely length of operation and the need for specialised local knowledge, the counter-insurgency force has been decentralised to nine territorial commands, each responsible to the Chief of the Army. This force consists of members of the Permanent Force (PF), Commandos and a few specially selected Citizen Force units.

Otherwise, the South African army is divided into 10 functional corps. These are: South African Artillery (Field Branch), Anti-Aircraft Artillery, Infantry, Armoured, Engineer, Signal, Technical Service, Administrative Service, Medical Services and Military Police. Within this basic structure the army consists of a Permanent Force (with national servicemen under training), a Citizen Force (with national servicemen under training) and the Commandos. The PF (figures given earlier under Strength and Budget) provides the officers, NCOs and administrative personnel to train the national servicemen, as well as staffing headquarters and providing the basic infrastructure of the largely reserve army. For command and administrative purposes, South Africa and South West Africa are divided into 11 military regions under commanders whose responsibility includes training the conscript, Citizen Force and Commando units. Table 1 details the Order of Battle of the South African Army in 1975 (recent increases in the size of the SADF render this somewhat out of date).

National Service

Until the early 1960s, the Defence Force consisted of volunteers backed up by a part-time civilian reserve. In 1962 national service was introduced based on a ballot system, and in 1967 this was replaced by compulsory military service for all fit, white, adult males. (The Cape-Coloured population is now partially incorporated in this system though Africans are not.) The period of national service has been progressively increased and from January, 1978 the 12 month requirement was extended to 24 months. In addition conscripts had to serve for up to 30 days per year for 8 years in either the Citizen Force or the Commandos (see earlier). During 1976, 63,104 men were called up by the Defence Force of whom 32,730 were granted exemption (usually to pursue educational courses). Although statistics are not available it seems clear that a steady flow of South Africans are leaving the country to avoid military service. The PF, with its national service complement, usually consists of eight infantry battalions, together with artillery regiments, engineer regiments, etc.

World Armies

Table 1 *Order of battle of the army*

7th Division (Johannesburg)

- 71st Motorised Brigade (Cape Town):
 - Cape Town Highlanders (Cape Town)
 - Cape Town Rifles (Cape Town)
 - Western Provinces Regiment (Stellenbosch)
- 72nd Motorised Brigade (Johannesburg):
 - Johannesburg Regiment (Johannesburg)
 - 1st Battalion Transvaal Scottish (Johannesburg)
 - 2nd Battalion Transvaal Scottish (Johannesburg)
- 73rd Motorised Brigade (Vereening):
 - Rand Light Infantry (Johannesburg)
 - Regiment Louw Werpner (Ladybrand)
 - Kimberley Regiment (Kimberley)
- Divisional Troops:
 - Light Horse Regiment (AC) (Johannesburg)
 - Cape Town Field Artillery (Cape Town)
 - 14th Field Artillery (Potchefstroom)
 - 7th LAA Regiment (—)

8th Division

- 81st Armoured Brigade (Pretoria):
 - Pretoria Highlanders (Pretoria)
 - Pretoria Regiment (Pretoria)
 - Regiment Boland (Pretoria)
- 82nd Mechanised Brigade (Potchefstroom):
 - Regiment de la Rey (Germiston)
 - Regiment de Wet (Kroonstat)
 - Witwatersrand Regiment (Germiston)
- 84th Motorised Brigade (Durban):
 - 1st Battalion Royal Durban Light Infantry (Durban)
 - 2nd Battalion Royal Durban Light Infantry (Durban)
 - Prince Alfred's Guard (Port Elizabeth)
- Divisional Troops:
 - Umvoiti Mounted Rifles (Armoured Corps) (Greytown)
 - Transvaal Staats Artillery (Greytown)
 - Transvaal Horse Artillery (Greytown)

- Western Province Command (Cape Town):
 - Cape Garrison Artillery (Cape Town)
 - 101st Signals Squadron (Cape Town)
 - Cape Corps Service Battalion (Eerste River)
 - 6th BOD (Cape Town)
 - Command Workshops (Cape Town)
 - 2nd Military Hospital (Wynberg)
 - 3rd Field Ambulance (Wynberg)
 - 11th STD (Wynberg)
 - Cape Flats Commando (Wynberg)
 - Worcester Commando (Wynberg)
 - Stellenbosch Commando (Wynberg)
 - 10th AA Regiment (Youngsfield)
 - 4th Electronic Workshops (Youngsfield)

- Eastern Province Command (Port Elizabeth):
 - 6th South African Infantry (Grahamstown)
 - 84th Technical Service Corps (Grahamstown)
 - 11th Commando (Kimberley)
 - East Cape Province Commando (Kimberley)
 - Port Elizabeth Commando (Kimberley)
 - Danie Theron Combat School (Kimberley)

- Natal Command (Durban):
 - 5th South African Infantry (Ladysmith)
 - 15th Maintenance Unit (Durban)
 - Tugela Commando (Durban)
 - Umvoiti Commando (Durban)

- Orange Free State Command (Bloemfontein)
 - 2nd Field Engineering Regiment (Bethlehem)
 - 17th Field Squadron (Bethlehem)
 - 35th Engineering Supplementary Unit (Kroonstat)
 - Tank Squadron 1st Special Service Brigade (Bloemfontein)
 - 1st South African Infantry (Bloemfontein)
 - 1st Parachute Battalion (Bloemfontein)
 - 3rd Military Hospital (Bloemfontein)
 - Parachute Commando (Kroonstat)
 - School of Engineering (Kroonstat)

- West Transvaal Command (—):
 - 2nd Signals Regiment (Voortrekkehoogte)
 - 5th B.O.D. (Pretoria)
 - 61st Brigade Workshop (Lyttleton)
 - 81st Brigade Workshop (Lyttleton)
 - Pretoria Oos Commando (—)
 - Horse and Dog Centre (Voortrekkehoogte)
 - South African Military College (Voortrekkehoogte)
 - Technical Service Centre (Voortrekkehoogte)
 - Services School (Voortrekkehoogte)
 - SAMS Training Centre (Voortrekkehoogte)
 - School of Technical Training (Pretoria)

- Northern Transvaal Command (—):
 - Command Workshop (—)
 - Frankfort Commando (—)

- North Western Command (Potchefstroom)
 - 3rd South African Infantry (—)
 - Command Workshop (—)

- Witwatersrand Command (Johannesburg)
 - Johannesburg Noord Commando (Johannesburg)

- South West Africa (Windhoek)

Citizen Force

Citizen Force units are fed by national servicemen but in recent years have been under strength. In the main the Citizen Force is organised in a conventional manner with infantry, artillery, etc. Some do belong to the Force for Counter-Insurgency and Terrorism (see earlier). Since the South African army has few permanent operational units except those under training as national servicemen, the Citizen Force is the mainstay of the conventional forces. The Citizen Force is organised as a corps, comprising two divisions, each with a number of brigades. The corps headquarters is in Pretoria, and divisional and brigade headquarters (where they exist) are staffed by Permanent Force personnel, and are found in the main population areas. It is in the Citizen Force that regimental traditions are most strongly preserved.

Commandos

Whilst at one time commando service was based on traditions derived from the Afrikaner past, the basic training is now identical to that of the Citizen Force. Commando units might be likened to a well-trained home guard, and are 'rural' or 'urban' with the 'urban' formed into a quasi-regimental system, whilst the 'rural' are spread throughout the small towns and villages that characterise much of South Africa. In addition, there are now a few 'Industrial Commandos', created to protect industrial complexes against subversion. Commando membership is to be extended to women, though in a non-combatant role. In 1978 the government announced that it wished commando units to extend membership to black recruits.

Non-White Forces

In recent years, non-white troops have been trained by the SADF as both combatants and non-combatants. The Cape Corps, abolished after World War II, was revived in 1961 and is now a Permanent Force unit providing men for both the army and navy, though they do not operate within white units, except as auxiliaries. It increased in size in the 1970s, and amongst its 700 odd members there are now seven commissioned officers. In addition, there is a smaller Cape Corps Special Service Battalion which was formed in 1973 to provide recruits for the main unit. Since 1976 the Cape Corps and the Service Battalion (the latter now apparently operating more as a voluntary Citizen Force unit) have served in the operational area in Namibia. In 1978 the Service Battalion reached full battalion size and the first Coloured captain was appointed. During 1978 the government announced that compulsory national service for Coloureds and Indians was envisaged although members of the majority (Coloured) Labour Party have said that coloureds owe no allegiance to the country and could not be expected to fight in its defence.

A South African Indian Corps and Indian Corps Training Battalion was formed in 1974. Until 1978 it numbered approximately 150 men but this is to be increased to 266. Although training is primarily in naval matters the Corps is a tri-service unit. Officer courses are to be introduced.

After some debate in political circles it was decided in June, 1974 to advertise for black-African soldiers. The first 48 passed out in December, 1974 and some are now NCOs. The 21 (Black) Battalion, as it is now called, is trained at Lenz in the Transvaal and has served in a combatant role in the operational area.

In official circles a great deal of publicity is given to all the non-white units, although Mr Botha has stated that their present size is not to be greatly expanded. He has also announced that he is working on the implementation of equal pay, regardless of colour, for servicemen in the operational area. No SADF units are integrated except where whites officer blacks.

In October, 1978 General Malan, Chief of the Defence Force, said that more than 20% of the South African forces in the operational area were blacks.

The Bantustans

South Africa's policy of 'separate development' has as its eventual aim the creation of eight independent Bantustans (or homelands). Transkei was granted independence in October, 1976 and Bophuthatswana in December, 1976. Neither is recognised by any State except South Africa. Both have embryonic armies that were initially trained by SADF personnel.

Training of a Transkeian battalion began in August, 1975 and it now numbers approximately 400 men. Until 1978 a South African brigadier remained as Secretary of Defence in the Transkei cabinet although it was announced that all South African military personnel were to leave by March, 1978. A worsening of relations between Transkei and South Africa led to a severance of diplomatic relations in April, 1978 and the abrogation by Transkei of the non-aggression pact between the two countries in May, 1978. Although this is unlikely to have any deleterious effect on South Africa it was announced by Transkei that South African military aircraft would not be allowed to overfly her airspace or warships enter her ports.

A Bophuthatswana National Guard was created in June, 1977. It has about 250 men, a headquarters and training base at Mafeking and white South African officers who are expected to remain in 'leading and advisory roles' for some time.

Although the 'independent' Bantustans do not at present pose a military threat to South Africa they might become such. It has been estimated that the 'independence' of Transkei and Bophuthatswana alone increase South Africa's border to be defended from 4500km to 8000km.

Namibia (South West Africa)

The SADF has organised and trained the 41 (Black) Battalion (five companies) in recent years.

RECRUITMENT, TRAINING AND RESERVES

Recruitment

The majority of personnel in the SADF are conscripted national servicemen, but in recent years the small volunteer

World Armies

Permanent Force has consistently fallen short of establishment. This shortfall is considered acute and resulted in a major recruiting drive in 1975, and the greater employment of women and non-whites. Although training is in both Afrikaans and English, recruitment for the army has been much better from amongst Afrikaners, and indeed there seems to be some antipathy from the English-speaking community to voluntary military service. Within the conscript element, drug abuse and low morale pose considerable problems from a minority.

Training

All officers in the SADF train at the Military Academy at Saldanha Bay. The basic training system is divided into three phases and lasts 2 years, whilst about 30% of students complete an extra 2 years at the academy and graduate with a BMil degree. During the basic 2 years, army officer cadets will disperse to the various arms schools and units for up to 15 months. The most important of such establishments is the Infantry School at Oudtshoorn, which caters for all soldiers and officers up to the rank of major. Officers may go later to the Army Staff College or the tri-service Defence College in Pretoria. For political reasons, few officers now train abroad, although it is reported that links exist with Israeli defence establishments. Certainly the SADF has been greatly influenced in both training and tactical developments by the experience of Israel, an experience which, as a similarly beleaguered and isolated State, South Africa finds particularly relevant.

Reserve

See under Strength and Budget, and Role, Commitment, Deployment and Recent Operations, for size, nature and deployment of reserve forces.

EQUIPMENT AND ARMS INDUSTRY

In consequence of the ever-increasing international furore over South Africa's domestic policies, and the United Nations' arms embargo first imposed in 1963, the Republic decided both to diversify her sources of supply whilst at the same time attempting to become as self-sufficient as possible through the development of a major arms industry. The United Nations' arms embargo became mandatory in November, 1977.

A Munitions Production Board was set up in December, 1964 later becoming the Armaments Board. This organisation has control over the manufacture, procurement, supply and defence research for the SADF. In January, 1969 the Armaments Development and Production Corporation of South Africa (ARMSCOR) was set up with a share of capital of R100,000,000, and in May, 1967 the Atlas Aircraft Corporation was formed. These institutions, together with private enterprise, manufacture either local equipment or equipment built under licence from abroad, and have made South Africa self-sufficient in a number of spheres including small arms, bombs, mortars, armoured cars, a variety of vehicles and a range of training and combat aircraft (Mirage F1 and various Italian Aermacchi jet trainers (called Impalas in South Africa)). South Africa has also recently produced the Ratel APC. Each vehicle carries 10 men and is armed with a turret-mounted 22mm gun and 7.62mm light machine-gun.

As early as 1965, the then Minister of Defence, Mr Fouche, stated that: 'South Africa was in a position to sell arms . . . to well-disposed friends'. South Africa has not yet produced sophisticated artillery or heavy armour, and the South African supplies of these are now becoming very elderly.

In November, 1977 following the United Nations' arms embargo, the South African government took powers to compel, where necessary, companies to manufacture military equipment.

The weapons and equipment in use by the South African army (and other services in the Defence Force) include:

1. About 1400 armoured cars, including locally produced Panhards and Elands.
2. 141 Centurion and 20 Comet medium tanks. One reliable authority believes that South Africa has as many as 500 tanks, though none would be modern.
3. Some 250 Saracen APCs and over 50 Ferret scout cars. Perhaps some 100 Commando APCs. In addition South Africa has an increasing number of locally produced Ratel APCs as well as some 500 light APCs.
4. Very old 5.5in medium and 25 pounder field guns still in use by the artillery.

Spares for some of this equipment may be very hard to come by, though fairly recent revelations suggest that some Centurion spares, including engines, have arrived in South Africa via the Channel Islands. South Africa recently bought 41 Centurion tanks and the Tiger Cat missile system from Jordan. France has provided equipment for all three services. In addition, South Africa has the ENTAC anti-tank missile, and a modern radar system covering the northern borders of the Republic. This network is linked to air force interceptor squadrons, and the Cactus air-defence system (three batteries of 18 Cactuses). Since 1968 South Africa has produced both a ground-to-air missile and a surface-to-air missile. Table 2 details the equipment in use with the navy and air force.

Table 2 Navy and air force equipment*

Navy

Three Daphne-class submarines (from France)
 Two destroyers with Wasp ASW helicopters
 Six ASW frigates (three with WASP ASW helicopters)
 One escort minesweeper (training)
 10 coastal minesweepers
 Five seaward defence boats (more being built in South Africa)
 A few extra Wasp helicopters
 Reserve: two frigates plus seven minesweepers

Air force

Over 350 combat aircraft
 One bomber squadron of six Canberra B1 Mk. 12s plus three T-4s
 One light bomber squadron of 10 Buccaneer S. Mk. 50s
 Two fighter squadrons with 32 Mirage III EZs and eight III DZs
 One fighter/reconnaissance squadron with 16 Mirage III CZs, 4 III BZs and 4 III RZs
 Two maritime reconnaissance squadrons with seven Shackleton MR3s, 18 Piaggio P166Ss
 Four transport squadrons with seven C-130Bs, nine Transall C-160s, 23 C-47s, Five DC-4s, one Viscount 781 and seven HS-125 Mercurys
 Four helicopter squadrons with 20 Alouette IIIs each, one with 20 SA-330 Pumas, one with 15 SA-321L Super Frelons. South Africa may have acquired additional helicopters (possibly 15) probably from France
 One flight of seven Wasps
 Four communications and liaison squadrons (army assigned), with 16 Cessna 185 A/D/Es, 36 AM-3C Bosboks and 20 C-4M Kudus
 Trainers include 16 Mirages, over 100 Harvard and over 300 Impalas (the last which can be readily used in a counter-insurgency role); Vampire FB Mk. 6s, Mk. 9s and Mk. 55s; T-6s; TF-86s; C-47s and Alouette II/IIIs
 Reserves include 160 Impalas, 100 Harvards, 20 Cessnas and 12 air commando squadrons with private aircraft

* Sources: *Military Balance* (various years); *Southern Africa: The Secret Diplomacy of Détente*, Colin Legum (1975); *PARATUS* (Magazine of the SADF).

A great deal of controversy has surrounded South Africa's nuclear potential. The Republic is one of the three largest uranium producers in the world, and in July, 1970 the South African Atomic Energy Board claimed that it had successfully pioneered a new process of uranium enrichment. Although this statement has been treated with some scepticism, it might be that South Africa could produce a crude nuclear device within perhaps 5 years or so. The Canberra B1 M/C 12 has been cited as a possible delivery agent. South Africa has not signed the Nuclear Non-Proliferation Treaty. In August, 1977 the United States government accused South Africa of planning a nuclear test in the Kalahari desert. Mr Vorster denied this claim but left open the issue of whether South Africa possessed nuclear capability.

In terms of military requirements, the one mineral not found naturally in South Africa is oil. However, the Republic has one of the most abundant supplies of coal in the world, and has pioneered a comparatively cheap process to produce oil from it. Additionally, it is reported that disused mine workings have been filled with oil, giving South Africa at least 2 years reserve. Nor has a limited Arab boycott been successful, South Africa receiving all the oil it needs from Iran, although on the Shah's departure in January, 1979 supplies were cut-off.

RANK, DRESS AND DISTINCTIONS

The rank structure of the South African army broadly follows the British pattern. The term *commandant* replaces lieutenant-colonel and the army is usually commanded by a lieutenant-general.

In the Citizen Force, particular regimental names are derived from British titles, e.g. The Cape Town Highlanders, Durban Light Infantry, Transvaal Scottish.

New uniforms have recently been introduced which dispense with the heterogeneous dress based on regimental traditions. As well as being more functional, the uniforms move towards a common style for the whole of the Defence Force. In general, orders, decorations and medals are similar for all services in the SAAF, though in some instances different ribbons may be worn.

The Cape of Good Hope Decoration (CGH) and the Honoris Crux Gold (HCG) are the highest awards for bravery, whilst the Order of the Star of South Africa (Class 1 SSA) is awarded to the most senior officers for especially meritorious service.

World Armies

CURRENT DEVELOPMENTS

Any consideration of future developments in the South African army must take into account the peculiarly volatile political and strategic position in which the Republic finds itself.

Developments following the Portuguese coup of 1974 removed the military and psychological security offered by the white-ruled buffer States, or *cordon sanitaire*, which surround South Africa. With the impending independence of Namibia and probable political changes in Rhodesia the threat posed by these developments may increase, particularly considering the failure of South Africa's *détente* policy in 1975. Pretoria has reacted to this by increasing her defence spending and the period of compulsory military service. Government spokesmen accept that South Africa is in an undeclared state of war and Mr Botha has stated that it is necessary to change the 'old common law concept of war and times of war'. To this end a wide range of emergency powers, reserved to the government for war-time, have been amended to cater for contemporary circumstances. General Malan, Chief of the South African Defence Force, has said that the requirements of a total strategy and a democratic system of government conflicted.

At present the South African Defence Force seems quite capable of countering any likely threat, be it internally or externally generated, though the recent *débâcle* in Angola together with the arms embargo and international reaction to deaths in detention, serve as lively reminders to South Africa of her own vulnerability to both physical attack and diplomatic and military isolation.

MATTHEW MIDLANE

SPAIN

HISTORY AND INTRODUCTION

The Spanish army is a historical and national institution of the first importance. It is generally regarded as being the first national army in the modern sense and was certainly the first to exercise power on a continental scale. It was also the first imperial army of modern times, and a pioneering and modernising influence on the emergent national armies of sixteenth-century Europe. In the twilight and aftermath of Spain's imperial centuries it became something else: the principal instrument of change, for better or worse, in the political life of the country, a role it began to pursue immediately after the expulsion of Napoleon's armies from the country in 1814 and may not yet have laid down.

The achievement of the Spanish military establishment at the beginning of the sixteenth century was to create an army of permanent regiments (*Tercio*), the ownership of which was indisputably in the hands of the Crown and not of their commanding officers. The means for this creation were two-fold: the existence of large numbers of experienced soldiers, veterans of the reconquest of southern Spain from the Moors, and the influx of bullion from the newly discovered Spanish empire in America, which provided the funds to purchase their loyalty and obedience. Certain technical military advances, notably the tactical co-ordination of new types of firearms worked out by Gonsalvo of Cordova, *el Gran Capitán*, lent the *Tercios*, at the same time, formidable battlefield efficiency. Wherever the Spanish army fought in the sixteenth century, in or beyond the extensive European dominions the Hapsburg heritage brought the Kingdom, the *Tercios* were generally invincible.

The *Tercios*, however, were never wholly, or even largely, Spanish in recruitment and, with the dissipation of Spanish wealth in the seventeenth century, their foreign recruits and their strength ebbed away. The eighteenth century army became as backward as the Spanish State and economy, and was destroyed in the first months of fighting against Napoleon. Though a shadow army fought with Wellington throughout the Peninsular War, it was he and his soldiers, not the royal army, which eventually turned the invader out. But if the army had not fought, many Spaniards had, in the 'little war' (*Guerrilla*) whose prosecution turned the Spanish front into a running sore on the skin of the Napoleonic empire, and these guerrilla leaders insisted on being incorporated into the peacetime army at the restoration of 1814 without a compensating retirement of useless regulars. At the same time the surviving hierarchy of the army successfully determined, in the teeth of the hostility of the *cortes* (parliament), the return of absolute royal rule, while ruthlessly snubbing many of the new guerrilla officers whose military records were so much better than their own. Many of the guerrilla officers reacted by espousing the 'liberal' principles which were anathema to the military hierarchy, but were also held by numbers of younger officers from the middle class and veterans of captivity in France where they had been initiated into Freemasonry. Thus were implanted in the Spanish army the factors which were to make it a major force in Spanish political life for the next century and a half: swollen numbers of officers, which condemned most to discontented inactivity and all to miserable pay, even though their pay would usually consume the greater part of the Spanish military budget; and deep divisions in the officer corps over the struggle between liberalism and absolutism which would express themselves at best in disaffection, at worst in civil war. These divisions and imbalances in a major national institution were to be exacerbated by almost uninterrupted failure in a succession of imperial campaigns and by the outbreak of separatist insurrections within the Kingdom itself. Yet step by step with the pace of Spain's international decline, and all concrete evidence to the contrary, the army came to regard itself as uniquely embodying the 'Spanish' character and virtues, and deserving therefore of a degree of social respect and political consideration which the people and the State grew equally unwilling to concede it. Popular respect was all the more closely withheld because of the vile conditions in which the conscripts spent their military service and the ease with which the better off bought exemptions from its performance. Finally, and despite their unvictorious character, the colonial campaigns threw up a band of officers who, as volunteers for service abroad, conceived a hearty contempt for those who rotted at home and which was returned in distaste for their uncouth manners, learnt in the field, and resentment at their claims to more rapid advancement.

In 1881 a Liberal deputy calculated that there had already been 81 military revolts in nineteenth-century Spain, varying in gravity from the *cuartelazo*, when a rebellious unit would take possession of its barracks and await events, through the *pronunciamento*, a public declaration of military demands, sometimes accompanied by force, to the *coup d'état*. Yet the trend of military intervention, and the greater number of the revolts, were (conventional expectations to the contrary) liberal in character. After the restoration of absolute monarchy by the old military hierarchy in 1812, a series of minor military revolts against absolutism culminated in a successful demand for the re-institution of the constitution in 1820. When a French army restored absolute power to the king in 1823, it was the army rather than the parties which made the only serious efforts to retrieve constitutionalism in the military-inspired rebellions of 1830 and 1831. During the dynastic First Carlist War of 1833-40, though the army rallied round the legitimist party, it took the opportunity to secure a partial return to constitutionalism in 1834 and a full return in 1836. Between 1840-3 Spanish government was in the hands of a

World Armies

military regent, Espartero, who was also the most liberal ruler Spain had hitherto had, and, during the period of moderate reaction which conservative soldiers subsequently brought about, he was returned to power by military action in 1854–6. The rebellion of 1868, which ended Moderate rule and inaugurated the First Republic, was also led by soldiers.

But from the restoration of the Bourbons in 1874, the trend of military politics changed direction. Thereafter it was to be conservative, even reactionary, rather than liberal. The reasons for this were several. Perhaps first was the permeation of political consciousness into the Spanish peasantry and proletariat, where the liberal tendency took socialist and anarchist forms from which the officer corps recoiled. Parallel with these movements was the growth of separatist tendencies in the commercially successful north-east, Catalonia and the Basque country. Both movements were the cause of disorders which the army was frequently called to suppress and, from having itself been the principal agent of disorder in the first half of the century, the army began to look on itself as both symbol and instrument of internal peace and national unity, and deserving of national respect for that reason. At the same time, however, the army found itself drawn into a series of colonial wars, the most serious since those culminating in the loss of the South American colonies at the beginning of the century, and, paradoxically, insisted all the more stridently on its right to respect as its ineptitude in the field became more evident.

The Cuban and Philippine campaigns of 1895–8, culminating in the United States' intervention on the rebels' side, were disasters, deeply humiliating for Spain's name abroad and a cause of widespread suffering to the Spanish people, whose conscript sons died abroad in their thousands of disease and neglect. The fault was partly, but only partly, the government's, for its failure properly to equip and supply the army was chiefly due to the officer corps' resistance to any reduction in its size. Their salaries, in 1900, consumed 80,000,000 pesetas of a military budget of 138,000,000 pesetas; their numbers, which had rarely sunk below 20,000 during the previous century, stood at 24,705, while the men numbered only 80,000 and, at one point in the next few years, the ratio of officers to men actually approached one to one. At the same time French officers' salaries consumed only one-seventh of the military budget, with one officer to 23 men. Little wonder that victory was so elusive, or that the Moroccan war which began in 1908 should have protracted itself in mismanaged stalemate. Attempts by the government to revitalise the officer corps by promoting the few successful Moroccan campaigners — the *africanistas* — only provoked insubordination among the stay-at-homes, who formed so-called Defence *juntas*, the chief object of which was to defend the professional *status quo*.

The *junteros* were only one of several intransigent groups — radicals, syndicalists, Basque and Catalan separatists — whose extreme and conflicting demands brought all Spanish governments of World War I and post-war years under acute pressure. The second decade of the century was indeed one prolonged political crisis in Spain, which any one of several component elements — general strike, agrarian revolt, terrorism of the left and right, separatist insurrection — might have brought to a head. But in the end it was military events and military reaction to them which did so. In 1921 a resurgence of the Moroccan war resulted in disaster at Annual: 8000 Spanish troops were massacred and the Spanish town of Melilla was saved only by the energies of two of the most prominent *africanistas*, General Sanjurjo and Major Francisco Franco of the Foreign Legion. The government abruptly veered in the direction of withdrawal — *abandonismo* — and a leading general, Primo de Rivera, unleashed against it a military conspiracy which in 1923 invested him with dictatorial powers.

The Primo dictatorship was not particularly repressive and, in concert with the French, it did bring the Moroccan war to a successful conclusion, the army's first military success for 50 years and the only one of any magnitude since O'Donnell's annexation of the Moroccan possessions in 1859–60. But it failed to reduce significantly the size of the officer corps, which still stood at 22,000 in 1930, without thereby mollifying any of the factions into which the army was still divided, and it failed to heal any of the wider divisions within Spanish society itself — those between rich and poor, monarchists and radicals, trades unionists and employers, landowners and peasants, the Catalans and Basques and the rest of Spain. In 1930 Primo became aware that he had lost the support of the army and effectively brought his own dictatorship to an end. The King, Alfonso XIII, installed another interim military dictatorship which proceeded to hold municipal elections. When the towns voted overwhelmingly for republican candidates he and the generals withdrew, he into exile, they into barracks.

The new republican War Minister, Azana, had made a special study of military affairs, unusual in a socialist of the period. As early as 1919 he had written that 'the abolition of the existing military system is a matter of life and death', and he used the impetus generated by the republicans' electoral success to tackle the problem of the army head on. He reduced the number of divisions in the army from sixteen to eight and abolished its special legal jurisdiction, but above all, by the offer of generous retirement terms, achieved a massive reduction in the size of the officer corps. Within a month it declined in numbers from 22,000 to about half that figure. The army accepted the cuts uncomplainingly. But they were not, as Azana thought, to solve the Spanish military problem, for the surviving officers included some of the most energetic in the army, jealous of its honour and profoundly suspicious of the republican government's policies and abilities. In 1932 Sanjurjo, the saviour of Melilla, attempted a monarchist coup (the *sanjurjada*) and, though the right-centre interlude inaugurated by the elections of 1933 calmed military anxieties, particularly by the strong line taken over the socialist rising in Asturias in 1934, the return of the left republicans, as a Popular Front government, in February, 1936 inflamed them again. Public disorder had reached new heights, with organised terror visited by the ultras of left and right on each other, attacks on the police, fighting between the police and the landless peasants, massing of armed worker militias in the industrial towns and of right-wing militias in the Carlist north, and, most offensive to the army and to the lower-middle class from which the majority of its officers sprang, incendiary attacks on churches and convents. Army plotters, led by General Mola, mooted a coup in April, 1936 but failed to bring it to fruition. In July the army found greater resolution. Led by Mola on the mainland

and Franco in Morocco, army units issued a *pronunciamento* against the Popular Front government and seized the centres of administration. In the Basque country, Catalonia and central and southern Spain their revolt failed or was not attempted, the army either being loyal to the government or judging local action against it injudicious. But most of northern Spain at once fell into their hands, as did a bridgehead in Cádiz province through which the Army of Africa was transhipped from Morocco. The revolt was immediately resisted, both by loyal units and by the republican militias, and within a week it was clear that the outcome was not to be a *coup d'état* but civil war.

The war was to last until March, 1939, polarise opinion in Europe, involve the direct intervention of Italian and German forces on the Nationalist side (as the rebels became known) and of Russians on the Republican, entail the deaths in battle or by atrocity of over 400,000 Spaniards, and bring Franco, proclaimed ruler of the Spanish State in 1938, a bitter victory. Its rights and wrongs, now embedded in the mythologies of right and left throughout the political world, defy judgement. But viewed as an episode in the Spanish army's long dialogue with the Spanish people and polity, it was clearly climactic. It was as a soldier in the *pronunciamento* tradition that Franco had instituted the revolt and, however political his manipulations of the parties which survived the war, it was as a military dictator that he ruled Spain until his death. Careful though he was to court the support of the church, and energetic in the renovation of the Spanish economy, it was upon the army and the forces of order — police and Civil Guard — that he based his power. All that the republic had taken away from the army he gave back to it — the Captaincies-General, the military governorships of the provinces, the autonomous legal jurisdiction. Curiously he gave back to it also its poverty and swollen numbers. In 1960 there were still 15,000 officers in an army of 150,000 conscripts, living on pay so low that 80% found it necessary to take a second, civilian job. It was as if this most reckless of *caudillos* shrank from the one act of modernisation which would irretrievably change the nature of the Spanish State.

STRENGTH AND BUDGET

Population (1976 estimate): 36,396,000

Army: 220,000

Navy: 48,000 (including 8000 marines); 38 major vessels, 55 smaller

Air force: 41,000; 157 combat aircraft

Paramilitary forces: 65,000 civil guards; 38,000 armed police

GNP (1976 estimate): \$101,700,000,000

Defence expenditure (1976): \$2,150,000,000

After many years of financial starvation, the Spanish armed forces have benefited from increased spending in the last 20 years. This is in part the product of greater national prosperity, in part the fruit of direct payments made by America in return for the grant of air and naval base facilities. Between 1971 and 1976 America offered credits of \$125,000,000, and \$20,000,000 of direct aid for re-equipment; between 1953 and 1964 she had contributed \$600,000,000. The greater portion of the equipment budget in recent years has, however, gone on the air force which, until the 1960s, was still equipped with propeller-driven aircraft of World War II. The army has begun to receive new equipment in the last decade, but is still woefully short of armour in comparison with other Western European armies of the same size.

COMMAND AND CONSTITUTIONAL STATUS

Spain is in the final throes of constitutional change which, after 40 years of personal dictatorship, are reintroducing parliamentary democracy. Most of the Franco constitution, however, enacted in the Laws on the Principles of the National Movement, 1958, the Statute Law of the Spanish People (*Fuero de los Españoles*) 1945 and the Organic Law of the State, 1967, are still in force. These, with earlier statutes, define the role and status of the army, the source of authority over it and the duties of Spaniards towards it. Constitutionally, the armed forces constitute a single army (by the Constitutive Law of 1878) which includes, besides the army proper, the navy and the air force, and the Forces of Public Order (of which the Civil Guard and the Armed Police are the most important elements). Their function is to 'guarantee the unity and independence of the country, the integrity of her territory, national security and the defence of the institutional system' (the 'institutional system' means the arrangements for the representation of the individual through, and only through, the family, the municipality and the State trade unions introduced by Franco during his tenure of office). Article IV of the Law of the National Movement lays down that 'the integrity of the country and its independence are the supreme exigencies of the national community. The Armed Forces of Spain, the guarantee of her security and the expression of the heroic virtues of her people, must possess the strength necessary for the better service of the country.' The Head of State (formerly Franco, now the King, Juan Carlos) 'exercises the supreme command of the army, navy and air force; (and) safeguards the maintenance of public order at home and the security of the State abroad', but, under him, the Home Office (*Gobernación*) exercises the supreme command of the security forces of the State, composed of the General Police Corps, the Armed and Traffic Police, the Civil Guard Corps and all other units of security and vigilance . . . 'In case of need it may solicit, through

World Armies

the appropriate channels, the co-operation of military units.' Its authority is thus separate from that of the service ministries and staffs. Each service (army, navy and air force) has its own staff and own ministry. In addition there is a Supreme Staff on a tri-service basis. The ministers and chiefs of staff of the three services, the Chief of the Supreme Staff, the President of the Government (Prime Minister) and co-opted ministers and officials form the National Defence *Junta* which 'proposes to the government the general lines to be taken in respect of security and national defence'. The Army and Navy Ministers are usually serving officers.

Article 7 of *Los Fueros de los Españoles* lays down that 'Bearing arms in the service of their country is a mark of honour for the Spanish people. All Spaniards are obliged to render this service when called upon to do so by law.'

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The role of the Spanish army has already been defined, and differs legally not at all from that of most armies. Given Spain's history, however, the internal role of the Spanish army is of greater significance than in most European countries. Salvador de Madariaga, Spain's greatest modern historian, once described the army as 'utterly useless' but at the same time 'indispensable' because it provides the 'minimum of outward and mechanical order' without which the country cannot progress towards 'inner and spiritual order'. Militarily the army is now a great deal more efficient than when he wrote, but his view of it as a force essentially for stability rather than for action holds true. Its quality of creative inertia is recognised and valued by the State, which takes care to see that it is never directly involved in the suppression of disturbances, which are left to the police force. That they are militarised is beside the point. The army is the ultimate deterrent: unused, it threatens any force of disorder with extinction; used, it threatens the ultimate catastrophe of renewed civil war. The leadership of the army, moreover, appears extremely sensitive to its deterrent role and determined, whatever its retrospective judgement about the rights and wrongs of 1936, to stand above party in the future. And, though 'above party except against those of the extreme left' is probably a sensible qualification, so too is 'and of the extreme right'. The army consistently set its face against efforts by the *Falange* (Franco's official party of State, though devoid of power) to raise its own party militia; the proliferation of such bodies under the Republic and the former monarchy it remembers as being the precipitating cause of disorder in Spain's dark years.

The army has deliberately exercised another role during the 40 year peace: that of the 'school of the nation'. In an atmosphere of bitter division and recrimination following the civil war, it provided the one forum in which young Spaniards from every background and region — republican, nationalist and separatist — were forced to mingle. However successful or unsuccessful its efforts at indoctrination of the recruits — 2,000,000 passed through its ranks between 1940 and 1965 — in the official ideology, its mere imposition of propinquity on the sons of former enemies was a healing act.

Commitment

Spain is a formal member of no international alliance system. But in return for the granting of base facilities, first negotiated in 1953, the United States has progressively extended guarantees of support for Spain against an external military threat. Spain herself eagerly looks forward to full integration within NATO. She signed in 1970 a defence agreement with France, integrating their Mediterranean air-defence systems and arranging for the sale of arms from France to Spain.

Deployment

Spain is divided into nine military regions, each under a Captain-General: I (HQ Madrid) New Castile and Extremadura; II (HQ Seville) Andalucía less the provinces of Málaga, Granada and Almería; III (HQ Valencia) Valencia and Murcia; IV (HQ Barcelona) Catalonia; V (HQ Saragossa) Aragón; VI (HQ Burgos) Vascongadas (the Basque country), Navarre and Old Castile; VII (HQ Valladolid) Asturias and León; VIII (HQ Corunna) Galicia; IX (HQ Granada) the provinces of Málaga, Granada and Almería, with Melilla on the Moroccan coast; Ceuta on the Moroccan coast belongs to Military Region II. Each of the regions is garrisoned by units of the Territorial Defence forces of the army: one Territorial Defence Brigade in each region, with one extra each for Madrid and Barcelona. There is also a reinforcement brigade in Granada. There is an alpine brigade in the Saragossa Region, and two mountain divisions (brigade strength only), in the Barcelona and Burgos Regions, stationed respectively at Lérida (4th) and Pamplona (5th). Ceuta and Melilla are garrisoned by three Foreign Legion regiments and two of *Regulares* (north African troops), the garrisons numbering 9000 and 10,000, respectively. There are 6000 troops in the Balearics (Majorca, Minorca and Ibiza) and 10,000 in the Canaries. There is a coast artillery brigade in the Straits of Gibraltar and five other coast artillery regiments.

The units of the Intervention forces are distributed as follows: 1st Armoured Division *Brunete* and the parachute brigade in Madrid, 2nd Mechanised Infantry Division *Guzman el Bueno* in Seville and 3rd Motorised (to be Mechanised) Infantry Division *Maestrazgo* in Valencia. The air-portable brigade is in the VIIIth Military Region and the armoured cavalry brigade is in Salamanca (1st Military Region).

Recent Operations

The Spanish army has been engaged in no operations since the end of the Civil War in 1939.

ORGANISATION

Arms of Service

There are five traditional arms of service: infantry (*Infantería*), cavalry (*Caballería*), artillery (*Artillería*), engineers (*Ingenieros*) and services (*Intendencia*). Spanish regiments preserve their ancient numbers and some claim ancestry from the *Tercios* of 1535 but their lineage was broken at the civil war, after which the army was remade. This is not true of the Foreign Legion (*La Legión de Extranjeros*), founded in 1921, of which the three regiments (*Tercios*) are known as *Gran Capitán* (1st), *Duque de Alba* (2nd) and *Don Juan de Austria* (3rd). Also separate from the army are the *Regulares*, raised in 1911, the north African regiments of the Moroccan enclaves.

Operational

The army is divided into two halves: the Intervention Forces (*Fuerzas de Intervención Inmediata* — F.I.I.) organised for mobile operations anywhere in Spain or its overseas possessions, and the Territorial Defence forces (*Fuerzas de Defensa Operativa del Territorio* — F.D.O.T.) for the defence of the area in which they are stationed. Their separation is modelled on that of the French army.

The armoured, mechanised and motorised divisions (three in all) of the F.I.I. are organised in three brigades each, of which one is a cadre formation. Thus the armoured division has two armoured brigades, the mechanised division one mechanised and one motorised brigade, and the motorised division two motorised brigades; the latter is to become a mechanised division. The armoured cavalry brigade has three regiments, each of three companies of tanks and APCs. The parachute brigade has three parachute battalions and the air-portable brigade two infantry battalions and a third in cadre.

In the F.D.O.T., the three mountain brigades (one is counted as a high mountain or alpine brigade) consist each of three mountain infantry battalions, a mountain engineer battalion and a service battalion. The two mountain divisions to which the brigades belong also have each a motorised infantry battalion, an artillery regiment, a parachute company, an engineer battalion and an aviation battalion. The Territorial Defence brigades consist of three infantry battalions, an artillery battalion, a service battalion, a reconnaissance company, an engineer company and a signals company.

The Foreign Legion regiments (*Tercio* — also the name by which the Legion is often collectively known) consist each of two battalions (*Bandera*), the *Regulares* of several battalions (*Tabor*).

In addition to the formations of the F.I.I. and F.D.O.T. there exist a number of units of indeterminate status whose location is not certain. The most important are a heavy artillery brigade, formerly equipped with 203 mm howitzers and Honest John missiles, and an air-defence battalion with Hawk and Nike Hercules missiles. The army aviation squadrons have 60 helicopters. The air force provides the army with the bulk of its ground-attack transport and liaison aircraft and helicopters. These belong to two air commands, the *Aviación Táctica* (Tactical Air Force) with stations at Madrid, Valencia and Valladolid and the *Mando de Transporte* (Transport Command). The Spanish navy has a force of 8000 marines, organised in four regiments and two independent groups, and stationed chiefly in the islands.

Paramilitary Forces

Spain is a heavily policed country, with several forces under the control of the Home Office (*Gobernación*). Besides the General Police Corps of the larger municipalities there are two other national police forces of considerable importance. The first is the Armed Police (*Policía Armada*), about 38,000 strong, which act as riot police (on the lines of the pre-civil war Republican Assault Guards) and security guards in the big cities. The second is the best known and arguably most redoubtable armed force in Spain, the Civil Guard (*Guardia Civil*). About 65,000 strong (stronger if the Customs Guards (*Carabineros*) are included), it is recruited from ex-servicemen and commanded by an army general. Its members, who are paid about 50% more than their equivalent ranks in the army, are always armed and patrol in pairs throughout the towns and countryside of Spain. The government uses Civil Guard units, unlike those of the army, without hesitation against riot, dissent and political crime. The force, the counterpart of the French *Gendarmerie* and Italian *Carabinieri*, is to an even greater extent than they an explicit symbol and instrument of government authority, recognised during the Franco years to be the regime's most important immediate guarantee.

RECRUITMENT, TRAINING AND RESERVES

Military service is a universal obligation in Spain, and about 100,000 young men are conscripted each year for 16 months. Regular service is also possible, and there are about 30,000 regular soldiers (besides officers). The Foreign Legion is

World Armies

completely regular and, apart from a few Portuguese, recruited almost entirely from Spaniards (unlike the French Foreign Legion, in which French citizens are debarred from serving).

Officers, of whom there are about 20,000, are recruited from suitable school leavers and trained at the *Academia General Militar* at Saragossa. About 70% are the sons of soldiers, and of those the majority the sons of NCOs rather than officers. Staff training is carried on at the *Escuela Superior del Ejército* at Madrid.

The number of reserves is not made public but in theory is sufficient to transform each of the Territorial defence brigades into a division of three brigades and to man the cadre brigade in the two mountain divisions and the three mobile divisions. As late as the 1960s, however, there was no system of refresher training for the reservists, who on discharge were simply placed on the lists of discharged soldiers.

EQUIPMENT AND ARMS INDUSTRY

The Spanish arms industry is not highly developed and, except for small arms and ammunition, and some artillery and its ammunition, most weapons, munitions and military equipment are imported. The three most important armament firms are EN de Santa Barbara, Esperanza and Bonifacio Echiverria.

Rifle: 7.62 mm CETME (EN de Santa Barbara; a very successful design which has been adopted by the German Bundeswehr)

Machine-gun: 7.62 mm 42/58 (German; Spanish manufacture)

Mortar: 60 mm, 81 mm and 120 mm (all Esperanza)

Anti-armour weapons: 106 mm M-40 recoilless rifle (USA), Milan missile (France) and Cobra missile (Italy)

Air-defence weapons: 40 mm L/60 and L/70 guns (Swedish Oerlikon) and 90 mm M-2 guns (USA); Hawk and Nike Hercules missiles (one battalion)

Artillery: 105 mm pack howitzers (Italy; equipping the mountain artillery); a total of 1000 105 mm M-1 howitzers (USA; equipping the artillery of the infantry brigades) and 155 mm M-2 howitzers (USA; equipping the medium-artillery regiments); a total of 80 105 mm M-37 SP guns (equipping the field regiments of the mobile brigades) plus 155 mm M-44 SP guns and 175 mm M-107 SP guns (equipping the medium regiments of the mobile brigades); 108 mm, 216 mm and 300 mm multiple rocket launchers (Spain)

Armour: AML 60/90 armoured cars (France; 75 in service); M-113 APCs (USA; 400 in service, equipping the mechanised brigades); M-41 light tanks (USA; in the mechanised, armoured and armoured cavalry brigades; 200 in service); M-47 and M-48 medium tanks (USA; in the armoured cavalry and armoured brigades; 475 in service); AMX-30 medium tanks (France; in the armoured brigades; 200 in service)

Aircraft: army aviation has 20 UH-1Bs, 16 AB-206As, and one Alouette III; 13 Bell 47G and three Puma helicopters.

RANK, DRESS AND DISTINCTIONS

The Spanish army wears khaki in everyday dress. The officers' uniform is a British-style service dress, with which a sword and waist sash are worn on ceremonial occasions. Combat dress is also khaki, worn with a NATO helmet; the German coalscuttle helmet has been given up. Paratroopers wear a mottled combat dress. The Foreign Legion wears light green, with a tasselled side cap. Marines wear dark blue. The Civil Guard wear dark green, with the famous 'airplane' tricorne hat in patent leather.

<i>Capitán General</i> (general)	Four stars around crossed sword and staff
<i>Teniente General</i> (lieutenant-general)	Three stars around crossed sword and staff
<i>General de División</i> (major-general)	Two stars around crossed sword and staff
<i>General de Brigada</i> (brigadier)	One star around crossed sword and staff
<i>Coronel</i> (colonel)	Three eight-pointed stars on the cuff
<i>Teniente Coronel</i> (lieutenant-colonel)	Two eight-pointed stars on the cuff
<i>Comandante</i> (major)	One eight-pointed star on the cuff
<i>Capitán</i> (captain)	Three six-pointed stars on the cuff
<i>Teniente</i> (lieutenant)	Two six-pointed stars on the cuff
<i>Alférez Alumno</i> (second-lieutenant)	One six-pointed star on the cuff
<i>Alférez</i>	One six-pointed star on the cuff
<i>Brigada</i>	One thick gold stripe on the cuff
<i>Sargento</i>	Three thin gold stripes on the cuff
<i>Cabo Primero</i>	One thin gold stripe on the cuff

Cabo Segundo
Soldato Especialista

Three diagonal red stripes on the cuff
 One red chevron on the sleeve

The title, but not the rank, of Captain-General is held by the commanders of the nine Military Regions.

CURRENT DEVELOPMENTS

The death of General Franco and the restoration of the monarchy and democratic government led many observers to expect a show of hostility and even resistance from the high command of the army and perhaps of revolutionary activity, on the Portuguese model, from a minority of more junior 'progressive' officers. A small conspiracy by members of a shadowy politico-military officers' circle was unmasked in 1975, and some officers court-martialled, but no other manifestations of dissent have been made public. The high command, to which the King has addressed frequent appeals for benevolence, has co-operated, without publicly voiced opposition, in the process of constitutional and electoral reform. The poor showing of the Communist Party in the post-Franco general elections is widely regarded as guaranteeing the army's political docility during the present transition from absolute to representative rule, but the high command appears adamantly opposed to devolution in the Basque or Catalonia regions, where the democratically elected government faces its gravest problems.

JOHN KEEGAN

SRI LANKA★

History and Introduction

Before becoming independent of Britain (by whom it had been annexed in 1796) in 1948, Sri Lanka — Ceylon as it then was — had no regular, locally recruited force. The British army provided the garrison, never a large one, since the country was tranquil and threatened by no external force. The only indigenous military force was the volunteer, part-time Ceylon Defence Force; the Ceylon Light Infantry was the most important unit, together with some small volunteer units; many of the volunteers were locally employed Europeans. The permanent cadre was British.

On independence, a regular Ceylonese infantry battalion, the 1st Ceylon Infantry Regiment, was formed. In 1950 it assumed the title of the 1st Battalion Ceylon Light Infantry and the old C.L.I. became the 2nd (Volunteer) Battalion. Subsequently two other regular regiments were formed, the Sinha (Lion) Regiment and the Genuna Watch (each also has a volunteer battalion). The army has been engaged in the suppression of internal disorders in 1958 and 1971, but has not operated from, and is not confronted by any threat from, outside the island. It has also remained happily untouched by the racial, ideological and religious animosities which divide Ceylonese society. A small, smart and efficient force, it bears comparison, in its social and political status, with its giant neighbour, the Indian army.

Strength and Budget

Population: 14,650,000

Army: 8900

Navy: 2400; one frigate, 28 smaller craft

Air force: 2000; 10 combat aircraft

GNP (1976 estimate): \$2,800,000,000

Defence expenditure (1977): \$48,000,000

Command and Constitutional Status

The President of the Republic (who is appointed by the Prime Minister) is titular Commander-in-Chief of the Armed Forces; the Minister of Defence (formerly the Prime Minister) is politically responsible for the army, which is commanded by a major-general. The army has, since independence, played no independent role in the affairs of the country (though 10 officers were convicted in 1962 for alleged complicity in an anti-government plot, and twelve more arrested, again for alleged plotting, in 1966, but acquitted by the Supreme Court).

Role, Commitment, Deployment and Recent Operations

The army's principal role is to provide the ultimate support to the police in the maintenance of law and order. The country is neutralist and has no external commitments. The deployment of the army outside the capital area is not known. It has not acted operationally since the internal disorders which centred on Galle, in 1971.

Organisation

Arms of Service

The army, divided into a regular and volunteer force, has, like the Indian, a British-style regimental system. The three regular infantry regiments (the 1st Battalion Sri Lanka Light Infantry, the 1st Battalion The Sinha (Lion) Regiment and the 1st Battalion The Genuna Watch) are independently recruited organisations; officers generally serve in the same battalion throughout their regimental career. The other regular arms are: the Ceylon Armoured Corps (one armoured-car reconnaissance regiment); the Ceylon Artillery (one field-artillery regiment); the Ceylon Engineers (one field squadron); the Ceylon Signals (one signal squadron) and the Ceylon Army Service Corps, Ordnance Corps, Electrical and Mechanical Engineers, Medical Corps, Military Police and General Service Corps. The volunteer force consists of: three infantry battalions (the 2nd (Volunteer) Battalions of the Sri Lanka Light Infantry, Sinha Regiment and Genuna Watch); an engineer regiment (development and construction); a unit of the Army Service Corps and the Army Medical Corps; four pioneer battalions and one guard battalion of the Sri Lanka Army Pioneer Corps; and two battalions of the Sri Lanka National

★ See also Appendix 2.

Guard. The air force also has an airfield construction battalion and four companies of airfield guards (Sri Lanka Air Force Regiment).

Operational

The regular force forms a brigade, though it is seldom so constituted; the volunteer force also forms a notional brigade.

Recruitment, Training and Reserves

Recruitment is by voluntary enlistment; in practice, the army is almost completely Sinhalese Buddhist, other communal groups not being accepted. Training of soldiers is carried out at the Army Training Centre, Diyatalawa. Officers, formerly trained at the British, Indian and Pakistani Academies, are also now trained at Diyatalawa, but go for staff training to Britain and India. There are specialist engineer, and electrical and mechanical engineer service corps schools; other specialist training is carried on in units. The volunteer force provides the reserves.

Equipment and Arms Industry

The country has no arms industry. Its infantry weapons are of British origin. The army has some Russian light artillery (76mm and 85mm) and APCs (BTR 152; 10 in service) and some obsolescent British armoured vehicles (six Saladin armoured cars and 30 Ferret scout cars).

Rank, Dress and Distinctions

Ranks are British and most of the uniform and distinction badges of the former British-run Ceylon Defence Force, suitably adapted, have been retained. The Sri Lanka Light Infantry, for example, retains its Prince of Wales' feathers badge, with the plumes replaced by drooping sheaves of paddy.

Current Developments

Despite Sri Lanka's grave religious, ideological and ethnic troubles, now heightened by economic hardships, the army remains a loyal and cohesive force. This is due partly to the comparatively high standard of living it is able to offer its soldiers and to the high quality of the officers, trained in a tradition of apoliticism, which it is able to recruit. It also has to do with the policy, inaugurated after 1962, of recruiting only from the Sinhalese Buddhist community, which consistently monopolises the government.

JOHN KEEGAN

SUDAN

HISTORY AND INTRODUCTION

The Sudan first acquired its present political outline (albeit in a shadowy form) in the 1820s, when a resurgent Egyptian government, still nominally under Ottoman suzerainty, conquered and annexed the northern area of the country and placed the slave trade drawing on the southern regions on a more regular basis. No local institutions of government were created, however, nor did any of the modern influences then transforming the Egyptian economy filter down into Sudan, so that when the Egyptians were expelled by a religiously inspired revolt in 1881–5 no advance had been made in creating a sense of national unity. The revolt was purely an affair concerning those Arabised and Islamised tribes of the region around and north of Khartoum who were converted to the puritanical and xenophobic sect founded by Muhammad Ahmad, a messianic personality who proclaimed himself al-Mahdi. The Mahdist victory over the Egyptians attracted some world attention principally because it caused the death of General Gordon, a Victorian military hero.

The Egyptians did not return for 15 years, and by the time they did in 1899 they were themselves fully under the *de facto* control of Great Britain. Sudan was rapidly reconquered by a combined British–Egyptian army, only the Mahdists offering any serious resistance, and was ruled for the succeeding half-century as an Anglo–Egyptian condominium. There were no significant outbreaks of resistance against foreign rule during this period, and under British administration there gradually developed an *élite* which conceived of itself as Sudanese. This *élite* was to be found particularly in the army.

What later became the Sudanese army was originally organised in 1898 as part of the Egyptian army, just prior to the campaign which reconquered the country. For the next several decades it consisted of Sudanese troops commanded almost entirely by British and Egyptian officers and NCOs, the British having a monopoly of the higher ranks. After a mutiny in 1924, however, the Egyptian officers and units in the Sudan were returned home, and a policy was adopted of Sudanisation of the NCO ranks and the lower echelons of the officer corps. The force was renamed the Sudan Defence Force (SDF) in 1925, and a military college was opened in Omdurman to train its Sudanese officer corps. By 1939 the SDF totalled about 5000 well-trained officers and men, and it acquitted itself with distinction against greatly superior Italian forces which invaded from Ethiopia in 1940. By May of 1941 the invaders had been driven from the country again.

During the first post-war decade the SDF did not grow in size, but Sudanese officers assumed increasingly senior posts as British officers retired or departed. The most effective pressures for independence in this period of growing Arab nationalism came from the army officers and from the grandson of the Mahdi, who controlled the powerful Ansar sect, but unquestionably the main reason for the British departure in 1956 was that in the aftermath of Egyptian independence any other course would have been senseless.

When the Sudan received its independence in 1956 it was still a country in name only. The most striking division was between the Arabic-speaking, Muslim northerners and the large minority of black African tribesmen, amounting to about one-quarter of the total population, who live in the southern three provinces near the Kenya, Uganda, Zaïre and Central African Empire borders. Between these two great groups there was little contact or sympathy, but even within them the divisions were many and varied: the Africans of the deep south are pagan in belief, with a small proportion of Christians; they speak 80 different languages; and they belong to some 500 tribes and sub-tribes. Sudan is the largest country in Africa, sparsely inhabited by 19,000,000 people, and even today it ranks in the UN's list of the world's ten least-developed countries; so for most of its population, contact with government, or exposure to the idea of a Sudanese identity, is not an everyday experience.

One question of identity which was unmistakable, however, was the division between Arab, Muslim northerner and black African, pagan or Christian southerner. The southerners grew increasingly alarmed at the intentions of northern politicians during the pre-independence period, and secessionist sentiments grew rapidly amongst them. In the final years of the condominium Britain had attempted to ease this sense of isolation and exclusion amongst southerners by encouraging for the first time their recruitment into the army, and by 1955 almost all the enlisted strength of the SDF's Equatoria Corps was southerners. In view of the educational requirements for officer training and the considerably more backward state of the south, however, almost all the officers even in this corps were Muslim northerners, and in 1955 southern resentment spilt over into mutiny and open rebellion. The Equatoria Corps was officially disbanded after most of its men went into hiding to begin a guerrilla war for independence, and northern troops were brought in to pacify the southern provinces. This proved to be the start of a 17 year civil war that killed up to half-a-million people.

The army expanded steadily after independence in order to deal with this major insurgency in the south, growing from 5000 in 1956 to 12,000 by 1959 and 18,000 by 1966. Over half of the army was stationed in the three southern provinces by 1962, but it was completely incapable of quelling the southerners' resistance, which had developed into a guerrilla army known as the *Anya Nya*. The problem grew more severe throughout the 1960s, the *Anya Nya* having expanded to about 25,000 full-time fighters and the Sudanese army to 35,000 men by 1970. The south, always the least developed part of

Sudan, was utterly devastated, with virtually all bridges, railways and other communications links destroyed, all vestiges of a cash economy in collapse, and up to a million refugees from the army's heavy-handed counter-insurgency tactics taking shelter in neighbouring countries.

The effect of this war on the rest of Sudan was to blight development plans and to draw the army steadily into politics. During the first years of independence the Sudan's government was dominated by the right-wing civilian politicians of the Umma Party, the political expression of the Ansar sect, loyal to the Mahdi's descendant, which embraces at least a third of the Arabic-speaking population. The rapid growth of the army and the corruption of this regime led to an early military take-over of the government in 1958, when General Abboud seized power in a coup, but this amounted to little more than a reshuffle in which uniformed rather than civilian members of precisely the same *élite* group took control. Following a week-long general strike and a series of uprisings in 1964, power passed back into the hands of civilian politicians, again without significantly altering the real distribution of power in the country. Military officers continued to be the final support of the government, and numbers of them went on serving in political appointments.

By the later 1960s, however, the greatly expanded army contained a new category of officer in the middle grades, not linked to the civilian *élite* and increasingly dissatisfied with what passed for government in the country. The war in the south was becoming steadily worse despite the deployment of over three-quarters of the army there; there was also very little real development being accomplished in the north, and politics was a corrupt game. Moreover, in a period which saw the height of pan-Arab enthusiasm, it was quite clear that the war in the south was being deliberately manipulated by outsiders to keep Sudan from addressing itself more directly to the concerns of the rest of the Arab world. Finally, the civilian government and its senior military supporters were attempting to contain change by banning the Sudanese Communist Party (then one of the largest and most sophisticated in the Arab world) and by a general clamp-down on unions, radical political organisations and Arab nationalist activities. A number of attempted coups in the later 1960s was detected in advance or otherwise thwarted, but on May 25th, 1969 Colonel (later Major-General) Jaafar Muhammad al-Nimeiri led a group of radical nationalist and communist officers in a successful *coup d'état* — the May Revolution, as it is now officially known.

In its first phase Nimeiri's regime was extreme Nasserist, committed to socialism, pan-Arab union, and a generally anti-Western orientation. 'We wish to make the new Democratic Republic of Sudan such a beacon of socialism on our continent as Fidel Castro's land has become in Latin America', announced Nimeiri in August, 1969, embarking on a militant campaign against the power and interests of the entrenched right-wing/religious forces which had previously dominated Sudanese politics. All existing political institutions and organisations were abolished, and Nimeiri contracted a close alliance with the Sudanese Communist Party. Most senior army officers were purged, and the newly promoted top level was drawn not only from pan-Arab but also from communist officers. The tentative commencement of an arms-buying relationship with the Soviet Union, initiated by the previous government in 1968, now became the mainstay of the Sudanese armed forces, and the gradually increasing involvement in Arab affairs, symbolised by the dispatch of a brigade of Sudanese troops to the Suez Canal after the 1967 war, became a firm commitment with the 1970 agreement between Egypt, Libya and the Sudan to join together as the Federation of Arab Republics.

By this time Nimeiri had already successfully crushed the rightist resistance to his rule, embodied above all in the Ansar sect led by Hadi al-Mahdi, grandson of the founder. A rebellion of the Ansar in March, 1970 was bloodily suppressed in a campaign which culminated in a massacre of several thousand Mahdists on the Nile stronghold of Abba Island. Right-wing opposition then mostly moved abroad.

Nimeiri's radical course continued, with the nationalisation of foreign banks and the confiscation of private businesses, but he came increasingly into conflict with the influential communist element in the army and government over his desire to centralise all political activity within a single party modelled on Nasser's Arab Socialist Union. This conflict broke into the open with a coup by communist elements in the army in July, 1971 which was aided by at least part of the Party's civilian leadership once it had apparently achieved success. Nimeiri became a prisoner, though his life was spared, and for 3 days the communists controlled Khartoum. The coup collapsed, however, when Libya illegally forced down a British airliner bearing its exiled leaders back to the Sudan from London, and when Egyptian forces came to the aid of loyal Sudanese troops in restoring Nimeiri to power. The entire military and civilian leadership of the Sudanese communists (including those unfortunates kidnapped by the Libyans and subsequently handed over to Khartoum), a total of over 20 men, were executed after summary trials, and the Communist Party was banned. All officers with known communist links were purged from the army, together with most of the more fervent socialists and Nasserists.

With the communists no longer an obstacle, Nimeiri proceeded with a referendum in October, 1971 which confirmed him as President, and the Revolutionary Command Council which had ruled since 1969 was abolished. The Sudanese Socialist Union was set up as the sole permitted political party. At the same time, however, there became evident a marked and growing tendency for the regime to adopt less-radical policies both domestically and on the international front. The number of Soviet advisers with the Sudanese army was severely curtailed after 1971, although Soviet complicity in the coup was never proved, and Khartoum began to enjoy warmer relations with conservative Arab States and with the West. It also failed to join the Federation of Arab Republics when that ephemeral union was created in late 1971, out of deference to the south.

Nimeiri's greatest achievement, by universal consent, was to end the 17 year-old civil war in 1972. During the first years of his power he had followed in his predecessors' footsteps in attempting a military solution, and the army had grown faster

World Armies

than ever: by 1972, it numbered 50,000 men. No significant progress had been made in pacifying the devastated southern provinces, however, and it was becoming ever clearer that the *Anya Nya* was receiving aid from both Ethiopia and its then close collaborator, Israel — in Addis Ababa's case, to keep a radical neighbour from turning its attention outwards, in Israel's case to prevent Sudan from adding its weight to a pan-Arab anti-Israel front. There was also an element of retaliation in Ethiopia's support for the *Anya Nya*, since Sudan had shown itself very sympathetic towards a similar long-running nationalist revolt in the north of the Ethiopian Empire — that of the Eritreans (many of whom were Muslim and partly Arabised) against their Christian Ethiopian rulers.

The formula for ending the war which Nimeiri successfully adopted, therefore, was to exchange a cessation of Sudanese aid to the Eritrean guerrillas for an end to Ethiopian assistance to the *Anya Nya*. (Without Ethiopian complicity, of course, no Israeli aid was possible.) At the same time a wide degree of autonomy was agreed for the three southern provinces, and an accord was signed in Addis Ababa on February 28th, 1972. The agreement has worked remarkably well — almost all of the million-plus refugees had returned to Sudan within a year, and the reconstruction of the region's shattered economy and communications was put in hand as quickly as Sudan's very limited means permitted. The former guerrilla commander, General Joseph Lagu, was made commander of the First Division, the principal army formation which remains in the south, and approximately 6000 former *Anya Nya* fighters were recruited into it in order to achieve a 'fifty-fifty' balance between southern and northern troops. Many other former guerrillas were absorbed into the local administration, and southern political leaders were also taken into President Nimeiri's cabinet. The sense of a distinctive local identity and the chronic suspicion of the Arabising, Islamising intentions of the northerners remain strong in the south, but since 1972 — at least until very recently — President Nimeiri's government has been at some pains to avoid affronting these sentiments by, for example, an open commitment to the goal of pan-Arab unity.

During 1973 and 1974 Nimeiri consolidated his personal rule and the newly pro-Western tendencies of his regime, easily surviving coup attempts in each year supported by right-wing and left-wing politicians in exile. There was a growing flow of investment and glowing promises of even greater sums from the oil-rich Arab Gulf States, principally directed towards large agricultural development schemes intended to realise some of the Sudan's alleged potential as the 'breadbasket' of the Arab world (although a number of these schemes have failed to yield a satisfactory return). There was also, however, a gradually increasing disposition on the part of Libya's Colonel Qaddafi, angered by Sudan's defection from the cause of instant Arab unity, to support the exiled Sudanese right/religious opposition in their attempts to overthrow Nimeiri.

The money and nearby bases which thus became available to Sudanese exiles made their chronic coup attempts far more dangerous, although the first which is definitely known to have been mounted with Libyan support, that of September, 1975, was crushed in a record 102 minutes. Nineteen plotters were subsequently executed, but the chief Sudanese opposition leaders, ex-Prime Minister (1966-7) Sadiq al-Mahdi of the Ansar and Sherif al-Hindi of the banned Sudanese National Party, united in the National Front under the leadership of the former, remained in exile to try again. Their final effort, in July, 1976 was by far the bloodiest attempted coup Sudan has ever experienced.

Libya began planning the 1976 coup immediately after the failure of the September, 1975 attempt, but on this latter occasion it amounted almost to an invasion. Insufficient numbers of willing Sudanese exiles were available for the assault on Khartoum, and so a group of Chadian, Malian, Zanzibari, Eritrean and other 'revolutionary volunteers' resident in Libya were added to the group. Some 1500 volunteers were assembled and trained at Libyan camps in the Jebel Uweynat area, near the Sudanese-Libyan-Egyptian border, and were there provided with vehicles and arms on a generous scale. The coup was scheduled for the return of President Nimeiri from a trip abroad early on July 2nd, 1976, to commence with the assassination of Nimeiri and the other leading regime figures at the airport. Most of the rebel force and their light arms were infiltrated across the long, unguarded border into the Khartoum area some weeks or more in advance. The convoy of trucks bearing the heavy equipment, shells and rockets and the hard core of the rebel force made the 3 day drive from the border to Khartoum by little-known desert routes with the aid of local guides, arriving in the capital just in time for the coup.

President Nimeiri survived, and the coup just barely failed, principally because he arrived at the airport an hour ahead of schedule, and so was able to escape from the initial assault. The rebel assault groups nevertheless succeeded in seizing the offices of the President, the Armed Forces General Headquarters, most of the government ministries, the main military barracks and the armoured units' camp at Shajara south of Khartoum, as well as the bridges connecting the three parts of the capital. Others seized the radio station at Omdurman (though it was put out of action in the fighting, thus preventing them from mobilising popular support for the coup), and commenced disarming police and soldiers. Nimeiri, however, managed to reach his previously prepared secret command post in the city, and organised his counter-attack.

With the aid of units summoned from outside the city and the 1500 man Sudanese brigade stationed in the Suez area, which was airlifted back to Khartoum by the Egyptian air force in 28 emergency flights, Nimeiri succeeded in recapturing the capital after 36 hours of fierce street battles. Other Egyptian aid included reconnaissance flights over the Jebel Uweynat area to locate the rebels' lines of logistical supply, technicians to repair the recaptured radio station, military equipment and medical aid, and an offer of Egyptian troops (which proved unnecessary). The failure of the rebels to capture the airport, which permitted the Egyptian aid, denied the rebels reinforcements and prevented the landing of al-Mahdi and al-Hindi to rally their own supporters, was probably the event that sealed their fate.

Approximately 700 people are known to have been killed in the street fighting, which reduced central Khartoum to a shambles and caused an estimated \$300,000,000 in damage. Many air force aircraft and the entire stock of spare parts for the

air force's Soviet and Chinese MiGs was destroyed in the fighting at the airport. Ninety-eight captured rebels and suspected local co-conspirators were executed after summary trial, and numbers of other suspects disappeared. The Sudan severed diplomatic relations with Libya, and charged it with aggression both at the UN Security Council and before the Arab League Council. As well as being the most serious and bloody coup attempt faced by Nimeiri, however, it proved to be the last, and a turning point in other ways as well.

At the time Nimeiri came to power in 1969 Sudan had been a weak radical State in an area of other militarily weak, mostly conservative States: the international dimension was not very relevant, even when there were sharp ideological differences between neighbouring regimes. By 1976, however, Sudan had a militantly radical neighbour in Libya which was already becoming a formidable military power as well as a generous financial backer of anti-Nimeiri plots. Ethiopia on the other side of Sudan had just acquired a Marxist regime, and was on the brink of receiving massive arms aid from the Soviet Union. The Sudanese regime in the meantime had been forced to retreat from radicalism because of Nimeiri's quarrel with the communists and the need for investment from the rich, conservative Arab States. Nimeiri was also convinced that Moscow must have been aware of Libya's involvement in the 1976 coup attempt, and given its approval. Thus it seemed that the only course still open to Khartoum by mid-1976 was to complete the process that had been creeping forward since 1971, and openly to take refuge in the conservative camp of the Arab world.

On July 15th 1976 therefore, less than 2 weeks after the attempted coup, Sudan concluded a joint defence agreement with Egypt which gives each government the right to intervene with force in the event of an attack on the other. The treaty does not specify external attack, nor need the intervening force receive an invitation first: in other words, it is primarily a treaty whereby Egypt guarantees to itself and President Nimeiri that no pro-Libyan regime will suddenly emerge in Khartoum. After concluding this treaty, Presidents Nimeiri and Sadat travelled together to Jeddah in Saudi Arabia, where the arrangement received the blessing of the third, 'silent' partner, King Khaled.

Since then, the consequences of this decision have reverberated through almost every aspect of the Sudan's internal and external affairs. Ethiopia has become an openly hostile neighbour, and Libya has grown further in power while not diminishing in hostility. Khartoum has expelled the last Soviet military advisers, and begun re-equipping its armed forces with American weapons. The regime has been obliged to embark on a process of domestic liberalisation and political reconciliation with its right-wing opponents whose end is not clear, and whose results in terms of the internal political balance are already putting into peril the settlement of the north-south civil war.

For further comments, see Current Developments.

STRENGTH AND BUDGET

The strength of the Sudanese armed forces is 52,100 men, of whom the overwhelming majority, 50,000, belong to the army. The air force has 1500 men, the navy only 600. There are in addition paramilitary forces numbering 3500 men, made up of 2500 Border Guards, 500 National Guard and 500 Republican Guard, the latter two bodies both being primarily concerned with the security of the President. There is no organised reserve.

The Sudanese armed forces grew tenfold in strength during the years 1956-1972, principally in response to the demands of the war against secessionist guerrillas in the far south. Since the peace settlement of 1972, however, numbers have been completely stable. They comprise only 0.25% of the population.

Sudanese defence expenditure in 1977-8 was £582,600,000 (\$237,000,000), a fairly modest share of the GNP of \$4,400,000,000 by regional standards, but a sharp increase on the 1975-6 defence budget of \$131,400,000. The bulk of the armed forces' ambitious re-equipment programme, however, is being paid for by Saudi Arabia, not the Sudanese government. It was reported in Khartoum in 1977 that the Saudis had promised Sudan \$250,000,000 to help in procuring arms in the West, which if not accurate at least gives an indication of the scale of Saudi aid.

COMMAND AND CONSTITUTIONAL STATUS

The Defence Minister, appointed by the President, exercises executive control over the armed forces as Commander-in-Chief. He is invariably an army officer. Immediately below him are the Chiefs of Staff of the Army, Navy and Air Force, who are responsible for the operational control of their respective services. In practice, the army dominates in all defence matters. The Defence Ministry and the three service headquarters are all located in Khartoum, and headquarters staffs are modelled on the British pattern. There are six major regional command headquarters: the Khartoum Garrison; Central Command at Al Ubayyid; Eastern Command at Qadarif; Western Command at Al Fashir; Northern Command at Shandi; and Southern Command at Juba.

In practice, military officers are frequently employed in senior positions in the civilian departments of government while still on active service. A further and even more significant expression of the officer corps' influence is the Senior Officers' Congress, a body set up by Nimeiri without formal powers in which the top 11 officers of the armed forces high command, plus fluctuating numbers of other senior officers, meet regularly with the President, the Defence Minister and the Army Chief of Staff to discuss political and diplomatic, as well as military, problems.

World Armies

According to the Sudanese–Egyptian treaty of July, 1976 there is a joint defence council comprising representatives of both countries' defence and foreign ministries, and also a joint chiefs of staff organisation, both of which are to meet regularly.

Since 1978, President Nimeiri has also personally held the linked posts of Defence Minister and Commander-in-Chief. The Army Chief of Staff is General Muhammad Abdul Majid Khalil.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The primary roles of the army are the defence of the borders and the preservation of internal security, with emphasis always upon the latter. Indeed, for the first 15 years of independence, with virtually no external threats along the borders and a relatively low coup rate, virtually the only task of the army was the suppression of the revolt in the three southern provinces of Equatoria, Bahr-el-Ghazal and Upper Nile. By the end of that period three-quarters of the army was deployed in the south, and almost all of the Frontier Guard was along the southern borders.

The end of the southern revolt in 1972 brought a change in both the role and deployment of the army. The troop strength in the south was reduced to about 12,000, of whom half were former *Anya Nya* guerrilla fighters who had been accepted into the army's First Division there in accordance with the peace terms. The main military role was still internal security, but in 1970–76 the principal danger was, first, insurrection by the Ansar sect in the Arab north and centre of the country, and later attempted military coups of increasing violence which received major support from Libya. The army in this period was repeatedly purged, and appointments and troop movements were made with the principal goal of making it hard to organise a coup. Certain redeployments were made towards the Libyan border region, but the main principle was to keep unreliable or doubtful troops away from the capital.

In the third period (post-1976), coups were judged less likely in view of the Egyptian alliance and the policy of 'national reconciliation' which brought most of the exiles home. On the other hand, both Libya and Ethiopia had become intensely hostile, and were rapidly being built up into major military powers by the Soviet Union; in addition, Libyan influence was extending all the way down the Sudan's western border due to Tripoli's growing control over the Muslim rebel forces in Chad. Thus, for the first time, it was assessed that there was an actual external military threat to the Sudan's integrity.

This is the reason for the relatively large arms-purchasing programme Khartoum has commenced since 1976: it is seeking to upgrade an army equipped almost solely for counter-insurgency tasks into a force capable of offering a stout defence in conventional warfare. (Of course, the new availability of Saudi money to pay for new weapons undoubtedly also played a role.) The bulk of this expenditure on new equipment is going to the air force, whose combat strength is to triple, although it will be extremely thinly stretched to provide air defence, military airlift, reconnaissance and ground support over an area of almost a million square miles. Similarly the navy, whose principal task until recently (apart from the Nile River patrol unit) was the control of smuggling along the Red Sea coast, is being upgraded into a more serious fighting force. This will take some time, however, and in the meantime it is noticeable that the Saudi Arabians are making extensive use of the Suakin naval facilities, south along the coast from the main Sudanese naval base of Port Sudan, for their own growing Red Sea flotilla of FPBs.

It must be pointed out that none of these measures will make the Sudanese armed forces remotely comparable in quantities of modern military equipment to the Ethiopian or Libyan forces. Equally, however, it should be noted that the distances in the Sudan are so vast, and vital centres so far from the desert borders, that it is almost impossible to take the idea of a major land invasion from either Libya or Ethiopia seriously. Libya may rejoice in 2000 tanks, but over 1000 miles of open desert lie between their normal bases and the nearest significant Sudanese city. This strategic situation underpins the logic of concentrating on the upgrading of the Sudanese air force, for defence against the only kind of attack that would be likely to reach Sudan's vital areas.

The only other serious military threat to the Sudan is the kind of foreign-backed assault force, infiltrated into the country, that briefly seized Khartoum in 1976. Against that President Nimeiri now has the guarantee of the Egyptian alliance, with its undertaking to provide Egyptian troops instantly and without prior request to forestall or reverse any repetition of that event. Although the treaty in theory lays an obligation on each partner thus to protect the other, in practical terms it is not to be interpreted as involving any commitment for the Sudan to furnish troops beyond its own borders in defence of the Egyptian government except, perhaps, in token quantities, as was the case with the 1500 man Sudanese brigade that was stationed in the Suez area in 1967–76. The only Sudanese troops now deployed abroad are 1000 men serving with the Arab Deterrent (peace-keeping) Force in the Lebanon, and it was announced in early 1979 that they would shortly be withdrawn. The country belongs to the United Nations, the Arab League and the Organisation of African Unity, but it has no military commitments beyond its own borders except the bilateral agreement with Egypt.

The Sudanese army's operational experience since independence has all been in internal war in the south of the country. In view of the length and scope of that war, that means that most officers of middle rank and above are combat veterans well versed in the art of guerrilla and counter-guerrilla war — especially as numbers of them fought on the guerrilla side — but none has experience of modern conventional war. The warrior traditions of many Sudanese tribes and the evidence of previous wars in the colonial era, however, suggest that Sudanese troops would prove once again to be tough and effective fighters.

ORGANISATION

Arms of Service

The arms and services are the same as those of the British army. Each branch maintains its own specialist school: the infantry school is at Jubayt in the Red Sea Hills; the artillery training establishment is at Atbara on the Nile north of Khartoum, and the armoured school is at Shajara camp just south of the capital. The engineer, ordnance, service, signal and medical corps installations are all in or near the Three Towns (Khartoum, North Khartoum and Omdurman).

Operational

The Sudanese army is primarily an infantry force, with seven infantry brigades. There are two armoured brigades and one parachute brigade, supported by three artillery regiments, two air-defence artillery regiments, and one engineer regiment. The brigade structure is akin to that of the British army, incorporating elements of all the requisite branches of service. There is a divisional level of organisation above the brigade structure, but it is mainly of administrative significance.

The air force is organised on a squadron basis similar to that of the British Royal Air Force. There is one interceptor squadron, one fighter-ground attack squadron, one transport squadron and one helicopter squadron. Major air bases are at Khartoum, Malakal, Juba, Atbara, Al Obeida, Al Fashir, Wad Medani, Dongola, Merowe, Waw and Port Sudan.

RECRUITMENT, TRAINING AND RESERVES

Before 1945 the Sudanese army's native-born officers were mainly drawn from upper-class families with inherited wealth and prestige, but in the decades following World War II there was a pronounced shift towards recruitment from the growing middle class of merchants and civil servants. Cadets were selected on merit through competitive examinations, but ignorance of the Arabic language barred most southerners from joining, while the stiff educational requirements meant that most successful applicants came from the Three Towns or the few other towns where there were secondary schools.

Officer training was done at the Arab Military Academy in Khartoum, where cadets were trained to high standards in a 2 year course. The average 1950s graduating class of about 60 officers had grown to about 500 in 1972, however, principally due to the heavy demand for officers occasioned by losses in the war in the south and purges in the heavily politicised officer corps. Although the course was extended to 3 years in 1960, this rapid expansion did entail a drop in standards during the later 1960s. Standards have since recovered.

After graduating as second-lieutenants, young officers attend the appropriate branch school for specialist training where necessary, and then join their units. Refresher courses in tactics and general ground forces combat skills are given by the infantry school at Jubayt. At the top of the system is the Sudan Staff College in Khartoum. Sudanese officers also frequently go abroad for technical and professional courses, principally to Egypt, Great Britain, Pakistan and the USA. Many officers have served for extended periods in the Egyptian armed forces, and some received training in the USSR in the early 1970s.

The principal foreign assistance in training was provided by a British military mission until 1970, when the new Nimeiri regime replaced it with a Russian training mission. This was drastically reduced in size after the communist involvement in the abortive 1971 coup, however, and by 1973 the British training unit had returned. The last remnants of the Russian mission were expelled in 1977. The British army still provides numbers of officers and NCOs in training roles — including that of Chief Instructor at the Staff College — but there is now considerable Egyptian assistance as well.

Recruitment of enlisted ranks in the pre-independence army was concentrated in certain warrior tribes, notably the Beja of the northern desert. Few men from the sedentary groups along the Nile River enlisted, and virtually none from the non-Arab south. The first attempt to remedy this latter defect in the years just before independence was defeated by the revolt, in which almost all the army's southern officers and men deserted to the rebel side. When southerners again began to be recruited into the army, they were invariably required to serve in the north under northern officers.

It is still true today that certain tribal groups are over-represented in proportion to their numbers in the nation as a whole. As part of the 1972 agreement ending the civil war, however, the First Division which is based in the southern provinces was to be made up of 6000 northerners and 6000 southerners, the latter being drawn from the ranks of former *Anya Nya* fighters. (In fact, southerners now make up more than half the division's strength.) Northerners and southerners serve in basically single-community units, although supporting elements may be drawn from the other community. The divisional commander and many of the officers are drawn from the south (the first commander, 1972–8, was General Joseph Lagu, formerly Commander-in-Chief of *Anya Nya*). The integration of southern ex-guerrilla officers was accompanied by intensive training in the Sudan and abroad to raise them to the professional standards prevailing in the regular army.

In 1971 the government established a system of conscription applying to all men between eighteen and thirty, and requiring young men to report for 2 years of military service after their eighteenth birthday. The system includes the usual provisions for educational and humanitarian exemptions and deferments, and university and secondary-school graduates are required to serve shorter periods of time. In fact, however, approximately a quarter of a million Sudanese males reach their eighteenth birthday each year, which is vastly more than the armed forces need or the nation could afford. Moreover,

World Armies

an army career has such attractive material benefits and prestige, compared to what most potential recruits could expect to receive in civilian life, that the volunteers greatly exceed the available places. In general, therefore, enlistment is voluntary, and conscription is rarely applied in practice.

New recruits receive their basic training within the major regional command controlling their area, and further training on the job within their assigned unit. NCOs receive further technical training in their specialities at the appropriate branch school.

The air force depends on foreign sources for virtually all of its training, both of flying personnel and ground crews. This has been provided mainly by Britain, the USSR (briefly) and Egypt. Almost all Sudanese naval personnel were trained by Yugoslavia.

The Sudanese army has a fairly low personnel turnover, so there is not a large body of trained former soldiers in the country. There is no formal reserve organisation.

EQUIPMENT AND ARMS INDUSTRY

Until the mid-1960s most of the Sudan's military equipment was bought or acquired as aid from Britain, the USA and other Western countries. After the 1967 war in the Middle East, however, the government drastically reduced or cancelled all overt aid from the USA and West Germany, and during 1968 arranged for extensive military aid from the USSR instead. This continued for a number of years, at precisely the time when the army and air force were expanding most rapidly, with the result that the bulk of the equipment in these services is of Soviet origin, most of the rest being British. The exception is the navy, most of whose ships have been furnished by Yugoslavia.

The disadvantage of this exclusive reliance on Russian arms supplies became clear after the 1971 coup attempt and Nimeiri's repression of the Sudanese Communist Party, when Soviet-Sudanese relations cooled markedly and the difficulties in obtaining spare parts from the USSR, which are customary in such situations, began to make themselves felt. By 1976 a great deal of the Soviet-supplied weaponry was inoperable, and the alliance with Soviet-armed Egypt in that year scarcely helped matters as Cairo was suffering from its own Russian arms and spares embargo.

This change of front did make Gulf oil money available to the Sudan for defence purchases, however, and so it went shopping in the West. Its first request for United States combat aircraft in 1976 was refused, only transport aircraft being sold, but by mid-1977 both France and the USA had agreed to sell various weapons to Khartoum. Subsequent purchases have also been made from Canada and Brazil. Sudan's total proposed expenditure on Western military purchases was reported in late 1977 to be in the vicinity of \$500,000,000, but of this it is believed that Saudi Arabia has agreed to contribute \$250,000,000 and the United Arab Emirates \$85,000,000 (the latter mainly for purchases from France).

The main armoured strength of the Sudanese army at present is 70 T-54 and 60 T-55 medium tanks, and 30 Chinese-made T-62 light tanks. It also operates 50 Saladin armoured cars and 60 Ferret scout cars. The APCs are Soviet-, British- and American-built: 100 BTR-40/-50/-152s, 60 OT-64s, 49 Saracens and 45 Commandos. 50 AMX-10 APCs are on order from France.

The artillery arm of the Sudanese army consists of 55 25 pounder, 40 100 mm, 20 105 mm and 18 122 mm guns/howitzers, and 30 120 mm mortars. It also has 30 85 mm anti-tank guns, and 80 40 mm and a total of 80 37 mm and 85 mm anti-aircraft guns, but no guided anti-tank or anti-air weapons.

The air force has 10 MiG-21MF interceptors and 12 ex-Chinese MiG-17 fighter-ground attack aircraft, but it is doubtful if they are all serviceable. On order from the USA are 10 F-5E and two F-5B Tiger II fighters at a cost of \$80,000,000, and 24 Mirage 50 and 14 Mirage III fighters have been ordered from France. Transport aircraft include six C-130H Hercules, six An-12s, five An-24s, four F-27s, one DHC-6, four DHC-5Ds and eight Turbo-Porters; six EMB-111P2 transports are on order from Brazil. The helicopter squadron has 10 Soviet Mi-8 and 10 West German BO-105 helicopters; 10 Puma helicopters are on order from France. In April, 1978 the United States Defense Department announced that it would sell the Sudan Westinghouse communications equipment and six air-defence radar systems at a price of \$71,000,000, to provide an austere air-defence network covering much of the country.

The navy operates six large patrol craft (two ex-Yugoslav *Kraljevica*-class) and three smaller patrol boats which were furnished by Iran. The six FPBs are Yugoslav '101'-class. There are also two LCTs and one landing craft utility.

United States Defense Secretary Harold Brown announced in February, 1979 that in addition to the 12 F-5s on order the USA would sell the Sudan two further C-130 Hercules transports, 50 M-60 tanks and 100 M-113 APCs. If the United States Congress approves this sale, the cost will be met by Saudi Arabia.

There is no arms industry in the Sudan, and the country is dependent on foreign sources for almost all spare parts and for technical training on the more sophisticated weapons systems. For example, the agreement to purchase Mirage fighters and Puma helicopters from France is accompanied by an arrangement whereby France not only trains the pilots for these aircraft, but also provides French technical personnel on secondment to maintain them.

RANK, DRESS AND DISTINCTIONS

The rank structure of the Sudanese armed forces is patterned on that of their British equivalents. The military commander is a *ferik*, equivalent to a lieutenant-general.

Army uniforms are khaki, cut like those of the British army. NCOs' rank is shown by chevrons or a combination of chevrons with a star or eagle worn on the upper sleeve. Officers' rank insignia in ascending order is one, two or three stars for lieutenant to captain; an eagle for major; an eagle plus one, two or three stars for lieutenant-colonel to brigadier; and a star, crossed swords and baton for a major-general. The *ferik* wears an eagle, crossed swords and a baton.

No information is available on Sudanese honours and distinctions.

CURRENT DEVELOPMENTS

The size of the Sudanese armed forces has remained stable since the period of headlong expansion to cope with the civil war ended in 1972, and their equipment, never suitable for anything other than internal security operations, may even have deteriorated since then due to the disruption involved in changing from Soviet to American and French arms suppliers. Yet since 1972 the Sudan's international environment has grown immeasurably more dangerous. It now has a militantly pan-Islamic, pan-Arab Libya on one side, and a militantly Marxist Ethiopia on the other, both of which are deeply hostile to the Sudan's present regime and orientation. Moreover, both neighbours are now exceedingly well equipped with large numbers of the most modern weapons supplied by their principal patron, the USSR, which also does not approve of the present Khartoum regime. With Libyan control or influence now extending throughout most of Chad, the Sudan now faces hostile powers along most of its borders. It is far too weak to counterbalance them itself, and has been compelled to place itself almost entirely under Egyptian protection.

The very first consequence of this was to cause a total rupture of relations with the Marxist regime of Ethiopia, which was already suspicious of Sudanese sympathy for the Eritrean secessionist movement, and quite accurately regarded the Sudan's new partners, Egypt and Saudi Arabia, as the leading supporters of the concept of a totally 'Arab' Red Sea including an independent Eritrea. By the end of 1976 the polarisation of the entire region into pro-Soviet and pro-American camps had gone so far that Ethiopia had permitted Mahdist rebel forces from the Sudan to open training camps on its soil. Khartoum responded by openly declaring its support for Eritrean independence and covertly assisting in the flow of arms to the guerrillas. By February, 1977 it was also providing facilities on Sudanese territory, including propaganda broadcasts, to other Ethiopian rebel groups such as the Ethiopian Democratic Union, despite the manifest danger that Addis Ababa might reply by returning to the previous regime's practice of supporting revolt in the southern Sudan.

The deeper involvement of Khartoum in Arab politics also involved adherence to the unified political command created by Egypt and Syria in late 1976 (and soon afterwards destroyed), a commitment to the eventual total unification of Egypt and the Sudan, the despatch of a unit of the Sudanese army to serve with the Arab Deterrent Force in the Lebanon, and open support for President Sadat's visit to Jerusalem and the Arab-Israeli peace initiative. The last action, in particular, embroiled the Sudan more deeply than ever before in the bitter inter-Arab quarrels of the Middle East, making it appear virtually a satellite of Egypt. Like Egypt, the Sudan was punished by the USSR for its new orientation by being made the victim of an almost complete embargo on spare parts for its Soviet-supplied weapons, and like Egypt it retaliated by expelling the 90 Soviet military advisers in the country and instructing Moscow to halve the number of its embassy staff in May, 1977. (The Soviet decision to provide Ethiopia with virtually unlimited arms and Cuban troops also contributed to Khartoum's action.) Once cut off from Soviet arms supplies, the Sudan, like Egypt, turned to the USA for weapons, only to find that they were not so readily forthcoming from this source. (See Equipment and Arms Industry.)

While thus trying to secure his position on the international front, President Nimeiri also embarked on a dramatically new policy of 'national reconciliation' with his exiled right-wing opponents in order to safeguard against any repetitions of the 1976 coup attempt. This daring and extraordinary experiment, begun at a meeting between regime and National Front representatives in London in January, 1977, only 6 months after the coup attempt, was consummated in an eight-point agreement concluded between President Nimeiri and Sadiq al-Mahdi at a secret meeting in Port Sudan in July, 1977. This agreement provided for: the release of all political prisoners (numbering about 1200); revocation of all measures of dismissal from office or confiscation of property applied against political opponents of the regime since 1969; revision of the structure of the single permitted party, the SSU, to permit participation of former opposition figures and free elections at every level; an end to discrimination against the Ansar sect; and various other measures dealing with civil liberties.

In July, 1977 the National Front ratified the agreement and Sadiq al-Mahdi returned home. Most of the other Ansari and Muslim Brotherhood exiles did likewise, although Sherif al-Hindi and his adherents ultimately refused to do so and remained abroad, breaking away from the National Front to form the Unionist Democratic Party. In February, 1978 elections were held for a new People's Assembly (legislature), in which individuals closely connected with the pre-1969 political parties of the right, including some recently released political prisoners, were permitted to run on the SSU ticket: of 225 elected members of the new assembly, at least 80 were closely associated with the Umma Party, the Muslim Brotherhood, or the Unionist Democratic Party.

By May, 1978 all political prisoners had been amnestied, including even the communists, although there still does not seem to be room for the latter group within the 'national reconciliation' so far as participation in politics is concerned. No senior government positions have been granted to any of the right-wing/religious opposition leaders either, but a significant concession was made in 1978 with the creation of a commission to study whether Sudanese law should be revised to conform with the strict Islamic 'Sharia' code.

World Armies

However, all these post-1976 measures, domestic and external, which have done a great deal to ensure the security and tranquility of northern, Muslim Sudan — the alliance and projected union with Egypt, the readmittance of the Islamic right to national politics, the confrontation with Ethiopia and all the rest — have tended to work precisely the opposite effect in the formerly rebel south of the country. The black, non-Muslim southerners trust very few northerners except Nimeiri, and the whole trend towards an increasing pro-Arab and Islamic influence in the government of the country deeply disturbs them. (Thus, for example, Mr Bona Malwal, a leading southerner in the government, successfully demanded that non-Muslims be placed on the law commission.) Similarly, hostile relations with Ethiopia raise the possibility that Addis Ababa might return to the policy of encouraging and supporting a revolt in the southern Sudan.

Signs of renewed restiveness in the far south have already appeared, although they are by no means decisive. There were two minor mutinies of southern troops in March, 1975 and February, 1976, basically arising from clashes between former *Anya Nya* and northern soldiers. A rather more serious plot was uncovered in February, 1977 involving 28 officers who had been about to take control of Juba, the most important town in the south, 'liquidate' the local representatives and supporters of the central government, and create a 'revolutionary regime' which would proclaim the independence of the south. Despite the arrest of the leading plotters, a company of mutinous southern air force troops did attempt to take over Juba airport in early February, and were killed to the last man in the subsequent fighting.

Outside the army, southern resentment and anxiety was also clearly on the rise. In the February, 1978 elections to the south's People's Regional Assembly, an autonomous body elected by genuinely free vote from which the members of the regional government, the Higher Executive Council, are almost exclusively drawn, the group led by Abel Alier which had ruled the south since the peace settlement in 1972 was crushingly defeated. The new President of the Higher Executive Council — and therefore Vice-President of the Sudan — is Joseph Lagu, formerly Commander-in-Chief of the *Anya Nya* guerrillas. It would be rash to predict a renewed insurgency in the south — especially as there has been no evidence that Ethiopia is attempting to instigate such a thing — but it is also clear that there are a number of trends in the Sudan which are working in its favour.

One of President Nimeiri's policies for defusing this danger has been to seek a degree of rapprochement with those foreign powers which might support a southern insurgency (while nevertheless clinging tightly to the Egyptian link.) Thus the Sudan encouraged the return of the Soviet ambassador in the spring of 1978 following his withdrawal by Moscow in the previous year, and resumed diplomatic relations with Libya in February, 1978. During the latter part of the year President Nimeiri even collaborated with Colonel Qaddafi in seeking to arrange a ceasefire in the war in Chad, thus tacitly recognising the achievement by Libya through armed force of the position virtually of protecting power in that country.

Partial reconciliation with Ethiopia was more difficult in view of the continuing Eritrean revolt, but a beginning was made in late 1977, after mediation by Sierra Leone. The manifest inability of the rival Eritrean guerrilla movements to achieve genuine unity even at the height of their power in early 1978, when they controlled over 90% of the province, has contributed to a substantial Sudanese disillusionment with their cause. Moreover, during the course of 1978 the other Ethiopian anti-regime movements which had briefly enjoyed Khartoum's support were militarily crushed by Addis Ababa, and a substantial measure of control had also been re-established over Eritrea by the end of the year by Ethiopian forces heavily supported by Cuban troops and Soviet advisers.

The prospect of playing semi-permanent host to more than a million Eritrean refugees and exiles, mostly of radical political views, is most unattractive to Sudan, which fears that they might turn into the sort of problem the Palestinian refugees have caused in Jordan and the Lebanon, so in early 1979 President Nimeiri ended his support for outright Eritrean independence and devoted all his energies to mediating a peaceful settlement. To this end he backed a third attempt to unite the two main Eritrean guerrilla organisations in late January, 1979, and was a main influence in persuading the joint political leadership to seek a negotiated settlement with Addis Ababa that fell short of full Eritrean independence.

In mid-February, 1979 Nimeiri travelled to Freetown, Sierra Leone to meet the Ethiopian revolutionary leader Colonel Mengistu Haile Mariam to discuss an Eritrean settlement. It is far from certain that a compromise solution is possible, however, as Ethiopia's recent military successes greatly reduce the pressure on Addis Ababa to make the kind of concessions on Eritrean autonomy that would be necessary. President Nimeiri's ability to bring pressure on the Eritrean guerrillas to settle, moreover, is greatly restricted so long as his principal military ally and safeguard, Egypt, and the paymaster of his armed forces re-equipment programme, Saudi Arabia, remain opposed to a settlement on Ethiopian terms.

In his own person, and in only one decade, President Nimeiri has travelled a political path from Nasserist radicalism to pro-American conservatism that took Egypt a quarter of a century under Nasser and Sadat: the forces driving the transformation were similar, but were operating on a much weaker State and a far more fragile regime. At the end of this pilgrimage, the Sudan finds itself in much the same quandary as Egypt: tied to a tacit alliance with the USA, which seems unable to produce the political benefits, the hoped-for investment, or even the urgently needed arms expected from it in sufficient quantities, and tied as well to ultra-conservative paymasters in the conservative Arab oil States, above all Saudi Arabia, whose demands create great difficulty for government policy. In the Sudan's case, the support which the Saudis have given to the drive for an increased role for Islam (and indeed, their role in the entire reconciliation between the regime and the right/religious opposition) has recreated the suspicion and hostility towards northern intentions in the non-Muslim south which last time led to a 17 year civil war.

Moreover, the Sudanese regime, like the Egyptian, is now threatened by the radicalism which it once espoused itself —

not only the Marxist radicalism of Ethiopia and the pan-Arabist radicalism of Libya, both supported by an aggrieved former Soviet patron, but perhaps more importantly by the new brand of revolutionary movement loosely known as 'Islamic Marxism'. The circumstances of urban deprivation and cultural backlash against rapid Westernisation which fuelled the Iranian revolution are equally present in the Sudan, where the degree of absolute poverty is far worse. In Sadiq al-Mahdi, leader of the militant Ansar sect, the country possesses a figure with a revolutionary potential perhaps greater than the Ayatollah Khomeini, as he combines an insistence on strict application of Muslim law in social and economic affairs with political aims akin to those of Eastern European-style State capitalism, including the eradication of the privileged middle class. The recent policy of 'national reconciliation' may have forestalled an Iranian-model upheaval in the Sudan, but the possibility of such an event remains.

The danger of external attack or intervention has probably diminished considerably in recent years, despite the fact that internal wars are being fought in three of the Sudan's seven neighbours. Unless the Sudan's attempted reconciliation with Ethiopia and mediation of the Eritrean war fails utterly, there is small chance of an externally inspired revival of the secessionist war in the south. The principal focus for externally sponsored coup attempts, the leaders of the Ansar and the Muslim Brotherhood, have returned to Khartoum, and the Egyptian military guarantee is valid against coups as well as invasions. So long as the bulk of the Sudanese officer corps remains loyal to Nimeiri, efforts to overthrow him by dissident groups are unlikely to succeed.

What is probably the most alarming development for President Nimeiri, therefore, is the ferment which his recent domestic and foreign policies have caused in the army's officer corps. His long-time military supporters, who have gained a major role in the civil administration, now find themselves competing for jobs and influence with newly returned or amnestied beneficiaries of the 'national reconciliation' policy. Other substantial sections of the officer corps, understandably less vocal, continue to have secret Marxist/communist loyalties, or are associated with the Unionist Democratic Party of Sherif al-Hindi, who has refused to join in the reconciliation. Throughout the army, moreover, there is strong antagonism towards the predominating Egyptian and Saudi influence on the regime and the armed forces.

This was strikingly illustrated in the January, 1978 meeting of the Senior Officers' Congress, chaired by the Chief of Staff, General Muhammad Othman Hashem, to which, unusually, President Nimeiri and his Defence Minister, General Bashir Muhammad Ali, were not invited. They attended anyway, and were confronted with a solid front of criticism about the joint defence pact with Egypt, the reappearance of disaffection in the south, Sudanese policy in the war in the Horn, and the rising influence of the Ansar and the Muslim Brotherhood under the national reconciliation programme. At almost the same time, but in an apparently unrelated incident, five officers and 12 NCOs were arrested for plotting to overthrow the regime.

Nimeiri responded to this challenge by summarily dismissing seventeen of his most outspoken officer critics (including three generals) from the army. Later in 1978, he also dismissed his Defence Minister and his Chief of Staff. The latter was replaced by Brigadier Muhammad Abdul Majid Khalil, a Nimeiri loyalist, but the President assumed the post of Defence Minister and Commander-in-Chief himself. It is not possible, however, to assess how far these measures may have succeeded in removing the centres of dissent within the armed forces.

Predictably, moreover, President Nimeiri's ever closer alliance with Egypt is causing a dangerous degree of discontent in the two most sensitive civilian communities in the Sudan: the Ansaris and the southerners. When Nimeiri was one of the few Arab leaders to come out in support of President Sadat's agreement to the Camp David terms for an Arab-Israeli peace settlement in 1978, Sadiq al-Mahdi abruptly resigned all his new posts in the Sudan Socialist Union in October and went abroad. When President Sadat subsequently visited Khartoum in January, 1979 for the second Sudanese-Egyptian joint parliamentary session and took the opportunity to promote his plans for creating a strong union between the two countries, a group of eight members of parliament from the southern region, claiming to represent the National Assembly's entire southern contingent of 60 MPs, denounced the Egyptian policy as 'neocolonialist' and utterly rejected the idea of union.

It is difficult to conceive of any other issue which could unite the officer corps, the Ansaris and the southerners against government policy. If President Nimeiri's Egyptian alliance should accomplish this miracle, as seems increasingly possible, then he will face a more serious challenge to his power than any that has gone before.

GWYNNE DYER

SURINAM

The Republic of Surinam, a former Dutch colony on the north-eastern coast of South America which received its independence in 1975, has a population of about 275,000 people, only two-thirds of the number who lived there in 1974. The remaining third of the population, most of whom had never previously been abroad in their lives, took advantage of the option to adopt Dutch nationality and emigrated to the Netherlands before independence closed off this possibility. Although inter-racial relations are relatively harmonious, given that Surinam has probably the most variegated population mixture in the world, anxiety that the end of Dutch rule would result in the kind of racial hostility and domination by a single group that prevails in neighbouring Guyana was at the root of most emigrants' choice.

Surinam, first colonised by the British in the early seventeenth century, passed under Dutch rule in 1667, and spent the next two centuries as a typical West Indian sugar-planting economy, with a minority of whites and a large African slave population. When slavery was finally abolished in Dutch possessions in 1863, the black population fled the land, as they had previously done throughout the West Indies. As in Guyana, the solution adopted was to bring in indentured labour from India, but also in Surinam's case from the Indonesian island of Java.

By the first half of the twentieth century the population consisted of about 31% Creoles (black and mixed race), 37% Hindustanis (from India, but so called to distinguish them from the indigenous Indians, and including Muslims as well as Hindus), 15% Javanese, 10% Bush Negro (the descendants of escaped slaves, living in the interior and retaining much of their African culture), 2.5% native Indians, 2% Chinese, 1% Europeans, 1% Lebanese, and a scattering of others. Most groups had retained their own language and customs: the Creoles spoke Dutch, most of the people originating from the Indian sub-continent spoke Hindi, the Indonesians spoke Javanese, and Chinese, English, French and Spanish were also in use. Most people also spoke the purely local patois, Sranan Tongo, also known as taki-taki. The population was 45% Christian, 28% Hindu and 20% Muslim.

The Creoles are overwhelmingly urban, and most work in the swollen public services (which provide 28% of all employment in Surinam) or in the bauxite industry which earns 90% of the country's foreign exchange. The once predominantly rural Hindustanis and Javanese have left their farms in huge numbers to flock to the cities, where they dominate all aspects of commercial activity (together with the small Lebanese and Chinese minorities). Most of the country's area (about the size of England) is rich in unexploited timber and minerals, but even the majority of the arable land is unused, while half the population lives in greater Paramaribo, the capital. Surinam is relatively prosperous by South American standards, with a per capita annual income of well over \$1000.

Surinam was granted full internal self-government in 1954, becoming an equal partner with the Netherlands Antilles and Holland itself in the Kingdom of the Netherlands. There was little pressure for independence from the governments of the 1950s and 1960s, the last of which, in 1969-73, was a Hindustani-dominated coalition which nevertheless incorporated numbers of Creoles (including the Prime Minister). This government fell after a wave of strikes and violence in 1973, and in the ensuing election the political parties separated on communal lines more sharply than ever before. The election was won by Mr Henck Arron's National Party of Surinam, an exclusively Creole party of socialist orientation, and the ensuing government was a coalition between this group, two smaller Creole parties of more radical leftist tone, and the Javanese community's party. In the much tenser racial atmosphere which now prevailed, Prime Minister Arron was unable to find any leading figure of the Hindustani community who would join his government.

The new government at once demanded independence, to the considerable relief of The Hague, and arrangements were rapidly finalised for the termination of Dutch rule in November, 1975. Dutch promises of post-independence aid were unusually generous, amounting to \$1,500,000,000 over the following decade, but it was also agreed that the Dutch armed forces would be withdrawn, handing over the responsibility for defence and internal security to the newly formed Surinam Armed Forces. Since, given the overwhelming predominance of Creoles in all branches of the State service, the new armed forces were bound to be a largely Creole institution, the Hindustani community in particular were gravely concerned that the post-independence course of events would duplicate that in Guyana, with a black minority government manipulating the political system to keep itself in power indefinitely with the support of a black army and police force. There was also concern amongst the large Hindustani merchant community at the socialist government's policies on nationalisation.

As a result of these misgivings, the main Hindustani political parties withheld their assent to the new constitution and resisted independence until only 5 days before the event, when they finally accepted the inevitable. In response to repeated demands from the other racial groups that the new armed forces should be recruited on the basis of racial quotas, the Creole-dominated government bluntly refused, stating that Surinamese were Surinamese. Consequently, the new army did indeed turn out to be a predominantly Creole force.

It was the fear of future racial clashes which was the prime motive force behind the extraordinary wave of emigration in 1974-5. It would appear, moreover, that the prospect of a largely black army and the Guyanese analogy led to a relatively high proportion of Hindustanis joining the emigrants: no statistics are available, but the clear victory of Prime Minister

Arron's coalition in the October, 1977 elections, compared to its previous narrow margin, would seem to suggest that there has been an appreciable shift in the racial balance of the remaining Surinamese population.

The Surinam Armed Forces that were created in 1975 now number over 1000 men. They comprise a single unified force, of which all but a tiny proportion are land forces. The system of ranks, administrative procedures, tactical doctrine and uniforms are all modelled on the Dutch army. Recruitment is by voluntary enlistment, and initial training is done within the country. Officer candidates, however, attend the Dutch military college, and in 1979 there were about 30 warrant officers receiving instruction in the Netherlands in various technical specialities.

The Commander-in-Chief of the Surinam Armed Forces is the President. Executive power rests with the Prime Minister, currently Mr Henck Arron, who is also the Minister of Defence. The Commander and senior serving officer is Colonel Alstet. No information is available on pay or conditions of service.

In addition to their internal security duties, the Surinam Armed Forces have a potential external defence role, in that Surinam has border disputes with two of its three neighbours. The southern border with Brazil has not become an issue, but disputes over which tributaries are the true sources of the rivers which define the international borders exist with both Guyana and French Guiana, Surinam's neighbours to the west and east. In each case, a substantial area of sparsely inhabited territory at the inland end of the common border is disputed, amounting to some 6000 square miles on the Guyanese frontier and somewhat less than half that on the French Guiana side. Since the land disputed with Guyana lies in the bauxite belt, and the territory claimed by French Guiana is believed to contain gold, both are of some economic significance, and development of these resources is being delayed by the uncertainty about ownership. With Guyana, the dispute has come near to armed clashes in the past.

Surinam belongs to the United Nations and the Organization of American States, but is non-aligned in foreign policy. The border dispute with Guyana has prevented it from joining the Caribbean Community. It has an agreement with the Netherlands providing training facilities for its armed forces, but there is no defence treaty. Despite the fears of racial clashes which caused the great exodus in 1974-5, there have been no serious disturbances, and the armed forces have not had to be employed in the internal security role.

SWAZILAND

A small military force is being raised from the basis of the former, largely ceremonial, Royal Guard. The Prime Minister, Colonel Maphevu Dlamini, is also the Army Commander, and the purpose of the force seems to be primarily internal security with, also, some element of national pride.

The internal political situation of Swaziland has recently been unsettled, the leader of the opposition being detained. The Constitution of the country was repealed by the King in 1973.

ANON.

SWEDEN

HISTORY AND INTRODUCTION

The Swedish military system, like the Swiss, rests upon the militia principle, within a framework of so-called 'total defence'. Its rationale is to present an aggressor with the prospect of having to confront a whole nation in arms, equipped with modern, domestically produced arms, trained to operate in extremes of climate and protected from indiscriminate attack on the population and essential services by a network of deep shelters and strong fortifications. To an extent even greater than the Swiss, the Swedes are determined to show that they are prepared to make extensive economic and social sacrifices to defend their neutrality.

Swedish neutrality is effectively over a century old, while the kingdom has not been involved in war (then against France) since 1814. Her adoption of neutrality, however, follows, like Switzerland's, on a long period of intense military activity, devoted, as Switzerland's was not, to territorial aggrandisement and imperial purpose. This 'imperial' episode in Swedish history began in the sixteenth century when the collapse of the power of the Teutonic Knights, long established on the southern shore of the Baltic, provoked the littoral States into a struggle for dominance in the region. Denmark, with which Sweden had recently been unified, Russia, recovering from a long decline, and Poland, still a strong State, were all anxious to seize the leading position. But it was Sweden, under a new and remarkable dynasty, the Vasas, which was, over the next 200 years, ultimately to do so. The aim of the original Vasa, Gustaf I (1523–60), was chiefly to unify his kingdom and consolidate its boundaries, in which he was remarkably successful. His descendant, Gustaf II Adolph (Gustavus Adolphus) (1611–32), made use of the national army he inherited from him to establish Sweden as the greatest power in northern Europe. Intervening on the side of the Protestant German princes in the Thirty Years' War, he won a succession of brilliant victories and, before his death in battle at Lützen, added considerably to Swedish territory. At the end of the century another fighting king, Charles XII (1697–1718), of even more bellicose character, reaped the whirlwind of Sweden's expansionist policy. Attacked simultaneously by Denmark, Saxony, Poland and Russia, he nevertheless succeeded in forcing the first three to make peace and then carried the war into Russia, eventually as far as the Black Sea. Ultimately defeated at Poltava in 1712, he succeeded in regaining his homeland and in staving off the consequences for another 6 years, but after his death in battle against the Danes, his successor was obliged to make peace and surrender almost all the territory gained during the preceding century.

Despite the collapse of the Swedish empire, the kingdom's achievements were remarkable, and all the more so since they were gained with a conscripted native army, not one of foreigners or mercenaries like those fielded by most of her enemies. Sweden enjoyed, and enjoys still, certain important strategic advantages, notably the deep forests and indented coastline which make her frontiers difficult and dangerous to violate, but her population was small — proportionate to surface area, very small indeed — her economy primitive and her financial resources exiguous. The Vasas had succeeded nevertheless in raising what is generally regarded as the first national army in Europe (1544) and sustaining it in fighting efficiency for 200 years. Even after the death of Charles XII it remained a formidable force; and the system on which it was raised and maintained, moreover, allowed its gradual transformation into a modern citizen militia without the provocation of any of those civil-military disputes which have marred the constitutional development of other warrior States.

This system, established by Carl XI at the end of the seventeenth century, and made possible as a result of his expropriation (*reduktion*) of the over-powerful nobles, was known as the *indelningsverket* or allotment system. On the land exacted from the nobles were settled the conscript soldiers of the provincial regiments on plots appropriate to their ranks, from the produce of which they were supported. Frequent mustering ensured that they did not allow their agricultural interests to erode their military efficiency. So deeply rooted did the provincial regiments become in Swedish social life that most have survived to this day, thus being the only military units to rival in unbroken descent the regiments of the British army.

In time, however, agriculture sapped the fighting spirit of the army, which did badly in Sweden's later wars, so much so that in 1808 they were unable to resist Russian attempts to impose on them her policy of friendship with Napoleon and were forced to surrender Finland, Swedish since the fourteenth century, almost without a struggle. Despite a temporary recovery under Bernadotte (an ex-Napoleonic marshal whom the Swedes persuaded to accept the succession in 1811, as a result of which the crowns of Sweden and Norway were united in 1814), the decline of the army continued.

Sweden continued nevertheless to behave as if her military power were intact, sending troops to help Denmark protect Schleswig-Holstein in 1848, negotiating in 1855 with Britain and France a treaty guaranteeing her against the consequences of her currently anti-Russian foreign policy, and allowing Swedish troops to serve as volunteers with the Danes during their unsuccessful war with Austria and Prussia in 1864. However, the lightning victories of the Prussians in 1866 and 1870 ultimately convinced Sweden — and Britain as well — that some far-reaching reform of their military system was necessary. That conviction had already brought forth from the middle class, as it had also done in Britain, a voluntary

World Armies

militia, the Sharpshooters, founded in 1860 and soon 40,000 strong, but lacking, like the British rifle volunteers of 1859 (*q.v.*), military effectiveness. What was really needed, it was seen, was an army based on general conscription and supported out of central funds and, after two decades of dispute with the farmers (still numerically predominant and still directly responsible for the bulk of military costs), such an army was created. In 1885 military service for the peasant soldiers was increased to 42 days annually and 30% of the land tax remitted by the government; in 1895, as a result of Russian threats to Finland and growing tension with Norway (which was to recover its full independence in 1905) general conscription was introduced with an 8 month term of service; and in 1901 the *indelningsverket* was finally abolished.

It was on a system of general short-term conscription that Sweden has organised her armed forces ever since, though the period of service has fluctuated considerably. In 1924 it was reduced to 4 months, in 1936 raised — in view of Sweden's patent unpreparedness at a time of growing international tension — to 6 months, and during World War II set at 360–450 days, near which it remains today. The introduction of general conscription was associated with the adoption of a formally neutral foreign policy. Though popular feeling was notably pro-German during World War I and anti-Russian during the Russo–Finnish War of 1939–40 (in which Swedish volunteers joined on the Finnish side), official Swedish policy from 1914 onwards was neutralist and has become increasingly strongly so. It is also idealistic, Scandinavia having been in the 1920s and 1930s perhaps more strongly committed to the League of Nations idea and to the vision of general disarmament than any other region in the world, a commitment which almost disarmed Denmark and Norway and brought Swedish preparedness to a low ebb. It is also strongly 'Scandinavian' in character: both immediately before and after World War II Sweden was deeply interested in the co-ordination of defence measures with her neighbours, a policy which almost led in 1948 to the formation of a Nordic Defence Union.

In the last resort, however, Sweden remains intensely independent in spirit. 'Even England suffered occupation in the eleventh century; Sweden has never known it . . . In her enjoyment of such an advantage, she is probably unique among the nations of the Old World, and such things do affect, in ways often difficult to define, a people's character'. It is not difficult to define the way it has affected the Swedish people's attitude to defence. Inheritors of a pioneering, colonising, warrior tradition, descendants of soldiers who won victories across the whole of northern Europe for 200 years, practitioners of a technology (military as well as civil) as advanced as any in the developed world, devotees of a cult of physical hardiness which their high standard of living seems to heighten rather than sap, the Swedes have a genuine determination to protect their own sovereignty and a belief in their power to do so. Their army, moreover, is a popular institution, and politically a beneficent one: 'The constitutional development of every country seems to be related — sometimes closely related — to its military system; and the fact that a great part of the Swedish population took an active part in the armed forces of the country interposed a real obstacle in the way of the establishment of any absolute form of government . . . the nature of the Swedish army, and (not least) the way it was paid, protected Sweden from the perilous choice between military efficiency and civil liberty.'* That judgement relates to the seventeenth and eighteenth century. What the Swedes have achieved in the twentieth is a very high level of military efficiency and its reconciliation with civil and personal liberties as extensive as any in the world.

STRENGTH AND BUDGET

Population: 8,263,000

Army: 9500 regulars; 9000 reservists on duty; 36,500 conscripts in initial training; 105,000 conscripts on refresher training

Navy: 22,000; 17 submarines, 12 destroyers, 175 smaller craft

Air force: 18,000; 504 combat aircraft

GNP (1976 estimate): \$76,500,000,000

Defence expenditure, 1977–8: \$2,830,000,000

Reserves: total mobilisable strength is given as 750,000; the size of the contingent on reserve refresher training in army units in any one year is about 100,000 and would represent one-third to one-quarter of the army's effective reserves, which therefore probably number 350,000; in addition, the voluntary home guard of pre-conscripts and ex-reservists numbers 100,000.

The defence budget is voted by parliament but, under a recently introduced system, itemised votes — for catering, ammunition, etc. — have been discontinued and the army has been allocated funds for the creation of different sorts of brigades, as it judges fit. Defence spending is fairly high — in 1969 about 15% of the budget, of which figure the army received less than a third — and, at constant prices, has doubled in the last 15 years (from 4,107,000,000 kronor in 1959 to 9,752,000,000 kronor in 1975).

COMMAND AND CONSTITUTIONAL STATUS

Swedish defence is organised and controlled within a system of Total Defence, comprehending Military, Economic, Civil

* Roberts, Michael, *Essays in Swedish History*, London, 9, 1967.

and Psychological Defence (*cf.* the Swiss and Austrian defence organisation). The King and parliament jointly exercise supreme command: the King in name only (since 1973 he has been a Head-of-State without powers), parliament directly through the powers of the ministers responsible and indirectly through its Permanent Defence Committee. In peace, the Minister of Defence is responsible for the co-ordination and control of Total Defence; in war, his powers would pass to the Prime Minister. However, even in peace the Prime Minister acts as Chairman of the National Defence Council (which is the meeting point of the military defence structure) under its Supreme Command, and the rest of the Total Defence Structure, under the so-called Central Command. The Council consists of, besides the Prime Minister, the Supreme Commander, the heads of the most important civilian Total Defence authorities and one of the Civil Commissioners of the six Military Command Areas (*militärområde*) into which Sweden is divided, together with such ministers as the Prime Minister may summon. Its policy is executed by the Total Defence Staff Committee on the civil side and by the Supreme Command on the military side; the Supreme Commander is at present Chairman of the Total Defence Staff Committee.

Within the Military Command Areas, the borders of which follow the boundaries of groups of counties (*län*), defence authority is vested in the six Commanding Generals and six civil Commissioners, of whom the former are directly subordinate to the Supreme Commander. Subordinate to the Commanding Generals are the Military District Commanders; their areas of responsibility correspond geographically with the counties, and the County Administrations exercise defence responsibilities on the civil side, under the Commissioners.

A number of semi-autonomous bodies form part of the Swedish defence structure, notably the Material Administration of the Armed Forces — the Military Procurement Agency, the Fortifications Administration, the National Defence Research Institute and the Medical Board of the Armed Forces. There are also a large number of voluntary organisations devoted to defence activity.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

Sweden has taken part in no war since 1815 and has been effectively a 'permanently neutral' State since 1855, when, to avoid involvement in the Baltic episode of the Crimean War, she negotiated a guarantee of integrity from Britain and France. Her neutrality does not exclude her from belonging to pacts or alliances, since both before and after World War II Sweden showed interest in joining a Nordic Defence Union, which would have protected the neutrality of Denmark and Norway (with whom she had made a joint declaration of neutrality in 1912, renewed in August, 1914) along with her own. She is also a member of the United Nations and one of the most frequent contributors to the organisation's Emergency Force (in which over a third of Sweden's regular officers have served), but it does preclude her joining a great power bloc. A semi-official definition of her international position is 'non-alignment in peace leading to neutrality in war'. The role of the Swedish army is to preserve that neutrality. Subsidiary roles are the training of the nation's youth for national service and the fostering of the national will to resist.

Commitment

The army is therefore wholly committed to the territorial defence of the kingdom, except for such volunteers as are on United Nations duty. Since 1964, the four Nordic countries have maintained a permanent contribution to the Emergency Force. Sweden's units are at present a battalion in Cyprus and a battalion in Egypt.

Deployment

Sweden is divided into 26 Defence Districts, grouped into six Regional Commands. The Defence Districts coincide geographically in almost every case with the counties (*län*) and each contains a number of regiments (*regementen*) and corps (*kår*), totalling 49 in all. These are training units and are the descendants of the old provincial regiments and corps.

Command

	Infantry	Cavalry	Armour	Artillery	Anti-aircraft	Engineers	Signals	Service
Upper Norrland	2	1	1	1	1	1	1	—
Lower Norrland	2	—	—	1	1	—	—	1
Bergslagen	3	—	—	1	—	—	—	—
East	3	1*	3	2	2	1	1	1
West	3	1	1	—	1	—	1	1
South	2	—	3	2	1	1	—	1

The Upper Norrland Command (HQ Boden) comprises the counties (*län*) of Västerbotten and Norrbotten; the Lower Norrland Command (HQ Östersund) comprises Västernorrland, Jämtland and Gävleborg (north); the Bergslagen

* The Royal Lifeguards; the remaining cavalry are armoured reconnaissance.

World Armies

Command (HQ Karlstad) comprises Örebro, Värmland and Kopparberg; the Eastern Command (HQ Strängnäs) comprises Östergötland, Södermannland, Stockholm, Uppsala, Västmannland and Gävleborg (south), together with the independent Island of Gotland command; the Western Command (HQ Skövde) comprises Halland, Göteborg and Bohus, Älveborg and Skaraborg; the Southern Command (HQ Kristianstad) comprises Malmöhus, Kristianstad, Blekinge, Kronoberg, Jönköping and Kalmar.

The mobilisable strength is reckoned to be 30 brigades, raised territorially in about equal proportion to the number of training regiments; the exact number and distribution is not revealed. Mobilisation stores are held in about 2000 dumps, distributed throughout the inhabited areas. In addition, there exist about 100 mobile (bicycle) battalions of older reservists (territorial defence) and 500 static defence companies. The voluntary Home Guard (*Hemvärnet*) is a separate force. The 'Coast Jäger', belonging to the naval coastal artillery, are a marine commando force operating in the islands.

The Swedish air force, though separate from the army, is organised for air defence into regions which roughly correspond with the Area Commands, but the fighter-bombers, which co-operate with the army, belong to the First Air Command, which is directly subordinate to the Supreme Commander.

Recent Operations

The Swedish army was last involved in war in 1814, against Napoleon. Swedish contingents are a permanent element of the United Nations Emergency Force, however, as already discussed, and Swedish military missions have trained troops in the Congo Free State (1883–1914), in Persia (1911–5) and in Ethiopia (1934–6 and 1945–64). During World War II about 9000 Swedish officers and men volunteered, on an individual basis, to fight for Finland against Russia, in the Swedish Volunteer Corps, the Hangö Battalion and the Svir Company.

ORGANISATION

Arms of Service

There are seven arms and services: infantry, armour (including armoured cavalry), artillery, air defence, engineers, signals and maintenance troops. The directorates of these are subordinate to the Army Chief of Staff, and with Section I (Organisation and Equipment), Section II (Tactics and Training) and the Camp Commandants' Office, they form the principal branches of the Army Staff (the Home Guard Staff, Central Conscript Bureau and the Army Administration are separate organisations directly subordinate to the Army Commander-in-Chief). More important to the conscript, and to Swedish military tradition and ethos, are the *regementen* and *kår*, many of which can trace their descent from the seventeenth century. They are locally based, train the conscripts from the surrounding district and provide the mobilisation structure for the operational brigades (see below). The infantry regiments (with their headquarters) are: 1 *Svea livgarde* (Upplands Bro); 2 *Värmlands Regemente* (Karlstad); 3 *Livregementet grenadjärer* (Örebro); 4 *Livgrenadjärregementet* (Linköping); 5 *Jämtlands Fältjägar* (Östersund); 11 *Kronoberg* (Växjö); 12 *Norra Småland* (Eksjö); 13 *Dalregementet* (Falun); 14 *Hälsinge* (Gävle); 15 *Älvsborg* (Borås); 16 *Halland* (Halmstad); 17 *Bohuslän* (Uddevalla); 19 *Norbotten* (Boden); 30 *Västerbotten* (Umeå); 21 *Västernorrland* (Sollefteå); 22 *Lapplands Jäger* (Kiruna). The armoured regiments are: 1 *Göta Livgarde* (Enköping); 2 *Skånska Dragonregementet* (Hässleholm); 4 *Skaraborg* (Skövde); 5 *Norbottens Pansarbataljon* (Boden); 6 *Norra Skånska* (Kristianstad); 7 *Södra Skånska* (Ystad and Revinghed); 10 *Södermansland* (Strängnäs); and 18 *Gotland* (Visby). Regiment 5 (P5) forms with Infantry Regiment 19 (119) a combined unit. The (armoured) cavalry regiments are: K1 *Livgardets Dragoner* (Stockholm), The Royal Bodyguard; K2 *Livregementets Husarer* (Skövde); and K4 *Norrlands Dragoner* (Umeå). The other regiments or *kår*, which are not basic training units, are artillery, air defence, engineer or maintenance; also organised into regiments, though belonging strictly to the navy, is the coast artillery. The artillery comprises: A1 *Svea Artilleriregemente* (Linköping); A3 *Wendes* (Kristianstad); A4 *Norrland* (Östersund); A6 *Småland* (Jönköping); A7 *Gotland* (Visby); A8 *Boden* (Boden); and A9 *Bergslagen* (Kristinehamn). The air-defence regiments are: Lv2 *Gotlands Luftvärnsbataljon* (Visby); Lv3 *Roslagens Luftvärnsregemente* (Norrtälje); Lv4 *Skånska* (Malmö); Lv5 *Sundvall* (Sundvall); Lv6 *Göta* (Göteborg); and Lv7 *Luleå* (Luleå). The engineer regiments are: Ing.1 *Svea Ingenjörregemente* (Södertälje); Ing.2 *Göta* (Eksjö); and Ing.3 *Boden* (Boden). The signal regiments are: S1 *Upplands Regemente*; S2 *Göta Signalregemente* (Karlsborg); and S3 *Norrlands Signalbataljon* (Boden). The maintenance (*träng*) regiments are: T1 *Svea Trängregemente* (Linköping); T2 *Göta* (Karlsborg); T3 *Norrland* (Sollefteå); and T4 *Skånska* (Hässleholm). The coast artillery regiments are: KA1 *Vaxholms Kustartilleriregemente* (Vaxholm); KA2 *Karlskrona* (Karlskrona); KA3 *Gotland* (Färösund); KA4 *Älvsborg* (Göteborg); and KA5 *Härnösand* (Härnösand).

Operational

The basic formation to be found on mobilisation would be the brigade, of which there are three types: armoured (*pansar*), infantry and Norrland (the northern half of Sweden is so-called). It is planned to raise six, twenty and four, respectively, of these types. The organisation of the armoured brigade is an armoured reconnaissance company; an HQ company; two

anti-tank companies (84 mm Carl Gustav recoilless gun, Bantam missile and 90 mm recoilless gun); an artillery battalion (one battery of four 155 mm howitzers, two batteries of six 105 mm 4140 howitzers); an air-defence company (Red Eye and 20 mm cannon); an engineer battalion; a maintenance battalion; and three armoured battalions (each of two tank companies and two APC companies, an artillery company (105 mm) and a maintenance company); total strength about 5000 men. The infantry brigade has the same reconnaissance, engineer, HQ, air-defence and maintenance units, but also one anti-tank company; one assault-gun company; one artillery battalion with three batteries of six 105 mm howitzers; and three rifle battalions (each of an HQ company, one mortar company equipped with 120 mm and 81 mm mortars, one maintenance company and four rifle companies). The HQ company and the rifle companies each have a 90 mm recoilless anti-tank gun platoon, and each rifle section has two 84 mm Carl Gustav anti-tank weapons. The organisation of a Norrland brigade is very similar, except that its means of transport are different. Both infantry and Norrland brigades are trained to move infantrymen by towing; in the infantry brigade behind a tractor and power take-off trailer, and in the Norrland brigade behind a Laplander tracked all-weather vehicle. In snow, the troops are towed on skis, in ordinary conditions on bicycles. This system had been adopted because Sweden lacks the oil fuel resources to sustain a fully motorised army in action for any length of time (though the cost of fully motorising the army would probably also be prohibitive). The Laplander vehicles are military, the tractors are to be brought by the local farmers to the mobilisation centres when required; an infantry battalion needs 94 tractors for full mobility. The number of anti-tank weapons in the brigades is to be noted: every other infantryman has an anti-tank weapon. There are also large allotments of anti-tank mines to the brigades.

On mobilisation, the brigades would operate under divisional headquarters. The organisation of divisional troops is one air-defence battalion of two batteries of six 40 mm guns and one battery of six 57 mm guns; one artillery regiment with one gun battalion of nine 155 mm guns and two howitzer battalions with 12 150 mm howitzers; and one transport battalion of three companies each with 55 tractors.

The older reservists would form about 100 bicycle battalions, armed with older heavy weapons and small arms, and 400–500 static defence companies.

The voluntary home guard (*Hemvärnet*), 100,000 strong, keeps its weapons at home and forms sections, platoons and companies.

RECRUITMENT, TRAINING AND RESERVES

The personnel of the army is divided into four types: regular, conscript, civil–military and civilian. The civilians are employed on clerical, administrative and stores work; the civilian–military are technicians, doctors and dentists. The conscript personnel consist of privates, junior NCOs and junior officers while the regular cadre consists of officers and senior NCOs. The Swedish regular rank structure is an unusual one, consisting of ‘regimental’ officers who correspond to the regular officers of other armies; ‘company’ officers, whose role corresponds to that of warrant officers; and ‘platoon’ officers, who are equivalent to senior NCOs. Some ‘regimental’ officers are recruited from the ‘company’ officer corps and about one-third of the ‘platoon’ officer corps eventually become ‘company’ officers. This system has been adopted to improve recruiting of NCOs, which, in Sweden’s high-wage egalitarian society, has been very poor in recent years.

Recruitment

This is by universal conscription of all male citizens at the age of eighteen. The annual contingent is about 40,000. Conscientious objection is allowed, but objectors (except those belonging to certain recognised religious groups) must perform alternative civilian service of 540 days within the Total Defence context; those refusing are imprisoned. The number of authentic conscientious objections registered has risen recently (750–1000 annually), but not at the same rate as in Germany or Holland.

Training

Conscripts are called to their local military district regiment (infantry or armour), examined and then allotted to the appropriate training unit, which may be the military district regiment itself or a specialist unit. The shortest term of service, for drivers, etc. is 255 days (Category G). Most conscripts serve 300 days (Category F) as riflemen. Tank commanders (Category E) and those selected for corporal serve 345 days. Conscript NCOs and conscript officers serve 450 and 540 days, respectively. Conscripts are called up, according to the length of service they will perform, at roughly monthly intervals, those with the longest to do starting first. In this way a future field unit is formed, proceeds to unit training, and is then placed, at the end of its conscripts’ term, on a reserve footing.

Conscript corporals (‘group commanders’), selected at the outset, undergo special leadership training before joining the ordinary conscripts in the training units. So too do conscript senior NCOs (‘platoon commanders’), though they start their training even earlier than the corporals. Successful ‘platoon commanders’ may volunteer for conscript officer training, which lasts 6 months at a cadet school.

Regular ‘platoon’ officers undergo a year’s training on top of their conscript term. From their ranks are selected the

World Armies

'company' officers who follow a year's course at their school in Uppsala. 'Regimental' officers proceed via the conscript officer training route. After that term of service, they enter the Military Academy at Karlsborg for a year's course.

Staff training is conducted at the Royal Swedish Staff College, Stockholm, on a tri-service basis. There has also existed since 1951 a National Defence College, serving the Total Defence organisation, at which military and civil-service personnel study with representatives from civilian organisations and private industry.

Reserves

The liability for military service endures to the age of forty-seven, reservists being technically 'on leave' until then. Refresher training takes place after an interval of 2 years from conscript service and then at intervals of 4 years, making five periods of 18 days in all. The first two to three periods are spent in the reservist's field unit — deactivated when he and his comrades completed their conscript term — which is mobilised for the occasion at its mobilisation centre. Reserve refresher training is thus also a practice mobilisation. The last two or three periods are spent in the reservist's local territorial unit.

Corporals and Category E reservists serve an additional 7 days on each refresher course, senior ranks an additional 14 days. Moreover, they all undergo, in the interval between the four-yearly refresher courses, a special period of training: 32 days for officers, 11 days for the rest.

For all reservists, there are also five separate mobilisation practices of 1–2 days. On mobilisation, nine out of ten command appointments are filled by reservists.

EQUIPMENT AND ARMS INDUSTRY

Sweden has one of the oldest established and now most comprehensive arms industries in the world. Its vast mineral resources (particularly of high-grade iron ore and copper), its enormous forests which provided charcoal for smelting, and its plentiful water power, allowed the country in the seventeenth century to become, through the application of royal and foreign capital and immigrant technical skill, a leading exporter of cannon: in 1641 her exports of guns were equal in number to the total of shipborne cannon in the French navy and in 1694 her cannon were reaching Britain, Holland and Portugal as well as Russia and many of the German States. It was not until the second half of the nineteenth century, however, with the coming of the railway and the refinement of the national banking system, that the Swedish engineering industry began to diversify: between 1870 and 1900 the number of engineering workers increased six-fold and the number of engineering works five-fold. A high level of universal education equipped the workforce for advanced industrial enterprise and the country's artificial isolation from world markets in two world wars encouraged self-sufficiency. As a result, Sweden, with a population of less than 9,000,000, has an industrial base of a size and complexity unmatched by many much larger developed countries. It includes shipbuilding, aircraft and motor-vehicle industries, all of which are involved in military, as well as civilian, production. The most important defence-orientated firms are the Volvo Corporation, whose subsidiary Svenska Flygmotor produces jet engines and Bolinder Munktell tracked vehicles; Saab-Scania (factories at Linköping, Jönköping and Södertälje) which produces aircraft, missiles and vehicles, Bofors, at Karlskrona, which produces artillery, armoured vehicles, missiles, ammunition and explosives; Förenade Fabriksverken (FFV), at Eskilstuna, which produces small arms, anti-tank weapons, ammunition and missiles; Hagglunds, at Örnsköldsvik and Mellansel, which produces armoured vehicles; Norma at Åmotfors, which produces small-arms ammunition; and a number of electronic firms — L.M. Ericsson of Stockholm, Philips of Stockholm, Svenska Radio (with factories at Bromma and Kumla), and Standard Radio and Telefon (an ITT subsidiary), all of which produce radar, laser, infra-red and air-defence control systems, fuses and radio communication systems.

About 10% of Swedish military equipment is purchased abroad, since it is a principle, laid down in 1973, that the most favourable bid, whether foreign or domestic, must be accepted when contracts are put to tender (rare exceptions are made for protective reasons). The rest is Swedish made (but includes 15% foreign components). There is an elaborate but effective system for arriving at contracts. Fundamental research on defence equipment requirements is carried out by the National Defence Research Institute (F.O.A.), which is directly responsible to the government but acts on the advice of the services and the procurement agency, the Material Administration of the Armed Forces (F.M.V.). Great importance is attached to writing the specification for new equipment, since finance does not usually allow the manufacture of alternative prototypes, as well as to giving it a 'Swedish profile' — suitability for use by a militia army in an extreme climate and for manufacture within the domestic economy. Development is largely carried out by Swedish industry, at a cost of about \$140,000,000 (7% of the defence budget). Annual purchases by the Material Administration of finished equipment amount to \$500,000,000 (25% of the defence budget and 6% of the Swedish engineering industry's sales).

The research and procurement process has been remarkably successful in producing equipment universally recognised to be of the first quality, particularly of artillery, anti-aircraft artillery, anti-tank weapons, aircraft and armour, much of which is widely exported. National neutrality imposes restrictions on the export of material to nations actually in conflict, but has not prevented Swedish industry acquiring a virtual Western-world monopoly, for example, of the manufacture, either directly or by granting of licences, of 40 mm and 57 mm anti-aircraft guns. Some Swedish designs, on the other hand,

have proved too advanced or too distinctively 'Swedish' to attract foreign sales, notably the remarkable 'S' turretless tank, now re-equipping the armoured brigades.

Sub-machine-gun: 9mm M-45 Carl Gustav (FFV)

Rifle: 7.62mm Automatkarbin 4 (Swedish-made Spanish CETME)

Machine-gun: M-58 7.62mm (Swedish-made Belgian FN)

Mortars: 81 mm M/29 (Swedish-made French Stokes-Brandt) and 120 mm M/41 (Swedish-made Finnish Tampella)

Anti-armour weapons:

Pansarskott M/68 Miniman (FFV one-shot throw-away missile)

84 mm Granatgevär M/48c Carl Gustav recoilless weapon (FFV)

90 mm Pansarvärnspjäs 1110 Huggpipan recoilless gun (Bofors; equips the brigade anti-tank companies)

Robot 53 Bantam wire-guided missile (Bofors)

Anti-aircraft weapons

20mm M/40 Ivakan (Bofors) automatic cannon (equips the brigade air-defence companies)

40mm L/70 M/48 Ivakan (Bofors) gun (equips the divisional air-defence battalion)

57mm M/54 Ivakan (Bofors) gun (equips the divisional air-defence battalion)

Rb 69 Red Eye shoulder-fired missile (see USA; equips the brigade air-defence companies)

Rb 67 Hawk missile (see USA; in separate Hawk unit(s))

Rb 68 Bloodhound 2 (see Britain; in air force air-defence battalions)

Artillery

105 mm 4140 howitzer (Bofors; equips the brigade artillery — replacement of the older M/39 and M/40 by the 4140 is in progress)

155 mm F howitzer (Swedish-made French M-1950; in the divisional and armoured brigade artillery)

155 mm 77 semi-SP howitzer (Bofors; replacing the 155 mm F)

155 mm BK 1A (L/50) self-loading SP gun (Bofors; in the divisional artillery; this is a highly advanced weapon, with a traversing turret, 14 round magazine and 25 km range)

Assault gun: IKV 103 105 mm (obsolescent; in the brigade assault gun and anti-tank companies)

Armour

Tank-destroyer: IKV 91 90 mm gun (Bofors; replacing the IKV 103)

APC: PBV (Pansarbandvagn) 302 (FFV; two crew plus 10 men; in the armoured battalions of the armoured brigades)

Tank: STRV (Stridsvagn) 101, 102 (British Centurion; in the armoured battalions) and STRV 103B (Bofors; replacing the Centurion; this is the 'S' tank, a turretless vehicle which trains its 105 mm gun by moving the whole vehicle with an elaborate hydraulic system; it has aroused great interest among tank experts)

Aircraft: 20 Bulldogs, 12 Augusta-Bell 204Bs and 22 Jet Ranger helicopters

RANK, DRESS AND DISTINCTIONS

Rank

General (general)	Crossed batons, four stars
General-löjtnant (lieutenant-general)	Crossed batons, three stars, one oak leaf
General-major (major-general)	Crossed batons, two stars, two oak leaves
Överste av 1 graden (brigadier)	Crown, four stars
Överste (colonel)	Crown, three stars
Överste-löjtnant (lieutenant-colonel)	Crown, two stars
Major (major)	Crown, one star
Kapten (captain)	Three stars
Löjtnant (lieutenant)	Two stars
Fänrik (second-lieutenant)	One star
Förvaltare } (warrant officer, approx.)	Three buttons
Fanjunkar } (warrant officer, approx.)	Two buttons
Sergeant (staff-sergeant, approx.)	One button
Rustmästare } (sergeant, approx.)	One thick bar, three thin bars
Överfurir } (sergeant, approx.)	Four thin bars
Furir (corporal, approx.)	Three thin bars
Korpral } (lance-corporal, approx.)	Two thin bars
Vice-korpral } (lance-corporal, approx.)	One thin bar

World Armies

Badges of rank are worn on the shoulder strap. Generals also wear three embroidered golden oak leaves on the collar. In combat and barrack dress, the rank badges are also worn on one side of the collar, the arm of service badge on the other. The regimental number is worn on the shoulder strap by colonels and below. Officer cadets wear one, two or three gold chevrons on the shoulder strap.

Dress

Formal dress is dark-grey tunic and trousers and peaked cap, with gold buttons and badges. Everyday wear is dark-green battledress. Combat dress is field grey. The steel helmet has cloth ear flaps and peak for winter wear. White snow clothes are worn in winter in the north. The Royal Guards wear nineteenth century ceremonial uniforms.

Regimental and *kår* badges are as follows: armour, crossed swords; artillery, crossed cannon barrels; engineers, crossed axes, sword and wheel; infantry, crossed rifles.

CURRENT DEVELOPMENTS

The organisation of the Swedish army remains the most impressive example of the militia principle in action to be found outside Israel. The morale of the serving soldiers, the commitment of the youth of military age and the support of the general population are high. Sweden's defence problem is not therefore, as it is in some other Western European countries, a human one. It is economic. The country has been marvellously successful at designing and developing military equipment of the first class for much of this century. But it is now widely felt that the costs of the next generation of equipment, particularly of aircraft but also of ground fighting vehicles and ordnance, which already alarm the defence ministries of the large military powers, may be too great for Sweden to bear. The effects of the recession of the 1970s have been felt particularly severely there but, even if that were not so, it would seem probable that the country, if it is to provide its servicemen with equipment of the standard to which they are accustomed, will have to purchase from abroad. Although foreign equipment has been purchased before, the quantities have been kept small, with a view to avoiding any compromise of the principle of neutrality. If Sweden is now obliged to buy in large quantities, she may find herself committed willy-nilly to an alliance with her supplier. The issue is of even greater importance for Swedish diplomacy than for Swedish defence.

JOHN KEEGAN

SWITZERLAND

HISTORY AND INTRODUCTION

It is widely known that modern Switzerland possesses no standing army as such, relying on the part-time service of its whole adult population as its principal means of national defence. However, there is a great deal more to the military character of the Swiss than that. '*Point d'Argent, point de Suisse*' ('no money, no Swiss') — Racine's aphorism, though overquoted and often misapplied, conveys two of the most important facts: that they were in their time well-known mercenaries, and that their services were distinctly worth buying. So well worth buying that as late as 1791, two centuries after Switzerland had ceased to act as an independent military power, the Bourbons maintained 11 Swiss regiments on the roll of the French army, besides the Swiss Guards (who were to be massacred the following year in defence of the Tuileries). In addition, Louis XVIII, at his restoration, actually renegotiated the agreement with the Swiss confederation under which these troops were recruited, thus providing his house with three Swiss regiments until its final fall in 1830. That demise severed a connection of 400 years, during which the Swiss had served not only the French (though they were always their principal employers) but most of the armies of western and central Europe including the Swedes, the Dutch and, in the seventeenth century, the English. However, though the official connection was broken, Switzerland continued to provide France, via the Foreign Legion, with a steady stream of excellent soldiers (even after enlistment was declared illegal in 1927 by the Federal government), besides furnishing the Pope, as it still does with the law's approval, with his personal guard (established by Pope Julius II in 1505).

The great military reputation of the Swiss was won, however, not in the service of foreign States but in defence of their own land and liberties, at a very early date and by tactical methods which marked a reversal of a centuries-old trend in European military development. In the thirteenth century, the Swiss, partly through the decay of imperial power (for they were technically vassals of the Holy Roman Empire, the *Reich*), and partly through the natural inaccessibility of their homeland, achieved an effective independence of their overlords. Threatened with submission to feudal status by the ascendant Habsburgs, Archdukes of Austria and soon to be Emperors, the foresters of the three cantons of Schwyz, Uri and Unterwalden met at the Rütli meadow on August 1st, 1291 to swear an 'eternal' treaty of mutual defence. Thereafter these mountaineers successfully maintained their resistance to Habsburg encroachments, and in the battle of Morgarten on November 15th, 1315 they achieved the massacre of a Habsburg army which was foolish enough to penetrate one of the narrow valleys which they were so adept at defending. This was an event of startling importance for two reasons: it was a victory of peasants over their feudal betters and of infantry over cavalry. Socially the former was the more shocking, but technically the latter had wider ramifications, for cavalry had consistently beaten infantry since the eleventh century. In practice, the victory threatened a socio-military revolution, for the social structure of the lands surrounding the forest and mountain cantons was built on the ascendancy of the mounted knight; to demonstrate his military fallibility was to threaten the settled order of things. The demonstration would have been, nonetheless, of purely local importance had the free cantons remained three in number, but during the fourteenth century they gained adherents: Lucerne in 1332, Zurich in 1351 (the town's adherence was important for the wealth and sophistication they brought to the confederation), Glarus and Zug in 1352, and in 1353 Berne which had 14 years before won a distinctively 'Swiss' victory over the Burgundian nobility at Laupen. These accretions, together with purchases and conquests of, or unilateral alliance with, neighbouring communities not yet admitted to the Confederation, gradually transformed it from an assemblage of would-be free men into an independent power with foreign interests of its own to pursue. Their pursuit involved it, during the fifteenth and early sixteenth centuries, in direct conflict (or alliance) with the great powers: the Habsburgs as always, France, Burgundy, the northern Italian cities and the Papacy.

In almost every battlefield encounter of these years the Swiss were successful, and the nature of one of their rare defeats, the 'mad' battle of St. Jacob-en-Birs, against the Dauphin Louis in 1444, demonstrated why: though outnumbered fifteen to one, the Swiss forded a river in the face of their enemies, attacked and broke into their formation and fought in its centre throughout the day until they were surrounded by 2000 enemy dead, and were themselves killed to a man. The Dauphin returned to France, persuaded that the Swiss were unbeatable; and so they believed themselves to be, in the dense, pike-studded phalanx in which they chose to fight. Besides being overwhelmingly self-confident, they were 'hardy, used to privations and painstakingly drilled . . .' and singled out from other races by 'their preference for killing rather than taking prisoners, their refusal to sacrifice order for plunder, their ruthless punishment of waverers', and their unconcern for the fate of their own wounded. Nor did their strength lie solely in their Kamikaze tactics. The Confederation possessed a remarkable military organisation which 'rested on compulsory military service from the age of sixteen to nearly sixty, on the training of the young men, and on pike-drill; periodical inspections ensured the use and upkeep of weapons . . . by an elaborate system of signals and intelligence, the army when required, could be rapidly mobilised; in the latter half of the fifteenth century the Diet could call up between 50,000 and 60,000 men' (an enormous number for the times; see later for comparison with the modern Swiss system).

World Armies

By the beginning of the sixteenth century, the military importance of Switzerland in European affairs underwent an abrupt eclipse. Its causes have been variously ascribed: to a sudden loss of self-confidence engendered by the defeat of a Swiss army in the battle of Marignano in 1515, to the signing of the treaty of 'perpetual peace' with France in 1516, to a recognition of the lowering effect of mercenary service on the interests of the Confederation as a whole, to an abrupt outdating of Swiss tactics by the appearance on the battlefield of effective firearms, to which their dense columns of pikemen were extremely vulnerable. None of these explanations is sufficient, for the Swiss continued after 1515 to fight abroad, both as mercenaries and, for a while, in their own cause, and adapted successfully to gunpowder warfare. The real reason is probably simpler, besides being inherent in the federal character of their union: it was that, under the impact of the Reformation (of which two of the most important leaders, Zwingli and Calvin, were Swiss-born), the minimum basis of co-operation between the cantons necessary to the pursuit of a common policy, disappeared. The Swiss had frequently disagreed among themselves — the Battle of St. Jacob had been fought in consequence of a civil war — and the coming of religious disunity (the central cantons around Lucerne remained staunchly Catholic) institutionalised the internal divisions.

In the wider European context, however, religious warfare provided the Swiss for the next 150 years with the most rewarding opportunity for mercenary services that they had yet been offered. Like all mountain peoples, they could win even at the best of times only a frugal living from their native valleys, and emigration was to them a necessary mechanism of economic survival, on a seasonal if not a longer time-scale. Their physical toughness and warlike reputation made their surplus population, like that of such other mountain peoples as the Scottish Highlanders, the Albanians and the Nepalese, readily saleable to foreign military paymasters; but the central situation of their homeland gave them, unlike the Scots and the Nepalese, ready access to several competing markets and hence a much higher return on their physical and moral capital than these other mountaineers enjoyed. France was always their principal employer, and found it in her interest to guard Swiss unity and formal neutrality throughout the wars of the sixteenth and seventeenth centuries, but they also fought, on a strictly contractual basis, for most other European States as well, including their ancient enemies the Hapsburgs. They even fought on opposite sides, a rare eventuality which agreement between the cantons was supposed to avert: at Malplaquet there were Swiss regiments in Villar's and Marlborough's armies.

However, by then — the beginning of the eighteenth century — the dampening of religious animosities in Europe had deprived the Swiss of the more lucrative opportunities for mercenary service, but in compensation had also relaxed the sectarian stresses which had threatened the fragile unity of the Confederation for 200 years. The Swiss continued to provide foreigners with soldiers — though on the formal, bureaucratic footing which the new regular armies of the dynasties required, rather than on the old heady, freebooting basis — but the Confederation itself was gradually undergoing a transformation into the sober, industrious, productive country which the world knows today. In the process, which much increased the power of property owners at the expense of peasants and artisans, it seems to have lost much of its legendary military power, for in the face of French revolutionary armies, invited into their homeland by native sympathisers in 1798, the Swiss militia crumbled. In the long run, however, the collapse of the patrician regime in the cantons may be thought to have been a good thing, for although the Helvetic Republic created by the French Directory was quite foreign in character to Swiss institutions, being highly centralised, the patrician regime it replaced was itself far removed in spirit from the peasant democracy of the forest cantons, while French interference led directly to the remarkably apt constitution imposed by Napoleon (through the Mediation Act of 1803) and to the eventual recognition of Swiss neutrality by Napoleon's victorious enemies in 1815.

The nub of the Napoleonic constitution was the resurrection of the cantons as 'living autonomous units' and the transfer of national defence, but not of military taxation, into federal hands. 'By providing for a cantonally apportioned federal tax, Napoleon thus solved the problem of the financing of the contingents which had for centuries baffled Swiss statesmanship and thereby paralysed Swiss national defence.' Not that the Swiss benefitted from this solution while his power persisted, his imposts on their manpower — which provided the splendid contingents who fought so bravely to assure the crossings of the Beresina in the retreat from Moscow — leaving the homeland so weakly defended that the allies made of that weakness a justification for their infringement of their neutrality in 1813. The powers declared that they 'could not admit a neutrality which existed in name. They would recognise it when the State was free and independent.' It was a warning which the Swiss took to heart and have guarded ever since, and explains the very great size of the army, relative to the population, which they have always subsequently maintained.

The acts of 1803 and 1815 did not solve all Switzerland's problems. The 1803 constitution was drastically revised in 1815 by the patricians of Berne, Zurich and Lucerne, very much to their advantage, while the Confederation's neighbours frequently intervened in its affairs, which were, at mid-century, much agitated by religious antagonisms between the Catholic and Protestant cantons. These antagonisms led, in 1846, to a minor civil war (the *Sonderbund* war), provoked by the Catholics' determination to set up a military organisation of their own separate from the Confederation's. The Diet thereupon elected a General Dufour (the first of only four to have been appointed: Dufour in 1846 and 1856; Herzog 1870; Nille 1914; Guissan 1939) whose brisk and relatively bloodless campaign collapsed the *Sonderbund*'s forces and led to a reconciliation of the cantons and an important democratisation of the constitution.

Switzerland's military history, internal and external, has been subsequently uneventful. The army was mobilised in 1856, successfully to outface a threat of Prussian intervention, in 1870 because of the French-Prussian operations on her borders, and in 1914 and 1939 as a precaution against the Powers violating her neutrality. It is in the mediation of disputes and in the alleviation of suffering caused by war that Switzerland has, during the last century and a quarter, made her mark

on the world's battlefields, where her inverted national colours — a red cross on a white field — have come to symbolise impartial relief of distress and to recall the work of the greatest of her modern citizens, Henri Dunant, author of *Un Souvenir de Solferino* and founder of the International Red Cross. The Swiss army remains, nonetheless, a national institution of the greatest importance, symbolising the unity of the cantons and the determination of the Confederacy in the last resort to guarantee its own independence. Socially, it stands for the principle of equality in Swiss life, its officer corps in no sense forming an officer class; practically, it provides the means for the Swiss electorate to render direct and continuing service to the State and to exercise, therefore, their powers as citizens as of right. In its international military aspect, the Swiss army serves as the most telling example of a citizen militia, besides being a force to be reckoned with by major modern armies.

STRENGTH AND BUDGET

Population: 6,440,000

Army: 3500 regulars; 36,000 active conscripts; reserves (mostly army) 582,500

Air force: 9000 active; 345 combat aircraft (serviced by civilians)

GNP (1977 estimate): \$60,100,000,000

Defence expenditure (1978): \$1,550,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

The Swiss system knows neither a personal supreme commander nor, except in time of war or general mobilisation, a commander-in-chief. The rank of general, except when a commander-in-chief is elected by parliament, remains in abeyance. Supreme command is vested in the 7 man Federal Council (*Bundesrat*). Its functions are exercised by the Councillor for Military Affairs, through the Federal Military Department, which has, under a General Secretariat, three main divisions or *Gruppen*: General Staff (*Generalstabsdienst*), Training (*Ausbildung*) and Armaments (*Rüstungsdienst*). The commanders of the four army corps also form part of the Department. The last four officers and the Chiefs of the General Staff and of Training hold the rank of *Oberstkorpskommandant* (Colonel-Corps Commander, equivalent to lieutenant-general). The Heads of the Secretariat and of Armaments are civilians. The Commander of the Air Force, organically part of the army, is on a par with the corps commanders.

These officials and officers form the Federal Military Defence Council (*Kommission für Militärische Landesverteidigung*) which lays down higher military policy. In another guise this council acts as the Minister's Command Staff (*Leitungsstab*).

Constitutional Status

Military service is so intertwined with civil life in Switzerland that the strict 'constitutional status' of the army means perhaps less to the average Swiss than its everyday reality. The army's status is nevertheless very precisely defined by the Federal Constitution of 1874, the second article of which lays down that 'the purpose for which the Confederation is formed is to secure the independence of the fatherland against foreign nations, and to maintain peace and good order within'; article 11 forbids Swiss citizens to enlist as foreign mercenaries; article 13 forbids the Confederation to maintain a standing (i.e. regular) army; article 18 enjoins universal conscription and the soldier's duty to retain his weapons at home; articles 19 and 20 lay down the respective military responsibilities of the Confederation and cantons; article 21 prescribes that units shall be composed of men from the same canton. Articles 85 and 102 regulate military taxation. The distinctive features of the Swiss military system are thus fully and very prominently enshrined in Switzerland's basic law; indeed, as we have seen, Swiss nationhood is arguably military before it is political, cultural or economic.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitment

The role of the army is to preserve the permanent neutrality of Switzerland and is wholly self-defensive. The country belongs to no alliance system, is not even a member of the U.N.O. (though it did belong to the League of Nations) and is pledged not to attack any other country under any circumstances. The army's new plans do not envisage it operating outside Swiss territory, although its defensive doctrine is 'aggressive defence'; by that is apparently meant a programme of powerful counter-attacks against the flanks and rear of an invader supported by air interdiction of his lines of communication. Until 1961, when an important *Truppenordnung* (the acts of the Federal Assembly which regulate defence) revised the structures and tasks of the army, the doctrine was one of rigid defence of a series of river lines. The new doctrine is one of fluid defence of the lowlands by the Field Army Corps, the frontier brigades acting as a covering force for the mobilisation

World Armies

of the border and field divisions, which would offer the main resistance, while the mechanised divisions manoeuvred for a counter-attack in which a very thorough demolition of communications would hamper enemy movement. About 6000 sites in the country are permanently prepared for demolition. The alpine heartland, defended by III *Gebirgsarmee* corps, is regarded as a last-ditch national redoubt, its territorial, fortress and redoubt brigades being trained to defend its prepared strongpoints, with the mountain divisions providing an active defence. Sections of the army are earmarked to assist the civil population in the event of 'disaster', whether this be natural or man-made (e.g. as a result of military attack) and are used for first-aid, traffic direction, rescue and avalanche duty as part of their normal peace-time service. Since 1970, there has existed a Central Organisation for Co-ordinated Defence (*Zentralstelle für Gesamtverteidigung*) with joint civil-military organs at every level from the Federal to the commander, which directs the emergency services of the State in any emergency. It has three main branches of activity: military defence, civil defence and 'spiritual defence', and in this last may be seen as carrying on the work of the formidable *Heer und Haus*, a voluntary organisation set up during World War II under the patronage of the then Commander-in-Chief, General Guisan, to invest the policy of neutrality with popular moral authority.

Deployment

The country is divided into four military or corps areas (*Korpsbereiche*): I, II and IV Field Army (*Feldarmee*) and III Mountain (*Gebirgsarmee*) Army Corps (always written 1, 2 and 4 FAK, and 3 GAK). The limits of the 3 GAK area coincide with those of the central ranges, and the southern sub-alpine cantons; those of FAK 1 with the north-western cantons around Berne; those of FAK 2 with the north-central cantons around Lucerne; and those of FAK 4 with the north-eastern cantons around Zurich. The border areas of the country are the responsibility of Border Brigades (*Grenzbrigaden*) subordinate to one or other of the Corps.

Recent Operations

The army has taken no part in active warfare since the minor civil war of the *Sonderbund* in 1846. Its last major engagements were against the French in 1798-9, when the Confederation was defeated and occupied. However, Switzerland kept 650,000 men under arms throughout 1939-44.

ORGANISATION

Arms of Service

There are 10 Arms of Service: infantry; mechanised and motorised troops; artillery; anti-aircraft troops; engineer and fortress troops; signals; medical; veterinary; supply; and civil defence troops. The air force counts as a further 'arm of service'. The mechanised and motorised troops are the descendants of the old cavalry, each corps possessing a motorised regiment still called 'Dragonerregiment'. Engineer regiments are called 'Genieregimenter', signals regiments 'Übermittlungsregimenter' and transport battalions 'Nachschubbataillone'. Infantry battalions are 'Fusilierbataillone'.

Operational

Of greater importance in the structure of the army are the principles of territorial recruitment and age classification. It is divided into three classes (*Heeresklassen*), the *Aufzug* or *Élite* of men aged twenty to thirty-two, the *Landwehr* of men aged thirty-three to forty-two and the *Landsturm* of men aged forty-three to fifty (see next section). The Field Army (*Feldarmee*) is drawn from the *Aufzug* and the majority of its units are recruited partly for historical reasons, but largely for linguistic and practical reasons, on a territorial basis. The Constitution (Article 21) lays down that this shall be a universal rule, but in practice only the infantry and motorised/mechanised units are strictly cantonal in composition. The *Landwehr* provides men for the Border, Redoubt and Fortress Brigades attached to the corps (see later), while the *Landsturm* provides men for supply and transport duties in the Territorial brigades attached to the corps, and for guard, security and civil-defence duties in the Territorial regions and districts (*Kreise*), where they are organised into air-defence (*Luftschutz*) battalions and companies.

Organisation of the Field Army

Army Troops

Outside the four corps organisations, the Field Army disposes of a motorised infantry battalion (*Motordragonerbataillon*), two engineer regiments, two signals regiments and some supply and support units.

Composition of the Corps

The four corps each dispose of three divisions, one or more territorial brigades and several border brigades. Divisions are either field (*Feld*), mechanised (*Mechanisierte*), border (*Grenz*) or mountain (*Gebirgs*).

FAK 1: *Mechanisiertedivision 1, Grenzdivision 2, Felddivision 3, Territorial Brigade 1 and Grenzbrigaden 1 and 2*. The corps is chiefly French-speaking. FAK 2: *Mech.div. 4, Gr.div. 5, Felddiv. 8, Terr.brig. 2 and three Grenzbrig.* FAK 4: *Mech.div. 2, Felddiv. 6, Gr.div. 7, Terr.brig. 4 and three Grenzbrig.* GAK 3: *Gebirgsdivisionen 9, 10 and 12, Terr.brig. 9, 10 and 12, three Grenzbrig.* three fortress brigades (*Festungsbrigaden*) and three redoubt brigades (*Reduitbrigaden*). As *Corps Troops* each of the FAK disposes of the following units: one helicopter squadron (17 Alouette IIs or IIIs), one light-aircraft flight (eight PC-6s); one *Dragonerregiment* (mounted/motorised infantry — in process of reorganisation); one *Radfahrregiment* (cyclists); one *Genieregiment* (engineers) with one engineer battalion, one bridging battalion and one mining battalion; one *Übermittlungsbataillon* (signals); one *Naachschubbataillon* (supply and transport); one *Krankentransportbataillon* (medical); and one *Verkehrsregelungsbataillon* (traffic control). The Mountain Corps has a mountain infantry regiment in place of the dragoon and cyclist regiments, and its engineer regiment has one engineer and one cable-car battalion.

Composition of the Divisions

Mechanised Division One reconnaissance (*Aufklärung*) battalion with two tank companies, two APC companies and one mortar company; two armoured (*Panzer*) regiments, each with one anti-tank company and one mortar company, and two tank battalions (these each with two tank and two APC companies); one motorised infantry regiment of three APC battalions; two artillery regiments — one self-propelled (*Haubitze*) regiment of two battalions (*Abteilungen*), each *Abteilung* of three batteries of six guns (M-109, 155 mm) and one towed (*Artillerie*) regiment of two *Abteilungen* (one *Abteilung* of three batteries of six 105 mm pack howitzers and one *Abteilung* of three batteries of six 105 mm guns; one air-defence *Abteilung* of three batteries (24 guns); one engineer (*Pionier*) APC battalion; one signals battalion (*Fernmeldeabteilung*); one medical (*Sanitat*) battalion, one transport (*Nachschub*) battalion, one maintenance (*Feldzeug*) battalion; one traffic-control (*Verkehrsregelungs*) company.

Field Division One reconnaissance battalion (motorised, not armoured); one armoured battalion (three tank and one APC companies); three infantry regiments (these with three rifle (*Füsilier*) battalions and one support (*Infanterie*) battalion); two artillery regiments — one *Haubitze* regiment of two *Abteilungen*, each of three batteries of six howitzers (105 mm pack howitzers) and one *Artillerie* regiment of two *Abteilungen* (one similar to the *Haubitze Abteilung*, and one of three batteries of six 105 mm guns); air-defence, engineer, signals and support troops as in mechanised division.

Border Division Similar to the Field Division but lacks the armoured battalion and has only one artillery regiment of three *Abteilungen*, each of three batteries of six 105 mm pack howitzers.

Mountain Division Similar to the Field Division but lacks the armoured battalion. The support troops are known collectively as the *Gebirgstainkolonnen*.

Border, Fortress and Redoubt Brigades These each dispose of one to two infantry regiments (each of two to four *Füsilier* battalions), one engineer, one anti-tank, one air-defence and one signals company, one artillery *Abteilung* and some supply troops.

Air and Air-defence Command This belongs to the air force and disposes of numerous air-defence units in its *Fliegerabwehrbrigade Nr. 33*: six regiments each of three *Abteilungen*, each of three batteries of 20 mm and 35 mm guns; one regiment of two *Abteilungen*, each of two batteries of Bloodhound missiles. Its airfield brigade (*Flugplatzbrigade Nr. 32*) disposes of 12 static batteries of 20 mm or 35 mm guns. A further nine similar batteries provide dam defence. The air force also has a small parachute unit (*Fallschirmgrenadiere Kompanie Nr. 17*) and another is planned.

Fortress Guard An important element of the army is the *Festungswachtcorps* (Fortress Guard), the only sizable permanent element of the army. It consists of 20 companies (50–250 men each) which maintain the arsenals, barracks and fortresses. It has an important equivalent in the *Überwachungsgeschwader* of the air corps, four fighter squadrons which are, in effect, a standing air-defence force.

RECRUITMENT, TRAINING AND RESERVES

It is widely known that the Swiss have a highly distinctive recruitment and training system (often wrongly called unique, for the Swedish and Israeli are similar) but its precise workings remain more obscure, which is perhaps why its virtues are invoked in argument by militarists and anti-militarists alike. Its principal elements are (a) the absence of a standing army —

World Armies

there are only 3000 permanent personnel, (b) the universality of the military obligation — all fit Swiss males are inducted at twenty, (c) the long duration of service — all soldiers remain in the army until fifty, being technically 'on leave' when returned to civil life from training, (d) the short duration of training — 4 months at any one time, (e) the retention of weapons in private hands — each soldier keeps his personal weapon in his home and (g) the localisation of units — the unit to which the soldier generally belongs is based in, controlled by, and would normally defend, his own canton. 'Recruitment', 'Training' and 'Reserves' have therefore each a special connotation in Switzerland, since all fit adult males are soldiers by virtue of their citizenship (and, it might be said, citizens by virtue of being soldiers) and are theoretically under training throughout their prime manhood; and, since they are granted 'leave' not 'discharge', belong always to the army, not to its reserves, which do not in theory exist. In practice, its separation into the *Auszug* (*Élite*), *Landwehr* and *Landsturm* (composed of men aged twenty to thirty-two, thirty-three to forty-two and forty-three to fifty, respectively) amounts to a reserve system.

Recruitment

In their nineteenth year, all Swiss males are examined for military service. About 10% are disqualified and 80% are passed for military service; another 10% are passed for 'auxiliary service' — in effect exemption for personal or career reasons. This produces an annual class of 30,000. It is inducted in two halves (February–May and July–November) in its members' twentieth year. There is no provision for conscientious objection in Switzerland. 'Military service, as we understand it, can only be service in a military unit. Thus, according to Swiss law, it cannot take the form of a *Civil Service*. There is only the possibility of assignment to non-combatant medical service. If a citizen refuses to do such service, he is prosecuted under the penal code, even if he appeals to religious motives, since the Swiss Constitution does not grant absolute religious liberty and freedom of conscience. In a conflict between religious liberty and compulsory military service, the latter has priority. The conscientious objectors are merely granted certain alleviations in serving sentence; nor are those sentenced suspended in their civil rights' (speech by H.R. Kurz, Federal Military Information Service, January, 1971). About 60–70 objectors, mainly members of religious sects, are sentenced each year.

Training

Those aged twenty are allotted to the various arms, e.g. infantry, artillery, etc. in groups called 'recruit schools' (*Rekrutenschulen*), of a size to allow manoeuvres in battalion strength at the end of the course. That lasts 118 days in all, the first seventy of which are spent in the barracks where the 'recruit school' is based; the next 42 days are spent in the field, twenty-one on section and platoon tactics, the following twenty-one on battalion exercise. The last week is spent back at barracks on inspection and demobilisation.

Throughout their recruit service, each pair of the three to six companies which form a recruit school is under the supervision of one of Switzerland's few regular officers (called 'instructing officers', *Instruktionsoffiziere*), but the company training is directed by other militiamen, NCOs or officers, whose 118 days' stint is itself part of their training obligation. The corporals who oversee the section training are militiamen of the previous years' recruit school who have been judged suitable for promotion and, in the 27 days prior to the recruit school they train, have themselves been given NCO training (*Unteroffizierschule*) by 'instructing officers'. The lieutenants are former corporals who have been invited to do officer training (*Offizierschule*) of 118 days. Higher ranks — militia captains, majors and colonels — are officers who, by invitation, have completed a statutory number of recruit schools as instructors and training courses as pupils. The system, in short, bears comparison with the monitorial system prevalent in British and French State Schools during the early days of compulsory universal education in the last century.

None of the NCO or officer training time exempts its recipients from the annual 3 weeks training (*Wiederholungskurse*) performed by the operational units to which they belong. Indeed before each annual training, they have to perform a short refresher course (*Kadervorkurse*). They then proceed, with the eight youngest classes of soldiers, to form and train as operational units for 3 weeks. The *Landwehr* perform a similar unit training every 2 years, the *Landsturm* every 4 years.

The regular officers are given an orthodox military training and education of 1 year at the Military Academy in Zurich, to which they may later return for higher training. Regular NCOs of whom there are very few, receive only the militia training normal to their rank.

EQUIPMENT AND ARMS INDUSTRY

Like others of Europe's smaller highly industrialised States with a tradition of neutrality (e.g. Belgium, Sweden and Denmark), Switzerland has a long-established and versatile arms industry of high reputation. The country, though importing several sorts of heavy equipment, manufactures its own small arms, some of its own artillery and its own tank.

The equipment authority for the Swiss armed forces is the Armaments Group (*Gruppe für Rustungsdienst*) of the Federal military department; it has equal status to the General Staff and training groups. It has three branches (a) *Technical* which oversees research, (b) *Commercial* which deals with private national and overseas arms supplies and (c) *Military Workshops*

which directs the six Federal arms factories. Armaments policy is decided by the General Staff, which then turns to the Armaments Group for research and procurement. The broad basis of Swiss armaments policy is that the country should be as little dependent as possible on foreign sources of supply (i.e. autarky), but that the national armaments industry should not attempt to produce material at uncompetitive cost. (A policy not always fulfilled: it is said that the P61 and P68 tanks cost 50% more than a comparable foreign model.) As there are parliamentary embargoes on the export of military equipment, this means that it concentrates on research and development of equipment items with which it has already had some success. Parliament also controls the introduction of new equipment by requiring that its production/procurement costs be voted separately from its research costs. Swiss policy also leans heavily on the principle of modification and modernisation, a good deal of its equipment being updated versions of old models. Nevertheless, the Armaments Group spends £120,000,000 annually on research, and has spent £1,500,000,000 since 1960 on new equipment (including fighter aircraft).

The five State factories are: Eidgenössische Konstruktionswerkstätte (manufactures the P61/68 tank), Thun; Eid. Munitionsfabrik, Aldorf; Eid. Waffenfabrik, Berne; and Eid. Pulverfabrik, Nimmis. The most important private arms manufacturers are: Schweigrische Industrie Gesellschaft, Neuhausen am Rheinfall (manufactures the standard rifle and machine-gun); Hispano-Suiza, Geneva and Oerlikon, Zurich (the latter now controls the former; both manufacture automatic cannon and anti-aircraft weapons); Contraves AG, Zurich (manufactures fire-control equipment).

Arms and Equipment

Pistol: 9 mm P49 (SIG)

(Assault) rifle: 7.5 mm Sturmgewehr 57 (SIG)

Medium-light-machine-gun: 7.5 mm MG51 (MG42) (Eid. Waffenfabrik, Berne)

Mortars: 81 mm MW33 (Eid. Munitionsfabrik, Thun), 81 mm MW72 (Eid. Munitionsfabrik, Thun) and 120 mm MW64 (Eid. Munitionsfabrik, Thun)

Anti-tank weapons: ROK Rohr 50 and 58, 83 mm (Mecar Blindicide) rocket launcher (Waffenfabrik, Berne); Bantam guided missile (Aktiebolager Bofors, Sweden) and Mosquito guided missile (Contraves); PAK 50 and 57 90 mm gun (Swiss make equipping the support company of the fusilier battalions); and PAK 106 mm M40AI recoilless rifle (USA make equipping anti-tank companies)

Anti-aircraft weapons

20 mm FLAMK 43 (Hispano-Oerlikon) and 20 mm FLAMK 54 (Hispano-Oerlikon) equipping the air-defence *Abteilungen* of the divisions; two guns also in each artillery battery and 12 in the air-defence company of the infantry regiments; the 75 light batteries of army, air field and dam defence also contain these guns

34 mm FLAMK 28 (Waffenfabrik, Berne) equipping partly the airfield and dam-defence batteries

FLAMK twin-35 mm 63 (Swedish Oerlikon) equipping two batteries of the divisional air-defence *Abteilung* (12 guns) and partly equipping the regiment of *Fliegerabwehr Brigade Nr. 33* (army air-defence)

Bloodhound SAM (British Aircraft Corporation) equipping the rocket regiment of *Fliegerabwehr Brigade Nr. 32*

Artillery: 105 mm H46 pack howitzer (Swedish Bofors; equipping the pack howitzer *Abteilungen* of the divisions);

105 mm SK 35 gun (Swedish Bofors; equipping the gun *Abteilungen* of the divisions (not border divisions)); and

155 mm M-109U self-propelled howitzer (USA; equipping the self-propelled regiment of the mechanised divisions)

Armour

M-113 APC (USA) equipping the *Panzergranadier* companies of the mechanised divisions; about 1050 in service
AMX-13 light tank (France) equipping the reconnaissance *Abteilungen* of the divisions; about 200 in service
Centurion Mk III main battle tank with 20 pounder gun (Britain) equipping the armoured battalion of the field divisions (Swiss designation Pz55)

Centurion Mk V and Mk VII main battle tanks with 105 mm guns (Britain) equipping the armoured regiment of *Mech.div. 2* (Swiss designation Pz57; about 300 in service)

Pz61 main battle tank (Eid. Konstruktionswerkstätte, Thun, Switzerland) with 105 mm gun (British-Swiss make; 630 bhp Daimler engine (German); 37 tonnes; 300 km range; speed 50 kph; armour not known; crew 4; equips the armoured regiment of *Mech.div. 4*; about 150 in service)

Pz68 main battle tank (details as for Pz61, except for weight (36 tonnes), speed (55 kph) and range (350 km) equipping the armoured regiment of *Mech.div. 1*; about 170 in service)

Aircraft: Alouette II and III light helicopters (France, Aerospatiale) and Dornier AB-47 light helicopter and Pilatus PC6 light aircraft (Swiss Pilatus Flugzeugwerke, Lucerne) equipping *Fliegergeschwader 25*

World Armies

RANK, DRESS AND DISTINCTIONS

Rank

General (vacant)	Four stars
Oberstkorpskommandant (lieutenant-general)	Three stars
Oberstdivisionär (major-general)	Two stars
Oberstbrigadier (brigadier)	One star
Oberst	Three wide stripes
Oberstleutnant	Two wide stripes
Major	One wide stripe
Hauptmann	Three narrow stripes
Oberleutnant	Two narrow stripes
Leutnant	One narrow stripe
Adjutant—Unteroffizier	One chevron and Swiss cross over two chevrons
Feldwebel	Swiss cross over two chevrons
Fourier	Two chevrons, Swiss cross between
Wachtmeister	Swiss cross over one chevron
Korporal	One chevron
Gerfreiter	One bar
Füsilier, etc.	—

Note: rank badges in gold; worn by officers on shoulder straps, on upper arm by other ranks.

Dress

Swiss parade and walking-out dress, which is of an almost Maoist modesty of design, is an open-necked blue-grey tunic with breeches or trousers. Officers wear a képi, soldiers a side-hat. The combat dress is startling: a very fiercely mottled camouflage jacket and trousers and a steel helmet of gigantic size and apparently mediaeval construction. Specialist badges are worn on the service dress, together with branch facing colours on collar and shoulder-straps, as follows: armour, lemon yellow; artillery, crimson; engineers, black; signals, light grey; infantry, dark green; medical, bright blue; air defence, dark blue; maintenance, violet; supply, green; territorials, orange; and fortress, red.

CURRENT DEVELOPMENTS

The Swiss have been almost completely successful in avoiding any of the dissension which has plagued the conscript armies of the Western democracies during the last 10 years. This must be attributed to the long tradition of genuinely universal military service in Switzerland, to the army's experience in the handling of large annual intakes of twenty-year-olds, to the well-established inadmissibility of conscientious objection and the obligation to pay sizable military exemption taxes in the case of foreign residents, to the well-known 'clubbability' of the Swiss (among whose multifarious organisations ex-service clubs are numerous and popular) and, perhaps most important, to the very short duration of the initial training period (as opposed to the long duration of the military liability itself).

The latter factor has grave disadvantages, since for 18 weeks of the year, November to February, Switzerland is virtually demobilised, the Recruit Schools and the Repetition Courses being over and the 'instructing' officers and NCOs busy in their offices and workshops. It is true that these are the months of bad weather when movement even on the plateau is difficult. It is also true that 600,000 men can be mobilised at 48 hours' notice, but the intermittent military timetable to which the Swiss army runs and its conscripts are trained, raises serious questions about how effective it would be when mobilised. The quality of Swiss military equipment is certainly good and the tasks for which the soldiers are trained relatively simple, and likely to be performed in a familiar neighbourhood. But the fact remains that after two years' service the majority of the conscripts have had only 138 days' training. Even in those NATO armies which have reduced the duration of national service below 2 years, conscripts receive three times as much training in the same period.

On the other hand, it is difficult to see with what Switzerland might replace the militia. A standing army would be difficult to recruit in such a high-wage economy, and very much more expensive to support. It could never equal the size of the militia, and could not therefore by itself perform the multiplicity of tasks which Switzerland's defensive plan requires in an emergency. It would almost certainly offer a more convincing counter attack capability than does the militia but the opponents of the standing idea would certainly argue that, given Switzerland's small population and area, counter attack alone could not assure her survival if things had come to all-out war with one of her more powerful neighbours. In such occurrence, it would be a united effort by the whole population which would do most to halt an invasion of the homeland.

Switzerland

As long as the principle and fact of the militia remain part of the Swiss way of life — and both are deeply embedded in it — such a united effort would be forthcoming. If tampered with, the will to resist might be dangerously weakened. Questions about the measurable efficiency of the Swiss army may, therefore, seem irrelevant. In an important sense, the militia is Switzerland, and vice versa, and attempts to meddle with that relationship, say by increasing the size of the professional component and reducing the conscripts' tasks to that of local defence, could only do harm.

JOHN KEEGAN

SYRIA

HISTORY AND INTRODUCTION

Since 1945 the Syrian army has been involved in three major wars and innumerable minor skirmishes with Israel, large-scale military interventions in Jordan and Lebanon, military confrontations with its other two neighbours, Turkey and Iraq, and a total of 21 coups against its own government. It has grown to a regular strength of 200,000 men (300,000 on mobilisation), and absorbs almost one-fifth of the entire GNP. It disposes of the most modern weapons in such numbers that it surpasses the British and French armies in total weaponry, although those countries have seven times Syria's population and about fifty times its GNP.

This army, which dominates every aspect of Syrian political and economic life, had its origin in the *Troupes Spéciales du Levant* (originally called the Syrian Legion) which the French created in their newly acquired Middle Eastern possessions after World War I. This territory, comprising what is now Syria and Lebanon, was part of the old Ottoman province of Syria (which had also included Palestine), and had been under Turkish rule for centuries. In the decade preceding the war the very first intellectual stirrings of Arab nationalism had begun in the cities of Syria, and in 1920–22 King Faisal supported by officers of the 'Arab Army' from the Hejaz, which had helped drive the Turks out of Syria in 1918, attempted to rule an independent Syrian-Arab State from Damascus with support from local nationalist elements. In the end, however, the conflicts between a king from Arabia, ex-Ottoman officers mostly hailing from Iraq, and Syrian intellectuals, merchants and notables became too sharp to contain, and it required little military effort for the French to establish their control over the whole country.

The local forces France then created for internal security purposes, however, were built up with the potential threat of Syrian-Arab nationalism very much in mind, and so the pattern of recruitment avoided Sunni Muslim Arabs of urban background as much as possible. The Sunni Muslim Arabs of the cities and plains of central Syria make up about 65% of Syria's population, but there is also a 13% Christian minority, a small Kurdish minority (albeit Sunni) in the north-east, and a variety of heterodox Muslim or ethnic minorities — Circassian, Druze and Alawite — making up about 17% of the total population, in the mountainous western parts of the country. It was from these minorities, and particularly from the Alawites, that the French recruited most of their *Troupes Spéciales*, on the principle of divide and rule.

The so-called *Troupes Supplémentaires*, consisting of an Alawite battalion, and Druze, Circassian and Kurdish squadrons, were mainly deployed in their own areas, but the minorities also constituted a clear majority of the officers and other ranks of the *Troupes Spéciales*. There was, indeed, little inclination on the part of Sunni Arabs to join the force, not only because it was an instrument of alien rule, but because aversion to military service was deeply ingrained in the peasant population after centuries of Ottoman conscription methods. Educated Syrian Arabs, enjoying many more attractive alternatives for advancement in commerce, government and the professions than their Iraqi counterparts, had never shown the same inclination towards the profession of military officer. Thus in 1938 the *Troupes Spéciales*, numbering some 10,000 men and 306 officers (of whom only 88 were French, mainly in the higher ranks), contained a majority of Syrians who were of rural background and minority origins. Those urban Sunnis who did become officers were of the lower-middle classes, not from the Syrian political and economic *élite*.

It was these troops who became the core of the new Syrian army after independence. Vichy French control in Syria was overthrown in 1941 by a British and Free French invasion after a futile resistance in which the *Troupes Spéciales* took part, and simultaneously a group of Syrian nationalists proclaimed an independent republic. After a period of military occupation French powers were effectively transferred to a Syrian government in January, 1944, and full independence was achieved in April, 1946. The former *Troupes Spéciales* became the Syrian army, serving the first government to rule an independent and united Syria since the fall of the Ummayyad Empire in the eighth century. An air force was founded in 1948 and a navy in 1950.

The new Syrian State almost at once became embroiled in the 1948 Palestine war, in which its troops were severely handled by the victorious Israelis. In immediate reaction to this there were three coups in 1949 led by former officers of the *Troupes Spéciales*, of which the last, headed by Colonel Adib Shishakli, succeeded in retaining power until 1954. The successor government survived numerous further coup attempts and took the country into a federal union with Egypt as the United Arab Republic in 1958, but the extreme resentment of Syrian army officers at being forced to play a subordinate role to the more numerous and powerful Egyptians in the new joint army was the main motive force behind yet another coup in 1961 that took Syria out of the union. A further successful coup followed in March, 1962, and a third in March, 1963.

The seemingly endless succession of coups and attempted coups between 1949 and 1963 arose from two principal facts. First, the Arab-Israeli confrontation, arising at the very birth of Syrian independence, created an emphasis on defence which guaranteed that the army would be the most powerful force in the State. Syria was more deeply involved in the

conflict than almost any other Arab State both because it was so vulnerable to Israeli attack (Damascus was only 40 miles from the Israeli border) and because the emotional identification with the Palestinians, who were historically indistinguishable from the Syrians, was greater than anywhere else. The second reason for the coups was the fact that this overwhelmingly dominant army was internally divided into bitterly hostile factions, in which generational rivalry played a large part.

Colonel Shishakli, like most Syrian senior officers of the 1950s, was a graduate of the French Military Academy at St-Cyr. Like his colleagues, he had developed strong links with the conservative civilian *élite*, and the factions which they formed were allied to parallel factions in that *élite*. Below them in the military hierarchy, however, were younger officers of a more radical disposition, who had attended the military academy at Homs, had been exposed to the radical Arab nationalist ideology expounded by al-Husri, Minister of Education just after independence, and had been deeply influenced by the example and ideas of Egypt's President Nasser. They generally came from the same ethnic and social background as their predecessors in the *Troupes Spéciales* — from the minority groups, especially Alawites, and from the peasantry and lower-middle classes — but the prevailing intellectual environment and the monopolisation of lucrative alliances with the civilian *élite* by their superiors both drove them in the same direction: anti-colonialism (and consequently anti-Western sentiments) and socialism. The continuous conflict between these two main rival groups of officers, greatly complicated by a proliferation of officer factions because of personal ambition or community allegiance, was the predominant factor in the acute political instability of Syria's government in the 1950s and early 1960s.

The first time that radical nationalist officers achieved power was in 1954. No sooner had they done so than Syria began to come under great pressure to adhere to the Western-dominated Baghdad Pact which was then being constructed in the region as part of the West's Cold War strategy against the Soviet Union. These pressures soon extended to Turkish and Iraqi troop movements along the Syrian border, but the new regime was strongly opposed to the Baghdad Pact, which it saw as an instrument for renewed Western hegemony in the area and a distraction from the more important problem of Israel. It was at this point, in 1955, that the Soviet Union first offered diplomatic support to Syria, and also showed willingness to provide the country with the modern arms which the West had refused to sell it. The relationship which began with the delivery of Soviet and Czech arms and the arrival of Warsaw Pact military advisers in that year was more firmly cemented by Soviet promises of support for Syria during the Anglo-French-Israeli attack on Egypt in 1956, a renewed attempt by the Baghdad Pact to precipitate the fall of the Syrian regime through the creation of threatening troop concentrations along the Turkish border, and the Anglo-American military interventions in Jordan and Lebanon in 1958.

The position which the Soviet Union achieved in these years as the principal supplier of arms and training assistance to the Syrian armed forces has survived all the subsequent changes of regime and vicissitudes of policy. After the emergence of the radical neo-Ba'athist regime in 1966, Soviet military assistance became far more lavish, and it has been indispensable in making possible the expansion of the Syrian army from the 60,000 men and 400 tanks of 1965 to the 200,000 men and 2600 tanks of today. The remarkable stability of this relationship, in comparison to the history of Soviet relations with other Arab countries, derives largely from the fact that the Syrians have never allowed the Soviet Union to gain a disproportionate influence in the internal affairs of the country or army: they have never permitted the Russians military base facilities, nor have Soviet officers and NCOs ever been placed in positions of command over Syrian troops. Consequently, there has not been the kind of anti-Soviet backlash that occurred in Egypt. Despite the deliberate diversion of some Syrian arms purchases to alternative suppliers in the interest of diversification in recent years, and a considerably greater Soviet reluctance to supply arms except for cash payment, the Syrian-Soviet military relationship remains a basic and seemingly indispensable component of Syrian military policy.

The relatively greater stability of Syria's military governments since 1963, which at last permitted a rapid development of the country's economy, was due to the final, inevitable settlement of the generational feud within the officer corps in favour of the younger group in the March, 1963 coup. In contrast to earlier left-wing and radical-nationalist regimes, the group who seized power in 1963 had a political doctrine and a party framework which allowed them to survive. The doctrine was that of the Ba'ath (Renaissance) Party, which combined pan-Arab nationalism with a rather incoherent version of Marxist socialism.

The Ba'ath Party was founded in 1943 in Syria by Michel Aflaq, a French-educated Christian Syrian intellectual. It was a movement with tremendous potential appeal to young Syrian officers, being socialist, anti-imperialist and dedicated to the creation of a single Arab State from Morocco to Iraq — with the initial goal of creating a 'Greater Syria' including Iraq, Palestine and Jordan. It adopted early a cellular structure similar to that of underground communist parties, making it an ideal vehicle for political intrigue and the co-ordination of military coups. If once it attained power, moreover, the party's secretive organisation and totalitarian methods made it an ideal instrument with which a relatively small and isolated group of military officers might hope to control and mobilise the entire nation, while its pan-Arab aspect offered the prospect of greatly enhancing Syria's influence in the Arab world. By the early 1960s the Ba'ath Party had far outdistanced Nasserism or communism in its adherents amongst the radical younger officers who had been trained since 1945, and had also attracted large numbers of young Syrian civilian intellectuals.

The coup of March, 1963 was of a different kind from those that had gone before, therefore, and following an attempted counter-coup in July of that year the Ba'athist officers ruthlessly proceeded to eliminate all further centres of resistance within the army, and began the process of economic, political and sometimes physical liquidation of the traditional civilian *élite*. At the head of this government was the army commander, Major-General Amin al-Hafiz, but the majority of his cabinet members were younger Ba'athist officers.

World Armies

The Ba'athist Party had spread to Iraq as early as 1949, and in 1954 the Iraqi organisation had been erected into a full 'regional' (i.e. Iraqi) branch of the 'national' (i.e. pan-Arab) Ba'athist movement. It chanced that early 1963 was also the first time that a Ba'athist-dominated coup seized power in Iraq, and accordingly one of the then frequent projects for Arab union was tentatively agreed between Syria, Iraq and Egypt in April, 1963. The project collapsed, however, when the Ba'athist regime in Baghdad was overthrown in November of the same year. Since then Syria's Ba'athists have shown little desire in practice to repeat the experiments of 1958-61 and 1963 in pan-Arab unification, despite their theoretical commitment to Arab unity. By the time a fellow Ba'athist regime had re-emerged in Iraq in 1966, indeed, the two main branches of the Ba'ath Party in Syria and Iraq had irrevocably split, nominally over ideological differences, but actually because each feared being dominated by the other. From 1966 to 1978, indeed, the two neighbouring Ba'athist regimes were the bitterest enemies in the entire Arab world. The real explanation for this is probably to be sought in the fact that Syria and Iraq are inevitably the major rivals in the contest for influence or control over the entire 'fertile crescent' which is an unchanging feature of inter-Arab politics.

As a result of disagreements within the Ba'athist Party, a new coup in February, 1966 brought the so-called neo-Ba'athist group of Dr Nureddin al-Atasi to power, and gave increased influence to civilian elements within the Party. The succeeding 4 years saw the most extreme and brutal totalitarian regime imposed on Syria, with even the small property-owning and merchant classes being effectively destroyed or driven into exile. The army's officer corps became almost totally politicised, with military competence and attention to duty ceasing to figure at all in the selection of officers for promotion. This had much to do with the Syrian army's disastrous defeat in the June, 1967 war with Israel, as a result of which the Golan Heights came under Israeli occupation, and the front line moved appreciably closer to Damascus. (For further comments, see Role, Commitment, Deployment and Recent Operations.) Ironically, the military disaster led to a rallying of public support for the Atasi regime, and Syrian equipment losses were quickly made good by the Soviet Union. Soviet influence reached its apogee in Syria in 1968-70, with limited naval facilities being granted to the Soviet navy at the ports of Latakia and Tartus. The same period witnessed a steady rise in the relative influence of the more radical civilian wing of the Ba'ath Party, accompanied by ever greater repression of dissent at home and a growing recklessness abroad. The culmination of the latter was the Syrian decision to intervene in the Jordan civil war of 1970 on behalf of the Palestinian guerrillas, despite the manifest probability that this would result in an Israeli military response which could not be contained by the Syrian army.

Numbers of military officers were greatly opposed to this venture, and none more than the Defence Minister, Lieutenant-General Hafiz al-Asad, a senior Ba'athist who also served as commander of the air force (he was himself a former fighter pilot). The government overruled his protests and dispatched a Syrian armoured column into northern Jordan, but Asad as head of the air force withheld air support; as a consequence the Syrian force was badly mauled by Jordanian tanks and aircraft, and then forced to withdraw by a combination of Israeli threats and Soviet and American pressure. Those responsible for the fiasco were discredited in the eyes of the army, and in November, 1970 the more moderate military wing of the Ba'ath Party seized power under the leadership of Asad in the so-called 'correctionist movement'. Asad was elected President in 1971.

Behind the ideological quarrels and policy disputes which were the apparent substance of intra-Ba'ath politics in the 1960s, however, the reality was somewhat different. The policy disputes were real, as was the evident rivalry between the military and civilian wings of the party, but the actual formation of factions within the officer corps of the armed forces was based primarily on the existing pattern of recruitment from minority communities. Army officers, as in most Arab countries, had been the first major group to become collectively committed to pan-Arab unity, radical transformation of economic and social structures, and the planned expansion of the national economic base, even if, as in Syria, most of them did not belong to the urban Sunni educated *élite* which might be thought the most likely group to adopt these goals. But officers remained Druzes, Circassians, Alawites or Christians even when they had become Ba'ath members, and in the murderous struggle for power in a system without rules which was the reality of Syrian politics after 1949, and especially after 1963, the only trustworthy allies were those who were bound to one by ties of blood and community. Thus military factions were almost always based primarily on groups of a single community, and in view of their predominance in the army the most powerful factions were Alawite. Never was this more true than of the group led by General Asad which has ruled Syria since 1970, and which now utterly dominates the higher command positions in the armed forces and the intelligence services despite the Alawites' mere 11% share of the population.

President Asad's regime was initially extremely popular in Syria, however, because it ended the veritable reign of terror of the previous 4 years. It continued the drive to construct a strong socialist and centralised State controlled by an army-dominated administration, but there was a great easing of economic and political restrictions and a consequent surge of economic growth. The economic liberalisation produced a 159% growth in the GNP between 1970 and 1975, despite the destruction of an estimated \$1,800,000,000 worth of industrial infrastructure by Israeli bombing attacks on economic targets during the 1973 war; and the unaccustomed personal style of Asad's leadership reconciled many Syrians to the apparently permanent rule of a totalitarian party dominated by soldiers belonging to non-Sunni minority groups. Asad also took the trouble to erect a certain pseudo-democratic façade to shield this reality: a new constitution was approved by plebiscite in 1973 creating an elected People's Council (legislative assembly), and the National Progressive Front was created by adding the communists, Nasserists and other socialist groups to the governing party (while carefully preserving the actual Ba'athist monopoly of power).

While likewise preserving the control of his own Alawite supporters over the senior command positions in the armed forces, Asad showed great energy in ensuring that the hordes of 'political' officers without adequate military abilities who had risen in the army in the late 1960s were replaced by competent professional officers. This, even more than the lavish provision of arms by the Soviet Union, was the reason for the markedly better performance of the Syrian army in the 1973 Middle Eastern War. (See Role, Commitment, Deployment and Recent Operations.)

Asad co-operated with some hesitancy in the post-war disengagement process mediated by United States Secretary of State Henry Kissinger in 1974–5. Syria accepted the possibility of peace with Israel if the occupied Arab territories were returned and an acceptable settlement could be obtained for the Palestinians (which retreat from militancy was the ostensible cause of an even more intense hostility on the part of Iraq, culminating in a crisis in 1975 that required the dispatch of substantial Syrian forces to the Iraqi frontier). But Asad was also aware of the fact that Israeli concessions to Egypt were far more likely than was the return of occupied Syrian territory, not to mention Israeli assent to the creation of a Palestinian State, and he was therefore wary of the possibility that Egypt might make a separate peace with Israel, leaving over-matched Syria to face the huge Israeli military machine virtually alone. From the time of Egypt's second Sinai Disengagement Agreement in 1975 this fear appeared to be becoming a reality, and Syria went into opposition to the 'peace process' as pursued by the USA and Egypt's President Sadat. This did not, however, prevent Damascus from maintaining quite cordial diplomatic relations with the USA and other Western countries (in marked contrast to the pre-1970 regimes), as it gave Syria much more room for manoeuvre than its previous sole reliance on close ties with the Soviet Union.

The growing isolation of Egypt in the Arab world after 1975 enabled Syria to embark with a greater chance of success on a policy which the effective withdrawal of Egypt from the Arab–Israeli confrontation had in any case made necessary: the creation of a regional power position, based on influence in Lebanon and Jordan and over the Palestine Liberation Organisation, which would enable it to bargain more effectively in peace and to depend on an 'Eastern Front' of greater military power in case of war. Thus in August, 1975 the existing informal military co-ordination with Jordan was formalised in the establishment of a Supreme Syrian–Jordanian Military Command to co-ordinate defence preparations and military operations. A proposal was also made to the Palestine Liberation Organisation for the unification of political and military commands, but it was rejected by the Palestinians, who rightly feared Syrian domination. (In Syria since 1970 all Palestinian organisations except those totally subservient to Damascus have been severely restricted in their activities.)

However, the factor which came to dominate Syrian foreign policy after 1975, and has latterly had severe domestic repercussions as well, was the attempt to make use of the Lebanese civil war in order to establish a dominant Syrian position in that country. (For details of the origins and course of the war, including Syrian involvement, see the entry on Lebanon.) Syria has always regarded Lebanon, which was only made into a separate State during the period of the French mandate, as being something less than a foreign country — it never exchanged embassies with Beirut for this reason — and it had traditionally supported the Muslim majority in Lebanon, with its greater consciousness of Arab nationality, against the dominant Maronite Christian minority. During 1975 Syria continued in this course, supplying arms, money and encouragement to the Muslim–leftist coalition which in alliance with Palestinian guerrilla forces was fighting to overthrow Maronite control and convert Lebanon into a 'confrontation State'. In early 1976 it even sent in regular units of the Palestine Liberation Army (which operate under the exclusive control of Damascus) to avert a partition of the country by the Maronite forces. The consequence of this intervention, however, was to tip the balance in the war so strongly in the Muslim–Palestinian favour that the possibility arose of a clear-cut victory and the emergence of a radical Lebanese State under the control of Palestinians and Muslim leftists. Not only would Syria have had little or no influence in such a State, but it would also have created a grave threat to the political stability of Syria itself and a strong probability of war with Israel. Accordingly, Syria switched sides, and from May, 1976 its regular forces were sent into Lebanon in growing numbers to fight alongside the Christians against the Palestinians and Muslim leftists.

Syria's goal was to weaken the latter groups sufficiently that they would be compelled to accept a compromise settlement which would re-create the old Lebanese State, with a fairer share of power for the non-Maronite majority but with effective Syrian hegemony over the entire country. The Palestinians in particular fiercely resisted this prospect, which would deprive them of the one real base of operations they had left near Israel. Had the Syrian military operation been a rapid success, it might have done little damage to Damascus, but it was not possible for Syria to smother resistance by introducing overwhelming force into Lebanon for fear of exciting Israeli suspicions and causing a possible Israeli counter-intervention. The Palestinians held off the limited Syrian forces in fierce fighting in June, 1976 therefore, and the conflict dragged on for months more.

The financial and political cost of this extended Syrian operation was bad enough on the international scene, where pro-Palestinian Iraq stopped trans-shipping oil via Syria, thereby depriving the country of a badly needed \$150,000,000 in transit revenues, and Palestinian and Iraqi-inspired terrorist attacks in Syria multiplied. The domestic consequences of the Syrian change of side were even worse, however, for the Syrian population was confronted every day for months with the prospect of Syrian soldiers in alliance with Maronite Christians killing Muslim Arabs and Palestinians. To make matters worse, the Syrian government and army which were doing this were controlled by an unpopular minority, the Alawites, who for many orthodox Sunni Muslims fall beyond the boundaries of Islam. Since 1976, therefore, there has been a marked erosion in the acceptability of the regime to the Sunni Arab majority of Syrians, and an apparently locally based terrorist campaign concentrating on the assassination of prominent Alawites. This unrest has been exacerbated by serious economic difficulties largely caused by the direct cost of the Lebanese intervention (some \$4,000,000 a day) and its political

World Armies

repercussions on other Arab countries' aid and trade relations with Syria. The flow of aid from the Arab oil States to Syria as a 'confrontation State' fell from \$690,000,000 in 1975 to only \$355,000,000 in 1976.

The Lebanese civil war was ended in October, 1976 after Syria had obtained assurances via the USA of Israel's willingness to abstain from intervening if Damascus introduced enough troops into Lebanon to crush Palestinian resistance. This was duly done, and the subsequent Arab summit conference at Riyadh effectively recognised Syrian hegemony in Lebanon, while preserving appearances, by renaming Syria's army in Lebanon the Arab Deterrent Force (with small additional contingents contributed by some other Arab States). But while Damascus thus succeeded in ending the war, it has had little success in re-establishing the conditions for peace, and its army in Lebanon is probably still the only barrier to a resumption of the war. The Muslims and Palestinians were largely brought under control by the end of 1976, but Syria has still to establish its dominance in the parts of the country controlled by the Christian militias. Despite frequent bloody clashes between the Syrian troops of the ADF and the Maronite militias, it is not possible for Syria simply to smother the Christians with overwhelming military force as it did the Palestinians, principally because Israel, which had no objection to Syrians killing Palestinians, might go to war to prevent the Syrians from overrunning the Christians of Lebanon. As a consequence, there were still approximately 35,000 Syrian troops tied down in Lebanon, with little to show for their efforts, two and a half years after the civil war had ended.

Syria's political isolation in the Arab world eased during 1977, and the visit to Jerusalem of President Sadat of Egypt in November, 1977 completed the rehabilitation of Syria by arousing the almost unanimous opposition of the Arab world to what was seen as a plan to consummate an Egyptian-Israeli separate peace. Following the Camp David summit meeting in September, 1978, which seemed to outline the terms of such a treaty, even the long-hostile Iraqi regime effected a reconciliation with Syria in October, agreeing to the creation of a unified military command as a step towards eventual union of the two countries. There must remain serious doubts, however, whether this alliance of the two Ba'athist regimes will ever become more than declaratory.

STRENGTH AND BUDGET

The strength of the Syrian armed forces in 1978 was 227,500 regulars and 102,500 reservists, out of a total population of 8,110,000. The army was far the strongest service, with 200,000 regular officers and men and 100,000 first-line reservists for whom a full regular scale of equipment issue was immediately available. The air force numbered 25,000, all of whom were regulars. The navy is the smallest service by far, with only 2500 regulars and 2500 reservists. The Syrian armed forces incorporate a fourth branch, Air-Defence Command, on the Soviet model, with a strength of 15,000 men, but its personnel are drawn from the army and air force and are included within those totals.

Also included within the army totals, but in practice operating under a separate command, are some 15,000 Special Forces troops, and between 5000 and 10,000 'Detachments for the Defence of the Regime', which serve as a Praetorian Guard. Paramilitary forces include a Gendarmerie of 8000 men, and a Desert Guard (*Hajjana*) of some 1500 men who are principally employed in controlling the bedouins of the eastern desert.

Syrian defence expenditure in 1978 was \$1,120,000,000 out of total government spending of \$4,605,000,000. In addition to this, unknown further amounts are being spent on national security as 'development expenditure'. While total expenditure rose by only 5% over the previous year, which allowing for inflation represented an actual slight decline, the defence budget grew by 10%. As a proportion of GNP, it is 16.4%, a higher ratio than in any other Middle East State except Israel.

National security takes the largest slice of government expenditure by far, amounting to 25% of the total, and 60% of current expenditure. In the more straitened economic circumstances Syria has been experiencing since 1975, it has been the part of the budget devoted to investment that has had to take the cuts. In January, 1977, however, the Arab oil States returned to their normal pattern of aid to Syria after the interruption caused by the Lebanese intervention, and promised Damascus \$570,000,000 in 'confrontation aid'. Even greater sums were pledged in November, 1978 at the Arab summit meeting in Baghdad held to condemn the Camp David peace proposals, but such generous gestures do not always result in money actually changing hands.

COMMAND AND CONSTITUTIONAL STATUS

All executive power is vested in the President, who also holds the office of Commander-in-Chief. In the circumstances prevailing in Syria, where the President is a military officer and depends for his survival on continued control over the army, this is far from being a ceremonial position. All senior military appointments, promotions and transfers are made by the President or his immediate entourage, and similarly all movements of major military units within the country must be approved by him. In reality, indeed, it is not so much the case that the President is the Commander-in-Chief as the other way round: the officer in effective control of the armed forces becomes the President, and acts as the representative of the army in the formal apparatus of the State.

The President appoints his own cabinet, which is not subject to approval by the elected People's Council, and controls

the armed forces through the Ministry of Defence. The officer who is Minister of Defence is also the Deputy Commander-in-Chief and is thus in the chain of command. The present incumbent is a very close associate of President Asad, Major-General Mustafa Tlas. The Deputy Defence Minister is General Moukayyed.

The Chief of Staff of the Armed Forces, General Hikmet Shihabi, is also the Army Chief of Staff. The other three armed forces — air force, air defence and the small navy — have their own commanders and staffs, subordinate to the Chief of Staff of the Armed Forces, or in the navy's case subordinate to the local army commander responsible for the coastal region. The Commander of the Air Force is Major-General Subhi Haddad, with Major-General Adnan Jabi as Assistant Commander and Major-General Ibrahim Hassan as Chief of Staff. The Commander of the Air-Defence Forces is Major-General Ali Salih.

There are at least five major internal security and intelligence services in Syria, some of which fall under the Interior Ministry, while others are answerable to the Chief of Military Intelligence, Major-General Ali Duba. The co-ordinating authority, the National Security Council, is headed by General Muhammad Kholi, who is thus in effect Head of the Secret Police.

Outside of the normal command structure of the army stand the 15,000 strong 'Special Forces' commanded by General Ali Haydar, and the division-strength 'Detachments for the Defence of the Regime', commanded by the President's brother, Lieutenant-Colonel Rifat Asad. Both these formidable formations are recruited almost exclusively from Alawite areas, and are equipped with heavy weapons and tanks. The Detachments for the Defence of the Regime are permanently kept in Damascus protecting the Presidential Palace; the 'Special Forces', equally fanatical in their loyalty to President Asad, have been doing most of Syria's actual fighting in Lebanon since 1976. These two forces would constitute the principal defence of the regime against the rest of the army, should a confrontation arise.

Most of the above-named officers are Alawites. More than half have reached their present eminence since mid-1978, following a wave of transfers and retirements in which most of the remaining senior officers who had been associated with President Asad in the preparation of the 1970 coup were removed from sensitive military positions and replaced by officers who owe their rapid promotions to the present regime. The others are officers who have been very close to President Asad for a long time, and are regarded as ultra-loyalists — like the President's brother Rifat, and Generals Tlas, Shihabi, Duba and Kholi.

Indeed, these five men and one or two others constitute the President's informal inner circle. Regardless of their relative positions in the formal hierarchy of army or regime, they are the men who, together with the President, make all important decisions in Syria and, through the networks of influence they control, ensure that the decisions are carried out. This inner group has not been entirely free from dissension: in 1972 General Muhammad Umran, who was said to have been plotting with Alawite army officers against the regime, was assassinated in Lebanon, and in March, 1978 one of the most senior members of this group, General Naji Jamil, was abruptly removed from his posts as Air Force Commander, Head of the National Security Council and Deputy Defence Minister, allegedly for playing his own political game while in charge of the Syrian military intervention in Lebanon. On the whole, however, the members of the inner circle recognise their mutual dependence, and operate very effectively to safeguard their joint power.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The Syrian army's military role has always been of paramount importance in view of the Arab-Israeli conflict which has been in existence almost from the date of its creation. Its parallel political role has sometimes had deleterious consequences for its primary mission, however: to some extent this was true in the 1948 war, which was ineptly directed by an officer corps in which advancement depended on political influence more than on professional ability, and it was entirely true of the disastrous 1967 war. On that occasion Syrian troops held out grimly in many parts of the Golan Heights under an overwhelming Israeli assault, often only to find themselves deserted by their own officers, who owed their positions to their loyalty to the Ba'ath Party rather than to their courage or competence. Since 1970, however, the army's political role has been severely restricted to the senior officer ranks, and company- and field-grade officers are expected to be able commanders as well as loyal Ba'athists.

Syria belongs to the Arab Defence Council, a subsidiary body of the Arab League created in 1959, and to the Unified Arab Command, set up in 1964. These organisations have never had any practical influence on events, however, and nor did the Federation of Arab Republics, created by Egypt, Syria and Libya in 1971, despite its alleged common defence policy, the existence of a Federal Defence Council, and the appointment in January, 1973 of an Egyptian Commander-in-Chief of all Federation forces. The defence agreements which have been of any significance have all been bilateral ones.

The alliances with which Syria fought the June, 1967 war were the bilateral defence agreements with Egypt of November, 1966 and with Jordan in May, 1967, which provided for the establishment of a Defence Council and Joint Command. Although co-ordination between the allies was extremely poor in that war the arrangement remained in existence, and was later joined by Iraq. Bilateral defence pacts were concluded by Syria and Iraq in May, 1968 and July, 1969, but the hostility between the two regimes prevented them from developing any real military significance. Indeed, the refusal of Syria to allow substantial Iraqi forces to be stationed on Syrian soil in peacetime, for fear that the Iraqi Ba'athists

World Armies

would conspire with sympathetic members of the Syrian Ba'athists to overthrow the Damascus regime, was the reason that Iraqi forces arrived very late on the Golan Front in 1973 and were largely destroyed before even deploying.

The existing Eastern Front Command, a loosely organised structure which had grown out of these bilateral treaties between Syria, Jordan, Iraq and the Palestine Liberation Army, was reorganised into separate Jordanian and Syrian commands in December, 1970. This foreshadowed the events of 1973, when Egypt and Syria in the course of preparing their October attack on Israel agreed that Jordan should be allowed to abstain from participation in the war due to its extreme vulnerability. The presence of Saudi Arabian and Moroccan units in Syria in 1973, although under the auspices of the Arab Defence Council, was also in fact the result of informal bilateral consultations.

The most important of Syria's external defence relationships in the period leading up to 1973, however, was not with an Arab country at all, but with the Soviet Union. Russian arms and training assistance had been the mainstay of Syrian armed forces since the mid-1950s, but after the neo-Ba'ath coup of 1966 and the 1967 war the number and modernity of weapons supplied to Syria rose dramatically. Between 1966 and 1973 the Syrian air force's combat aircraft increased by 250% to 210, and the army's tank force almost quadrupled to 1500. Soviet generosity grew noticeably greater after the expulsion of 20,000 Russian troops and advisers and the curtailment of Soviet air and naval facilities in Egypt in 1972, which left Syria as Moscow's only trusted ally amongst the Arab front-line States. Soviet arms shipments in the first half of 1973 exceeded those of the whole of 1972. The qualitative difference was also great: Syria began to receive the SA-6 missiles which enabled it to erect an air-defence screen over the Golan Heights during the war only in the preceding 12 months.

The Syrian army went to war in October, 1973 enjoying four great advantages over 1967: a vastly expanded and improved armoury of weapons, officers who could be relied on to know their job and stay with the troops, the benefit of years of work by a greatly expanded Soviet advisory corps, and the inestimable advantage of surprise. In consequence, it naturally achieved some striking initial gains. But only those who were astonished to learn that properly trained and led Syrian troops could fight bravely and well would say that the Syrian army's performance in 1973 was anything more than passable.

The Egyptians had analysed the specific problem of fighting the imaginatively led Israeli armoured units, assessed the impact of the new anti-air and anti-tank guided weapons, and drastically modified Soviet tactical doctrine to suit the circumstances (although, to be fair, the Egyptians had the enormous logistical obstacle of the Suez Canal to encourage them to consider the merits of a swift advance followed by a solid defence against which the Israelis might beat themselves in vain). The Syrians, by contrast, slavishly followed Soviet tactical doctrine without the resources and reserves to justify such an all-out offensive strategy, and indeed without any political need to pursue such a strategy.

The Syrians committed between 800 and 1200 tanks — the bulk of their armoured force — to the first attack, pursuing an inflexible plan in which insufficient allowance had been made for the inevitable dislocations inflicted on the best-laid plans by actual combat. At heavy cost they overwhelmed the light Israeli covering force on the Golan Heights, but in the course of the fighting the first wave naturally became scattered and lost its momentum. Within 36 hours of the initial attack the Syrian armoured columns had outrun their cumbersome logistical system — though the distances involved were not large — and there was no 'second wave' available to pass through them and continue the attack. Syria simply did not have enough tanks for the strategy it adopted. To make matters worse, command control over Syrian formations was rapidly lost once forces became engaged. As a result the furthest advanced Syrian forces, exhausted, short of fuel, and not infrequently lost, were struck by the Israeli counter-attack which had been absolutely inevitable as soon as mobilisation had been completed (and indeed could have been predicted almost to the hour) and were rolled back rapidly past their start line. By previous Syrian standards, it was an achievement of some merit; by the standards the Syrian army must aspire to if it ever hopes to have the capability to fight Israel on something approaching equal terms, it left a great deal to be desired.

The extremely high rate of Syrian equipment losses, especially in tanks, and the possibility that the Israeli counter-attack might not stop short of Damascus caused the Soviet Union to begin a massive sea and air lift of military equipment to Syria on October 10th. The Syrian army proved to be much more formidable and better organised in defence, however, although Moscow did feel it necessary to indicate to the USA on October 11th that Soviet airborne divisions had been alerted to go to the defence of Damascus, and the headquarters staff of one Soviet division was reportedly flown in. In the fighting around Sa'sa on the road to Damascus the Syrian defensive tactics, based on armour working in co-operation with fortified strong-points, proved particularly effective. Nevertheless, the effective ending of the heavy fighting on the Syrian front only half-way through the 2 week war was caused not by either of these obstacles to a continued Israeli attack, but rather by the transfer of major Israeli forces to the south for the counter-attack on the Sinai front. The Israeli air force, however, was ordered to wage total war against the Syrian economy, and in a series of extremely effective raids almost crippled the economy and communications infrastructure of the country.

The 1973 war was certainly not a military victory for the Syrians. Despite the advantage of surprise and superior numbers, they ended up losing 600km² of territory in addition to the area they had lost in 1967. Syrian military casualties included about 5000 dead, and 800 tanks — over half their force — were destroyed. In the political circumstances of 1973, however, almost any military outcome short of the Israeli occupation of Damascus would have meant a political victory for Syria, simply by demonstrating that they were still a military threat which could not be ignored either by Israel or by the Great Powers, and so it proved: under the disengagement agreement of May, 1974 the Israelis withdrew from the additional Syrian territory they had captured.

Nor were the heavy losses suffered by the Syrian forces a serious military problem. Between October 10th and 23rd,

3750 tons of Soviet military equipment was airlifted to Syria, while a greater amount arrived by sea. In a massive resupply operation in the few months after the war the Soviet Union made good almost all of Syria's massive equipment losses in the war, although training replacements for the dead gunners, tank crews and pilots would take some time. Syria nevertheless felt sufficiently recovered militarily to embark on a limited war of attrition in January, 1974 on the Golan Heights which culminated in heavy infantry fighting for the peak of Mount Hermon in April, 1974, and continued until the disengagement agreement in May. Subsequent Soviet arms deliveries have increased Syrian military strength to well above the 1973 level.

Since 1974, apart from the brief deployment of two divisions along the Iraqi border in August, 1975, all the army's operational experience has been in Lebanon. The first Syrian offensive launched against the Muslim–Palestinian forces in June, 1976 was considerably less than a success, due probably to a combination of overconfidence and inadequate numbers. The Syrian regular forces in Lebanon were considerably augmented over the summer and early autumn, however, and the final Syrian drive against the Palestinians in October, 1976 was a complete success. Although there must have been severe morale problems in asking Muslim Syrian soldiers to fight Palestinians and Muslim Lebanese, no serious breakdowns of discipline have been reported.

The morale problem was greatly eased when Syria changed sides again in the Lebanese conflict after the ceasefire of October, 1976. Almost all subsequent fighting by the Syrian army in Lebanon has been against the Maronite Christian militias. There are nevertheless considerable discipline problems involved in having a large part of the Syrian army engaged in what amounts to occupation duties in a much more sophisticated country like Lebanon, and the army has to maintain a 'decontamination' or 'de-Lebanisation' centre near Homs to process returning soldiers who may have acquired a taste for such un-Syrian habits as smoking marijuana. Moreover, the sporadic clashes with the Maronite militias have caused quite considerable casualties to the Syrian army — very roughly, a thousand a year in 1977 and 1978 — and it may be an indication of the morale effects of this on Syrian troops who have no clear idea why they are in Lebanon that tours of duty there are kept short. Most of the actual fighting in Beirut is now done by the *élite* 'Special Forces' units whose chief virtue is their absolute, almost tribal, loyalty to the regime.

In late 1978 there were seven brigades of the Syrian army — about 35,000 men — committed to the Lebanon, where they comprised the overwhelming majority of the ADF and assured Syria predominant influence in Lebanese affairs. These were the only Syrian troops deployed beyond the country's borders. In compliance with strong Israeli warnings, however, there were no Syrian units south of the Litani River, some 10–15 miles from the Israeli frontier, and the intervening space is held by UN forces and an Israeli-supported Christian militia. Moreover, the Syrian forces were distributed all over the Lebanon, and were in no position either to mount a rapid attack against Israel or to respond quickly to an Israeli attack into Lebanon. The presence of Syrian troops in Lebanon thus certainly does not indicate that a new front has become available to the Arabs for military operations against Israel.

At the same time, the absence of 35,000 Syrian troops from the existing Golan front certainly makes it even less likely that Syria would willingly contemplate war with Israel. With the effective departure of Egypt from the ranks of the 'confrontation States', all that now remains of Arab military strength immediately adjacent to Israel is the depleted Syrian army in the Golan and the competent but small Jordanian army to the south. The military balance has hardly ever been less favourable to the Arabs. (For further comments on the present Israeli–Syrian military balance, see Current Developments.)

Syria's only option after the defection of Egypt's armed forces from the ranks of the confrontation States was to strive to organise a really solid 'Eastern Front' which might at least serve to deter an Israeli attack, even if it were not capable of any co-ordinated offensive action carrying a reasonable promise of success. The most vital component of such an Eastern Front so far as Syria is concerned is, of course, Jordan, and since 1973 Jordanian–Syrian defence links have been very strong.

Despite the gulf between the official ideologies of the two countries, King Husain of Jordan is a personal friend of President Asad, who may well have prevented his overthrow by refusing to lend air support to the Syrian army's intervention in the Jordanian civil war of 1970, and both leaders recognise that they share what is in strategic terms a single front against Israel. The existing defence relationship between the two was strengthened in 1975 by the creation of a Supreme Syrian–Jordanian Military Command, and although at the time it was motivated more by threats from Iraq than from Israel, it does have contemporary relevance for the latter confrontation as well. It has no executive control over either country's forces in peacetime, but there are regular liaison visits between the Syrian and Jordanian Chiefs of Staff, and there is a joint consultative body which meets to co-ordinate military policy.

Although it is understood that Jordan would stay out of a war between Syria and Israel if possible, the Jordanian army maintains strong forces in the extreme north of the country to avoid offering Israel the temptation of an easy outflanking move around the southern end of Syria's Golan defences, and it is certainly not excluded that some Jordanian forces might be sent into Syria to help out in another war, as indeed they were in 1973. However, on the very important question of creating an integrated air-defence operations centre to co-ordinate the defence of the two countries' airspace — which would certainly make sense operationally, since Damascus and Amman are only a bit more than 100 miles apart — discussions which were held during 1976 ended after Jordan decided to acquire an American-made Improved Hawk SAM system which is incompatible with Syria's Soviet-supplied equipment.

The one Arab State whose full adhesion to the Eastern Front Command might make it a militarily credible deterrent to an Israeli attack is Iraq, and until 1978 relations between Syria and the Baghdad regime were so bad that no possibility of this

World Armies

seemed to exist. In October, 1978 however, Iraq staged a grand reconciliation with Syria, and the two States signed a charter for joint action in 'all political, military, economic, cultural and information fields'. A Joint Higher Political Bureau was established to supervise all aspects of bilateral relations, to meet every 3 months alternatively in the two countries' capitals, and including in its membership the most powerful figures in both regimes. The most important of the four sub-committees that were simultaneously created is the Committee on Military Co-operation, charged with formulating a 'joint defence agreement that will lay the basis for full military union between the two countries'. Iraq also offered to send troops to strengthen Syrian defences in the Golan Heights at once. In the next meeting in late January, 1979 Syria and Iraq signed a mutual defence pact and agreed to proceed via unification of the two branches of the Ba'ath Party to a complete union of the countries into one State with 'one name, one flag, one national anthem and one President who will be alternately Syrian and Iraqi'.

The likelihood that either the Damascus or the Baghdad regime would relinquish even a portion of its control to a joint authority is still very small, however, and it was noticeable that no statement about stationing Iraqi troops in Syria was forthcoming. Although a united Syrian-Iraqi State would indeed be a formidable military, economic and political power, possessing plentiful oil wealth, 415,000 troops, 750 aircraft and 4400 tanks, it is most unlikely to come into existence. The real motive for the reconciliation was fear of the gathering threats that face Iraq due to the Iranian revolution, and that beset Syria due to its own military inferiority to Israel, the endless military commitment in Lebanon, and the defection of Egypt. The Syrian-Iraqi reconciliation amounts to an attempt to remove the distractions of political terrorism in the capitals and military mobilisations along the common border, in order to be better able to face the dangers which threaten both Iraq and Syria at the other end of their countries, along the borders with Iran and Israel.

The deployment of the Syrian army, in consonance with the country's main military preoccupation, is mainly in the south-west, between Damascus and the Golan front, and extending in lesser strength for some distance north along the Lebanese border and eastwards from the southern end of the front, in an attempt to protect against Israeli flanking moves. Only light covering forces are maintained along Syria's other frontiers. Most other Syrian troops are located at bases, depots and training camps which are mainly located in and near the larger cities, thus also serving in the function of garrisons. The exception is Damascus, where no formed military units are permitted to enter except Rifat Asad's 'Detachments for the Defence of the Regime'.

The political and internal security roles of the army have been discussed in the preceding sections. It may be added that extensive use is made of the technique of maintaining rival and overlapping intelligence services, some of which concentrate on the armed forces, others on the civilian population at large. What is most striking, however, is the extent to which the army presence permeates civil life and civilian economic activities.

One third of all the motor vehicles in Syria carry the army's green licence plates, and lands, buildings and services have been requisitioned on a very large scale. The armed forces have the ability in practice to disregard the directives of other ministries and to reallocate to themselves resources of material, foreign exchange and industrial capacity which were originally planned for other purposes. There is also a very substantial sector of Syrian industry which is controlled by the army, sometimes with little evident relation to the needs of national defence. Over 200,000 civilians work in army-run enterprises. Taking this together with the effects of conscription and pre-military training in schools, and the omni-present military intelligence services, there can be scarcely a family in Syria which does not have regular contact with the army in one way or another.

ORGANISATION

Arms of Service

The Syrian army is divided into the conventional arms — infantry, armoured, artillery, engineers — and services. Air-Defence Command, although it combines army and air force personnel under army command, does not have its own separate branch structure.

Operational

The general staff organisation is patterned on that of the French army, with four chiefs of bureaux charged with responsibility for personnel and administration, intelligence, operations and training, and logistics. There is also a special staff composed of the directors of the various technical functions and services. The military chain of command extends from General Headquarters in Damascus to the component field commanders and chiefs of the combat arms. Air force headquarters is also in Damascus. The navy's headquarters is near Latakia; its commander is subordinate to the local army commander in the area, and a Director of Naval Operations exercises direct control over all units afloat.

The Syrian army is made up of two armoured divisions, each with two armoured and one mechanised brigades, and three mechanised divisions which each have one armoured and two mechanised brigades. There are a further three independent armoured brigades, one independent mechanised brigade and three independent infantry brigades. The army also contains two artillery brigades, six commando battalions, four paratroop battalions, one surface-to-surface missile

battalion with Scud missiles and two SSM batteries with FROG-7s, and 48 SAM batteries with SA-2/-3/-6s. The internal organisation of all army combat units now closely parallels the Soviet model.

The Air-Defence Command, under army control, is organised into 24 fixed SAM batteries equipped with SA-2/-3s, 14 mobile batteries with SA-6/-8s, anti-aircraft artillery batteries of a variety of calibres, plus interceptor aircraft and air-defence radars provided by the air force.

The air force's tactical organisation consists of: six fighter-ground attack squadrons (three with MiG-17s, three with Su-7s); three fighter squadrons with MiG-23s and MiG-27s; 12 interceptor squadrons with MiG-21 PF/MF (under the operational control of Air-Defence Command); and transport, helicopter and training squadrons. A reconnaissance squadron of MiG-25s was reported to be operating in Syria in 1976-7, presumably flown by Soviet pilots, but this appears to have been withdrawn. Major Syrian air bases are at Damascus, Hamah, Dumayr, Palmyra, Sahles, Sahara, Aleppo, Blay, Sayqat, Rasafa, Khalkhalah and Masiriyah.

The navy does not appear to have any permanent operational subdivisions; all units at sea are directly controlled by the Director of Naval Operations. The major naval bases are at Latakia and Baniyas.

RECRUITMENT, TRAINING AND RESERVES

Candidates who wish to become regular officers must be between 18 and 23 years of age, and in possession of a satisfactory school matriculation certificate. Selections for the military academies are made from among those who pass the entrance examination and are physically fit.

Army officers undergo a 2 year course of instruction at the Military Academy at Homs, which was founded in 1933 by the French. It is primarily a school for training infantry officers; graduates selected for other arms or services go on to additional specialised training at other army schools, or are sent abroad for instruction at foreign schools and academies. Since 1963, almost all foreign training has been done in Soviet and Eastern European institutions. Upon completion of the 2 year course at the Academy, graduates are commissioned as second-lieutenants.

The Air Force Academy, founded in 1960, is at Nayrab air base near Aleppo. It provides officer candidates with a 2 year course of instruction in theoretical, technical and scientific subjects, and basic flight training. The Naval Academy, founded in 1962, is at Latakia, and also provides a 2 year course of theoretical and practical instruction.

Most of the manpower of the armed forces is provided, at least in the first instance, by conscription, which was introduced by the Service of the Flag Law in 1953. All Syrian males, with a few exceptions, are liable to perform 30 months of military service (subject to extension at the discretion of the army) commencing at age 19 years, and subsequently to serve in the active reserve for 18 years. Some individuals with special qualifications of use to the State have to serve only 18 months, and deferments are available for students going on to university. The conscript classes, designated by their year of birth, are called up in two annual increments in March and September. Some conscripts, mostly college graduates, are selected for training as reserve officers, while most of those with school-leaving certificates become reserve NCOs (though not with the same authority as professional NCOs) after basic training. The remainder of the conscripts serve as privates.

Military training for many Syrian conscripts begins long before induction, in the *futuwah* programme for secondary-school pupils. Begun in 1956 with regular army instructors, it is now run by full-time civilian instructors who are usually reserve NCOs or officers. All male secondary school and university students attend compulsory weekly sessions of military training, and in the case of secondary school pupils compulsory annual summer training camps as well. The school-leaving examination includes military sciences and practical military examinations upon which pass or failure are contingent.

Once in the army, conscripts undergo basic training and then go on to their units where they receive further on-the-job training, most of which is conducted by NCOs. The units of the army operate the usual annual cycle of field training exercises. Conscripts selected for reserve officer training attend a concentrated 9 month course at the Reserve Officers' School in Aleppo, and are then assigned to a unit, usually in the infantry, as an officer candidate. Those whose performance has been satisfactory are granted commissions as reserve second-lieutenants 1 month before the end of their required 2 year tour of duty.

Medical officers are given direct commissions after short periods of military training: 6 months at the Military Academy for those going into the regular service and 3 months at the Reserve Officers' Academy for those fulfilling their national service obligations.

The professional NCO corps is drawn from conscripts who choose to enlist for an initial 5 year period in the regular army on completion of their obligatory service. Full status as a professional rather than a conscript NCO is not granted, however, until the end of the first term of voluntary enlistment. Those volunteers who fail to make NCO may re-enlist up to a maximum total time of 15 years in the service; professional NCOs are retired at forty-five, or at their own request after 20 years of service. There is a wide variety of opportunities for NCOs to receive specialised technical instruction and advanced schooling, both within their own branches and at advanced career and technical schools which all three services maintain for senior NCOs. Engineers and other highly trained technical personnel are also recruited directly by the army as NCOs by the inducements of high salaries and other privileges; this applies particularly to those who work in the army's research centres and maintenance workshops.

World Armies

The general standard of individual training of the Syrian army in the late 1970s was good, and it was by then largely independent of Soviet training assistance except for specific highly advanced technical subjects. The estimated number of Soviet advisers with the Syrian armed forces in 1978 was 1800, down from 3500 a few years earlier, and the majority of those were assisting in the training of the air force and Air-Defence Command (where the Russians insist on placing one adviser with each SAM unit). The professional NCOs continued to be the backbone of the system, but officer recruitment, though still drawing disproportionately heavily on the minorities, was based on professional competence or promise rather than on the purely political grounds of the 1960s.

In general, quarters, food and pay in the Syrian army compare favourably with what the average serviceman could expect to receive in the civilian economy. Officers and NCOs have separate accommodation, including family housing for married regulars on most posts. Medical care is of a high standard, leave is 30 days a year for regulars and 15 days a year for conscripts, and there are a wide variety of supplements to basic pay for dependents, duty in a combat zone, subsistence and specialist qualifications which in many cases double the basic rate. Officers receive an allowance for servants. Retirement pay is adequate to live on, with NCOs qualifying for retirement after 20 years and officers after 25 years.

The reserves are almost all army, there being only 2500 naval reservists. The widely used figure of 100,000 army reservists represents an estimate of how many reservists the army could actually equip and fit into its formations upon mobilisation; the actual total of former conscripts with a continuing reserve liability is many times that figure. In practice the army would only bring back those who had completed their service within the previous 3–5 years, with the possible exception of reserve officers, as older men would be unfamiliar with much of the army's equipment. The mobilisation organisation for the reserves is maintained at a high level of readiness, and although not so quick-moving as that of the Israelis, could produce most of those reservists who are actually required at 3 or 4 days' notice.

EQUIPMENT AND ARMS INDUSTRY

The Syrian army's armoured strength consists of 800 T-62, 1500 T-54/-55 and 200 elderly T-34 medium tanks, plus 100 PT-76 light tanks. A further 60 T-62s are on order. The army has unknown numbers of BRDM reconnaissance vehicles and BMP MICVs. The mechanised infantry is borne in 1600 BTR-40/-50/-60/-152 and OT-64 APCs. Artillery strength consists of some 800 122 mm, 130 mm, 152 mm and 180 mm guns/howitzers, and 75 SU-100 and some ISU-122/-152 SP guns. These are supplemented by 122 mm, 140 mm and 240 mm multiple rocket launchers, and 82 mm, 120 mm and 160 mm mortars. For long-range bombardment of targets within Israel the army has 30 FROG-7 and 36 Scud surface-to-surface missiles.

The formerly standard Snapper, Swatter and Sagger ATGWs have now been supplemented by a purchase of 10,000 Milan missiles from France and an unknown number of HOT ATGWs from the USA. These are supported by 57 mm, 85 mm and 100 mm towed and ZSU-23-4 and ZSU-57-2 self-propelled anti-aircraft guns, and SA-7/-9 surface-to-air missiles. There are further SA-6/-8/-9 SAMs on order. The army has 25 Gazelle helicopters, with a further 24 on order.

Area air defence, as opposed to mobile point-defence AA weapons with the combat units, is the responsibility of Air-Defence Command. This controls 24 batteries of SA-2/-3 and 14 batteries of SA-6 missiles, AA guns, 12 squadrons of interceptor aircraft and a comprehensive air-defence radar network which, since 1973, has been extended to cover all the country's industrial areas.

The Syrian navy has two Petya-I-class frigates (and another on order), six Osa-I and six Komar-class FPBGs with Styx SSMs, one T-43 class and two coastal minesweepers, one large patrol craft and eight P-4-class MTBs. Nine Ka-25 helicopters under air force control are devoted to anti-submarine warfare duties.

The air force has about 400 combat aircraft, although some are believed to be in storage due to a shortage of pilots. Twelve interceptor squadrons with 220 MiG-21 PF/MFs are under the operational control of Air-Defence Command. Ground-attack capabilities rest with three squadrons flying 50 MiG-17s, three squadrons equipped with 60 Su-7s and three squadrons possessing 62 MiG-23s and 12 MiG-27s. A further 50 MiG-27s were sought from the Soviet Union in late 1978, for delivery in late 1979, but it is not known if this order was accepted. The standard air-to-air weapon is AA-2 Atoll.

Air force transports include eight Il-14, six An-12, two An-24 and four An-26 aircraft. The training squadrons use Yak-11/-18, 23L-29, MiG-15UTI and 32 MBB 223 Flamingo aircraft. There are four Mi-2, eight Mi-4, 10 Mi-6, 50 Mi-8, nine Ka-25, 36 Super Frelon and six CH-47C helicopters. Eighteen AB-212s are on order from Italy.

The great majority of Syrian weapons are derived from the Soviet Union, and must almost certainly continue to be so, both because of the logistical problems that would arise if major items of military equipment from other countries had to be fitted into the structure, and more importantly because the Soviet Union is the only country willing to provide Syria with arms in the quantities and of the level of sophistication the country requires. Moreover, no other arms supplier has the sheer reserve industrial capacity to provide Syria rapidly with replacements for weapons losses of the scale that were experienced in 1973. Thus, although Syria has deliberately diversified its arms-purchasing policy since 1973 by acquiring specific items of Western military equipment which were superior to their Soviet equivalents — Milan anti-tank guided weapons, and Gazelle and Super Frelon helicopters from France, HOT ATGWs from the USA, AB-212 helicopters from Italy, all-terrain trucks from Germany, and ordnance and ordnance production equipment from Austria — there is no alternative to the

Soviet Union for most of its equipment needs. Indeed, the difficulties involved in using Western military equipment have been well illustrated by the case of the Milan missiles, which have been adapted by the Syrian troops in Lebanon into a highly effective weapon for destroying specific buildings in the Christian quarters of Beirut, thus occasioning a strong French protest against this 'misuse' of the missile.

There have, of course, been difficulties with Soviet arms supplies as well, on both political and financial grounds. The Soviet Union has used its virtual monopoly position from time to time in an attempt to influence Syrian policy by slowing down the delivery of weapons and spares — in early 1974, for example, when it was trying to persuade Syria to attend the Geneva conference on Middle East peace, and in 1976 during the Syrian military operations against the Palestinians in Lebanon. It also insists on cash payment for its weapons nowadays, which posed a considerable problem for Syria in 1976–7 when the flow of financial assistance for military purposes from the Arab oil States had temporarily slowed down.

The Soviet Union continues to seek political advantages in return for its weapons. The abrupt and unscheduled ending of Syrian Chief of Staff Hikmet Shihabi's visit to Moscow in November, 1978 was reportedly due to a Soviet demand that Syria sign a Treaty of Friendship with the Soviet Union in return for further arms supplies, and an attempt by Moscow to switch the Syrians from the MiG-27s they wanted to buy to MiG-23s, in the interest of standardisation within the new Syrian–Iraqi alliance. Syria's proven ability to withstand this kind of pressure seemed to be demonstrated once again in January, 1979, however, when Defence Minister Tlas visited Moscow and apparently got most of the weapons Syria was seeking without any political concessions.

RANK, DRESS AND DISTINCTIONS

The military rank and grade structure is the same for all services and conforms to normal practices. In general, lieutenants command platoons and captains are in charge of companies; squad leaders are usually sergeants, with corporals as assistants.

Officers' rank is shown on shoulder boards, NCOs' rank by chevrons of silver thread worn point upward on the upper sleeve; the background colour of the shoulder board or chevron indicates the branch of service.

<i>Rank</i>	<i>Arabic designation</i>	<i>Insignia</i>
Lieutenant-general	Fariq	Crossed swords and two eagles
Major-general	Liwa	Crossed swords and one eagle
Brigadier-general	Zaim	Eagle and three stars
Colonel	Aqid	Eagle and two stars
Lieutenant-colonel	Muqaddam	Eagle and one star
Major	Rais Awwal	Eagle
Captain	Rais	Three stars
First-lieutenant	Mulazim Awwal	Two stars
Second-lieutenant	Mulazim	One star
Chief warrant officer	Wakil Awwal	Three chevrons over two stars
Warrant officer	Wakil	Three chevrons over one star
First sergeant	Raqib Awwal	Three chevrons
Sergeant	Raqib	Two chevrons
Corporal	Arif	Two inverted chevrons (point down)
Private first class	Jundi Awwal	One inverted chevron
Private	Jundi	—

Army combat clothing is of Soviet pattern. Officers' service uniform is wool coat and trousers of British design, with a visored cap; enlisted men wear battledress with a garrison cap. The red-and-white chequered Arab head-dress, the *kaffiyah*, is sometimes worn by soldiers guarding important national buildings. The dress uniform, worn by officers only, is of dark blue with a gold-decorated upstanding collar, black shoes and gold-trimmed belt. Air force personnel wear the same uniforms as the army, and naval uniforms are similar to those of the British or American navies.

Decorations carry considerable prestige, and are distributed sparingly. In order of precedence, the decorations for valour or outstanding performance in war service are: the Medal of Military Honour (four classes), the Medal of Merit (five classes), the Loyalty Medal (five classes) and the War Medal (four classes). They may be awarded to either military or civilian personnel. Any participant in hostile action against Israel is awarded the Palestine Medal, and those who receive wounds in combat receive the War Wounded Medal.

World Armies

CURRENT DEVELOPMENTS

Syria's military position *vis-à-vis* Israel has substantially deteriorated since 1973. The country's holdings of major weapons have grown by about 50% since then, and have more or less kept pace with the rate of modernisation on the other side, but Israel's own stocks of weapons have also grown by at least 50%. Moreover, fully two divisions of Syria's forces are tied down in Lebanon, in positions from which they could not rapidly take an effective part in any fighting. What makes the great difference, however, is the effective departure of Egypt's large armed forces from the Arab-Israeli military balance, thus leaving Syria alone (or at the most, with what help Jordan could provide) to withstand the full weight of an Israeli onslaught. For the first time in the post-war history of the region, it is probable that Israel would enjoy numerical superiority over Arab forces engaged in a war, in addition to its still existing advantages of superior equipment and better-trained operators.

Even were Egypt to return to the ranks of the 'confrontation States', either from its present position (in February, 1979) or after a peace settlement with Israel had been concluded and had returned the Sinai peninsula into its possession, this relative deterioration in the Arab strategic position would persist, though in a less severe form. From its present positions, with the Sinai passes as a barrier between it and the Israeli forces, the Egyptian army would have great difficulty in rapidly bringing heavy military pressure against Israel, and could probably be held by minimum Israeli forces while the main weight of the army was devoted to the destruction of Syria's defences. Even if a peace settlement should be concluded and Israeli forces were compelled to withdraw behind the 1967 border in Sinai, only very light Egyptian forces would be allowed east of the passes, and sending major forces through them in war could still pose a military problem under Israeli air attack. In either case, Israel could reasonably expect to have considerably more time to devote to smashing the Syrian forces, before being compelled to transfer most of its own army south to deal with an Egyptian threat, than it had in 1973. Moreover, it should not be forgotten that the Egyptian armed forces' fighting strength has declined considerably in absolute terms (an estimate of 30% has been suggested) since 1973. The inescapable conclusion is that Syria would either have to fight alone in another war with Israel, or at best could expect greatly reduced help from Egypt by way of drawing off Israeli forces to a southern front promptly and in large numbers. Nor does it seem probable that the recent Syrian-Iraqi proclamation of brotherhood and eternal unity will actually result in significant numbers of Iraqi troops being stationed close enough to the Golan front to be of immediate use in war, because that would also place them close to Damascus, which is a prospect unlikely to appeal to the Syrian regime.

In view of all the above, and of the extreme improbability that Syria could again achieve the kind of surprise it did in 1973, it is almost inconceivable that Damascus would deliberately launch an attack against Israel. The most it can plausibly hope for is an ability to slow and damage an Israeli attacking force enough to allow time for more distant Arab countries to bring their weight to bear, or for the superpowers to impose a ceasefire. Since anything short of a complete collapse of Syrian defences and the loss of the capital might well be converted into a political victory, this ability is an objective worth considerable effort on Syria's part.

Israel is well aware of this, and given the time constraints which are likely to apply would probably prefer not to attack head on into the dense Golan defences, which extend back all the way to Damascus. Although the current diversion of so much Syrian military strength into Lebanon may have weakened the Golan defences sufficiently to make Jerusalem reconsider that option, it is generally considered that the preferred Israeli solution would be to outflank the Golan position, either to the south through northern Jordan, or to the north through south-eastern Lebanon. In either case, this might bring Israeli forces quickly into the plain surrounding Damascus, and compel the main body of the Syrian army to reverse its front, come out of its fortified defences, and fight in the open across its own badly tangled supply lines. This strategy would have the further attraction of avoiding a violation of the Golan disengagement arrangements which have been guaranteed by the Soviet Union.

Both approaches also have their disadvantages, however. To go through northern Jordan Israel would have to fight a fair proportion of the Jordanian army, which has been deliberately positioned there to prevent such a flanking move around the Golan defences. To go through Lebanon, on the other hand, Israel would now have to drive through UN forces, which could be very embarrassing. Striking on this flank would also involve moving through mountain passes that can be more easily blocked, but a large-scale Israeli paratroop landing in the Masna'a area could cut communications between Syria and Lebanon while their forces were advancing, and they would emerge on the Syrian plain much closer to Damascus. Bearing in mind that the Syrian army is well aware of these Israeli options, however, neither flanking operation would be without its risks, and Jerusalem would not lightly undertake a full-scale invasion of Syria.

Indeed, it is probable that the Syrian regime is currently more concerned about internal security than external threats. The trouble began at the time when the Syrian army attacked the Palestinian and Muslim-leftist forces in Lebanon in June, 1976. Within months, a series of bomb explosions and assassinations of prominent figures associated with the regime — most of them Alawites — had begun in Syria: the seizure of the Semiramis Hotel in September, 1976, the assassination of the military commander of the Hamah region and two other officials in October, an attempt on the life of the Foreign Minister in December, and the murder of the Rector of Damascus University, a relative and close adviser of President Asad, in February, 1977. The first attacks were carried out by Palestinian guerrillas, and there was doubtless Iraqi money supporting the campaign, but it appears that the actual perpetrators of most of these attacks have been dissident groups within Syria's own Sunni majority, most probably belonging to the Muslim Brotherhood. To many Syrian Sunnis,

already resentful of the rule of the Alawite clique surrounding President Asad, the action in Lebanon looked to be simply an Alawite-Christian alliance against Muslims.

Nor did the subsequent Syrian reversal of alliances in Lebanon end the ferment which had been unleashed. It also had its repercussions within the army, where between 70 and 100 junior officers were reported to have been arrested in Lebanon at the end of 1976 after protesting against Syria's actions there and their own poor promotion prospects. The assassinations continued — Colonel Razzaq, Commander of the Missile Regiment, was killed in June, 1977 and six people died in a bomb explosion outside Air-Defence Headquarters in Damascus in July — and the elections for the People's Assembly on July 31st–August 1st averaged only a 17% turnout despite President Asad's attempt to co-opt the support of conservative and religious opponents of the regime by permitting numbers of 'independent' candidates to run.

A series of public hangings in Damascus failed to end the assassinations of prominent Alawites, of which there were about another dozen in 1977, including another relative and personal associate of the President. Criticism also began to be voiced within the army against the prominent role of the President's brother, Rifat, demanding the integration of his Special Forces into the army and the unification of the intelligence services. Unverified but apparently reliable reports stated that Rifat Asad and his wife were wounded in an attack by dissident army officers in February, 1978, and during the succeeding months about 20 other prominent Alawites were killed, including two other relatives of the President. The Head of the Security Services was removed in March, 1978 apparently for having been implicated in dealings with dissident officers, and round-ups of Sunni youths in the main cities further frayed the ragged confessional harmony of Syria. In an attempt to ward off trouble, some 400 transfers and retirements of senior armed forces officers were made between July and December, 1978, while the civilian apparatus of the Ba'ath Party was simultaneously purged of branch leaders throughout the country who were opposed to the 'Rifat Asad line'. But in August the Chief of Police Personnel, Colonel Khalil, was machine-gunned outside his home, and a large bomb was dismantled near the home of Rifat Asad.

Given the extreme secrecy with which the internal affairs of army and party have habitually been shrouded in Syria, and the deliberate concealment of details about the wave of assassinations, it is difficult to gauge just how serious the threat to the regime is. Certainly the Sunni political leader Abdallah al-Ahmar has so far refused to lead open opposition to Asad despite urgings from several quarters. But the great revival of Islamic observance among the Sunni young in Syria's cities, while doubtless part of a trend extending throughout the Middle East, nevertheless augurs ill for a regime which is controlled by members of a heretical minority sect. If Syria should suffer serious economic setbacks or a major humiliation in international affairs, the regime could well face a grave challenge from the officer corps, the civilian Sunni majority, or both.

GWYNNE DYER

TAIWAN (Republic of China)

HISTORY AND INTRODUCTION

Defeated on the mainland of China by the Communist Chinese People's Liberation Army in 1949, at the end of a 3 year civil war, Chiang Kai-shek transported the remnants of his army, with American assistance, to Taiwan (Formosa), where he re-established his government, claiming for it legitimacy. His claim was effectively accepted by the USA until 1974.

Under Chiang Kai-shek's direct administration, and with generous American assistance, Taiwan has become one of the most prosperous States in Asia, with a fast-growing economy and a large export trade. But its most remarkable feature remains its enormous army, 320,000 strong, quite disproportionate to its defence needs and, as long as America remains the regime's patron, with no role outside the island.

STRENGTH AND BUDGET

Population: 17,235,000

Army: 320,000

Navy: 35,000 (plus 35,000 marines); five submarines, 28 frigates and destroyers, 81 others (mostly landing vessels)

Air force: 70,000; 296 combat aircraft

Paramilitary: 100,000 militia

GNP (1975 estimate): \$US 16,100,000,000

Defence expenditure (1975-6): \$US 1,000,000,000

There are two budgets published annually, one 'provincial' for Taiwan and one 'national', for the government of China, and partly secret. Figures from the latter published in 1973 showed 40.7% for 'administration and defence' but estimates suggest that 50% for defence is more likely, which would produce a figure of \$U.S. 1,000,000,000. An important compensation for the high cost of defence is that 65-70% of defence equipment is locally manufactured. America granted military aid of \$65,000,000 in 1974. Cumulative military aid since 1950 totals \$2,850,000,000.

COMMAND AND CONSTITUTIONAL STATUS

The President is Commander-in-Chief and Head of the Supreme National Defence Council, to which is subordinate the National Security Bureau, the National Defence Planning Bureau and the Military Science and Research Committee. It is composed of the President and Vice-President, Chief of the General Staff, and Ministers of Defence, Interior, Finance and Foreign Affairs. The General Staff is effectively a joint service organisation and its chief is also the President's executive for command and the Defence Minister's executive for administration.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role of the army on Taiwan must remain a matter for speculation. Chiang Kai-shek steadfastly insisted until his death in 1975 that he intended to lead it in the reconquest of mainland China. Even if the Americans were to permit the attempt today — and they control the waters and airspace around the island — it would certainly be summarily defeated by the C.P.L.A. And the Americans in any case would certainly not permit such a venture. Nor have they shown any readiness to employ the services of the army elsewhere. Its diplomatic usefulness as an 'army in being' seems therefore negligible. The only justification for sustaining its present inflated size would seem to be as a guarantee of the island's security in the event of America quitting the western Pacific.

About 80,000 men of the army are stationed on the islands of Quemoy and Matsu, which are within artillery range of the mainland. The garrison and their mainland counterparts regularly exchange fire, and the bombardments have in the past been very heavy, particularly in the early 1950s. Otherwise the army has taken no part in operations since 1949. It may or may not remain in contact with the handful of Nationalist soldiers hidden in the jungle on the Sino-Burmese border since 1949.

ORGANISATION

The army is organised on American lines. There are 12 infantry divisions, six light infantry divisions, two armoured divisions, two armoured cavalry regiments, two airborne brigades, four special forces groups, one Honest John missile battalion and three air-defence missile battalions. The marines are organised into two divisions.

RECRUITMENT, TRAINING AND RESERVES

The army has gradually replaced the veterans brought from the mainland in 1949 with locally conscripted youths. Service is for 2 years, beginning at eighteen.

There is an elaborate officer-training system. The academy is modelled on West Point, and the command and general staff college on Leavenworth. The National Defence College at Fenshan is regarded as the descendant of the famous Whampoa Military Academy which produced so many of China's leaders in the 1920s (both Chiang Kai-shek and Chou En-lai served on the staff there).

Trained reserves number 1,000,000, for whom personal arms and equipment are available. It is claimed that all reservists can be mobilised within 10 days.

EQUIPMENT AND ARMS INDUSTRY

Taiwan is now a major industrial power and produces two-thirds of its defence equipment in the island. This does not yet include heavy equipment, but F-5 fighters and helicopters are assembled locally. Small arms are American models, manufactured locally. Heavier equipment is as follows:

Anti-armour weapons: 106 mm M-40 recoilless rifle (USA; 500 in service) and 76 mm M-18 SPG (USA; 150 in service)
Air-defence weapons: 40 mm L/60 Bofors (Sweden; USA); 40 mm L/60 M-42 SPG (USA); Chaparral missile, Nike-Hercules missile and Hawk missile
Artillery: 75 mm M-116 pack howitzer (USA; 350 in service); 105 mm M-101 howitzer (USA; 550 in service); 105 mm M-52 SPH (USA; 225 in service); 155 mm M-114 howitzer and 155 mm M-59 gun (USA; 300 in service); 203 mm M-55 howitzer (USA; 90 in service)
Armour: M-113 APC (USA; 250 in service); M-41 light tank (USA; 1000 in service); M-47/48 tank (USA; 150 in service)
Aircraft: 110 helicopters (UH-1H and Hughes 500). The air force operates 120 military transports

RANK, DRESS AND DISTINCTIONS

The army is entirely American in appearance.

CURRENT DEVELOPMENTS

The army, with which the political leadership remains closely linked, has transformed itself since the 1950s from an ageing and defeated rearguard into a youthful and well-equipped fighting force, supplied from a steady source of manpower and an expanding local industrial base. Its size and state of training make it one of the most formidable armies in Asia, though it is deficient in modern armour. Yet its role, as anything except testimony to the unrealisable ambitions of the successors of Chiang Kai-shek, remains mysterious. Its maintenance, despite American aid (now much diminished) and Taiwan's growing wealth, is a serious strain on the economy. Unless the government foresees a time when American ships and aircraft will no longer deny the Formosan Strait to a mainland Chinese invasion force, it can have no reason for maintaining its military force at this level.

JOHN KEEGAN

TANZANIA*

HISTORY AND INTRODUCTION

Tanzania came into existence in 1964 following the union of the former mainland State of Tanganyika with Zanzibar. Tanganyika had been a British territory until 1961, and Zanzibar until 1963. Following the revolution of January, 1964 Zanzibar's new African rulers sought a loose union with the mainland. Although Tanganyikan soldiers fought on the German side in the World War I German East Africa Campaign and for the British in the East African and Burma Campaigns of World War II, the military traditions now commemorated are those of resistance to imperial rule, notably the Hehe resistance to the Germans in 1896-8 and the Maji-Maji Rising of 1905-6. After the army mutiny of January, 1964 the Tanzanian government decided that the British model was unsuitable for a socialist African State (being argued to be elitist) and the Tanzanian People's Defence Forces (TPDF) are organised on more revolutionary principles. The politicisation of the armed forces has in general been successful; occasional minor military conspiracies are reported (though not so in Tanzania); a more serious conspiracy arising from the proposed new party and constitutional changes was widely rumoured early in 1977.

STRENGTH AND BUDGET

Population: 16,000,000 (approximately)

Army: 18,000 plus an air force of 1000 and a people's militia of a strength said to be 35,000 and a barrack police force of over 1000

GNP (estimate): \$2,000,000,000

Defence expenditure (estimate): \$140,000,000

COMMAND AND CONSTITUTIONAL STATUS

The President of the United Republic of Tanzania, *Mwalimu* J.K. Nyerere, is the Commander-in-Chief of the TPDF. The portfolio for Defence is now held by R. Kawawa, a former Second Vice-President. In the lifetime of Zanzibar's revolutionary leader, A. Karume, the islands (Zanzibar and Pemba) maintained their own small forces under the overall shadowy control of Dar-es-Salaam, but in practice available for use only for local purposes. Exercises only occasionally took place together, mainland units were occasionally posted to Pemba, and the islands' soldiers infrequently trained or served on the mainland. Mainland forces were not posted to Zanzibar Island other than on brief ceremonial occasions. After the murder of Karume in 1972, his successor, Aboud Jumbe, has brought the islands much closer to the mainland. The distinctive island units are being merged into truly national ones, and personnel freely exchanged.

A basic requirement for acceptance into the TPDF is membership of the newly formed CCM political party, this party being an amalgamation of the two former TANU and ASP Parties (mainland and island, respectively). There is a Political Commissar for the TPDF; unit and sub-unit commanders are expected to be the heads of CCM committees of their commands. All officers are expected to undertake party work. Officers may also be required to serve in general national administrative postings.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The TPDF appears to have several roles — the obvious one of national defence and security being the most important. Tanzania has had frontier and border anxieties since 1964 — Zaïre and Rwanda supplying refugees, some of whom were turbulent, and a frontier dispute occurring with Malawi later in the decade. From 1965 onwards Tanzania experienced anxieties over her border with Moçambique, Portuguese forces periodically crossing or overflying in pursuit of Frelimo insurgents. In 1971 the Uganda border dispute began following President Nyerere's support for the armed followers of the deposed President of Uganda, M. Obote, who was attempting to recover his position. President Amin's retaliations included a brief incursion into north-west Tanzania, an air attack on Mwanza and a claim for a border area; he is also known to have larger ambitions for territorial acquisition at Tanzania's expense. In 1976, units, said to be two battalions, were sent

* For general notes on African armies, see Appendix 1.

to Moçambique, whether to support the Moçambique authorities in internal security or to assist in the defence of Moçambique against the Rhodesians, is far from clear, but no reports of their having been in action against the Rhodesian army have been received. In addition Tanzanian units are to be found in some of the Comoro Islands and in the Seychelles, as part of a policy hoping to keep the armies of others away.

The TPDF is also expected to play a part in 'nation-building'; duties in this connection can include rural development work, political instruction and, it is also reported, assistance (at times repressive) in the enforcement of the *Ujamaa* (community village) re-settlement schemes. The TPDF trained insurgents from Portuguese Africa prior to independence, and continues to do so in respect of Rhodesia; a TPDF mission is currently training the newly formed Seychelles force.

ORGANISATION

The military units of the TPDF include 10 infantry battalions, a tank battalion and one, possibly two, artillery units.

RECRUITMENT, TRAINING AND RESERVES

The formal colonial basis of preference for Nyamwezi and Hehe soldiers has ended: there appear now to be no ethnic preferences except that members of immigrant races seem to be debarred.

In the military units approximately half of the soldiers are regulars and half are national servicemen. A compulsory period of general State service is required from all young men. Some 3500–4000 of these per year may opt to spend most of their service in the military units — after an initial 3 months on general work (construction or bush clearance) men who meet the party membership qualifications already noted and who can read and write Swahili (the national language) are accepted for 21 months in the ranks. A Standard XII education is required from officer candidates.

Some abuses of the system — in particular party membership being sought in order to opt for the slightly more comfortable military national service — have been alleged. However, TPDF officers appear to have adjusted to their new roles without marked resentment of the loss of *élite* status; only a few instances of officer subversion have been reported, the most serious being in early 1977. No admission of this was made in Tanzania.

In the early independence period of 1961–4, British officers trained — and commanded — units. The British officers left after the mutiny and assistance was received from Canada, Nigeria (a battalion of whose army was posted to Dar-es-Salaam while the Tanzanian force was being reconstituted), Ethiopia and West Germany. The USSR, China and the GDR played an initial role in setting up Zanzibar's small force. In this period mainland cadets continued to be sent to Britain for training. In the late 1960s, however, Tanzania's growing friendship with China led to an increasing number of Chinese military advisers and the despatch of cadres to China for training. China gradually asserted a monopoly position and from 1969 onwards it would appear that no Tanzanians train abroad anywhere else. More recently Cuban advisers have been reported; this could well prove to be the case as the Chinese became disenchanted with Tanzania following the latter's support for the Soviet–Cuban-aided MPLA in Angola.

The People's Militia is seen as a reserve of manpower for home defence and the preservation of socialist policies. In theory, police officers, prison officers, TANU Youth League members and all State servicemen receive weapon training, but this is unlikely to be the case universally in practice. There is also the small barrack police force and a harbour and coastal defence unit.

EQUIPMENT AND ARMS INDUSTRY

The TPDF has been standardising on Chinese equipment, or such Warsaw Pact equipment that conforms with it. The tank battalion consists of two companies of the Chinese T-59 medium tank and one company of the Chinese Type 60 light tank. Other equipment reported includes BTR 152 and BTR 40 APCs, 24 Soviet 76 mm guns, 18 Chinese 122 mm guns, 30 Chinese 100 mm mortars and a number of 37 mm and 14.5 mm anti-aircraft weapons. The air force has a squadron composed of eight of the Chinese versions of the MiG-19 and 12 Soviet MiG-17s supplied by China; there is also a transport squadron of assorted light transport aircraft.

RANK, DRESS AND DISTINCTIONS

The formal rank structure remains British, as do several aspects of uniform and dress.

World Armies

CURRENT DEVELOPMENTS

Tanzania is a very poor country covering a large area of terrain. The recent economic recession has affected the economy, but the fear of Uganda and the wish to make some assertion in the Indian Ocean and in Moçambique have led to an expansion of the armed forces. The nation is remarkably free from ethnic jealousies, but the enforcement of collectivisation measures for which it is reported that the TPDF is occasionally deployed, may cause some decline in military morale. It remains to be seen whether the move of the capital to Dodoma will lead to a return to isolationism in the islands, but this appears unlikely at present.

L. L. MATHEWS

THAILAND

HISTORY AND INTRODUCTION

The Royal Thai Armed Forces, of which the Royal Thai Army forms the strongest and politically most important part, have more or less continuously exercised power inside Thailand for 40 years. The coup of 1932, organised by a conspiracy of progressive civilians and conservative officers, was designed to end the absolute power of the monarchy, which both groups agreed was a disabling hindrance to Thailand's evolution into modernity. The civilians' programme of modernisation subsequently alarmed their more cautious military partners into excluding them from government which, with interludes from 1944–7 and 1973–6, the army, usually but not always supported by the other armed forces, has controlled ever since. At times the army has encountered fierce opposition from sectors of the population, but its rule has on the whole been accepted by the majority, who are prosperous by Asian standards, accustomed to unrepresentative government and fiercely proud of Thai sovereignty. During the 1950s the government became alarmed by the spread of left-wing subversion, but it was in fact confined to the overseas Chinese community. During the 1960s a more popular communist insurgency developed in the remote regions on the borders of China and Laos, and its suppression has subsequently become a major governmental and military preoccupation. But popular revolution in the cities or central regions is not a threat with which the government is confronted.

The Thais are a vigorous and warlike people, whose ruling house is descended from a successful general who expelled the Burmese from the country at the end of the eighteenth century. The Rama dynasty subsequently added southern Laos to its possessions and established suzerainty over Cambodia. These acquisitions brought it into conflict with the French at the end of the nineteenth century, which might have led to its annexation, had Siam (as it was then known) not already learnt to practice a skillful diplomacy between the various powers competing for advantage in its area. The Royal House had also taken the precaution of seeking help in modernisation, the need for which it early recognised, from several rather than a single European State. Young noblemen were sent abroad to train as officers, for example, at the British, French, German and Russian military academies, while Chulalongkorn, Siam's great modernising king (1868–1910) made a Belgian his principal adviser.

It is difficult, therefore, to characterise the influences which directed the Thai army's development into a modern force (though the navy was heavily influenced by the British). But by the 1930s the army had acquired a modern organisation, based on conscription, which had been introduced in 1917, and a strong corporate sense. It was this modernising and corporate sense which impelled it to join with a group of young civil servants, led by the socialist Pridi Panomyong, to present King Prachatiok with an ultimatum demanding constitutional rule, in June, 1932 — though they were also influenced by the previous king's favouring of an alternative army, called the Wild Tigers, and, with the civil servants, by reductions in the size of the army and civil service made necessary by an economic crisis. Once installed, the new government quickly split, the officers expelled the civilians and thereafter ruled themselves. Their rule until December, 1938 however, was faithful to the spirit of the new constitution. But in that month General Pibun (Phibul) Songkhram, a leader of the 1932 coup and the defender of Bangkok against an unsuccessful absolutist counter-coup in 1933, succeeded to the premiership and quickly made the national assembly a puppet organisation. When the Japanese appeared in Indo-China in 1940, he quickly came to an accommodation with them and took advantage of their arrival to repossess by force the Laotian provinces Thailand (as Siam was known after 1939 — 'Thai' means 'free') had been obliged to cede to France in 1893. Japan's insistence on his accepting their troops on Thai territory led to a minor crisis of conscience, but was swiftly resolved through the inability of the Western powers to aid Thailand's defence. The country therefore spent the war, until August, 1944 as Japan's passive ally.

The course of military events then prompted the ruling group to disentangle itself from Pibun, thus allowing Thailand to emerge in 1945 on the right side, and ruled by the socialist civil servant, Pridi, who had taken part in the coup of 1932. Neither Pibun nor the army had taken the transfer of power to his hands in good part, however, and in April, 1948 Pibun, who had organised a military coup the previous November, returned as prime minister. He was to hold power until 1957, and to bring Thailand firmly into the Western orbit by his accession in 1954 to the South-East Asia Treaty Organisation, whose headquarters were established in Bangkok. But he ruled as moderator between new strong men, particularly the Head of Police, General Pao, and the Commander of the Army, General Sarit, rather than in his own right. The navy was badly disaffected from this police–army regime and in February, 1949 the Royal Thai Marines and a number of naval officers actually launched a pro-Pridi counter-coup. Its failure led to Pridi's departure to join the Chinese communists and a major purge of the marines and navy. In June, 1951 the navy, conscious of its decreasing political influence, staged another unsuccessful anti-army coup, and actually made Pibun prisoner for some days, after which it lost all political importance. That of the police was growing however, to the point where it rivalled that of the army, and, in its pursuit of 'subversive elements', aroused widespread hostility among the Thai middle class. Pibun and Pao combined this domestic policy with,

World Armies

after 1955, a foreign policy which was friendly to China — whose government had assured Pibun that the 'autonomous Thai State' it had established in south China was not a bridgehead for aggression against his country. This ambivalent policy led to a serious reverse for his administration at the February, 1957 elections and in September his nominee at the head of the army, General Sarit Tanaret, ousted him and took power himself.

General (later Field-Marshal) Sarit ruled dictatorially until his death in 1963. The assembly and the constitution were abolished, trade unions and political parties dissolved and martial law imposed. In 1959 a constitutional assembly was convened — containing, as was now established practice, a majority of nominated military members — and among the provisions it advanced was a draconian endorsement of arbitrary measures in the event of an emergency. This interim constitution remained the basis on which the army governed during the remaining years of Sarit's rule and under that of his protegee and successor, Field-Marshal Thanom Kittikachorn. The constitution, which provided for the election of a consultative but not executive assembly, was eventually promulgated in 1968 and led to elections in February, 1969. These returned the pro-government party, but did not indemnify the assembly, which was dissolved by an internal coup in November, 1971. Thanom ruled directly until December, 1972 when he introduced a new interim constitution and a new assembly of entirely appointed members.

Thailand's growing student population were by now extremely hostile to the military regime and to the façade of representative government which it maintained. The king, moreover, was reported to have been affronted by the internal coup by which Thanom had dissolved the last assembly. When, in October, 1973 demonstrations broke out at Bangkok universities, Thanom and his deputy, Field-Marshal Praphas, quickly found themselves isolated and fled into exile. A civilian government was appointed. But two subsequent coups, in October, 1976 and October, 1977 have restored military government.

STRENGTH AND BUDGET

Population: 46,390,000

Army: 141,000

Navy: 28,000 (including 8000 marines); three major vessels, 108 smaller craft

Air force: 43,000; 149 combat aircraft

Paramilitary: 14,000 Border Patrol Police; 40,000 Provincial Police; 52,000 Volunteer Defence Corps

GNP (1977 estimate): \$18,100,000,000

Defence expenditure (1977-8): \$746,000,000

Defence expenditure in 1975 was about 17.5% of the national budget. In a country so long dominated by the armed forces, it has naturally long been high (between 20% and 32%, 1932-9) and is currently inflated by the demands of the counter-insurgency campaign. A great deal of military cost has been offset since 1954, however, by American military aid (\$481,000,000, 1961-9) and by direct American defence expenditure for base construction and operation (about \$300,000,000 a year, 1967-9). As a proportion of gross national product, however, combined defence and internal security costs have consistently stood at between 4% and 5% in the 1970s, which is high for an unindustrialised country.

COMMAND AND CONSTITUTIONAL STATUS

The constitution promulgated after the most recent coup in 1977 was the eleventh since 1932. Since most of the others were also written by military governments, whose policies have been closely similar, the constitutions have not varied much in the provisions they have made for command of the armed forces. The King, a constitutional monarch, is Commander-in-Chief, but takes no official part in the executive process (though he wields great influence, which he is believed to have used at the time of the 1973 anti-Thanom coup). Under the military regime which held power until 1973, Field-Marshal Thanom was Prime Minister, Minister of Defence and Supreme Commander of the Armed Forces, and thus held the first three positions on the chain of command. The Minister of the Interior, Field-Marshal Praphas, was also Deputy Prime Minister and Commander-in-Chief of the Army. These 'multi-hattings' have been common under Thai military government. The chain of command from the Supreme Commander ran to the commanders of the three services, who each had their own staffs. In the army, the commander-in-chief was served by four staffs (general, special, technical and training) but dealt directly with his army areas (of which there are four) and with the combat forces operating within them. Outside the main chain of command, the supreme commander was supported, through his own supreme commander's headquarters, by logistic, intelligence, training, budgetary and inter-service staffs. The office of the under-secretary for defence, also answering to the supreme commander, oversaw administrative and supply departments, including fuel and military factories. The civilian government installed after the 1973 coup did away with the office of supreme commander, and replaced it with a joint chiefs of staff committee, but otherwise left the machinery of command intact. It is not known if the military government which took power in October, 1977 has restored the office. Whatever formal command changes it makes are probably irrelevant. Thai government is deeply militarised — though that does not mean that it is insensitive to

civilian interests or pressures. As an American observer, Fred Riggs, has explained, 'The successive *coups d'état* by which ruling circles are modified and replaced have become as much a formula for changing *élites* as the periodical electoral battles which take place in the United States, or the cabinet crises in France during the Third and Fourth Republics. The succession of constitutional charters in the Thai polity have, correspondingly, scarcely more systemic significance than a change of party in England, perhaps less. The effective constitutional structure, which is unwritten, appears to have taken shape as a relatively stable pattern'. That pattern is of one-party government, of which the military form the executive arm. The opposition Democratic Party does not represent an ideological opposition, but a source of criticism of the government's behaviour and shortcomings.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The Thai army has played a major political role in the country since 1932, when a group of officers took part in the bloodless coup which transformed the monarchy from absolutism to constitutionalism. The armed forces played a controlling role in the first constitutional government and between 1939 and 1944 a military dictatorship held power. After a civilian interlude, the army again seized power, which they held without interruption until 1973 and since 1976 the armed forces have controlled the government again. Undeniably, therefore, a principal role of the Thai army, usually in concert with the navy and the air force, has been governmental. Because of the insurgency in the north and north-east, a large area of the country is under direct military administration. The army, with the police, also has a major counter-insurgency role and, during the American campaign in Indo-China, it maintained a division in Vietnam and sent large numbers of troops to fight the Pathet Lao in Laos (it is reported that at one time there were 20,000 Thai soldiers there). A Thai battalion served in the United Nations Force in Korea.

Commitments

Since the winding-up of the South-East Asia Treaty Organisation in 1977, Thailand has no external military commitment, but has a military assistance agreement with the United States.

Deployment

Thailand is divided into four military regions: First, Second and Third Armies and the Fifth Military Circle. First Army, with headquarters at Bangkok, provides the King's Guard and oversees the central and northern areas. The cavalry division has its headquarters (Saraburi) in the First Army area, though its units are widely dispersed. The Second Army has its headquarters at Korat and oversees the north-east. The Third Army has its headquarters at Phitsanulok and oversees the south-east. The Fifth Military Circle has its headquarters at Nakhon Si Thammarat and oversees the isthmus and Malay border. The infantry divisions and the cavalry division are deployed in the three Army areas; the Fifth Military Circle appears to dispose only of independent regimental combat teams. Most formations are broken down into battalion-size groups, widely dispersed in the countryside, with the largest concentrations in the north-east. The special forces have their headquarters at Lopburi, north of Bangkok. The air force has four airfield defence battalions at the four main forward air bases: Korat, U-Tapao, Nakhon Phanom and Udon.

Recent Operations

The Thai army, through its involvement on the American side in the Vietnam war and its campaign against the Pathet Lao in Laos, has considerable operational experience. Since 1965 it has been conducting a counter-insurgency campaign on its own territory in the north-east and far south, and in the north and west since 1967. The population in the north-east contains a large number of Laotians, the north of hill peoples (Meo, Aka and Lisu), the west of Karens and the far south of Muslim Malays, in whose region shelter the intact remnants of the Chinese communist terrorist bands defeated in the Malayan emergency (1948-62). The insurgencies in the north, west and south, though active, do not threaten to develop into full-scale rebellions, for a variety of local reasons. That in the north-east, which is nearest to the powerful communist States, does pose a threat to the authority and even stability of the Thai government. The CTs ('communist terrorists', as the insurgents are known) are growing in numbers and the reach of their activities is extending. While there are reckoned to be only 400 in the west, 2000 (mainly Chinese communist veterans of the Malayan insurgency) in the south and 2000 in the north, the number in the north-east is estimated at 3500, and in February, 1977 the Crown Prince's car was fired on in Phetchabun province in central Thailand. Between October and December, 1976 170 clashes between government forces and the insurgents were reported, a considerable increase on any comparable period (though probably a response to the coup of October).

There were also clashes with Cambodian troops on the border of Prachin Buri province in January, 1977 following a

World Armies

Cambodian raid into Thai territory and the killing of a number of villagers. The border is now quiet. The ability of the army and police to contain the insurgencies is probably more than adequate. For, though it is to their disadvantage that the areas in which the insurgents are strongest are wholly or partly non-Thai, that in itself is a check on the acceptability of the insurgents in Thailand proper. The costs of the campaign, though high, do not as yet seriously strain the Thai exchequer or economy.

ORGANISATION

The domestic organisation of the Royal Thai Army is similar to that of the American: there are armoured cavalry, infantry, artillery, engineer, signal, transportation, quartermaster, military police and other smaller branches. Operationally, the army adheres to the American organisation of the 1950s: divisions, regimental combat teams and regiments, and then battalions. The six divisions have three to four regimental combat teams (RCTs), each of three (occasionally four) infantry battalions. There are also three independent regimental combat teams. Four of the divisions include a small tank battalion. The divisional artillery has nine batteries of six howitzers and some medium howitzers. The cavalry division is equipped with armoured cars, light tanks and APCs, and there may be some APCs in the infantry divisions. Armoured companies are dispersed, however, and many of the artillery units are broken down, often into two-gun sections. The total number of infantry battalions is about seventy.

The marines of the Royal Thai Navy form three battalions and an artillery group. The infantry battalions have some amphibious personnel carriers. The parachute and special forces units of the army have been expanded to four battalions, and are well provided with air lift. The army also operates five aviation companies and a number of independent flights, flying helicopters and light aircraft.

The Thai National Police Department is a large force (60,000), with a strong paramilitary element. The country is divided into nine police regions, of which III–IX (headquarters Korat, Udon, Chiang Mai, Phitsanulok, Nakhon Pathom, Nakhon Si Thammarat, Pattani) have insurgency problems. Each region has about 4000 Provincial Police, some of whom are organised into 50 man Special Action Forces, trained to respond quickly to insurgent activity. All regions but Region I also have 1500–2000 Border Patrol Police, a force founded in 1954 to deal with insurgency on the borders; it is military in organisation and equipment. The Police Air Division operates some helicopters and light aircraft. There is also a Marine Police, which patrols the Mekong and Thai territorial waters. Numbers are: Marine Police, 1500; Border Patrol Police, 14,000; Provincial Police, 42,000. A programme to provide each of Thailand's 7000 tambons (clusters of villages) with a detachment of 12–20 Provincial Policemen is making slow progress.

In the insurgent areas there also exists the Volunteer Defence Corps, founded in 1954 and numbering 52,000, and consisting of villagers armed to defend their homes. The operational unit is the joint security team or village protection unit, formed of 10 villagers led by two policemen. Their effectiveness is limited by lack of mobility.

RECRUITMENT, TRAINING AND RESERVES

Under the Military Service Act of 1954 every able-bodied Thai between the ages of twenty-one and thirty is obliged to serve 2 years in the armed forces, which means in practice usually the army. Monks and teachers are exempt; so too are naturalised citizens and the sons of aliens, an exemption designed to exclude overseas Chinese from the armed forces. In practice, the government also exempts most of the minorities: the Muslim Malays of the south, Karens of the west, the montagnards (Meo, Yao, Lisu, Aka and Lowa) of the north and north-west, and the Khmers (Cambodians) of the north-east. The army is thus almost exclusively composed of Buddhist Thais. By no means all the annual contingent is drafted; those exempted among the Thais are transferred to the 2nd Category of the Reserve. Conscripts are inducted twice a year, to the battalion nearest their home, in which they are trained and then serve.

Officers, who come for the most part from the middle class, are trained at the Chulachom Klao Royal Military Academy, near the royal palace in Bangkok, founded by King Chulalongkorn in 1887. Some cadets go to Britain and America to train. There is an army staff college for selected officers and an army war college for more senior officers. The highest level of training is provided at the armed forces staff college, the courses being composed of 35 senior officers of the three services. The national defence college trains officers and civil servants. The Ministry of Defence also runs a preparatory school to feed the three service cadet academies, and there is a military technical training school to train technical specialists. Each of the three armies has its own counter-insurgency school: the First Army's is located at Hua Hin, the Second's at Nam Pung Dam and the Third's at Lamphun.

There is an elaborate reserve structure. Time-expired conscripts are enrolled in the 1st Category of the Reserve for 7 years. Service in the 2nd and 3rd Categories, which also include untrained men, is for 10 and 6 years, respectively. The reserves are apparently not called out for training, nor is there sufficient equipment in the country to arm them.

EQUIPMENT AND ARMS INDUSTRY

The Thai armed forces are equipped with American arms, bought or supplied under agreement from the United States, though some older British equipment is still held. There is a small, recently established arms industry, which manufactures small-arms ammunition, explosives and the Heckler and Koch 5.56 mm rifle.

Rifle: 7.62 mm M-1 (USA), 5.56 mm M16 (USA) and 5.56 mm Hk33 (West Germany, manufactured under licence in Thailand)

Machine-gun: 7.62 mm M-60 (USA)

Mortar: 81 mm M-29 (USA)

Anti-armour weapons: 57 mm M-18 and 106 mm M-40 recoilless rifles (USA)

Air-defence weapons: 40 mm L60/70 Bofors (Sweden and USA); Hawk missile (USA; 40 in service)

Artillery: 75 mm M-116 pack howitzer (USA); 105 mm M-101 howitzer (USA; 300 in service) and 155 mm M-114 howitzer (USA; 50 in service)

Armour: Saracen armoured car (Britain); M-113 APC (USA; 250 in service); LVTP-7 armoured amphibious carrier (USA); M-24 light tank (USA; obsolete, 20 in service) and M-41 light tank (USA; 150 in service)

Aircraft: 200 helicopters in service, including 120 UH-1 B/Ds; 90 light aircraft. The air force operates 50 military transports and 50 helicopters

RANK, DRESS AND DISTINCTIONS

Thai ranks follow the British system up to the rank of field-marshal. The unusual rank of 'special colonel' is equivalent to brigadier. Uniforms are American in colour and style.

CURRENT DEVELOPMENTS

An internal military coup of October 20th, 1977 overthrew the government set up by the Administrative Reform Council in October, 1976. It was entirely bloodless and merely removed the civilian prime minister, Thanin Kraivichien, installed by the soldiers a year earlier. His fault seemed to have been that his policy was too right wing for the armed forces. He preached a fiercely anti-communist foreign policy line, which the armed forces thought made it impossible to come to any working arrangements with their newly communist neighbours in Laos and Cambodia (Democratic Kampuchea), while announcing that he foresaw a return to civilian rule no sooner than 12 years in the future. A coup against his government in March, 1977 by a disgruntled general retired in 1976, failed for lack of official backing (and the officer was — unusually in Thailand — executed), but by October the armed forces appear to have decided that they could no longer work with Thanin Kraivichien. His government was reformed and its structure reorganised into three: a secretariat command, dealing with the bureaucracy, headed by the Under-Secretary of the Prime Minister's Office, a military command, in charge of counter-insurgency and security affairs, led by the Under-Secretary for Defence; and a civilian command, dealing with economic and foreign affairs. The overall governing body, closely similar in composition to the Administrative Reform Council, is called 'Revolutionary Council Command', and is composed of 23 officers. It has promised elections shortly.

JOHN KEEGAN

TOGO*

History and Introduction

Togo attained independence in 1960; it had been a German colony until 1919 when a small part was detached and made over to British administration (subsequently being incorporated into the Gold Coast), and the rest to a French mandate, later trusteeship. In 1963, Togo's President, S. Olympio, was murdered by a group of mutinous army NCOs. In 1967 Olympio's successor, Grunitzky, was overthrown by Eyadéma (one of the NCOs of 1963) who assumed the Presidency and Defence portfolio.

Strength and Budget

Population: 2,500,000 (approximately)

Armed forces: 1750 (of which 50 are air force and 200 navy) plus a gendarmerie of 1200

GNP (1977 estimate): \$500,000,000

Command and Constitutional Status

President Gnassingbe (formerly Étienne) Eyadéma is Head of State and Minister of Defence; the Chief of Staff is Colonel Yaovi Assila.

Role, Commitment, Deployment and Recent Operations

Togo's army has little real role and no special deployment. Relations with Ghana pass through successive periods of unease. The majority of the Ewe people live in Togo, a minority in Ghana. When the Ewe are well-represented in Ghana's government, relations are good, but when the Ewe are at a disadvantage, relations are cool. Togo has never abandoned the aspiration of a reunification of the Ewe people under the Togo flag and gives some covert support to the secessionist movement in eastern Ghana. Togo's army acts as a safeguard against any sudden Ghanaian military retaliation or strike.

Since the accession to power of Colonel Kerekou in Benin, occasional friction occurs on the border.

Organisation

The army consists of three under-strength battalions, each composed of two infantry companies (one has an armoured car troop as well); there is also a fourth 'commando battalion' which includes an engineer company and the air flight. Army headquarters is at Tokoin.

Recruitment, Training and Reserves

A random system of national service — for 2 years — exists. The majority of the soldiers come from the north of the country, in particular from the Kabré, while a majority of the officers were either Ewe or Mina from the south, until the events of 1963, when the balance began to change. The small technical and logistic units, however, are mainly southern.

French assistance for military training has been used since independence although air force pilots are being trained in Zaïre.

Equipment and Arms Industry

Togo has no arms industry. The armoured-car squadron has American M.8 vehicles; the remaining military equipment is all French. The small air force consists of six transport and communications machines, and one helicopter.

Rank, Dress and Distinctions

These generally follow the French colonial troops pattern, except that the képi is not worn.

* For general notes on African armies, see Appendix 1.

Current Developments

A very small force, the Togo army could not defend the country in the event of a Ghanaian incursion. A number of the army's best officers are being used for civil administration tasks.

The group of northern ex-NCOs who are now the army's senior officers, and who are linked by complicity in the Olympio murder and Grunitzky overthrow, are of the same tradition and from the same area as the majority of the soldiers. This gives the army a cohesion, although at some expense to its claim to be a truly national institution.

ANON.

TONGA

The Kingdom of Tonga consists of 169 islands (36 inhabited) in the south-west Pacific, about 400 miles east of Fiji. Approximately 75% of its total land area of 385 square miles is arable, and it is accordingly one of the most densely settled of the Pacific island States, with a population of 106,000. It is also, by virtue of its position and its history, by far the least affected by Westernisation and tourism of all the south Pacific island groups, and preserves both its culture and its traditional political system. Over 99% of the population are Polynesian, and the principal language is Tongan (although English is also spoken).

The islands were first settled no later than the tenth century, and have been a unified kingdom for at least 700 years. Very few Europeans called there until the nineteenth century, and the first Christian convert was only made in 1829. In the same period the Tongans, who had always been involved in the inter-island wars of the region, became infected with both the cannibalism and the savage civil wars that were then devastating Fiji, and for several decades Tonga itself was immersed in a series of civil wars. The new monarchy that emerged from this period, displacing the centuries-old Tu'i Ha'atakalaua dynasty, was founded by the warrior aristocrat Taufu'ahau, who was converted to Christianity in 1834. He had ended the civil wars by 1852, and by the time he died in 1893 all the Tongans had been converted to Christianity. The present monarch, King Taufu'ahau Tupou IV, who came to the throne in 1965, is only the fourth of his line to reign in Tonga in almost 150 years.

The founder of the dynasty put Tonga under British protection in 1889 to protect it from the predatory colonialism of the other imperial powers which were then scourging the south Pacific, and the present king led it back into full independence in 1970, but the entire period of British sovereignty had virtually no effect on the domestic political structure of Tonga. That structure, created by the first Taufu'ahau as the only way of ending the civil wars, is the purest example of feudalism in existence in the world today. The kingdom was divided into 33 hereditary fiefs, each holder of which was responsible for order, and for allocating all but 5% of the land (which he might rent) equally among the local population. The sale of land to foreigners was forbidden. Each Tongan male aged sixteen had the right to claim 8¹/₄ acres from his local noble, and had the right to pass the usufruct on to his heirs.

In practice, however, the nobles have always retained far more of the land for their own use (the present estimate is as much as 27%) and arbitrarily extracted dues in kind from their tenants. With the rapid growth in Tonga's population in the twentieth century (now 3% a year) it became impossible to allocate land to each Tongan even if the nobles had wished to, and massive unemployment now causes great numbers of Tongans to seek work abroad, principally in the factories of New Zealand. Between 1974 and 1977 10,000 Tongans obtained entry visas to New Zealand to seek work. Much of the aristocracy's land remains untilled, and much other land is only cultivated very inefficiently. The flight from the land has resulted in the massive depopulation of the outlying lands: 62% of the population now lives on the main island of the southern group, Tongatapu, and one-quarter is concentrated in the capital, Nuku'alofa. Largely as a result of this, within a country where agriculture offers the possibility of prosperity, the annual per capita income is under \$250.

This full-blown feudal system is ruled by an absolute monarch answerable, in effect, only to the nobility. The King is Head of State and Head of Government. He appoints and presides over a Privy Council of six Ministers plus the royal governors of the other two main island groups, Ha'apai and Vava'u. The Prime Minister, Prince Tu'ipelehake Fatefehi, is the King's brother. The Legislative Assembly consists of seven Ministers of the Crown, seven nobles elected by their peers, and seven commoners elected by all literate adults who pay taxes.

The Tongan armed forces consist of the Royal Guard and the Tongan Defence Force. Their duties are exclusively internal security, with the exception of the tiny maritime component, consisting of two patrol craft based at Nuku'alofa. For external defence, Tonga effectively relies upon Western naval forces in the Pacific, in the first instance those of New Zealand. The latter is extremely solicitous of Tonga's total independence: when a Soviet delegation arrived in the kingdom in 1976 and offered to construct a new international airport and to improve the port facilities for use by Soviet fishing fleets, the Foreign Ministry in Wellington urgently sought to dissuade Tonga from accepting the offer. So did the King's powerful friends on the right wing of Japanese politics, and in the end the Soviet offer was refused.

To carry out its internal security role, the Tongan Defence Force has an active strength of about 200 men who receive basic infantry and riot-control training. They are recruited by voluntary enlistment for a period of 18 months' to 2 years' active service; in view of the very high unemployment rate amongst school-leavers, there is no difficulty in attracting enough volunteers. The enlisted ranks are trained in Tonga, but regular officers and NCOs receive training abroad, principally in New Zealand. On completion of active service, Tongan soldiers are assigned to a reserve organisation which numbers upwards of 1000 men. There is also a Royal Guard of some 20 men.

The Tongan Defence Force is equipped with British-pattern infantry weapons. Its soldiers wear khaki uniforms similar to those of the Australian army, except for the headgear, and also have a ceremonial uniform of dark blue for the enlisted

ranks and white for officers. The latest available figure for the defence budget is \$Tongan 74,000 (about \$100,000) in 1972-3.

There have been no known serious protests or attacks against the interests of the aristocracy in Tonga, but the large numbers of Tongans who have been exposed to a different way of thinking while working in Auckland make it likely that such developments may come. The King himself has warned his nobles of this publicly, urging them to cultivate their lands themselves or hand them over to those who will and prophesying 'an inevitable rise of disorders' if this is not done, but he is not in a strong enough position to compel the aristocracy to comply.

GWYNNE DYER

TUNISIA

HISTORY AND INTRODUCTION

The modern Tunisian army has its roots in the French colonial period, and is the first national army that the country has possessed for a number of centuries. Under Carthage, and later under Arabised Berber rulers like Tariq, who conquered most of Spain for Islam in the early eighth century, the area which is now Tunisia had been a powerful military factor in the Mediterranean, but following the great Arab nomad invasions of the eleventh century it declined steeply in prosperity and power. In the sixteenth century the country, by then almost entirely Arabised, was conquered by the Ottoman Turks, but the local Ottoman administrators soon established a considerable degree of autonomy. In 1705 an Ottoman general who had been appointed the Bey (local governor) of Tunis succeeded in making the office hereditary in his family, and founded the Husainid dynasty which lasted until 1957. The Beys acknowledged at first only a tenuous Ottoman suzerainty and later none at all.

During the nineteenth century the Beys of Tunis tended to look towards France for support at home and abroad, and fell increasingly into debt as they sought French loans to bolster their power and modernise the country. Under the pretext of a threat to their Algerian possessions, the French declared a protectorate over Tunisia in 1881, which rapidly developed into a colonial regime in which the Beys were only powerless figureheads. There was considerable European settlement, and Tunisians were extensively recruited into the French armed forces, while Bizerte was developed into a naval base dominating the narrows of the central Mediterranean. The only exclusively Tunisian armed force during this period was the 600 men whom the Bey of Tunis was permitted to keep as a personal bodyguard.

Nationalist agitation for independence began in a serious way in 1934, when a young lawyer called Habib Bourguiba broke away from an ineffective proto-nationalist grouping to found his own Neo-Destour (constitutionalist) Party. Its growth was interrupted by World War II, when Tunisia was extensively fought over, coming first under German and then Anglo-American occupation, but in the early post-war years it expanded rapidly into an impressive organisation embracing all currents of Tunisian nationalist opinion. French attempts to defuse the agitation by granting local autonomy measures under the Bey of Tunis proved inadequate, and anti-French guerrilla bands, mostly made up of Tunisian veterans of the French army, began operations in the Cape Bon peninsula in 1952. Although suppressed there by an intensive counter-insurgency campaign by the French Foreign Legion, the *fellaghas*, as they were known, reappeared in mountainous areas south of Tunis and conducted a classical small-scale guerrilla campaign from early 1954 to 1956. It was not so much this campaign, however, as the need to concentrate on the far more serious insurgency that had begun in 1954 in Algeria (which was an integral part of France with over a million European settlers) that impelled Paris to seek a settlement with Bourguiba in 1955. Agreement on internal self-government was reached with Neo-Destour in that year, but pressure from the communists and from a radical pan-Arabist faction within his own party compelled Bourguiba to hold out for complete independence, which was achieved in February, 1956. Bourguiba returned to Tunis to ride through the city on a white stallion to the ecstatic adulation of the crowds, and has utterly dominated Tunisian politics ever since. The monarchy was abolished in 1957.

The Tunisian National Army which was founded in 1956 consisted of about 1300 officers and men released from the French army, and some 850 men from the Beylical guard. Tunisians had fought for France with distinction in both World Wars and in the first Indochina War, and as late as 1957 there were still some 4000 Tunisians serving with the French armed forces. Most were transferred to the new Tunisian army in the course of the next year, and by early 1958 it had achieved a strength of some 6000. The key positions in this new army, however, did not go to French army veterans but to reliable party and resistance-movement members.

Independence in 1956 did not end frictions with the French, as they continued to occupy the giant naval base at Bizerte and as most of the regular units of the Algerian Army of National Liberation were based just inside the Tunisian border until the war in that country ended in Algerian independence in 1962. There were continual clashes over the Bizerte base, the most serious occurring in 1961 when Tunisian regular forces and party organisations attacked the base, which the French were refusing to evacuate. It cost the Tunisians about 1000 casualties, but the French left shortly afterwards. The Tunisian army had achieved a sufficient level of administrative and logistical organisation by 1960 to be able to contribute a 3100 man force to the United Nations Peacekeeping Force in the former Belgian Congo. A navy was created in 1959, and an air force in 1960. By 1965 the strength of the army had risen to 17,000.

The armed forces remained relatively modest in size and importance, however — in the first decade of independence, military expenditure never amounted to more than 2% of GNP — partly because there were no serious external threats to Tunisian sovereignty, but at least as much because they were not required to perform the bulk of the internal security function, as they had been in so many other newly independent countries.

President Bourguiba's Destour Socialist Party (PSD), as it was renamed in 1964, rapidly evolved into an all-embracing

single party, despite the fact that the constitution makes provision for a multi-party regime. Since the Communist Party was banned in 1963, there have been no other political parties in Tunisia, and in its earlier years the PSD filled the role of a national vehicle for political participation and social and economic development far better than most other single parties. The single instance in which elements of the army were implicated in political intrigue, an alleged assassination plot against President Bourguiba by pan-Arabist officers in 1962, may also have played a role in causing the political leadership to downgrade the importance of the armed forces.

The stability and popularity of the regime and the very creditable rate of economic growth achieved by Tunisia — it now has the fifth highest per capita income in the African continent, over \$800 a year — all contributed to this domestic tranquility. Until recently, the army was only three times called upon to intervene against domestic disorders: during the 1967 Arab–Israeli war, when it was called in to suppress serious rioting in Tunis (President Bourguiba made a suitably tardy offer to send a token force to support the Arabs, which was not taken up); against disgruntled villagers at the height of the collectivisation campaign in 1969; and against strikers in textile mills in the coastal village of Ksar Hellal in 1977. On all other occasions, the civil police and gendarmerie proved sufficient. Even after the emergence of a serious territorial dispute with Libya over sea-bed demarcation in 1967, it was not considered in Tunis that there was any serious external threat to the country, so little attention was paid to keeping the army's equipment up to date, let alone expanding its size.

Since the later 1960s, however, Tunisia's political regime has become more autocratic and more erratic, with serious potential consequences for domestic stability. Many attribute this principally to the effect of advancing age on the personality of the undisputed leader, Habib Bourguiba: although born only in 1903, and thus not astonishingly old as world leaders in single-party systems go, he has suffered at least two heart attacks, viral hepatitis, several nervous breakdowns and has been afflicted for many years with arteriosclerosis. Whether the cause is medical or not, his behaviour in the past decade has been both impulsive and increasingly jealous of potential rivals.

In 1965–9, Bourguiba permitted a radical Minister for Planning and Development, Ahmad Ben Salah, to plunge the country into an ill-prepared experiment in unfettered collectivism; when the resentful rural population was nearing revolt in 1969, Bourguiba abruptly jailed Ben Salah for treason (he escaped abroad in 1972) and totally reversed Tunisia's attitude towards capitalist free enterprise and foreign investment. In succeeding years he succeeded in ousting all the other major independent figures from the PSD: Ahmed Mestiri in 1972, during a controversy over liberalising the party structure in which Mestiri actually won the support of most party members; Bahi Ladgham in 1973; and Muhammad Masmoudi in 1974. Masmoudi, a pan-Arabist who was then Foreign Minister, had persuaded Bourguiba to make an agreement with Libya for unification of the two countries, only to have the President renege at the last minute. In 1974 Bourguiba was also designated President-for-Life.

By the latter part of the 1970s, therefore, there were a number of former leading PSD figures, some in exile abroad, some in opposition at home, who could serve as alternative focuses of loyalty. Two of them, moreover, were closely associated with a radical pan-Arab socialist alternative, and maintained close links with Libya: Ben Salah and Masmoudi.

Despite Tunisia's still quite respectable economic growth rate, the gap between rich and poor was becoming steadily and embarrassingly wider, especially in the cities, and an alarming problem of youth unemployment had appeared. After fluctuating around the million mark for about 2000 years, Tunisia's population entered the rapid growth phase associated with modernisation during the later nineteenth century, and now stands at 6,250,000, of whom 56% are below the age of twenty. The fact that the government has consistently dedicated 30% of public expenditure to education, and that almost one-fifth of the population is attending some educational institution at any given time, in a sense only makes matters worse, since it is commonplace in the Third World that masses of educated unemployed youths are politically much more dangerous than uneducated ones.

To these difficulties should be added the fact that the party and the State bureaucracy — which are effectively one — have grown less representative and more corrupt than they were in the early years of independence, and that all the leading ministers and party leaders are now preoccupied with the preliminary moves in the impending struggle for the succession to Bourguiba. This jockeying for position has increasingly involved competition for the loyalty of the army, which is seen as playing a potentially decisive role in the post-Bourguiba period that cannot be long delayed, and is arguably the reason for the recent announcement of a 5 year modernisation programme for the armed forces. (*See also* Current Developments.)

STRENGTH AND BUDGET

The total strength of the Tunisian armed forces is 22,500, of which the army accounts for 18,000. The navy's strength is 2500 and the air force's 1700. 12,000 of the army's strength and 500 in each of the other two services are conscripts. There are also 1500 paramilitary National Police, organised in three battalions, and 4500 National Guards. It became evident during 1978 that the PSD has also created an armed party militia, still officially unacknowledged; its strength is unknown, but it certainly numbers in the thousands.

The military budget has risen steadily from about \$14,000,000 in 1965 to \$185,000,000 in 1978–9. It is still, however, less than 4% of the GNP of \$5,000,000,000. In 1977, the Ministry of National Defence stated that 400,000,000 dinars (about \$990,000,000) would be invested in modernising the armed forces over the succeeding 5 years.

World Armies

COMMAND AND CONSTITUTIONAL STATUS

The Commander-in-Chief of the Tunisian armed forces is the President of the Republic, who has the constitutional right to make military appointments. The Ministry of National Defence is responsible for operational control as well as administrative, personnel and logistical matters. The Minister is appointed by the President: the present incumbent is Abdullah Farhat.

The officer at the top of the military hierarchy is the Chief of the General Staff; beneath him are the Chiefs of Staff of the Army, Navy and Air Force. There is also an Inspector-General of the Armed Forces, who bears responsibility for discipline and efficiency. In 1977 it was General Habib Tebib.

The paramilitary forces, i.e. the National Police (gendarmerie) and the National Guard, are both controlled by the Ministry of the Interior. It is not clear who actually controls the PSD militia.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The mission of the Tunisian army is defined as the defence of the country's territorial integrity, the maintenance of internal security and participation in military civic action. It has never been called upon to carry out the first mission, and has only a limited capability to do so. It is very rarely employed in the internal security role, being held back as a reserve if the task should prove beyond the abilities of the paramilitary forces. It spends a great deal of time performing its civic action responsibilities, and indeed those are the primary occupation of the conscript elements of the army once their basic training is completed.

Tunisia's only neighbours are Algeria and Libya. The former is greatly superior militarily due to its much larger population and considerable oil income; the latter incomparably superior, at least in equipment, by virtue of its enormous oil revenues. Both neighbouring regimes are ideologically far to the left of the Tunisian regime, far more deeply committed to the pan-Arab cause, and closely associated with the Soviet Union as an arms supplier in contrast to Tunisia's Western military ties. Libya's Colonel Qaddafi has held a considerable grudge against the Tunisian government since it backed out of a precipitate plan for uniting the two countries in 1974.

Yet, despite the fact that the Tunisian army could hardly resist the full weight of either neighbour's armed forces for as much as a week, the Tunisian government has never felt enough concern about this situation to seek either defensive alliances with other powers or the achievement of a better military balance through large-scale expansion of its own forces. In this apparent neglect of Tunisia's defence there is of course a just appreciation of the limited nature of its own resources, but more importantly a belief, probably justified, that the probability of a serious military clash with either neighbour is extremely small. In recent years this belief has been further bolstered by the fact that Algeria's armed forces are preoccupied with Morocco, and Libya's with Egypt, but beyond this there are two permanent considerations which make a military attack on Tunisia unlikely: first, that a certain sense of Arab solidarity makes a resort to war less probable than it otherwise might be, and second, that the three countries, Libya, Tunisia and Algeria, live so much in isolation from each other that in practical terms it is hard to imagine an issue arising between them which would be sufficiently vital to justify more than, at most, border clashes and military demonstrations of resolve.

Even the frontier dispute with Libya which has existed since 1967, despite the fact that it involves oil, is not such as to threaten really serious conflict between the two. The quarrel involves the demarcation of the sea-bed in the Gulf of Gabes between the two countries, and has dragged on for a dozen years. Libya's grant of drilling rights in the disputed area to ENI, the Italian oil company, led to a confrontation in May, 1977 when a Tunisian frigate intervened to stop operations on an Italian drilling rig in the area, and there was some discreet sabre-rattling for a time. It may even be the case that the Tunisian military modernisation programme announced in that year, notably involving the acquisition of anti-tank and anti-air weapons and naval vessels, was undertaken partly in apprehension of border clashes or maritime skirmishes with Libya arising out of the dispute, but it is hardly likely that this quarrel could lead to full-scale war between the two countries.

The bulk of the army is equipped not for conventional war but for internal security duties, and except for the Sahara regiment is fairly evenly distributed amongst the more heavily populated regions of the country. The air force is likewise oriented towards internal security duties, the bulk of its aircraft being principally suited to counter-insurgency operations.

The primary day-to-day responsibility for internal security, however, lies with the paramilitary forces of National Police and National Guard. The former is primarily an urban police force with the usual police duties, but it also includes a special riot-control unit, three battalions strong, which was created after the 1967 riots. The National Guard fulfils all the roles previously carried out by the French Gendarmerie in non-urban areas, and is organised on a military basis. It is composed mainly of former army privates and junior NCOs who have completed their military training and are in the army reserves; in time of emergency, it is responsible for aiding the army in counter-insurgency tasks.

Tunisia belongs to the UN, the Arab League and the Organisation of African Unity, but it has no military commitments beyond its own border. Except briefly in 1967, there has never been any suggestion that Tunisian forces might take part in the Arab-Israeli confrontation — and even then the offer was probably not meant to be taken seriously. The Tunisian armed forces have had no combat experience since independence.

ORGANISATION

Arms of Service

The Tunisian forces are modelled on the French, and the arms and services within the army follow the French pattern.

Operational

The army is organised into two combined arms regiments, one Sahara regiment, one para-commando battalion, one artillery battalion and one engineer battalion. No higher level of operational control exists.

The air force consists of one fighter/training squadron, one training squadron and one helicopter squadron. The principal air base is Sidi Ahmed near Bizerte. Others are at Tunis (El Aouina), Monastir, Gabes, Sfax and Djerba.

The navy's main base is the former French installation at Bizerte. There is also a naval base at Tunis.

RECRUITMENT, TRAINING AND RESERVES

The core of the Tunisian army is about 6000 long-service regulars, including the great majority of the army's officers and NCOs, who are recruited by voluntary enlistment. The remainder is made up of conscripts who serve for only 1 year, and acquire only basic military skills. Since the much smaller air force and navy are predominantly regular, they together contain over one-third of the regular strength of the armed forces.

All physically able male citizens reaching the age of twenty are required by law to serve for 1 year in the armed forces. There are generous exemptions available for those with dependents and certain other categories, and deferments are available for students. It is also possible for students, teachers, civil servants and certain groups of technicians to perform their national service in several shorter periods, rather than in a single 1 year stretch. Since the early 1960s, the number of 20-year-olds becoming available for military service each year has exceeded the armed forces' requirements by an ever growing margin, so that the system is now in fact selective service, with those who will actually have to serve selected by lot. Fewer than half of those who are eligible are actually conscripted. In 1978 Tunisia also commenced the conscription of young women, but in what numbers and in what roles is unknown.

Lycée and first-year university students receive a certain amount of pre-induction training at nearby army installations 1 day a week during the school year and in summer camps. Most of those who are conscripted will be trained as reserve officers or NCOs. The less-well-educated recruits who comprise the bulk of the annual intake receive not only training in basic military skills, but also instruction to bring them up to the equivalent of a sixth-grade education, including literacy training when required. The army also teaches recruits a number of trades, principally to do with construction, road building and machine operation, which it exploits in its own civic action programmes and then releases into the civilian economy.

Regular officer cadets have been trained since 1967 at the national military academy at Fondouk Djedad about 20 miles south of Tunis. The minimum qualification is a bachelor's degree, and admission is by competitive examination. After a 2-year course of instruction at the academy, most newly commissioned officers are sent abroad for further training, principally to France and the USA. The academy also provides more advanced combat arms training, but for instruction in many technical subjects it is still necessary for Tunisian regular officers and NCOs to attend courses abroad.

Conditions of service in the armed forces compare favourably with those prevailing in civilian life for most recruits from rural areas. Regular personnel receive pay and allowances competitive with what their skills would bring in the civilian economy, and there are pension programmes for all ranks.

Following active service, officers and enlisted men are required to become members of the reserve army for periods of 9 years in the first reserve and 15 years in the second reserve. Officers in the reserves are required to attend schools periodically to keep abreast of new techniques and mobilisation procedures, but the mobilisation organisation is hardly ever exercised.

EQUIPMENT AND ARMS INDUSTRY

Most Tunisian equipment is French or American. The army has 30 AMX-13 and 20 M-41 light tanks, 20 Saladin, 13 AML-60, 15 EBR-75 and some M-8 armoured cars, and 40 105 mm (10 SP) and 10 155 mm howitzers. The current anti-tank and anti-aircraft weapon inventory is dated and inadequate, consisting of SS-11 ATGWs and 40 mm AA guns, but this is now being rectified. 45 Kürassier self-propelled anti-tank guns are on order from Austria, and the purchase of 60 M113A1 APCs with TOW missile launchers and 1200 of the missiles themselves, plus some M577 mobile command post vehicles, has been tentatively agreed with the USA for \$23,300,000. The army's air defences are being improved by a \$58,000,000 order for Chaparral missiles and a \$21,300,000 order for Vulcan guns from the USA.

The navy consists of one destroyer escort (ex-United States *Radar Picket*), one coastal minesweeper, one corvette

World Armies

(ex-French *Fougeux*-class), three P48 class FPBGs with SS-12 SSMs, two Vosper patrol boats and 10 small coastal patrol boats. One frigate of the *Aviso* type is being built for Tunisia in France. During the visit of the Tunisian Defence Minister to China in May, 1978 Peking agreed to sell Tunisia further coastal patrol boats.

The air force's combat aircraft are 10F-86F fighters, and 12MB-326B/K and two MB-326L trainer/COIN aircraft. There are also 12SF-260W and 12T-6 trainers, with an additional six SF-260C trainers on order. Helicopters include eight Alouette IIs, six Alouette IIIs, four UH-1Hs and one Puma, and there are three G-222 transport aircraft. In 1977 Tunisia placed an order with the USA for 12F-5E/F Tiger II fighters at a cost of \$53,600,000, plus Sidewinder air-to-air missiles.

RANK, DRESS AND DISTINCTIONS

The rank and grade structure of the Tunisian armed forces is similar to that of the French, except that the highest military rank authorised by law is major-general. Tunisian army uniforms resemble those of the eastern Arab armies, although certain French influences remain in matters such as collar patches. No information is available on medals and distinctions.

CURRENT DEVELOPMENTS

Despite President Bourguiba's age and infirmity he could well last for years, but all political decisions in Tunisia now, including decisions dealing with the affairs of the armed forces, have become entangled in the struggle for the succession. This is even true of the riots of January, 1978, the worst in the country's history, which cost over 100 lives and required army troops and tanks to be deployed in the streets of the major cities (although it was primarily the PSD party militiamen who did the killing).

The riots grew out of a general strike called by the head of the Tunisian trade union federation, Habib Achour, a major contender for power within the PSD, at least partly in order to assert his claim to the succession. The strike quickly degenerated into rioting and looting, carried out mainly by the hordes of jobless teenagers who throng all the cities, and for a time the authorities nearly lost control of the situation. Achour and 10 of the 13 man executive of the trade union federation were arrested, together with hundreds of other trade unionists. Both he and a senior colleague, Abderrazak Ghorbal, who had called for a 'worker's State', were sentenced to 10 years' hard labour for subversion in October, 1978, in a trial which fell far short of normal legal standards, but there remain many contenders for power both within and outside the regime.

One faction in the regime is led by Prime Minister Hedi Nouira, Bourguiba's designated successor, but a right-wing faction dominated by Defence Minister Abdullah Farhat and PSD political director Muhammad Sayah (who probably controls the party militia) is at least as powerful. A third group, centred around former Interior Minister Tahar Belkhdja and former Foreign Minister Habib Chatti, who were both abruptly expelled from the Cabinet in December, 1977, still enjoy the support of Bourguiba's very influential wife, Wassila, and cannot be excluded from the contest.

Equally important, however, are former PSD leaders now outside the party, such as the liberal group around former Interior and Defence Minister Ahmad Mestiri and the radical pan-Arabist exiles like former Foreign Minister Muhammad Masmoudi and former Economics Minister Ahmad Ben Salah. The latter still enjoys great popularity amongst the most deprived sections of Tunisian society, and both he and Masmoudi receive strong Libyan support. Indeed, Libyan intrigues to influence the outcome of the succession struggle have even extended to sending an assassination squad to Tunis in 1976 to kill Prime Minister Hedi Nouira, the man chiefly responsible for stopping the planned Libyan-Tunisian union.

All this manoeuvring takes place against a background of deepening social unrest in Tunisia. Amongst the young in particular there is a growing current of extreme leftist sentiment, and also a strong Islamic fundamentalist movement even in this most Westernised of Arab countries. If the battle for the succession ends up in the streets, however, it is probably the army that will decide the issue, and so all the rival factions have been seeking to win the support of key individuals in the officer corps.

The state of opinion within the officer corps cannot be precisely gauged, as they are not encouraged to make political statements beyond announcements of their loyalty to the regime. That sharp differences of opinion about Tunisia's future course exist in the army is certain: in August, 1976 22 members of the armed forces were arrested for plotting subversion and another five disappeared, after which the commanders of units in the south were replaced by loyal officers from the capital. It can be stated in general terms, however, that the right-wing group led by Defence Minister Abdullah Farhat has been seeking to gain the army's support both by a generous military spending programme and by specific promotion policies.

The latter process centres on the removal or retirement from senior command positions of 'first generation' officers who fought for independence with Bourguiba and 'second generation' officers, promoted after independence, who were infected by pan-Arab sentiments and were deeply disappointed by Tunisia's lack of involvement in the 1967 war against Israel. Their replacements are generally 'third generation' officers who have been trained in French or United States military academies or are known for their pro-Western sympathies. In this way it is hoped to ward off leftist, Islamic and/or

Libyan challenges when Bourguiba finally goes. It is simply not possible, however, to judge what the true opinions of the mass of middle-ranking army officers really are, and this may prove to be the most critical factor in determining the outcome.

GWYNNE DYER

TURKEY

HISTORY AND INTRODUCTION

Turkey is the only State in the Middle East with an army whose traditions genuinely extend back beyond the turn of the century. It stands in direct descent from the Ottoman Army, and its outlook has been moulded and matured by five centuries of experience as the army of a great power. By the same token, the army's relationship with the Turkish State, and the immense fund of goodwill it enjoys in the mass of the Turkish population as a heritage of many generations of sacrifice and gallantry in (mostly lost) wars as the borders of the Ottoman Empire contracted, are fundamentally different from the circumstances prevailing in almost all its neighbours. Despite many alarms and upheavals, the Turks basically like their army and are comfortable with it. In return, though it sometimes puts its claims rather more strongly than civilian politicians would prefer, it knows its place — and that place is not in sole charge of the Republic.

In some senses, the Ottoman Empire was an army that made itself into a State, and the prime role of the early Sultans was almost invariably that of supreme military commander. The relative power of the army compared to other institutions was correspondingly always high within the Empire, and in time a succession of military interventions contributed substantially to its decline. This was a particularly marked phenomenon in the latter days of the Janissary army — a unique Turkish institution in which the army was comprised of Yenicheri ('new troops') who were conscripted from the non-Muslim subject populations in early youth, converted to Islam, and constituted into a professional, regular force. Eventually, and inevitably, this corps of men became a militarily useless body with entrenched privileges and reactionary views, leading the first of the reforming Sultans, Selim III, to attempt to replace them with a new army modelled on the Empire's successful European rivals.

His reforms were collectively known as the Nizam-i Jedid (New Order), but their focus, as in all subsequent efforts to modernise the Ottoman Empire from above in the nineteenth century, was on the military institutions which alone could save the empire from its encroaching enemies. Thus the new volunteer military force modelled on contemporary Western armies which was created in 1792, complete with military and naval schools where education on Western technical subjects was given by French officers, itself became known as the Nizam-i Jedid. The Janissaries, fearing for their privileges, revolted 13 years later, murdering many of the leading reformers and forcing the abolition of the new-style army and the Sultan's abdication in 1807, but the need for reform was too great to be postponed forever. The next great reforming Sultan, Mahmud II, effectively recreated the Nizam-i Jedid in 1826, and shortly afterwards annihilated the Janissary corps, once more in revolt, by massed cannon fire in the centre of Istanbul. This massacre is known to Turkish history as the 'Auspicious Incident'.

The regular army that then emerged is the lineal ancestor of the Turkish army of today. From that time onwards, too, the phenomenon became visible which was to dominate Turkish history for the next century, and influence it strongly down to the present: the leading role of army officers as reformers and Westernisers. For it was they, earlier and more comprehensively than any other Ottoman Turks, who were taught European languages and given Western education in the military schools which were now founded to train the officer corps of the regular army. It was also they who were best placed to see the disastrous gulf between the decaying traditional institutions of the Empire and the new forms of organisation that underlay European successes, they who bore the most direct responsibility for the series of catastrophic military defeats caused by this gulf, and they who were best placed to do something about it. Inevitably, they became first reformers, then revolutionaries.

Eventually, in 1908, it was army officers who carried out the Young Turk Revolution that inaugurated the last desperate race to rescue the Empire by turning it into a European-style State. Within a couple of years, they transformed the empire into a constitutional democracy with an elective parliament, remodelled practically every institution in sight along Western lines, and extended the right (and duty) of military service to the non-Turkish and non-Muslim populations of the empire. In practice, they also turned the State into a military dictatorship, run by an oligarchy of young Turkish nationalist officers (the average age of the leading rebel officers of 1908 was late twenties), and within 6 years they had plunged the empire into its last disastrous war. By 1918 they were totally discredited, and the empire was militarily prostrate, awaiting partition amongst the victorious *entente* powers.

There was, however, a 'second team' of 'young Turk officers', dissidents who had been excluded from the ruling group quite early on, who had all along favoured a 'Turkish' rather than an 'Ottoman' solution. That is to say, they had argued (rightly) that it was far too late to try and save the moribund multi-national empire, and that all energies should be devoted to the aim of somehow extricating an independent Turkish national State from the impending wreck. The most prominent of these nationalist officers was Mustafa Kemal, later called Atatürk; like his colleagues, he served loyally in military commands throughout World War I, rising to the rank of General and Pasha, and his group was available as an alternative leadership when military catastrophe finally discredited its ruling rivals.

Mustafa Kemal Atatürk and his companions then proceeded to create a military resistance movement in central Anatolia, and fight off French, Italian, Greek and British forces — at first unaided, later with Soviet Russian aid — in a part-guerrilla, part-regular war that ended in triumph, and in the creation of the Turkish Republic in 1923. (It was for this first successful war of nationalist resistance against imperialism, by the way, that the Soviets coined the technical Marxist term 'war of national liberation', later to gain general currency.) The Russians saw it in ideological terms as a war of the 'national bourgeoisie', but the Turks are probably more accurate in describing it as 'the war of the reserve officers'. It was the army that rescued a Turkish national State from the ruins of the Empire, just as an earlier Turkish army had founded it, and the army's driving force was a Western-oriented officer corps — regulars educated in the military schools in the key positions, and reserve officers with semi-Western educations (a great many of them school-teachers) as the mass behind them.

In the subsequent 15 years until his death in 1938, Atatürk, with the army's backing, rammed through the radical reforms which turned Turkey into the mirror image (so far as laws and State institutions go) of a European, secular State. He did Turkey an equally great service in firmly suppressing any tendencies in the army towards the praetorianism that had wrecked the 1908 revolution, and by firmly insisting on the total separation of military and civil functions. (He set the example himself, by resigning his military rank upon becoming President of the Republic.) It was the army's role, clearly stated in the constitution, to safeguard Atatürk's reforms and prevent backsliding, but not to rule itself.

To a very great extent, Atatürk's definition of the army's role within the State prevails even today. Multi-party democracy was introduced in Turkey in 1950, and with some short-lived interruptions has continued ever since. Indeed in the past quarter-century, in all the region between Italy and India, Turkey's record as a liberal, parliamentary democracy is only matched by Israel and (perhaps) Greece.

That is not to say that the Turkish army has ceased to play a political role. Ten years after democracy was introduced, in 1960, it intervened against the government of the day on the grounds that it was corrupt, that it was pandering to traditionalist, obscurantist and anti-Atatürkist sections of the population, and that it planned to rig the forthcoming elections. True or not, the reputation the army still enjoyed as a modernising, progressive force was shown by the fact that the intervention had the support of most Turkish intellectuals, including even the students. It hanged the Prime Minister and two of his associates — now generally admitted to have been a disastrous error — but it dealt firmly with those of its own officers who showed a taste for clinging to political power, and it handed the government back to civilian politicians after only a year. Moreover, it gave the Second Turkish Republic a considerably more democratic constitution than its predecessor had had.

As Atatürk's reforms have gradually entrenched themselves and as political democracy has matured in Turkey, it has been argued, the army's self-appointed role as guardian of the constitution has become decreasingly relevant. It is undeniably true, however, that a great many Turkish senior officers, operating in an efficient environment of thorough military professionalism, feel a deep distaste for the unseemly compromises and sloppy half-measures of democratic politics, and occasionally have the urge to knock the politicians' heads together. Such sentiments lay behind the 'mini-coup' of March, 1971 when the army, without actually seeking to overthrow the constitution, nevertheless demanded and got the resignation of the Prime Minister. Its patience had been sorely tried by the government's apparent policy of masterly inactivity in the face of the terrorist campaign then troubling Turkish cities (the Turkish People's Liberation Army, now largely defunct), and it got the successor government to impose a state of modified martial law in all the main urban areas. It then embarked on a draconian round-up of leftists of all varieties, without much regard for the niceties of constitutional rights.

It is indicative of the army's changing position in Turkey, however, that most of these prisoners were released within a year of its handing back full control to the politicians in October, 1973. Not only did it allow the 1973 election to be held, but it acquiesced in the subsequent curious coalition government of social democrats and Islamic radicals. (Ten years previously, it would not even have allowed the latter party to run for office.) Even more significantly, when the armed forces attempted to exercise their traditional right of nominating the President in March, 1973 the politicians almost unanimously resisted, and got their way. By 1974, the last of the four 'interventionist' service chiefs who had forced their ultimatum on the Prime Minister in 1971 had been retired without any fuss.

There is unquestionably an element of resentment — even disbelief — in parts of the Turkish officer corps at the idea that Turkish democratic politics is now mature enough to get along without them, but it is not the dominant sentiment. As a body, Turkish army officers are deeply imbued with Atatürkist ideology, which stresses their role as a national force above politics. It is also quite explicit about the evils of praetorianism, and even in periods of political intervention senior officers have been quick to stamp on any manifestations of such a tendency. Military influence on Turkish politics seems to have stabilised at a new level, lower than before, and by and large the army's officer corps seems content with that limited role.

STRENGTH AND BUDGET

The strength of the Turkish armed forces is 465,000 (1.1% of the population of 41,000,000), of which 390,000 are army. The army is the largest in the Middle East, and the second-largest (after the USA's) within NATO. Over half the army's strength (300,000) is conscript; almost all officers and non-commissioned officers are regulars.

The navy has 45,000 men (31,000 conscripts), and the air force 50,000 (31,000 conscripts). Army reserves number

World Armies

approximately 700,000. The principal paramilitary force is the Gendarmerie, which consists of 75,000 men and includes three mobile brigades.

The Turkish military budget for 1978–9 was \$1,700,000,000. Military spending has now stabilised, after growing about 50% between 1974 and 1976. The gendarmerie budget is separate, as is a special allocation for the re-equipment and modernisation (REMO) of the armed forces, currently running at over \$500,000,000 a year, which envisage a total expenditure of some \$4,000,000,000 by 1978.

The sharp rise in Turkish defence expenditure is almost entirely due to the Aegean confrontation with Greece since 1974, and this has also determined that the bulk of equipment purchases be concentrated on air and naval forces. The demands of the Turco–Greek arms race have made such heavy inroads on Turkey's limited foreign exchange reserves that in July, 1976 the armed forces impounded half those then remaining in case of emergency military needs.

COMMAND AND CONSTITUTIONAL STATUS

The President of the Republic is Commander-in-Chief of the Armed Forces according to the constitution. Since all but one of Turkey's presidents have been retired military officers, this role tends to be more than merely ceremonial. The President's power is exercised through the Prime Minister and the Minister of National Defence. The executive commander of the armed forces is the Chief of the General Staff.

The three armed forces are partially integrated, with the Chief of the General Staff presiding over the three service Chiefs of Staff. Army influence tends to predominate. The armed forces' role as 'guardians of the republic', while it is still a strongly held belief in the officer corps and has been advanced in justification of the military interventions of 1960 and 1973, has no constitutional basis. It derives rather from the dicta of Atatürk, the founder of the republic, and is invoked in defence of his policy and goals. He regrettably neglected to resolve the dilemma between this principle and his equally explicit injunction that the armed forces stay out of politics and the active conduct of government.

There are three institutions linking the government and the armed forces. The Ministry of National Defence, whose head is a senior cabinet member appointed by the Prime Minister, performs administrative and logistical functions connected with the procurement and allocation of military supplies and equipment, and prepares and presents the annual military budget to the Grand National Assembly (parliament).

The National Security Council is given responsibility by the 1961 Constitution for determining national security policy and co-ordinating all activities relating to national mobilisation (in its civil as well as its military aspects) and total defence. The President, or in his absence the Prime Minister, presides over this body, whose membership includes the Prime Minister and Deputy Prime Ministers (if any), the Chief of the General Staff, the Ministers of National Defence, Interior, Foreign Affairs, Finance, Communications, Labour, and Industry and Technology, and the Commanders of the Army, Navy and Air Force. It is served by a general secretariat, and tends to be more concerned with the civilian aspects of defence policy (as reflected in the predominantly civilian membership).

The most important body, although its existence and duties are not defined by any legislation, is the Supreme Military Council, which serves as principal defence adviser to the Prime Minister as the National Security Council does to the President. The Prime Minister presides over its meetings, at which the Chief of the General Staff, the Minister of National Defence, the three service chiefs, one army and one navy commander, and a varying number of individually appointed generals, are present. The composition is thus predominantly military, and in times of crisis like the 1974 Cyprus operation it tends to act as a supreme executive body in military affairs. That is not to say, however, that cabinet responsibility is formally abdicated, nor that civilian control over decision making is necessarily diminished.

The President is elected by both houses of the Grand National Assembly (GNA); he appoints the Prime Minister, who requires a vote of confidence in the GNA. The President appoints the Chief of the General Staff, upon nomination by the cabinet, and is legally responsible to the Prime Minister.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The Turkish army is organised for national defence, and except in times of martial law has no authority to perform internal security functions. (However, the gendarmerie, which does have such functions, is commanded by army officers and co-operates closely with local army units, although in time of peace it is under the control of the Ministry of the Interior.)

For several centuries, Turkey's main military preoccupation has been Russia, against which it fought (as the Ottoman Empire) about a dozen wars, in the course of which it lost the richer half of its imperial possessions. Hostility and fear towards Muscovy are deeply ingrained in the Turkish national consciousness (and a substantial minority of the Turkish population are descended from refugees from the territories lost to Russian armies over the generations).

Turkish–Soviet relations were quite good in the period 1923–41, as a heritage of their collaboration in the period of the Turkish War of Independence and the Western interventions in the Russian Civil War, and as a result Turkey was able to adopt a neutral foreign policy for the first time in its history. However, the old anxieties were instantly reawakened by the

Russian arrival in the Balkans in 1945 and Stalin's demands for territorial concessions from Turkey, and Ankara accordingly flung itself into the arms of the USA when the Truman Doctrine was promulgated in 1947.

In its initial enthusiasm for the Western alliance (and, undoubtedly, to earn some political credit) Turkey sent a brigade to join the United Nations forces fighting in Korea in October, 1950. In all, some 20,000 Turkish troops fought in Korea, and 717 died there. It was the first time the Turkish army had fought since 1922, and it showed that the Turkish military reputation for ferocious bravery and unyielding resistance was still as well merited as it had always been.

In 1952 Turkey was admitted to full membership of NATO, and in 1955 it joined the Baghdad Pact (later CENTO), whose headquarters is in Ankara. Its main assigned role in both alliances, however, was simply to defend its own strategically vital territory, and above all the Bosphorus and Dardenelles Straits giving access from the Black Sea to the Mediterranean. This entirely corresponded to the Turks' own security priorities, and between 1947 and 1973 military assistance from the USA totalled almost \$6,000,000,000 in value.

The Turkish enthusiasm for NATO began to cool somewhat after the emergence of the Cyprus problem in the 1950s, since it raised the possibility of conflict with Greece, their nearest NATO ally. The estrangement was gradual (and is still far from complete), but it was exacerbated by American attempts to steer a middle course between contending Greek and Turkish claims. It was also hastened by the gradual apparent diminution in the Soviet threat (the Soviet government repudiated Stalin's territorial claims on Turkey in the early 1960s) and by the deliberate Turkish government attempts, in emulation of its Western allies, to achieve a measure of detente with the Soviet Union.

As successive Cyprus crises heightened Greek-Turkish hostility, Turkish military priorities gradually came to include the possibility of war with Greece in the Aegean, or of military intervention in Cyprus. When the climactic crisis came in Cyprus in July, 1974 the Turkish armed forces were prepared and equipped to carry out a swift sea and airborne invasion.

The 1974 crisis was caused by the ill-advised action of the Athens government in sponsoring a coup against Archbishop Makarios, President of Cyprus, using as its instrument the 12,000-man Greek-Cypriot National Guard, a semi-regular force (illegal under the 1959 treaty) which was commanded by Greek army regular officers. Makarios escaped with his life, but the coup leader, Nikos Sampson, an ex-EOKA terrorist renowned for his anti-Turkish attitudes, was established as President within 24 hours of the attack on the Presidential Palace in Nicosia on July 15th. Cyprus was proclaimed a 'Hellenic Republic', and the military junta in Athens, displaying an incompetence that rivalled its brutality, evidently believed that the path had been cleared for *enosis* — union of Cyprus with Greece — within a year. Astonishingly, and despite clear prior warnings from Ankara, the Greek government was of the opinion that Turkey would not react vigorously.

The Turkish government, fearing for the safety of the Turkish-Cypriot minority and determined not to allow *enosis* (which would create a Greek military stronghold flanking its south coast), first sought British co-operation in a joint intervention in Cyprus. Both countries, as co-guarantors of the 1959 treaty establishing Cypriot independence, had the right to intervene in defence of the constitution, but Britain refused to exercise its right, or even to allow Turkey to land its forces through the British Sovereign Base Areas on the south coast. There were also reports that Washington was considering the recognition of the Sampson regime. The Turkish government therefore decided to ignore British and American pressure for a non-military solution to the crisis, which it feared could all too easily lead to the consolidation of the new situation, and chose to exercise its right of unilateral intervention by invading Cyprus.

Cyprus's geographical position, some 300 miles from Crete and 500 from the Greek mainland, but only 40 miles from Turkey, guaranteed Turkey air and naval superiority in the area. The Cyprus National Guard was relatively short of heavy weapons — it disposed of only 32 tanks, 50 armoured cars and some medium artillery — so that there was no question of its being able to prevent an invasion. The Turkish landings commenced after dawn on July 20th, across the beaches west of Kyrenia and by paratroop landings at the Turkish-Cypriot village of Gönyeli, on the Kyrenia-Nicosia road south of the St. Hilarion Pass.

The initial landings were successful, but there was tough Greek and Greek-Cypriot resistance, especially in the Pass. Turkish forces barely succeeded in driving a wedge through to the beleaguered Turkish-Cypriot quarter of the capital before the first ceasefire supervened on July 22nd, and they failed to seize Nicosia airport. Inter-service co-ordination was generally satisfactory, although Turkish aircraft sank one of their own naval vessels by mistake.

At the time of the July ceasefire the Turkish army controlled only a small enclave extending inland from the northern coast at Kyrenia, and about half the Turkish-Cypriot population were still effectively hostages in Greek hands in the rest of the island. There were continual breaches of the ceasefire and a gradual expansion along the edges of the Turkish enclave during the next month. A conference convened in London on August 10th collapsed when the Greek side asked for more time to consider Turkish proposals for a permanent settlement in Cyprus on a cantonal, federal basis. Thereupon, having meanwhile built up its forces in the Cyprus bridgehead to about 40,000 men and 200 tanks, the Turkish army recommenced its advance in mid-August. Greek resistance collapsed rapidly under vastly superior air, armour and artillery bombardment, and by the time the second ceasefire was agreed on August 16th, the Turkish armed forces controlled the northern two-fifths of the island. They had also relieved the besieged Turkish-Cypriots in the city of Famagusta.

Over the next year, continuing population movements, some voluntary, some less so, more or less completed the physical separation of the Turkish- and Greek-Cypriot communities (although exacerbating even more the problem of Greek refugees, generally estimated to number almost 200,000). Since August, 1974 the Turkish government has insisted on a bizonal, not merely a cantonal, federal government for Cyprus, with the Turkish-Cypriot community remaining

World Armies

concentrated in a single contiguous area in the north. Recent negotiations between the two communities suggest that the Greek-Cypriot side has now reluctantly accepted this principle, though the final size of the Turkish-Cypriot area remains a subject for discussion. There is general consent, however, that some parts of Turkish-occupied northern Cyprus — 38% of the island's territory — will be handed back to accommodate some of the Greek refugees, and certain areas have been left deliberately empty by the Turkish authorities for this purpose. Turkish forces in Cyprus have gradually declined to a current size of about two divisions (25,000 men), and a permanent settlement would mean the removal of almost all of these as well.

During the 1974 crisis Turkey did not declare mobilisation (as Greece did), but elements of the First Army were concentrated on the Turco-Greek frontier in Thrace, while substantial air and naval forces were moved to the Aegean coast. Subsequently Turkey created a Fourth Army in the Aegean, outside the NATO command structure, but this was largely a symbolic gesture. For the most part, Fourth Army forces are those that were in the area before, simply transferred to a different chain of command. The same tendency was evinced in the government declaration in January, 1974 of an intention to create a bomber *force de frappe* within the air force which would operate outside the NATO command structure.

Only a small portion of the Turkish army has actually been shifted south since the confrontation with Greece over Cyprus, Aegean oil and other issues entered its severe phase in 1974, which may be taken to indicate one or both of two things: (a) the continuing preoccupation of the Turkish General Staff with the Soviet Union as the prime threat to security, if a less urgent one; and/or (b) the predominantly air and naval character that any war in the Aegean would assume. There is, of course, no serious possibility of a major Greek military incursion deep into Turkish territory.

Turkey's Greek problems since 1974 have shown themselves more in increased defence budgets, a greater stress on the development of a domestic arms industry (*see* Equipment and Arms Industry), and in the awkward question of foreign bases. The major NATO naval base at Izmir has not been affected, but the 26 American bases existing in Turkey under a bilateral agreement, including a major air base at Incirlik near Adana and several strategically important stations for monitoring various activities in the southern Soviet Union, have been in a state of suspended animation since the American Congressional embargo on arms aid to Turkey was imposed on December 10th, 1974. Unless and until this embargo is fully lifted, the future of these American bases in Turkey will remain in doubt.

Turkey maintains no significant army forces on its borders with Iran (a fellow-founder of the Regional Co-operation for Development — RCD — in 1964, and a fellow CENTO member), nor on the Iraqi and Syrian frontiers. The principal Turkish government concern there is to suppress smuggling (a gendarmerie responsibility) and to co-operate with its neighbours in preventing any outbreak of separatism in the Kurdish population that inhabits the border areas of all four States. Turkey takes no military interest (and not a great deal of diplomatic interest) in the Iranian concern for Gulf security or in the Arab confrontation with Israel.

ORGANISATION

Arms of Service

The Turkish army is still largely an infantry force based on peasant conscripts, albeit a very high-grade one, and this is reflected in the fact that it consists of 14 infantry divisions, only two mechanised infantry divisions, and a single armoured division. There are, however, a further five independent armoured brigades and four mechanised infantry brigades, as well as five independent infantry brigades. There is also a parachute brigade and a commando brigade. The army also has four surface-to-surface missile battalions armed with Honest John missiles.

Operational

The Turkish General Staff, though it is invariably commanded by an army general and has a large majority of army officers, is in effect a joint staff. It is located in Ankara, and is organised into five major divisions for personnel, operations, planning, logistics and communications, designated J-1 to J-5, respectively. Staff officers in Ankara and in the field comprise a separate corps, all of whom are graduates of the 4 year course at the General Staff College in Istanbul. The headquarters of all three services are in Ankara, in constant close contact with the General Staff.

There are four Turkish army commands, each containing two or three corps. The First Army, headquarters Istanbul, controls forces in eastern Thrace on the Greek and Bulgarian borders. It is heavy in armour, and organised for mobile operations. The Second Army, headquarters Konya, is primarily responsible for the defence of the northern Anatolian coast east of the Straits, but also has logistical responsibility for the Turkish forces in Cyprus. The Third Army, whose headquarters has recently been moved from Erzerum to Erzincan, is responsible for the security of the Turkish-Soviet border area in eastern Anatolia. The newly created Fourth Army, headquarters Izmir, is responsible for the military security of the Aegean coastal region. The land forces also include a training command of five or six training divisions, three Communications Commands (West, Central and East), and several base commands.

The Turkish air force contains 21 squadrons, of which the majority are organised into two Tactical Air Forces. There are

14 fighter—ground attack squadrons, one interceptor squadron, two reconnaissance squadrons and four transport squadrons. It also possesses eight batteries of Nike—Ajax and Nike—Hercules surface-to-air missiles. A large part of the air force's strength, and all the SAM batteries, are concentrated in the region of Istanbul and the Straits. Major air bases are at Adana, Balıkesir, Bandırma, Diyarbakır, Esluboğa, Eskişehir, Etimesgut (Ankara), İzmir, Merzifon, Sivas and Yeşilköy (Istanbul); the First Tactical Air Force has its headquarters at Eskişehir in western Turkey, and the Third Tactical Air Force headquarters are at Diyarbakır in eastern Turkey. The air-defence and warning command, controlling an extensive radar network, is sometimes referred to as the Second Tactical Air Force.

The Turkish navy is composed of the North and South Sea Area Commands (Istanbul and İzmir) and several training commands. The sub-command in charge of operations in the Straits is also in Istanbul. Fleet Command, bearing primary responsibility for ship building, repair and supply, is at Gölçük, the naval base at the head of İzmit Bay in the Sea of Marmara. Other major naval bases are at Iskenderun, Samsun and Trabzon.

The 110,000 man gendarmerie, armed with light infantry weapons, is fully controlled by the army in wartime, and may also come under operational control of the army in whole or in part when states of emergency or martial law are declared. Even in peacetime it is commanded by a four-star army general, and the gendarmerie general staff is directed by an army major-general. Its personnel are derived from the army, and its uniforms, ranks, pay and equipment are the same. The gendarmerie organisation includes three mobile infantry brigades deployed in the Second and Third Army areas.

Under existing agreements (now in partial suspension), all of the Turkish navy, most of the air force, and 15 out of 17 army divisions are 'assigned' to NATO, although they remain — at least in time of peace — under the control of the Turkish military authorities. The NATO command structures in the region — Sixth Allied Tactical Air Force, and South-Eastern Command with responsibility for land forces — both have their headquarters at İzmir in western Turkey. Until recently both organisations were commanded by American generals, in order to avoid offence to the rival nationalisms of Greece and Turkey whose forces, together with some locally based American units, would be subordinated to these commands in wartime. This argument has ceased to be valid since Greece left the integrated command structure of the alliance after 1974, and Sixth Allied Tactical Air Force and South-Eastern Command will henceforward be commanded by Turkish generals with American deputies. The headquarters at İzmir, and a new allied headquarters at Larisa commanded by Greek officers, which would control Greek forces if they should be reintegrated into the military structure of NATO, are both to be under the ultimate authority of Commander-in-Chief South in Naples.

RECRUITMENT, TRAINING AND RESERVES

The regular officer corps of the Turkish army is trained at the Turkish Military Academy in Ankara, where cadets with a satisfactory standard of secondary education undergo a 3 year programme of military instruction and general education and receive commissions as second-lieutenants in the regular army upon graduation. About a thousand officers are graduated each year, and the historical tendency to overproduce junior officers, which has been aggravated by an inadequate rate of retirement at the top, has occasionally necessitated the wholesale retirement of officers in the middle ranks.

At appropriate stages in their careers, officers attend advanced courses in the schools run by their arm or service, and very large numbers have also been to courses in the USA and Western Europe. At the top of the army school system is the General Staff College in Istanbul, where selected officers who have passed the stiff entrance examinations pursue a 4 year programme of study and staff practice. Successful graduates become members of the *élite* General Staff Corps, and subsequently serve in the important command positions and on the General Staff.

Career NCOs are volunteers who enter on long-term enlistments after completing secondary school. They attend a course of about 2 years at the Non-Commissioned Officers' School in Ankara before being appointed corporals in the regular army.

The bulk of the armed forces' manpower (360,000 out of 485,000) is provided by conscripts doing 20 months of compulsory service. Fit males are generally called for service in their twentieth year, although induction may be deferred until completion of schooling or up to the age of thirty-two. There is no minimum educational or intelligence requirement. Those who are not secondary school graduates generally serve as privates; those who show ability may be appointed as acting NCOs in the lower grades, while university graduates almost invariably do their service as reserve officers.

Conscript recruits receive about 8 weeks of basic training (including literacy training if required) in the training divisions which are distributed around the country. (These are quite separate from the combat units of the field armies.) After basic training, recruits are assigned to a combat unit or, if qualified by education and aptitude, are sent to one of the army's branch schools for further training. The principal branch schools for the infantry are located in Istanbul and Çankırı; for engineers, at Kağıthane near Istanbul; for artillery, at Polatlı; for armour and for army aviation, at Ankara; and for commandos, at Eğridir. The technical services, such as ordnance, transportation and signal corps, maintain specialist schools in various parts of the country.

Reserve officers usually come to the army having already completed training programmes at the civilian universities. Required service is 20 months, but reserve officers may at the army's discretion contract for additional service of up to 26 years.

The navy has retained the former pattern of officer training, abandoned by the army in the 1950s: candidates generally

World Armies

attend the Naval Lyceum, a 3 year secondary school to which youths are admitted by competitive examination, before moving on to the Naval Academy where they undergo 4 years of naval and general education as midshipmen. They are then promoted to ensign, and serve a further probationary period of 2 years at sea before finally receiving full commissions in the regular navy. Both the Lyceum and the Academy are on Heybeli Island, in the Sea of Marmara off Istanbul, which also houses the headquarters of the navy's Training Command.

A similar system prevails in the training of NCOs; the Petty Officers' School in Istanbul accepts applicants at the age of twelve for 4 years of secondary and naval education, after which they are admitted as petty officer candidates and undergo a further 4 years of specialty training before being appointed as career petty officers of the lowest grade. Navy conscripts receive about 4 months' basic training, and serve the balance of their time in various duties ashore or afloat.

Air force regular officers are trained at the Air Force Academy in Eskişehir, where the Air Force Non-Commissioned Officers' School is also located. The latter school complex also provides specialist instruction in a variety of technical subjects, which is supplemented in some cases by instruction at civilian facilities or abroad. Pilot training is done at Çiğli, near Izmir. The air force relies on career airmen for operational and technical duties, generally restricting its proportionately small share of conscripts to administrative and guard duties.

Recently, a special once-only provision was made for those educated in universities abroad, or who had otherwise passed the usual age for military service due to educational reasons, to discharge their liability with a special abbreviated training period of only 4 months. This was seen by some as the entering wedge in tackling the problem of universal military service, which with the rapidly growing Turkish population (now 41,000,000, of whom some 42% are under fifteen) has been flooding the armed forces with more unskilled people than they can usefully employ, at some cost to the more important consideration of buying new equipment. Since universal military service is also seen as serving important educational and national purposes, however, especially in the case of the large Kurdish minority population of the south-east, there is still a considerable reluctance to change the system to one of selective or voluntary service.

Conscripts are placed on the reserve list at their local government office on completion of their 20 months' service. They are subject to recall until the age of forty-six if physically fit and not otherwise exempted, but there is no system of organised reserve units and no periodical refresher training is provided. It is estimated that the army could expect to be able to call up about 700,000 reservists who were reasonably fit, available, and with training recent enough to be useful, while the navy could call up about 25,000.

Turkish armed forces' pay and allowances are adjusted periodically to keep them more or less equivalent to what is earned by persons of similar qualifications in civil life. The armed forces also run an extensive social-security system for their members called the Military Mutual Aid Association (OYAK). Regular officers and NCOs contribute about 10% of their salaries to the association fund, which is largely tax exempt. Participants may borrow from the fund for home purchases, and on retirement they receive back their investment plus accumulated interest and accrued dividend distribution. OYAK, whose director is a general officer on active service (the rest of the management is civilian) disposes of extremely large sums for investment, and has a considerable influence in the Turkish economy through its interests in the automobile industry, cement production, petrochemicals, textiles and other enterprises.

EQUIPMENT AND ARMS INDUSTRY

The Turkish army's armoured strength consists of 2800 M-47 and M-48 tanks, now rather dated, and the mechanised infantry has 1650 M-113, M-59 and Commando APCs. The artillery arm consists of 265 105 mm, 190 155 mm and 36 175 mm SP guns, and 1500 75 mm, 105 mm, 155 mm and 203 mm howitzers. Smaller fire-support weapons include 1750 60mm, 81 mm and 4.2in mortars, and 1200 57 mm, 390 75 mm and 800 106 mm recoilless rifles.

There is a variety of anti-tank guided weapons: SS-11s, 85 Cobras and some TOWs, with further TOW and also Milan ATGWs on order. There are 900 40mm AA guns, as well as eight batteries of Nike-Ajax/Hercules missiles (the latter under air force control). The three SSM battalions have 18 Honest John missiles.

The army has on order 193 Leopard tanks from West Germany, 6750 Milan ATGWs from France and Germany, TOW ATGWs from the USA and 56 AB-205 helicopters from Italy. An order for Roland SAMs is being negotiated with West Germany.

Army aviation has 153 light aircraft (10 Beavers, 95 U-17s, three Cessna 421s, seven Do-27s, 18 Do-28 D-1s and 20 Beech Barons), and 168 helicopters (100 AB-205/6s, 20 Bell 47Gs and 48 UH-1Bs).

The Turkish navy's major vessels are 14 submarines (two more under construction), 12 destroyers and two frigates. It has 14 fast patrol boats (14 more on order) and six fast patrol boats with surface-to-surface missiles (three more on order). There are 25 minesweepers, nine minelayers, 45 coastal patrol craft and 58 landing craft. The navy controls a maritime reconnaissance squadron with 10 S-2E Trackers (plus two trainers), and has three AB-205 and 12 AB-212 ASW helicopters. There are a further six AB-212s on order, and also 33 Harpoon surface-to-surface missiles.

The Turkish air force has 319 combat aircraft, all American designed, organised into 14 fighter-ground attack squadrons, one AWW squadron and two reconnaissance squadrons. The equipment is varied, consisting of 40F-4Es, 70F-5As, 36RF-5As, 74F-104 G/Ss, 74 F-100C/D/Fs and 25F-102As. Transport aircraft include seven C-130Es, 20 Transall C-160s, 30 C-47s, three C-54s, three Viscount 794s and two Islanders. Trainers include 20 T-33As, 35 T-37s,

18 T-34s, 25 T-41s, 35 F-100Cs, and 13 F-5Bs, TF-102As, TF-104Gs, Beech AT-11s and Cessna 421Bs. The air force also has 10 AB-204s, 10 UH-1D and 10 H-19 helicopters.

There are orders for 56 Alpha Jet strike-trainers and about 50 AM-CIII utility transport aircraft from West Germany and 40 F-4E Phantoms from the USA. The Turkish air force has been the service most seriously affected by the protracted American arms embargo, and it was estimated by NATO's European commander in early 1978 that its combat effectiveness had been cut by 50%.

On the whole, the Turkish air force is equipped to a relatively modern standard, but navy and army equipment tends to be rather dated. This has been a source of acute anxiety since 1974, and latterly has been exacerbated by the American arms embargo (at first complete, latterly on Turkish arms transfers other than cash transactions up to a limit of \$175,000,000 a year). The Turkish response has been two-fold: an attempt to vary its source of weapons, previously exclusively the USA, by turning to Western European arms producers, and in the longer run an ambitious attempt to create its own arms industry.

Some of its earlier purchases from European arms producers received tacit encouragement from the American administration, which disapproved of the Congressional arms embargo. Thus, for example, Turkey has been able to buy 36 F-104S fighter-bombers, manufactured in Italy by Aeritalia under American licence. In late 1976 it ordered 193 Leopard tanks from West Germany. Nor has the door remained shut for cash purchases from the USA, and in January, 1977 agreement was reached on the sale by America of a further 40 F-4 Phantom aircraft for \$464,000,000.

Ankara still hopes, however, that the embargo can be lifted fully, and a package deal has been negotiated in which the USA would provide \$1,000,000,000 in military aid for the modernisation of the Turkish armed forces by 1980 in return for a new agreement which would enable the USA's bases in Turkey to be fully reactivated. It is in this context that the Turkish air force is now negotiating with General Dynamics for over 100 F-16 aircraft to replace its ageing F-102s and F-104s from 1980-81, with a first batch of 40 to be ordered in late 1978. It is also reported to be considering the acquisition of some F-15s. The aid-for-bases settlement with America which would make this possible, however, is inextricably linked to a \$600,000,000 4 year American aid agreement with Greece, and neither the Greek government nor the United States Congress seems eager to see these two deals ratified. President Carter indicated in April, 1978 that he wished to end the embargo immediately and unconditionally, but his proposal was rejected by the Senate Foreign Relations Committee in the succeeding month. Though Carter will continue to try, his chances of gaining Congressional assent must be reckoned to be slim.

The parallel Turkish strategy of creating a domestic arms industry is taken very seriously — indeed, even in the proposed F-16 purchase the Turks have expressed the desire to join the four-nation European consortium (the Netherlands, Belgium, Denmark and Norway) that is to share European production of the fighter. Existing agreements to begin arms production in Turkey, however, are primarily with the Federal Republic of Germany.

In March, 1976 Turkey agreed to buy 56 Alpha Jet aircraft to replace its current training equipment. It stipulated that final assembly was to be carried out at the TUSAS aircraft factory in Konya, where the Turks eventually hope to build some 200 aircraft. Similarly, an order for 50 AM-CIII utility transport aircraft from the German firm Airmetal will be assembled at another aircraft factory at Kayseri. Turkey has been building naval vessels up to the size of destroyer escorts since the mid-1960s, and the first domestically produced Turkish submarine, of West German design, will enter service in 1979. Aid is also being provided to expand Turkish shipbuilding facilities, so they can turn out larger batches of the West German-designed Lürssen missile-firing fast patrol boats. Negotiations are in progress to build a factory in Turkey to manufacture Leopard tanks, and perhaps vehicles for the Roland SAM system, while measures to ensure Turkish self-sufficiency in small arms, artillery, soft-skinned military vehicles and ammunition are already well in hand.

Turkey is of course only one of a number of nations in the Middle East region that are seeking to lessen their dependence on foreign arms suppliers, influenced either by the experience or the fear of suffering arms embargoes at critical moments. Indeed, during 1975 Ankara concluded separate agreements with Libya, Iran and Pakistan to make joint investments in armaments industry (detailed plans to be formulated later). But such co-operation, whether within the framework of the RCD or not, is unlikely to extend far beyond joint marketing arrangements for various nationally produced weapons. Of these various national programmes for arms independence, moreover, only the Turkish one is to be taken very seriously for the coming decade.

In the entire Middle East only Turkey and Israel possess the necessary combination of political will, financial resources, industrial base, technical skills and large market — Turkey, like Israel, estimates its annual replacement requirement for combat aircraft at 40-50 a year — needed to create and support a fully-fledged domestic arms industry. (It is possible that the attempt currently being made to create such an industry in Egypt to supply the less radical States of the Arab world will succeed, but only slowly, and by dint of smothering other deficiencies with huge sums of money.) While Turkey, like Israel, can never hope to be fully independent of outside sources for some of the most advanced weapons technologies, there is every reason to believe that it will eventually achieve a quite substantial degree of self-sufficiency in arms.

RANK, DRESS AND DISTINCTIONS

The Turkish armed forces have a rank structure identical to that of the USA, and the nomenclature is the same for all three services (except for naval ranks above that of captain).

World Armies

General of the Army (Admiral of the Fleet, General of the Air Force)	<i>Mareşal</i> (navy: <i>Büyük Amiral</i>)
General	<i>Orgeneral</i> (navy: <i>Oramiral</i>)
Lieutenant-general	<i>Korgeneral</i> (navy: <i>Koramiral</i>)
Major-general	<i>Tümgeneral</i> (navy: <i>Tümamiral</i>)
Brigadier-general	<i>Tuğgeneral</i> (navy: <i>Tuğamiral</i>)
Colonel	<i>Albay</i>
Lieutenant-colonel	<i>Yarbay</i>
Major	<i>Binbaşı</i>
Captain	<i>Yüzbaşı</i>
First-lieutenant	<i>Üsteğmen</i>
Second-lieutenant	<i>Teğmen</i>
Sergeant Major (Chief Petty Officer)	<i>Kidemli Başçavuş</i>
Master Sergeant	<i>Başçavuş</i>
Sergeant First Class	<i>Üstçavuş</i>
Sergeant	<i>Çavuş</i>
Corporal	<i>Onbaşı</i>
Private	<i>Er</i>

There are only four grades of NCO in the navy, the rank of *Onbaşı* not being in use.

Turkish army officers' uniforms are generally similar in cut to those of the United States army, and are dark olive-brown in colour. Enlisted men wear a British-type battledress, with trousers tucked into short leggings when in the field. Navy uniforms for both officers and men conform to the usual international style and are navy blue in colour; air force uniforms follow army patterns for both officers and men, but are light blue in colour.

Officer ranks in the army and air force are indicated by combinations of five-pointed gold stars and other insignia worn on shoulder straps. In ascending order of rank, company-grade officers wear one to three stars, field-grade officers wear a gold wreath device enclosing the Turkish crescent-moon-and-star with one to three stars, and general officers wear the same device on a red background with superimposed white crossed sabres plus one to four stars. 'Five-star' generals wear no stars, but only the same device as other general officers on a solid gold shoulder strap outlined by the basic service colour, olive green or light blue.

Naval officer ranks are indicated by gold stripes on the sleeves, the topmost being of medium width with a standing loop. Ensigns wear one medium stripe, lieutenants one medium and one narrow, lieutenant-commanders three medium, commanders three medium and one narrow, captains four medium, commodores one medium and one wide, rear-admirals two medium and one wide, vice-admirals two medium and one narrow above one wide, admirals three medium above one wide and admirals of the fleet four medium above one wide.

NCO rank indications for all three services are chevrons of the same design, worn on the right sleeve with the 'V' pointing down. Army chevrons are dark gold, navy are white and air force are light gold. The number of stripes rises with rank, from one to five. Conscripts who hold acting appointments in the lower NCO grades wear red chevrons to distinguish them from regular NCOs.

CURRENT DEVELOPMENTS

Both the political and the military roles of the Turkish army are in some doubt at the moment. There is no question of an open and prolonged military seizure of power. The army's highly professional self-image and its distaste for the disastrous combination of military incompetence and political intrigue prevalent in the armies of some of its near neighbours are sufficient guarantees of that. There is the additional factor that it is generally colonels and below who make coups, while in the Turkish army there is an immense upper crust of generals which stands in the way — the two abortive colonels' coups of the mid-1960s foundered on precisely this obstacle. But the traditional large corporate voice of the army in the State has been considerably diminished in the past few years, and not all senior officers are happy about it.

Nevertheless, the loyalty of senior officers to the order founded by Ataturk, whose ideology even now dominates in their ranks, is likely to prevent any radical departures from the current civil-military balance even in times of crisis (though readjustments, and even temporary interventions, are of course still possible).

A longer-term problem lies in the considerably greater degree of ideological commitment of a radical kind — right and left, but principally the latter — which occurs in the officer corps at colonel rank and below. It has been traced by some observers to the decision taken in the 1950s to recruit officers not after middle school but only from Lycée graduates, with the consequence that they came to the army thenceforward already equipped with an ideological perspective, and thus less receptive to the army's own pure Ataturkist ideology.

Any judgement on the future behaviour of this new generation of officers when they reach the highest ranks must depend on how much credit one gives to the explicit principle of civil and military separation and the basically pragmatic orientation of Atatürk's ideology in keeping their predecessors within bounds. It can equally well be argued that the political restraint of the Turkish officer corps is the inevitable consequence of the powerful institutions and traditions underpinning the present order — in other words, that permanent military take-over has not occurred in Turkey principally because the civilian political institutions are fundamentally healthy and responsive to changing circumstances.

The military role of the Turkish army is rather blurred at the moment: the serious threat is the Soviet Union, against which all of Turkey's diplomatic and military arrangements of the past three decades have been directed, but the urgent threat is Greece. Priorities have, as a result, become rather confused.

As a fighting man the Turkish soldier's reputation ranks extremely high — amongst the four or five most respected in the world, perhaps — and it is well deserved. Given intelligent leadership and adequate support, he is superb. The support is there, in the sense that the extraordinarily powerful Turkish reflex of national unity in times of crisis is as strong as ever, and that national pride in the army and in Turkish military prowess is still immense. The leadership also is more than adequate: the Turkish regular officer corps has high professional competence and a justified reputation for intelligence. Although discipline is extremely strict in the army, there is no gulf in class: the officer corps is not drawn from the upper class, but recruited on merit mainly from much lower social backgrounds, including the peasantry.

The army has very limited ability to operate at any distance from its border, but in defence it might be able to perform its primary strategic mission: to resist a full-scale Soviet attack until help arrived from NATO. It would be hindered by its relative lack of mobility, compared to Warsaw Pact forces, but a larger problem would probably be that of just how much NATO help would be available.

This lies at the root of the perennial doubts expressed by Turkish officers at NATO's official doctrine of 'flexible response'. For if help from NATO would be slow in coming, or inadequate in numbers when it arrived (perhaps because of prior commitments elsewhere), then this policy would involve sacrificing at least temporarily not only the relatively empty uplands of eastern Anatolia, but also thickly populated Thrace and quite probably Istanbul and the Straits. The latter is unthinkable, so official Turkish government policy states that the defence line is on the border.

The contradiction is somewhat eased by the fact that the Turkish army would probably not face large Soviet forces in a general European war, since they would be committed largely to the Central Front, and in such a case would almost certainly be able to contain Bulgarian (and perhaps Romanian) forces with limited Russian stiffening. On the other hand a Soviet onslaught directed specifically against Turkey, which would be almost impossible to contain, would also find Ankara's NATO allies in a better position to send swift and effective aid.

These calculations about a possible Turkish-Soviet confrontation have been overshadowed since 1974 by the possibility of war with Greece. Such a conflict in the Aegean, however, would be primarily an air and naval war, almost certainly with Turkey on the strategic offensive. The army's role would be largely confined to holding the border in Thrace (a task well within its capabilities, though penetration westwards into Greek Macedonia would be extremely difficult for reasons of geography and terrain) and to providing landing forces to attack and take hostage one or more of the Greek islands fringing the Aegean coast of Turkey. Neither country is in a position to strike at the heartlands of the other. In any case a Greek-Turkish war, never likely once the July, 1974 crisis was past is now — despite the arms race — a diminishing possibility. The Turkish and Greek Prime Ministers met at Montreux in March, 1978 to discuss the resolution of mutual problems, and negotiations between the two countries continue.

The Greek arms build-up and the continuing United States arms embargo against Turkey have led recently, however, to an official reformation of defence priorities. Shortly after Prime Minister Bülent Ecevit took office in January, 1978 he announced a 'new national security concept' for Turkey which effectively de-emphasises the NATO link and the Soviet threat, while stressing self-reliance, joint arms production agreements with Western Europe, and the primacy of the Greek threat. Turkey's decreased concern about the Soviet Union was underlined by a visit to Ankara by the Soviet Chief of Staff in April, 1978 (he publicly suggested that the two countries might 'benefit from the possibilities offered by a military relationship', but Turkish sources denied any intention to buy Soviet arms), and by Prime Minister Ecevit's visit to Moscow in June, during which the two countries signed an accord pledging friendly relations and binding them not to allow their territory to be used as a base for attack against each other.

Ecevit has stated that Turkey has no intention of quitting NATO, but intends to reduce its contribution to match what the alliance contributes to Turkish security. The precise extent of the reduction would depend upon what was decided in Washington about the arms embargo, and upon the extent to which the Western European NATO members were prepared to fill the gap with economic and military aid. The European partner which Ankara has most in mind is undoubtedly West Germany, which has denounced the American embargo as 'not in the interests of the Western Alliance'.

GWYNNE DYER

UGANDA*

HISTORY AND INTRODUCTION

Uganda attained independence in 1962; on the departure of the last British Governor-General the country became a republic with the Kabaka of Buganda in his personal capacity (as President Sir Edward Mutesa) as Head of State. This compromise collapsed in violence in 1966 when Mutesa was forced to flee to Britain; the Prime Minister, Mr Obote, subsequently became President. This situation lasted until 1971 when a military coup led by the Army Commander, General Idi Amin Dada, took place.

It is important to note, overall, that in the colonial period power and influence lay in the southern part of the country, in particular in the Kingdom of Buganda. In 1962 and 1966 power moved into the north, from where Obote came; at the military coup power moved to the extreme north and north-west, General Amin's home area, and in an increasing number of cases also into Muslim hands, Amin's religious creed.

In colonial days, Uganda had contributed the 4th Battalion to the King's African Rifles. This unit formed the nucleus of Uganda's army, inheriting traditions of service in German East Africa in World War I; Somalia, Ethiopia and Burma in World War II; and operations against Mau Mau in Kenya in 1953-6.

STRENGTH AND BUDGET

Population: 12,500,000 (approximately)

Army: 19,000 (estimated) with an air force of some 1000. There is also a Public Safety Unit, a small political barrack police force and a 'research service' for internal security

GNP: \$3,000,000,000 (approximately)

COMMAND AND CONSTITUTIONAL STATUS

The country's President, Field-Marshal Amin (albeit self-promoted, black Africa's first Field-marshal) is Commander-in-Chief of Uganda's Armed Forces.

The Vice-President, General Mustafa Adrisi, recently returned to favour and was appointed Minister of Defence. Major-General Lumugo is Chief of Staff and Minister with special responsibilities for the air force.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

President Amin has great ambitions for his small country; he openly claimed an area of western Kenya and also an area of north-west Tanzania. He is reported to have even greater territorial ambitions, including access to the Indian Ocean at or near Tanga. Uganda's army has therefore been expanded, equipped and trained for attack as much as defence, at least in theory. The President would also expect the army, if the Organisation of African Unity so required, to contribute to a force for conflict in southern Africa. Lastly the army has a crucial internal security role in maintaining the President's government in power against his many opponents, some of whom receive support from other African States.

Since independence, Uganda's army has had an eventful career. In January, 1964 the 1st Battalion of the Uganda Rifles mutinied, Amin, at that time a major, playing a very ambiguous role and emerging as the battalion's new commanding officer. In 1966, on Obote's orders, Amin directed an assault on the Kabaka's palace held by a tiny weakly armed force loyal to the Kabaka; this assault is now viewed by the Uganda army as a glorious achievement. The relationship between Obote and Amin declined for a variety of reasons in the period 1966-70 (two being Obote's creation of a barrack police force as a rival to the army and his favouring the advancement of officers from his own home area); in a sudden rapidly accelerating rush of misunderstandings in January, 1971 Amin took power while Obote was abroad. Since then, the Uganda army has, not very efficiently, repelled incursions by military groups wishing to restore President Obote, several in the north in 1971 and a more serious one in the south in 1972; this latter led to inconclusive sparring with Tanzanian forces. It also led to the brief appearance of Libyan units in Uganda, ostensibly to assist in defence against Tanzania, but more probably (since they never moved near the Tanzanian border) to withstand a rumoured British military operation to evacuate the Ugandan

* For general notes on African armies, see Appendix 1.

Asians. Its real lack of competence was, however, revealed with its complete failure to prevent or contain the Israeli assault on Entebbe in July, 1976.

ORGANISATION

The army is believed now to consist of two brigades of four battalions each, the 1st to the 8th Uganda Rifles, two mechanised units, a unit described as parachute-commando, an artillery regiment and a training battalion. Reports on the composition of the army, however, vary, and not all of these units may yet be in existence or up to strength. The brigade headquarters are at Jinja (1st Brigade) and Masaka (2nd Brigade). One of the mechanised units is believed to be near Kampala, and the other near Mbarara. An infantry school exists at Jinja and an ordnance depot at Mazamaga. A border-guard unit is posted to Fort Portal. Army headquarters is in Kampala. The main air force base is at Gulu.

There are also reports of a 300 strong 'public safety unit' stationed at Naguru barracks, near Kampala. It is said that some of the officers of this unit, a Presidential Guard unit, are Palestinians.

RECRUITMENT, TRAINING AND RESERVES

Uganda's policies have veered from one direction to another. At independence in 1962 Uganda's first cadets had returned from their training in Britain; it also had some promoted effendis. The army commander and the battalion commander of Uganda's one battalion were, however, British, as were some other officers and her personnel. In 1963 a second battalion was created, again with British help. The mutinies of January, 1964, after unheeded warnings by a British commanding officer and after being put down by British troops flown in from Kenya, led to the removal of most British personnel from the battalions, and then by late 1964, the final departure of British personnel from army headquarters as well. This was followed by a bitter vendetta between the new army commander, a Mganda, and his deputy Amin, the latter winning. Uganda found herself divided as a result of both external and internal problems, and accepting assistance from a variety of sources. Cadets and staff officers continued to go to Britain for training, Israeli training staff arrived, some use was made of occasional Russian and Chinese help, and when the decision to mechanise the infantry was made in 1967, Ugandan army officers and warrant officers were sent to Brno to learn how to operate OT-64 Czechoslovakian APCs. After the military coup, Amin expelled the Israelis whose informal discipline Amin correctly judged to have harmed the army, and at first sought British help. Finding that realistic payment arrangements were required for this, and immersed in his quarrel with Britain over the Ugandan Asians, he turned next to Libya, who sent troops for the defence of Uganda. He then turned to the USSR and Czechoslovakia. A sizeable Soviet military mission is now supervising the re-equipment and training of Uganda's army; the financing for this is far from clear but President Amin's connections with the Arab States and other Muslim-world States may be proving helpful. A small Cuban mission was recently reported to have arrived.

In colonial days a very high percentage, probably between 65 and 75%, of Uganda's soldiers were Acholi — Lango and West Nile forming almost all of the remainder. Soldiering had little appeal to the southern Bantu peoples. At independence a limited effort was made to diversify, some southern officers, including Baganda, being trained. President Obote favoured Lango and to a lesser extent Acholi officers: this aroused a jealousy which was to prove disastrous for them after the 1971 coup.

In 1971 President Amin began a policy of favouring personnel from the extreme north (West Nile), Kakwa, Lugbara and Nubian; some southern Sudanese (trained by the separatists) were also recruited. Far more serious, a series of wholesale killings of Acholi and Lango officers, NCOs and soldiers took place in most barracks. In their place the Ugandan army lost almost all of its best-trained officers: these were replaced by Kakwa, Lugbara and Nubian NCOs on promotion — many being additionally rewarded with property of the departing Asians. Many other officers and soldiers fled into exile. Amin's strong Muslim beliefs have led him to favour Muslim officers and NCOs. Another confusing feature of the scene is that a certain number of southerners have accepted a conversion to Islam and changed their names; 'anyone can be a Nubian' was a recent remark (an invitation if not a command) of General Amin. How lasting these conversions might be in changed circumstances is far from clear.

However, even selection of key personnel from the President's own area has not secured total obedience. Several attempts to remove, or assassinate, the President have taken place; a purge of Lugbara in 1973 was followed by the dramatic events of March, 1974 when a Christian Kakwa, Brigadier C. Arrube, attempted unsuccessfully to overthrow the President. He was reported to have died shortly afterwards, and further selective killing of officers appears to have followed. Unrest and conspiracies continued to be reported in 1976, with a more serious event occurring in 1977, apparently an attempted coup by a group of air force officers with one army unit.

The humiliation of the Entebbe raid by the Israelis and Amin's threats to Kenya led to further unrest; some 2000–3000 troops were reported to be in a state of mutiny.

World Armies

EQUIPMENT AND ARMS INDUSTRY

Uganda's post-independence contacts have left her with a very mixed range of weaponry; it can be surmised that these are to be replaced by an orthodox range of Soviet/Warsaw Pact equipment as soon as funds may permit. The recently arrived Soviet weapon range includes T-55 tanks, BTR 40 and 152 APCs, BRDM reconnaissance vehicles, 76 mm and 122 mm field guns, 40 mm anti-aircraft guns, 82 mm and 100 mm mortars, Sagger ATGWs and GSP assault pontoon/ferries, with also possibly K61 amphibious load carriers (the latter items being useful in the context of any operations proposed against Tanzania). Older equipment includes elderly M-4 medium tanks and British Ferret scout cars. A much publicised agreement with France for a wide range of equipment did not, it would seem, result in any deliveries. The state of serviceability is not known, but in view of the limited education facilities in the areas from which Uganda's soldiers are in the most part recruited, foreign assistance will be necessary to maintain, and perhaps drive, many of the items. The same can be said for Uganda's air force, which has between 30 and 40 Soviet interceptors, some MiG-15s, 17s and 21s, some transport and training aircraft, and a helicopter squadron. Some ten to twelve of these machines were destroyed by the Israelis in the Entebbe raid, but replacements have subsequently arrived. The pilots have been variously reported as Palestinians, East Germans, and, for training, Russians and Libyans.

Uganda has no arms industry. In addition, she has desperate fuel problems, both of expense and of transport, as it has in fact to cross Kenya.

RANK, DRESS AND DISTINCTIONS

Rank and dress follow the British pattern. Some units have particular names, the 1st Battalion is the 'Burma' battalion, the 3rd is the 'Tiger' and the 4th the 'Simba'. One of the mechanised units is referred to as the 'Malire' battalion.

CURRENT DEVELOPMENTS

A few features of Uganda's army not yet mentioned need to be taken into account. The army's recruitment and promotion policy favouring men from the north and north-west, and supported, it is said, by pressures on other soldiers to espouse Islam, may be creating a situation in which substantial areas of Uganda regard the army as alien to them. The killings of 1971 and 1974 in particular, and gross abuses of power at various times, may further have left resentment. The rapid expansion of the army has never been matched by a supply of properly trained cadres: some of the training to which foreign observers have been invited has in fact been ludicrous. Finally, Uganda's economic situation continues to deteriorate leaving the country even more dependent on foreign help, Arab or Russian, for anything more than the briefest of military campaigns which may be attempted. President Amin's recent change of emphasis from military to economic problems, and a somewhat lower profile in international relations are signs of these conditions. Should more prosperous conditions return, however, either through Uganda's own efforts or massive foreign aid, there is no doubt that Amin's ambitions would once again present a military challenge to Kenya and Tanzania.

L.L. MATHEWS

UNION OF SOVIET SOCIALIST REPUBLICS

HISTORY AND INTRODUCTION

There is considerable truth in V. S. Soloviev's assertion that 'the history of Russia is the history of wars'. During the Middle Ages Russia was a loose collection of warring principalities, and in 1223 Mongol victory at the battle of the Kalka initiated a long period of Mongol rule. It was not until 1480 that Ivan III ceased paying tribute to the Mongols: he also styled himself 'ruler of all Russia', clearly stating the supremacy of his own principality, Moscow.

Ivan III conquered Novgorod in 1478, and Ivan IV brought yet more territory under Moscow's control: the khanates of Kazan and Astrakhan were overwhelmed in 1553 and 1556, respectively and substantial advances were made on the Volga, in the Crimea and in Siberia. The victories of the early tsars were won by armies of a markedly mediaeval character, consisting primarily of forces raised by great nobles, backed by small numbers of professional soldiers, the *streltsy*. An army of this sort had obvious disadvantages, and Peter the Great (1689–1725) set about providing Russia with an army more suitable for an expanding State. He disbanded the *streltsy*, after a bloody mutiny, and founded the Preobrazhensky and Semionovsky regiments, which may be regarded as the first units of the Russian regular army. A primitive form of conscription was introduced, and members of the nobility were obliged to serve as officers. Peter's army inflicted a decisive defeat upon Charles XII of Sweden at Poltava (1709), and the Peace of Nystadt (1721) made Russia a Baltic power. The capital was shifted from Moscow to the new city of St. Petersburg, and the bustling shipyards of the Neva gave Russia a fleet of Western-style warships.

The political turmoils which followed Peter's death did not prevent the continued improvement of the army. Its successes against the Turks brought Russia the lands between the Bug and the Dniester, and a short war with Persia saw the extension of Russian influence into Georgia and Transcaucasia. The most notable military leader of the period was General Alexander Suvorov, whose emphasis upon speed, decisiveness and the maintenance of morale was to make him an attractive figure even after the Revolution of 1917.

The accession of the unstable Paul I in 1796 brought with it the introduction of Prussian-style formalism. Although Paul reigned for only 5 years, the consequences of his military policies were to prove long-lasting. Paul was succeeded by his son Alexander I, whose initial liberalism was reflected as much in his dealings with the army as it was in his strivings for political reform. Alexander had, however, become suspicious and reactionary by the time of his death in 1825, and the army reverted to the parade-ground Prussianism of Paul I. Alexander's brother, Nicholas I, was a confirmed reactionary in all respects, and the army continued to be more concerned with the minutiae of dress and drill than with the need to improve tactics, training and recruitment. Nicholas's internal policy was based upon the three principles of autocracy, orthodoxy and nationalism. His foreign policy was heavily influenced by pan-Slavism, and his pressure upon Turkey led to the Crimean War of 1854–5. This conflict revealed the failings of the autocratic system and the weaknesses of the Russian army: it was a condemnation of a military system based upon long-service conscription and the extinction of individual initiative.

Alexander II was an altogether more sympathetic character than his father Nicholas. Assisted by the capable Nikolai Miliutin he abolished serfdom in 1861 and subsequently introduced limited measures of local self-government. The army was reformed and universal conscription was introduced in 1874. The performance of Alexander's army was impressive. Russia's hold on the Caucasus was consolidated by the mid-1860s, and in central Asia Russian forces advanced to Tashkent, Samarkand and Khiva. Military victories over Turkey in the war of 1877–8, however, brought little material recompense, and the ensuing peace treaty damaged Russia's relations with Germany and Austria-Hungary.

Russian defeat in the Russo-Japanese war of 1904–5 discredited the regime and was followed by a wave of strikes and disturbances. The defeat was not an accurate index of the army's defects: it reflected rather the shortcomings of Russian strategy and the errors of senior commanders. These deficiencies had not been fully remedied when war broke out in 1914, and the disaster incurred by Russian forces at Tannenberg in East Prussia was the result of atrocious generalship and poor staff-work. Tannenberg did serious damage to the Russian army: losses in regular officers and NCOs, and in equipment, were very heavy, and confidence in the High Command was inevitably shaken. The army had better fortune in its struggle against the Austrians. The Brusilov offensive of 1916 inflicted irreparable damage upon the Austro-Hungarian army, but Russian casualties were, for the third year running, appallingly severe. Russia's economy and transport system proved unable to bear the strain of a long war, and serious food shortages contributed to war-weariness. The army's morale had, understandably, deteriorated, but it is significant that the first signs of collapse came not from the fighting units at the front but from replacement depots in Petrograd.

Revolution broke out in March, 1917. A liberal Provisional Government, dominated by middle-class intellectuals, was established following the tsar's abdication. In November this body was itself overthrown by Lenin and the Bolsheviks, who proclaimed a Federated Socialist Republic and in March, 1918 brought Russia out of the war with the treaty of

World Armies

Brest-Litovsk. The military logic behind the conclusion of peace was sound enough. The events of 1917 had inevitably worsened the already unsatisfactory state of the army. The Provisional Government had abolished military discipline and instituted soldiers' committees. Desertion was rife: over 2,000,000 men had left the colours by September, 1917. The Bolsheviks were faced with the urgent need to create an army both strong and reliable enough to defend them from their foreign enemies and internal opponents. They initially employed enthusiastic Communist Red Guards and sailors from the Baltic Fleet, but a decree of January 28th, 1918 brought the Red Army of Workers and Peasants into existence. Compulsory military service was reintroduced in April and conscription recommended in June. Many former imperial officers and NCOs were called up: some, like the future marshals Tukhachevski, Shaposhnikov and Egorov, rejoined the army voluntarily.

Essential though the employment of ex-officers was, it gave rise to problems of political reliability. The loyalty of these ex-officers, or 'military specialists', as they were known, was ensured by the attachment of a political commissar to every unit. The commissar system, which has survived, in a modified form, to the present day, was not without its disadvantages. All orders had to be signed by both commander and commissar, and it was not uncommon for there to be serious friction between the two individuals. The fighting against foreign interventionists and White forces dragged on until 1922. By this time the Red Army had developed considerably. It numbered over 5,000,000 men, organised conventionally in brigades and divisions. Discipline had to some extent been restored, but the system of dual command persisted and the concept of personal military rank was shunned. Two rival groups had crystallised within the army during the Civil War. One, the 'Red Cavalry' faction, included the future marshals Budenny, Voroshilov and Timoshenko: it enjoyed the influential support of Josef Stalin. The other faction was centred upon Leon Trotsky, Commissar for War and perhaps the single most important architect of victory in the fighting of 1918-22. Trotsky had opposed the Red Army's disastrous advance on Warsaw in the summer of 1920. He agreed with the military specialists that certain universal principles, as relevant to Soviet Russia as they were to the capitalist West, underlie military science. His rival, M. V. Frunze, claimed, on the other hand, that a Communist State should develop its own military ideology.

Trotsky was unseated in 1925 and replaced as War Commissar by Frunze. The latter died after only 5 months in office, but his reforms were of the greatest importance. The Red Army Staff was streamlined into the General Staff, and the country was divided into two armies, stationed in areas where fighting was still going on, and a number of military districts. The army, navy and air force were reorganised, and the power of the commissars was reduced. Tentative advances were also made towards the reintroduction of drill and smartness, but the egalitarian nature of military service was still stressed and commanders enjoyed no personal privileges.

K. E. Voroshilov became Commissar of the Army and Navy in December, 1925. Despite Frunze's reforms, the condition of the army left much to be desired: there was a serious shortage of modern equipment, and the position of the commander was far from satisfactory. Military collaboration between Germany and the Soviet Union had commenced in 1921, and by 1928 this co-operation was at an advanced stage. It ceased in 1933, but by this time the foundations of a native Russian armaments industry had been laid. Western Siberia and the Urals were opened up to industry, and new industrial centres were established in European Russia. M. N. Tukhachevski, appointed Inspector of Armaments in 1931, was largely responsible for developing the tactical and strategic doctrine which, linked with the growing capacity of the Russian armaments industry, resulted in the mechanisation programme. Tukhachevski shared Frunze's belief that any attack upon the Soviet Union should be met with a massive counter-offensive, the aim of which should be rapid and decisive Soviet victory. He recognised the vast potential of armoured vehicles, and was well aware of the importance of inter-arm co-operation.

The first mechanised brigade was created in 1930, and several mechanised corps were set up 2 years later. In 1933 Tukhachevski's ideas were tried out in a series of major exercises in which mechanised units trained with parachutists, cavalry, infantry and artillery for a battle of breakthrough and encirclement. This period also witnessed the reorganisation of the central administration, whose existing bodies were replaced by the People's Commissariat of Defence, controlled by a Defence Commissar assisted by eleven deputies. The gradual increase in the proportion of commanders of proletarian origin made possible the improvement of their status. The commissars were reduced in importance in March, 1934 and personal ranks for some military commanders were reintroduced the following year. Five leading officers, including Voroshilov and Tukhachevski, were appointed to the new rank of Marshal of the Soviet Union. Steps were taken to improve officer education: a general staff academy was opened in 1936, and other military academies were improved and enlarged.

By 1936 the Red Army contained nearly 1,500,000 men, equipped with an impressive array of modern weapons. Its tactical doctrine was remarkably advanced, and many of its senior commanders were men of great ability. There were, however, numerous imperfections: officer and NCO training was still uneven, mechanisation was far from complete, and there was a substantial gap between tactical concepts and the real standard of training. Nor was the Red Army without a dangerous rival. The Peoples' Commissariat of Internal Affairs (NKVD) controlled not only the police, frontier guards and security troops, but also had its own well-equipped army of 150,000 men. There had been friction between the Red Army and the NKVD for some time, and the latter's activities in Spain during the Civil War served only to worsen army-NKVD relations. Purges within the Communist Party were by no means a new phenomenon, but that which commenced in the summer of 1936 was to have serious effects upon the army. The NKVD was more than ready to assist Stalin in his attempts to eliminate any possible political rivals, particularly when the latter were to be found within the army.

Several senior officers were arrested in May and June, 1937 and in the following month eight leading officers, including Tukhachevski himself, were arrested, tried for treason, and shot. During the next year up to 35,000 officers were executed, imprisoned or dismissed. They included three out of five Marshals of the Soviet Union, 13 out of 15 army commanders and all 11 Deputy Commissars of Defence. The purges had a cataclysmic effect upon morale: fear of denunciation dominated the lives of commanders and commissars at all levels. Officers of ability and experience were sacrificed, and the army was deprived of the men who had planned the mechanisation programme and correctly foreseen the pattern of future war. Yet even at the height of the purges the Red Army gave proof of its mettle. In the summer of 1938 Marshal V.K. Blukher, soon to fall victim to the NKVD, defeated the Japanese around Lake Khasan, south-west of Vladivostok, and a year later the Japanese were again vanquished, this time by G.K. Zhukov, at Khalkin Gol on the Mongolian-Manchurian border.

The Ribbentrop-Molotov pact of August, 1939 paved the way for Russian occupation of eastern Poland the following month. The pact also placed the Baltic States within the Soviet sphere of influence, but although Latvia, Lithuania and Estonia gave Russia the required concessions, Finland proved obdurate. In late November the Red Army mounted an offensive against the Finns. The campaign initially went very badly for the Russians, and it was not until March, 1940 that Finland was at last forced to give up the unequal struggle.

The Russo-Finnish war revealed numerous shortcomings within the Red Army, and S.K. Timoshenko, who replaced Voroshilov as Defence Commissar, took steps to remedy these defects. The ranks of general and admiral were reintroduced in June, 1940 and in August the commissars, restored to eminence during the purges, were once more reduced in authority. A new code of military discipline came into force in October, and a personnel reshuffle took place within the Defence Commissariat and in the military districts. It was decided to form new mechanised corps, and Timoshenko himself kept a close watch upon the progress of training.

Timoshenko's reforms were only partially successful. They were impeded by equipment shortages, bickering amongst senior officers and a general air of false security. When the Germans launched their invasion of Russia, early on the morning of June 22nd, 1941 they caught the Red Army in the midst of reorganisation and redeployment. Frontier defences were incomplete, and the Soviet forces stationed behind them were too weak to prevent the Germans from breaking through yet strong enough in armour and manpower for their destruction to have grave results. On June 23rd the *Stavka* (Supreme High Command) of the Armed Forces was set up, and Stalin took over from Timoshenko as its chairman early the next month. He also assumed the post of Commissar for Defence, and, in addition, presided over the State Defence Committee. Stalin was unable to check the German advance. Indeed, his insistence on holding ground at all costs often proved counter-productive, and the Red Army lost heavily in a series of battles of encirclement. German advanced units got to within a dozen miles of Moscow, but a counter-attack launched by Zhukov in early December thrust them back from the capital. Leningrad also held out, albeit at frightful cost to the civilian population.

In 1942 the Germans planned a major offensive with the oilfields around Baku as its prime strategic goal. The plan also called for the establishment of a defensive bulwark along part of the Volga, and the German 6th Army, charged with the task of seizing the industrial centre of Stalingrad and holding part of the Volga line, proved unable to capture the city and was itself enveloped by a Russian counter-offensive. The 6th Army held out until the end of January, 1943. Its collapse, the most serious reverse yet incurred by the *Wehrmacht*, gave a powerful boost to Soviet morale. The failure of German attempts to 'pinch out' the Kursk salient in the summer of 1943 was probably the turning-point in the war in the East: the battle saw the destruction of the last German armoured reserve. And, although Russian losses were also heavy, Soviet industry was by now producing 2000 armoured vehicles and 9000 aircraft each month, and the Kursk losses were soon rectified.

The initiative passed to the Red Army following its repulse of the Kursk offensive. Kharkov was recaptured on August 23rd, Smolensk fell in late September and Kiev in early November. The Russian summer offensive of 1944 brought about the destruction of the German Army Group Centre and the recapture of Minsk and Vilna. Before the year was out Russian troops had occupied Rumania, Finland and much of Hungary, and their advance continued in 1945. The final offensive began on April 16th. Russian soldiers entered the suburbs of Berlin on April 21st, and the city at last fell on May 2nd.

The war with Germany ended a fortnight later, but the Red Army's operations were by no means over. Russia declared war on Japan on August 8th, and on the next day three Soviet fronts (army groups) swept into Japanese-held Manchuria. The ensuing campaign was remarkable for the speed with which Russian armour advanced, the use of airborne troops to seize objectives ahead of the advancing divisions, and widespread reliance upon air supply. The offensive was dramatically successful: over 600,000 prisoners were taken, and the powerful Japanese Kwantung army simply ceased to exist. The lessons of the campaign were not lost on Soviet military theorists, and many of its ingredients were to become accepted as elements of standard military doctrine.

At the end of World War II the Red Army comprised some 500 divisions deployed from central Germany to Korea. It was, as Malcolm Mackintosh noted, 'the largest land army the world had ever seen'. Although reduced to about 175 divisions by the end of 1947 the Soviet army retained over 1,000,000 men in Eastern Europe. The reasons for this were two-fold. Firstly, Russia was, at the time, unable to counter American nuclear power, and so planned to deter the USA by threatening a massive conventional invasion of Europe. Secondly, Soviet troops helped suppress anti-communist movements and thereby ensured the survival of local communist regimes.

In March, 1946 Stalin relinquished the post of Commissar for Defence. The Defence Commissariat was renamed the Ministry of Defence, and Marshal N.A. Bulganin, a political officer, became Minister. The titles 'Red Army' and 'Red

World Armies

Navy' disappeared, to be replaced by those of 'Soviet Army' and 'Soviet Navy'. There were some changes within the high command: Marshal A.M. Vasilevski took over the senior post of Chief of Staff of the Soviet Army and Navy, and Zhukov was confirmed as Commander-in-Chief of Ground Forces. Zhukov retained this post for only a few months: in July, 1946 he was sent to command the Odessa Military District. His fall from grace was a clear warning to all other senior officers, and it was not until Stalin's death in 1953 that the army escaped from the straitjacket imposed upon it by Stalin and the NKVD.

The high command established by the Collective Leadership, which took over following Stalin's death, bore a marked resemblance to that of 1946. Bulganin took over the Ministry of Defence, which had split into War and Navy Ministries from 1947 to 1953, with Vasilevski and Zhukov as his deputies. An abortive plot, centred upon the unattractive person of Lavrenti Beria, resulted in Beria's execution in December, 1953 and in the appointment of an army general to command the NKVD forces.

The death of Stalin, together with the explosion in August, 1953 of the first Soviet hydrogen bomb, gave new impetus to strategic debate. Theorists were not slow to point out that the old concept of linear frontier defence followed by a massive counter-attack was of limited value in the nuclear age. Premier G.M. Malenkov believed that the possession of nuclear weapons by both Russia and the USA would simply produce mutual deterrence: local conventional war was, he believed, infinitely more likely than full-scale global conflict. Malenkov's replacement by Bulganin in 1955 was accompanied by the elevation of Zhukov to the Ministry of Defence. The new leadership accepted the possibility of nuclear war, and took steps to improve air defence in order to blunt any strike by American bombers. The Air-Defence Command (PVO-Strany) became independent, being given the same status as the Ground Forces, air force and navy.

N.S. Khrushchev, who had served as a senior political officer on the Stalingrad front, assumed the key post of First Party Secretary in 1953 and retained it on Malenkov's fall 2 years later. He was to dominate Russian politics until his eventual replacement in October, 1964. The Khrushchev period witnessed the advancement of many senior officers of the so-called Stalingrad group, who had served with Khrushchev during the war. Marshal R.Ya. Malinovski became Commander-in-Chief of Ground Forces in 1956, and a number of Stalingrad officers obtained seats on the Party Central Committee at the Twentieth Party Congress. Zhukov was appointed a candidate member of the party's Presidium, an unprecedented honour for a professional soldier. He also initiated measures which were to have lasting importance. The corps was abolished as an intermediate command level between division and army. Plans were made to abolish mechanised divisions and armies and to replace rifle divisions with motor rifle divisions. There would eventually be two basic types of division — tank and motor rifle — and these would be grouped into tank and combined-arms armies.

It is scarcely surprising that there was friction between Zhukov and Khrushchev, particularly after the former, appointed a full member of the Presidium, felt entitled to expound upon non-military topics. He also came into conflict with the Political Directorate when he attempted to reduce the power of political officers and the time spent in political training. Zhukov was dismissed in October, 1957. He was replaced as Minister of Defence by Malinovski, and Marshal A.A. Grechko took over as Commander-in-Chief of Ground Forces.

Not all Zhukov's policies shared the fate of their author. The motorisation of rifle divisions began in 1958, tank armies began to replace the more cumbersome mechanised armies, and manpower was reduced towards a target figure of 140 divisions. Khrushchev's strategic doctrine, which emphasised the importance of nuclear rather than conventional weapons, led to the creation in 1960 of the Strategic Rocket Forces as the senior branch of the armed services. The Ground Forces ceased to be an independent command 4 years later, and were placed under the direct administration of the Ministry of Defence. They regained their former status in 1967, as part of a general trend towards the improvement of Russian conventional capabilities. The post-Khrushchev era also saw the reshaping of the officer corps. Many older officers died or were retired, and steps were taken to reorganise a command structure somewhat disorganised by the 'restructuring' carried out by Khrushchev.

The military service law of October 12th, 1967 which reduced the length of conscript service, lowered call-up age and revised retirement age-limits for all ranks, was a significant landmark in the Soviet army's development. It was probably inspired as much by internal motives — such as the army's need to compete for trained manpower with civilian industry — as by external threats posed by NATO or the USA. Although not all the law's provisions have proved totally successful, the measure has contributed to the excellent 'mixed' capability which has distinguished the Soviet armed forces in the post-Khrushchev period. The continuing development of the Strategic Rocket Forces has effectively closed the 'missile gap' of the 1960s. The Ground Forces retain an impressive ability to fight either a nuclear or a conventional war, and the substantial increase of Soviet naval strength has further broadened the Soviet Union's military capabilities.

STRENGTH AND BUDGET

Strength

Population: 261,310,000

Strategic Rocket Forces: 375,000

Ground Forces: 1,825,000

Air-Defence Forces (PVO-Strany): 550,000

Navy, including Naval Air Force, Naval Infantry, Coast Artillery and Rocket Troops: 433,000; 243 major warships, 243 submarines, about 1200 smaller vessels

Air Force: 455,000; 4650 combat aircraft

Paramilitary: (a) KGB border guards, 200,000; (b) MVD security troops, 250,000; (c) civilian military training organisation (DOSAAF), 80,000,000 (claimed)

Defence Budget

There is some doubt as to what is included in the official defence budget. Such things as nuclear warheads, frontier guards and certain research and development programmes, are excluded. Even if allowance is made for these items, the total rouble cost of the budget does not reflect the real charge of defence expenditure to the national budget. It is also difficult to arrive at a dollar equivalent of this total rouble cost, for the official exchange rate does not accurately relate the purchasing power of rouble and dollar.

The 1975 budget, including an allowance for items excluded from the official figures, was 26,200,000,000 roubles, or \$36,400,000,000 at the official rate. A better comparison of Soviet and the USA's defence expenditures can be made by converting the rouble cost of the former to dollars using a rate designed to relate the purchasing power of the rouble in Russia to that of the dollar in the USA. This method would give a total defence budget of \$103,800,000,000 for 1975.

COMMAND AND CONSTITUTIONAL STATUS

Command

It is difficult and dangerous to draw precise conclusions about an organisation which, like the Soviet High Command, is both complex and secretive. Much remains unclear, and there is often a significant divergence between constitutional theory and military reality.

The Supreme Command

The Soviet Union is a federated State of 15 republics. Supreme authority is vested in the Supreme Soviet, a large elective body which meets for only a few weeks each year. Article 108 of the Constitution declares that the Supreme Soviet is the 'highest body of State authority'. Since the Supreme Soviet is somewhat unwieldy in size and is rarely in session, its smaller Presidium, elected by members of the Supreme Soviet, carries out many of the latter's functions. The Presidium is specifically charged with the appointment and removal of commanders of the armed forces, the proclamation of war during the recess of the Supreme Soviet, the declaration of general or partial mobilisation and the imposition of martial law. The Council of Ministers is responsible to the Presidium and the Supreme Soviet, and also co-ordinates and directs the work of individual ministries.

In practical terms, however, real power is exercised by the Party's Secretariat and Politburo. There are some grounds for supposing that the Party's First Secretary is *de facto* Commander in Chief of the Armed Forces (and in May, 1976 First Secretary Brezhnev assumed the rank of Marshal of the Soviet Union). At the 22nd Party Congress in 1961 Marshal Malinovski referred to Khrushchev as 'Supreme Commander' of the Forces, and Marshal V.D. Sokolovski makes the same implication in his book *Military Strategy*. Be this as it may, there seems little chance of Leonid Brezhnev actually wielding the sort of power in military matters employed by Khrushchev, still less that enjoyed by Stalin. It is interesting to note that the then Minister of Defence, Marshal A.A. Grechko, was co-opted onto the Politburo in 1973 at the time of the SALT and MBFR discussions; this is no doubt an accurate pointer to the real source of top-level military decisions.

It is difficult to say with certainty what form the High Command would take in the event of war. It is, though, more than likely that a *Stavka* would be set up, transmitting its orders to the commanders of the various theatres of military operations.

The Ministry of Defence

The Minister of Defence has, since the creation of a unified ministry, always been a serving officer. The present Minister, Marshal Dimitri Ustinov, who succeeded Marshal Grechko in April, 1976, is not a career officer. He was a party civilian with wide experience in the arms industry, who made the transition from honorary to executive military rank on his appointment as Minister. The Minister is assisted by a Military Council, which normally includes the Commanders-in-Chief of the five Operational Branches, the Head of the Political Directorate, the Chief of the General Staff of the Armed Forces and the Head of the Chief Inspectorate.

The Chief of the General Staff of the Armed Forces is assisted by a number of Deputy Chiefs. The General Staff of the Armed Forces services six directorates, dealing with Operations, Intelligence, Topographical Service, Signals, Organisa-

World Armies

tion and Mobilisation, and a Historical Section. It also provides the bulk of the staff officers employed in the Warsaw Pact Joint High Command. The Ministry includes, in addition, a number of other directorates with responsibilities for Personnel, Rear Services, Equipment and Military Justice. There is also a Chief Inspectorate and a Chief Political Directorate.

The Chief Political Directorate (GLAVPUR)

This body is at one and the same time a department of the Party's Central Committee and a directorate within the Ministry of Defence. It is headed by a Party official invested with military rank in order to take the appointment. His deputies are themselves, in the main, the senior political officers of the various Operational Branches. The Chief Political Directorate is responsible for the political reliability of the armed forces in both peace and war. Although direct responsibility for morale, discipline and political education lies with commanders at all levels, they are aided by GLAVPUR personnel. All commanders, from those of the Operational Branches to Community Commanders, have a Deputy Commander for Political Affairs (ZAMPOLIT) whose rank depends largely upon the level of command to which he is attached. The Political Administration of the Ground Forces is headed by a colonel-general, while a community would be likely to have a lieutenant as its ZAMPOLIT.

The Committee of State Security (KGB)

Russia has traditionally maintained a large and powerful secret police and security force, known from time to time as the Ochrana, Cheka, OGPU, NKVD and now as the KGB. The latter is the senior police organisation within the Soviet Union, and has its own well-equipped military forces which are quite independent of the Ministry of Defence. A special branch of the KGB deals with the security and political reliability of the army.

The Operational Branches

There are five main Operational Branches of the Soviet armed forces, each with its own commander-in-chief, deputy commanders (including, of course, a deputy commander for political affairs), and staff. The Strategic Rocket Forces are the senior branch. The details of their command structure are unknown, but it seems probable that there are at least two subordinate headquarters, one controlling MRBMs and IRBMs, and the other ICBMs. The Long-Range Air Force also comes under the command of the Strategic Rocket Forces, and it is likely that submarines armed with SLBMs are also subject to their operational control.

The Ground Forces are deployed in Groups of Forces in Eastern Europe and Military Districts within the Soviet Union. There are four Groups of Forces, of which the largest is Army General E.F. Ivanovskii's Group of Soviet Forces Germany (GSFG) with its headquarters at Zossen-Wunsdorf, near Berlin. The Northern Group of Forces is commanded from Legnica in Poland, the Central Group from Milovice, near Prague, and the Southern Group from Budapest. There are 16 Military Districts within the Soviet Union, each commanded by a Ground Forces officer with the title Commander of Troops. He is assisted by a Military Council, containing a Chief of Staff and a number of Deputy Commanders, and commands all forces within the Military District. This Military Council will also include the local Party Secretary.

The navy is commanded by Admiral of the Fleet of the Soviet Union S.G. Gorshkov, who has held the post since 1956. There are four major fleet commands — Northern, Baltic, Black Sea and Pacific — and a number of smaller flotillas. The navy controls its own Naval Air Force, which is largely land-based. It also possesses Coast Artillery and Rocket Troops, employed in the defence of ports and their approaches, and has a body of 12,000 Naval Infantry, carrying out the traditional tasks of marines, organised in regiments attached to fleets.

The Air-Defence Command (PVO-Strany) has four subordinate branches dealing with early warning systems, fighter aircraft, SAMs and ABMs. The Soviet Union is divided into a number of Air-Defence Districts, whose commanders are responsible for the co-ordination of the various means of air defence.

The air force is the most junior operational branch. It is in no sense an independent arm, for each of its branches is controlled by another operational branch.

The Warsaw Pact

The Pact was signed in Warsaw on May 14th, 1955 by the governments of the Soviet Union, Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland and Rumania. Albania, however, withdrew from the Pact in 1968. Article 4 of the Pact binds members to mutual defence in the case of armed aggression against any member, and Article 5 sets out the organisation of the Pact's Joint Command. The Pact has a Political Consultative Committee, a Joint Secretariat, a Permanent Commission and a Council of Foreign Ministers. Its highest military body is the Council of Defence Ministers, consisting of the Ministers of Defence of all the member States, assisted by a Military Council. The Joint High Command has its headquarters at Moscow and a forward headquarters at L'vov in the Ukraine, and is headed by a Soviet marshal with a Soviet general as his First Deputy Commander. The other Deputy Commanders are Ministers of Defence of

the member States. The Pact's Joint Staff is composed mainly of Soviet officers under the leadership of the Russian First Deputy Commander. The four Soviet groups of forces in Eastern Europe seem to be permanently assigned to the Pact, and forces stationed in the Baltic, Carpathian and Byelorussian Military Districts might well be allotted to the Pact in the event of war. In practical terms, though, the Pact is Soviet controlled. The forces of the member States would become operationally subordinate to the Soviet High Command in wartime, and even in peacetime the air defence of the Pact is controlled from Moscow by the Commander-in-Chief of the Soviet Air-Defence Command.

Constitutional Status

The Constitution of 1977, as amended to date, contains 174 articles in 9 chapters. It clearly asserts the obligation of all citizens to serve in the armed forces: Article 63 declares that 'military service is an honourable duty', and Article 62 states that 'defence of the Socialist Motherland is the sacred duty of every citizen'. This general obligation is, of course, more precisely defined in current military service legislation.

Individual Union Republics are permitted to enter into diplomatic relations with foreign powers. Issues of war and peace, and direction of the Armed Forces, are retained in the hands of the central government. The constitution lays down no limitations upon the use of military power or the employment of the armed forces. It does, though, guarantee the right of every citizen serving with the armed forces to vote and to seek elective office.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitment

The role of the Soviet armed forces may broadly be termed as four-fold. Defence of the territory of the USSR is, naturally of prime importance. In this context Russian history has a considerable psychological impact: Russia has been invaded at least four times over the past 75 years, and the German invasion of 1941 has left an enduring scar. Secondly, the armed forces are intended to deter attack, particularly nuclear attack, but they are also designed to win any war that might result if deterrence fails. The USSR has a clear commitment to maintain communist rule in certain of the countries of Eastern Europe: the invasions of Hungary and Czechoslovakia demonstrate how seriously this duty is taken. Finally, the armed forces are expected to support Russian political manoeuvres throughout the world. This support may take various forms, ranging from the supply of weapons to communist movements or nations, to the commitment of Soviet Ground or Air Forces to the defence of friendly States.

Soviet military doctrine is essentially concerned with what it terms 'nuclear rocket war', although it recognises the possibility that other types of conflict could arise. The balance between the nuclear and conventional elements of Soviet military thinking has shifted substantially within the past decade or so. Khrushchev emphasised 'minimum deterrence'; he hoped to deter the USA from launching an attack on the Soviet Union by threatening a Soviet counter-strike and, providing that this remained credible, he was content to accept a measure of United States nuclear superiority. Believing that deterrence made war between the superpowers unlikely, he was prepared to reduce Soviet conventional capabilities — hence his downgrading of Ground Forces. The Soviet Union has pursued a 'mixed' capability since the fall of Khrushchev. It has attained nuclear superiority over the USA: this has the dual effect of strengthening the deterrent value of its nuclear weapons while at the same time improving its ability actually to win a nuclear war should deterrence fail.

In February, 1963 over 18 months before the fall of Khrushchev, an article in *Red Star* announced that the Party had reached the conclusion that:

'the armed forces and the country as a whole must prepare for a war in which nuclear weapons will be widely used; which will represent a decisive, classic collision of two opposed world social systems, and which will be distinguished by unprecedented violence, dynamic force and high manoeuvrability of combat operations.'

Marshal Sokolovski took the argument a stage further, arguing that:

'Military strategy under the conditions of modern war becomes the strategy of deep nuclear rocket strikes in conjunction with the operations of all services of the armed forces in order to effect a simultaneous defeat and destruction of the economic potential and armed forces throughout enemy territory, thus accomplishing the war aims within a short time period.'

Sokolovski was at great pains to point out that, even in the nuclear age, military strategy was dependent upon politics: he noted, however, that statesmen could not violate or ignore the laws of military strategy with impunity.

Sokolovski, in common with other Soviet military authors, stresses the essentially defensive purposes of Soviet military power, but warns that the USA is pursuing a goal of world domination, and fears that war may eventually be unleashed by the aggressive activities of 'imperialistic madmen'. A massive Soviet counter-offensive would follow this aggression.

World Armies

Moreover, since the aggression itself would almost certainly involve the use of nuclear and chemical weapons, the Soviet response would itself employ such devices. This logic, curious though it may seem, is used to justify the great emphasis which the Soviet armed forces place upon offensive operations. There are, perhaps, more credible reasons for this preoccupation. The Soviet Union has vast tracts of thinly populated territory and long land borders and, as history so amply demonstrates, are vulnerable to invasion. Any form of linear frontier defence, even if militarily viable in the nuclear age, would be totally impossible because of the large amount of troops it would require. A mobile defensive war, fought within the boundaries of the Soviet Union, is clearly unacceptable: an offensive war, albeit fought in defence of Soviet interests, is therefore an eminently practical solution.

Soviet military doctrine stresses the primacy of offensive action. In his book *The Offensive*, Colonel A.A. Sidorenko emphasises that 'only the offensive leads to the attainment of victory over the enemy'. Defensive tactics are acceptable only on a temporary basis or in areas of secondary importance. Both Sidorenko and Sokolovskii emphasise that offensive operations are 'the main type of combat action for troops' and 'the basic means for solving the problems of armed conflict in land theatres'. There are three vital ingredients in the Soviet offensive. The initial nuclear strike would have enemy nuclear delivery means, other targets in the deep rear and forward formations as its target. Airborne assaults would be used in conjunction with this strike to carry out acts of sabotage and destruction, to seize objectives of tactical significance, such as river crossings, or simply to 'leap-frog' ahead of the advancing troops. Tank and motor rifle formations would press forward along selected main axes of attack, exploiting breaches produced by the initial nuclear strike, and pushing on into the deep rear. Enemy reserves would, where possible, be attacked straight from the line of march, and the impetus of the attack would be sustained in order to prevent the successful occupation of defensive positions in depth.

Although Soviet theorists believe that nuclear weapons would almost inevitably be used in 'main sectors' in the event of a major war, they nevertheless point out the dangers of training exclusively for a short, fluid nuclear conflict. In the autumn of 1967 the Ground Forces, newly re-established as an independent operational branch, carried out the large-scale non-nuclear exercise *DNEPR*. This seems to have involved a brief attack by the 'enemy' force, rapidly followed by a massive counter-offensive, unrolling across an area roughly the size and shape of Western Europe. The exercise included the assault crossing of a major river obstacle, the Dnieper. This was conducted, in Sidorenko's words, 'simultaneously, in the entire zone of attack, across a front of tens of kilometres'. Helicopter assaults by motor rifle troops were used to seize vital ground on the enemy bank, and the whole attack was launched with the minimum of delay with assaulting formations crossing the river in the same formation in which they had advanced to the obstacle. The Russians continue to place great emphasis upon river crossing: it should be noted that the dramatically successful Egyptian crossing of the Suez Canal in October, 1973 was accomplished with the aid of large quantities of Soviet bridging and ferry equipment. Exercise *DVINA*, which took place in 1970, had both nuclear and conventional phases: it too involved the crossing of water obstacles.

In the event of major war the Soviet High Command would divide the world into a number of theatres of military operations, each under its own commander. A land theatre, say the Western European Theatre, would contain a number of Fronts, each equivalent to a Western Army Group, and probably named after the area in which they were to operate — First Western European Front, Second Western European Front, and so on. Each front would contain four or five tank and combined-arms armies, a tactical air army, and various supporting units.

The front's advance would be preceded by a large-scale strike, probably employing conventional, chemical and nuclear weapons. This would be planned by front headquarters, and would be likely to take about 4 hours to fire. Enemy nuclear delivery means would be the prime target, but headquarters, airfields and defensive positions would all be struck if located. Soviet nuclear weapons would mainly be fused to give a low air-burst, although ground bursts might be used against certain targets. The attack of the front's tank and combined-arms armies would be concentrated upon a number of 'axes of major effort', although the front commander would retain uncommitted formations and use them to reinforce any particular axis or exploit an enemy weakness. Secondary or holding attacks might be made in other sectors of the front's area with the aim of pinning the defender to his position and thereby enabling formations engaged on axes of major effort to encircle him or operate against his flanks and rear. The initial strike could also be exploited by airborne troops: during exercise *DVINA* an entire airborne division was dropped in a single wave.

A front might well advance with three of its five armies in the first line. Each of these armies would probably have an attack frontage of about 50km. An assaulting army's configuration would be much the same as that of a front: a five-division tank army could well lead with three divisions. The frontage over which these attacking divisions would operate would vary, but a division committed along an axis of major effort could assault on a frontage of as little as 5km. The army's remaining divisions could be used to reinforce or exploit, as occasion offered. A possible grouping for the three leading divisions of an army would be for two divisions, moving down an axis of major effort, to advance side-by-side with a combined frontage of up to 25km, while the other leading division would make a secondary attack, on a similar frontage, in another part of the army's sector. No effort would be made to maintain an unbroken front: the space between divisions would be covered only by reconnaissance units and flank security patrols.

Although Soviet military doctrine stresses the need for concentration of force, Russian theorists are not blind to the dangers of concentration on the nuclear battlefield. Considerable attention is therefore paid to the maintenance of depth in the assault. An attacking division could be concentrated along a narrow sector of front, but the distance from its leading reconnaissance elements to the last of its combatant units could be as much as 100km. Its advance would be made in two echelons, preceded by a strong reconnaissance detachment. The main weight of the division would be found in the first

echelon: second-echelon units could be used to reinforce or replace the first echelon or to reduce centres of enemy resistance by-passed by the leading units.

In August, 1945 the Transbaikal Front advanced up to 800km in 10 days, and the 6th Guards Tank Army actually managed to average 100km/day. These impressive rates of advance were, admittedly, carried out over terrain which was well-suited to the use of armour, but they nonetheless showed that such swift operations were possible. It was not until the early years of this decade that the Soviet High Command recognised that similar rates of advance would be unattainable in future war in Western Europe. Nevertheless, basic Soviet tactical techniques, like the attack 'from the line of march' and the 'meeting engagement' are high-speed manoeuvres designed to ensure that the advance continues with the minimum loss of time. It is only if a Soviet formation were to be faced with an intact position held in strength that it would embark upon a set-piece attack with full preparatory fire. It seems likely that the Russians now plan to average about 50km/day for an operation lasting rather less than 2 weeks. This rate of advance would, of course, not be constant: the advance to contact and pursuit phases of the operation would obviously be swifter than the battle for the main defensive zone, and the average rate of advance would itself decrease if nuclear weapons were not employed.

Possession of a well-ordered body of military doctrine which stresses the primacy of offensive action and deals in considerable detail with the conduct of the land battle has notable advantages for the Soviet armed forces. Planning, training and weapons procurement policies all reflect the prevailing doctrine, and the Ground Forces have developed an excellent capacity for waging the sort of war envisaged by Soviet theorists. Soviet equipment, although often less sophisticated than that used by Western powers, is usually simple and robust. The Ground Forces have a good river-crossing capability, and are well equipped for the delivery of, and defence against, chemical weapons. The aircraft of the tactical air armies would be likely to gain air superiority over their NATO opponents, thereby severely restricting NATO movement by day. Conversely, Soviet air-defence weapons are formidable in the extreme: major units and formations have large quantities of well-tried anti-aircraft weapons available. The impressive offensive capabilities of the Soviet Ground Forces have not been achieved without sacrifices, and it is not uncommon for Western observers to point out that Soviet tactical doctrine is unsubtle and to note the numerous restrictions imposed upon the initiative of junior and middle-rank commanders. These objections may indeed be justified, but they in no way invalidate the basic premise that wars are won by offensive action, and it is offensive action for which the Ground Forces are ideally suited.

If the operational role of the Ground Forces is reasonably clear cut, the same cannot be said of that of the navy. The current line of development of Soviet naval doctrine may be traced to the replacement of Admiral N.G. Kuznetsov by Admiral S.G. Gorshkov in 1955. Kuznetsov had clashed with Khrushchev over the composition of the navy: the former advocated the continued construction of cruisers, while the latter maintained that large naval units were of little value in the nuclear age. The fall of Kuznetsov was followed by the termination of the cruiser programme: naval research, development and construction were then concentrated upon submarines and guided-missile vessels. A substantial construction programme went on throughout the late 1960s and early 1970s: the Soviet navy now contains over 230 major surface combat vessels and 265 submarines. In terms of surface ships, submarines and naval aircraft Russia now has a superiority of something like 2:1 over her potential opponents in NATO.

Several roles are allotted to the Soviet navy. In a major war, nuclear submarines with SLBMs would be used to guarantee Russia's second strike capability, while Soviet anti-submarine units would endeavour to destroy enemy submarines whose SLBMs might be used against the Soviet Union. In a less clearly defined conflict Soviet naval power could be used against Western merchant ships: seaborne supplies to Western Europe could be seriously disrupted, if not entirely cut off, by Russian naval action. The Soviet navy also has numerous peacetime tasks. It carries out the traditional naval function of 'showing the flag', and is particularly useful for demonstrating to non-aligned countries the advances of Soviet technology. Visits to foreign ports can have more concrete purposes than mere propaganda: practical military aid is given to client States and satellites. Naval power can be used, in areas like the Mediterranean, to improve Soviet security and at the same time to diversify threats to the West.

Deployment

The Strategic Rocket Forces

Soviet ICBM complexes stretch in a broad band across the Soviet Union, more or less parallel with the Trans-Siberian railway. MRBM and IRBM sites are located mainly near Russia's western borders, although some are positioned in frontier districts in the Far East and south-west.

The Ground Forces

These are deployed in the four groups of forces in Eastern Europe and the 16 military districts of the Soviet Union. There are three categories of Soviet division. Formations of Category 1 are at least 75% manned and 100% equipped, those of Category 2 are between 60 and 75% manned and fully equipped, although not necessarily with the latest equipment, while the divisions of Category 3 are up to 50% manned and are short of some equipment.

The Group of Soviet Forces Germany contains 20 Category 1 divisions, ten of them tank and ten motor rifle. They form

World Armies

five armies: 1st Guards Tank Army (HQ Dresden), 2nd Guards Tank Army, 8th and 20th Guards Armies (HQs Neustrelitz, Erfurt and Bernau) and 3rd Shock Army (HQ Magdeburg). The 16th Tactical Air Army is under the Group's command. The Northern Group (Poland) has only two tank divisions, the Central Group (Czechoslovakia) comprises two tank and three motor rifle divisions and the Southern Group (Hungary) has two tank and two motor rifle divisions. All these formations, like their counterparts in GSFG, are Category 1.

The bulk of forces within the Soviet Union are to be found in European Russia. Twenty-two tank divisions, 36 motor rifle divisions and five airborne divisions are stationed in the Moscow, Leningrad, Kiev, Odessa, Byelorussian, Baltic and Carpathian Military Districts. All the airborne divisions are Category 1, and the tank and motor rifle formations fall more or less evenly into all three categories. The North Caucasian and Transcaucasian Military Districts contain one Category 1 airborne division together with three tank and 19 motor rifle divisions, half of them Category 2 and the remainder Category 3. The one tank division and five motor rifle divisions of the Volga and Urals Military Districts are all Category 3. The central Asian, Siberian, Transbaikal and Far Eastern Military Districts, together with the Mongolian Peoples' Republic, contain one or two Category 1 airborne divisions, seven tank and 35 motor rifle divisions, divided between the three categories.

The Navy

The navy is deployed in four major fleets, of which the Northern Fleet, with an average strength of about 175 submarines and 60 surface combat units, is the largest. The Baltic Fleet normally consists of about 35 submarines and 55 major surface combat vessels, while the Pacific Fleet usually contains in the region of 105 submarines and 60 major surface combat ships. The Black Sea Fleet has an average strength of 25 submarines and 65 major surface combat units, a proportion of which are employed in the Mediterranean and Caspian flotillas. The navy also possesses 53 intelligence vessels, and these are often to be found in the North Sea, Atlantic or the Channel, engaged in electronic surveillance of NATO naval manoeuvres. The great majority of the 700 or so combat aircraft of the Naval Air Force are based in the Northern, Baltic and Black Sea Fleet areas, and the remainder are deployed in the Far East.

The Air-Defence Command

The missiles and fighters of the Air-Defence Command are intended primarily to defend the chief centres of population and industry and are mainly sited to guard against attack from the West. The GALOSH ABM system is deployed in four sites around Moscow.

The Air Force

The Air Force contains about 5300 combat aircraft, apart from the fighters and interceptors under the command of the Air-Defence Command. The majority of these belong to the Tactical Air Force, whose 4500 planes form 16 Tactical Air Armies, four of them — some 1500 aircraft — in Eastern Europe, and the remainder in 12 of the Soviet Union's Military Districts.

Overseas Commitments

Soviet military advisors are stationed in small numbers in Algeria, Iraq, Libya, Uganda, the People's Democratic Republic of South Yemen and the Yemen Arab Republic (North Yemen). About 1000 are currently to be found in Cuba and a significant but unestimated number in Angola, Moçambique and Ethiopia. The bulk of Soviet troops formerly stationed in Egypt were engaged in the air defence of the Suez Canal; they were organised on the lines of a Soviet air-defence district, and commanded by Colonel-General V. V. Okunev, Commander of the Moscow Air-Defence District, detached to Egypt in 1970. They were withdrawn in 1972.

Recent Operations

The Soviet Armed Forces have not been involved in any large-scale conventional operations since 1945. They have, however, been engaged in several clashes of varying intensity along the Sino-Soviet border, and have mounted three major internal security operations within the Warsaw Pact. The repression of the East Berlin rising of June, 1953 was the least important of these operations; the suppression of the Hungarian revolt of November, 1956 was altogether more serious. General P. I. Batov moved eight divisions from his Carpathian Military District to assist the two Soviet divisions already in Hungary, and there was sporadic fighting which went on for about 3 days. The invasion of Czechoslovakia was by far the most significant of the three operations. It was planned while the Czechs and, indeed, most Western governments, were lulled into a false sense of security by the Bratislava Declaration of August 3rd. On August 7th Shtemenko took over as Chief of Staff of the Warsaw Pact forces and at once set about forming a command and signals network for a major operation. Certain Soviet specialists moved into Prague *incognito* on August 17th, and at 11 p.m. on

Tuesday, August 20th Warsaw Pact troops poured across 18 points on the Czech border. A large-scale airlift was mounted at Prague airport: the movement of air traffic was controlled from a 'civilian' Aeroflot plane which had landed earlier the same day. Perhaps 250,000 troops were involved in the early stages of the operation, rising to an estimated 600,000 by the end of August. Army General Pavlovski seems to have commanded the operation under the overall direction of Yakubovski. Elements of 24 Warsaw Pact divisions were initially employed: sixteen of these were Soviet, three Polish, two East German, two Hungarian and one Bulgarian. Czech military and security forces had been ordered not to resist the invaders, but there was some serious rioting, particularly in Prague, where a number of Soviet AFVs were destroyed.

Although the operation did reveal some minor flaws within the Soviet system — standards of map reading were far from perfect and the morale of some units suffered after contact with the hostile Czech population — it was an impressive demonstration of the Warsaw Pact's ability to plan and execute a rapid large-scale troop movement. The Prague airlift is perhaps the single most noteworthy military feature of the operation.

ORGANISATION

Arms of Service

The arms of service of the Ground Forces are as follows: tank; motor rifle; rocket troops and artillery; motor transport and military roads; chemical; engineer; pipelaying; signals and radio technical; military construction; railway and military communications; engineer technical; airborne; administration and intendance; medical; veterinary; and justice.

Operational

The Front

The Soviet front is roughly equivalent to a Western army group. Fronts do not exist in peacetime, but would be formed for operations from the Ground Forces divisions stationed in the groups of Soviet forces and the military districts. A number of fronts might be grouped together in a 'theatre of military operations'. There is no fixed organisation for a front, whose precise composition would depend upon its role. Under normal circumstances, though, a front would include two or three combined-arms armies, two tank armies and a tactical air army. Airborne forces, together with the requisite air transport, would be allocated to the front for a specific operation. The front would be amply provided with both combat and service support. It would be particularly strong in rocket and conventional artillery. The heaviest of its weapons would probably be the medium-range surface-to-surface nuclear missile Scaleboard, and it would certainly possess two brigades, each of nine launchers, of the shorter-range Scud missile, which has a conventional as well as a nuclear capability. The front's field artillery division would comprise about 160 guns and howitzers ranging in calibre from 122 mm to 152 mm. Two SA-2 regiments would provide the front with its heavy air defence: targets for the 18 launchers of each battalion would initially be detected by the front's early warning battalion. The prime role of the front's numerous engineers would be river crossing. Two engineer brigades and two independent regiments would man the PMP ferry-bridge, and two assault crossing battalions would provide lighter equipment. The front would probably contain two intelligence regiments: one, a reconnaissance intelligent unit, could be employed behind the enemy's lines, while the other, an intercept regiment, would be used to monitor enemy radio transmissions. At least two chemical-defence battalions would be attached to the front, and they might be joined by smoke-screen and other chemical units. Signals regiments, radio-relay battalions, independent ECM units and line-laying troops would complete a front's combat support. The largest element of service support within the front would be its transport brigade, consisting of a large but flexible number of road-transport and fuel-bowser battalions. The construction element within the front would consist of road and rail construction units, and would also include a fuel pipelaying brigade. An assortment of depots, maintenance units and minor services would, with two front hospitals and a number of independent medical units, complete the front's establishment.

The Combined-Arms Army

A combined-arms army would contain three motor rifle divisions and a tank division, together with large amounts of combat support. Its artillery brigade would contain numerous guns, howitzers and multi-barrelled rocket launchers. These might be used at army level, or their control might be decentralised to those divisions which, in the army commander's opinion, required extra fire support. A nine-launcher Scud brigade would also be at the army commander's disposal. Air defence would be provided by one or two SA-2 regiments, each with 18 launchers, an SA-4 brigade and an early warning battalion. Large numbers of PMP ferry-bridges would be available in the two engineer regiments, who would be assisted by an assault-crossing battalion. Signals and ECM units, together with a reconnaissance company, helicopter squadron and chemical-defence battalion complete the army's combat support. Its service support would comprise a transport regiment, probably equipped with a high proportion of requisitioned civilian vehicles, and a number of medical, maintenance and static-depot units.

World Armies

The Tank Army

The tank army's basic components are three or four tank divisions and one motor rifle division. It would also contain much the same combat and service support as the combined-arms army, although it would probably have no artillery brigade.

The Motor Rifle Division

The motor rifle division is descended from the old rifle division, but it is much more than merely a mechanised infantry division. Its formidable striking power is centred upon its three motor rifle regiments and its one tank regiment. Each motor rifle regiment contains three motor rifle battalions and a tank battalion. The motor rifle battalion has three motor rifle companies, each comprising three platoons of three sections. The battalion has its own anti-tank and mortar platoons, as well as a signals platoon and a small administrative echelon. The tank battalion of the motor rifle regiment is stronger than its equivalent within a tank regiment: it has three companies, each of three platoons, with four tanks per platoon. The motor-rifle regiment has its own artillery, which includes an ATGW battery with Sagger or Swatter missiles, an anti-aircraft battery of four ZSU 23-4 anti-aircraft tanks and four SA-9 SAMs, and a battery of six 122 mm howitzers. In all, the regiment contains 40 tanks and 112 APCs, together with a multitude of other armoured and soft-skinned vehicles. The division's tank regiment is an altogether smaller formation than the motor rifle regiment. It comprises three tank battalions, each of 31 tanks, together with combat and service support. Tank regiments have recently been given their own integral motor rifle troops, probably on the scale of at least one motor rifle company per tank regiment. They have no integral artillery apart from a battery of ZSU 23-4 anti-aircraft tanks. The motor rifle and tank regiments of the motor rifle division both possess reasonable river-crossing and chemical-decontamination facilities, but their repair and recovery resources are very limited.

The combat support of the motor rifle division is as impressive as the striking power of its regiments. The divisional artillery contains a Frog free-flight rocket battalion of four launchers, an artillery regiment of 54 122 mm howitzers, a rocket-launcher battalion with 18 multi-barrelled rocket launchers, an anti-tank battalion of 18 100 mm anti-tank guns, and anti-aircraft regiment of 24 57 mm towed AA guns or a battalion of SA-6 or SA-8 anti-aircraft missiles; an artillery observation unit completes the divisional artillery's establishment. The division also possesses a strong reconnaissance battalion, an engineer battalion with good mine-clearing and river-crossing capabilities, a signals battalion and a chemical-defence company. It now seems likely that a tank reserve of up to 50 tanks is available at divisional level. The division's service support is, like that of the regiment, designed for lightness and mobility. Its repair and recovery facilities are limited, but it includes a 60 bed field hospital and a transport battalion.

The Tank Division

The tank division is a somewhat smaller formation than its motor rifle counterpart. It has three tank regiments, each containing 95 tanks, 93 of them in the regiment's three battalions and the remaining two in regimental headquarters. A motor rifle regiment, with 40 tanks of its own, is integral to the division, giving it a total strength of 325 tanks. The combat and service support of a tank division is very similar to that of a motor rifle division.

The Tactical Air Army

Although staffed almost entirely by air force personnel, tactical air armies are subordinate to the Ground Forces in both peace and war. The precise composition of a tactical air army is, like that of a front, subject to some variation. A typical army might consist of a headquarters controlling a number of air-defence fighter divisions, several fighter-ground attack divisions, and light bomber, transport and reconnaissance regiments. The army would have its own maintenance and ancillary services.

RECRUITMENT, TRAINING AND RESERVES

Recruitment

The majority of members of the armed forces are conscripts. The ratio of conscript to regular personnel varies between operational branches, but the Ground Forces, which contain the highest proportion of conscripts, it is about 65:35. The individual's general liability for military service is clearly stated in the Soviet constitution, and the Military Service Law of October 12th, 1967 which came into force on January 1st, 1968 provides the legal framework for conscription.

The 1967 law lowered the call-up period to 2 years in the Ground Forces and the air force, although it was fixed at 3 years for the navy and the KGB. There are two call-up periods each year, in May-June and November-December. Deferment from service may be granted on a wide variety of grounds, of which education is probably the most common. To gain deferment for this reason, however, the individual concerned must be pursuing a continuous course of full-time education.

A man who obtains deferment up to the age of twenty-four is unlikely to be inducted for full-time service. About 1,250,000 conscripts, perhaps half the available total, are called up each year.

Most officers are recruited by way of the Military Schools (VU) and Special Military Schools (VVU). Applicants to these establishments must be between seventeen and twenty years of age; the majority of them come straight from civilian life, although serving conscripts may, with the permission of their commanding officers, seek admission. Examinations for VU and VVU take place in July, and are geared to the syllabus of secondary schools. Some young men, usually the sons of Communist Party officials or officers of the armed services, attend Suvorov and Nachimov schools (for the Ground Forces and navy, respectively) from the age of fifteen or sixteen, and then pass on to a VU or VVU. It is possible for a conscript to attain a commission, having first reached the rank of ensign (*praporschchik*). There is no foreign equivalent to the Soviet *praporschchik*, although he bears some resemblance to the French *adjutant* and the United States warrant officer. *Praporschchiki* and their naval equivalents were introduced in November, 1971 in an effort to replace the old category of 'extended servicemen' — re-enlisted conscripts. Extended servicemen or conscripts nearing the end of their service could apply for appointment as *praporschchiki*. Successful applicants enlisted for 5 years and can re-enlist, subject to efficiency, for 3 year and 5 year periods thereafter. The *praporschchik* scheme seems to have been designed to improve the senior NCO structure by creating a rank whose status and prospects make it attractive to the better elements among the conscripts. It has not been an unqualified success. The old extended service category still remains, for numerous extended servicemen were unable to qualify for appointment as *praporschchiki*. It is, though, likely that the scheme has improved incentives at the NCO level, and taken some of the more tedious and routine burdens from the backs of junior officers. A high proportion of *praporschchiki* seem likely to attain commissions, either in the regular forces or on the reserve. A third source of officers is the military departments of universities. University students carry out military training in these departments, and are appointed reserve officers, in which capacity they are liable for 2 years' duty with the regular forces.

Training

The 1967 law introduced compulsory preconscription military training. This is carried out at schools and other establishments, and is intended to consist of about 140 hours of training spread over a year to 18 months. The instructors are serving or retired officers, and the syllabus includes basic drill and tactics. By the end of 1974 about two thirds of conscripts had received a significant amount of preservice training. Schoolboys who fail to secure the certificate of military training at the end of preconscription training are denied a school-leaving certificate, which effectively denies them a worthwhile civilian career.

The conscript training cycle begins on December 1st, although the year is divided into two periods, each of 26 weeks, which commence with the arrival of the two annual conscript intakes. Induction procedure takes about 2 weeks, and is followed by 2 months' basic training, after which the conscript is posted to his unit. Potential NCOs are sent on a 6 month NCO course, from which they emerge as junior sergeants. Great emphasis is placed upon the standardisation of training, and the relatively short period of time available tends to produce an onerous and tightly structured daily training programme. Most conscripts will qualify in at least one trade, and may be taught another complementary skill; for example, a soldier whose first trade is a tank driver may also be trained as a tank gunner.

Officer training is naturally more thorough. The course at a VU lasts for 3 years, while that at a VVU may be either 4 or 5 years. Graduates of the latter establishments emerge with an appropriate technical qualification in addition to their junior lieutenant's commission. Despite the substantial academic content of officer training, officer cadets (*kursanty*) spend much of their time in the field, on training designed to reproduce, as accurately as possible, the stresses of modern war. This realistic battle simulation is also a feature of other aspects of Soviet training: the Soviet officer and soldier are likely to spend much longer training to operate in a chemical and nuclear environment than are their Western counterparts. The officer's education does not cease when he leaves his VU or VVU. In mid-career he will probably be sent on a command or technical specialisation course, lasting between 3 and 5 years, and officers destined for very high rank will be sent on the 2 year course at the General Staff Academy.

A significant proportion of training time is expended not on practical military instruction but upon political training. Officers and soldiers are all expected to receive certain regulation quantities of political training. A conscript will receive about 5 hours' training each week from his unit's ZAMPOLIT and his assistants, and officers must attend at least 50 hours of political instruction each year. In addition to formal classes, political training is also conducted in a number of other forms, since the ZAMPOLIT is closely involved in activities which might be considered sporting or recreational in a Western army. Officers are strongly encouraged to become Party or, if under the age of twenty-five, KOMSOMOL members. Party membership is by no means obligatory, but perhaps three-quarters of majors and officers of equivalent rank are Party members, and membership is almost a prerequisite for promotion to senior rank.

Reserves

The 1967 law gave rise to problems by reducing training time, but had the advantage of increasing the throughput of trained soldiers. About 1,250,000 conscripts pass onto the reserve each year, and they retain a reserve liability until they attain the age of fifty. Officers also go onto the reserve on retiring from the regular forces. It is difficult to estimate the

World Armies

current size of the reserve, but it could well be as high as 25,000,000 officers and men, of whom well over one-fifth have had regular service within the last 5 years. A paramilitary organisation, DOSAAF, gives part-time training in specialist skills such as shooting and parachuting.

EQUIPMENT AND ARMS INDUSTRY

Arms and Equipment

Small Arms

Pistol: Makarov 9mm (PM)

Machine pistol: Stechkin 9mm (APS)

Assault rifle: Kalashnikov 7.62mm (AKM)

Light machine-gun: Kalashnikov 7.62mm (RPK)

General purpose machine-gun: Kalashnikov 7.62mm long (PKS)

Heavy machine-gun: Goryunov 7.62mm long (SGM) vehicle mounted; Degtyarev-Shpagin 12.7mm (DShK) ground and air defence; and Vladimirov 14.5mm (KPV) ground and air defence

Mortars: 82mm M-1943 (parachute battalions), 120mm M-1943 (motor rifle battalions) and 160mm (used only in difficult terrain)

Anti-tank Weapons

Grenade launcher: RPG-7 (one per motor rifle section)

Recoilless gun: B-10 82mm

Rocket launcher: SPG-9 76mm

Guns: SD-44 85mm, M-1955 100mm and T-12 100mm

Anti-Aircraft Guns: 14.5mm ZPU-4 (four-barrelled towed), 23mm ZSU-23 (twin-barrelled towed), 23mm ZSU-23-4 (four-barrelled AA tank), 57mm S-60 (single-barrelled towed) and 57mm ZSU-57-2 (twin-barrelled AA tank)

Artillery

Field guns and howitzers: 122mm howitzer D-30 (towed), 122mm field gun D-74 (towed), 130mm field gun M-46 (towed), 152mm howitzer D-1 (towed), 152mm howitzer D-20, 180mm heavy gun (towed), M-1973 152mm SP howitzer and M-1974 122mm SP gun

Rocket launchers: 122mm BM-21 (truck-mounted; 40 tubes) and 140mm M-1965 (towed; 16 tubes)

Armour

Tanks: T55 main battle tank (100mm main armament, 36 tons in weight, crew of four), T62 main battle tank (115mm smoothbore main armament, 36.5 tons in weight, crew of four) and T10 obsolescent heavy tank (122mm main armament, 49 tons in weight, crew of four). A new main battle tank has entered service replacing the T55 and T62; it mounts a 125mm gun with an auto-loader and there are two versions: T64 and T12 with an improved chassis

Reconnaissance vehicles: PT-76 (amphibious light tank, 76mm gun, weight 14 tons, crew of three, now obsolescent), BRDM (several versions of this vehicle exist — one mounts a 14.5mm MG and another the Sagger missile; it can also be fitted with flag dispensers for NBC reconnaissance; weight 6–7 tons, crew 3–5) and BMP (reconnaissance variant)

Assault guns: ASU-57 57mm gun (weight 3.4 tons) and ASU-85 85mm gun (weight 15 tons)

APCs: BMP tracked section APC (mounts 73mm smoothbore gun and is often fitted with Sagger), BTR-50P tracked section APC (mounts 14.5mm MG), BTR-50PK tracked section APC for the motor rifle troops of tank divisions, BTR-152 obsolescent wheeled section APC and BTR-60P obsolescent wheeled section APC (mounts 12.7mm MG).

All the above APCs mount a 7.62mm MG in addition to any other armament

Aircraft

Several versions of many of the types listed below are currently in service. Names in *italics* are NATO recognition titles. Numbers in brackets are an estimate of quantities currently in service.

Long-Range Air Force (800): Tu-95 *Bear* long-range turboprop heavy strategic bomber (100); Mya M-4 *Bison* long-range strategic jet bomber (35); Tu-16 *Badger* medium-range strategic jet bomber (305); Tu-22 *Blinder* medium-range jet bomber and reconnaissance aircraft (136); Tu *Backfire* variable-geometry jet bomber (has recently entered service) (50); flight refuelling tanker support is provided by *Bison* tankers (44)

Naval Air Force (770): Maritime versions of *Badger* (280), *Blinder* (40) and *Bear* (45); *Backfire* bomber (40); Il-38 *May* long-range turboprop maritime patrol aircraft (50); Be-12 *Mail* coastal and medium-range flying boat (90); Mi-4 *Hound*, Mi-14 *Haze* and Ka-25 *Hormone* anti-submarine helicopters (220). There are also miscellaneous transport aircraft

Air-Defence Command (2700+): MiG-17 *Fresco* and MiG-19 *Farmer* fighter–interceptors, both obsolescent (250); Su-9 and Su-11 *Fishpot* interceptor (650); Yak-28P *Firebar* interceptor (320); Tu-28P *Fiddler* interceptor (150); Su-15 *Flagon* interceptor (850) (replacing *Fishpot-C*); MiG-25 *Foxbat* interceptor and reconnaissance aircraft (300); Tu-126 *Moss* Airborne Warning and Control Aircraft (12); and numerous training aircraft

Tactical Air Force (4650): Yak-28 *Brewer* tactical attack bomber and Il-28 *Beagle* (175 in total); MiG-17 *Fresco* (220); Su-7 *Fitter-A* fighter-ground attack (500); MiG-23 *Flogger* variable-geometry aircraft, in interceptor (*Flogger-A*) and fighter-bomber (*Flogger-B*) versions (1100); MiG-21 *Fishbed* in fighter and interceptor versions (1450); Su-20 *Fitter-B* fighter-ground attack (an improved version of *Fitter-A*); Su-17 *Fitter-C* fighter-ground attack (300); Su-19 *Fencer* fighter-ground attack (120); An-12 *Cub* modified for ECM; and MiG-25 *Foxbat* (150)

Air Transport Force (1300 fixed-wing aircraft and 2000 helicopters): Il-14 *Crate* obsolescent transport (a civil version remains in service with Aeroflot); An-8 *Camp* turboprop transport; An-24 *Coke* short- and medium-range turboprop transport; An-12 *Cub* general-purpose tactical transport; Il-18 *Coot* turboprop passenger/transport aircraft; An-22 *Cock* heavy transport (exceeded in size only by the Lockheed C5A *Galaxy*); Mi-1 *Hare* helicopter (now obsolescent); Mi-2 *Hoplite* general-purpose transport helicopter; Mi-4 *Hound* general-purpose helicopter (widely-used throughout the Warsaw Pact); Mi-6 *Hook* heavy transport helicopter (an armed version exists); Mi-8 *Hip* medium general-purpose helicopter; Mi-10 *Harke* transport helicopter designed to carry heavy loads slung beneath the fuselage; and Mi-24 *Hind* gunship and assault transport helicopter

Naval Vessels

Ballistic missile submarines (nuclear): D-II/III-class, each with 16 SS-N-8s (13); D-I-class, each with 12 SS-N-8s (15); Y-class (33 with 16 SS-N-6s, one with 12 SS-NX-17s); H-III-class with six SS-N-8s (1); and H-II-class with three SS-N-5s (7)

Ballistic missile submarines (diesel): G-II-class, with three SS-N-5 *Serb* missiles (11); and G-I-class, with three SS-N-4 *Sark* missiles (9)

Attack submarines (nuclear): 40

Attack submarines (diesel): 134

Cruise missile submarines (nuclear): 45

Cruise missile submarines (diesel): 24

Helicopter cruisers (primarily anti-submarine): *Kitr*-class, with 25 helicopters and 25 V/STOL aircraft (*Kiev* entered service in 1976; *Minsk* near completion); and *Moskva*-class, with 20 Ka-25 helicopters (2)

Cruisers: *Sverdlov*-class (mainly gun-armed but some SAMs) (10)

Anti-submarine cruisers and destroyers: *Kara*-class, with SSMs and SAMs (6); *Kresta-I* and -II-class, with SSMs and SAMs (11); *Kynda*-class, with SSMs and SAMs (4); *Kanin*-class, with SAMs (8); *Kashin*-class, with SSMs and SAMs (19); *Krivak*-class, with SSMs and SAMs (20); and *Kildin*-class, with SSMs (4)

Destroyers: *Kotlin*-class, with SAMs (4); *Kotlin*-class (18); and *Skory*-class (20)

Escort vessels: *Kola*-, *Riga*-, *Petya*- and *Mirka*-class (107)

Submarine chasers and coastal escorts: (295)

Fast patrol boats: *Osa*- and *Komar*-class, with *Styx* SSMs (120)

Patrol and torpedo boats: (200)

Minesweepers: (300)

Amphibious ships and landing craft: (200)

Transports, oilers, depot and repair ships: (100)

Intelligence collection vessels: (53)

Hovercraft: (41)

Missiles

ICBMs: SS-9 *Scarp* (190); SS-11 *Sego* (780); SS-13 *Savage* (60); SS-17 (60); SS-18 (110); and SS-19 (50)

SLBMs: 1015 in 90 submarines

MRBMs/IRBMs (690): SS-5 *Skean*; SS-4 *Sandal*, and SS-20 mobile IRBMs

Tactical nuclear weapons: *Frog* wheeled launcher (range 15-65 km); *Scud-B* wheeled or tracked launcher (range 260 km); and *Scaleboard* wheeled launcher (range 850 km)

ABMs: *Galosh* in four sites around Moscow (64)

SAMs: SA-1 *Guild* (solid fuel, HE warhead; appears to be going out of service); SA-2 *Guideline* HE warhead (slant range about 25 miles); SA-3 *Goa* low level (slant range about 15 miles; mounted in pairs on tracked launcher; a naval version also exists); SA-4 *Ganef* medium range (mounted in pairs on tracked launcher); SA-5 *Gammon* long range, high level; and SA-6 *Gainful* medium range, low level (triple-mounted on tracked launcher)

Coast defence: SS-N-3 *Shaddock*

Stand-off: *Kangaroo* for Tu-20 *Bear*; *Kipper* anti-shipping for Tu-16 *Badger*; and *Kitchen* for Tu-22 *Blinder*

Anti-tank: *Swatter* and *Sagger* HEAT warheads mounted on BRDMs (*Sagger* also exists in man-portable version)

Arms Industry

The Soviet Union has a large and well-developed arms industry. It is allotted a high priority by GOSPLAN, the State Planning Ministry, which produces overall industrial plans every 5 years or so. Standardisation of military equipment is relatively easily achieved, for both planning and production are totally subject to centralised control. Market forces, and the ambitions of individual armaments manufacturers, are thus of little consequence.

World Armies

Although Soviet military equipment has become increasingly sophisticated over the past decade, there is a continuing emphasis upon producing items which are 'soldier-proof', being fairly simple to operate and maintain. There is also a tendency for designers to improve upon existing models rather than to develop new ones. Much Soviet equipment is widely used outside the Soviet Union, notably in the Warsaw Pact.

RANK, DRESS AND DISTINCTIONS

Rank

Officers

Officers show their rank on shoulder-boards which closely resemble those worn before the Revolution. There are three types of shoulder-board:

1. Gold braid for parade dress: plain braid for officers to the rank of colonel, decorated braid for generals.
2. Matt yellow for daily wear: generals have a decorated surface as in (1) above.
3. Khaki for wear in the field: generals have a matt-braid-like surface.

Marshal of the Soviet Union	Large five-pointed gold star with a national emblem above it
Chief Marshal of an Arm of Service	Large five-pointed gold star within a wreath, surmounted by the relevant arm-of-service badge
Marshal of an Arm of Service	Large five-pointed gold star surmounted by the relevant arm-of-service badge
Army General	Four medium silver stars
Colonel-General	Three medium silver stars
Lieutenant-General	Two medium silver stars
Major-General	One medium silver star
Colonel	Two red perpendicular lines, three silver stars in a pyramid
Lieutenant-Colonel	Two red perpendicular lines, two stars
Major	Two red perpendicular lines, one star
Captain	One red perpendicular line, four small silver stars, arranged in the form of an inverted 'Y'
Senior-Lieutenant	One red perpendicular line, three small silver stars in a pyramid
Lieutenant	One red perpendicular line, two small silver stars
Junior-Lieutenant	One red perpendicular line, one small silver star

Ensigns and Soldiers

Ensigns and soldiers also show their rank on shoulder-boards. There are only two types of shoulder-board for NCO ranks:

1. In arm-of-service colour for parade and everyday wear.
2. Khaki for wear in the field; badges of rank are red rather than yellow.

Ensign	Two small yellow stars
Officer cadet	Broad yellow edging to shoulder-board
<i>Starshina</i>	Broad yellow perpendicular line
Senior Sergeant	Broad yellow transverse stripe
Sergeant	Three thin yellow transverse stripes
Junior Sergeant	Two thin yellow transverse stripes
<i>Efreitor</i>	One thin yellow transverse stripe
Private	Plain shoulder-board

Dress

Soviet military uniforms underwent a major change in 1970-71. The new-style uniform is remarkably Western in appearance, although the typically Russian shoulder-boards have been retained. There are five basic forms of dress.

1. Parade Dress. Officers and ensigns wear a bottle-green tunic with a turned-down collar, bottle-green trousers tucked into high black boots, and a bottle-green forage-cap with red band. Soldiers wear a similar uniform in khaki. A ceremonial full dress, which includes a red plastron front to its tunic, is used by certain units on very special occasions.

2. Walking-out dress. This is similar to parade dress, but its embellishments, such as belts and aiguillettes, where worn, are less colourful.
3. Everyday dress. This is khaki for all ranks: the collars of officers' and ensigns' uniforms are turned down, and are worn with a collar and tie beneath, whereas soldiers have high collars. Soldiers normally wear their trousers tucked into their boots.
4. Working dress. This is worn by conscripts only, and consists of a khaki tunic with a high collar, and khaki trousers tucked into boots. It is worn with a khaki side-cap.
5. Field dress. All ranks wear high-collared khaki tunics and khaki trousers tucked into boots. Steel helmets are worn when appropriate. Officers and ensigns have plain khaki forage-caps, and soldiers often wear their working-dress side-caps in the field. Belts of the Sam Browne type are normally worn by officers and ensigns.

Grey greatcoats are worn, when necessary, with any of the above forms of dress: they are usually accompanied by grey fur hats. A number of special combat uniforms exist. The crews of AFVs wear black coveralls and ribbed helmet with integral headset. NBC protective suits are used by all troops in chemical and nuclear environments. Troops engaged on reconnaissance and special duties are issued with a mottled summer camouflage suit, and white winter camouflage is issued when appropriate. Airborne troops are something of a law unto themselves. They wear air force blue parade uniforms, and their khaki everyday uniforms have open collars, showing blue and white striped vests. They wear blue berets on some occasions, and have their own battle uniform of khaki coveralls and hood.

The operational branch and arm of service to which an officer, ensign, soldier or airman belongs is clearly shown on his uniform. Identification is made by means of arms of service colours and badges, shoulder boards, and collar and sleeve patches.

Arm-of-Service colours are as follows:

Motor rifle troops: Red

Rocket troops and artillery, armour, motor transport and military roads, railway and military communications, signals and radio technical, chemical, pipelaying, engineer, and all other technical troops: Black

Air force and airborne troops: Blue

Medical, military justice, administration and intendance: Magenta

KGB troops (but not border troops): Dark Blue

KGB border troops: Green

MVD troops: Russet

The shoulder-boards of soldiers and ensigns are in arm-of-service colour, except in field dress when they are khaki. Sergeants and below wear, in addition to their badges of rank, lettering on their shoulder-boards which indicate their operational branch. This lettering is in the same material as badges of rank, and is not worn on field shoulder-boards. Examples of this lettering are

CA	Soviet Army
ГБ	KGB
BB	MVD

Collar patches are in the arm-of-service colour of the unit in which the wearer is serving. They are edged with gold in parade and walking-out uniforms, and bear the arm-of-service badge of the individual's parent arm.

Arm-of-service badges are small metal insignia worn on collar patches in parade, walking-out and everyday dress. In field dress all ranks carry their arm-of-service badge on the shoulder-board. Many of these badges are self-explanatory: the badge of armoured troops is a small tank, that of rocket troops and artillery is crossed cannon barrels, and so on.

Arm-of-service sleeve patches are large cloth badges with the arm-of-service badge woven in yellow on a background of the arm-of-service colour. They indicate the unit in which the wearer is serving, rather than his parent arm, and are worn on the left upper arm in parade and walking-out dress. Airborne troops also wear them in everyday dress.

Distinctions

A wide variety of badges, medals and decorations are worn in the Soviet Armed Forces. Badges are awarded to soldiers for many reasons: passing training tests, physical proficiency, 'excellence' in specialist fields, and so on. Officers may also receive specialist qualification badges worn, like soldier's badges, on the right breast. The great majority of medals and decorations are worn on the left breast. Numerous campaign medals have been struck, and orders — like those of Suvorov and Kutuzov — were established following Russian victory at Stalingrad. The most coveted decoration is probably the gold star of a Hero of the Soviet Union.

World Armies

CURRENT DEVELOPMENTS

The Soviet Armed Forces currently possess excellent capabilities for waging both nuclear and conventional war, although it must be remembered that Soviet military doctrine stresses the likelihood of any major conflict turning nuclear. Recent Russian naval developments are worthy of note, and the offensive potential of the Ground Forces — particularly the Groups of Forces in Eastern Europe — remains impressive. Centralised control of the Soviet economy contributes markedly to the efficiency of the arms industry, and Soviet military equipment, while retaining, in the main, its 'soldier-proof' characteristics, is tending to become increasingly sophisticated.

If, however, the Soviet Armed Forces do not face all the problems encountered by their Western counterparts, they are by no means free from difficulties. Despite the reduction in the length of conscript service, and the energetic efforts of unit political officers, there is ample evidence that many young Russians regard their 2 years with the colours as anything but the happiest of their lives. The reduction in length of service has obviously lessened the time available for training, a diminution which, bearing in mind the further erosion of training time by political instruction, may well have damaging effects upon efficiency.

The Soviet Armed Forces share some of the recruitment and career-structure difficulties experienced by Western forces. Attempts to make the profession of arms an attractive career for suitable young men have not proved entirely successful: it seems likely that VU and VVU have recently been forced to lower their standards slightly. The *praporshchik* scheme has not proved an unqualified triumph, and there are signs that the senior NCO situation is not entirely satisfactory. The effects that these shortcomings might have upon the overall efficiency of the armed forces are open to question. It is, though, unlikely that they seriously limit the ability of the Soviet Armed Forces to carry out their roles.

RICHARD HOLMES

UNITED ARAB EMIRATES

HISTORY AND INTRODUCTION

For reasons of space, this introductory survey will deal with all seven Gulf Emirates which used to be known as the Trucial States. Developments since 1971 and the contemporary military situation in Qatar and Bahrain, who did not adhere to the United Arab Emirates, will be treated separately.

For most of its history the southern Persian Gulf coast between Kuwait and Oman has been a sparsely inhabited region making its living primarily from the sea (fishing, pearl culture and piracy). Periodically it came under the political control of neighbouring empires: Bahrain was sporadically under the rule of the Safavid empire of Iran between 1602 and 1782, and later most of the coast came under tenuous Ottoman sovereignty. Most of the time, however, actual political power lay in the hands of the small tribal confederacies based primarily on kinship ties which had established themselves along the coast. In the area later to become the Trucial States, there were only two real towns — Bahrain and Dubai, both making their money mainly from smuggling (now known as trade).

British imperial power was extended westwards from India into the Persian Gulf in the early nineteenth century principally to suppress piracy in the region. The first treaties with the eastern sheikhdoms were concluded in 1820, and were followed by others granting Britain further influence over the States until a final one in 1892. Similar British treaties with Bahrain were concluded in 1861, 1880 and 1892, and Qatar was finally brought into the system when Ottoman sovereignty was repudiated in 1916. All the treaties were virtually identical in effect: the sheikhly States granted Britain exclusive responsibility for their defence and foreign relations, gave up their right to have direct dealings with foreign States, and received British advisers at their courts. They got British subsidies in return, and collaborated in the suppression of piracy. There was little interference with domestic political arrangements, and the rulers all retained their personal bodyguards and autocratic privileges.

In the early twentieth century the Gulf States were still extremely poor, totally dominated by conservative Islam in their political and social life, and almost 100% Arab. But then oil began to be discovered: in 1932 in Bahrain, in 1949 in Qatar, and in Abu Dhabi in 1959. The avalanche of sudden wealth has already transformed these societies utterly — per capita income in Abu Dhabi, at \$22,000 a year, is the highest in the world — and the changes are far from finished.

In Bahrain, the edifice of a welfare State is almost 40 years old, and change is no longer at such a headlong pace. Indeed, Bahrain's oil output is far less than those of the other major producers in the area, and its oil is expected to run out within another 20 years, so the State's strategy for future prosperity is focused on turning Bahrain into the commercial centre of the Gulf, and creating industries which will outlast the oil. Elsewhere the wealth is newer and greater, and the growth more frantic, although already there are numbers of industrial projects (mainly hydrocarbon-based) planned or under construction.

In all seven States, however, certain common patterns have emerged. The autocratic rule of the sheikhs has not been seriously challenged, though the ruling families have occasionally substituted a less traditionalist sheikh for an older incumbent. The local Arab populations, swimming in wealth but still socially conservative, have shown little inclination to protest the utter absence of genuinely representative institutions anywhere in the region. But the Arab citizen population, in almost every case, has become a minority — sometimes a small one — in its own country, as the foreign experts and workers needed to work the oil industry and administer the welfare state have flooded in.

At the turn of this decade Bahrain's population was 207,000; it has grown to 345,000 in the meantime (1979), and remains 70% indigenous. But Qatar's population has almost doubled to 205,000 people in the same period, and only 30,000 are native Qataris. The seven States making up the United Arab Emirates had 150,000 people in 1972; there are now 750,000, with the growth concentrated in Abu Dhabi and Dubai. Europeans run the oil installations and supervise the endless construction projects; Palestinians, Egyptians and Lebanese administer the country and run the education system; and masses of Baluchis, Pakistanis, Indians and other Asians do the labour. As little as 20% of the United Arab Emirates' population are now citizens; between two-thirds and three-quarters are from the Indian sub-continent. In Abu Dhabi, according to the local joke, it is hard to find anybody in the street who speaks Arabic.

A majority of resident foreigners, on top of all the stresses of rapid change, has led to a certain apparent political fragility in all of these States. Taking into account also the dominating presence of Iran in the Gulf, and the South Yemeni and Iraqi attempts at stimulating revolution in the area which had already begun in the late 1960s, it is scarcely surprising that the sheikhdoms greeted the British announcement of impending withdrawal from the Gulf in January, 1968 with less than undiluted enthusiasm.

As the Gulf sheikhdoms grew in importance due to their oil wealth in the 1950s, the British military presence in the area was gradually reinforced. By the end of the 1960s it amounted to some 9000 men, with their headquarters in Bahrain. After Britain's withdrawal from Aden in 1966, it commenced to construct a new base in Sharjah, which also became the base

World Armies

of the Trucial Oman Scouts, an internal security force officered and paid for by Britain. All this was due to disappear when Britain's withdrawal was completed in 1971, however, and the sheikhdoms would have independence thrust upon them.

This may have been a prerequisite for the continuation of the conservative sheikhly regimes, for the South-Yemeni-backed Popular Front for the Liberation of the Occupied Arab Gulf (PFLOAG), as it was then known, would otherwise have had the far easier target of British imperialism to attack. The rapidity of the British withdrawal came as a rude shock, however, and concentrated minds in the region wonderfully. All nine sheikhdoms formed a loose federation in July, 1968 with authority vested in a council of the nine rulers, and each State began building up military forces to the extent of its ability.

The federation thus formed enjoyed rather more success than most of the others encouraged by London during Britain's imperial twilight, although it was not total. In 1971 six of the sheikhdoms formed the United Arab Emirates, with their seat of government at Abu Dhabi until a new federal capital could be built on the Abu Dhabi-Dubai border. The six founders were Abu Dhabi, Dubai, Sharjah, Ajman, Umm al Qaiwain and Al-Fujairah. At that time the only one possessing substantial oil wealth was Abu Dhabi, although Dubai has subsequently begun producing oil on a large scale.

A seventh, eastward-lying sheikhdom, Ras al-Khaimah, held itself aloof for a time in the hope of discovering its own oil, and also because it hoped to extort military support from somewhere in its dispute with Iran over the Tunb Islands strategically situated near the Strait of Hormuz. The other sheikhdoms could offer nothing but moral support, however, while Britain was not prepared to intervene and Saudi Arabia then lacked the military strength to do so. Iran duly invaded and seized the disputed islands at the end of November, 1971 as soon as the British treaty of guarantee lapsed, and Ras al-Khaimah joined the United Arab Emirates in the following year.

The two westernmost States, Bahrain and Qatar, found it impossible to devise a satisfactory formula whereby they might remain in the federation. Each had had oil wealth for far longer, each had a population far larger at that time than any of the other seven, and especially in Bahrain's case there had been a much greater degree of development in education and the social services thanks to a full generation of oil-fuelled prosperity. Qatar and Bahrain went their separate ways, each receiving their independence from Britain at the same time as the United Arab Emirates in 1971. All three States joined the United Nations and the Arab League.

(Further developments in Bahrain and Qatar are discussed in the entries for those countries.)

The history of the United Arab Emirates since 1971 has been dominated by two processes: learning to cope with the special indigestion of the very rich; and trying to create a real federal government over the heads of seven absolute rulers. The lead in the latter enterprise has been taken throughout by Sheikh Zaid of Abu Dhabi, but every step has had to be achieved by persuasion. Of course, Sheikh Zaid can be very persuasive indeed, for his State has the lion's share of the oil wealth — 1,600,000 barrels/day in 1976 — and is the only member with a large surplus of foreign exchange. Dubai is the commercial capital, as it contains the Union's only long-established town, and produces oil at the rate of 350,000 barrels/day; Sharjah has 50,000 barrels/day; Ras al-Khaimah began producing some oil at the end of 1977; and the other three members, despite a good deal of searching, have yet to find any. So subsidies from Abu Dhabi to the federal budget and thence to the poorer sheikhdoms have been the order of the day, and provide the motive power for Sheikh Zaid's programme for strengthening federal control.

Abu Dhabi has contributed the great bulk of the federal budget ever since 1971 (over 75% in 1975), and has consistently attempted to integrate the administration and the economy. Despite its preponderant wealth, however, each State continues to develop its own parallel facilities — five of the seven members have opened their own international airports in the past few years, Sharjah's and Dubai's being only 5 miles apart — and federal institutions still resemble more an alliance than a federation. The National Assembly, which passes on, but does not initiate, legislation, consists of 40 members appointed individually by the ruling sheikhs, and supreme authority lies in the High Council of the Federation, where each of the seven rulers has a veto.

In December, 1973 Abu Dhabi disbanded its own government, some of its members becoming federal ministers, and subsequently Sheikh Zaid pledged 50% of his immense revenues to the federation. He has had some successes: in May, 1975 the High Council agreed on further centralisation measures, including the handing over of police and internal security forces to the federal Ministry of the Interior, and in November Sharjah and al-Fujairah handed over their tiny National Guards to the federal government and abolished their flags. At the end of 1976 Abu Dhabi's ruler was chosen by his peers for a second 5 year term as federal President, and it was agreed that all other emirates should also contribute from their revenues to the federal budget according to a negotiated formula.

But the larger States did not follow suit in handing over their defence forces to the Union Defence Forces, and retained the right to maintain their separate armed forces. An agreement in May, 1976 to unify the federation's military forces was executed at the end of the year, but bore little fruit in terms of genuine integration. (See Command and Constitutional Status, and Role, Commitments, Deployment and Recent Operations.) The individual rulers continued to act as Heads of State, accepting official invitations from abroad without informing the Foreign Ministry, and issuing formal joint communiques with foreign leaders.

Sheikh Zaid evinced a certain reluctance to accept a second term as President in 1976 — perhaps as a pressure tactic — and immediately received a message by special envoy from the Shah of Iran, while the United Arab Emirates' Foreign Minister had to be sent off on an urgent mission to the Saudi capital. In the event, the Sheikh allowed himself to be persuaded, but the

incident amply demonstrated the tender solicitude both his large neighbours display for the health and further integration of the federation.

Such an attitude on their part is the merest common sense, but it is only lately that they have been showing it. When the United Arab Emirates came into existence in 1971 it was on extremely bad terms with Iran, which had just annexed territories previously under the control of two of its members, and the federation's leaders suspected Tehran of having expansionist ambitions. Relations with Saudi Arabia were non-existent because of a dispute over the Liwa oases on the Abu Dhabi-Saudi border. But in late 1974 the territorial dispute was settled and Riyadh officially recognised the United Arab Emirates. In 1975 Sheikh Zaid paid a State visit to the Saudi capital, and at the end of the year he visited Tehran with whom relations have also improved greatly.

Iran's reconciliation with Iraq in the spring of 1975 is seen in the Gulf as having ended the ambitions of the latter to spread revolution in the area, at least for the moment. The end of the Dhofar war is widely assumed to mean an end also to South Yemen's active support for subversion in the United Arab Emirates.

A meeting of all eight Gulf States in Oman in November, 1976, with the aim of creating a regional agreement on security and co-operation, foundered, principally because of Iraqi opposition. Nevertheless, the territorial survival and political orientation of the State appear rather more assured than they did at its foundation. The principal threat is now probably the intense rivalries between the three largest sheikhdoms, Abu Dhabi, Dubai and Ras al-Khaimah, and particularly between the former two.

Dubai-Abu Dhabi rivalry was endemic even before 1971, and the ruler of Dubai has since attempted to match Abu Dhabi's greater wealth derived from oil by pursuing a headlong and sometimes reckless expansion of industry, commerce and banking (two UAE banks were forced to close their doors in 1977). This policy has led to Dubai refusing to recognise federal authority in banking and other matters, to make no contributions whatever to the federal budget, and to guard jealously the effective independence of its own armed forces.

Sheikh Saqr bin Muhammad al-Qasimi, ruler of Ras al-Khaimah, was a late and reluctant adherent to the federation, and in recent years has been pursuing his own private territorial dispute with neighbouring Oman, much to the discomfiture of the federal authorities. The latter find little merit in Ras al-Khaimah's defence of its encroachments into Omani land and offshore zones, and are deeply concerned by the possibility of a clash with Oman; on the other hand, they can scarcely refuse to stand by one of the partners in the federation. The purpose of Sheikh Saqr's manoeuvres is privately seen by some other members of the UAE as an attempt to create his own base of power in case the UAE should disintegrate, possibly with a view to establishing a local Qawasim State uniting Ras al-Khaimah and Sharjah (the ruling families in both States are Qasimi). His decision to invite Soviet military technicians to the emirate is taken as another evidence of his disaffection.

Although these disputes are extremely serious, and very little real progress has been made in unifying such key federal institutions as the budget, the banking system and the armed forces, there are powerful countervailing factors which help to hold the UAE together. The most obvious of these is Abu Dhabi's enormous wealth, which underwrites virtually the whole of the federal budget and is almost the sole support of the small members with little or no oil of their own. The rulers of all the emirates have a clear and probably overriding interest in hanging together lest they hang separately. Finally, neither Saudi Arabia, which wields enormous influence in the UAE, nor Iran, nor even Oman, would welcome the turmoil and uncertainty which would attend the break-up of the federation. In all probability, the seven sheikhs are stuck with one another permanently.

STRENGTH AND BUDGET

The strength of all the United Arab Emirates' armed forces at the end of 1978 was estimated to be 25,900 men, of which land forces amount to approximately 23,500, Naval forces number 800 men, and air forces about 1800. The military budget in 1978-9 was \$661,000,000, still a small proportion of a GNP estimated at \$7,700,000,000.

The situation is complicated by the fact that, despite an agreement to integrate the various sheikhly armed forces, there still existed four separate military organisations until very recently. Troops of all the sheikhdoms appeared in the same uniform for the first time in December, 1976 and the unified force's operational structure closely duplicates that of the old separate armies.

Of the four defence forces in the United Arab Emirates, Abu Dhabi's has always predominated in size and influence. Besides Abu Dhabi's own defence force, moreover, the old federal forces got most of their pay from the ruler of that State, which contributes about 98% of the federal budget. For purposes of comparison, the strengths of the old separate forces on the eve of unification in 1976 were as follows: The Union Defence Forces (formed out of the former Trucial Oman Scouts) numbered 3000, but the largest were the Abu Dhabi Defence Forces, with 15,000 men. Dubai and Ras al-Khaimah maintained their own small defence forces of 2000 and 900 men, respectively.

A further rapid expansion of the United Arab Emirates' armed forces is to be expected.

COMMAND AND CONSTITUTIONAL STATUS

Under the terms agreed in the October, 1976 meeting of the High Council of the Union for the unification of all armed

World Armies

forces in the United Arab Emirates, the President (Sheikh Zaid bin Sultan al-Nhayyan, Ruler of Abu Dhabi) exercised direct control of the Union Security High Command, and acted at least temporarily as Commander-in-Chief. In his absence command was exercised by the Vice-President (Sheikh Rashid bin Said al-Maktum, Ruler of Dubai).

The Minister of Defence is Sheikh Muhammad bin Rashid al-Maktum, son of the Ruler of Dubai. The Minister appears to be responsible primarily for administrative, personnel and logistical matters. This responsibility he shares with the Deputy Commander, Sheikh Khalifa bin Zaid al-Nhayyan, son of the ruler of Abu Dhabi and current President. In December, 1976, as part of the process of integration, he decreed that arms purchases were to be made by the Ministry of Defence only: 'no emirates will be permitted in future to make their own contracts with arms suppliers'. The Minister of Defence does not appear to be in the chain of command, if so formal an arrangement exists.

Operational command of the integrated Union Defence Forces is exercised by the Chief of Staff, who is as before Major-General Awad Khalidi, a Jordanian. This officer also serves as military adviser to the President, and is responsible for carrying out the decisions of the Supreme Defence Council (another federal fixture of flexible make-up and ill-defined responsibilities).

There is rather less to the unification of the armed forces than meets the eye, for they are to be divided into three 'military regions', based on the three largest member States. Western Military Region in Abu Dhabi was initially placed under the command of Sheikh Sultan bin Zaid, son of the ruler of Abu Dhabi. Central Military Region in Dubai is commanded by Sheikh Ahmad bin Rashid, son of Dubai's ruler and hitherto Commander of the Dubai Defence Forces. Northern Military Region in Ras al-Khaimah is under the command of Sheikh Sultan bin Saqr, who happens to be the son of Sheikh Saqr al-Qasimi, ruler of Ras al-Khaimah.

The largely fictional nature of the unified command structure was demonstrated by an acute crisis in February, 1978 when the President, Sheikh Zaid of Abu Dhabi, named his 18 year old son Colonel Sultan bin Zaid (until then Commander of Western Military Region, i.e. Abu Dhabi's own forces) to the post of Commander-in-Chief and promoted him to Brigadier. As President, Sheikh Zaid had previously occupied the post himself as a purely nominal office; he apparently failed to consult with Sheikh Rashid of Dubai or with his son, the Defence Minister, before making the appointment.

The immediate response in Dubai was that officers in the local force announced that they were no longer taking orders from the federal authorities and that Dubai's troops had been put on 1 hour emergency alert. Subsequent declarations from both sides endeavoured to conceal the existence of any rift, but likewise it is to be doubted that the appointment achieved any substantial advance towards genuine integration. The refusal of Dubai forces to accept orders from the federal command structure was little more than an untactful revelation of an existing situation: for practical purposes all three of the chief contingents in the federal armed forces — those of Abu Dhabi (15,000 men), Dubai (3000 men) and Ras al-Khaimah (1000 men) retain full operational independence.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The principal potential role of all armed forces in the United Arab Emirates is probably internal security, though they have had no exercise in that role. There is also a certain prestige value in armed forces in such a heavily armed region (especially in the case of the forces hitherto maintained by the individual member States). The United Arab Emirates can afford them, and already its forces are considerably bigger than those of Oman or Kuwait.

In terms of defence against external threats, the United Arab Emirates' foreign officials blandly refuse to identify any in the region, but there are two that probably occupy most military attention in the emirates. One is the possibility of Iranian attack — even though that would seem utterly remote so long as the present political regime survives. The other, even less plausible, would be a hypothetical American attempt to seize the Gulf oilfields in some ultimate crisis brought about by a prolonged and total oil embargo. Yet the United Arab Emirates (more precisely, Abu Dhabi) is engaged in building a small but high-quality air-defence system incorporating Mirage aircraft, Crotale and Rapier surface-to-air missiles, and an expensive network of low-level radar cover. Whether against Iranians, Americans or perhaps Iraqis, such a small defence system could not survive for very long, but it might win enough hours for someone else to come to the United Arab Emirates' aid, or at least (on the American hypothesis) to destroy the oilfields. And of course if things started going badly wrong in the Gulf, nearby States much closer to the United Arab Emirates' own size could conceivably turn into hostile regimes almost overnight.

The United Arab Emirates has no military commitments beyond its own borders. Its defence forces have never fought anybody. Some 700 United Arab Emirates' troops were sent to join the Arab League peacekeeping force in the Lebanon, at the end of the civil war in that country in late 1976.

ORGANISATION

Arms of Service

The land forces consist of one Royal Guard 'brigade', three light armoured battalions with light tanks and armoured cars, seven infantry battalions, three artillery battalions and three air-defence battalions.

Operational

The Union Defence Forces are organised in three regional commands: western, central and northern, with headquarters in Abu Dhabi, Dubai and Ras al-Khaimah, respectively.

RECRUITMENT, TRAINING AND RESERVES

Military service understandably holds few attractions for the fortunate few who are citizens of the United Arab Emirates, so a large proportion of the armed forces are foreign mercenaries, recruited principally from other Arab States (particularly Oman and Jordan), Pakistan and Britain. There are numbers of Jordanian officers; ex-Pakistani air force pilots fly most of the combat aircraft; and some rulers still show a certain preference for British officers on contract instead of 'other Arabs' who are regarded as more likely to carry infectious political diseases.

A very large proportion of the United Arab Emirates' army's rank and file, and of junior officers up to the rank of lieutenant, are from its much more populous but less wealthy neighbour, Oman. This is encouraged by the Oman government, which also attempts to retain their loyalty by lavish promises of free land and houses when they finally return home. Unsurprisingly, this causes certain doubts in the United Arab Emirates and elsewhere about the ultimate allegiance of much of the military personnel, and there have recently been United Arab Emirates' efforts to recruit more heavily in North Yemen to offset the Omani predominance in the armed forces. Following the difficulties along the United Arab Emirates-Oman border in late 1977, the armed forces, already well paid, received a 50% pay rise in early 1978.

A great many recruits come to the United Arab Emirates Defence Forces already trained and most subsequent technical training is also done outside the Emirates. Methods of training and tactical doctrines are largely on the British pattern. There is no reserve system.

A report in November, 1976 that the Ministry of Defence was drafting a law which would impose conscription on the federation's citizens, had not been confirmed at the time of writing. It is in any case unlikely to alter the federal forces' basically foreign complexion, as the Arab citizen population of the emirates — only one-fifth of the whole — numbers well under 200,000. Only full mobilisation of every fit adult male citizen would produce enough troops to man even the present armed forces; to maintain regular armed forces of that size with anything above a quarter of citizen troops is beyond the federation's demographic resources, even with conscription.

EQUIPMENT AND ARMS INDUSTRY

The ground forces have: 80 Scorpion light tanks; 125 Saladin, six Shorland and some Panhard armoured cars; 60 Ferret scout cars; and 30 Saracen and some Panhard M-3 APCs. The artillery is provided with 22 25 pounder guns, a number of 105 mm guns, and it also has 16 AMX 155 mm SP howitzers. There are also 81 mm mortars, and 120 mm RCL and Vigilant ATGWs. Air defence is provided by Rapier and Crotale SAMs. There are 200 EE-9/11 armoured fighting vehicles on order from Brazil.

Maritime forces consist of six large patrol craft and 23 smaller boats.

The air arm of the Union Defence Forces consists of 24 Mirage Vs, eight ageing Hunter ground-attack aircraft and six MB-326 counter-insurgency aircraft. There are two C-130, one G-222, four Islander, three DHC-4 and one Cessna 182 transports, and eight AB-205, six AB-206, three AB-212, 10 Alouette III and five Puma helicopters. Almost all the air forces of the federation previously belonged to Abu Dhabi. There are two G-222 and four DHC-5D transports, and 10 Mirage V fighters, on order.

There is no arms industry in the United Arab Emirates, but the State has contributed substantially to the consortium, also including Saudi Arabia, Qatar and Kuwait, which established the Arab Military Industrial Organisation in early 1975, with a founding capital of \$1,040,000,000. The intention is to build advanced weapons for all the Arab countries in factories located in Egypt, using Gulf money, Egyptian skilled labour, and European designs and technical guidance. In late 1976 the first tentative deals with France for building Mirage aircraft in Egypt were announced, while the consortium was renamed the Arab Organisation for Industrialisation and reportedly had its capital increased to \$4,000,000,000.

RANK, DRESS AND DISTINCTIONS

These follow the British style which prevailed in the Trucial States before independence.

CURRENT DEVELOPMENTS

There seems little chance that the United Arab Emirates' armed forces will be called on to fight anybody in the near future.

World Armies

The perceived Iranian threat was probably always a mirage, and is certainly now not such a major fear in the emirates. Invasion from any quarter is most improbable, and internal security is unquestionably the first priority.

In fact, the extraordinary population structure of the State makes subversion a fairly unpromising enterprise. The large majority of residents who are foreigners from a wide variety of cultures and backgrounds are most unlikely to be susceptible to the sort of revolutionary blandishments that might appeal to citizen Arabs — a comment that applies equally to the armed forces. As for the indigenous population, they are extremely prosperous, and are closely bound to the ruling families in what are, after all, very small communities.

In any case, the main supporter of attempts to sow revolutionary seed in this fertile soil, the PDRY, is being gently dissuaded from such enterprises by Saudi Arabian subsidies.

The Aden-based Popular Front for the Liberation of the Occupied Arab Gulf, later renamed PFL Oman and the Arab Gulf, and still later in July, 1974 sub-divided into country-by-country organisations, of which that aimed at the United Arab Emirates was given the title National Front for the Liberation of the Arab Gulf (NFLAG), had never in any case got anywhere in the sheikhdoms. With the emergence of Saudi Arabia as a more active and flexible diplomatic actor under King Khalid, and the new Riyadh strategy towards South Yemen that emerged, this organisation may eventually be allowed simply to fade away by its sponsors in Aden.

If, despite all this, things should start to become unstable in the United Arab Emirates, its own defence forces are only the first of three lines of defence for the regime. Neither Iran nor Saudi Arabia would tolerate revolutionary change there, and both would intervene to prevent it — the order of precedence being fairly certainly Saudi Arabia first, with massive Iranian intervention only if the Saudis should somehow fail to restore the *status quo*.

There is a sort of domino theory about the stability of all the conservative States around the Gulf which is most strongly espoused by their own governments. With so much at stake, it is most improbable that a revolutionary movement could successfully establish itself in any of the small Gulf States without first capturing one of the larger neighbours who stand ready to crush any such outbreak.

The more immediate concern in 1978 was for the internal cohesion of the federation. Sheikhly rivalries continue unabated, and the crisis over the command of the federal armed forces between Dubai and Abu Dhabi in February, 1978 (*see* Command and Constitutional Status) underlined the fact that no real military integration has yet been achieved. Ras al-Khaimah's independent course, which has brought it into serious territorial dispute with neighbouring Oman, nearly led to a military confrontation in November, 1977 when the latter's army and navy took active measures to curtail Ras al-Khaimah's activities in the disputed border and offshore regions. The United Arab Emirates' President's support of Oman's claims defused the confrontation, but further embittered relations between Abu Dhabi and Ras al-Khaimah; it is difficult to see how he could have done otherwise, in view of Iranian support for Oman and the predominance of Omani mercenaries in the ranks of the United Arab Emirates' armed forces, but it augured ill for the attempts that are underway to achieve greater integration.

A further unsettling factor was Iranian—Saudi Arabian rivalry for influence within the United Arab Emirates. Abu Dhabi and the small emirates have strong ties with Riyadh, whereas Iranian influence has always been powerful in Dubai. The latter was the only real town in the region before oil was discovered, a trading town of cosmopolitan make-up and outlook whose large merchant class was predominantly Iranian, and 'Arabism' has never been very important there. The conflicting influences were clearly seen at work during the recent crisis over the appointment of the Emir of Abu Dhabi's son to the post of Commander-in-Chief of the Armed Forces: the Saudi Arabian Defence Minister sent a message of congratulations to the new appointee, while the United Arab Emirates' own Defence Minister, the son of the Emir of Dubai, immediately went to Tehran for consultation and consolation. While it is unlikely that either outside power would encourage its clients to pursue policies which could lead to the actual disintegration of the federation, their rival influences certainly do impose a further serious strain on the fragile cohesion of the United Arab Emirates.

GWYNNE DYER

UNITED KINGDOM

HISTORY AND INTRODUCTION

The Regular Army has always occupied a rather anomalous position in British society. Since the formation of a permanent force over 300 years ago it has owed allegiance to the monarch while being effectively controlled by politicians who traditionally regard its existence as unconstitutional and a potential threat to civil liberties. It has always been reduced in size alarmingly during periods of peace — a process which continues today — yet has proved flexible enough to absorb and train large numbers of recruits, whether volunteers or conscripts, during times of national emergency. It has contained within its ranks all the latent conflict of the British class-structure, drawing its officers from the landed gentry and its soldiers from the lower orders, for much of its history, yet has never interfered in the politics of the State nor shown the slightest sign of class hostility. It has a tradition of conservatism in its tactical thinking, invariably fighting the first battle of a war on lessons drawn from the preceding conflict, but has not lost a major war since 1783. Finally, it has been despised in the folk-memory of the country, but now enjoys an enviable reputation as one of the most professional and capable armies in the world.

Some of the reasons behind this picture of confusion date back to the emergence of the army in the late seventeenth century. Up to that time it was widely felt that England had no need for a standing force, being adequately protected against external attack by the navy and internal trouble by locally raised, part-time militia units. Any move towards the establishment of permanent forces, it was argued, could only be for the purposes of political or religious repression, as indeed had been the case during the Civil War and its aftermath in the 1640s and 1650s. Thus, when the raising of standing regiments became a necessity with the beginnings of empire in the 1660s, the units were treated with considerable wariness and accepted by Parliament only on condition that they should never be stationed in England. Unfortunately James II (1685–8) ignored this stipulation, openly building up his army for use in the suppression of his religious and political opponents. Parliament took fright and, after engineering the King's deposition, made sure that his successors, although remaining as titular head of the army with some effective power, should enjoy no independent control of military forces. By the Declaration of Rights (1689) two important constitutional checks were imposed upon the monarch when Parliament took over responsibility for the cost and discipline of the army. Thereafter, if the force should ever be regarded as too large for public safety or politically dangerous, the House of Commons could refuse to vote money for its upkeep, which would lead to an immediate reduction, or to renew the annual Mutiny Act, which would oblige the King to disband an army thus freed from the strictures of discipline. As a further safeguard, the gradual introduction of purchased officer commissions ensured that men who invested their fortunes in the army were unlikely to upset the *status quo* by moving against either Parliament or the monarch for fear of losing their money.

This pattern of close political control of military affairs has continued to the present day, for although the purchase system disappeared in the 1870s, it is still the responsibility of Parliament to pay for the army, through the annual Defence Estimates, and to renew its terms of discipline, through the Army Act. Many commentators agree that it is this, above all else, that has successfully prevented military interference in the politics of Britain over the last 300 years. It should be added, however, that the same political control has often led to a dramatic fall in military efficiency, particularly during periods of peace, as Parliament has used its financial powers to reduce the size and cost of a basically distrusted force, augmenting it hurriedly in time of crisis.

The effects of this constant process of reduction and expansion may be seen throughout the army's history. They were at their worst between 1689 and 1870, as the army took on the roles which have shaped its development. During this period Britain was involved in major wars with European neighbours for about 80 years, and while they were going on the politicians did not starve the army of funds, enabling it to perform some remarkable feats of military skill. Under the Duke of Marlborough, particularly between 1704 and 1709, British soldiers placed themselves firmly on the map by defeating the most professional armies of the day, and their main battle-honours — Blenheim, Ramillies, Oudenarde and Malplaquet — still feature proudly on many regimental colours. One hundred years later the Duke of Wellington proved himself a natural successor to Marlborough, leading his troops to a new string of victories in the Iberian Peninsula between 1808 and 1814. His career, and with it the reputation of the British regular forces, reached its height with the defeat of Napoleon at Waterloo in 1815; a victory which was to be exploited by the politicians until the early campaigns of the Crimean War (1854–6) called their bluff by showing how inefficient the army had become. Meanwhile, during the eighteenth century an empire was gained — in America, Canada, the West Indies, the Mediterranean and parts of India — almost entirely through the exploits of British regiments, and although the colonies in America were lost between 1775 and 1783, enough remained elsewhere to lay the foundations of Britain's maritime trade. These foundations were built upon during the Revolutionary and Napoleonic Wars (1793–1815), particularly in the West Indies and southern Africa, while the early decades of the nineteenth century saw a large-scale expansion of British interests in India, again in the wake of military action. Finally, in

World Armies

both the eighteenth and early nineteenth centuries, it was regular regiments which protected the homeland itself from invasion, even bringing the enemy to decisive battle within the country in 1746.

But as each war or national crisis ended, so did the flow of money, and for well over half the period in question the army had to put up with cuts of alarming proportions, often being reduced to a third of its strength as soon as hostilities ceased. This had a number of detrimental effects. Within the army itself it led to a dangerous lack of interest in military affairs, particularly among the officers. Although competent and dedicated men undoubtedly existed, there were many who abused their positions. Commissions were purchased, often at inflated prices, purely as investments; officers absented themselves from duty or exchanged commissions with others less fortunate, simply to escape an unattractive posting; there was little attempt at tactical innovation or anything more than basic drill within the regiments. In short, the army stagnated during periods of peace, despite the reforming zeal of people such as the Duke of York who, as Commander-in-Chief between 1795 and 1827, tried desperately to stop absenteeism and purchase-abuse, even introducing a form of officer training when in 1802 the Royal Military College was opened under his auspices at Sandhurst. When such reforms were destroyed in the apathy of peace, the army quickly gained a reputation within society which lasted, in essentials, until the early years of the present century. The officer-class was widely regarded as amateurish, treating military service as an imposition while enjoying the social rewards of army life; the rank and file, obliged to join the service for terms limited only by death or old age, were despised as the very dregs of society. Little wonder that to enlist as a soldier was seen as the last resort before starvation and that the army during these periods of peace reached its nadir in both size and efficiency. Unfortunately this was the picture of military life which became etched in the folk-memory of Britain; a picture which was to remain at least until World War I, if not beyond.

Responsibility for improving this situation lay ultimately with the politicians, who had to be forced to recognise that the army was not merely a weapon to be ignored until a war broke out. Fortunately such a process took place between 1870 and 1914, beginning with a realisation that the army, heavily committed to the protection of a widespread empire, did not have the manpower resources or organisation to take part in a European war. The muddles and confusions of the Crimea showed how difficult it was to get an effective force into the field, while the growth of Prussian militarism, chiefly in the 1860s, implied that even if British soldiers appeared on the continent, they were going to be outclassed. The immediate reaction to the problem was to concentrate forces in Britain by withdrawing all those in white colonies, leaving the settlers to look after their own defence, but it soon became clear that this could only be a short-term solution. Consequently, between 1870 and 1881 a series of reforms were introduced by Edward Cardwell, Gladstone's Secretary of State for War, which altered the army and its organisation to a remarkable extent. The purchase system was abolished, short-term enlistments for private soldiers were introduced (consisting of 12-year engagements, six to be spent with the colours and six with the Reserve), and all infantry regiments were affiliated to local areas and reserve formations in Britain for the purposes of recruitment, the area name becoming a part of the regimental title. In addition, each infantry unit was re-organised to consist of two battalions, one of which was to be abroad, policing the Empire, while the other was at home, fostering local connections and ready to fight in Europe if the need arose. The scheme as a whole was a considerable success. Men who before had not joined the army because of its unattractive terms of service, now came forward, usually to join the unit affiliated to their area of Britain; a capable Reserve force, allied closely to existing Regular formations, was formed from the old militia units and the more recent Rifle Volunteers, raised in the late 1850s; and, perhaps most important of all, a regimental system grew up in which officers no longer put their own convenience above their military careers and intense feelings of loyalty to a particular unit and its recruiting area were engendered. This, more than anything else, was to sustain the bulk of the army through the traumatic experiences of the twentieth century.

The reforms could not end there, however, for regardless of Cardwell's success in counteracting many of the old abuses, the army was still not prepared for modern war. The chief weakness lay in the field of command and administration, where the traditional political mistrust of militarism had long prevented the development of a General Staff, charged with advising the government on the preparedness and capabilities of the army in any given situation. This deficiency became obvious during the early disasters of the South African War (1899–1902) and reforms were quickly introduced. As early as 1902 a Committee of Imperial Defence was set up to co-ordinate military and naval policy-making at Cabinet level, and two years later Lord Esher, Chairman of a special War Office (Reconstitution) Committee, re-organised the whole administrative structure, centralising executive processes under the Secretary of State for War and introducing a General Staff. The scheme took until 1908 to finalise, by which time Lord Haldane as Secretary of State had come forward with more new ideas. Taking the Cardwell reforms as a base, he went one stage further by creating from the units stationed in Britain a coherent fighting force of two army corps (six infantry divisions) with a supporting cavalry division, ready to move into Europe as soon as a war developed. This British Expeditionary Force (BEF) was composed entirely of Regular formations, but as a back-up to them Haldane reorganised the Militia and Volunteer units into a new Reserve force — known as the Territorials — consisting of 14 self-supporting divisions. The modernisation of the army was complete.

This was just as well, for in August, 1914 Britain entered a conflict which was to stretch her military resources to the limit. At first, all appeared to go according to plan. The BEF was committed to Europe within a fortnight of the declaration of war, while Territorial units moved onto a war-footing, with some relieving Regular formations in the colonies. But Haldane's reforms had catered for campaigns of short duration only, and when the BEF was virtually wiped out at the battles of Mons and 1st Ypres in 1914, being replaced initially by the other Regular regiments and then, as casualties continued to mount, by the Territorials in 1915, a manpower shortage arose. To a certain extent this had been foreseen by

Lord Kitchener who, when appointed Secretary for War at the outbreak of hostilities, had made an appeal for civilian volunteers which rapidly produced over 1,000,000 men, but they were untrained and, at prevailing rates of loss, could not be regarded as sufficient. The government had little choice except conscription — a method of recruitment without precedent in the history of Britain's standing army — and in January, 1916 the process began with a selective call-up of unmarried men between the ages of 18 and 30. At the time it was hoped that the decisive campaign of the war would take place on the Somme in the summer of 1916, so relatively few of the conscripts were trained, but when the Somme offensive resulted in the wholesale destruction of Kitchener's volunteers for little territorial or military gain (the casualty list for July 1st, 1916 alone being over 60,000, of whom 20,000 were killed) there was nothing else left. As the war dragged on into 1917 and 1918, casualty figures mounted and the net of conscription widened, eventually taking all fit males between 18 and 41, married as well as unmarried, until, when hostilities ceased, the army mustered nearly 6,000,000 men — its highest level ever. With such a force the enemy had eventually been beaten, not only in Europe but also in the Middle East, where Allenby conducted one of the few campaigns of brilliance to defeat the Turks, but the cost was exceptionally heavy, the final casualty figure standing at 745,000 killed. In such circumstances the British public, particularly in those towns and cities which had contributed so eagerly to the short-lived Kitchener battalions, was quite content to let the old pattern re-emerge and the politicians dismantle the military machine as soon as peace was restored.

The process of dismantlement was as complete as any that had occurred before in the aftermath of war. Conscription — never popular with the people — was ended as early as December, 1918 causing the army to dwindle in size dramatically, regardless of the fact that its peace-time commitments had increased, initially with occupation duties in Germany and then with responsibility for the ex-German and Turkish colonies placed under League of Nations' mandate. In addition the government introduced a 'Ten-Year Rule' in 1919, specifying that defence-spending was not to be increased beyond prevailing levels as war in Europe was unlikely to reoccur in the next 10 years. This was all very well in 1919, but the rule was renewed, on the same ten-year reckoning, every year until the mid-1930s, causing a stagnation within the army which was reminiscent of the early-nineteenth century. By 1922 the force had been reduced to a mere 250,000 men; the Territorials had been re-organised and severely cut back; and the supply of new equipment had virtually ceased. This latter point was important, for during World War I Britain had led the world in the development of armoured warfare, and two men — Major-General J. F. C. Fuller and Captain B. H. Liddell Hart — had produced, or were to produce during the inter-war period, brilliantly viable theories on the use of armour which failed to make much impact upon the army, chiefly because the necessary equipment was not made available. The theories were taken up instead by the Germans, with devastating results.

For once, however, Britain was forced to recognise the parlous state of her defences before the peace-time period ended, when the Munich Crisis of 1938 jolted politicians into realising that another war with Germany was inevitable. Between then and the outbreak of hostilities a year later, the army was hurriedly prepared: the Territorial force was doubled in size; a degree of mechanisation was introduced, substituting tanks for the horses of the Regular Cavalry and their Yeomanry reserve; and, for the first time, a form of peace-time conscription was established, applicable to both unmarried men and women between the ages of 18 and 25. As a result, the army was large enough to take on the commitments of war in September, 1939 but, like so many times before, lacked the sustained training for immediate or easy victory. The string of initial defeats was long: in Norway and France in 1940 British soldiers had to retreat before the German onslaughts; in the north African desert, despite a brilliant campaign by O'Connor which routed the Italians in late 1940, the battles were long and hard for little appreciable gain, at least until 1942; in the Far East the Japanese attacks of late 1941/early 1942 swept all before them. It was not until the vast industrial and manpower resources of the United States had been committed to the British cause that the tide began to turn, and even then the road to final victory was hard. In north Africa it took Montgomery's victory at Alamein (October, 1942) and a seaborne invasion of Algeria (Operation *Torch* of November, 1942) to trap the German Afrika Korps between two advancing fronts. Elsewhere in the Mediterranean theatre, despite the surrender of Italy in 1943, it took until 1945 for the enemy to be decisively beaten, while in Europe the D-Day invasion (Operation *Overlord* of June, 1944) and the subsequent drive into the heart of Germany necessitated a commitment of men and material hitherto undreamed of. Finally, in the Far East, despite Slim's successful campaign in Burma in 1944/5, the Japanese did not surrender until atomic bombs had been dropped in August, 1945. The war had been total in almost every sense, and the British army, although ultimately victorious, had been incapable of defeating the enemy on its own in any theatre. The lesson was apparent: if the army was to be an effective influence in the post-war world it had to be allied to other, more powerful forces, preferably those of the United States, while maintaining its size and war-time efficiency. In 1945, there was to be no massive politically inspired reduction or return to the usual peace-time pattern.

The fact that the government accepted this new state of affairs was understandable from a purely practical point of view. In 1945 the army was being called upon not only to resume its pre-war colonial policing role, but also to establish large occupation forces in Europe and the Far East. In addition, with the Russian advance deep into Eastern Europe during the war, a new potential enemy had appeared, necessitating the maintenance of some form of instant fighting capability: a factor which led in 1949 to the establishment of the North Atlantic Treaty Organisation (NATO), with Britain, as a founder member, promising military contributions to a standing force in Western Europe. Such large commitments naturally required large numbers of men, and for this reason conscription had to remain, changing its name in 1948/9 to National Service, whereby all fit males aged 18 were obliged to do 2 years' Regular service, followed by 3 years in the Reserve. The troops were certainly needed, not only in Europe but also in the large numbers of colonies and mandated

World Armies

territories which had emerged from the war intent upon achieving independence from British rule. In many cases the eventual transfer of power was relatively easy, but elsewhere the local people could not wait for the political process to take its course, and the army had to be called upon to keep the peace. A series of campaigns — in Palestine (1945–8), Malaya (1948–60), Kenya (1952–60) and Cyprus (1955–9) — saw both volunteer and conscript soldiers learning techniques which were to help make the army one of the most adept in the world at counter-insurgency. At the same time, through its contribution to the United Nations' force in Korea (1950–3), the same army was continuing to gain experience of large-scale conventional war.

Nevertheless, the maintenance of such massive military forces could not continue indefinitely. National Service was intensely unpopular among a people bred in the tradition of anti-militarism, the cost was enormous, and, as Britain withdrew from her Empire, the army's commitments diminished, while the country itself declined as a world power. The extent of this decline was shown in 1956, when, despite a successful air and seaborne invasion of Egypt, designed to re-open the Suez Canal to international trade, Britain was forced to step down and withdraw her forces through economic pressure from the United States. In such circumstances a full-scale re-assessment of British defence policy was clearly called for, and this took place in 1957. Recognising the fact that as Britain no longer enjoyed a great deal of influence in world affairs, she no longer needed large armed forces, the politicians ordered a phasing-out of National Service and a drastic re-organisation of the army. The last conscript did not in fact complete his service until 1963, but by that time dramatic and far-reaching changes had taken place. Regiments were amalgamated (with some disappearing altogether) in order to cut down to the size of an all-volunteer force; the army was geared to a potential rather than a presence east of Suez; and Britain's commitment to NATO was afforded top priority, with the development of weapons and equipment for conventional war in Europe. In general terms, this has remained as the shape of British defence policy ever since, and although counter-insurgency operations have continued to arise — in Borneo (1963–6), Radfan and Aden (1964–7) and, of course, Northern Ireland, where they still go on — the British Army of the Rhine (BAOR) maintains priority. The army may be small, mustering only 172,500, but it is well-trained for its commitment to Europe and enjoys one of the best records in the world for successful counter-insurgency. It has certainly not fallen into the usual peace-time trap of complacency and stagnation since 1945, although how far its efficiency can be maintained in the face of constant economic pressure must be a subject of some speculation.

STRENGTH AND BUDGET

Population: 56,600,000

Army: 172,500 Regular Army, 110,000 Regular Reserves and 60,100 Territorial Army and Volunteer Reserve (TAVR)

Estimated GNP (1976): \$224,500,000,000

Defence expenditure (1977–8): \$6,330,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

Supreme responsibility for national defence lies with the Prime Minister and the Cabinet, who are responsible for their actions to Parliament as a whole. The formulation of defence policy is the responsibility of the Secretary of State for Defence as political head of the Ministry of Defence (MOD), an administrative department set up in 1964 to co-ordinate control of all three armed services — navy, army and air force — as well as the procurement of defence equipment. The Secretary of State is assisted by a Minister of State and by three Under-Secretaries of State for the Navy, Army and Air Force, respectively. They, together with the Chief of the Defence Staff, the three Chiefs of Staff, the Chief of Personnel and Logistics, the Chief Scientific Adviser, the Chief Executive of the Procurement Executive and the Permanent Under-Secretary of State for Defence, form the Defence Council, which deals with major defence policy under the chairmanship of the Secretary of State. The Chiefs of Staff Committee, comprising the Chief of the Defence Staff as chairman and the three Chiefs of Staff, is responsible for giving professional advice on strategy and operations. The day-to-day management of the army is the responsibility of the Army Board of the Defence Council.

Constitutional Status

Theoretically the monarch is still the head of the army, and it is to H.M. Queen Elizabeth II that all serving personnel swear allegiance. This is undoubtedly a contributing factor to the army's continuing non-interference in the politics of the State, but in practical terms its significance is slight. So far as Parliament is concerned, the army is still subject to the restraints imposed in 1689, and the annual Defence Estimates and Army Act repeatedly stress the civilian control of military affairs and reinforce the traditional idea that a standing force is maintained on sufferance only.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

The basic role of Britain's armed forces as a whole is to contribute to the defence of Europe, primarily against possible Soviet or Warsaw Pact aggression. This naturally entails contributions to the deterrent capabilities of NATO, with Britain playing an important part in the efforts of her European partners to assume, through closer co-operation, an increasing responsibility for Western defence. The army's first and most important role must therefore lie within Europe, defending the continent in co-operation with the NATO allies.

But other roles also arise. Chief amongst these is home defence, not merely against external attack, which is covered to a great extent by NATO, but more importantly, against internal trouble, of which the army's commitment to Northern Ireland is a prime example. In addition, six residual overseas responsibilities remain — Gibraltar, Hong Kong, the sovereign bases in Cyprus, Brunei, Belize (British Honduras) and the Falkland Islands — requiring the army to retain at least a capability in its traditional colonial policing role. Finally Britain's support for the United Nations occasionally necessitates military contributions to peacekeeping operations, chiefly in Cyprus.

Commitment

In line with role priorities, the army's main commitment is to NATO, with 55,000 troops comprising BAOR in northern Germany, and certain reserve formations earmarked for reinforcement duty, probably on the flanks (Norway or the Mediterranean), in the event of European war. Beyond NATO, Britain is a member of the Central Treaty Organisation (CENTO) and the South-East Asia Treaty Organisation (SEATO), as well as a participant, with Australia, New Zealand, Malaysia and Singapore, in the Five-Power Defence Arrangements of 1971, designed to protect Malaysia against further communist aggression. The last-mentioned agreement was the only one actually to involve a commitment of troops (with Australia and New Zealand a special ANZUK force was formed) but Britain's contribution has since lapsed. In fact, although Britain is still responsible for the defence and internal security of her remaining dependencies (leading to the maintenance of troops in Brunei, Hong Kong, Cyprus, Gibraltar and Belize), the vast majority of the army is now stationed in the United Kingdom (including Northern Ireland) and Germany.

Deployment

United Kingdom (United Kingdom Land Forces — UKLF):

1. United Kingdom Mobile Force (UKMF): 6th, 7th and 8th Field Forces, including regular infantry and parachute battalions.
2. ACE Mobile Force (Land): one battalion group; one SAS regiment (less one squadron), and one Gurkha infantry battalion.
3. HQ Northern Ireland: three infantry brigade HQs; one armoured reconnaissance regiment and three squadrons; about 10 battalion-size units in an infantry role; one SAS, three engineer and two army aviation squadrons.

Germany

1. British Army of the Rhine (BAOR): one corps HQ, three divisional HQs, five armoured brigades, one mechanised brigade and two artillery brigades; total 55,000 men.
2. Berlin: one infantry brigade (including one parachute battalion); total 3000 men.

Brunei: one Gurkha battalion.

Hong Kong: One brigade with one British and three Gurkha infantry battalions, one engineer squadron, and support units (garrison to be reduced to four battalions; total now 8000 men).

Cyprus: One infantry battalion (less two companies), one armoured reconnaissance squadron with United Nations Force in Cyprus (UNFICYP), one infantry battalion, two infantry companies and one armoured reconnaissance squadron in garrison in Sovereign Base Areas.

Gibraltar: One infantry battalion.

Belize: One infantry battalion group.

N.B. The organisation of the army is in the process of being considerably altered, with the elimination of the brigade as a level of command. BAOR is to have four armoured divisions, one artillery division and a new infantry formation, known as 5th Field Force. In April, 1978 UKLF (excluding Northern Ireland) was reorganised to consist of 6th Field Force (five battalions, including one parachute battalion group), 7th Field Force (including regular, TAVR and reservists, and a number of separate units) and 8th Field Force (including regular and TAVR units earmarked for home defence.) Units in Hong Kong will form the Gurkha Field Force. (See later for further details.)

Recent Operations

Since 1945, with the exceptions of Korea (1950–3) and Suez (1956), British army combat experience has been exclusively in

World Armies

the field of counter-insurgency. Beginning with Palestine in 1945 — a campaign which continued until 1948 — British soldiers have operated against insurgent organisations in Malaya (1948–60), Kenya (1952–60), Cyprus (1955–9), Radfan and Aden (1964–7) and Borneo (1963–6), and are currently involved in Northern Ireland (since 1969). In many ways the techniques adopted have differed little from those used in the colonial policing activities of the nineteenth and early twentieth centuries, but the close civil–military co-operation and excellent intelligence work which have characterised the army's conduct up to the present day have ensured a degree of success not enjoyed by other countries. Despite a recent resurgence of communist activity in Malaysia and a less-than-total destruction of insurgent organisations in Palestine, Cyprus and Aden when the various campaigns ended, the army has achieved enough to earn a description as one of the best counter-insurgency forces in the world. How far this has undermined its effectiveness in conventional warfare, however, is a subject of speculation, particularly now when units of BAOR spend a great deal of time training for, and serving in, Northern Ireland.

ORGANISATION

Arms of Service

Taking Regular and TAVR units together, the army comprises:

1. Royal Armoured Corps: 14 Regular armoured regiments; five regular and two Yeomanry (TAVR) armoured reconnaissance regiments.
2. Royal Artillery: Two Regular SSM regiments, two Regular SAM regiments, 22 other Regular regiments and five TAVR regiments.
3. Royal Engineers: 13 Regular regiments and seven TAVR regiments.
4. Royal Signals.
5. Infantry: Nine Guards battalions (Regular), 38 Regular infantry battalions and 38 RAVR infantry battalions.
6. Paratroops: Three Regular battalions and three TAVR battalions.
7. Gurkhas: Five Regular Infantry battalions with supporting services.
8. Special Air Service: One Regular regiment and two TAVR regiments.
9. Army Air Corps: Six Regular squadrons.
10. Royal Army Chaplains Department.
11. Royal Corps of Transport.
12. Royal Army Medical Corps.
13. Royal Army Ordnance Corps.
14. Royal Electrical and Mechanical Engineers.
15. Royal Military Police.
16. Royal Army Pay Corps.
17. Royal Army Veterinary Corps.
18. Small Arms School Corps.
19. Royal Army Educational Corps.
20. Royal Army Dental Corps.
21. Royal Pioneer Corps.
22. Intelligence Corps.
23. Army Physical Training Corps.
24. Army Catering Corps.
25. Queen Alexandra's Royal Army Nursing Corps.
26. Women's Royal Army Corps.
27. Ulster Defence Regiment (TAVR): 11 battalions.

All the former Cavalry regiments are now represented within the Royal Armoured Corps, having been equipped with armour just before or during World War II. Horsed squadrons are maintained by the Household Cavalry (Life Guards, and Blues and Royals) for ceremonial duties, chiefly in London. Fifteen Cavalry regiments — the result of a series of amalgamations — still exist, retaining their old titles of Dragoon Guards, Hussars or Lancers, and they join four units of the Royal Tank Regiment to make up the Regular RAC formation. The old Yeomanry regiments — raised initially during the Revolutionary and Napoleonic Wars as a part-time cavalry reserve — are now represented by a mere two 'big' regiments — made up of squadrons drawn from different parts of the country — in the armoured role. Two other Yeomanry regiments do still exist, but are trained and equipped for infantry duties.

The 38 Regular Infantry battalions are all that remain of 110 such units which existed before the Cardwell reforms of the 1870s. These units — numbered 1–109 with the Rifle Brigade unnumbered — were reduced to 69 regiments by Cardwell, chiefly through a process of amalgamation, e.g. the 37th and 67th Foot became 1st and 2nd Battalions, The Hampshire

Regiment. The advantages of this regimental system were two-fold: on the one hand it created a body to which both officers and men could feel intense loyalty; on the other, each individual regiment could act as a base upon which any number of battalions might be built up. At no time was the regiment as such a fighting unit, but during periods of crisis the number of battalions taking the name, and with it the loyalty and traditions of that regiment, could be immense. Thus, although in 1914 the Hampshire Regiment already mustered 1st and 2nd Regular battalions as well as 3rd (Special Reserve), 4th, 5th, 6th, 7th, 8th and 9th (Territorial) battalions, the Kitchener volunteers and later the conscripts of World War I could be organised into further battalions, numbered 10th onwards. This system proved its worth during both World Wars and has been maintained, in essentials, ever since, creating a continuity of tradition which even the drastic amalgamations of the 1950s and 1960s — actions which helped reduce Cardwell's 69 regiments to the present-day 38 battalions — could not destroy. However, although certain TAVR infantry battalions still 'belong' to a parent Regular unit, the many changes which have affected the army since 1958 have resulted in some being organised as separate entities, with others tracing their history through the Yeomanry Cavalry!

The five Gurkha battalions are all that remain of the pre-1947 Indian Army. Recruited in Nepal with both their own and British officers in command, they constitute four Regiments of Infantry (one of which has two battalions) with separate Engineer, Signals and Transport services. The majority of the units are stationed in the Far East.

Operational

The chief operational command in the British army is 1st British Corps (BAOR) in northern Germany. At the moment it is in a state of change as a result of the 1974–5 Defence Review, the details of which are still being implemented. Before the Review, this corps consisted of three divisions (numbered 1, 2 and 4) made up of five armoured brigades, one mechanised brigade, two artillery brigades (one conventional and one nuclear) and a separate brigade in West Berlin. By the reorganisation now being put into effect the command level of the brigade (and with it the rank of brigadier) is to disappear and the British troops outside Berlin reallocated to a total of four armoured divisions, an artillery division and an infantry field force. The number of men stationed in Germany (55,000) will not change, but certain specialist functions hitherto enjoyed by all armoured and mechanical units (notably reconnaissance and anti-aircraft defence) are to be centralised in appropriate formations and parcelled out to individual divisions as the need arises. This scheme is basically an economy measure, designed to help cut the army by 15,000 men through the dismantling of brigade staffs, but it does balance the teeth-to-tail ratio of 1st British Corps and could lead to greater tactical flexibility as the corps commander will have an increased number of separate formations at his disposal.

The reorganisation will also have its effects elsewhere. In Britain itself, although the troops in Northern Ireland will be untouched, the three brigades of UKLF will be altered to form a further three field forces and the Parachute Brigade will disappear altogether, leaving one parachute battalion only in the jumping role. In Hong Kong, when the garrison has been cut to four battalions (all of them Gurkha) a special self-supporting Gurkha Field Force will be formed. Elsewhere abroad, the army will continue as before, with individual units coming under local command structures during their tours of duty.

RECRUITMENT, TRAINING AND RESERVES

Recruitment

The army consists entirely of personnel serving on a voluntary basis. Those wishing to hold a commission, whether entering from civilian life or through the lower ranks, are chosen by a Regular Commissions Board (RCB) which assesses their aptitude and educational qualifications over a three-day period. If successful, applicants may opt for short-, medium- or long-term engagements, receiving initial training at the Royal Military Academy (RMA) Sandhurst (see later). Engagements available to non-commissioned ranks range from 3 to 22 years, with a wide freedom of choice on the length and terms of service. In 1972 a new type of engagement was introduced for non-commissioned ranks, under which recruits are committed for a minimum period of productive service only (about 3 years) and, subject to that minimum, may leave at any time at 18 months' notice. Discharge may also be granted on compassionate grounds, by purchase, or on the grounds of conscience, for which there is an independent tribunal to assess cases.

Recruitment to the TAVR is usually done on a local basis, with terms of service in the non-commissioned ranks similar to those for the Regular army. Officers for the TAVR are usually chosen from within the units, although Regulars are sometimes posted in for training and administrative purposes. It is also possible for a Regular officer to transfer his commission to the TAVR when his term of regular service ends.

Training

Since 1972 all initial officer training has been carried out at RMA Sandhurst. Successful applicants for Regular commissions, regardless of the length of their prospective engagements, enter the Academy at one of three dates during the year, receiving basic training in a Standard Military Course (SMC) which lasts approximately 6 months. All who survive this course are then commissioned as second-lieutenants, and those who have opted for a short-term engagement join their

World Armies

units. Those who wish to receive a permanent (long-term) commission, however, remain at the RMA for a further 6 months on a Regular Commission Course (RCC) consisting mainly of academic work in disciplines designed to lay a foundation of knowledge which can be built upon during their future careers. Upon completion of RCC the officers join their units, but their academic training is not over. A few may go on to civilian universities, a number in the more technical arms are sent to the Royal Military College of Science at Shrivenham to do a degree course, and all are expected, through a Progressive Qualification Scheme (PQS) to pass written examinations, as well as practical aptitude tests, to rise from lieutenant to captain and captain to major. The results of these examinations, together with aptitude assessments, then determine whether the officer, upon attaining the rank of major, should attend the Staff College, Camberley, where an annual course, as the name implies, prepares students for staff duties and higher rank.

In addition, a proportion of officers are recruited directly from civilian universities upon graduation and others are sent to university as civilians on an army grant which obliges them to serve a minimum period (usually 5 years) after graduation. In both cases a six-month course at the RMA has to be attended before they join their units, and although their degrees can lead to exemption from some PQS examinations, these officers have to follow the same road as non-graduates to high rank. A short course at the RMA is held each year for TAVR officers, but their future rise through the commissioned ranks does not include attendance at Staff College.

Soldiers enlisting in the non-commissioned ranks receive basic military training at the central depot of their units, and may attend more specialist courses later in their careers. Most training, however, for both Regular and TAVR personnel, is done by the individual regiments on an internal basis. Some Regular soldiers, recruited at the age of 16, may join through the Army Apprentices College for technical arms, or the Junior Leaders Regiment for Royal Armoured Corps or Infantry. In either case these soldiers are regarded as future non-commissioned officers within their units.

Reserves

The army possesses two reserve forces. All officers and men, assuming they are still fit, are transferred to the Regular reserve upon completion of their Regular service, and are expected to be prepared to rejoin their units in an emergency. Their usefulness is obviously restricted to a certain time after the end of their Regular engagement, as they receive little additional training, but there are over 100,000 such men available, acting as a significant reserve potential. The Territorial Army and Volunteer Reserve (TAVR), on the other hand, is made up of soldiers who receive continuous training on a part-time basis, and although they muster 54,000 only, they are now capable not only of acting as a base upon which expansion could take place, but also as a direct reinforcement to the Regular army. One of the results of the 1974–5 Defence Review was, in fact, a complete assimilation of the TAVR into the Regular force — it had tended before to be rather an appendage — with all TAVR units being assigned to one of the three field forces in Britain, prepared to be sent as a direct reinforcement to BAOR or to remain in the home defence role. Those assigned to BAOR now receive the same types of training and equipment as Regular units and have attained a very high standard of military skill, despite the restrictions inherent in their part-time nature.

EQUIPMENT AND ARMS INDUSTRY

Britain possesses a thriving arms industry, catering for both internal and export use. Responsibility for internal procurement (i.e. research, development and production) of defence equipment lies with the Procurement Executive within the Ministry of Defence, set up in 1971 to establish a closer liaison between the service users and the machinery for procurement, closer co-ordination with civilian industry in the formulation of programmes, and stronger and more accountable management.

The major part of research is undertaken by the Ministry of Defence's research and development establishments, but the Ministry also sponsors a substantial amount of research by industry and the universities. This requires a high initial investment — in 1975–6 the total cost of British equipment research and development was estimated at £554,000,000 — so attention has recently been concentrated upon more collaborative projects, particularly with NATO allies, which enable the cost of development and production to be shared. Examples of such collaboration range from the Tornado combat aircraft (developed by Britain, Italy and West Germany) to such Anglo-French projects as the Martel air-to-surface missile, and the Puma and Gazelle helicopters. Nevertheless, the importance of maintaining a sound national industrial base for defence procurement is recognised, and there is close consultation between government and industry both in the National Defence Industries Council and through other specialised machinery.

Following the development of defence equipment, either nationally or in co-operation with allies, production is usually undertaken by private industry on a contract basis or by the Royal Ordnance Factories. A Defence Sales organisation provides support, assistance and advice to British industry and the Royal Ordnance Factories in promoting the sales of defence equipment overseas. In 1975–6 the value of exports of British defence equipment was estimated to be in excess of £560,000,000.

Arms and Equipment

Note: all items are manufactured in Britain unless otherwise specified.

Pistol: 9mm L9A1 Browning automatic and 7.65mm Walther PP automatic (West Germany)

Rifle: 7.62mm L1A1 self-loading rifle and 7.62mm L42A1 converted No. 4 0.303in for sniping

Sub-machine-gun: 9mm L2A3 Stirling

Machine-gun: 7.62mm L7A1 GPMG, 7.62mm L8 tank MG coaxial, 7.62mm L20 helicopter MG, 7.62mm L37 tank MG cupola mounted, 0.303in L3A3 Browning M1919A4, 7.62mm L4A4 Bren and 0.5in L40A1 Browning spotting MG for infantry

Mortars: OML 2in and OML 81mm L16A1

Anti-tank weapons: rocket, 66mm Heat L1A1 (Norway); gun, 84mm infantry L14A1 Carl Gustav (Sweden); gun, 120mm RCL; cannon, 30mm Rarden L21E4; Vigilant ATGW; Swingfire ATGW; and Milan ATGW (Aerospatiale, France)

Anti-aircraft weapons: 40mm L40/70 AA gun, Blowpipe SAM, Rapier SAM and Thunderbird SAM

Artillery: Abbot 105mm SP gun (100 in service), M-109 155mm SP gun (USA; 40 in service), M-107 175mm (USA; 24 in service), M-110 203mm Cannon (USA; 12 in service) and 105mm pack howitzer/light gun (100 in service)

Surface-to-surface missiles: Honest John (being replaced by Lance; both USA)

Armour: Chieftain medium tank (910 in service), Scorpion FV-101 light tank (270 in service), Saladin armoured car (120 in service), Scimitar armoured car (100 in service), FV 438/FV 712 AFV (170 in service but Striker entering service), Ferret scout car (1650 in service), Fox scout car (70 in service), FV-432 APC (1520 in service) and Saracen APC (600 in service but Spartan entering service)

Aircraft: Beaver light aircraft (6 in service), Scout helicopter (110 in service), Alouette II helicopter (10 in service; French), Sioux helicopter (110 in service), Gazelle helicopter (80 in service but a further 90 on order; Anglo-French) and the Lynx helicopter which is presently on order

RANK, DRESS AND DISTINCTIONS

Rank

Field Marshal	Crossed sword and baton in a wreath
General	Crossed sword and baton, one crown, one star
Lieutenant-General	Crossed sword and baton, one crown
Major-General	Crossed sword and baton, one star
Brigadier	One crown above three stars
Colonel	One crown above two stars
Lieutenant-Colonel	One crown above one star
Major	One crown
Captain	Three stars
Lieutenant	Two stars
Second-Lieutenant	One star
Warrant Officer I	Royal Arms
Warrant Officer II	Crown
Staff Sergeant	Crown above three chevrons
Sergeant	Three chevrons
Corporal	Two chevrons
Lance-Corporal	One chevron
Private	—

Note: rank badges are worn by officers on each shoulder, by other ranks on each arm.

Dress

Most patterns of dress take khaki as their basic colour, with the beret (usually black) as the chief form of head-gear. Working dress for both officers and men now consists of pull-over and trousers, the battle-dress having been phased out in 1972, and combat-dress is camouflaged. Full-dress, however, helps preserve peculiarities within individual regiments, ranging from the scarlet jackets and bear-skin busbies of the Foot Guards to the tartans of Scottish units. Officers' mess-dress takes this process even further, with scarlet jackets predominating for the infantry and blue for most of the corps.

World Armies

Distinctions

Each unit in the British army wears its own cap or beret badge, with appropriate collar devices, and many wear some form of metal shoulder-title. Fusilier regiments, together with certain other units, wear distinctive feather hackles behind their cap badges, while all Scottish regiments wear bonnets and, in full-dress particularly, either the kilt or trews.

CURRENT DEVELOPMENTS

In an era of increasingly stringent defence cuts, it is extremely difficult to make a balanced judgement on the long-term efficiency of the British army. As the situation stands today, in the immediate wake of the 1974–5 Review, the process of cut-back does not appear to have been too counter-productive, for the reorganisation now being implemented will improve the fighting potential of the force to a certain extent, particularly in Europe. In addition, the army's record in the intensely difficult field of counter-insurgency remains one of the most impressive in the world; training standards in all arms are still very high; and the professionalism of the force as a whole cannot be questioned. But these are relatively superficial impressions, disguising factors which may affect the army in the future. In relation to the scope and variety of its commitments, the force is small; units, particularly in the infantry, are devoting time to Northern Ireland which should be devoted to NATO; the reserve potential, although adequate for a short-term emergency, cannot hope to sustain Britain's military efforts in a lengthy conventional war; and, perhaps most important of all, economic stringency means less money for research and development — a factor which could lead to Britain lagging behind where new and sophisticated equipment is concerned. Overall, therefore, there must be cause for some disquiet, even though the army still retains an enviable and well-deserved reputation for high professional standards, resourcefulness and ability. It is also worth remembering, of course, that the army has suffered far worse than this during previous periods of peace and has still managed to survive as a successful and integral part of the State.

JOHN PIMLOTT

UNITED STATES OF AMERICA

HISTORY AND INTRODUCTION

The army of the USA belongs to that small and interesting group (the Chinese PLA being the next most notable member) whose existence antedates that of the States which they serve. Because of its founding role, the issue of who should command it, and how, attracted the closest attention of the fathers of the United States constitution. And this question of what control the civilian authority should exercise over the army, and of what influence the army should exert in domestic life, has remained a matter of importance — sometimes diminished, sometimes very prominent — ever since. Despite, rather than because of, this constant surveillance, the army's acceptance of its subordination to the civil power has, throughout its two centuries of life, remained absolute, its record unmarred even by so minor a blemish as the Curragh incident (*see* United Kingdom).

The significance of the army in American history does not, however, attach only to its part in securing the 13 colonies' independence from Britain, and preserving that of the Federal government thereafter. By its actions it has, at different times greatly extended the land frontiers of the Union, both by foreign conquest (as in the Mexican War of 1846) and by the defeat and pacification of the American Indian tribes in the period 1790–1890; opened to settlement great areas of the American interior; secured territory overseas (in the Caribbean and the Philippines (Spanish American War and Philippines Insurrection, 1898–1902)); maintained, with the United States Marine Corps, a Pax Americana in the western hemisphere; won victories in two world wars which helped to establish America as the greatest power of the mid-twentieth century; and, most important of all, ensured, during the gravest crisis of American history (1861–5), the preservation of the Union itself. In a direction eccentric to the main trend of its activity, it has also during the twentieth century been the principal agent of America's policy of involvement in the affairs of mainland Asia, with results which, during the Vietnam War, awoke those powerful forces of antimilitarism which are constantly present in the American people's relationship with their professional soldiers.

So powerfully present was that antimilitarist feeling in the Founding Fathers that, after the departure of the British, they attempted, like the English at the restoration of Charles II, to dispense with an army altogether — and for much the same reason: unhappy experience of the exactions on property and freedom which standing armies impose. In 1784 Congress disbanded the Continental Army — the force of regulars it had voted to raise on June 14th, 1775 to supplement the disorderly colonial militias — except for 80 soldiers retained to guard stores at Pittsburgh and West Point. Relenting a little the following year, it authorised the creation of a single infantry regiment (today's Old 3rd, the senior American infantry regiment) and of two companies of artillery. And this tiny force was only gradually augmented, principally under the pressure of Indian resistance to settler expansion on the North-Western frontier, until the renewal of war with Britain in 1812.

At no time, however, did Congress attempt to disband the States' militias. Indeed it lacked after 1789 the power to do so, for although the new constitution reserved to Congress the right to raise (and therefore to disband) armies, the first amendment to it entrenched the rights of the people to bear arms and therefore to form militias. Thence stems the dichotomy in the American military system, strange to foreign thinking, between a federal regular army and the part-time voluntary forces of the States. Yet it had, in a sense, been present from the outset, for much of the fighting of the Revolutionary War had been done by militiamen, and the anti-Federalists among the Founding Fathers had argued partly from self-interest, partly from political caution and partly from high-mindedness, that free States, united or not, both needed a militia and at the same time needed no more regular a form of military defence than a militia could supply.

As long as America's enemies remained on the far side of the Atlantic, this was a safe argument. And, except during the 1812 and the Mexican Wars, when the regular army was hastily expanded, it prevailed. Between 1790 and 1861 its peacetime strength never rose above 13,000 and sometimes sank as low as 5000. Professionally the most impressive element of the army during the years was not one of its fighting units, but rather the Military Academy at West Point, founded on the model of the Paris *École Polytechnique* in 1803 and transformed by its great superintendent, Sylvanus Thayer, during his term of office (1817–33) into one of America's foremost centres of education. Its prominence and relatively large size (250 cadets) is explained by the function many of its graduates performed on leaving: rather than officer the army they were used by the government to plan and direct major public works, for which task the West Point engineering degree admirably qualified them (and to which few civilian universities, still orientated to the humanities, could offer an equivalent). It was their excellent engineering training which explains why so many West Pointers' names (like McClellan's) turn up on lists of directors of the early railway companies, why their intellectual standing, unlike their European comrades', has always been high among civilians, why the Corps of Engineers became, and remains, the principal agency for Federal public works in docks, harbours, irrigation and flood control, and why, when war between the States broke out

World Armies

in 1861, so tiny a body of professional officers (821 West Pointers were on active duty) yielded enough competent men to general armies numbering ultimately nearly 3,000,000.

'Competent' must be qualified: though the four outstanding soldiers of the war — Grant, Lee, Jackson and Sherman (all West Pointers) — were commanders of world class, there was more bad generalship (much of it by West Pointers) in the Civil War than in any major conflict of modern history; and at the same time it would have required divine competence to make effective armies quickly out of the civilian hordes with which both North and South had to fight each other. The popular quality with which their improvisation necessarily invested the Civil War armies (and which revealed itself in the election of officers, a common impatience with the niceties of drill and turnout of which European armies made a fetish, and a general disregard for anything much but getting the job done and returning home) recalled the spirit of the Continental army; more important it laid down a pattern which was to repeat itself in the two world wars and which military commentators, foreign and native-born, were to hold distinctive of the American army itself and expressive of much that is fundamental in American society.

The Civil War inflicted on America higher proportional casualties than those suffered by any Western nation until 1914, and left behind, not unnaturally, a profound distaste for war which during the 1870s hardened again into a real antimilitarism. The prevailing mood then was one of what Samuel Huntington has called 'business pacifism', which compared business methods and achievement with the army's, to the latter's disadvantage. In sympathy to the nation's mood, Congress reduced the army's strength in 1877 to 27,000 and it remained at that level for 20 years, during which it became increasingly isolated from civil society both socially and physically: socially because the officers of the period were almost exclusively West Pointers and the soldiers new immigrants, and physically because its regiments lived far removed from the centres of population, fighting Indians on the western frontier. Yet, like the British army on frontier policing duty, an experience closely similar, it apparently suffered no harm from its isolation, which allowed its members to lead that life (brilliantly depicted in the paintings of Frederick Remington) of moderate danger in a fine climate by which soldiers appear most fulfilled. The only incidents to mar its agreeable *post-bellum* existence were the frequent calls made on the services for strike-breaking in the labour disputes brought on by rapid industrialisation (though the duty fell most heavily on the State militias which isolated enthusiasts kept alive during the 1870s and 1880s and were somewhat revitalised through the formation of the National Guard Association in 1879).

Yet for all their apparent indifference to the military necessity, Americans flocked to join the army when a war with Spain was manufactured in 1898. Within less than a year its strength had increased to 275,000 and while many of the recruits were National Guardsmen, the majority were first-time volunteers, of whom the best known was Theodore Roosevelt, whose rise to prominence dates from his command of the Roughriders (1st Volunteer Cavalry) in Cuba. Roosevelt's military motivation was Kiplingesque, and there is much to compare in the enthusiasm of the Americans for their war with Spain and of the British for theirs with the Boers. Moreover, though the Americans suffered no humiliations comparable to those of Magersfontein or Paardeburg, Cuba and the Philippines revealed shortcomings in their army which prompted the undertakings of reforms as far-reaching as those initiated in the British army after 1902. Perhaps, indeed, further-reaching, for the American army had even more ground to make up: it possessed before 1903 no general staff, no proper staff college, few 'special-to-arm' schools and no permanent organisations above regimental level, while its efficient command was hampered by a division of authority between the Secretary of War and the General-in-Chief (*see* Command and Constitutional Status).

A similar division in the British system had been healed by the abolition of the post of Commander-in-Chief in 1905. Elihu Root, appointed Secretary of War in 1899, and who was to establish himself as the greatest civil head the army has ever had, achieved the transformation of the Commanding General into a Chief of Staff in 1903 and at the same time persuaded Congress to provide him both with a General Staff and to feed it from new senior and junior staff colleges, the Command and General Staff College, Fort Leavenworth, and the Army War College, Washington. Root, who retired in 1904, had been much influenced in the policy-making by the writings of General Emory Upton (*The Military Policy of the United States*, published posthumously, 1904), whose dedicated professionalism, admiration for foreign (particularly Prussian) practice, and contempt for the amateur, part-time and voluntary character of the national military institutions, branded him in the eyes of many as un-American. That he was not, for West Point, by its nature, had always produced a proportion of 'hard-nosed' military technocrats. But it was very American that the fight to direct the development of the 'New Army' (as Root's creation was called) should have been carried on between two generals who had each started life as military surgeons, an unthinkable origin for any senior European soldier. Frederick Ainsworth was a reactionary whose determination to preserve the powers of his own office of Adjutant-General meant resisting plans to centralise the scattered army posts, and who thereby won the strong support of interested Congressmen because it won additional Congressional support; it also meant resisting plans to supplant the National Guard with a more effective federal reserve for the regular army. Leonard Wood, whose plans these were, defeated Ainsworth in the end. But the American system was strong enough to leave him with only half of what he wanted: an experiment with centralised formations (the Maneuver Division of 1911) but not the federal reserve; the National Guard remained in 1914 (when he retired) the army's only reserve (though its organisation was somewhat improved as a result of the passing of the Dick Act in 1903).

As he had foreseen, though the President he served refused to contemplate the thought, the USA was about to confront the need to expand its armed forces even more suddenly and extensively than had been the case in April, 1861. Then Lincoln had thought 75,000 men enough to see the Civil War through. In 1917, on America's long, if understandably delayed entry

into World War I, Wilson was told by General Pershing, who had arrived in France in June, that he would need a million men at the front by the end of 1918; less than a year later he was to ask for 3,000,000 (or 66 divisions) by May, 1919 shortly revised to 80 divisions, and then again to 100 divisions. It is astonishing that in practice 43 divisions, out of 62 raised, actually reached France before the end of 1918, and that achievement would have been impossible but for the Mexican rebel 'Pancho' Villa's attacks on the Texan border in early 1916 which in turn prompted Congress to pass some anticipatory legislation. The National Defence Act of 1916 permitted an increase in the size of the regular army to 175,000 but, familiar news to 'Uptonians' in the officer corps, it provided for strengthening the reserve by granting funds to the National Guard instead of a new federal force and, with a flash of anti-federalist caution, it laid limits on the number of extra officers who might serve on the General Staff in or near Washington. But the Selective Service Act, passed as soon as America declared war, provided the conscriptive powers necessary to achieve the expansion, much of it as divisions of a National Army, akin to the reserve Root and Upton had wanted, to be formed under federal control.

America's military contribution to the winning of World War I was not tangibly great. Pershing resisted Franco-British requests, first reasoned, then desperate, for piecemeal reinforcements, understandably wishing to withhold American troops from the front until a whole army of some 20 divisions could be assembled. When it was, the worst of the 1918 fighting was over, Germany having exhausted her strength just a little quicker than she had her enemies'. Pershing's American army was eventually allotted a secondary sector (the Meuse-Argonne) where its offensive, though conducted with a simple stand-up bravery not seen in France since the epic days of the Marne or the Somme, could not in any case have produced a decisive result. Nevertheless its intervention was the decisive factor in finishing the war for moral if not material reasons, its strength, vigour and apparently inexhaustible numbers, besides putting new heart into the British and French armies, revealing to the Germans how vain had become their generals' promise of victory.

Despite the extent of the army's achievement, and the apparent enjoyment with which most Americans had accepted conscripted service (to the introduction of which there was, thanks to the Civil War precedent, none of the political and moral hostility so strongly felt in Britain), it was allowed after 1918 to revert very quickly to its pre-war role and size (1921-36: 140,000). However, in the National Defence Act of 1920, Congress perpetuated the existence of a federal reserve (the Organised Reserve) separate from the Guard, in an 'Army of the United States' of which the regular army was to be the third component. The USA was divided into nine corps areas, each to contain one regular, two Guard and three reserve divisions (though for most of the period up to 1939 only three regular divisions had a peacetime existence). The Air Corps, raised during the war, was made a substantive element of the army, with its strength fixed (by the Air Corps Act of 1926) at 15,000.

This generally improved the organisation of the army but did little in practice to make it an efficient modern force, for while the Air Corps thrived on comparatively generous budgets, the ground elements had to make do during the penny-pinching inter-war years with the ageing equipment, much of it French, issued in 1918. Although Christie, the most inventive of contemporary tank designers, was an American, the army was allowed to purchase none of his models in bulk; indeed its Tank Corps was absorbed by the infantry in 1920. The soldiers moreover were given very little to do. The Marine Corps (raised in 1775) had by now finally fought off attempts to incorporate it into the army and established itself as America's Pacific and Caribbean police force. The frontiers were quiet. The Philippines had organised its own army.

Public interest in the armed forces, such as there was, concentrated on the Air Corps which the mercurial General Billy Mitchell, preaching the same message as Trenchard in Britain, but in a more dramatic style, was determined to transform into a decisive element of American power. His efforts to have it separated from the army as an independent force, not eventually achieved until 1947, resulted in his court-martial in 1925. This sacrifice of his career was the most certain guarantee of the final success of his campaign that he could have arranged.

Otherwise the army spent the inter-war years at a humdrum round of garrison duty, occasionally relieved, in an unwelcome fashion, by internal security duty, as in the case of the dispersal of the Bonus Marchers (unemployed veterans demanding deferred gratuities) in Washington in 1932. During the worst of the recession the army also supervised the job-creation schemes organised by the federal government through the Civilian Conservation Corps. But the outbreak of war in Europe in 1939, even though Congress and the majority of the people were determined that America should take no part in it, brought a renewed spirit of activity and a massive increase of numbers. Fearful that Britain as well as France might fall to Germany, control of the Atlantic pass to Hitler and the security of the Western hemisphere be threatened, Congress in May, 1940 voted to increase the army to 375,000 (from 190,000). In August it authorised the President to embody the National Guard for federal service for 1 year and in September it voted for selective conscription (the Burke-Wadsworth Bill). By December, 1941 when Japan's attack on Pearl Harbour and Hitler's unilateral declaration of war on the USA ended the hesitation over involvement, the army had grown to a strength of 1,638,086, organised into 36 divisions. Because so much of America's growing output of military material had been sent overseas to equip British (and later Soviet) forces, however, few of these new divisions possessed the means with which to fight, while almost none was under experienced leadership. The extraordinary pace and scale of the expansion bears comparison only with the creation of the previous American Expeditionary Force and of the Kitchener armies in 1914-15.

Unlike the AEF, the new American army would shortly have to fight as the major partner in the Western military alliance. Roosevelt and Marshall, the magisterial Chief of Staff who was to remain at the President's side throughout the war and do so much to guide the direction of allied strategy, were anxious to commit a major expeditionary force to battle in Europe in 1942. Dissuaded by the British from risking a cross-channel invasion of the continent, they dispatched the

World Armies

American II Corps to north Africa in November, 1942 as part of the Anglo-American First Army. Its three divisions were the vanguard of ninety-one which the army was to raise during the war (the Marine Corps was to field another six). In the ensuing Sicilian campaign, to which Roosevelt and Marshall reluctantly agreed, the size of the American contingent rose to four, in the invasion of Italy to five. By November there were seven American divisions in line, equal to the number of British and at the same time a major American invasion army was gathering in Britain for the much-postponed assault on north-west Europe. Eisenhower, Marshall's protégé and the commander of the original north African landing force, had been designated Supreme Commander of the Allied Liberation Army, in which the Americans would, after the initial landing, form the majority.

At the end of the battle of Normandy, which followed the audacious cross-channel invasion, Eisenhower assumed control, hitherto exercised by Montgomery, whose 11 British divisions were now outnumbered by 14 American. One British division actually had to be dissolved in order to provide reinforcements for those remaining, and thenceforward the American army was progressively to outdistance the British in size. At the end of the war in Europe, it counted twenty-three to eleven British, and was unquestionably the major partner in the victory.

In the Pacific theatre, where a British-Indian army engaged the Japanese in Burma throughout 1942-5, its strength had grown proportionately, though never, despite pressure from the United States Navy to the contrary, on a scale to inhibit operations in Europe. By the end of the war, there were 31 army divisions in the theatre, some transferred from Europe since the defeat of Hitler, but the majority of which had behind them 3 years of exhausting but triumphant amphibious island-hopping from New Guinea, Guadalcanal and the Philippines to Okinawa on the doorstep of the Japanese home islands.

Throughout the war, the air force, still technically as the Army Air Force a branch of the army, had maintained a major strategic bombing campaign against Germany, subsequently transferred to the Pacific theatre. And the campaigns of the Army Ground Forces and the Army Air Forces had been supported by the work of the Army Service Forces — a three-fold division of an over-large organisation implemented in March, 1942. Over 8,000,000 Americans had worn khaki, and 2,000,000 had served in ground combat formations. They had shown remarkable and innovative military talent in airborne, armoured and amphibious operations, had pioneered a new 'joint' approach to the co-ordination of inter-service planning, staff work and command, and had produced, in MacArthur, one of the great strategists of the twentieth century, in Eisenhower the greatest inter-allied commander and in Patton one of the most dynamic battlefield leaders.

The immediate post-war years saw as radical a reduction of the strength of the army as it had suffered after 1918. The development of the atomic bomb persuaded the American people and its leaders that not only was there no excuse to delay the demobilisation of the wartime army almost in its entirety, but also that there would be little call in the future for traditional military forces to defend America's interests, since they could be consigned to the care of a small nuclear-equipped air force — after 1947 established as an independent entity. This optimistic forecast of America's military future was upset by the Korean War, which broke out on June 25th, 1950. The United Nations immediately invoked its security arrangements against the North Koreans, who had invaded South Korea, and the American occupation forces in Japan were mobilised to assist the South Korean army in repelling them. Its numbers proving inadequate, the American government was obliged to send forces from continental USA and to increase the size of the standing army. It had fallen to about 700,000, with only two divisions available for reinforcement of the occupation forces in Germany and Japan, and although Congress had in 1948 passed a selective service act to supplement with conscripts the supply of volunteers, it was to be operative for only 2 years. Confronted with the Korean crisis, Congress activated eight National Guard divisions and then introduced a Universal Military Training and Service Act (June, 1951) which, though applied selectively, did provide the army for the first time in its history with a permanent supply of peacetime conscripts. During the Korean War (not technically a war for America, but a peacekeeping operation) that provision was vital, since the scale of operations required the induction of 3,000,000 men and the maintenance of 20 divisions on a tactical footing.

In the aftermath of Korea, the USA was never again to allow the size of its army to fall to the dangerously low level it had reached in the late 1940s. Through its commitment to the North Atlantic Treaty Organisation, activated in 1949, it was bound to maintain the Seventh Army in Germany at a level of six divisions, but they had been allowed until 1950 to remain at skeleton strength. After 1955 they were properly reinforced, while in the USA a Continental Army Command (the predecessor of the present Forces Command) oversaw the gradual strengthening of American-based formations to realistic levels. Two Strategic Army Corps (III and XVIII Airborne) were earmarked for rapid deployment overseas in the event of emergency. Internally, the army reappraised its methods of training and standards of discipline in an effort to avoid future collapses of morale, displayed at the outset of the Korean involvement, which had deeply shocked old-school officers who had not themselves had to face Asian communist styles of warfare or treatment of prisoners of war.

President Johnson's decision to commit full American formations to ground warfare in Vietnam, which came in mid-1965, was initially seen by the reinvigorated and remodelled peacetime army as a chance to display the new skills it had learned in the quietus since its last Asian involvement. Foremost among these were the techniques of irregular warfare pioneered by the Special Forces, which President Kennedy had greatly expanded as a means of extending American military power without committing full-scale military strength to foreign crisis centres. The Special Forces, who raised and led Vietnamese irregular units throughout the American involvement in the war, achieved much that was remarkable. But, after two and a half years of generally successful campaigning against the Viet Cong, the conventional formations of the army were badly shaken by the Viet Cong/North Vietnamese Tet offensive of 1968 (see Role and Recent Operations).

Although successful in suppressing it, they thereby lost control of much of the countryside, which they were never able to recover. The army was, moreover, from 1966 onwards afflicted by a very bitter domestic opposition both to the war itself and to its conduct, which heightened as the demands of the draft eventually extended to include almost the whole male population of draft age. In Vietnam, the disaffection of the conscripts became almost open once peace talks were opened with the North Vietnamese in 1969 and occasionally took the form of physical assault on superiors. It was exacerbated by drug abuse and by severe racial conflict outside the combat zones, most severely felt in units in the USA and Germany.

President Nixon's eventual disentanglement from the war was therefore warmly welcomed by the army's senior officers, as was the decision, enacted in mid-1974, to accept a 'zero draft' (without repealing the Military Service Act) and recruit the army by voluntary enlistment. It was believed that the voluntary system offered the army the best chance available to repair the damage done to its morale by the stresses of Vietnam and to transform it into a highly trained and motivated force, organised for the rapid reinforcement of the Seventh Army in Germany and for intervention overseas at points of crisis.

The last 10 years in the life of the American army have not been the happiest. It has come closer to losing a war than it has ever done before, and suffered acute internal disturbance in the process. It nevertheless remains a model of what the army of a great democratic State should be. For all the political anguish experienced in the USA over the war, no military leader improperly sought to influence either its conduct (as MacArthur was thought by some to have attempted during the Korean War) or the terms on which it was concluded. It has done its duty, dealt judiciously with breaches of its code of behaviour committed by its officers and soldiers during the war (and they were few) and accepted the judgement of the civilian authority constitutionally set over it throughout — as it has from the inauguration of the first President.

STRENGTH AND BUDGET

Population: 217,030,000

Army: 789,000 regulars (51,900 women); 379,000 National Guard reserves; 212,000 army reserves

Marine Corps: 192,000 regulars (3900 women); 33,500 reserves

Navy: 551,000; 175 major surface ships, 78 missile and attack submarines

Air force: 571,000; 3400 combat aircraft

GNP (1976); \$1,692,400,000,000

Defence expenditure (1977–8): \$109,700,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

The Commander-in-Chief of the three services is the President. Advised by the National Security Council, he directs policy and decision, through the Secretary of Defence and his Department (the Pentagon), with its many departments and agencies*. Of these the Joint Chiefs of Staff, chaired in turn by a soldier, sailor and airman (who is not the Chief of his own service staff and who has no vote), is the Secretary's executive, directly controlling the unified commands of the American forces: Atlantic, Aerospace Defence, Pacific, Southern, Readiness, Strategic Air, Military Airlift and European. The staffs of the three services remain separate; they directly control those forces not assigned to Unified or Special Commands. For operational purposes, however, the controlling authority is the Joint Chiefs of Staff and the operational executive its J-3 division.

The Department of the Army, which is part of the Department of Defence, is headed by the Secretary of the Army, a presidential appointee, assisted by an under-secretary and five assistant secretaries, the latter responsible for (a) finance, (b) installations and logistics, (c) research and development, (d) manpower and reserves and (e) civil works. He exercises control of the army through the Chief of Staff, and he in turn through the Commanding Generals of the Field Commands. Of these there are now thirteen: Forces, Training and Doctrine, United States Army Europe, United States Army Japan, Eighth Army (Korea), Material, Communications, Health Services, Military Traffic Management, Criminal Investigation, Computer Systems, the Army Security Agency and the Washington Military District. (Reorganisation in 1973–4 did away with Continental, Combat Development, Air Defence, Intelligence, Pacific and Southern Commands.) Many of these are in turn subdivided, somewhat confusingly, into commands or armies (e.g. Forces Command controls First, Fifth and Sixth Armies in continental USA), nomenclature surviving from an older organisational scheme. The Reserve Army is commanded through nine Readiness Commands, subordinate to the First, Fifth and Sixth Armies, and overseen by a Chief of Army Reserve on the General Staff. The National Guard, because it is constitutionally a collection of State forces, is commanded by the Governors of the States, through their Adjutants-General, but the General Staff maintains a National Guard Bureau which standardises policy and training, and administers federal funds. Its chief, by jealously guarded statutory provision, has direct access to the Chief of Staff (and is a National Guard officer).

* No ex-officer is eligible to serve as Secretary of Defence for the 10 years after he leaves the service: National Security Act, 1947.

World Armies

Constitutional Status

The framers of the constitution, who included in its preamble their intention to provide 'for the common defence' arranged that power over the army, as over other institutions of the Union, should be separately vested. Article 1, Section 8, allotted Congress the power 'to raise and support armies', 'to make rules for their government and regulation', 'to provide for organising, arming and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, and for 'calling forth the militia to execute the laws of the Union, suppress insurrection and repel invasions'. The appointment of officers in the militia was however reserved to the States, together with authority to train it 'according to the discipline prescribed by Congress'; while the second amendment to the constitution ('a well regulated militia being necessary to the Security of a free State, the right of the people to keep and bear arms shall not be infringed', 1789), established the right of the States to raise the militias to which the constitution referred. Finally, control of the army of the United States, and of the militia, while in federal service, was constitutionally vested in the President (Article II, Section 2); but, as a check on his executive military power, Article 1, Section 8, laid down that 'no appropriation to (the support of armies) shall be for a longer term than 2 years', and the appointment of officers is reserved to the Senate.

Many of the Founding Fathers had disapproved of giving constitutional endorsement to the existence of a federal army which they suspected would be a potential instrument of tyranny. Suspicion, though generally muted, has lingered ever since, expressing itself in mutual antipathy between the regular army and the militia (National Guard), in congressional struggles to restrict the army's autonomy and the size of its budget, and in successive readjustments of the relationship between the senior officer of the army on the one hand and the Secretary of War (later of the Army and then also of Defence) on the other. It was not until 1821 that the army was given an official head, and then only because during the war of 1812, 'civilian control of the military was interpreted by Congress to mean civilian command', with disastrous results. But the General in Chief (or Commanding General), whose post survived until 1903, was not a successful creation. Under a strong President (Polk in the Mexican War, Lincoln until his 'discovery' of Grant) he was merely a mouthpiece; under a weak President he tended to fight with the Secretary of War who, though his power was restricted in 1821 to the administrative side, often interfered in operations, the General's preserve. At the same time the General's own authority within the army was limited by the independence of his chiefs of bureaux (who had life tenure and reported directly to the Secretary) — so much so that General Schofield (1888–95) declared that 'under the government of the United States, an actual military commander of the army is not possible'.

The division of responsibilities, and the inefficiency and mutual hamstringing which resulted from it, had its parallels in the government of other nineteenth century armies, notably the British, and was eventually resolved at the same time and by the same methods: the institution (by Secretary Elihu Root in 1903) of a General Staff, whose chief surrendered nominal command for the status of principal professional adviser on the understanding that his domestic authority within the army should be virtually absolute. As a principle, it has been respected ever since, but its operation, particularly during World War II, when several service chiefs acquired immense politico-military influence by force of circumstance, has been erratic. The passing of the National Security Act of 1947, and the subsequent legislations and executive amendments to it, have, however, now shifted the balance of power decisively into civilian hands. The most important of these were the amended National Security Act of 1949, the Reorganisation Plan No. 6 and so-called Key West Agreement of 1953, and the Defence Reorganisation Act of 1958. The 1947 Act in itself was a half-measure, in that it subordinated the three services to a Secretary of Defence without giving him effective means of controlling them. As amended in 1949, they ceased to be 'executive departments' and by the Reorganisation Plan of 1953 the three Secretaries of the Army, Navy and Air Force were reduced in status to 'operating managers' under the Secretary of Defence, to whom were also subordinated all defence agencies, e.g. the Munitions and Research and Development Boards, which had an inter-service function. A few months later the Key West Agreement between the Chiefs of Staff of the three services further increased the authority of the Secretary of Defence, by prescribing as complete an integration of military functions as was possible, short of merging the three services. They were required furthermore to establish unified commands 'as necessary' — the tri-service organisations which were henceforward to be the most important agencies of American strategy. In 1958 the Defence Reorganisation Act re-aligned responsibilities within the defence structure so that the chain of command ran from the President to the Secretary of Defence to the Joint Chiefs to the unified commands; the naval and air staffs were taken out of the chain of command altogether (as the army had been by the Root reform of 1903) and the Joint Staff (whose head is appointed by the Secretary of Defence and which services the Joint Chiefs) was doubled in size (to 400 officers — now over 2000). Thus 'the Secretary, acting for the President has now been made solely responsible for defending the constitution . . . against all enemies, foreign and domestic. He was to maintain the security of the United States, its possessions, and areas of vital interest . . . and safeguard internal security.' The Joint Chiefs meanwhile had their role reduced to one of advice, and their functions to the preparation of strategic plans and the 'provision of strategic direction'. But Congress, fearful of a movement towards the erection of a single service, removed provisions which would have allowed the Secretary of Defence to reassign functions between the services at will.

Civilian control is thus entrenched both in principle and practice; indeed Congress in the early 1960s expressed fear that the impact of military advice on decision making had become too limited (House Armed Forces Committee, Special Subcommittee on Defence Agencies, 87th Congress, 2nd Session, 1962, pp.6631–4). Final judgement on the working of the defence bureaucracy in the direction of the Vietnam War may or may not bear out that fear.

Although the Secretary of the Army and the Army Staff now occupy a position several removes distant from the centre of strategic authority, they are not completely isolated from the processes of executive or legislative government. By an anomaly the Chief of Staff, through his membership of the Joint Chiefs Committee, may actually be more directly involved in decision-making than the Secretary of the Army, his nominal superior. Both, moreover, are in touch with Congress, through the investigative process run by the House and Senate Appropriations and Armed Forces Committees and their Defence Appropriations Sub-committees. The days of open combat between the services for a 'fair' share of appropriations, so notable a feature of Washington life in the 1940s and 1950s, are over. The army must still nevertheless justify its expenditure to Congress, besides being ready to answer any and every enquiry which Congress or its individual members submit: 'in an average year the Army might receive 60,000 letters, 75,000 telephone calls and 7500 personal visits from Congressmen'. To deal with all these matters the army maintains an Office of Legislative Liaison, with offices both in the Pentagon and the two Houses. It also prepares all legislation (which the army, like any other government agency, has the right to initiate). Such bills normally relate to the domestic affairs of the army and the pay, pensions and legal status of its members.

The National Guard, being the army of 'the Several States and territories', a 'single organisation with a double existence' — State and federal, and the beneficiary of both the 'army' and the 'militia' clauses of the constitution, has a special relationship with Congress. It comes under control of the President, as Commander-in-Chief, only after Congress has declared the existence of a national emergency. But its Washington lobby secured in 1933 the passage of an act which makes it a reserve of the regular army. Attempts to reorganise it against its will (as by McNamara in 1965) are usually fiercely and successfully resisted. The Army Reserve, though a federal body, also enjoys special Congressional protection, since its units, being static, tend to take on 'State' character.

Legally, the army (and the other services) possess wide disciplinary powers, set out in the Uniform Code of Military Justice, and may both try, sentence and punish offenders. The army maintains its own penal establishment, but long-sentence criminals are normally transferred to federal prisons to serve out their terms.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

Title 10, Section 3062 of the United States Code, lays down that 'it is the intent of Congress to provide an army that is capable . . . with the other armed forces, of preserving the peace and security . . . of the United States; . . . supporting the national policies; implementing the national objectives; . . . and overcoming any nations responsible for aggressive acts that imperil the peace and security of the United States'. In practice, it is traditionally upon the United States Marine Corps that the task of dealing with local threats to American interests overseas devolves (e.g. most recently in the Lebanon (1958) and in the initial stages of the intervention in the Dominican Republic (1965)). Moreover, although Title 10, Section 3062 does not include the maintenance of internal security as a task of the army, it has frequently been so used, e.g. in 1860 to put down John Brown's rising at Harpers Ferry, in 1877 and 1894 to break railway strikes, in 1930 to disperse the Bonus Marchers in Washington and during the 1960s to suppress racial disorder. The army has also been used to capture runaway slaves before the Civil War, to run the Freedmen's Bureau after it and the 1300 camps of the Civilian Conservation Corps of the 1930s, to perform disaster relief, and to operate, through the Corps of Engineers, federal harbour, river and irrigation works throughout the USA. Constitutional or legal authority exists for all these activities. To a marked extent, however, the principal role of the American army is to fight wars, usually large wars, and in between to keep itself in readiness to do so.

Commitment

The USA maintains major army formations in Germany (including Berlin), South Korea, Italy, Japan (Okinawa) and the Panama Canal Zone, and embarked Marine Corps units in the Pacific and Mediterranean. It has bilateral treaties of military guarantee with Japan, Iran, Pakistan, South Korea, Spain and the Nationalist Republic of China (Taiwan), and with most of the members of the regional alliances to which it belongs: NATO, Organization of American States, ANZUS (Australia, New Zealand, Pakistan, the Philippines, Thailand and Great Britain). It also maintains military assistance advisory groups (MAAG) and other military missions in about 50 foreign countries (including all Latin American States except Cuba and Ecuador) and over 80 army attaché offices in foreign capitals.

Deployment

During 1973–4 the structure of the army, both in continental USA (CONUS) and outside (OCONUS), was much simplified, principally in order to reduce the number of servicemen employed on non-combat duty. Two major home commands (Air Defence and Army Intelligence) were eliminated, and also five overseas, of which Pacific, Alaska and Southern (Caribbean) were the most important. The two largest commands remaining in CONUS are Forces (FORS-

World Armies

COM) controlling all ground units, and Training and Doctrine (TRADOC) controlling all schools and training units. All others — Material, Communications, Health Services, Development, Military Traffic Management, Computer Systems and Criminal Investigation Commands, the Army Security Agency and the Military District of Washington — are Support, Procurement, Research or Administrative Agencies.

The territory of continental USA is divided into zones of three Armies — First, Fifth and Sixth, with headquarters at Fort Meade, Maryland; Fort Sam, Houston, Texas; and the Presidio of San Francisco, California — which administer all static army installations within their boundaries. It is further subdivided into nine Readiness Regions with headquarters in Fort Devens, Massachusetts; Fort Dix, New Jersey; Fort Meade, Maryland; Fort Gillem, Georgia; Fort Sheridan, Illinois; Fort Knox, Kentucky; Fort Sam, Houston, Texas; the Rocky Mountain Arsenal, Colorado; and the Presidio of San Francisco, California. The Readiness Regions are subordinate to the appropriate Army and are the medium of command of the local Army Reserve and National Guard units.

The field formations of the Active Army are subordinate, however, either to FORSCOM or to one of the armies overseas. FORSCOM directly controls two Corps (III and XVIII) and several independent brigades and regiments, besides the reinforcement divisions of the Seventh Army and those in strategic reserve. The divisions of the Active Army are thus commanded and deployed as follows:

Continental United States

XVIII Corps

82nd Airborne †

101st Air Assault†

III Corps

1st Cavalry (Mechanised)†

2nd Armoured*

1st Infantry (Mechanised) (less one brigade)*

9th Infantry†

4th Infantry (Mechanised)*

Fort Bragg, North Carolina

Fort Bragg, North Carolina

Fort Campbell, Kentucky

Fort Hood, Texas

Fort Hood, Texas

Fort Hood, Texas

Fort Riley, Kansas

Fort Lewis, Washington

Fort Carson, Colorado

Germany (Seventh Army, Heidelberg)

V Corps

3rd Armoured

8th Infantry (Mechanised)

VII Corps

1st Armoured

3rd Infantry (Mechanised)

1st Brigade

1st Infantry (Mechanised)

Frankfurt

Hanau

Bad Kreuznach

Stuttgart

Göppingen

Würzburg

} Augsburg

Korea (Eighth Army and I Corps)

2nd Infantry

Hawaii

25th Infantry

There are in addition six independent brigades: 6th Air Cavalry Combat Brigade at Fort Hood; 194th Armoured Brigade at Fort Knox; 197th Infantry at Fort Benning, Georgia; 172nd Infantry in Alaska; 193rd Infantry in Panama; and one in Berlin; there are also three large armoured regiments (2nd and 11th in Germany, 3rd at Fort Bliss, Texas) besides minor land units elsewhere, e.g. one airborne battalion in Italy and the headquarters of a Corps (IX) in Japan, and two Ranger Battalions at Fort Stewart, Georgia and Fort Lewis, Washington.

New Formations

The army has recently raised three new divisions. They are:

5th Infantry (Mechanised)

24th Infantry

7th Infantry

Fort Polk, Louisiana

Fort Stewart, Georgia

Fort Ord, California

Each is composed of two active brigades and one reserve brigade. The 2nd Armoured and 4th Infantry Divisions are also to receive each an extra brigade, making four in each division, of which one will be always in Germany on a 6 month tour.

* Seventh Army reinforcements.

† Strategic Reserve.

The divisions of the Marine Corps are stationed thus:

Continental United States

1st Division (and 3rd Air Wing)	Camp Pendleton, California
2nd Division (and 2nd Air Wing)	Camp Lejeune, North Carolina

Pacific

3rd Division, less 1st Marine Brigade (and 1st Air Wing) Okinawa
 Part of the 1st Air Wing is stationed in Japan; the independent 1st Marine Brigade is in Hawaii.

The command structure of forces outside continental USA (OCONUS) now comprises only three major headquarters: United States Army Europe (USAREUR), United States Army Japan and the Eighth Army in Korea, all controlled directly by the Department of the Army (in liaison with supranational authorities where appropriate: NATO in Europe and the United Nations Command in Korea).

Army Reserve

The Army Reserve is a voluntarily enlisted body of (1978) 212,000. It is administered through 19 Army Reserve Commands and is formed into 12 divisions (Training), two Maneuver Area Commands, four Military Police Commands, four Engineer Commands or Brigades, three Transportation Brigades, three Support Brigades, three Civil Affairs Brigades, nine Army Hospitals and three Infantry Brigades. The latter (157th Infantry (Mechanised), HQ Horsham, Pennsylvania; 187th Infantry, HQ Boston, Massachusetts; and 205th Infantry, HQ Fort Snelling, Minnesota) are, with three independent infantry battalions, the Reserve's only true combat units. Some progress has been made however with a plan to associate Reserve units with those of the Active Army, to which in emergency they would act as formed reinforcements: six Reserve brigades and five separate Reserve battalions benefitted from this 'reserve components affiliation program' in 1974-5.

National Guard

The Army National Guard is a voluntarily enlisted body of (1978) 379,000. It is recruited and administered through the Adjutants-General of the 50 States and formed into eight Divisions: (a) 26th Infantry, Massachusetts; 28th Infantry, Pennsylvania; 38th Infantry, Indiana; 40th Infantry, California; 42nd Infantry, New York; 47th Infantry, Minnesota; 49th Armoured, Texas; and 50th Armoured, New Jersey, (b) 15 Separate Infantry Brigades: 29th Hawaii; 30th (Mechanised) Wisconsin; 33rd Illinois; 39th Arkansas; 41st Oregon; 45th Oklahoma; 48th (Mechanised) Georgia; 53rd Florida; 67th (Mechanised) Nebraska; 69th Kansas; 81st (Mechanised) Seattle; 92nd Puerto Rico; 218th (Mechanised) South Carolina; and 256th Louisiana, and (c) three separate Armoured Brigades: 30th Tennessee; 31st Alabama; and 155th Mississippi. It also provides 12 artillery, engineer, military police and support formations. Units of the Guard are commanded in peace by the Governor of the State in which they are located but, for training and operational purposes, the chain of command is from the Forces Command through its Readiness Regions. Under the new 'reserve components affiliation program' 24 Guard units completed training in 1974-5 with the units of the Active Army to which they would act as formed reinforcements in emergency.

A Selected Reserve Force (SRF) of three divisions in size, formed from Guard and Reserve Units, is kept at an advanced state of readiness to mobilise in under 5 weeks.

Recent Operations

The United States army (or United States Marine Corps) has, since the end of World War II, twice intervened in the affairs of foreign States and twice fought a major war. The interventions were in Lebanon in 1958, when three battalions of marines, and an army battle group, were landed at the request of the country's president to help avert the outbreak of civil war (the intervention was bloodless), and in the Dominican Republic in 1965 when marines and the 82nd Airborne Division occupied the capital between May and September, after a communist-inspired coup had overthrown the government. From 1962-75 the army and marines also maintained units in Thailand, which supported United States military advisers to the Royal Lao Army in Laos.

The two wars were in Korea (1950-53) and in Indo-China, 1965-72. The Korean War was long, large-scale (300,000 soldiers deployed) and costly, and falls outside the category of 'recent operations', but the army still lives with the aftermath of the Indo-China (Vietnam) War.

Its involvement in the region began, while France was still fighting its war there with the Vietminh, with the provision of money, equipment and training teams. After the defeat of the French, the United States army became responsible for training the new army of 150,000 of the Republic of (South) Vietnam and, from the onset of deliberate North Vietnamese subversion of the Southern government's authority in 1959, for the provision of numerous advisers to operate with ARVN

World Armies

(Army of the Republic of Vietnam) units in the field. By 1965 their numbers had grown to 27,000 but their efforts to stiffen the ARVN's resistance were unavailing, and in March of that year President Johnson decided to commit formed combat units in an attempt to avert an immediate seizure of power by the North Vietnamese/Viet Cong (NVA/VC). Their forces by then outnumbered those of the ARVN, which was losing a battalion each week in the fighting. Between 1965 and 1968 the United States army deployed 100 'maneuver battalions' (infantry, armour, airborne or ranger battalions) in the South and, having won at the outset some bloody full-scale battles for control of the highland frontier towns, embarked on a prolonged 'search and destroy' campaign in the countryside. Militarily, this demanded the creation of a new sort of unit — the helicopter-borne infantry battalion, with an immensely expensive support system to maintain it in action. Domestically it required a change from a programme of selective to near-universal conscription. The apparent success of the air-mobile units in the search and destroy campaign was very great. Politically, the progressive appetite of 'the draft' generated resistance from the young (and their parents) which took vociferous and sporadically violent forms and drew strength from the support of groups or individuals who, if not threatened personally by conscription, had moral or ideological objections to America's involvement in, or conduct of, the war. The anti-war movement had its hand greatly strengthened by the NVA/VC Tet offensive of February, 1968 during which 100 towns were attacked, Hué (the old imperial capital of Annam) occupied, and the American Embassy in central Saigon for a time besieged. The scale of this quite unexpected counter-offensive appeared to invalidate, fearful though its cost to the attackers was, the United States army's belief, and its commander General Westmoreland's firmly stated conviction, that it was winning the war. President Nixon, entering office in early 1969 and recognising the power of the anti-war movement at home and the improbability of American victory in the theatre of war itself, therefore instituted a policy of 'Vietnamisation'. It meant that the main burden of fighting was to be transferred to the ARVN, which was to be equipped for the task with arms and supplies on the scale hitherto enjoyed by the United States army. 'Vietnamisation' did not prevent the President's extension of the war in 1970 to Cambodia, whose neutralist leader had been brought publicly to protest at the growing (and well-known) use of his country's territory by the NVA/VC for their military purposes; but it did mean that by the end of 1972 the American army had ceased to operate combat units on Vietnamese soil.

A major element among many which brought the American government to decide on withdrawal from direct involvement in the war had been its effect upon the United States army and its soldiers, both regular and drafted, both in Vietnam and elsewhere. That effect, by and large, has been for the worse. At the height of the army's effort, 525,000 soldiers were deployed on the ground, representing 10 divisions (1st, 4th, 9th and 23rd Americal — now deactivated — and 25th Infantry; 1st Cavalry and 101st, both airmobile; and 1st and 3rd Marine) and five brigades. This deployment had reduced the strategic reserve in the continental United States to two divisions and brigades, and had deprived the Seventh Army in Germany of necessary resources. Morale in Vietnam after Tet was poor, expressing itself in widespread 'escape' from an unpopular war by drug-taking and in the occasional assassination of over-zealous junior leaders by their men. Many of the professionals, who had entered the campaign with enthusiasm and a determination to show the army 'combat ready', as it had not been at the outbreak of the Korean War in 1950, had become dispirited by the conscripts' discontent and by the seeming endlessness of the conflict. They were also depressed by reports of 'sympathetic' indiscipline in units at home and in Germany, and by the manifestation in the army of the racial tension and violence which disturbed domestic life during those years and which the black soldiers' recognition of their disproportionately high numbers in combat units exacerbated. The leadership of the army was also discouraged by the failure of its 'high technology' approach to counter-insurgency, on which high hopes had been based, to win tangible victories; they were also appalled by its cost in ammunition expenditure and equipment losses (up to 5000 helicopters a year) and by the suffering it inflicted on the civil population, friendly and no-so-friendly. President Nixon's decision in 1969 to 'Vietnamise' the war and progressively to return American units to the United States was therefore tacitly welcomed, as was that to institute a 'zero draft' (volunteer army) which flowed from it. Fears that sufficient volunteers to meet the army's prescribed all-regular strength (860,000) might not come forward have been proved exaggerated, at least in the context of a fairly severe economic recession; other fears that Vietnam had done irreparable damage to the army's morale, discipline and sense of duty appear groundless, the now all-regular force having apparently responded to its leaders' programme of regeneration in a satisfactory spirit. The quality of recruit, thanks to a surplus of applicants, has improved; meanwhile, whatever the other effects of Vietnam, it has meant that the great majority of the army's leaders have had combat experience.

ORGANISATION

Active Army

Arms of Service

These are known as 'branches' and are divided into 'arms' ('combat' and 'combat support' troops) and 'services' (providing either 'combat service support' or administrative services); three (Engineers, Military Police and Signals) are regarded as being both 'arms' and 'services', because of a multiple function.

The arms, in official order of precedence, are: Infantry, Corps of Engineers, Air Defence Artillery, Field Artillery Armour, Signals Corps, Military Police Corps and Military Intelligence Branch.

The services are likewise: Adjutant-General's Corps, Finance Corps, Quartermaster Corps, Army Medical Department (which comprises the Medical Corps, Army Nurse Corps, Dental Corps, Veterinary Corps, Medical Service Corps and Army Medical Specialist Corps), Chaplains, Judge Advocate General's Corps, Ordnance Corps, Chemical Corps, Women's Army Corps and Transportation Corps. Army aviation is organised, in deference to the air force, neither as an arm nor a service, but as an operational element of a fighting formation: its officers and men belong to other branches. The functions of most of the branches are explained by their titles; but the Adjutant-General's Corps deals with personnel affairs, the Chemical Corps with nuclear-biological-chemical warfare and the Quartermaster Corps is a supply organisation. Officers and men generally remain within the branch which they joined on entering the army. They spend little time with any one unit, however, as a result of the army's policy of diversifying their experience to the greatest extent possible. This turbulence can have an unfortunate effect on unit morale and efficiency and some attempt to offset it has been made with the introduction of the Combat Arms Regimental System (CARS). This, modelled on the regimental system of the British army, confers on each combat unit the ancestry of one of the army's original regiments; but since it lacks the principal ingredient of the British system, namely stability of personnel, its success is doubtful.

Operational

The division is the key formation and since 1956 has been so organised that each of the three 'type' divisions — armoured, mechanised infantry and infantry — has a similar 'divisional base' (i.e. headquarters, support arms and services). They differ only in the number and type of allotted 'maneuver battalions', all of which have three 'maneuver' companies. The internal brigade organisation has been abolished, but each division contains three brigade headquarters which can control from two to five battalions as assigned by the divisional commander. Extra battalions, up to a total of 15, may be assigned by the corps commander. The artillery of the armoured and mechanised divisions can fire nuclear projectiles. The organisation of the airborne division is fairly similar to that of the 'type' divisions. That of the airmobile divisions is the subject of experiment (TRICAP, meaning 'triple capability').

The divisional base consists of: headquarters and HQ company; three brigade headquarters and HQ companies; one armoured cavalry (reconnaissance) squadron; one air-defence, one engineer and one signal battalion; one military police company; one aviation company (armoured and mechanised divisions) or one aviation battalion (infantry divisions), the divisional artillery — one Honest John battalion, three field artillery battalions (of 105 mm howitzers in the infantry division, of 155 mm SP howitzers in the armoured and mechanised divisions) and one 8 in howitzer battalion (in the infantry division a mixed battalion of towed 8 in and 155 mm howitzers) — and a divisional support command (DISCOM) which contains one medical, one maintenance and one supply and transport battalion and administrative units. The air-defence battalion contains 24 20 mm radar-controlled guns and 24 Chaparral missile launchers. The aircraft strength is eighty-eight in the infantry divisions and sixty-one in the armoured and mechanised divisions, the difference being due to the large size of the infantry division's aviation unit, which has 37 helicopters instead of ten.

The 'maneuver' element of the division is:

Armoured division: six tank battalions and five mechanised infantry battalions

Mechanised infantry division: four tank battalions and six mechanised infantry battalions

Infantry Division: one tank battalion, six mechanised infantry battalions (sometimes) and eight infantry battalions (the tank battalion has 54 tanks)

The airborne division's organisation differs from that of the 'Type' divisions in that its nine battalions are all infantry, its artillery consists only of three 105 mm howitzer battalions, and its signal, engineer, reconnaissance and other units are smaller in size and lighter in equipment.

The airmobile (Air Assault) division (which in Vietnam comprised helicopter-borne infantry battalions) is undergoing trials in a triple capability role, for which it will probably be definitively organised with one helicopter and two conventional brigades.

Corps and Armies

The organisations of formations superior to the divisions has recently been changed (Echelon Above Divisions concept), to eliminate the numbered field army and its support command (FASCOM). Henceforward the corps is to be the main command and administrative formation intermediate between divisions and Theater Armies, e.g. United States Army Europe. The Theater Army will, however, retain its support command (TASCOM).

Corps troops will comprise: one corps headquarters and HQ company; the corps artillery (175 mm gun, and Pershing and Sergeant missile battalions); one air-defence artillery; one engineer, one signal and one aviation brigade; one (or more) armoured cavalry (reconnaissance) regiment; one military intelligence, one psychological operations and one smoke generator battalion; one air cavalry squadron; one army security agency group; and the corps support commands (COSCOM) containing one medical and one civil affairs brigade, and transport, military police, administration, automatic data processing, movement control, material management, ammunition and support groups.

Theater Army troops comprise headquarters, artillery and air-defence artillery as assigned, and the support command (TASCOM) which contains personnel, medical, transportation, supply and maintenance, engineer and area support

World Armies

commands (respectively, in acronyms, PERSCOM, MEDCOM, TRANSCOM, SMCOM, ENCOM and ASCOM). The area in which these commands operate is known as the Communications Zone (COMMZ); the area forward of that, in which corps and divisions operate, is known as the Combat Zone.

Army Aviation

The United States air force jealously surveys army aviation to ensure that it does not encroach upon its functions or duplicate its equipment. In deference to American susceptibilities, army aviation is organised neither as an 'arm' nor a 'service'; it exists as a 'quasi-arm'. It is nevertheless a strong and important element of the army, with 10,000 fixed- and rotary-wing aircraft. Each infantry division has an aviation battalion, and each armoured and mechanised division an aviation company. All divisional armoured cavalry (reconnaissance) squadrons have an 'air cavalry' (helicopter) troop. Corps and armies contain additional light, medium and heavy helicopter units and fixed-wing units.

National Guard and Army Reserves

The organisation of units of these 'reserve components' is on paper exactly similar to those of the Active Army. In practice, the Army Reserve acts principally as a pool of reinforcements, though some progress is being made with 'affiliation programs' which will bring chosen units to a state of combat-readiness. It is intended that the National Guard should provide, in case of mobilisation and within 5 weeks, eight combat divisions, 18 separate combat brigades and some smaller units; but it is likely that effective mobilisation would take longer — neither Reserve furnishes formations larger than a division. A Selected Reserve Force (SRF), composed of elements of both reserves, is designed to provide immediate reinforcement of six divisions and three brigades on call.

The United States Marine Corps

Arms of Service

In theory, the USMC is a homogeneous corps. In practice, there is a strong division between the air and ground units, and within the ground units a fair degree of specialisation — artillery, amphibious transportation, military police, etc. The USMC does not, however, divide itself into 'arms' and 'services' as does the army.

Operational

The Corps consists of three active divisions (*see* Role, Commitment, Deployment and Recent Operations) and a reserve division. Each consists of three Marine regiments, each of three battalions of four rifle companies. Its support elements include: one artillery regiment; and one engineer, one reconnaissance, one anti-tank, one service, one medical and one headquarters battalion. Heavier support is assigned to so-called Force Troops, the equivalent of the army corps, but of variable composition. It is weaker in transport and supply facilities than an army division because much of its personnel, equipment and stores are seaborne; it is also weaker in artillery, because it can normally depend on the support of an affiliated Marine Air Wing (MAW) and of naval gunnery. A division provides the nucleus of the two Fleet Marine Forces: 2nd Division to the Atlantic Fleet (with a detachment to the Sixth Fleet in the Mediterranean) and 3rd Division to the Pacific Fleet. As needed, each Fleet Marine Force can provide a Marine Amphibious Unit (MAU — a battalion-sized landing team plus helicopter squadron) Brigade (MAO — regimental-sized landing team, plus helicopter group) or Force (MAF — a Marine division and Marine Air Wing).

An Air Wing has no fixed strength but usually contains eight fixed-wing tactical aircraft squadrons, three fixed-wing transport or observation squadrons and seven helicopter squadrons (heavy, medium, light and attack) in all about 400 aircraft. (Total in USMC Air Wings (1975): 1227 in active wings and 205 in reserve wings.)

Reserves

The Organised Marine Corps Reserve provides the manpower for the 4th Marine Division and 4th Marine Air Wing (Camp Pendleton, California). Reservists serve short terms to keep the division constantly in being. Members of the OMCR, like National Guardsmen, are ineligible for conscription and during the Vietnam war it quickly reached its authorised strength of 40,000. Between 1972–4 it fell to 32,000.

Paramilitary Forces

None exists at the Federal level, since the maintenance of law and order is the concern of the individual States. They rely on their National Guard units to contain disorders which overtax the power of the civil police. Against disorders which result from the refusal of a State government to operate federal law, the President may authorise the employment of Active Army

troops (as did President Eisenhower at Little Rock, Arkansas in 1957); he may also lend Active Army units to a State Governor on request, as President Johnson did to the Governor of Michigan in 1967; disorder in both cases was the outcome of black–white conflict. Each State maintains a police force (usually called State Troopers) with State-wide authority, outside the municipalities which possess their own police troops. Some of the larger municipalities have, since the outbreak of serious racial conflict in the early 1960s, formed 'Police Tactical Units' but neither these nor the State Troopers equate in size or resources or legal powers to the gendarmeries of European States.

RECRUITMENT, TRAINING AND RESERVES

Recruitment

Soldiers

Since June 30th, 1974 the draft (the federal machinery of conscription) has been in 'zero operation', that is, the legal authority to conscript remains in force but the armed services have recruited by voluntary enlistment. The army's authorised strength is 785,000 and in the fiscal year 1973–4 182,000 volunteers were recruited. To maintain numbers at the required level 200,000 were required for 1974–5. To encourage enlistment a 'combat arms' bonus, a pay rise and the right to serve in a chosen unit were granted in 1973. Minimum enlistment is for 2 years. Re-engagement is permitted for additional periods as long as soldiers progress up the NCO or 'specialist' ladder. The 'specialist' ladder is equivalent to the NCOs', offering promotion from Specialist 4 (corporal) to Specialist 7 (sergeant first class) but without command responsibility.

Officers

Officers may be recruited either from the United States Military Academy, West Point (a small minority), or through the Reserve Officer Training Corps (ROTC) (the majority), or by promotion from the ranks (in very small numbers). Officers of specialist corps—Medical, Chaplains, Army Nurse Corps—are commissioned direct from civil life. ROTC officers are granted reserve commissions but may later apply to become regular officers; a few outstanding applicants are granted regular commissions from the onset. However, many serving officers remain 'Reserve Officers on Active Duty' throughout their career and retire as such on pension. Retirement on pension is possible for United States officers after 20 years. West Point officers must serve a minimum of 5 years from graduation. They are still selected, as they have been since 1843, by Congressmen (except for 14% of the academy's strength, selected by competitive examination among serving soldiers and deceased veterans' sons). Each Congressman may nominate from his district one 'principal' and one 'alternate', or allow the academy to choose from six nominees. Most Congressmen submit applicants to examination on an approved syllabus before making their nomination. The system remains decentralised, nonetheless, and is an interesting example of the constitutional separation of powers.

Training

Soldiers

Soldiers receive 8 weeks of basic combat training at one of three training centres in the First, Fifth and Sixth Army areas, then proceed to individual training which may last from 5 to 44 weeks depending on specialisation (401 are taught by the army) at one of the Army Service Schools. He then joins his unit and enters its unit training cycle.

The Army Service Schools (which may also be attended by officers and NCOs) and are directed by the Training and Doctrine Command, are:

- Adjutant General School, Fort Harrison, Ind.
- Air Defence School, Fort Bliss, Tex.
- Armour School, Fort Knox, Ky.
- Artillery and Missile School, Fort Sill, Okla.
- Aviation School, Fort Rucker, Ala.
- Chaplain School, Fort Hamilton, N.Y.
- Chemical School, Fort McClellan, Ala.
- Civil Affairs School, Fort Gordon, Ga.
- Combat Surveillance School, Fort Huachuca, Ariz.
- Engineer School, Fort Belvoir, Va.
- Finance School, Fort Harrison, Md.
- Infantry School, Fort Benning, Ga.
- Intelligence School, Fort Holabird, Md.

World Armies

Judge Advocate General School, Charlottesville, Va.
Management School, Fort Belvoir, Va.
Medical Field Services School, Fort Houston, Tex.
Military Police School, Fort Gordon, Ga.
Ordnance School, Aberdeen Proving Ground, Md.
Missile and Munitions School, Redstone Arsenal, Ala.
Primary Helicopters School, Fort Walters, Tex.
Quartermaster School, Fort Lee, Va.
Signal School, Fort Monmouth, N.J.
S.E. Signal School, Fort Gordon, Ga.
Special Warfare School, Fort Bragg, N.C.
Transportation School, Fort Eustis, Va.

The Northern Warfare Training Centre in Alaska teaches Arctic warfare and the School of the Americas, Panama Canal Zone, teaches jungle warfare, both to United States and Latin American soldiers; the medium of instruction is Spanish.

Officers

ROTC training is administered through four ROTC Regions under TRADOC and is offered in some 250 colleges and universities, including a number of civilian 'military academies' of which the oldest and best-known is the Virginia Military Institute (VMI) at which Stonewall Jackson taught and from which George C. Marshall graduated. Students joining ROTC receive part-time training, to fit in with their academic timetable spread over 4 years. They may be eligible for some pay and a contribution to their fees. On graduation, those commissioned into the Army Reserve proceed to branch training at the School (see above) of their branch.

The USMA course at West Point is of 4 years and is largely academic in character, its aim being to equip each cadet with a high-quality bachelor's degree in science, the arts or engineering (the latter the traditional though now a minority subject). Military training is largely confined to the summer months, though military discipline prevails at all times. West Point graduates also proceed to branch training on graduation. All combat arm officers must complete Airborne and Ranger courses.

The branch training course lasts 9–16 weeks, and is followed by 3–8 years of regimental duty. Every regular officer must then complete his branch career course of 9 months, at the appropriate Army Service School. Thereafter officer training is on a selective basis, and selection is increasingly important for promotion. The Command and General Staff College, Fort Leavenworth, Kansas, offers a 1 year course to officers with 9–16 years' service, for which 60% of combat arms officers and 20% of services officers are selected; without its qualification, promotion beyond lieutenant-colonel is rare. The Armed Services Staff College, Norfolk, Virginia, is an inter-service school, offering a 5 month course, which 15% of regular officers attend as an alternative to the C and GSC (an officer may not attend both). The Army War College, Carlisle Barracks, Pennsylvania and the National War College and Industrial College of the Armed Forces, both at Fort McNair, Washington D.C., offer 1 year courses to officers with 15–23 years' service. About 15% of regular officers attend one of these Schools (the NWC and ICAF are inter-service); without that qualification, promotion to general rank is rare (of the 519 generals in the army in 1972, only two had not attended War College). The NWC and ICAF have recently been combined as the National Defense University.

The United States army, like the navy and air force, encourages and finances officers to gain higher degrees at civilian universities and it is now reckoned that possession of a master's degree is becoming a precondition for promotion to general. But the army also requires the specialist officers which its financing of in-service graduate education produces, while many officers seek such education with a view to finding a civilian career if promotion does not come their way. (In recent years, an increasing number of West Point graduates have used the esteem attaching to its bachelor's degree to leave the army at the earlier permissible point.)

The Marine Corps is and always has been an all-volunteer body. Its men receive basic training at Parris Island, South Carolina, and individual training at the Marine Corps Schools, Quantico, Virginia, which is also the training centre for officers recruited through ROTC or from the ranks. Regular officers are educated at the United States Naval Academy, Annapolis, Md.

Reserves

See Role, Commitment, Deployment and Recent Operations, and Organisation.

EQUIPMENT AND ARMS INDUSTRY

The United States is the largest arms exporter and has the largest arms industry in the non-communist world, but it is of

comparatively recent origin: as late as 1917 the American army, on its arrival in Europe, had to be supplied with artillery by the French and tanks by the British (who had also provided many of the arms used by the North in the Civil War). It was not until President and Congress took the decision, early in World War II, to supply arms to Britain, first on a cash and carry basis, then on a lend-lease basis, that any sizeable fraction of the country's enormous industrial base was mobilised for war purposes. That it was mobilised with such speed and efficiency as to make America, by 1943, the 'Arsenal of Democracy', was due in part to a large portion of its capacity having lain idle since the slump of 1929–32 but in great measure to the adaptability of the labour force. Naturally, it was also an important contributory factor that much of American industrial capacity lay in automobile, aircraft, machinery, machine tools and chemical production, which required the minimum (though still very extensive) retooling to be turned to military purposes.

Had America reverted to custom, her industry would after 1945 have been demobilised and returned almost exclusively to civilian production. Much of it indeed was, and during 1947–9 the country underwent its worst severe post-war economic recession until 1973. Because, however, the scale of defence investment between 1941 and 1944 (in which period spending on war material increased from \$2,100,000,000 to \$57,700,000,000 at constant prices) industrial capacity had been created which would not quickly be converted to civilian use, and before reconversion was complete the outbreak of the Korean war had regenerated demand for its output. Continuing world tension and a rapidly changing arms technology have required ever since that large sections of American scientific, technological and industrial endeavour should be directed into defence research, development and production.

The United States army has itself become a major arms and munitions manufacturer operating: (a) army ammunition plants at Radford, Virginia; Scranton, Pennsylvania; Milan and Holston, Tennessee; Marshall, Texas; Shreveport, Louisiana; Newport and Charlestown, Indiana; Burlington, Iowa; and Independence, Missouri; (b) army missile plants at Charlotte and Burlington, North Carolina; and Warren, Michigan; (c) the army ordnance plant at Joliet, Illinois; (d) the army tank–automotive plant at Cleveland, Ohio; (e) the army engine plant at Muskegon, Michigan; and (f) arsenals at Edgewood, Maryland; Frankford, Pennsylvania; Dover, New Jersey; Watertown and Watervliet, Massachusetts; Redstone, Alabama; Pine Bluff, Arkansas; Detroit, Michigan; Rock Island, Illinois; and Denver, Colorado. A very large number of private corporations manufacture equipment for the army, the most important are: Colt Industries, Hartford, Connecticut; Maremont Corporation, Saco, Maine (small arms); Bowen–McGlaughlin–York, York, Pennsylvania (artillery); Cadillac Gage Corporation, Detroit, Michigan; Pacific Car and Foundry Corporation, Renton, Washington; Chrysler Corporation, Detroit, Michigan; General Motors, Allison Division, Indianapolis, Indiana; Food Machinery and Chemical Corporation, San José, California (tracked and wheeled vehicles and tanks); Hughes Aircraft Company, Culver City, California; General Dynamics Corporation (Pomona Division), San Diego, California; Philco–Ford Corporation, Newport Beach, California; Sperry Rand Corporation, Salt Lake City, Utah; McDonnell–Douglas Corporation, Huntington Beach, California; Martin Marietta Corporation (Orlando Division), Orlando, Florida; LTV (Ling–Temco–Vought) Aerospace Corporation (Michigan Division), Warren, Michigan; Raytheon Company, Lexington, Massachusetts (anti-armour, surface-to-air, air-to-air, and surface-to-surface missiles); Boeing Company (Vertol Division), Seattle, Washington; Bell Aerospace Company, Buffalo, New York; and Sikorsky Aircraft, Stratford, Connecticut (army aircraft).

Equipment

Small Arms

Pistol: 0.45 in Colt

Rifle: M-16 5.56 mm automatic (Colt)

Sub-machine-gun: M-3 0.45 in

Light machine-gun: M-14 A1 7.62 mm (Colt)

Medium machine-gun: M-60 7.62 mm (Maremont Corporation)

Grenade launcher: M-79 40 mm

Grenade launcher (heavy): M-2 0.5 in (Browning)

Mortars

Light: M-224 60 mm

medium: M-29 81 mm

heavy: M-30 4.2 in

Anti-armour weapons

light: M-72 66 mm one-shot throw-away missile (General Dynamics)

medium: M-47 Dragon missile (McDonnell–Douglas)

heavy: M-151 TOW missile (Hughes Aircraft Co.; can be helicopter mounted)

Anti-aircraft weapons

light: Redeye (one-man, shoulder-fired missile; General Dynamics)

medium: M-139 20 mm vehicle-mounted cannon (Hispano–Oerlikon; manufactured in United States army arsenals);

M-163 Vulcan Air Defence System (M-61 20 mm cannon on M-113 chassis; General Electric Co.; equips the air-defence battalion); and Chaparral missile on M-548 truck (Philco–Ford; equips the air-defence battalion)

heavy: Hawk missile (Raytheon)

World Armies

Artillery

- light: M-102 105 mm howitzer (United States Army Arsenals; equips the artillery of the airborne and airmobile division)
- medium: M-114 155 mm howitzer (United States Army Arsenals; equips the field artillery of the infantry division); M-109 155 mm SP howitzer (Cadillac-Chrysler-Allison (General Motors); equips the field artillery of the armoured and mechanised division)
- heavy: M-110 8in SP howitzer (Bowen-McGlaughlin-York; equips the howitzer battalion of the infantry, armoured and mechanised division; can fire a nuclear shell) and M-107 175 mm SP gun (Pacific Car and Foundry Co./FMC Corporation/Bowen-McGlaughlin-York; equips the gun battalion of the corps artillery)

Missile Artillery

- Honest John free-flight missile (25 mile range, 1 KT warhead; Douglas Aircraft Co.; equips the missile battalion of the divisional artillery)
- Sergeant guided missile (85 mile range, 1 KT warhead; Sperry; equips the corps artillery)
- Pershing guided missile (450 mile range, 1 KT warhead; Martin Marietta; equips the corps artillery)
- Lance guided missile (70 mile range, 1 KT warhead; LTV Aero-Space Corp.; is replacing Honest John and Sergeant)

Armour

- APC: M-113 (Food Machinery and Chemical Corp.; equips the mechanised infantry battalion; exists in a variety of versions — M-114, M-577, etc.)
- Light (reconnaissance) tank: M-551 General Sheridan (Allison (General Motors); equips the armoured cavalry (reconnaissance) units. Gun: 152 mm Shillelagh smooth bore; engine 300h.p.; range 350 miles; speed 45 m.p.h.; crew four)
- Medium tank: M-60 (Chrysler; equips the tank battalion. Gun: 105 mm (some with Shillelagh, *see above*); engine 750h.p.; range 310 miles; speed 30 m.p.h.; crew four). *Note:* some M-48 tanks are still in service

Aircraft

- Observation helicopter: OH-6A Cayuse (Hughes Aircraft Co.; on issue to all divisional aviation units and to the divisional headquarters and artillery)
- Utility helicopter: UH-1C/D/G/H (various models), Iroquois (Huey) and Bell 204 (Bell Helicopter Co.; tactical armed transport (eight soldiers); equips the divisional air cavalry troop, the divisional company, the combat aviation (battalion) and the combat aviation group of the air mobile division)
- Attack helicopter: AH-1G Huey Cobra (Bell 204) (Bell Helicopter Co.; two-seat gun-ship; employment as for Iroquois, which it complements)
- Medium transport helicopter: CH-47 Chinook (Boeing Vertol; the transport aircraft of the combat aviation group of the airmobile division)

The utility and attack helicopters are equipped with a variety of air-to-ground missiles, and machine-guns for anti-armour and anti-personnel missions.

Equipment in development: major items under development or nearing production are a mechanised infantry combat vehicle to replace the obsolescent M-113 APC; an XMI main battle tank to replace the M-60; an advanced attack helicopter (AAH), for which Bell and Hughes have each submitted designs, and which will carry the Hellfire 'fire and forget' anti-armour missile; a utility and transport helicopter (UTTAS) to replace the AH-1 Huey; and a battlefield air-defence system, SMA-D. The heavy artillery is also to be re-equipped with a modern version of the M-110 8in self-propelled howitzer, replacing the old M-110 and the M-107 175 mm gun; a new towed 105 mm howitzer (XM-204) is also under development. The budget request for reserved and development of costs of these and other items in the 1975 fiscal year was \$1,986,000,000,000.

RANK, DRESS AND DISTINCTIONS

Commissioned Ranks

General of the Army	Five silver stars
General	Four silver stars
Lieutenant-general (LTG)	Three silver stars
Major-general (MG)	Two silver stars
Brigadier-general (BG)	One silver star
Colonel (COL)	Silver eagle
Lieutenant-colonel (LTC)	Silver leaf
Major	Gold leaf
Captain	Two silver bars
First-lieutenant	One silver bar
Second-lieutenant	One gold bar

Warrant Ranks

Warrant Officer W-4	Three brown stripes on silver bar
Warrant Officer W-3	Two brown stripes on silver bar
Warrant Officer W-2	Three brown stripes on gold bar
Warrant Officer W-1	Two brown stripes on gold bar

Enlisted Grades

Command Sergeant Major	E-9	Three chevrons, three rocker bars†, star and laurel between
Staff Sergeant Major	E-9	Three chevrons, three rocker bars, star between
First Sergeant	E-8	Three chevrons, three rocker bars, lozenge between
Master Sergeant	E-8	Three chevrons, three rocker bars
Platoon Sergeant (Sergeant 1st Class)	E-7	Three chevrons, two rocker bars
Staff Sergeant	E-6	Three chevrons, one rocker bar
Sergeant	E-5	Three chevrons
Corporal	E-4	Two chevrons
Private First Class	E-3	One chevron, one rocker bar
Private	E-2	One chevron
Recruit	E-1	—

*Specialist Grades**

Specialist 7	Three inverted rocker bars over eagle (see Specialist 4)
Specialist 6	Two inverted rocker bars over eagle
Specialist 5	One inverted rocker bar over eagle
Specialist 4	Eagle on chevron-shaped patch

Commissioned ranks and warrant ranks wear badges of rank on the shoulder; enlisted grades on the upper sleeve.

Dress

Walking-out dress is a dark-green tunic and trousers, worn with pale-green shirt and black tie, and dark-green peaked cap; branch badges are worn on the lapel (the same in light khaki for summer). Officers may, and some ceremonial units do, wear a dark-blue-version. Combat dress is dull-green tunic and trousers; the World War II (now NATO) helmet is still worn.

Distinctions

The army awards a variety of decorations, of which the highest for bravery is the (Congressional) Medal of Honour, instituted in July, 1861. Lesser awards for bravery are the Distinguished Service Cross and Medal, the Silver Star and the Bronze Star. The Purple Heart (instituted by George Washington in 1782 — re-instituted in 1933) is awarded for injury in combat, the Soldier's Medal for heroism not involving actual conflict. 'Commendation' medals may be awarded for lesser acts or achievements and especially distinguished units may be awarded Presidential Citations; a badge signifying this is worn by their members. These citations also decorate the colours, of which regiments carry two: a national colour (Stars and Stripes) and a regimental, in the appropriate branch colour (yellow for cavalry, blue for infantry, scarlet for artillery, etc.). The army has also awarded a large number of campaign medals.

CURRENT DEVELOPMENTS

The United States army has recovered well from the disabling experience it underwent in the Vietnam War. It has reorganised sensibly to produce a larger number of tactical formations than it could field before the war on a smaller manpower base, and is re-equipping them with a well-chosen range of new weapons. Its drug abuse, disciplinary and racial problems have been almost completely eliminated, its morale is high and the quality of volunteer it is able to recruit has been high during the economically depressed times in which the 'zero draft' has operated.

* Specialists rank after the enlisted grade of the same number (Specialist 7 is equivalent to Platoon Sergeant E-7). Neither they nor the warrant officers (who mess with the commissioned officers) possess command authority.

† 'Rocker bars' are ellipses, ends upward, which join ends of upward-pointing chevrons.

World Armies

Its main difficulty is that its manpower requirements are, because of the short term for which most recruits enlist, very large and threaten indeed to exceed the numbers available. It has sought, as have the other services, to alleviate the problem by increasing the number of women enlisted, and their numbers have multiplied four-fold in 4 years (from 13,000 to 51,000). Under equal opportunity legislation, it has also thrown open its career structure to women, excluding them only from combat assignments, which are forbidden to them by law. But that does not exclude them from non-combat duty in combat units, to which many are now being assigned. The willingness of male combat soldiers to accept routine orders from female superiors is thus becoming a subject for speculation in the ranks, since its reality cannot be long delayed.

JOHN KEEGAN

UPPER VOLTA*

History and Introduction

Upper Volta attained independence from France in 1960 and remained under civilian political rule until January, 1966. A military coup then took place which overthrew a regime by then unpopular (the coup was supported by the trade union movement), and a military government headed by Colonel (later General) S. Lamizana was installed. General Lamizana has remained Head of State since that time but the style of government has changed. Lamizana first attempted to return the country to civilian rule but this ended in violent disturbances. There followed a period of joint military and civilian rule, which in 1970 extended to elections for an assembly and a civilian prime minister. But friction, greatly exacerbated by the Sahel drought, occurred in the early 1970s; in 1974 the assembly was dissolved and the constitution suspended by a group of younger officers. These, it appears, then formed the effective power in the State, ruling through a National Council for Renewal, under which military officers had a considerable share in the governing of the country's 10 departments; a parallel system of 'defence zones' was also created. In 1976, however, Lamizana once again announced an intention to return to civilian rule for which plans aiming at civilian rule in April, 1978 are in hand. It is likely, however, that Lamizana will continue as an elected Head of State.

Strength and Budget

Population: 6,500,000 (approximately)

Armed forces: 3000 (approximately) together with a 50 strong army air unit plus a gendarmerie of 700, a republican guard of 1200 and a public security company of 250

GNP (estimate): \$750,000,000

Command and Constitutional Status

Upper Volta's government, reformed in February, 1976 is composed of General Lamizana as Head of State and Prime Minister, five other soldiers and 14 civilians. Brigadier Baba Sy is Minister for Defence.

Role, Commitment, Deployment and Recent Operations

Upper Volta's army has two roles: internal security and the defence of the country's borders. A border dispute with Mali exists, Upper Volta holding an area of the Beli river near Agachev, important for grazing and also possibly for mineral wealth, to which Mali lays claim. The dispute became tense at the end of 1974 with border clashes; further clashes followed in June, 1975. No subsequent incidents have been reported, and the efforts of neighbouring States to mediate have so far proved successful.

Organisation

The army is composed of four infantry battalions, one including a reconnaissance company. One battalion (with the reconnaissance company) is posted to Ouagadougou, one other is at Bobo-Dioulasso; formation of a fifth battalion has been reported but not confirmed.

The gendarmerie's headquarters are at Ouagadougou, with four territorial companies stationed at Ouagadougou, Bobo-Dioulasso, Koudougou and Fada N'gourma; together with two mobile companies, one each at Ouagadougou and Bobo-Dioulasso. The Republican Guard and the Public Security Company are both stationed in the capital.

Recruitment, Training and Reserves

The Mossi people are the largest (and best organised) ethnic group in the country, being just under one half of the total population. For this reason, and the very large number of Mossi traditionally in French colonial military service, they figure conspicuously in the Upper Volta army.

A basic training centre is located at Kadiogo.

Upper Volta has a technical military assistance and training treaty with France — but since independence there has been no French garrison.

* For general notes on African armies, see Appendix 1.

World Armies

Equipment and Arms Industry

The infantry units have an entirely French range of equipment including 60 mm and 81 mm mortars, and 75 mm rocket launchers. Some old 75 mm field guns have also been reported. The armoured-car reconnaissance squadron has some American M8 armoured cars and also a few British Ferret vehicles. The air unit consists of eight transport aircraft and one light liaison machine.

Rank, Dress and Distinctions

These generally follow the French pattern except that the *képi* is not worn.

Current Developments

The Sahel drought and consequential economic problems make any expansion unlikely except in the event of further disputes with Mali. Discipline is said to be of a higher standard than in some other Francophone African armies.

L.L. MATHEWS

URUGUAY

HISTORY AND INTRODUCTION

It was a concomitant of, and a precondition for, Uruguay's long-held reputation as the most stable and democratic State in Latin America that its army should be non-political. This was certainly the case until the early 1970s when, as a result of the internal revolutionary campaign conducted by the left-wing Movement of National Liberation (or *Tupamaros*, so named after the Indian resister of Spanish rule, Tupac Amaru), the army, in concert with the small navy and air force, progressively encroached on the autonomy of the government and eventually overthrew it in June, 1975. Uruguay thus joined the long list of Latin American republics under military rule, which the regime has given notice will not be lifted until 1981.

In striking contrast to the stability which Uruguay achieved in this century, its history in the nineteenth was disorderly to a degree unusual even in the region. Between 1828, when its independence was recognised by its neighbours Argentina and Brazil, each of which had laid claim to its territory, and 1890, there were nearly 40 revolutions, of which twelve were successful. Only three of the 23 governments which held power during the period were not challenged by revolt, and it was not until 1890 that the country got its first civilian president. All the rest had been soldiers, though, in the absence of a professional army, which did not emerge until the end of the century, 'soldiers' should really be understood to mean 'military adventurers'.

Demographically, economically and politically, Uruguay divides into two regions: that of the coast, centred on Montevideo, a great exporting and commercial centre; and the interior, which produces meat, hides and wool on great estates. Hostility between the two resulted in a 9 year siege of Montevideo from 1843 until 1852 (the Great War), with the city dwellers (*Colorados*, or Reds, from the colour they chose) backed by the Argentinians and the country party (*Blancos*, or Whites) backed by the Brazilians. Brazil took a large slice of the north as the price of her intervention and left a Blanco government nominally in power but, in 1863, joined with Argentina in supporting a Colorado invasion of the country from Paraguay, both countries hoping thereby to dismember the State further. The dictator of Paraguay, López, hoped however to make Uruguay his and his presumptions brought down upon him the combined wrath of the two larger annexationists. Uruguay joined them as an ally in the Paraguayan War which followed (1864–70), the result of which for her was to end Argentinian–Brazilian rivalry for her territory. The internal result was to bring the *Colorados* to power for the next 90 years and so gradually to suppress the endemic disorder in which the still sparsely populated country lived. The Paraguayan War had brought into being something like a national regular army (a national guard had been created with units in each town after the Great War, but had failed to flourish) and stable Colorado control of its hierarchy and promotions was an important factor contributing to the development of internal peace. The military academy was founded in 1885, after which adventurers were gradually excluded from its officer ranks.

But the most important factors making for stability towards and after the turn of the century were economic and political rather than military. Uruguay's rich agricultural interior and easy access to the seas made it a boom State, and attracted immigrants in hundreds of thousands from Europe, with moderate political traditions and no part in the feuds which had almost destroyed the country in mid-century. And in 1903 it elected as President one of the most remarkable men of modern Latin America, Jose Batlle, whose determination was to establish consensus politics, ending the *Colorado–Blanco* feud for good. His cure was to introduce collegiate government on the Swiss system, which gave the minority a share of seats with the majority on a Council of Government, designed to assist the president in his executive functions. Batlle was also during both his presidencies (1903–07 and 1911–15) to introduce legislation for universal and compulsory suffrage, mass education, State intervention in commerce and industry, social welfare payments and protection of trade union activity which was to win Uruguay during the 1920s and 1930s the reputation as the Sweden of South America.

The collapse of Uruguay's prosperity in the world slump of 1929–31 caused a return to dictatorship, of a mild sort, between 1931–8, and pure '*batllista*' government was not fully restored until 1951, when the presidency was actually abolished and the Council Government invested with full executive power. But the army took no real part in government even during the years of the Terra dictatorship and acquiesced silently and decently in the '*batllista*' system. As late as 1960 Edward Lieuwen, the leading expert on Latin American militarism, could write:

'The country's extraordinary economic and social progress during the twentieth century has been paralleled by the assumption by the armed forces of a purely professional, purely military role.

In Uruguay the armed forces at present are neither above the law nor beyond civilian control. The defense minister is uniformly a civilian. The career in arms is voluntary; there is no conscription. Personnel of the small professional army, navy and air force are isolated in military bases and other installations. The armed forces play only a minor, a disciplined and a completely subordinate role in the Uruguayan State'.

Within 12 years, the powers of government had passed almost completely to the armed forces. The reasons for this extraordinary and totally unexpected reversal in Uruguayan affairs result from the very success of the *batllista* achievement

World Armies

in producing the best-educated and most politically conscious electorate in Latin America, and thus that most sensitive to failures and short-comings in its elected government, and to the vulnerability of its economic system to movements of the world economy. Welfare Uruguay, with over half the work force on the government payroll, and with large welfare payments to make to any citizen thrown out of work, depended upon a ready and favourable market for its agricultural produce. An unfavourable balance of payments from the mid-1960s onwards resulted in raging inflation, the effects of which fell most heavily on the working class, and its social consequences brought to life the most dramatic and effective 'guerrilla' movement in Latin America, the Tupamaros. Recruited from the students educated in the free *batllista* university system, they robbed banks, kidnapped native and foreign notables (including the British ambassador) and infuriated the established class, to the point where in April, 1972 a 'state of internal war' was declared to exist. Thereafter the progression to full military rule (outlined under Command and Constitutional Status) became inexorable.

STRENGTH AND BUDGET

Population: 3,170,000

Army: 20,000

Navy: 4000; five major vessels, seven smaller

Air force: 3000; 30 combat aircraft

GNP (1977 estimate): \$3,600,000,000

Defence expenditure (1977): \$72,000,000

The percentage of the budget spent on defence in 1973 was 10.2, the average throughout the 1960s being 8.1. The country has benefitted very generously from American military assistance, the total received between 1950 and 1969 being about \$40,000,000. The bulk of defence expenditure goes on the army, and is for running costs rather than equipment purchase.

COMMAND AND CONSTITUTIONAL STATUS

Since 1900 and until very recently, constitutional provisions in Uruguay have been designed to avert dictatorship and foster consensus. Between 1951 and 1967 the country was actually run on the Swiss system. The presidency was abolished and executive power vested in a National Council of Government of nine members, six from the majority and three from the minority. The presidency was restored in 1967 as the result of a referendum and the revised constitution vested command of the armed forces in the President, who was also allotted power to regulate recruitment and the provision of personnel. The Congress was assigned powers to fix annually the size of the armed forces and to declare war. The Minister of National Defence had administrative control of the armed forces only, though they were subordinate to him on a day-to-day basis. Subordinate to each of the armed forces commanders was a chief of staff. There was no joint staff.

As a result of the internal crisis precipitated by the activities of the *Tupamaros*, the machinery prescribed by the 1967 Constitution has been very much altered. Although the country still has a civilian president, a former minister of health, he was installed by the armed forces as a result of a dispute between the service commanders and the former president, the last elected by popular vote, in June, 1975. By that date, power had already moved effectively to the armed forces, which had insisted on the dissolution of the Congress (Senate and Chamber of Deputies) in June, 1973 and its replacement by a 20 man Council of State. Even before that, it had effectively secured power to itself by requiring President Bordaberry, in February, 1973 to sanction the creation of a National Security Council (CONASED), composed of the commanders of the three services, and the Ministers of the Interior, Defence, Foreign Affairs and Economics, to function 'as an organ of military control over the administration'.

In June, 1975 the provisional president who replaced Bordaberry appointed a Council of the Nation, composed of 29 senior service officers and the existing Council of State, which 2 months later chose a president (the present one) for a 5 year term. In August, 1977 he announced a timetable for a return to democratic government: (1) the promulgation of a new constitution by 1980; (2) the election of a president, the candidate to be chosen by the two 'traditional' parties (*Colorados* and *Blancos*), with the approval of the armed forces, in November, 1981; (3) normal elections, of candidates from the traditional parties, in 1986.

Meanwhile the government rules by decree, constitutional measures and major laws being known as 'institutional acts'. The armed forces are in direct control of the central bank, State monopolies, posts and telegraphs, and fisheries. The press is banned or controlled. All left-wing parties have been dissolved and normal political and trade union activity is in abeyance. Divisions have been perceived within the armed forces over policy (between 'constitutionalists'; '*peruanistas*', i.e. ultra-nationalists; and right-wingers, who take the military regime in Brazil as their model) but, through purges and dismissals, have been kept under control. The temper of the military regime, though fiercely anti-left, is not reactionary. Generals have consistently expressed their disapproval of profiteering and corruption in the 'traditional' parties and, before taking power, openly voiced their unwillingness to act against the trade unions in an economic climate harshly unfavourable to the

working-class. It is probable that the example of the military regime in Brazil, the country's neighbour, is that which most influences the army's policies.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The Constitution of 1967 enumerates 20 responsibilities of the Minister of Defence, of which the most important are defence against external aggression, and the preservation of national security and law and order. Uruguay is a signatory of the Rio and Chapultepec treaties, has sent troops to act as UN observers on the India–Pakistan border, has a constitutional provision permitting the entrance of foreign troops and the despatch of national troops abroad, with the approval of the general assembly, but has no current external commitments. There are four military regions. The army is at present deployed in Regions 1 and 2, around the major centres of population, particularly Montevideo, but maintains a presence in the interior and at the land frontier posts. Its engineer battalions are largely engaged on development work in the interior. Since the rise of the *Tupamaros* in the late 1960s, the army has been extensively committed to internal security duty, but operations have been of a police character. Uruguay sent military observers to the UN force supervising the Kashmir peace-line between 1949 and 1971.

ORGANISATION

The army is organised domestically into the following branches: infantry, cavalry, artillery, engineers, signals, ordnance, medical, veterinary, intendance and transportation. Operationally, there exist four 'armies', which are each stationed in one of the four military regions, but they are administrative in status. The highest operational organisation is the battalion or regiment: there are three armoured regiments, six cavalry regiments (probably squadrons), 13 infantry battalions, four artillery battalions (battery strength), one air-defence battalion and five engineer battalions. All units appear to be small in size or below strength.

The police number 17,000 and include at least two paramilitary units — the Republican Guard and the Metropolitan Guard, both stationed in Montevideo. The Montevideo branch of the National Police includes a Quick Action Unit specially formed to counter *Tupamaros* activity.

RECRUITMENT, TRAINING AND RESERVES

Unusually in Latin America, the army is recruited by voluntary enlistment. The soldiers contract for either 1 or 2 years' service, with the option of extending. There is no difficulty in attracting recruits. The men are trained in the units, specialists at the School of Arms and Services. Officers are also volunteers, chosen by competitive examination from high-school graduates. They are trained at the military academy (a 4 year course) and given branch training at the School of Arms and Services. There is an Army Command and Staff School for chosen staff candidates and a tri-service Military Institute of Superior Studies for senior officers.

The reserve is said to number 120,000, composed partly of time-expired soldiers, but largely of citizens who have undergone 'military preparatory training' at school. Its military value is probably low, but so to is the likelihood of a need for its use.

EQUIPMENT AND ARMS INDUSTRY

There is some light industry and a little heavy industry in the country, and small-arms ammunition is produced. The equipment of the army is imported, however, and is now almost all obsolescent or obsolete. Small arms are American. Heavier equipment is as follows:

Air-defence weapons: 40 mm L60/70 Bofors (Sweden; USA)

Artillery: 105 mm M-101 howitzer (USA; 25 in service)

Armour: M-3A1 half-track (USA; 10 in service); M-113 APC (USA; 15 in service); M-5 Stuart light tank (USA; 18 in service) and M-24 light tank (USA; 17 in service)

The air force operates eight helicopters and 12 military transports.

World Armies

RANK, DRESS AND DISTINCTIONS

General de brigada	National emblem, two gold stars, oak leaves
Coronel	National emblem, one gold star
Teniente coronel	Crown, two sunbursts
Mayor	Crown, one sunburst
Capitán	Three sunbursts
Teniente	Two sunbursts
Teniente segundo	One and a half sunbursts
Subteniente	One sunburst

Uniform is American style. Distinguishing piping colours are worn: green for infantry; dark red for cavalry; black for engineers and signals; orange for ordnance; violet for medical and veterinary; brown for intendance and transportation; scarlet for artillery and general officers. There are no military medals or decorations.

CURRENT DEVELOPMENTS

As so many other Latin American armies which have usurped political power in the last 10 years have painfully discovered, the assumption of the responsibility of government has not abolished the necessity for political choice in Uruguay or exempted the army from its exigencies. Inflation, though somewhat reduced, continues at a high rate, despite a currency reform in 1976, and with it popular discontent and trade union protest. Twenty-two officers who had 'analysed' the current political situation in a document sent to the government in March, 1977 were dismissed from the army, and 30 more suspected of sympathising with them shortly afterwards. They may be presumed to belong to the ultra-nationalist *peruanista* wing who favour a more radical approach to the country's problems. In April a law was enacted providing for the retirement of officers 'whose activities compromise the purposes which should inspire their actions', a tautology enjoining an unattainable standard of loyalty. Now that the *Tupamaros* have been defeated as an effective force, the military government has the choice either of embarking on a full-blown Peruvian course, which the sophistication of the Uruguayan electorate probably makes both unfeasible and unthinkable, or of returning the country to civilian rule. That it has promised to do, under supervised conditions, by 1981. Whether the electorate will find the patience to acquiesce in its timetable will depend on the army's success in managing the economy.

JOHN KEEGAN

VENEZUELA

HISTORY AND INTRODUCTION

Venezuela, cradle of Latin American independence, has 'a political history which can be told in the lives of its military dictators' and yet a political present in which the army plays a less intrusive role than perhaps anywhere else in mainland South America. Thanks to the very large oil revenues which the government enjoys, which give real hope for the economic transformation of the country, and the genuinely 'professional' outlook of the Venezuelan officer corps, the prospects for continuing civilian government appear promising.

Yet until 1958 Venezuela seemed bound to the wheel of an inflexible military dictatorship half a century old, and which seemed tolerable only by comparison with the era of civil war and personal caudillism which had preceded it. The country was born in war. Miranda, the Precursor as he is known in the annals of Latin American liberation, and Bolívar, the Liberator, were both Venezuelans, and Carabobo, the decisive battle for independence, was fought on Venezuelan soil. The country's secession from Bolívar's Gran Colombia, in which he temporarily united all the modern northern republics, was engineered by the commander of the Venezuelan army, General Páez, who became the country's first president and remained *de facto* ruler until 1848. His defeat at the hands of his nominee, General Monagas, in an abortive rebellion, merely ushered in a further period of personal rule, and one so arbitrary that it eventually brought about his violent overthrow in 1858. The parties who had combined against him, generally characterised as conservatives and liberals respectively, though all from the propertied classes, immediately fell out and the country embarked on a civil war (the Federalist War) which lasted for 5 years. The conservatives recalled General Páez in an attempt to win it but were ultimately defeated by Generals Falcon and Guzmán Blanco. Falcon's presidency was challenged by a conservative revolt under the leadership of Monagas in 1868, and stable government was only restored by the counter-coup of Guzmán Blanco in 1870.

Guzmán Blanco ruled for 18 years, seen retrospectively as a golden age of peace, progress and culture. But the basis of his power was again military, and his regime was brought to an end by a provincial revolt. Four years of chaos (1888–92) were cured only by another dictatorial coup, led by the foremost general, Crespo and a disputed election at the term of his presidency led to a civil war (1897–9) which ushered in yet another military regime, that of General Cipriano Castro. An extortionate tyrant, Castro nevertheless gave Venezuela what it had hitherto lacked — a centralised army, with which his successor, General Juan Vicente Gómez, maintained himself in office from 1908 until 1935. López Contreras, the Minister of War and a serving general, quelled the disturbances which followed the death of the dictator by taking power himself, which he transferred to another, General Medina Angarita, at the end of his presidential term, while awarding himself the Ministry of War again and retaining effective authority.

He was preparing to resume the presidency at the 1945 election when, to the surprise of all but a handful of junior officers and left-wing politicians, the traditional establishment was swept off the board by a classic military conspiracy. The *junta* of professional officers, who had long chafed at being used to prop up regimes insensitive to the interests both of the army and the nation, initially sponsored a government of the leading left-wing party, *Acción Democrática*, under the presidency of the charismatic Rómulo Betancourt. Alarmed at its authentically reformist programme, however, the army took power itself in 1948 and held it for the next 10 years. The military leader, Pérez Jiménez, governed in a spirit of extravagant State investment and narrow repression, and came to grief at the hands of another left-wing-cum-military coup in 1958. Betancourt made a triumphant return to the presidency, overcame a series of internal left-wing rebellions and right-wing coups, and handed on power constitutionally to a candidate of his own party in 1964. The presidency passed to an opposition party (COPEI — Christian Socialist) candidate in 1968, back to *Acción Democrática* in 1974 and will be contested at what are expected to be orderly elections at the end of 1978.

Venezuela thus appears to have had only 20 years of non-military rule in its century and a half of independence. But the appearance is misleading, for 'military' is a word of more than usually imprecise meaning in the Venezuelan context. The 'army' with which the nineteenth century *caudillos* sustained their power was in fact a federation of local regiments, answerable to their provincial chiefs, into which the national army had dissolved after the secession from Gran Colombia. The provincial character of the 'army' reached its apogee during the Federalist War, when commissions were granted so freely that, even 10 years later, a census in the State of Carabobo revealed the existence, among a male population of 22,952, of 3450 commissioned officers, including 627 colonels and 449 generals. Páez had attempted to reform such absurdities by establishing a military academy, but the innovation has not been successful. The army which brought Castro to power in 1899 was a typically Venezuelan band of provincial partisans, motivated by hopes of political plunder.

Castro and his successor, Gómez, instituted between them, however, a fundamental transformation of Venezuela's military institutions which was to put their 'Andean' caudillism on a firmer basis than any of the former dictatorships had enjoyed and, at the same time, to promise an eventual end to caudillism itself. Their army, recruited chiefly in the Andean State of Táchira, was composed for the first time of literate townsmen, rather than uneducated peasants from the coast or

World Armies

the *llanos*, and therefore took readily to the reforms which their leaders introduced. These comprised the creation of a general staff and the organisation of a chain of command from it to the military commandants in each State, the establishment of a military academy and the importation of foreign training missions, initially from the Prussian-trained Chilean army, later from Belgium and France. Perhaps the most important of these initially was the general staff, which found ways of giving the local commandants no safe option but to accept its authority and put down local guerrilla bands which would not accept theirs. As a result the country had, by the end of Castro's presidency, a single army under effective presidential control.

In the longer run, however, it was the professionalisation of the army, through its own and the imported training institutions, which was to have the more important effect on Venezuelan political life. Castro and Gómez partially officered the army with men properly trained in the new military academy, but continued to commission political nominees who were in general preferred for high command. And while Venezuela's traditional *élite* preserved their privileges, the junior officers remained badly paid and condemned to serve at menial tasks far from the capital. Those who went abroad for training, particularly in Peru, contrasted their lot particularly unfavourably with their fellow officers elsewhere. Military discontent first showed itself in the common cause made between the future leaders of *Acción Democrática* and some academy-trained officers in the abortive coup of April, 1928 against President Gómez. The intervention of the commander of the Caracas garrison, General López Contreras, spared many of the conspirators from the dictator's wrath but, though he was sympathetic to the rising spirit of professionalism within the army, his own management of national affairs, first as President (1936–41), then as *éminence grise* to General Medina (1941–5), deferred little to the young officers' aspirations. The prospect of his return to the presidency in 1946, and the continuation of the Andean hegemony over politics and the army which it entailed, therefore precipitated decisive military action. A secret society of young academy-trained officers, the *Unión Patriótica Militar*, acting in concert with Rómulo Betancourt's *Acción Democrática*, to which they had proposed revolution, instituted a rising on October 18th, 1945 and, after 5 days of internecine fighting which cost at least 500 casualties, took power.

The 1945 revolution marks a clear breach between what has been called the 'gendarmist State' and a regime of outright militarism. In the former, typified by the rule of Castro and Gómez, a military strongman 'uses a mercenary army to make himself national ruler, impose order, tames the army and uses it to maintain himself in power'. In the latter, the army rules directly and largely in its own interest. In Venezuela the transition was not clear cut. Medina, president between 1941 and 1945, had indeed attempted to demilitarise the existing government, and it was his success in doing so which in part created the revolutionary outlook of 1945. Demilitarisation continued during the first 3 years after 1945, when the army co-operated enthusiastically with the *Acción Democrática* government which it had brought to power. But the military mood which underlay both the army's overthrow of Medina and of its own chosen successor regime was consistent. Confronted by major regional and generational divides, on the one hand, and by the divisive policies of a too narrowly based political party on the other, the army acted both in 1945 and in 1948, when it took power back to itself, as a 'regulator', an agent of 'rectification', which alone among the institutions of the country and the State could act efficiently, uncorruptly and impartially.

The *coup d'état* of 1948 was to change the army's course, however. Delgado, leader of the three-man *junta* which overthrew the elected government, was mysteriously murdered in November, 1950 and his place taken by Pérez Jiménez, a colleague with none of his tact or standing with civilian society. Pérez Jiménez claimed to be alarmed by the policies of *Acción Democrática*, particularly its alleged plan to create an armed party militia, but it seems more likely that he feared their success would rob the army of its traditionally determinative role. His 10 years of power were certainly to be marked by an outright favouring of the army above every other sector of Venezuelan society. His arrangements with the foreign oil companies, far more preferential than those they had struck with the *Acción Democrática* regime, provided his treasury with plentiful funds, some of which he appropriated for his own use, some of which were invested in spectacular public works, but much of which was spent on the army itself. Salaries, long a subject of complaint with junior officers, had been raised in 1945 but were raised sharply again by Pérez Jiménez, to the highest level among Latin American armies, and supplemented by housing allowances and perquisites, which included the use of the Caracas Officers' Club, built by the dictator to be the most luxurious and costliest in the world. Favoured officers were promoted to the rank of general, in abeyance since 1945, were appointed again to political posts (from which officers had been removed by Medina) and allowed opportunities for graft. Officers suspected of disloyalty were, by contrast, ruthlessly persecuted by the National Security Police, which the dictator built up to a strength of 5000 and made the scourge of all opposition. The army itself, which remained only about 10,000 strong, was lavishly re-equipped, a development which gave great satisfaction to its career officers and NCOs, an increasing number of whom were also sent abroad for training.

The very lavishness of Pérez Jiménez's policies was to prove his ultimate undoing. Narrow though the army's view of its 'regulative' role was, it was based upon genuine idealism, to which the dictator's gross materialism was an affront. These feelings were particularly strong in the navy and air force, which were somewhat excluded from his largesse in any case. Despite the activities of the security police, the political parties had by 1957 organised a Patriotic *junta* whose object was the restoration of civilian rule, and similarly dedicated cells had begun to form in the armed forces. Two weeks after the dictator had held a rigged plebiscite to perpetuate his hold on power, on January 1st, 1958 army, navy and air force units rose, and planes bombed Caracas. Units loyal to Pérez Jiménez put the rising down, but it marked the end of his effective rule. On January 21st, the Patriotic *junta* called a general strike and, to avoid civil war, a group of his military supporters

transferred their loyalty to the conspirators, who included, as in 1928 and 1945, the cadets of the Military School. Disorders continued until January 25th when the new *junta*, under Admiral Larrazábal, agreed to include two civilians in its ranks. It shortly afterwards promised free elections, to be held as quickly as possible.

The *junta* included and depended upon a high proportion of those officers of Andean origin, particularly from the province of Táchira, which had dominated both army and government since Castro's seizure of power in 1899. The demise of the *hegemonia andina* looked therefore by no means assured. But the experience of the army and the political parties under the 10 year dictatorship seemed to have taught both a new moderation and spirit of co-operation. The *junta* dealt severely with the leaders of the disorders, civilian and military, which swept the country between January and the presidential elections of December, 1958. The political parties, of which *Acción Democrática*, led by Rómulo Betancourt, re-emerged as the most powerful, campaigned in a moderate manner and agreed to pledge support to whichever candidate succeeded at the polls. Meanwhile the general staff was reorganised by the *junta*, and the most notorious of the *perezjimenista* officers exiled.

Rómulo Betancourt was returned as President, clearly if only narrowly ahead of Admiral Larrazábal, who at once marshalled the armed forces behind the legitimate Head of State. Their loyalty proved necessary to preserve the regime during its first 3 years of office, when it was frequently assailed by right- and left-wing coups, two of the latter being mounted by naval infantry units at Carúpano and Puerto Cabello in May and June, 1961. During 1962-3, left-wing violence of a more conventional sort was mounted by a splinter of *Acción Democrática*, the Movement of the Revolutionary Left (MIR), which with Communist Party support and help from Cuba organised a number of small bands in the countryside, particularly the north-east and north-west, and waged low-level guerrilla operations. Their object appeared to be to provoke the army into a counter-coup, from which they hoped to profit, but the severity of Betancourt's reaction, and the care he took to maintain his understanding with the military leadership, disappointed their hopes. An orderly election under an extended franchise resulted in the return of another *Acción Democrática* candidate in December, 1963 the extent of whose popular support completely deflated the guerrillas' claims to represent mass opinion.

Betancourt's policy of publicly flattering the army's wisdom and emphasising its predominant role, of privately sustaining warm personal relations with the military leaders, and of consistently fostering the material welfare of the armed forces has been pursued by his successors, with highly beneficial results. Venezuela has now enjoyed 20 years of civilian government and of almost unbroken internal peace, together with great prosperity, derived from the country's raw material revenues, and rapid developmental advance. The success of civilian government promises to prove self-sustaining and to preclude the occasion for a return to military rule.

STRENGTH AND BUDGET

Population: 13,090,000

Army: 28,000

Navy: 8000 (including 4000 marines); 12 major ships, 29 smaller; 15 aircraft

Air force: 8000; 99 combat aircraft

Paramilitary: 10,000 National Guard

GNP (1977): \$36,100,000,000

Defence expenditure (1978): \$615,000,000

Venezuela has traditionally spent only a small portion of the national budget on defence. In the last year (1958) of the Pérez Jiménez regime, for example, it spent only 8.6%, compared to 29% in Brazil and 26% in Colombia. The reason for this moderation lies in the very large revenue which the government enjoys, largely derived from the sale of domestic oil, to the comparatively small size of the armed forces, and to their modest equipment. Unlike the States with 'great power' aspirations in South America, particularly Brazil and Argentina, Venezuela does not feel it necessary to buy or attempt to manufacture large surface ships, advanced combat aircraft or battle tanks.

COMMAND AND CONSTITUTIONAL STATUS

Venezuela, even among Latin American States, is notable for the number of constitutions which successive governments have granted. The present, promulgated in 1961 by Rómulo Betancourt's *Acción Democrática* congress, is the twenty-fourth. A highly idealistic document, it restores to congress and the States many of the powers which the Pérez Jiménez constitution of 1953 reserved to the presidency. Article 132 declares the National Armed Forces to be a non-political and obedient institution, organised by the State to ensure the national defence, the stability of democratic institutions, and respect for the constitution and the laws, the observance of which shall always be above any other obligation. The National Armed Forces shall be in the service of the Republic, and in no case in that of any person or political party. Article 190 declares that the President is Commander-in-Chief. He is advised by the Supreme Council of National Defence, which consists of the Cabinet, the Inspector-General of the Armed Forces, the Chief of the Joint Staff and the Commanders of the

World Armies

Army, Navy, Air Force and National Guard. Executive control is vested in the Minister of Defence, who is advised by the Inspector-General of the Armed Forces but deals directly with the commanders of the services. In practice he works through the Chief of the Joint Staff, though that official is in theory outside the direct chain of command. Each of the services has its own staff, organised on the American pattern (as is the Joint Staff, which was established in 1958 as an anti-*perezjimenista* measure). The branches of the Army Staff normally double as branches of the Joint Staff.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role of the army is well-defined by the Constitution. Historically, of course, it has acted either as the principal support of an autocratic ruler or as a government in its own right. Recently it has played an important part in protecting a democratic government from violent overthrow. It also performs, though to a lesser extent than many Latin American armies, a civic action role. It has no external role of immediacy or importance, for though the country is in dispute over boundaries with Colombia and Guyana, the disputes remain diplomatic in spirit. Venezuela is a signatory of the mutual defence and non-aggression treaties of Chapultepec and Rio.

The army's main area of deployment has always been in and around Caracas, in which the Miraflores and San Carlos barracks have been traditional political storm centres, and at the large Maracay base to the west of the city. The Andean garrison, centred on San Cristóbal in Táchira State, has also always been strong. The old-established infantry battalions are distributed among the larger State capitals. The armoured units are based at Maracay. The new ranger battalions, raised during the 1970s, are based in the States which have experienced guerrilla activity, notably Sucre, Monagas, Anzoátegui, Falcón, Lara, Yaracuy, Portuguesa and Apure.

Operations against the guerrillas, organised by the MIR splinter of *Acción Democrática*, the Communist Party of Venezuela, a small number of left-wing officers and other left-wing groups all actively supported by the Cuban regime, began in 1962 and were effectively concluded in 1965, although sporadic guerrilla activity continued for several years. The level of activity was always low, and easily contained by the army, National Guard and police.

ORGANISATION

The army is divided into the following branches: infantry, artillery, cavalry, armour, engineers, signals, transport, military aviation and services. Operationally it consists of one light and two medium tank battalions (which form an armoured brigade), two mechanised battalions, 11 infantry battalions, 13 ranger battalions, seven artillery groups, five engineer battalions and some air-defence battalions. There is also a cavalry regiment. The size of the army has almost doubled in the last 10 years, largely by the creation of the anti-guerrilla ranger battalions, but also by the addition of armoured and artillery units. The navy's marines, *Infantería de Marina*, raised in 1958, are organised in three battalions. The air force has a parachute battalion, based near Caracas.

The National Guard, always so-called but officially known as the *Fuerzas Armadas de Cooperación*, forms a fourth and co-equal service. It comes under the Minister of Defence, but is divided into State contingents. Its 10,000 members, whose popular standing is high, are almost all ex-servicemen and are enlisted on a regular basis. Its officers are enlisted and trained in the same way as those of the other services. The civil police, under State or Federal control, number about 20,000.

RECRUITMENT, TRAINING AND RESERVES

All Venezuelan males become liable for military service in their eighteenth year. The annual contingent numbers about 80,000, but only about a quarter are enlisted. There are generous exemptions for married men, teachers, high-school and university students, government employees, railway workers, clergy, only sons and brothers of servicemen. The requisite number is chosen from the remainder by lottery. The result is that the conscripts, who form the majority of the army, are from the rural and urban poor. They are mainly trained in the infantry battalions.

Officers and NCOs are all regulars. The NCOs are recruited from time-expired conscripts. The officers are selected by competitive examination from high-school students and trained at the *Escuela Militar* at Maracay; the course lasts for 4 years. Staff college training is given at the *Escuela Superior*, Chorrillos; there are branch schools for the infantry, artillery, armour, engineers, signals and transport at Maracay. The government also finances two military high schools, in Táchira and Caracas, to feed the *Escuela Militar* and to provide a supply of reserve officers.

Venezuela has a military assistance agreement with the United States, which has provided training missions in the past, and large numbers of Venezuelan officers and NCOs have undergone training at the United States School of the Americas; numbers of staff officers have attended the Inter-American Defense College, Washington. American influence on the organisation and doctrine of the army is strong.

There is no reserve organisation, but ex-conscripts are liable to recall in an emergency.

EQUIPMENT AND ARMS INDUSTRY

Venezuela has no domestic arms industry and most of its equipment has, since World War II, been imported from the United States. More recently the army has turned to Europe, and particularly France, with which the army has a historic connection, for equipment.

Rifle: 7.62mm FAL (Belgium)

Sub-machine-gun: 9mm Uzi (Israel-Germany)

Machine-gun: 7.62mm MAG (Belgium)

Mortar: 61mm Brandt (France), 80mm Brandt (France) and 120mm Brandt (France)

Anti-armour weapons: 106mm RCL (USA)

Air-defence weapons: 40mm L/60 (Sweden; USA)

Artillery: 105mm M-101 howitzer (USA) and 155mm AMX SP howitzer (France; 15 in service)

Armour: AMX-VCI APC (France), AMX-13 light tank (France; 40 in service) and AMX-30 medium tank (France; 142 in service)

Aircraft: 20 helicopters, including two UH-IDs, Alouette IIIs and Bell 47s. The air force operates Canberras, F-5s, Mirage IIIs and F-86s, and about 40 helicopters

RANK, DRESS AND DISTINCTIONS

Teniente General	Three gold sunbursts
General de División	Two gold sunbursts
General de Brigada	One gold sunburst
Coronel	Three gold stars
Teniente Coronel	Two gold stars
Mayor	One gold star
Capitán	Three small gold stars
Teniente Primero	Two small gold stars
Teniente	One small gold star

The army wears a light khaki uniform in summer and dark-green in winter. Combat dress is American in style. There are many national decorations, including the Order of the Liberator, the Legion of National Defence and the Marshal Sucre Medal.

CURRENT DEVELOPMENTS

Venezuela's foremost national problem, until 1958, was undoubtedly the demilitarisation of its politics. After 20 years of civilian government it is possible to say that a very great deal of progress has been made towards solving it. Very serious problems nonetheless remain, even for a country of such abundant natural wealth. They include the redistribution of the land of the great estates, which *Acción Democrática* and COPEI have tackled energetically and intelligently, and the provision of employment for the hundreds of thousands of unemployed or semi-employed who inhabit the mushrooming slums of Caracas and the other large cities. The benevolence of the army is a necessary condition of progress towards their solution, since, despite its officer corps' genuine idealism and sense of national guardianship, the army's identification with the middle class and property ownership is a fact. In recent years all presidents, taking their cue from Rómulo Betancourt, have been at pains to flatter the army's self-esteem and pay tribute to the contribution it makes to national life. The civilian governments have also taken care to cushion both the officers' and the career NCOs' conditions of service. Their pay is the highest in the Latin American armies, they retire on full pay after 30 years' service, and officers have the right to employment in the civil service or State enterprises after leaving the army.

Paradoxically, the government must also take account of the existence, among a minority of officers, of radically left-wing sentiments. Divergent opinions of this sort are associated with the navy and the air force, which took a premier part in the overthrow of Pérez Jiménez, but the government cannot altogether, although it does in part, play at 'divide and rule' with the armed forces, since inter-service hostility is abhorrent to all of them, and politically dangerous into the bargain. Any Venezuelan government is therefore faced with the need for a particularly delicate management of its military establishment, whose loyalty is far more conditional than that upon which European governments can count. Expert observers include Venezuela in that group of countries in which 'it is likely that political power will continue to oscillate between the civilians and military men'. But the experiences of the last 20 years give grounds for optimism that power may have come to rest with the civilians, as long as they govern moderately and intelligently and the country remains prosperous.

JOHN KEEGAN

VIETNAM

HISTORY AND INTRODUCTION

The People's Army of Vietnam (*Quan Doi Nan Dan*), sometimes known as the Defence of the Homeland Army, is among the ten largest in the world, has had more, and more continuous, operational experience than any other since the end of World War II, can claim to have inflicted major setbacks on two Western armies during the period — the French and American — and is the instrument through which the independence of North Vietnam was secured between 1946 and 1954 and the territory of South Vietnam added to that of the People's (now the Socialist) Republic of Vietnam in 1975.

The army was created under the command of Vo Nguyen Giap at Cao Bang, on the Vietnamese–Chinese border, on December 22nd, 1944 as the Vietnam Propaganda and Liberation Army. It then consisted of 34 members and was somewhat expanded when in April, 1945 it merged with another nationalist force, Chu Van Tan's Army for National Salvation, composed of north-eastern tribesmen who had been recruited to the Viet Minh cause. The Viet Minh, a coalition of nationalist and Vietnamese communist bodies under communist leadership, personified by Nguyen Ai Quoc (Ho Chi Minh), had been formed at Chingsi in south China. One of its first acts was to send Giap into north Vietnam to organise a guerrilla force there. At that time Indochina, comprising the French-ruled Vietnamese territories of Tonking, Annam and Cochin-China and the French Protectorates of Laos and Cambodia, was still under French administration but also under the military occupation of the Japanese, who had come to an arrangement with the Vichy regime to use the territories as a staging area for their forthcoming campaign in south-east Asia. After the outbreak of war with America, American O.S.S. agents who reached Chiang Kai-shek's fastness in Chungking made contact with Giap and supplied him with weapons to use against the Japanese. Ho Chi Minh himself meanwhile became a member of an alternative coalition of Vietnamese nationalists, the Dong Minh Hoi, which had Chinese nationalist backing. Through it, Ho was able in October, 1945 to re-enter Vietnam and when the Japanese in March, 1945 dissolved the French administration, rightly supposing it to have accepted Gaullist leadership, Ho was able to extend his apparatus. When the Japanese themselves proclaimed a local capitulation in August, 1945 Ho prevailed on the Viceroy of Tonking, the Emperor Bo Dai's representative in the north, to lend his support to a National Liberation Committee, under Viet Minh control, which took over the administration of the territory. On August 23rd the Emperor abdicated in favour of the Viet Minh which on September 2nd proclaimed the Democratic Republic of Vietnam.

Neither the French nor the other Western allies were prepared to accept this arbitrary assumption of power, however, and two interim occupation forces were despatched to the country — a Nationalist Chinese to the north (Tonking) and a British to the south (Cochin-China and Annam). The Viet Minh was weak in the south and the British were easily able to establish their authority there and transfer it to a French army of reoccupation, under General Leclerc, when it arrived in October. In the north, where Ho's power was much better established, he looked to have a better chance of sustaining the pretensions to independence but was eventually obliged to treat with the French as a means of getting rid of the Chinese nationalists, whose intention was clearly to establish a puppet regime of their own. Negotiations with the French, who were willing to grant only limited independence, eventually broke down, however, and the Viet Minh, who made a desperate attempt to destroy the vanguard of the French reoccupation force by surprise, were driven out of Hanoi and the Red River Delta in December, 1946.

Thus began a war which was to last for 8 years. Ho and Giap retired with their skeleton army, about 10,000 strong, to the Viet Bac, the mountainous north-east, abutting onto China. They left behind them the infrastructure of a politico-guerrilla organisation in the villages and towns of the lowlands which grew steadily in importance despite the superiority of the French in conventional military strength. French efforts were concentrated during this first period of the war (1946–9) on asserting their presence in the countryside and on encircling Ho and Giap in the northern highlands. An essential element in the latter campaign was the holding of the Sino–Tonkingese frontier, marked by the *Route Coloniale 4* and the towns along it. The battle for *RC4* eventually became a full-scale campaign and yet did not stop the Chinese communists, after their arrival on the frontier in October, 1949 from passing advisers and large quantities of arms freely across it. With this accretion of strength Giap unleashed in September, 1950 a major offensive against the frontier towns on *RC4* and by the end of October had captured them all. It was a stunning defeat for the French.

In the following year, Giap made the mistake, however, of over-estimating his success. Believing that the war had reached what, in Maoist analysis of military operations, is called the stage of the 'general offensive', he brought his forces, now organised into five full divisions, down to the edge of the Red River Delta and made an all-out attempt to reach Hanoi. The French, under the inspired leadership of a newly arrived commander, the charismatic de Lattre de Tassigny, repulsed the attacks with great loss to the Viet Minh (at least 9000 killed). By mid-June, at the end of three major battles (Vinh-Yen, Mao-Khe, Ninh-Binh), Giap himself had suffered a defeat as serious as that he had inflicted the previous year and was

obliged to withdraw his main force (*chu luc*) divisions into the Viet Bac. But he left behind him a greatly strengthened political and military structure, composed both of village guerrillas and regional semi-mobile regulars, in the countryside. As in 1947–9, the French largely ignored the countryside forces in new efforts, which occupied most of 1952–3, to bring the main force divisions to battle again and repeat the success they had won in the delta under de Lattre. By 'deep penetrations' along the northern rivers and by parachute descents into the Viet Bac, they strove to make the Viet Minh fight for fixed points of ground, where air power would tell. None of these operations had more than a temporary and local success, since Giap was well aware of their intentions and became adept at refusing battle, while profitably harrasing the flanks of the penetrations that the French made.

At the end of 1953 the French high command, desperate for a decisive battle and alarmed that the Viet Minh might repeat an earlier incursion into Laos, where a home-grown communist army, the Pathet Lao, was threatening the stability of the French-protected royal government, decided to construct an 'aero-terrestrial base' in the northern highlands across the route the Viet Minh must use if they wished to re-enter Laos. The spot chosen was Dien Bien Phu, on the Laotian border, 170 miles from Hanoi by air. The French counted on their air power, operating from the Dien Bien Phu airstrip in local support and from Hanoi on supply runs, to devastate the main force concentration they hoped Giap would assemble there. They were right in assuming that Giap would on this occasion accept battle but wrong in supposing that they could overcome. The Viet Minh managed to assemble, by man portorage over jungle tracks 300 miles long, a great weight of artillery and munitions in the hills overlooking the Dien Bien Phu airstrip. With this battering force, they opened a bombardment of the 'aero-terrestrial base' on March 13th, 1954 which immediately interrupted all landings and take-offs from the airstrip. The French succeeded in sustaining resistance there by parachute dropping of supplies and reinforcements, but were unable to provide effective local air cover or to evacuate the wounded. After a heroic resistance, the French garrison, numbering over 10,000, was obliged to surrender on May 8th. While the siege had distracted French attention, the Viet Minh had further extended their control over much of the lowland territory of Tonking and had asserted an important military presence in Annam. An international conference in session at Geneva, convened to decide the future of Vietnam (to which France had several times promised conditional independence) accepted the results of the fighting of 1954 as evidence that France no longer exercised effective jurisdiction and, with French acquiescence, drew up plans for the political future of Indo-China. Tonking became an independent State under Viet Minh (now openly communist) control, as the Democratic Republic of Vietnam. Annam and Cochinchina, where the Viet Minh had never been strong, also became independent, under a non-communist government, as the Republic of Vietnam. Laos and Cambodia ceased to be French Protectorates, but became subject to international supervision designed to avert their falling under the control either of the Viet Minh or anti-Viet Minh governments in Vietnam.

In the process of gaining independence there took place a major two-way shift of population between north and south. The largest movement was of Catholic Vietnamese from Tonking to the south, though numbers of declared Viet Minh also went from the south to the north; but the proportions were very unbalanced: about 900,000 from the north to the south, about 90,000 in the opposite direction. The imbalance was partly due to a decision by the Viet Minh to leave a number of their 'cadres' concealed in the south. The Geneva agreement had prescribed the holding of elections to bring about the unification of the two Vietnamese States, but there was clear lack of intention both in the north and south from the outset to accept reunification on anything except partisan terms.

The southern government, under the leadership of Ngo Dinh Diem, accepted American advice and aid from the beginning of its rule, particularly in the creation of an army. The French had created in 1948 a Vietnamese National Army (separate from the Vietnamese-recruited units of the French army) which eventually reached a strength of 100,000, and it was on that base that the South Vietnamese government built its Army of the Republic of Vietnam (ARVN). On American advice, it was organised into eight divisions, trained in conventional tactics to repel an invasion across the 17th Parallel (the provisional frontier and Demilitarised Zone separating the two Vietnams) which was regarded as the principal military threat the South had to face.

In fact, from 1957 onwards, it began to be confronted with the same pattern of rural insurgency, now organised by local communists who quickly came to be called Viet Cong, which the French had known. Between 1957 and 1960 several thousand government officials had been murdered in the villages and wide areas of the countryside ceased to be under effective government control. An attempt was made to establish, on the British model successfully carried out in Malaya, a chain of 'strategic hamlets', defended by village militias, which the Viet Cong could not penetrate, but it failed. In 1960 the southern insurgents proclaimed a National Liberation Front, with its National Liberation Army, and made clear that its programme was nothing less than the overthrow of the existing government and its replacement by one committed to Marxist forms.

In describing what happened thereafter, it is impossible to reconcile the versions of the two opposing sides. That of the NLF depicts a home-grown insurgency gradually overcoming, despite massive American assistance, the power of the southern government, to the point where the Americans were obliged to abandon it and it itself eventually collapsed. That of the South Vietnamese government and its American allies is completely contrary. While accepting the presence of a home-grown insurgency on the soil of the south, it insists that it survived only through the support of North Vietnamese units introduced by clandestine methods across the frontiers and supplied, down the 'Ho Chi Minh trail' through Laos and Cambodia, with munitions sent from North Vietnam but donated by Russia and China. It also insisted — and here the North Vietnamese version does not much differ — that the eventual collapse of the southern government was brought

World Armies

about by a full-scale invasion of the south by the north, after the Americans had withdrawn their troops and air support, in 1975.

The evidence for direct North Vietnamese involvement in the 'Viet Cong insurgency' is in fact incontrovertible. Photographs taken of supply columns on the 'Ho Chi Minh trail', captured stocks and documents and indeed captured personnel all point to the presence of People's Army units on southern territory and to wholehearted Hanoi support for the Viet Cong. It would indeed be difficult to disprove the south's case that the National Liberation Front and the Liberation Army were directly controlled from the north through southerners who had been original communist members of the Viet Minh. It would be almost equally difficult to show that the Viet Cong could have achieved their final victory without the presence of People's Army units on southern territory from early in their campaign.

That insurgency gathered pace from 1960, prompting the American government to reinforce heavily the numbers of military advisers it already had in South Vietnam. President Diem's government came under increasing internal and external criticism, as violence and his repressive response to its manifestations increased, and in November, 1963 he was overthrown and murdered by a political faction within the armed forces. The new government did no better at quelling the insurgency and in July, 1965 the United States government, using powers voted it by congress the previous August as a result of the Gulf of Tonking incident, decided to commit whole American units to the fighting. In heavy engagements during the autumn of 1965, these units were able to repel a full-scale North Vietnamese invasion of the south through the Southern Mountain Plateau and, during 1966-7, when American forces committed exceeded 250,000, and American air attacks on northern territory became continuous, the tide of war began to swing against the Viet Cong. The successful defence of Khe Sanh, besieged by three North Vietnamese divisions for 77 days in the spring of 1968, seemed an augury of eventual victory, which was cautiously predicted by the American commander, General Westmoreland. On January 21st, however, there was unleashed all over the south a mighty Viet Cong offensive, timed to coincide with the Vietnamese new year (Tet), which took both Americans and South Vietnamese completely by surprise and brought the war into almost every town of any size. Saigon itself was invaded by Viet Cong regulars and most of Hué, the ancient capital of the empire of Annam, taken over. At the end of a month's fighting, the Viet Cong and North Vietnamese People's Army had suffered 40,000 deaths, and failed in their objectives, but had attracted much of the fighting force of the six American divisions available for mobile operations (three others were tied to the Demilitarised Zone) and of the 150 South Vietnamese battalions out of the countryside, where they were never thereafter to re-establish control.

In April, Hanoi accepted an offer from President Johnson to negotiate for an end to the war. The talks, convened at Paris in May, were to last until January, 1973 while fighting continued in the countryside. Cambodia was invaded (May, 1970) and then Laos (February, 1971) by American and South Vietnamese troops in an effort to interrupt supplies and reinforcements from the north to the south, and the American air campaign against military targets in the north periodically halted and re-started to put negotiating pressure on Hanoi. But in July, 1969 the Americans had enunciated their determination to turn the conduct of the war over to the South Vietnamese (the Nixon Doctrine of 'arms not troops') and it was against that background that the diplomacy proceeded. The eventual agreement, which imposed a ceasefire and established an international control commission to supervise its observation, did little more than place that resolve on a public basis.

It did not end the fighting, though the re-equipped and revitalised ARVN which the Americans left behind after their withdrawal (completed January, 1973) showed itself far more effective at dealing with the Viet Cong after the Americans' departure than it had before their arrival. But the Viet Cong had by 1973 grown into an experienced and well-equipped force of 225,000, with the 15 divisions of the People's Army, much of it deployed in the south, to support it. By October, 1974 numbers of previously uncommitted North Vietnamese People's Army divisions had been brought down the Ho Chi Minh trail and emplaced on the border in the Southern Mountain Plateau. The ARVN, which had suffered heavily in its successful campaign to recapture the northern Quang Tri province and the highland region around An Loc in the summer of 1972, could not match either the weight of numbers or equipment that the enemy were able to deploy and, when the Viet Cong/People's Army offensive opened in March, 1975 it was swiftly forced to give ground. People's Army divisions first drove into the Southern Mountain Plateau, threatening to bisect the country, and then into Quang Tri in the north. Much of the South Vietnamese army, including the excellent marine division, was destroyed in the fighting for the northern town of Da Nang at the end of March, and by early April the People's Army controlled South Vietnam as far south as Nha Tranh, 200 miles from Saigon. During the next fortnight they maintained their pressure from west and north, driving the South Vietnamese army before them. On April 29th their forces surrounded Saigon and on the following day they received the unconditional surrender of the South Vietnamese government.

The appearance of the victorious army in the streets of Saigon, instantly renamed Ho Chi Minh City, removed all doubts about the identity of the conquerors. The units, including tank battalions equipped with Russian T-54s, were those of the Vietnamese People's Army. After a campaign lasting 20 years, it had achieved the unification of the country under communist rule.

STRENGTH AND BUDGET

Population: 48,090,000

Army: 600,000
 Navy: 3000; 79 small craft
 Air force: 12,000; 300 combat aircraft
 Paramilitary: 70,000 armed security forces; a militia of 1,500,000

No trustworthy figures are available for military expenditure.

COMMAND AND CONSTITUTIONAL STATUS

Supreme command of the People's Army rests with the President, but control of its organisation, recruitment, budget, promotions and operations with the Politburo of the Central Committee of the Workers' Party. As a member of the Politburo, Minister of Defence, Commander-in-Chief, creator of the People's Army and architect of its victories (as well as its defeats, which should not be forgotten), General Vo Nguyen Giap must enjoy greater prestige than any politico-military commander at present in office anywhere in the world. Command, nevertheless, has always been exercised by committee, in which Giap has played the part of first among equals in the making of higher policy.

The High Command of the People's Army, of which the Minister of Defence and Commander-in-Chief is the Head, is organised into three main elements: the central political bureau (commissar system), which has cells as far down the military structure as the platoon; the supply staff, which procures and distributes military material and services; and the general staff. The latter is divided into bureaux for operations, intelligence, training, administration, armed (main) forces, popular forces (militia), personnel, communications and liaison.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role

As in all communist States, the role of the army transcends purely military responsibilities. Soldiers form part of the National Assembly, its Standing Committee and of the Central Committee of the Workers' Party and its Politburo from which all power flows. The more or less continuous war which the party has fought since 1946 has naturally heightened the influence which military leaders exert. On the other hand, Ho Chi Minh, the creator of the communist State, was emphatically not a military man and as president, to which office the constitution in any case allots virtually unlimited power, he represented the political and ideological tradition in the communist system. He has been succeeded by a trusted friend, of the same background and outlook. Because of his advanced age, however, it seems unlikely that he is an effective president. This must enhance the power of other members of the politburo, in which military influence is strong.

Besides sharing in government, the army plays a major part in the indoctrination and leadership of the population through its control of the militia. Its resources have also become available, since the conquest of the south, for civic development and rural aid.

Commitment

Vietnam has a military assistance agreement with Russia, under which very large quantities of military equipment have been supplied. In July, 1977 she signed a series of agreements with Laos (where Vietnamese troops have operated for many years). It is supposed that the agreements regularised the presence of Vietnamese units. In practical terms, Vietnam is committed to the defence of Laos.

Deployment

Vietnam is divided into a number of military regions. Two in the north are the North-Western, headquarters Son La, and the Fourth, headquarters Vinh. This would suggest that the government has preserved the four military zones delineated during the war against the French, the other two then being south and north of Hanoi. Since the conquest of South Vietnam, two military regions have been mentioned there — the Fifth and Seventh. The Viet Cong divided South Vietnam into three zones — the coastal plain, the highlands and the extreme south (Cochin-China). This evidence suggests that there are now seven military regions, with three to four divisions stationed in each.

About 40,000 Vietnamese troops are stationed in Laos, and have been there for many years, at least since 1961 in force, and in smaller numbers from French days.

Recent Operations

Since the conquest of South Vietnam in 1975, relations between the Hanoi government and the Khmer Rouge regime in Kampuchea (Cambodia) have worsened to the point where, in mid-1977, fighting broke out between the two armies along

World Armies

Kampuchea's eastern border in much the same area (Parrot's Beak) as the Americans occupied in their invasion of Cambodia in 1970. The fighting seems to have been initiated by the Khmer Rouge, for internal political reasons, but has provoked the Vietnamese, according to some reports, into deploying six divisions on the border. On April 15th, 1978 Hanoi radio claimed that 19 Cambodian battalions had been repulsed from the border. Since no foreign observers have been permitted to visit the battle zone, the course of events there is highly obscure. But it is believed that the Vietnamese have, unsurprisingly in view of their greater strength and experience, had the better of the fighting and have 'straightened the frontier', apparently with the intention of retaining the ground they have captured.

Shortly before going to press, news reached the outside world of the all-out invasion of Kampuchea by the Vietnamese People's Army, the occupation of the capital and most of the countryside, and the expulsion of the Khmer Rouge government. That government claims it is waging widespread guerrilla warfare against the Vietnamese, but there is no evidence of the scale of the fighting. Reports indicate rather that the Vietnamese and the regime they have installed are in full control.

ORGANISATION

Little is published about the domestic organisation of the Vietnamese People's Army, but it seems that it conforms to that common in communist armies — branches for infantry, artillery, engineers, signals, medical service, political directorate and rear services. The Air and Air-Defence Service forms part of the People's Army. Operationally it is organised into divisions and independent regiments. There are estimated to be 25 infantry divisions, two training divisions and up to 15 independent infantry regiments. The division is composed of three infantry regiments each of three battalions, an artillery regiment, a tank battalion and support elements. The strength of a division is about 10,000 and of a regiment 2000–3000. Five of the divisions, Nos. 304, 308, 312, 316 and 320, were created about 1950 and have long and varied operational histories. The 304th Division, for example, was at both Dien Bien Phu in 1954 and Khe San in 1967. Other divisions identified are the 2nd, 3rd, 5th, 7th, 9th, 324th, 325th (sometimes numbered 325C), 335th, 338th, 341st and 610th. One of the best-known independent regiments is the 148th, which appears to have been more or less continuously in Laos since the 1950s. The VPA also includes an artillery command (which may be the 351st Heavy Division, also a 1950s creation), an engineer command (probably an offshoot of the 351st) 20 air-defence missile regiments, 40 air-defence gun regiments and 15 engineer regiments.

About ten of the Vietnamese People's Army divisions are formed from 'main force' units of the Liberation Army (Viet Cong), which have been absorbed since the unification of north and south in 1975.

It is not known how much, if anything, of the South Vietnamese Army (ARVN) has been absorbed into the People's Army, nor even whether its massive armoury has been taken into service. Some personnel, particularly from the paramilitary forces — the Regional Forces, Popular Forces, People's Self-Defence Force and Civilian Irregular Defence Groups — are known to have been enlisted on an individual basis.

North Vietnam had, before the conquest of the south, its own well-established paramilitary organisation: an armed police (Frontier, Coast and People's Armed Security Forces) totalling about 70,000; and an armed militia, numbering about 1,500,000.

RECRUITMENT, TRAINING AND RESERVES

The original People's Army was recruited through the peculiar structure of the army — the most active and best-motivated young men of the village guerrilla groups were chosen to go to the semi-mobile units of the provincial Regional Forces, and they in turn sent their best men to the Main Force (*chu luc*). The party insisted that all its soldiers were volunteers, and that there was no conscription inside its liberated areas. Since the establishment of the communist State in 1953 conscription has been instituted, but it was supplemented during the Vietnam War by the 'Three Readies Drive' — a propaganda campaign which persuaded men to volunteer that they were 'ready to fight, ready to join the army, ready to go wherever needed', and which is said to have netted 1,500,000 signatories. The Vietnamese recruitment system seems therefore to be conscriptive, but to operate in a population whose men of military age have largely been persuaded also to declare themselves volunteers for military service. However, the communist party always met considerable resistance to efforts to recruit the non-Vietnamese minorities of the uplands and mountains. Some were won over by imaginative personal appeal (the 316th, 324th and 335th Divisions have a large minority element), but the majority expressed their ethnic hostility to the Vietnamese either by standing neutral or even by joining the French forces (during the Indochina war), or by enlisting to fight the Viet Cong and infiltrating North Vietnamese regulars in the south during the Vietnam War. It is not known to what extent the communist government has applied conscription to the minorities, or how willingly they have responded.

All Vietnamese of military age in the north receive some preliminary training in the village militias. They complete their training in units, probably in the training divisions. Officers, who are selected by the party apparatus, are trained in the officer training schools. Two, at Ha Giang and Bac Kan in the far north, had been established during the course of the war

with the French. It is known that there are officer schools now at Thanh Hoa and Son Tay, south and just west of Hanoi, respectively.

The reserve is divided into two categories. The second category comprises men waiting for call-up. The first includes all those who have completed their compulsory military service (at least 2 years) and who are assigned to local reserve units, which have arms and equipment stored in convenient armouries and can be activated at short notice. They may number 500,000, perhaps more.

EQUIPMENT AND ARMS INDUSTRY

The Viet Minh began a village arms industry during their war against the French, but it produced only the most primitive sorts of weapons in very small quantities. Since independence in the north in 1954 they have expanded and re-equipped their arms industry, so that they can now manufacture small arms ammunition, some heavier ammunition (including shells for the American 105 mm howitzer of which they captured numbers from the French) and some automatic weapons. The output was, however, quite insufficient to sustain the Viet Cong—North Vietnamese war effort in the south during the Vietnam War. Almost all the equipment used there, and to defend the north against American air attack, was supplied by China and by Russia, over the Chinese border, through the port of Haiphong or through Cambodian ports. Spare parts and munitions for its now enormous arsenal of equipment must still come from its allies. It is not known what it will do with the equally large arsenal it inherited when the south was overrun, since munitions and spare parts for almost all those American weapons (the 105 mm howitzer excepted) are of course unavailable.

Rifle: 7.62 mm AK-47 (Russia; Chinese model also)

Machine-gun: 7.62 mm RPK Kalashnikov (USSR) and 7.62 mm PKS Kalashnikov (USSR). (Many older Russian and Chinese small arms also still in service)

Mortar: 82 mm M-42 (USSR), 120 mm M-43 (USSR) and 160 mm M-43 (USSR) in the artillery battalion

Anti-armour weapons: RPG-7 rocket launcher (USSR); 57 mm M-43 gun (USSR) and 85 mm M-45 gun (USSR); 107 mm B-11 recoilless rifle (USSR); 100 mm M-45 gun (USSR); Sagger missile

Air-defence weapons: 14.5 mm ZPU-2 and ZPU-4 guns (USSR); 23 mm ZU-23 gun (USSR); 23 mm ZSU-23-4 SPG (USSR); 37 mm M-39 gun (USSR) and 57 mm M-50 gun (USSR); 57 mm ZSU-57-3 SPG (USSR); 85 mm M-44 gun (USSR), 100 mm M-49 gun (USSR) and 130 mm M-55 gun (USSR); SA-2 (Guideline) missile (USSR), SA-3 (Goa) missile (USSR), SA-6 (Gainful) missile (USSR) and SA-7 (Grail) missile (USSR)

Artillery: 105 mm M-101 howitzer (USA) and 122 mm M-38 howitzer (USSR); 130 mm M-54 gun (USSR); 152 mm M-55 gun/howitzer (USSR)

Armour: BTR 40/60 APC (USSR); PT-76 light tank (USSR) and Type 60 light tank (China); T-34 tank (USSR) and T-54 tank (USSR); T-59 tank (Chinese version of T-54); SU-76 assault gun (USSR), T-10 assault gun (USSR) and JSU-122 assault gun (USSR). There are about 900 tanks in service with the army

RANK, DRESS AND DISTINCTIONS

Unlike the Chinese People's Liberation Army, the Vietnamese People's Army uses conventional military rank titles, at least up to the rank of general. Like the CPLA, however, officers, at least in combat dress, bear no distinguishing mark. The uniform is a simple cotton tunic and trousers in khaki-green, with a red patch and a star on the collar. The most distinctive feature is the headdress, a tropical sun helmet made of pressed fibre and bearing a red star. It is from this that the regular soldiers (*bo doi*) get their nickname of 'hard hats'. A number of campaign medals have been issued, including one, much prized, for Dien Bien Phu.

CURRENT DEVELOPMENTS

The Vietnamese People's Army is, after the Chinese and the Indian, the third largest in Asia, one of the best equipped and immeasurably the most experienced. It seems able to sustain its intake of conscript personnel without detriment to the economic objectives of the State and, as long as Russia and China compete for Hanoi's favour, it is probably also assured of an adequate supply of the foreign-made equipment it needs to maintain its fighting strength. It certainly has more than enough capability to succeed in the war it has just fought with Kampuchea (Cambodia). Without other enemies to fight in its sphere of influence, for at present there is no strong evidence of Hanoi's desire to escalate the insurgency in north-east Thailand, it must remain to be seen whether the government of Vietnam will think it desirable to maintain the present very large size of the army. If Western economic aid, which Hanoi is urgently soliciting, is forthcoming in quantity, it may be that the presently very high proportion of the military age-group conscripted into the People's Army will be reduced to enlarge the civilian labour force.

World Armies

The victory in Kampuchea has, however, outraged the Chinese, who have shifted forces to their southern border, partly as a mark of displeasure and partly as a precaution against Vietnamese military preponderance in the area. While the tension persists — and it is heightened by the decision of Vietnam's Chinese minority to leave the country — Vietnam cannot reduce the size of its army.

At the time of going to press news reports indicated that in mid-February, 1979 the Chinese were engaged in the launching of a large invasion force on a punitive mission across Vietnam's northern border at at least four widely separated points in order 'to teach Vietnam a good lesson' for its involvement in Kampuchea, but probably also in reprisal for alleged continuous border incidents and the 'expulsion' or harrassment of large numbers of ethnic Chinese. The Chinese publicly stated a few days later that they had no intention of entering the Red River Delta and thereby threatening Hanoi, but it was known that at that time their troops were already 25 miles inside the border at one point, and that probably at least two provincial capitals had fallen. One major fear voiced by Western observers initially was that China might have difficulties in physically withdrawing her forces (although as the invasion progressed this seemed less likely), and that there was always the possibility of a Soviet reaction. In this connection it was announced on Sunday, February 25th that the Mongolian army had been mobilised, although with what aim was not made clear.

THE WEST INDIES

JAMAICA

The origins of the Jamaica Regiment, the principal unit of the Jamaica Defence Force, ascend into the late eighteenth century. The West Indian islands were then, as they had been intermittently for 200 years, the scene of fighting between the European powers, and in 1795 a British officer raised a corps of islanders to help defend Martinique against the French. This, Malcolm's Corps of Rangers, was soon amalgamated with an existing body of men from Jamaica: the Corps of Dragoons, Pioneers and Artificers, which had originally been raised as the Carolina Corps in 1778, and used by the British to fight the rebels in the American War of Independence. Disbanded in Jamaica in 1783, its black soldiers were retained in government service as a semi-military labour force. The amalgamation of the two produced the unit which in 1798 was to be renamed the 1st West India Regiment and was to form the nucleus of the most important colonial force maintained by Britain outside India during the nineteenth century.

By 1799 there were 12 battalions of the West India Regiment in existence, a number which alarmed the white planter community considerably but was justified by the Westminster government on the ground that local regiments suffered a much lower mortality than white, which at times would be wiped out by disease. They proved their military worth by helping in the capture or retention of all the British colonies of the Caribbean during the wars of 1793–1815, and by accompanying Pakenham to New Orleans in the War of 1812. By 1819 the 12 battalions had been reduced to two — the 1st and 2nd West India Regiments. A third existed between 1840 and 1870 and a 4th and 5th briefly in the 1860s, but it was the two oldest which chiefly served the particular purpose for which the British government maintained the West India Regiment during the nineteenth century. This was the garrisoning of the Caribbean and British West Africa and, when necessary, colonial campaigning in West Africa. From 1812, soldiers of the W.I.R. were actually recruited in Sierra Leone, and from 1824, when the 2nd W.I.R. fought in the First Ashanti war in what is now Ghana, there was always one battalion on the west coast. In all the W.I.R. took part in 22 campaigns or expeditions before 1900 and fought in the Cameroons, east Africa and Palestine during World War I. Confusingly a British West Indies Regiment, eventually of 11 battalions, was raised from the militias and volunteer forces of the islands in 1915 and served in an auxiliary capacity during World War I. In World War II these local forces were re-embodied as the North Caribbean and South Caribbean Forces (1943), and an active service force, the Caribbean Regiment, was formed from it in 1944. But none saw action.

By then the old West India Regiment, always a corps of the regular British army, had ceased to exist. It had been disbanded in 1927, its band alone surviving as a ceremonial unit supported by the government of Jamaica. The various island volunteers and militias had remained in existence, however, and in 1959, as a result of the Federation of the Caribbean islands the year before, the West India Regiment was reconstituted, to be the nucleus of the Federal Army. On the dissolution of the Federation in 1962, following disagreement between the islands, the regiment was again dissolved, its individual battalions becoming the property of the islands as they took independence. The 2nd Battalion went to Trinidad and Tobago, as the Trinidad and Tobago Regiment, the 1st and 3rd to Jamaica as the Jamaica Regiment. These units are now the main elements in the Defence Forces of these respective sovereign States.

The Jamaica Defence Force is divided into the Regular Force and the part-time National Reserve; both are tri-service in composition. The Regular Force consists of the 1st Battalion, Jamaica Regiment; an infantry battalion of the British type; a Support and Service Battalion; the Force Coast Guard, with three fast patrol boats; and the Force Air Wing, with seven light aircraft and helicopters. The National Reserve consists of the 3rd Battalion Jamaica Regiment; an ordinary infantry battalion of part-time volunteers with a regular cadre, the five companies of which are scattered over the island; an Air Squadron; and a Coastguard Reserve. The Force is commanded by the Governor-General in name but in practice by the elected government. Officers are trained in Britain, India, Canada and Australia. The Force is equipped with British light weapons. It wears British style uniforms, badges of rank and insignia: its cap badge incorporates the wreath of Carolina laurel worn by the Carolina Corps and the Old West India Regiment. Its duties are to maintain internal security, which is threatened by the intense political rivalries and economic inequalities on the island. It was widely and successfully deployed to keep the peace during the 1975–6 General Election Campaign; there is no arms industry.

TRINIDAD AND TOBAGO

The Defence Force in its present form came into existence in 1962; for its previous history, see the entry on Jamaica (above). It consists principally of a single infantry battalion — the 1st Trinidad and Tobago Regiment. It is recruited by voluntary regular enlistment but has a part-time volunteer company. Officers are trained chiefly in Britain. It is equipped with British

World Armies

infantry weapons and wears British-style uniforms and badges of rank. Its role is to maintain internal law and order. The Governor-General is titular Commander-in-Chief but command is exercised by the elected government.

BARBADOS

The defence forces of this, the third most populous State of the former British West Indies, consists of a single volunteer part-time infantry battalion — the Barbados Regiment. It is only about 300 strong. There are plans, not yet realised, to create a Barbados Defence Force, incorporating a larger Barbados Regiment and other units.

THE BAHAMAS, BERMUDA AND THE SMALLER WEST INDIAN STATES

The Bahamas has no defence force. Bermuda has a small infantry battalion — the Bermuda Regiment which is recruited by selective conscription and regular enlistment. The Associated States have small part-time volunteer defence forces: the Antigua Defence Force (75 all ranks), St. Kitts/Nevis Volunteer Defence Force (about 100 all ranks), Dominica Defence Force (about 100 all ranks), St. Lucia Defence Force (about 100 all ranks), the Grenada Volunteer Force (about 200 all ranks) and the Belize (formerly British Honduras) Defence Force (about 300, but in the process of expansion into a regular force). Britain retains responsibility for the external defence of these States. It does so also for Bermuda and the remaining dependent territories of the Caribbean. Britain maintains a garrison in Belize, to which Guatemala lays claim, and a naval force, with Royal Marines embarked, at Bermuda.

JOHN KEEGAN

YEMEN ARAB REPUBLIC (NORTH YEMEN)

HISTORY AND INTRODUCTION

The governance of North Yemen is one of the closest approximations in the modern world to Thomas Hobbes' 'war of everyone against everyone'. The only two centres of power in the country are the army and the tribes, and the struggle for mastery both within and between the two forces is conducted virtually without rules and almost invariably by violence. Between October, 1977 and October, 1978 the country lost two presidents by assassination and experienced at least two other major coup attempts. Purges within the army, as the briefly successful contenders for power struggle to eliminate their enemies, have prevented it from attaining any serious measure of professional competence, and continuous intrigues, involving also the conservative, wealthy neighbour, Saudi Arabia, and the Marxist sister State, South Yemen, preclude any stabilisation of the situation. The fluidity of power in North Yemen is best exemplified by the rise to power of the late President Ahmad al-Ghashmi, assassinated in mid-1978, who made it all the way from corporal to lieutenant-colonel and Head of State by the age of thirty-nine in a career marked by cynical intrigues and brutal murders.

The Yemen, north and south, is historically a single State which has always contained about half the population of the Arabian peninsula despite its small share (10%) of the region's territory, owing to the relative fertility of its soil and an adequate annual rainfall. Separated as it is by sea and vast tracts of sparsely inhabited desert from the rest of the world, it has also always been an extremely inward-looking, conservative and even xenophobic society. It was ruled by the Ottoman Turks until World War I, but the continuous uprisings against foreign rule made it the graveyard of the Turkish army (the folk-wisdom of Anatolia regarded a Turkish conscript posted to the Yemen as being as good as a dead man), and Ottoman rule was never firmly established in the mountains of the north which were the stronghold of the great tribal confederacies. These tribes belong to the Zaidi sect of the Shi'ite branch of Islam, and regarded the Sunni Turks as infidel interlopers. Amongst the population of the centre (including San'a', the capital), the coastal plain (the Tihama) and the south, however, there was markedly less resistance to Turkish rule, for this population is itself Sunni, of the Shafa'i school.

The Zaidi northern tribes traditionally elected an Imam with severely restricted temporal powers to serve as their leader, but from 1891 the Hamid al-Din family succeeded in making the Imamate hereditary in its own hands, and in expanding its political importance to something approaching the powers of a feudal monarchy. When the Turks left the Yemen in 1918 the Zaidi Imams set about the extension of their control over the entire country, and the political dominance they then established was such that even today it would be unthinkable for a Shafa'i Head of State to rule in San'a'. Even the Imams found it hard to control the great Zaidi tribes, dominated by the Hashed and Bakil confederacies centred in the north and north-east, but with adherents throughout the country. The Imam Yahya, who had ruled the country with an iron hand since 1918, was assassinated in 1948 in a palace coup supported by restive tribal factions opposed to his tight control, and his son Ahmad had to fight a major campaign against the rebel forces before re-establishing his control as Imam.

It was after this experience that the Imam Ahmad set out to build up a small army along modern lines which would enforce the power of the central government against the tribes. He purchased military equipment from the Soviet Union, and sent his new officers to be trained in Egypt and Iraq. The officers were deliberately chosen on non-tribal criteria, in order to ensure their loyalty to him. In a further measure to bolster central power, the Imam took his country into the United Arab Republic (Egypt, Syria and North Yemen) in 1958, but this federation was dissolved at the end of 1961 after the Syrians seceded. In the meantime, however, the officers of the new Yemeni regular army had been politicised by their contact with the Arab nationalism and radical socialist ideas of their Iraqi and Egyptian trainers, and had been made aware by their travels of the appallingly backward conditions which prevailed in the Yemen even by comparison with the central Arab world. When the Imam Ahmad died in 1962, a group of Nasserist, Ba'athist and socialist officers led by the commander of the Imam's personal guard, Colonel (later Marshal) Abdullah al-Sallal, seized power in San'a' in a military coup. With the support of the few like-minded civilians they founded a republican government which sought and received support from President Nasser of Egypt. The Imam, however, escaped, and enlisted the aid of the northern tribes and of Saudi Arabia. (The latter was then the target of Nasserist intrigues, and the Saudi regime was thus deeply concerned about the emergence of Nasserist influences on its southern borders.) The civil war that ensued in the Yemen was fought between the Republican Army of 10,000 men, soon totally overshadowed by an Egyptian expeditionary force that reached 70,000 troops at one stage, and the tribal confederacies of the north backed by Saudi money, arms and supplies. It took the form of a brutal and indecisive counter-insurgency struggle centred in the north, in which the Egyptians made lavish use of air power and even employed nerve gas against the tribal villages on a number of occasions. By 1967 over 200,000 Yemenis had died, but San'a's control still did not extend far beyond its northern approaches — and in that year Egypt suffered a crushing defeat at the hands of Israel in the Six-Day War. The Egyptian troops were now urgently needed at home, and Nasser was equally in need of Saudi financial aid to re-equip his shattered armed forces, so the Egyptian expeditionary force was withdrawn from the Yemen in accordance with a compromise settlement between Cairo and Riyadh. The republican

World Armies

government in San'a' remained and Saudi Arabia ceased to arm the tribes against it, but it was clearly understood by both sides that without Egyptian support the San'a' government would have to allow the tribes a very substantial share of power. In November, 1967 President Sallal was deposed while abroad, and a Republican Council was installed in San'a'. Sporadic fighting with the tribes continued until 1970, when Saudi Arabia assisted in a political reconciliation which accorded the tribes the share of power they felt to be their due: a new Consultative Council was created, with a substantial veto power over the government, whose head was Shaikh Abdullah al-Ahmar, leader of the Hashed confederacy, and most of whose members were his followers.

A further element had been added to Yemeni politics in November, 1967 when Britain withdrew from its Aden colony after a 4 year counter-insurgency campaign, leaving two rival guerrilla armies to dispute the future control of the new State of South Yemen (since 1970 called the People's Democratic Republic of Yemen). Of the two guerrilla armies, the more extreme Marxist organisation, the National Liberation Front, which had built up its support in the tribal areas by undermining the authority of the shaikhs, soon triumphed over the Front for the Liberation of Occupied South Yemen (FLOS Y), which had been receiving support from San'a' and was mainly centred on the North Yemen immigrants who then made up much of the population of Aden City.

Following the NLF's victory, the FLOS Y leadership, together with some 300,000 refugees from the North Yemeni community of Aden and from the displaced tribal leading families, fled into North Yemen, where they have ever since intrigued against the Aden regime, and on occasions mounted raids across the border. (The present North Yemeni Foreign Minister, Abdullah al-Asnaj, is the former leader of FLOS Y.) During 1971–2 there was open border war between the two Yemens, with North Yemen receiving aid from Saudi Arabia and South Yemen getting military aid from the Soviet Union. At the end of the fighting, however, the Aden and San'a' regimes agreed to a total union of the two countries within 18 months. In view of the fact that one government was a tribally dominated conservative regime allied to Saudi Arabia and the other was the nearest thing to a communist regime in the Arab world, it is hardly astonishing that the union was not consummated. It is indicative of the strength of popular feeling in both parts that the Yemen is really one country divided only by an accident of colonial history, however, that the principle should have been espoused by two so dissimilar regimes.

By the early 1970s, therefore, all the harsh contrasts and bitter conflicts which divide the country and make it virtually ungovernable were already in existence. Of the 9,000,000 Yemenis, over 7,000,000 lived in the North, a state of extreme social conservatism and economic and political backwardness which was a protégé and pensioner of Saudi Arabia, with only the most tenuous tradition of centralised government continuously under challenge from powerful tribal forces. Just under 2,000,000 lived in the South, a State where tribal power counted for nothing, containing a considerably more sophisticated and urbanised population due to the period of British rule, but governed by one of the most politically extreme, savagely repressive and ruthlessly centralising regimes in the world, with close links to the Soviet bloc. Yet the sense of a single Yemeni nationhood persistently drives these two States to attempt union.

Within this basic division, other contradictions abound. The religious division between Shi'ite and Sunni is at least as important as any political conflict to most Yemenis, and the religious border runs north of San'a', leaving the majority of North Yemen's population in the same camp as the south. Yet North Yemen is politically dominated by the Zaidi Shi'ite tribes of the northern highlands. There is a standing temptation amongst the Shafa'i *élite* of San'a' and the south to collaborate with the South Yemen regime in order to overthrow Zaidi tribal domination — yet that *élite* in San'a' includes very large numbers of refugees who are implacably hostile to the Aden regime.

A further contradiction with incalculable consequences for both North Yemen and Saudi Arabia has arisen since the four-fold oil price increase of 1973 started the ultra-rapid development of the latter country, and led to the importation of about 1,000,000 North Yemeni labourers — one-third of the adult male population of North Yemen — to work on the vast construction projects that litter Saudi Arabia. Both North and South Yemen are almost totally undeveloped countries, but remittances from emigrant workers in Saudi Arabia now benefit North Yemen to the extent of over \$1,000,000,000 a year, fuelling a severe inflation and an artificial boom in the economy. At the same time, the presence of so many North Yemeni workers in Saudi Arabia, rivalling in numbers the native working population, has made Riyadh desperately anxious that these immigrant workers should not come under radical influences through a change of regime at home in San'a'. As a result, Saudi aid covers North Yemen's budget deficits and pays for the development of the armed forces.

All these contradictions have their echoes in the North Yemeni armed forces. A substantial Shafa'i element was introduced into the officer corps during the civil war, but since the end of the civil war the Zaidi predominance has been growing greater and the Shafa'is have been very much on the defensive. The political turbulence within the army makes rapid promotion as commonplace as sudden death, and by the mid-1970s officers with close tribal links, who had been excluded by both the Imam and the Sallal regime, were again rising into the higher ranks. The Saudis who provide much of the military budget have continually wavered between reinforcing the authority and cohesion of this army, and the alternative course of strengthening the northern tribes as the ultimate deterrent to the appearance in San'a' of a radical regime allied with South Yemen. Generally they had done a bit of both: backing pro-Saudi military regimes in San'a' and even paying for the construction of roads in the north to facilitate counter-insurgency operations, but simultaneously cultivating the support of the northern tribes and spreading Saudi influence there (in the north and north-east most vehicles are Saudi-registered and the principal currency is the Saudi riyal) in case the worst comes to the worst and the creation of a tribal buffer-State between south-eastern Saudi Arabia and a radical San'a' regime should become necessary.

From 1970 the principal institutional link between the Saudi and North Yemeni regimes was the Joint Yemeni–Saudi Co-ordinating Committee, chaired by the Saudi Defence and Aviation Minister, Prince Sultan bin Abdul Aziz, which channelled Saudi funds to various military and economic projects in North Yemen. Riyadh was generally content with the existing relationship between the two States, but it raised no strong objection to the coup by Lieutenant-Colonel Ibrahim al-Hamdi in June, 1974, nor to his manifest desire to strengthen the power of the central government over the tribes. It was clear to Riyadh even from its own experience that no stability or development would be possible so long as the tribes were in a position to thwart any changes, even if there was also a continuing Saudi interest in maintaining influence among the tribes as a sort of reserve position.

The 10-man Military Command Council created by Hamdi, himself a Zaidi, initially consisted of seven men, including three officers closely related to the leaders of the Hashed and Bakil confederacies. By 1975, however, Hamdi had expelled the three tribal representatives and reduced the MCC to four men: himself as President, Premier Abdul Aziz Abdul Ghani (a figure eminently acceptable to the Saudis), Chief of Staff Lieutenant-Colonel Ahmad al-Ghashmi (a Zaidi associated with the Hashed confederacy) and Paratroop Commander Major Abdullah Abdul Alem (a Shafa'i from the south). Riyadh was reassured, however, when Hamdi turned away from the Soviet Union as the country's main arms supplier after 1975, and with Saudi assistance arranged for the purchase of American arms. The naval facilities which were previously available to the Soviet navy at the North Yemen port of Hodeida were also withdrawn during the course of 1976. The Saudis therefore continued to support Hamdi when, having abolished the Consultative Council and purged the MCC, thus destroying the tribes' positions of influence in the central government, he became involved in an escalating confrontation with the great Zaidi tribes after 1975. The Hashed and Bakil confederacies responded to Hamdi's challenge first with a civil disobedience campaign, and then by ambushing army units in the north. By the spring of 1977 a small civil war had erupted again in the northern parts of the country, and the air force had been brought in to bomb the tribes.

There is little question but that by this time Saudi Arabia was becoming concerned by Hamdi's inability either to control the tribes or to compromise with them. At the same time Riyadh grew increasingly uneasy about the North Yemeni President's policy of seeking national reunification. At the end of 1976 he and Salim Rubayya Ali, the leader of the South Yemeni regime, issued a joint statement that 'rapid measures would be taken to unify the two parts of Yemen as a natural and necessary step . . . and as a strategic issue important to both countries'. In February, 1977 the two leaders met on the border and announced the creation of a Joint Council composed of themselves and their respective Ministers of Defence, Foreign Affairs, Economy, Trade and Planning to hasten the process of reunification. The South Yemeni leader paid one public and several clandestine visits to San'a' in the months that followed. At the same time the National Democratic Front, composed of six small leftist organisations and backed morally and financially by South Yemen, was encouraged to take a larger part in North Yemen's affairs. But in October, 1977 2 days before his scheduled first visit to Aden, President al-Hamdi was murdered in a *coup d'état*.

Hamdi's serious pursuit of the goal of Yemeni reunification undoubtedly caused some unease in Riyadh, although at the time Saudi Arabia was following its own policy of reconciliation with South Yemen in the hope of weaning it away from its links with the Soviet Union. Saudi Arabia and South Yemen had established diplomatic links in 1976, and throughout the following year there was much discussion about massive Saudi grants of aid to the impoverished country if it adopted a less stridently revolutionary foreign policy. At the end of 1976 Riyadh had succeeded in mediating a ceasefire on the South Yemen–Oman border, where Aden had previously been supporting Marxist guerrillas seeking the overthrow of the Oman government, and in retrospect it seems clear that the South Yemeni leader was not ill disposed to the Saudi proposals for a change of front. Indeed, that may have been part of the reason why he was murdered by domestic rivals in mid-1978.

On the whole, therefore, the widely disseminated thesis that Hamdi's killers had Saudi support is not necessarily correct — even though his genuinely independent nationalist position, which has made him something of a hero for many educated Yemenis since his death, was arguably not in the Saudi interest. Despite all the trouble he was having with the tribes, moreover, the theory that the coup which killed him was made with the support of the tribes has no firm foundation. The likeliest explanation for Hamdi's murder was simply that his Chief of Staff and successor wanted to be president. Since violence is the only available route to power in North Yemen, that was the route he took.

The realities of the internal power structure in North Yemen offer innumerable opportunities for foreign conspirators to intervene in the course of domestic events, but they also make such intervention not a necessary element in violent local changes, as the structure itself guarantees that such violence will occur. The two main actors in politics are the tribes, who can field several hundred thousand more or less well-armed men at short notice, and the army, which has grown continuously in numbers from the 10,000 of civil war days to almost 40,000 now. But each major force is internally divided into many real or potential factions capable of acting separately: the tribal confederacies of the Hashed and Bakil are no friends to each other and have serious internal divisions, while the army's loosely organised brigades are often virtually the independent fiefs of their commanding officers, whose rise to that position is far more often due to their skill at intrigue than to their military ability. Thus, for example, Hamdi's purposes may have been idealistic and altogether praiseworthy from a Yemeni nationalist point of view, but his actual base of power consisted of precisely three brigades of troops, mostly stationed near the capital: the Amaliqah (Giants) Brigade in the Dhamar area, commanded by his brother Abdullah, the Paratroops Brigade, commanded by Major Abdullah Abdul Alem, a fellow member of the Military Command Council, and the Fourth Armoured Brigade commanded by Lieutenant-Colonel Ali Qannaf, Hamdi's brother-in-law. To overthrow the regime, it was only necessary to kill or isolate these men.

World Armies

This was done, almost certainly at the instigation of Lieutenant-Colonel Ahmad al-Ghashmi, the Chief of Staff and another member of the 4-man MCC, in October, 1977. Both Hamdi brothers were murdered at a rest house maintained by one of them outside San'a' and two French women who were either at the house already or were brought there by the assassins were also killed and left there, in order to destroy Hamdi's considerable popularity amongst the puritanical Yemenis by disseminating the impression that he had been consorting with prostitutes. In a separate, simultaneous incident, Lieutenant-Colonel Qannaf, the Fourth Armoured Brigade Commander, was arrested elsewhere in San'a'. The Chief of Staff became President al-Ghashmi, and proceeded to purge all of Hamdi's supporters from the army. Saudi support continued under the new regime, and all suggestion of an imminent reunification of the two Yemens ceased, but there is no proof of prior Saudi knowledge of the coup.

It cannot be denied, however, that Ghashmi controlled a direct Saudi subsidy to military headquarters of \$10,000,000 a month to finance officers' salaries and facilities while he was planning the coup, nor that he had a completely free hand in making military appointments. Moreover, he proved far more compliant to the Saudis than Hamdi had been in other matters of interest to Riyadh besides the suspension of the negotiations with Aden. The autonomous tribal area in the north where Saudi influence predominates, which had been dismantled by Hamdi, was reinstated by Ghashmi, and the National Democratic Front was fiercely suppressed. Saudi subsidies expanded rapidly, enabling Ghashmi to secure the army's loyalty by promptly doubling the pay for all ranks. Thanks mainly to Saudi largesse, North Yemen was able to sustain the astonishing import/export ratio of 100:1 in 1977-8.

Ghashmi nevertheless had considerable difficulty in establishing control over the country: in the first few months he survived several assassination attempts, and large-scale operations had to be conducted against the 'Giants' Brigade, the younger Hamdi brother's former regiment. A large number of armed forces personnel fled to the south, as did members of the National Democratic Front, and in the subsequent purges of the officer corps almost all Shafa'i officers were removed from senior posts. The officer who conducted a suitably inconclusive inquiry into the motive for Hamdi's murder, Major Ali Shaybah, was made Chief of Staff in the following month, while the man widely believed to have been the actual killer, Lieutenant-Colonel Ali Abdullah Saleh, took over as Commander of the Fourth Armoured Brigade at the old airport just south of San'a'. This was the key brigade in the whole army because of its location.

The one remaining influential member of Hamdi's regime, the Commander of the Paratroops Brigade, Major Abdullah Abdul Alem, remained on the restructured Military Command Council for 6 months, apparently in the hope of securing a senior permanent position in the new regime, but when Ghashmi had himself 'elected' President by a specially convened Consultative Council in April, 1978, and dissolved the MCC without making any provision for Abdul Alem, the latter took himself off to his own Shafa'i home area of Hajjariya near the South Yemen border and raised the standard of revolt. He took several hundred men of his own Paratroops Brigade with him and was joined by others from the Giants Brigade, and succeeded in attracting some local support in the area around Adim where he dug himself in. It represented a major challenge to Zaidi dominance, in the heart of the Shafa'i area where that sect have attempted to establish an independent State of their own in the past, and San'a' mounted a considerable campaign involving armoured forces under the command of Colonel Ali Abdullah Saleh in order to dislodge Abdul Alem and drive him and his followers across the border. Subsequent rumours that in exile Major Abdul Alem sought to convince the South Yemen regime to support a major Shafa'i insurrection in the south seemed to be confirmed by the events of early 1979 (see Current Developments).

President Ahmad al-Ghashmi did not have long to enjoy his achievement of undisputed power, however; on June 24th, 1978 he was killed in his office together with a secret envoy from South Yemen's President Rubayya Ali, when the envoy's briefcase exploded upon being opened. Within 24 hours the South Yemeni President himself was stood against a wall and shot for his 'individualistic policies and actions' by forces loyal to the Secretary-General of South Yemen's monolithic National Front Party, Abdul Fattah Ismail, after a day of fierce fighting in Aden. A considerable number of South Yemeni refugees crossed the border into North Yemen, fleeing the fighting and the subsequent liquidation of the groups which had supported Rubayya Ali. San'a' promptly broke off relations with Aden, accusing the South Yemeni regime of organising President al-Ghashmi's assassination, and shortly thereafter Saudi Arabia achieved the unprecedented feat of persuading the Arab League to boycott the South Yemen regime. In San'a', the powerful Colonel Ali Abdullah Saleh asserted his right to the succession without challenge, and duly had himself 'elected' President shortly afterwards.

A bewildering variety of hypotheses has been offered for these bizarre events, but the explanation which seems most plausible, and is confirmed in all aspects except for one embarrassing detail by the South Yemeni regime, serves to illustrate how deeply entangled the political intrigues of the two Yemens have now become. It was known for some time before June, 1978 that the relations between President Rubayya Ali and party Secretary-General Ismail in Aden were at breaking point. This was commonly explained in terms of the former's 'moderate' Marxist views versus the latter's 'pro-Soviet and ultra-leftist' inclinations, but is quite adequately accounted for by the intense rivalry between two ambitious men schooled in the ruthless traditions of Yemeni politics and controlling separate power complexes within the totalitarian South Yemeni State. In early 1978 it was clear that Rubayya Ali was losing this struggle for power, as party leader Ismail was steadily expanding his control over the regular armed forces which were the President's main power base. The victors in the fighting of June 24th subsequently alleged that Rubayya Ali had in desperation attempted to launch a coup against the rest of the leadership, and although in fact he may have been pre-empted by Ismail there is very little doubt that he was indeed planning to do so.

The South Yemenis further allege that President Rubayya Ali had secretly been in contact with President al-Ghashmi of

North Yemen for months previous to June, 1978, which is partly confirmed by the visit of the secret envoy who brought the exploding briefcase to San'a' — and that the two presidents had been plotting to co-operate in the overthrow by Rubayya Ali of the National Front apparatus and the installation of a much more conservative regime in South Yemen, which would also be able to count on Saudi Arabian support.

The present Aden regime naturally will not reveal the rest of the story, but it seems probable that some of President Rubayya Ali's agents were actually double agents working for party Secretary-General Ismail, and that one of them succeeded in substituting the booby-trapped briefcase for the one containing the genuine documents that Rubayya Ali's envoy was bringing to Ghashmi. The explosion which killed Ghashmi was the signal for Ismail's supporters to strike against his fellow conspirator in Aden, Rubayya Ali, and to purge the South Yemen regime of any who were still tempted by the Saudi Arabian offers of lavish financial assistance in return for political moderation which had been extended over the previous few years.

The initial transfer of power in North Yemen from the assassinated President al-Ghashmi to President Ali Abdullah Saleh went smoothly, as the South Yemeni regime was preoccupied with its own mini-civil war, but the totally Zaidi composition of the San'a' government and its scarcely concealed status as a Saudi Arabian satellite offered an irresistible target to Aden once its own house was in order. On October 15th, 1978 a military uprising took place in and around San'a', with clashes also occurring in Baida Province near the southern border. The revolt involved major military units including the First and Fifth Infantry Brigades and the Military Police, as well as civilian conspirators in the capital who were allegedly supplied with \$2,000,000 and arms and explosives by Libya via South Yemen. The coup attempt had clearly involved infiltration of large parts of the armed forces by agents of the National Democratic Front exiles and/or Major Abdul Alem in South Yemen, and came very close to success; only the arrest of one key plotter, leading to a breakdown in communication between the rebel units at a crucial moment, the abstention of most of the armoured units and the loyalty of the air force saved the regime from overthrow. In the aftermath of the attempted coup at least 7000 persons were arrested, and there were numerous executions of officers and civilians implicated in the uprising. The rapid rotation of army commanders, provincial governors, ministers and officials which has been a feature of the Ghashmi and Saleh regimes (as an anti-coup measure) was subsequently accelerated further.

Having tried and failed with internal subversion, the South Yemen regime then turned to the sponsorship of an external invasion in its attempt to overthrow the pro-Saudi regime in San'a'. On February 20th, 1979 a force of National Democratic Front exiles attacked into North Yemen with strong support from the South Yemen armed forces, and in a short time fighting had spread along most of the border. At the time of writing military operations were still in progress.

STRENGTH AND BUDGET

The North Yemeni armed forces have grown about four-fold in the past 15 years, and now number 38,000 men, of whom 36,000 serve in the army. The air force has 1500 men and the navy 500. There is a paramilitary force of some 20,000 tribal levies that performs provincial security duties. Even including the latter, military forces amount to less than 1% of the population of 7,270,000, although military demands on the available manpower pool are considerably greater than that would imply, since about one-third of adult males are working abroad.

The present regime has the co-operation of the major tribes (President Saleh belongs to the Hashed confederacy), but their military potential remains most important. Even allowing for the substantial depletion of their manpower through massive temporary emigration to Saudi Arabia, the major tribes are probably still capable of fielding 200,000 armed men, and in their own northern highland territories represent a formidable military force.

Defence expenditure in 1977-8 was 360,000,000 riyals (\$79,000,000), an increase of about 25% in 2 years. The defence budget accounts for two-fifths of government expenditure, and is a notably high share of an estimated GNP of only \$1,200,000,000. All North Yemen defence expenditure figures may be seriously misleading, however, as there are large Saudi Arabian subsidies to the North Yemen budget and there are also believed to be direct subventions paid to the armed forces general staff. Moreover, virtually the entire cost of recent North Yemeni arms purchases from the USA, amounting to almost \$500,000,000, is being met by Riyadh.

COMMAND AND CONSTITUTIONAL STATUS

The President, chosen by a non-elected Consultative Council dominated by tribal representatives, is Commander-in-Chief of the Armed Forces. He appoints a cabinet headed by a Prime Minister, but there is no Minister of Defence. The armed forces stand directly under the President's authority, headed by the Chief of Staff, currently Colonel Ali Shaybah, who is also Deputy Commander-in-Chief. He exercises control over all three services. It is believed that the Head of the Central National Security Organisation (also referred to as the Director of Military Intelligence), Lieutenant-Colonel Muhammad al-Khamis, stands outside this structure and reports directly to the President.

In practice, the army is the State, and whoever manages to secure control of it automatically becomes President and controls the civilian apparatus of the State as well, restricted only by the countervailing influence of the great tribal

World Armies

confederacies. (Since late 1977, the two forces have been effectively allied.) The unbridled competition for power within the officer corps is so intense, and the institutional structure so weak, that almost any ruthless and lucky officer can make it to the top — the current President, Ali Abdullah Saleh, was a lieutenant in 1974, and was only 31 years old when he became Head of State in mid-1978.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role of the army is predominantly to maintain internal security, which generally means attempting to defend the centralising governments in San'a' against the power of the tribes. This was its role under the Imam, under Marshal Sallal during the civil war, and again under President Hamdi in 1974–7. As a natural consequence it enlisted substantial numbers of Shafa'i officers into senior positions, and tended to identify with 'progressive' political movements in the Arab world such as Nasserism, Ba'athism and Marxism. Despite the large increase in Zaidi and tribal influences after 1970, this remained true to some extent until Hamdi's assassination in 1977. Since then successive purges of the officer corps have converted it into an overwhelmingly Zaidi force, no longer seeking actively to dominate the tribes, but acting almost as the agent of the northern tribes and of Saudi Arabia in the control of the Shafa'i areas, which are politically more inclined to the left and more enthusiastic about reunification with South Yemen even under its present regime. The fact that the tribes and the army are Shi'ite, whereas both Saudi Arabia and the Shafa'is are Sunni, does not seem to raise any obstacles to this political alliance.

In the course of carrying out this role, the army has increasingly become involved in a military confrontation with South Yemen, and a large part of its forces are now concentrated near the southern frontier. (A similar build-up of Saudi forces along the South Yemen frontier was evident in 1978.) It is still necessary to retain substantial forces in San'a' to ensure the security of the regime, however. The only North Yemeni forces deployed outside the country are 1500 troops serving with the Arab Deterrent Force in the Lebanon.

The great majority of the army's recent operations up to 1977 were counter-insurgency campaigns against the tribes in the north, although there were some clashes along the South Yemen border in 1971–2. At the time of writing the army was involved in another border war with South Yemen, and had recently been involved in fighting against itself. It has a considerable numerical superiority over the army of South Yemen, and is about equally well provided with similar sorts of weaponry. However, the severe internal divisions and successive purges which it has suffered in recent years give cause for doubt about its present effectiveness as a fighting force in sustained combat against a well-organised and similarly equipped army like that of its southern neighbour.

ORGANISATION

Arms of Service

The North Yemen army has the usual pattern of branch organisation into the various arms and services. Owing to the training role of the Soviet Union over a considerable number of years, many of its staff procedures and much of its unit organisation follow the Soviet model.

Operational

The army contains two infantry divisions consisting of 10 infantry brigades (three reserve), plus two armoured brigades, five artillery battalions and two anti-aircraft artillery battalions. Almost all of the 15 brigades are severely under-strength, some amounting to little more than big battalions, and a major objective of the 5 year modernisation programme initiated with Saudi support in 1976 is to reorganise the army into about half a dozen full-strength brigades.

The air force has one fighter squadron, one light bomber squadron, and transport, training and helicopter flights. The navy consists of some patrol craft and MTBs based at the main port, Hodeida.

RECRUITMENT, TRAINING AND RESERVES

The army is recruited on the basis of selective conscription, with military service beginning at the age of eighteen and lasting for 3 years. Almost all training beyond basic level is done abroad, mainly in Egypt and Saudi Arabia. There has been a Soviet military training mission in North Yemen for many years, and although all Soviet arms purchases ceased in 1976 there were still about 100 Soviet advisers with the army in early 1979. Indeed, during the border war at that time the North Yemeni Prime Minister publicly complained that since there were Soviet advisers with both sides, all movements of the North Yemeni army at once became known to South Yemen. He explained, however, that the North Yemeni army would

continue to depend on the presence of Soviet instructors for some time, until the transition from Soviet to American weapons had been completed.

This transition, which began with the placing of the first North Yemeni arms orders in the USA in 1976, requires a different set of foreign advisers to be imported. It was envisaged that most of them — 75 or fewer — would be Saudi Arabian military personnel who were thoroughly familiar with United States weapons, with probably a small number of Americans as well. The great acceleration in United States arms deliveries occasioned by the border war in 1979 is likely to necessitate the presence of substantially greater numbers of Saudi or American military advisers, however, if the North Yemeni armed forces are to absorb these weapons in a reasonably short period of time.

Living conditions for North Yemeni conscripts are primitive, but not dissimilar to what they were accustomed to in civilian life. Pay was doubled for all ranks in late 1977 at the time Colonel Ahmad al-Ghashmi came to power, and is now roughly competitive with the amounts that can be earned by going to Saudi Arabia as an immigrant labourer. Since 1977 each soldier also received a daily ration of \$12 worth of *qat*, the local narcotic shrub which is chewed habitually by most Yemenis.

There is a reserve of some kind in North Yemen, made up of ex-conscripts who have a residual reserve liability, but no information is available on its size, organisation or state of readiness.

EQUIPMENT AND ARMS INDUSTRY

The Saudi-sponsored transition by the North Yemen armed forces from Soviet to American arms supplies was initiated in March, 1976, when a United States military delegation visited San'a'. In the following month a \$139,000,000 arms deal was signed with the USA covering the supply of howitzers, anti-aircraft guns, light weapons, ammunition and trucks, the cost being entirely covered by Saudi Arabia. Deliveries began in February, 1977 and were accelerated following the coup in South Yemen in June, 1978 which brought a more strongly pro-Soviet regime to power in Aden.

At the same time the United States administration also sought permission from Congress for the sale to North Yemen of \$360,000,000 in additional weapons, including 12F-5 fighters, two C-130 transports, 50M-60 tanks and 100M-113 APCs, to be delivered over the succeeding 3 years. These weapons were also to be paid for by Riyadh. The outbreak of fighting between North and South Yemen in February, 1979 caused the USA to employ an airlift to complete deliveries on the 1976 order, and the administration announced that it would commence deliveries on the subsequent order, including tanks and aircraft, without waiting the usual period in order to let Congress review the sale in view of the seriousness of the military situation.

Since 1976 the Soviet Union has allowed its military advisers to remain in North Yemen despite the marked pro-Western orientation of subsequent regimes in San'a', and has apparently not applied any restrictions on the delivery of spare parts for the largely Soviet-built equipment of the North Yemen forces. This policy may best be interpreted as a case of hanging on to established footholds and waiting for better times.

The main armoured strength of the North Yemen army consists of 220 T-34 and T-54 tanks, supported by 50 Saladin armoured cars and some Ferret scout cars. There are 350 BTR-40/-152 and some Egyptian-made Walid APCs. Artillery strength comprises 50 76 mm and some 122 mm guns, and 50 SU-100 SP guns, supported by 82 mm and 120 mm mortars, and 75 mm recoilless rifles. Anti-tank defence depends mainly on 100 Vigilant ATGWs and anti-aircraft defence on 37 mm and 57 mm AA guns. Additional United States artillery and anti-aircraft guns have been received, and 50M-60 tanks and 100M-113 APCs will be delivered during 1979.

The small navy has four large patrol craft (Poluchat-class) and four P-4-class MTBs, all based at Hodeida. The air force has 12 MiG-17 fighters and 14 Il-28 light bombers. The standard air-to-air weapon is AA-2 Atoll. Transports include three C-47s, two Short Skyvans and one Il-14; there are two AB-205 helicopters and one Mi-4. Trainers include four MiG-15UTIs, 18 Yak-11s and four F-5Bs which were transferred from Saudi Arabia in 1978 in order to speed the conversion of North Yemeni pilots to American aircraft. Twelve F-5E fighter-bombers and two C-130 transports are on order from the USA, and delivery was expected to take place in 1979. Some of the air force's existing aircraft are believed to be in storage owing to a shortage of pilots.

RANK, DRESS AND DISTINCTIONS

The rank structure of all the North Yemeni forces conforms to the usual international model, and employs standard eastern Arab nomenclature. No information is available on distinctions.

CURRENT DEVELOPMENTS

The situation of the North Yemen armed forces in early 1979 was difficult if not parlous. The officer corps had been heavily purged and deeply demoralised by the successive political upheavals of recent years, commanding officers were mostly

World Armies

young and had little military experience, and discipline was doubtful. The forces were also in the midst of an awkward transition from Soviet to American arms and particularly unready to fight a major conventional war against South Yemen, which seemed to be a significant possibility in early 1979. The military regime was heavily dependent on outside support from Saudi Arabia and the USA, and enjoyed little popular support in the southern and coastal parts of the country.

On February 20th, 1979 guerrillas of the exiled National Democratic Front in South Yemen in alliance with a group of former North Yemeni army officers led by Major Abdullah Abdul Alem calling itself the June Thirteenth Movement, and strongly supported by South Yemeni regular forces, attacked at a number of points along the lengthy and convoluted border between the two countries, which rises at some points to 10,000 feet. Within a week the South Yemen-backed forces were in control of three of the main North Yemeni towns along the border, Qataba, Bayda and Harib, and Saudi Arabia and the USA had both begun airlifts of arms and supplies to San'a'. There were also reports of disturbances in several military units in the interior of North Yemen. While a full-scale invasion of North Yemen by the South is unlikely unless the former's army should fall to pieces or defect *en masse*, there was considerable concern that the aim of the invaders might be to establish a rival provisional government under the National Democratic Front, closely allied with and supported by Aden, in the strongly Shafa'i parts of North Yemen close to the border which had also been the scene of Major Abdul Alem's attempted insurrection in 1978.

GWYNNE DYER

PEOPLE'S DEMOCRATIC REPUBLIC OF YEMEN (SOUTH YEMEN)

HISTORY AND INTRODUCTION

South Yemen's origins as a coherent political entity extend back all of two decades. Though Britain had occupied the port of Aden for strategic reasons since 1839, and had created a network of treaties granting it advisory status with the various tribal shaikhs of the interior, only in the late 1930s and early 1940s did the British government even begin to extend the rudiments of a civil administration beyond the Aden colony. At the very time when British authorities began to think of a federation of shaikhdoms (in 1955), Arab nationalist sentiments were coming to dominate in the Aden colony.

The Anglo-French attack on Egypt in 1956 greatly accelerated the growth of the nationalist movement in Aden (where a majority of the workers were immigrants from North Yemen), and focused the hopes of many on President Nasser. The first strikes in Aden occurred in the same year, and soon Russian-made arms were finding their way to the tribes from North Yemen, which has always claimed the entire territory as its own.

In the late 1950s Aden was selected by Britain as a substitute for Suez as its major Middle Eastern base. In 1959 the South Arabian Federation was formed as part of a deliberate British policy of submerging the urban nationalism of the colony in the conservative mass of the rural population — a policy which culminated in the shotgun wedding of Colony and Federation in 1962. But 24 hours later the conservative Imam of (North) Yemen was overthrown, and a large Egyptian expeditionary force soon arrived in the Yemen to back the republicans in the civil war.

Violence began in South Yemen the following year under the aegis of the Front for the Liberation of Occupied South Yemen (FLOSY), with support from San'a' and Cairo. Soon, however, FLOSY gave birth to a splinter group, the National Liberation Front (NLF), comprised mainly of young Marxists who were disciples of the pan-Arab socialist movement headed by George Habbash. By 1964, when Britain promised to withdraw within 4 years, Britain was basically an onlooker at the civil war between FLOSY and the NLF.

The NLF adopted the strategy of winning over dissident tribesmen, turning them against their shaikhs, and gradually taking over the Protectorates, while FLOSY was largely confined to a North Yemeni immigrant following in the one large urban area, Aden. Egypt's withdrawal from North Yemen in the aftermath of its defeat in the 1967 Arab-Israeli war left FLOSY high and dry, and when Britain carried out an accelerated withdrawal from South Yemen the same year it handed over control to the NLF, as the strongest power on the ground. In a brief civil war immediately after the British departure, the NLF annihilated FLOSY's remaining strength.

The economy of the port of Aden has been in headlong decline since independence, due partly to the closure of the Suez Canal for most of that time. As a result of that and the campaign against FLOSY, the great majority of the estimated 100,000 North Yemenis have returned home, there to strengthen the opposition of the San'a' regime to the NLF. Despite an official commitment by both regimes to the eventual reunification of the Yemen, the ideological war between them continues unabated. South Yemen under the NLF became a unitary Marxist State — the shaikhs were executed or got out to live on Saudi stipends. Collectivisation, indoctrination and all the usual paraphernalia of the doctrinaire Marxist State were applied rigidly. The government is fanatically secretive and suspicious, and less detailed information is available about PDRY internal affairs than about almost any other State on Earth.

The National Front, the ruling party which grew out of the NLF, was torn by a bitter power struggle in 1967-9, culminating in the removal of President Qahtan al-Sha'abi by the radical leftists in June, 1969. A 3 man President Council was established under the chairmanship of Salim Rubayya Ali, who thus became President. His principal sources of power were his influence in the tribal hinterland and especially in the Hadhramaut, the eastern part of the country near Oman, and hence also in the regular army which was mainly recruited from these rural areas. His nearest rival in power was Abdul Fattah Ismail, whose main strength lay in his mastery of the party organisation. The third member was the Prime Minister and Defence Minister, Ali Nasir Muhammad. The country was renamed the People's Democratic Republic of Yemen (PDRY) in 1970, and the radical regime began the lengthy task of imposing absolute party control over both the armed forces and the administration.

The PDRY armed forces then consisted of the regular army, the General Security Units and the Popular Militia (an air force and navy were in the course of being created). The regular army had developed from the military forces that had existed in the territory at independence — the former Federal Regular Army (Aden Protectorate Levies), the Eastern Protectorate's Hadhrami Bedouin Legion and the Mukalla Regular Army — and had President Rubayya Ali as its Supreme Commander. The General Security Units, controlled by the Ministry of the Interior, normally performed only police and gendarmerie duties. The Popular Militia, however, came under the direct control of the NF, and was composed of workers, students and peasants who were regarded as being more 'revolutionary' in spirit than the regular forces or the General Security Units; it came under the effective control of party leader Abdul Fattah Ismail.

After 1969, the regular army and the General Security Units were thoroughly purged and reorganised. All British and

World Armies

royalist personnel had already been removed, but now officers belonging to the Awaliq tribes of the Fourth and Fifth Governorates, who were regarded as 'reactionary and traditional-minded', were purged, exiled or killed, and replaced mainly by officers from the Dathina area of the Third Governorate (which happened to be President Rubayya Ali's home territory). 'Revolutionary Military Commands' were introduced in the regular army in 1970, to subject soldiers and officers to intensive and continuous Marxist indoctrination, and Soviet military aid and advisers began to play a large role in the army. Like the civilian population, the army was forced into a posture of absolute and unquestioning obedience to the party; nevertheless, as became clear in retrospect even from the choice of those purged at this point, it also became an arena of conflict between the various factions within the regime.

South Yemen's external relations in the Arab world at this time were extremely turbulent. In addition to the North Yemenis who had fled after the defeat of FLOSYP in 1967, at least 300,000 South Yemenis became refugees when the radical faction began mass round-ups of all potential opposition elements, accompanied by extreme brutality and a good deal of clandestine killing, after its victory in 1969. There had already been fighting against the Saudi Arabian army and air force in the Wadhah area of the common border in 1969, and the conservative Saudi regime, deeply concerned about the emergence of a radical Marxist State on its own borders, now organised many of the refugees into an 'Army of Deliverance' which unsuccessfully attempted to detach the Hadhramaut from South Yemen in an invasion in 1971. At the same time fighting flared on the North Yemen border, which harboured the refugee leadership of FLOSYP and was closely aligned with Saudi Arabia; in October, 1972 this skirmishing erupted into open war, including air raids, for about 2 weeks.

In the ceasefire agreement mediated by the Arab League at the end of October, 1972 the two Yemens actually agreed to work for unification. This was indeed the fundamental desire of most Yemenis, who despite the division of the country in the colonial era have never ceased to see themselves as one nation. In view of the great ideological gulf between the regimes in Aden and San'a', however, nothing came of this agreement. Indeed, although fighting then subsided on Aden's North Yemeni and Saudi Arabian frontiers, it soon flared on the Omani border instead. There had been a local revolt against rule from Muscat in the neighbouring Omani Province of Dhofar since 1964, and soon after coming to power in 1967 the Aden regime had effectively taken control of it, transforming it into a Marxist revolutionary organisation known as the Popular Front for the Liberation of the Occupied Arab Gulf (PFLOAG). At first with Chinese assistance, and after 1972 with Soviet assistance, all channelled through the supply base of Hauf in the eastern PDRY, the PFLOAG guerrillas had succeeded by 1973 in overrunning virtually the whole of Dhofar Province except for the capital, Salalah. In December, 1973 however, a substantial number of Iranian troops were brought into Dhofar by agreement with the Sultan of Oman and proceeded to drive the guerrillas back towards the South Yemeni frontier. Oman claimed that 400–500 South Yemeni regulars were fighting with the Dhofari guerrillas as stiffening in the last phase of the war, but by the end of 1975 Iranian troops had reached the South Yemen border, and there had been instances of Iranian destroyers and aircraft attacking targets within South Yemen's easternmost region.

The end of the fighting in Dhofar, however, made it possible at last for Saudi Arabia, the local great power, to attempt a policy of *détente* with the radical South Yemeni regime, in which it had reason to believe that there were elements who would be willing to curb the regime's revolutionary adventures in return for massive Saudi subsidies to the desperately impoverished South Yemeni economy. In late 1975 Riyadh successfully arranged for the return of the body of an Iranian F-4 pilot shot down over South Yemeni territory, and capitalised on this contact to expand discussions to the point where an agreement to establish diplomatic relations was concluded in March, 1976. Although it was never stated publicly in so many words, the deal on offer by Riyadh was a very large amount of aid — some \$400,000,000 was the most commonly discussed figure, which comes to almost 2 years' GNP for South Yemen — in return for Aden's ending support for revolutionary organisations beyond its own borders and breaking its close military and political ties with the Soviet Union. What the regime did internally would remain its own affair. While some members of the South Yemen ruling group, notably President Salim Rubayya Ali, seemed interested in at least some aspects of this package, others were totally opposed: party leader Abdul Fattah Ismail deliberately absented himself in Moscow to avoid being present for the March, 1976 reconciliation with Saudi Arabia.

An additional factor which attracted some South Yemeni leaders towards reconciliation with the Saudis was that the possibility of reunification of the two Yemens had by 1976 become more than a mere slogan. In June, 1974 the ultra-conservative, tribally dominated regime in North Yemen, which had refused to have anything to do with Aden, was overthrown by a young army officer, Lieutenant-Colonel Ibrahim al-Hamdi. While Hamdi continued to enjoy Saudi moral and financial support even after he came into serious conflict with the conservative tribes of the north in the course of his attempts to increase the powers of the central government, he was clearly a nationalist of much more 'progressive' ideas than any of his predecessors in San'a'. He even continued to enjoy Riyadh's support when he permitted the National Democratic Front, an organisation uniting six small North Yemeni leftist parties, to operate freely, and when he began to extend feelers to South Yemen on the subject of reunification in 1976 (counterbalancing this action by ending North Yemen's previous dependence on Soviet arms supplies).

Saudi Arabia's tacit support for Hamdi's proposals was due to the fact that they fitted into its own strategy for buying off South Yemen with a variety of inducements — and if it succeeded, a reunified Yemen in which the conservative north, over three times larger in population, would help further to contain an already tamed South Yemeni ruling party, would be highly desirable. In February, 1977 President Rubayya Ali of South Yemen and President al-Hamdi of North Yemen met on the border and announced the creation of a Joint Council composed of themselves and their respective Ministers of

Defence, Foreign Affairs, Economy, Trade and Planning which would guide the process of reunification over a 4 year period. The South Yemeni leader paid one public and several clandestine visits to San'a' in the months that followed. A succession of South Yemeni ministers visited Saudi Arabia and the United Arab Emirates during 1977 discussing various kinds of financial and development aid which might be forthcoming, and in August President Rubayya Ali himself visited Saudi Arabia.

All this external diplomatic activity was closely connected with a major power struggle which was developing within the South Yemeni regime between the factions led by President Rubayya Ali and party leader Abdul Fattah Ismail. Issues of ideology and external policy were involved — Rubayya Ali advocated a gradual approach to social change and a *rapprochement* with Saudi Arabia, while Ismail was a rigidly orthodox Marxist who supported the radical policy of 'mass mobilisation' internally and opposed any weakening of the link with the Soviet Union — but these issues were interwoven with older quarrels arising from traditional tribal rivalries and personal disputes. Most of all the struggle was about sheer power — who would rule South Yemen — and the question of external relations with the Soviet Union or with Saudi Arabia became an issue which the rival factions used in their struggle, while the external powers who stood to win or lose by the outcome in turn used what influence they had to swing the balance in their favour. In terms of armed force, President Rubayya Ali as Commander-in-Chief, with Prime Minister and Defence Minister Ali Nasir Muhammad as at least a benevolent neutral, was able to rely on the support of the regular army to a considerable extent, while Abdul Fattah Ismail as party leader had almost exclusive control of the Cuban-trained and increasingly well-armed Popular Militia.

In October, 1975 Abdul Fattah Ismail succeeded in merging two smaller extreme leftist parties, the People's Vanguard (Ba'athist) and People's Democratic Union (Communist) Parties with the ruling National Front to create a new, broader single party, the Unified Political Organisation — National Front (UPONF), in which his own radical faction enjoyed stronger support. He was made Secretary-General of the UPONF, with President Salim Rubayya Ali as his deputy. This was interpreted as a victory for the hardliners, and the Soviet Union promised to continue supplying military and economic aid, but in a series of manoeuvres in December, 1975 to January, 1976 Rubayya Ali and his followers, depending heavily on their strong position in the Hadhramaut, succeeded in reshuffling the UPONF's Central Committee and changing the composition of the government in their favour. This then left President Rubayya Ali free to pursue his policy of *détente* with Saudi Arabia and reunification with North Yemen through 1976 and early 1977.

During 1977, however, events abroad began to move rapidly to his disadvantage. The growing Soviet interest in supporting the beleaguered Ethiopian revolutionary regime in the Horn of Africa made South Yemen a far more important strategic base for Moscow, and the prospect that in a war between Ethiopia and Somalia the Soviet Union would be expelled from its existing Somali naval and air facilities further increased Aden's importance to Moscow. Promises of more generous Soviet military and economic aid began to be made to South Yemen, accompanied by requests for base facilities and tactful support for Abdul Fattah Ismail's faction of the leadership. Following the visit of Soviet Navy Commander-in-Chief Admiral Sergei Gorshkov to South Yemen in late 1976, Soviet First Deputy Defence Minister Sokolov visited Aden in February, 1977.

Cuba's Premier Fidel Castro arrived in March bearing a plan for a federation of 'revolutionary States' in the Red Sea area — Ethiopia, Somalia and South Yemen — which Rubayya Ali succeeded in rejecting, but he was compelled to rush his foreign minister to Riyadh to placate the nervous Saudis, and to give further reassurances to Saudi Foreign Minister Prince Saud al-Faisal, who paid a personal visit to Aden in April. Castro was followed in May, 1977 by a Soviet air force delegation led by General Shomatov (the prospect of having to airlift Soviet arms in large quantities to Ethiopia was already being considered), President Rubayya Ali persisted in his course, but Saudi Arabia's confidence in his ability to control the course of events in South Yemen was clearly declining as fast as its anxieties about Soviet intentions in the Red Sea and the Horn of Africa were rising: during a visit to Moscow in July, 1977 by Prime Minister and Defence Minister Ali Nasir Muhammad, Rubayya Ali had to hasten to Saudi Arabia to dispel the impression that Abdul Fattah Ismail's faction, with powerful support from the Soviet bloc, was gaining the upper hand. His parallel attempts to reassure North Yemen's President al-Hamdi that the unification project was still on course evidently succeeded, for Hamdi agreed to pay his first visit to Aden in October, 1977.

Hamdi, however, was murdered 2 days before his scheduled visit to Aden, and his successor (and the man who had arranged his assassination), Colonel Ahmad al-Ghashmi, was a strongly pro-Saudi officer which immediately suppressed the leftist National Democratic Front in North Yemen, and put an end to the talks with South Yemen on unification. There has been much speculation that Hamdi died because Saudi Arabia had concluded that President Rubayya Ali was unable to control the rise in influence of Secretary-General Abdul Fattah Ismail's faction in Aden, enjoying as it did such powerful support from the Soviet bloc, and that the reunification of Yemen therefore had to be stopped as it was likelier to result in the radicalisation of North Yemen than in the taming of South Yemen. Further confirmation of the apparent growth of Ismail's power in Aden had been provided by the fact that in September South Yemen had begun supplying tanks and fighter aircraft (allegedly complete with crews) to a by then totally pro-Soviet Ethiopia — on the understanding that the South Yemeni equipment would be replaced by the Soviet Union — and by the visit of East German Defence Minister General Heinz Hoffman to Aden in October.

Whether or not the assassination of North Yemen's President al-Hamdi was a signal that Saudi Arabia had despaired of its efforts to achieve *détente* with South Yemen, it had an immediate impact in Aden which was very much to Rubayya Ali's disadvantage. Before October was out Prime Minister Ali Nasir Muhammad, who had hitherto also controlled the

World Armies

Defence Ministry and thus the regular army as a kind of counterbalance to Abdul Fattah Ismail's Popular Militia, was relieved of his post as Defence Minister. It went instead to Lieutenant-Colonel Ali Antar, a 'leftist' who was closely associated with Ismail's faction. Other cabinet changes in the same reshuffle also denoted a decline in Rubayya Ali's power.

During the succeeding months South Yemen became even more deeply committed to supporting Soviet strategy in the region. A full-scale Soviet air bridge was set up to fly in vast quantities of military equipment to Ethiopia, with all the aircraft staging through South Yemen, and units of South Yemeni combat troops were also sent to Ethiopia — notably in January, 1978 when a South Yemeni battalion committed to the Arab Deterrent Force in Lebanon was hastily withdrawn and sent directly to the defence of the Red Sea port of Massawa, which was under close siege by Eritrean guerrilla forces. By the end of 1977, moreover, border skirmishes between South Yemeni and Saudi Arabian troops had become commonplace, with some more serious fighting at Wadiyah in the western sector of the frontier. South Yemen's reward became clear in February, 1978 when Prime Minister Ali Nasir Muhammad, on a visit to Moscow, received far-reaching pledges of economic co-operation and a Soviet commitment to help double the size and strength of the South Yemeni armed forces. This prospect undoubtedly assisted the new, pro-Ismail Defence Minister, Colonel Ali Antar, in undermining President Rubayya Ali's previous influence in the regular armed forces. In April 150 senior army officers loyal to the President were arrested by the militia on Ismail's orders, and Ismail's key lieutenant, Minister of State Security Muhammad Said Yafai, attacked President Rubayya Ali publicly for having readmitted to the army some 300 soldiers who had formerly been discharged because of their hostility to the regime.

Following Defence Minister Antar's visit to Moscow in May, 1978 moreover, it was reported that a Soviet delegation led by Admiral Sergei Gorshkov arrived in Aden in early June under cover of secrecy to sign a 15 year agreement covering military and other aspects of co-operation. The agreement allegedly provided for Soviet assistance in the construction of a large new naval base in the Bay of Turbah which would offer the Soviet navy facilities for repair, storage, communications and monitoring; the construction of a new air base at Khormaksar near Aden with accommodation for 60 fighter aircraft (also offering facilities to the Soviet air force); a monitoring and communications station on Socotra Island; a large military installation at Mukalla on the road to Oman; and the delivery to the South Yemeni armed forces of some 30 MiG aircraft, five FPBs and a major radar network to cover the south of Saudi Arabia and parts of the Gulf.

By mid-1978, therefore, President Rubayya Ali had lost almost all influence over government policy to the rival faction led by Secretary-General Abdul Fattah Ismail, and his control over at least many of the units of the regular army. Given the arcane nature of South Yemeni politics, it is not possible to state with complete confidence the sequence of events which then led to the simultaneous assassination of the North Yemeni President, Rubayya Ali's execution and the outbreak of severe fighting between the army and the Popular Militia in South Yemen, but the version which is most plausible, and best substantiated by known events, is as follows.

Rubayya Ali, seeing no hope of restoring his crumbling position in South Yemen except with outside aid, apparently maintained secret contact with North Yemen's new leader, President Ahmad al-Ghashmi, despite the latter's known dependence on Saudi support and his suppression of the left in North Yemen. It is alleged that Rubayya Ali was planning a coup against the rest of the party leadership in Aden with the aid of units in the regular army that were still loyal to him, and that his contacts were to ensure instant North Yemeni and Saudi Arabian support for the coup in what was bound to be a delicately balanced situation in South Yemen. Some of Rubayya Ali's agents, however, were actually double agents working for Ismail, and one of them apparently succeeded in substituting a booby-trapped briefcase for the one which the President's secret envoy was taking with him to North Yemen on June 24th, just as the coup was about to begin. When Rubayya Ali's unsuspecting envoy opened the briefcase in President al-Ghashmi's office in San'a', it exploded, killing both men.

It is not clear whether Rubayya Ali's coup ever actually got underway in Aden, or whether the heavy fighting in the city which broke out at the same time, accompanied by air strikes on the Presidential Palace, was due to units loyal to the President defending themselves against a pre-emptive attack by forces obedient to General-Secretary Abdul Fattah Ismail. Within a short time the President's forces in Aden City were defeated, however, and within a further 24 hours Rubayya Ali had been summarily tried, stood against a wall, and shot. Prime Minister Ali Nasir Muhammad was installed as President in his place, but the true undisputed ruler of South Yemen to emerge from the fighting was the hard-line General-Secretary of the UPONF, Abdul Fattah Ismail. He subsequently assumed the Presidency himself.

There was extensive fighting in various parts of the country as army officers and units loyal to President Rubayya Ali resisted Ismail's Popular Militia troops. Fighting was particularly heavy in the Third Governorate (Abyan), the President's home territory, where the local army commander led many soldiers up into the hills to conduct guerrilla warfare against the new regime, but there were also clashes in the First, Fourth and Sixth Governorates and throughout the eastern Hadhramaut. It was alleged (admittedly by refugees) that some of the Cuban troops in the country and two battalions of Ethiopians under Arabic-speaking officers, hastily sent by Addis Ababa in repayment for services rendered, were thrown in by the government to fill the gaps left by mass defections of regular army troops, and that several hundred Russian officers were placed in effective command of the South Yemeni army pending a thorough purge of all elements still loyal to the former President. It is certainly the case that there were large numbers of defections from the armed forces, including one entire unit (allegedly a brigade, but probably a battalion) that took refuge in North Yemen from the Beihan area. By November, 1978 however, almost all of the fighting had died down. The armed forces had been very extensively purged, with numerous executions, and even the mountainous areas along the borders with Oman and North Yemen were largely

People's Democratic Republic of Yemen (South Yemen)

under government control. Consolidating his victory, Abdul Fattah Ismail transformed the UPONF coalition into a single 'Yemen Socialist Party' in October, 1978. The party's first congress afforded the Secretary-General and President Ali Nasir Muhammad an occasion to award themselves the rank of brigadier, presumably to strengthen their authority over the army.

STRENGTH AND BUDGET

The strength of the PDRY's armed forces is 20,900, of which 19,000 are army. The 600 man navy is subordinate to the army; the formal status of the 1300 man air force is unknown. In February, 1978 the Soviet Union pledged to double the size and strength of the armed forces over an unknown period of time. The population of the PDRY is 1,800,000.

Paramilitary forces, in the form of General Security Units (1500 men) and the Popular Militia, at least notionally include every fit adult male in the population, but it is not known how closely this precept is adhered to in rural areas. Numbers of units in the Cuban-trained Popular Militia are now as well equipped as comparable infantry units in the regular army, as was demonstrated during the short civil war in June, 1978.

The military budget for 1978 was 19,000,000 South Yemen dinars (\$56,000,000). This does not include expenditure on the General Security Units, and it may not include the Popular Militia either. The estimated GNP is only \$224,000,000, which suggests that South Yemen, despite relatively large amounts of military aid from the Soviet Union, has one of the highest rates of military expenditure in the world.

COMMAND AND CONSTITUTIONAL STATUS

The executive organisation, effectively chosen by the single permitted party, is the Presidential Council, a 5 man body made up of President Abdul Fattah Ismail, Premier Ali Nasir Muhammad, Defence Minister Ali Antar, Foreign Minister Saleh Mutea and Culture Minister Abdul Razzaq Badid. (The last is included as a representative of the Communist Party, now formally submerged within the Yemen Socialist Party.) The President is Supreme Commander of the Armed Forces and exercises control through the Defence Minister, who is in the chain of command. Operational control is in the hands of the Chief of the General Staff; staff organisation is on the Soviet model, and Soviet military advisers are distributed throughout the army. Regional military commands coincide with the boundaries of the eight governorates into which the country is divided for administrative purposes.

The General Security Units are controlled by the Ministry of the Interior. The Popular Militia is directly controlled by the Secretary-General of the ruling party, President Abdul Fattah Ismail, and is at least as strong in numbers as the regular army. Following the fighting between the Popular Militia and units of the army loyal to the late President Rubayya Ali in June, 1978, numbers of army command positions, including senior staff jobs in Aden, were taken over by militia officers who were considered to be more reliable politically.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

The role of the South Yemen regular army is the defence of the national territory against the country's three hostile neighbours. The role of the Popular Militia is the preservation of the regime against the army. The army's task is made rather difficult by the fact that North Yemen, Saudi Arabia and Oman all vehemently disapprove of the Aden regime, and together dispose of five times the armed forces, 10 times the population and 250 times the national income of South Yemen. The militia has recently demonstrated that it is entirely capable of performing its task.

In fact, the army's job of defending South Yemen is greatly eased by the fact that all the conservative countries of the Arabian peninsula have a strong aversion to creating a precedent for the overthrow of another country's regime by military invasion, or even of territorial changes imposed by force, and would be reluctant to embark on such a venture even to be rid of a regime they abhor as much as that in South Yemen. Moreover, the Aden regime can almost certainly rely on firm Soviet political and military support to prevent such an occurrence. The main problem the army has to deal with, therefore, is that of border clashes, although some of them have been of quite large scope in the past.

Recent operations have included border clashes with Saudi Arabia in 1969 and 1977, a small border war with North Yemen in October, 1972 involving air-strikes and small-scale military actions in a restricted area, and operations in support of the guerrillas of the Popular Front for the Liberation of Oman (as PFLOAG was renamed in 1974) fighting in Oman's Dhofar Province. The latter conflict involved Iranian and Omani air strikes into South Yemen's Hadhramaut Province and artillery duels across the border in 1975, but from 1976 onwards the Aden government refused to allow PFLO guerrillas to cross the border into Oman and shooting ceased.

As many as 2000 South Yemeni troops may have been involved in fighting in support of the Ethiopian government, principally in Eritrea, in 1977-8, but all were believed to have returned home before the end of 1978. The extensive fighting between the army and the Popular Militia in June, 1978 appears not to have done the former serious damage, as the

World Armies

army was committed on a large scale to the fighting that erupted along the North Yemen border in February, 1979 (*see* Current Developments). There is no real evidence as to the army's fighting ability in prolonged conventional combat against serious opposition, but it seems well enough trained and equipped to give a good account of itself.

Detailed information on deployment is unavailable. Both army and Popular Militia units are stationed throughout the eight governorates, and there are always substantial concentrations along the Oman and North Yemen borders. (The latter approaches to within 50 miles of Aden.) The lengthy border with Saudi Arabia runs through virtually uninhabited desert; exiles from South Yemen raid across it occasionally, but the South Yemen army maintains no military concentrations along it on a permanent basis except for a light screening force in the western sector. Major garrison towns include Aden, Mukalla and Hauf. There are not believed to be any South Yemeni troops deployed abroad.

The PDRY, like all Arab States, belongs to the Arab League and to its subsidiary military bodies, the Arab Defence Council and the Unified Arab Command, but no serious military commitment is implied. The only significant military relationship maintained by the regime is with the Soviet Union and some of its allies, notably East Germany and Cuba, all of which supply military advisers to the country.

ORGANISATION

Arms of Service

The usual division of the army into combat arms (infantry, artillery, armour and engineers) and supporting services (signals, ordnance, transport, etc.) is observed. The branch structure of the Popular Militia, if any, is unknown.

Operational

The army is organised into 10 infantry brigades (each of three battalions), two armoured brigades, five artillery battalions, one signals unit and one training battalion.

The air force has a conventional squadron organisation, consisting of one interceptor squadron (MiG-17s), one light bomber squadron, one transport squadron and one helicopter squadron. The main air base is at Khormaksar (Aden), which is also extensively used by the Soviet air force. Other air bases are at Al Dali, Mukayris, Lawdar, Bayshan al Qisab, Ansab, Ataq, Mukalla, Zamakah and Ir Fadhl Field.

The squadron or flotilla organisation of the navy, if any, is not known. The main naval bases are at Aden and Mukalla; a large new base for joint South Yemeni-Soviet use is being built in the Bay of Turbah.

RECRUITMENT, TRAINING AND RESERVES

Conscription for a period of 2 years was introduced in March, 1977 and the intention is to double the present size of the armed forces to about 40,000 men. It is not known if any conscripts are directed into the Popular Militia. There has been some discussion about sending young men to be trained in Cuba, as was done by the Ethiopians, but so far as is known all military training of conscripts is done at home. Further training in specialised subjects for senior NCOs and officers frequently has to be done abroad, however, mainly in the Soviet Union and East Germany.

Amongst the communist States which have sent training missions to South Yemen are the Soviet Union, East Germany, Cuba and North Korea. Considerably exaggerated figures are frequently quoted for the number of Soviet-bloc military advisers in the country, perhaps harking back to the quite high numbers of Soviet and Cuban military personnel who were based in the country briefly, or passed through it, in connection with the airlift of military aid to Ethiopia in 1977-8. The totals in early 1979, however, were between 400 and 800 Russians, about 300 Cubans and 300 East Germans and other Eastern Europeans, not all of whom were military personnel. The Soviet military advisers have primary responsibility for training assistance to the regular armed forces and the Cubans work mainly with the Popular Militia. The East Germans have specialised in the organisation and training of the police and internal security forces, including the much feared Revolutionary Security Organisation (the secret police), which is controlled by State Security Minister Muhammad Said Yafai, a close ally of President Abdul Fattah Ismail.

Apart from the Popular Militia, there was not known to be a reserve organisation in South Yemen, although with the introduction of conscription it would seem likely that one will eventually be created.

EQUIPMENT AND ARMS INDUSTRY

South Yemen operates mainly Soviet equipment, with some older British equipment from the pre-1970 period. The army's armour consists of 260 T-34 and T-54 tanks, supported by 10 Saladin armoured cars, 10 Ferret scout cars and an unknown number of BTR-40/-152 APCs. The artillery employs British 25 pounders and 105 mm pack howitzers, and

People's Democratic Republic of Yemen (South Yemen)

Soviet 122mm and 130mm howitzers. Other weapons include BM14 and BM21 mobile rocket launchers, 81 mm and 120mm mortars, and 122 mm recoilless rifles. Anti-aircraft defence is provided by 37 mm, 57 mm, 85 mm and ZSU-23-4 SP AA guns and SA-7 surface-to-air missiles. Anti-tank weapons probably include Sagger, Snapper or Swatter ATGWs. The standard personal weapon is the AK-47. In view of the June, 1978 agreement with the Soviet Union on the expansion of the armed forces, substantial further deliveries of Soviet weapons are to be expected, and T-62 tanks were reported present in the South Yemeni units fighting on the North Yemen border in early 1979.

The navy has the following: two SO-1-class and one Poluchat-class large patrol craft; two P-6-class and four P-4-class MTBs; three Osa-I-class FPBGs with Styx surface-to-surface missiles; three ex-British Ham-class inshore minesweepers; two Polnocny-class and three ex-British medium LCTs; three Spear-class and one Interceptor-class patrol boats; and 15 ex-British small patrol craft.

The air force operates 12 MiG-21MF interceptors, 15 MiG-17 fighter-bombers and seven Il-28 light bombers. It has four Il-14 and three An-24 transports, and eight Mi-8 and some Mi-4 helicopters. There are three MiG-15UTI trainers. The standard air-to-air weapon is AA-2 Atoll. It is believed that some aircraft are in storage owing to a shortage of pilots.

RANK, DRESS AND DISTINCTIONS

Regular armed forces ranks conform to international practice. No information is available on rank structure in the Popular Militia.

CURRENT DEVELOPMENTS

By the end of 1978 the regime appeared to be in full control of the army and the country, and its international alignment and military relationship with the Soviet Union seemed secure from further domestic challenge. By early 1979 it was confident enough to sponsor a major attack against North Yemen by exile forces from that country, with powerful support from South Yemeni regular forces.

There was considerable evidence that Aden had earlier had a hand in organising the major military revolt against the pro-Saudi, tribally dominated regime in San'a' in October, 1978. Following the suppression of that revolt further North Yemeni military and civilian refugees fled to South Yemen, where they joined earlier political refugees belonging to the leftist National Democratic Front (NDF) that had been banned after the coup that overthrew President al-Hamdi in October, 1977, and military exiles who had taken part in an unsuccessful revolt led by Major Abdullah Abdul Alem in the southern part of North Yemen in April, 1978. (See the entry on North Yemen for further details.) The South Yemeni regime encouraged the NDF refugees to organise guerrilla forces in alliance with the June Thirteenth Movement formed by the exiled North Yemeni army officers, and on February 23rd, 1979 attacks were launched along most of the North Yemen frontier by South Yemeni regular units operating in concert with these guerrillas. Within a week a considerable area of North Yemeni territory along the frontier, including the three large towns of Qataba, Bayda and Harib were in rebel/South Yemeni hands, and the USA and Saudi Arabia had both begun airlifts of arms and supplies to San'a'. At the time of writing fighting was still continuing; it did not seem likely that the South Yemeni attack was intended to penetrate far beyond the border areas, but rather to be aimed at sparking off an internal rebellion, or alternatively making it possible for the exiles to set up a rival provisional government in the territory seized for them by the South Yemeni forces.

In March, 1979 there had been no reports of a resumption of guerrilla attacks into Oman's Dhofar Province by the PFLO guerrilla forces which are still maintained in South Yemen's neighbouring Hadhramaut Province, but in view of the withdrawal of Iranian troops from Oman and the change of regime in Aden this possibility cannot be dismissed.

GWYNNE DYER

YUGOSLAVIA

HISTORY AND INTRODUCTION

The Kingdom of the Serbs, Croats and Slovenes was proclaimed on December 1st, 1918. It was made up of the independent Kingdoms of Serbia and Montenegro, the Austro-Hungarian provinces of Croatia-Slavonia, Dalmatia and Bosnia-Herzegovina, and small parts of Austria and Hungary. The new nation faced serious problems from the outset. Her borders were not confirmed until 1926, and the eventual settlement left numerous non-Yugoslav minorities — Magyars, Germans, Albanians and Romanians — within Yugoslavia. Of the population of about 12,000,000, just over half were Greek Orthodox, nearly 5,000,000 were Roman Catholic and over 1,000,000 were Moslem. The Royal Family, together with nearly half the population, was Serbian, and the Constitution of 1921 was merely a modified version of that of Serbia. The Constitution was sharply attacked by the Croats, who demanded a federal union, and parliamentary debates grew so heated that Radić, the Croatian leader, was mortally wounded on the floor of the House in June, 1928.

In January the following year King Alexander decided that party passions were so inflamed that an extra-parliamentary solution should be sought: he therefore dispensed with parliament and Constitution, and set up a government under the nominal leadership of a general. All existing political parties were dissolved, and the formation of new ones required official authorisation. Alexander granted a new Constitution in September, 1931, but it was little more than a cloak for the continuation of royal dictatorship. On October 9th, 1934 Alexander was assassinated at Marseilles by an agent of the Croatian separatists. The young Paul II governed through a council of regency, dominated by his father's cousin, Prince Paul, who took some steps to liberalise the regime within the existing Constitution. Political parties were unofficially tolerated, and the Communist Party, banned in 1922, gained numerous adherents.

Josip Broz, subsequently known as Tito, a Croatian factory worker imprisoned in 1928 for illegal trade union activities, took over the leadership of the Communist Party in 1937. His energetic reorganisation of the party came at a time of deepening domestic and international crisis. The establishment of an autonomous Province of Croatia in August, 1939 failed to solve the problem of national minorities, and was followed by increasing Serbian, Slovenian and Moslem demands for self-government. The economy was dangerously dependent upon Germany, the disappearance of Czechoslovakia deprived Yugoslavia of her main source of arms, and the government's emergency economic measures contributed to the growing inflation. In March, 1941 after temporising as long as possible, the government at last bowed to German pressure and signed the anti-Comintern pact. The regency was thereupon overthrown by a coup in which army and air force officers played leading roles. King Paul was declared of age, and a new broadly representative government was formed.

The coup infuriated Hitler, who ordered that Yugoslavia should be smashed 'with merciless brutality'. On April 6th the Axis invasion commenced with a savage air attack on Belgrade. Organised resistance lasted only a few days: the government surrendered unconditionally on April 17th. Yugoslavia was then dismembered. Most of her components were placed under German or Italian rule, and an independent State of Croatia, run by the *Ustaši* as an Axis satellite, was established. The *Ustaši* embarked upon a policy of exterminating the Serbs within Croatia in a fashion which dismayed even the Germans and Italians, whose own behaviour in occupied territories was scarcely model.

Occupation was fiercely resisted. Armed bands were active in Serbia as early as May, 1941 and the German invasion of Russia brought the Yugoslav communists into the struggle. The conflict was bitter and confused, complicated by the existence of some pro-Axis factions as well as two major anti-Axis groups. General D.D. Mihailović's *četniks* were initially the largest and most prestigious group. They owed allegiance to King Peter's London-based government-in-exile, and enjoyed the support of the Western Allies. The communist partisans were led by Tito and supported by Russia; they eventually became recognised, even in the West, as the most effective of the resistance groups. The *četniks* and the partisans were often as hostile to one another as they were to the occupation forces, and the struggle was as much a civil war as a campaign against the invaders. The *četniks* had been almost totally destroyed by the spring of 1945, although it was not until March, 1946 that Mihailović himself was captured. He was executed, together with a number of other anti-communists, the following month.

The defeat of the Axis and the eradication of the *četniks* left Tito supreme. A communist-dominated provisional government was formed in March, 1945 and a constituent assembly met on November 29th. It immediately declared Yugoslavia a Federated People's Republic, and a federal constitution was approved in January, 1946. Yugoslavia was, in the early post-war years, a staunch ally of the Soviet Union: she was a founder member of Cominform, whose headquarters were set up in Belgrade. By late 1947, however, there was friction between Tito and Stalin over foreign policy, and in March, 1948 Stalin formally accused the Yugoslav Communist Party of revisionism and other anti-communist activities. The Yugoslav party denied the charges, but in June was expelled from Cominform and publicly castigated for ideological deviation.

Yugoslavia's break with the Soviet Union was followed by Soviet attempts to engineer Tito's overthrow by the party's

central committee and by the army. The failure of these projects was followed by a purge of pro-Soviet members of the party, army and administration. Cominform stepped up its propaganda campaign in 1949, and the Soviet Union encouraged Yugoslavia's neighbours to press their territorial claims against her. Yugoslavia's economic severance from the Soviet bloc brought her economy to the verge of collapse, and forced her to look to the West for trade. In 1951 both France and America supplied Yugoslavia with arms, and the next few years saw increasing *rapprochement* between Yugoslavia and the West. There was a measure of relaxation within Yugoslavia: police powers were curbed in 1953–4, numerous collective farms were disbanded and steps were taken to decentralise elements of the administration. The Constitutional Law of January, 1953 introduced the office of President of the Republic, and placed great emphasis upon the direct political participation of working people.

The death of Stalin, in March, 1953 removed a major obstacle to reconciliation between Yugoslavia and the Soviet Union. A settlement was reached in 1955, and Tito himself visited Moscow the following year. The reconciliation proved short-lived: there were fundamental differences of opinion between Tito and Khrushchev, and by the summer of 1958 the Yugoslavs were once more accused of revisionism. The failure of the settlement with Russia encouraged Tito to increase his involvement with non-aligned States: he travelled extensively in Africa and Asia, and in September, 1961 sponsored a world conference of non-aligned States at Belgrade. Relations with Russia improved after 1961, but Yugoslav foreign policy remained firmly committed to non-alignment. Within Yugoslavia the trend towards the devolution of power and the increase of workers' control of industry went on: the Constitution of April, 1963 reaffirmed the rights of the working people, and set up a complex multicameral parliament.

The invasion of Czechoslovakia, in August, 1968 came as a shock to Yugoslavia, who feared that she might be treated in a similar manner. Tito and his Romanian counterpart immediately met and declared their determination to resist aggression, some military units moved to their war locations and a number of reservists were mobilised. The defence budget was increased in October, and in February, 1969 a territorial defence organisation, based on the concept of Total National Defence, was set up. Although the Soviet invasion never actually materialised — Yugoslav fears were undoubtedly somewhat exaggerated — the system of total defence remains an essential ingredient of Yugoslav defence policy.

Tito's undoubted success in maintaining Yugoslavia's independence should not be allowed to obscure the fact that the nation continues to face serious difficulties. There have been some rifts within the party: Vice-President Aleksander Ranković fell from power in an internal upheaval in the summer of 1966, and the veteran communist Milovan Djilas has been imprisoned on several occasions for his attacks on the regime. There have also been a number of strikes and some student unrest. The problem of nationalities, moreover, remains unsolved. Yugoslavia is, in the words of one authority, 'neither a homogeneous nation-State like Italy nor a fully multinational State like the Hapsburg Monarchy in the past or the USSR today'. Less than half the population belongs to the largest national group, the Serbs: there are four written and six spoken languages. Friction between the minorities persists, with economic, linguistic and cultural motivation, and some violence has been carried out by separatist movements. The move towards decentralisation and socialist direct democracy goes on, but there are fears that Tito's Yugoslavia will not survive its founder's death and that the federation will fragment under the pressure of nationalism. The effects of such fragmentation would not be purely domestic, but might all too easily provoke foreign intervention, with dangerous consequences for world peace. Recent events, such as the visit of General Lubcic to Russia in May, 1974 and General Kulikov's visit to Yugoslavia 6 months later, point to something of a *rapprochement* between Yugoslavia and the Soviet Union. Kulikov again visited Yugoslavia in April, 1976.

STRENGTH AND BUDGET

Population: 21,950,000

Army: 200,000

Air force: 40,000; 329 combat aircraft

Navy: 27,000; five submarines, one destroyer, 85 smaller craft

Paramilitary: 1,000,000 in a Territorial Defence Force; 300,000 in youth units; 16,000 frontier guards

GNP (1977 estimate): \$37,800,000,000

Defence expenditure (1978): \$2,330,000,000

COMMAND AND CONSTITUTIONAL STATUS

Command

President Tito holds the rank of marshal, and is Commander-in-Chief of the Armed Forces. Day-to-day control is exercised by the Ministry of National Defence. There are six military districts, based on Belgrade, Skopje, Split, Zagreb, Sarajevo and Ljubljana; there is possibly another military district in Serbia. The two major air commands are located at Zemun and Zagreb, and the navy, commanded from Split, has three regional commands based on Pula, Šibenik and Kotor/Trivat.

World Armies

Constitutional Status

The Constitution of February, 1974 affirms that Yugoslavia is a Socialist Federal Republic, comprising the Socialist Republics of Serbia, Croatia, Macedonia, Montenegro, Slovenia and Bosnia–Herzegovina. The Socialist Republic of Serbia includes two autonomous regions: Vojvodina and Kosovo.

Collective presidency was established in 1971, and in 1974 the presidential body was reduced to nine members, one representative from each of the Republics and autonomous regions, and the President of the League of Communists of Yugoslavia. The constitution specifically exempts Tito from a general ban on re-election to the office of president. There is a bicameral Federal Assembly, whose members must be workers rather than professional politicians; it is assisted by an Executive Council of Ministers.

The constitution states, as a basic tenet, that Yugoslavia is devoted to 'peaceful coexistence and the principles of non-alignment'. It also declares that 'the armed forces of the Socialist Federal Republic of Yugoslavia are an integral entity, and consist of the Yugoslav People's Army as the joint armed force of all nations and nationalities and all working people and citizens, and the Territorial Defence Forces as the broadest form of organised armed resistance'.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Role and Commitment

In the words of Army General Ljubčić, 'Yugoslavia's armed forces are intended exclusively for the defence of the Socialist Federal Republic of Yugoslavia'. Yugoslavia subscribes to no military alliances, and all her forces are stationed within her borders. The concept of Total National Defence (TND) is paramount. Ljubčić suggests that 'TND points the way to the solution of the problem of how small and medium-sized countries can successfully withstand aggression by a considerably stronger aggressor'. TND is designed to deter a potential aggressor and, if this deterrence fails, to ensure that 'every citizen, irrespective of sex, age, occupation and so on' resists the attack in one way or another. Ljubčić stresses that Yugoslavia's terrain favours small-unit defensive actions, and believes that the Vietnam war demonstrates that 'liberation forces' enjoying the support of the local population can defeat a sophisticated enemy.

Any attack on Yugoslavia would be met by 'comprehensive defence' beginning on the frontier and extending into the interior. The entire population would be involved in armed resistance, civil defence, armaments production or military engineering. There would be no front in the accepted sense: units of the Territorial Defence Forces (TDF) would fight on in occupied areas, forcing the invader to pay careful attention to the security of his lines of communication. It is likely that the armoured formations of the Yugoslav People's Army (YPA) would fight delaying actions in the open country north and north-east of the Sava, Danube and Morava with the intention of inflicting casualties and giving the TDF time to arm and deploy.

Deployment

The YPA consists of nine infantry divisions, 10 armoured brigades, 15 independent infantry brigades, two mountain brigades and a single airborne battalion. The armoured brigades seem to be grouped into divisional-sized formations around Sisak (Croatia), Kragujevac (Serbia) and Skopje (Macedonia). Armoured formations based on Sisak and Kragujevac are well placed to operate against an invader advancing through the good tank country of the Sava and Danube valleys.

Recent Operations

The YPA has been involved in no military operations since 1945. In 1971 a large-scale exercise, *Freedom 71*, was carried out: it involved both YPA and TDF. Although the Yugoslavs maintain that the exercise confirmed the practicability of their concept of TND, there have been suggestions, notably in the Austrian military press, that the exercise was not an unqualified success. Exercise *Kosovo 72* tested partisan operations, and exercise *Podgora 72* involved operations on the Adriatic Coast.

ORGANISATION

The concept of TND stresses the totality of national defence and the need for intimate co-operation between the YPA and TDF. There are, however, substantial organisational differences between the two forces.

Firstly the YPA has a full range of combatant arms and supporting services. Its formations come under the command of Military District HQs. Corps staffs would be formed only on mobilisation, but six army staffs, based on Military District HQs, exist in peacetime. The infantry divisions of the YPA comprise three or four infantry regiments, each containing three infantry battalions and a heavy weapons battalion, a tank battalion, an anti-tank battalion, an artillery regiment and

various divisional troops. A tank division contains two tank brigades, a motorised infantry brigade, an artillery regiment and the usual divisional troops. Each tank brigade has three tank battalions, one or two motorised infantry battalions, an engineer company, artillery battery, quartermaster company and medical company. Army troops consist of one light and one heavy artillery regiment, a tank battalion or tank regiment, together with anti-aircraft, signals, engineer, medical and transport battalions.

Secondly the TDF is organised on the basis of existing socio-political communities: Socialist Republics, provinces, communes and factories. There are two major structures of TDF units. The *manoeuvrable* structure is made up of the larger TDF units under the control of republic, zone or province staffs; these units are intended to carry out mobile operations over a wide area. The *spatial* structure includes all other TDF units, which have the task of guarding key points, protecting the population, and so on.

RECRUITMENT, TRAINING AND RESERVES

Recruitment and Training

All Yugoslav citizens have some military liability: males may be called up for service in the YPA or TDF between the ages of sixteen and sixty-five. The YPA draws its recruits from all over Yugoslavia: conscripts serve in it for 15 months. Those conscripted into the navy or air force serve for 18 months. The YPA would be brought up to strength on mobilisation by the inclusion of reservists with recent regular service; others would serve in the TDF.

Schoolchildren receive compulsory military training, and the TDF carries out training on a part-time basis.

Reserves

There are about 500,000 army, navy and air force reservists with recent military service.

EQUIPMENT AND ARMS INDUSTRY

The Yugoslav armed forces use a very wide variety of arms and equipment. Although considerable efforts have been devoted to building up the domestic arms industry, the YPA still continues to employ numerous items of Soviet and American equipment. Units of the TDF are equipped mainly with older small arms and mortars.

Equipment

Small arms: 7.62 mm M57 pistol (copy of Tokarev TT23), 9 mm M65 pistol (based on Tokarev TT33), 7.62 mm M49/57 SMG (copy of PPSH 41), 7.62 mm M56 SMG (based on German MP 40), 7.62 M59/66 automatic rifle (copy of Soviet SKS), 7.62 mm M64 assault rifle (now called M70, copy of Soviet AK-47), 7.62 mm M65A and M65B (heavy barrel versions of M70, copied from Soviet Kalashnikov LMG), 7.62 mm M53 SARAC LMG (copy of German MG 42) and some bolt-action M-48 7.92 mm carbines (based on the German Mauser 98 K) which are still in service with the TDF

Mortars: (the Yugoslavs attach great importance to mortars, due, no doubt, to their usefulness in mountainous terrain); 50 mm M-8 light mortar (similar to British 2 in light mortar), 60 mm M-57 (developed from United States 60 mm M-2), 81 mm M-31 (copy of United States 81 mm M-1), 81 mm M-68 (the Hotchkiss-Brandt MO-81-61L, built under licence in Yugoslavia), 120 mm UBM-52 (the Hotchkiss-Brandt MO-120-AM50, built under licence in Yugoslavia).

The Soviet M-38 and M-43 mortars are also used. M-60 rifle grenade

Anti-tank: M-57 anti-tank grenade launcher (similar to Czech P-27), M-18 57 mm recoilless gun (United States design), M-20 75 mm recoilless gun (United States design, mounted on a Zastava jeep), M-60 82 mm recoilless gun (Yugoslav-designed and developed), M-65 105 mm recoilless gun (replacing a similar United States weapon). The Soviet M-43 57 mm and M-55 100 mm anti-tank guns are also in use

Anti-aircraft: most AA guns are of Soviet design, and include the ZSU-57-2 SP AA gun as well as a variety of towed weapons. The three-barrelled 20 mm M-57 is manufactured in Yugoslavia under licence from Hispano-Suiza. Some World War II German 88 mm FLAK-36 guns are still in use in emplacements on the Adriatic coast

Artillery

Towed guns include: 76 mm M-48 B1 mountain howitzer (Yugoslav-produced; can be towed by vehicle or horses, or broken down for carriage on pack-mules), 105 mm United States M-2 howitzer and its Yugoslav derivative the 105 mm M-56 howitzer, 122 mm Soviet M-38, 130 mm Soviet M-54, 152 mm Soviet M-37 and 155 mm United States M-2. German 105 mm and 149 mm howitzers are also in service

SP gun: 105 mm United States M7B2

Rocket launchers: 128 mm M-66 32-barrelled rocket launcher mounted on trailer and 130 mm M-51 Czech rocket launcher

World Armies

Armour

Tanks: about a total of 1500 Soviet T-34/85s and T-54/-55s and United States M-47 Pattons. About 650 United States M-4 Shermans

Reconnaissance vehicles: Soviet PT-76 light tanks and BTR-40PB scout cars, and United States M-8 armoured cars

Assault guns and tank destroyers: Soviet ASU-57s and SU-100s, and United States 76.2 mm M-18 Hellcat and 90 mm M-36 Jackson tank destroyers

APCs: Soviet BTR-40s, -50Ps, -60Ps and -152s; United States M-3 half-tracks; Yugoslav-produced M-590 tracked APCs (carry 12 men and mount 12.7 mm MGs); Yugoslav-produced M-980 MICVs (mounting 20 mm cannon and two Sagger missiles)

Aircraft

Fighter – ground attack: United States F-84 G Thunderjets (10), Yugoslav-produced Kraguj (15), Yugoslav-produced Galeb/Jastreb (95) and Yugoslav/Romanian Orao MRCAs

Fighter: a total of about 110 MiG-21Fs and United States F-86 Sabres

Reconnaissance: a total of 40 United States Lockheed RT-33As and Galeb/Jastrebs

Transports: a total of about 60 C-47 Dakotas, Il-14 Crates, Il-18 Coots, Li-2 Cabs and An-12 Cubs

Trainers: a total of about 90 Galebs, Lockheed T-33As plus a few MiG-21 UTI trainers

Helicopters: Westland S-55 Whirlwinds (15), Mi-4 Hounds (35) and Mi-8 Hips (25). 130 Gazelle SA-341s are on order.

A small number of Alouette IIIs are probably still in service

Naval vessels: five submarines, one destroyer, three corvettes, 10 Osa-class patrol boats with Styx SSMs, 90 MTBs, patrol craft and minesweepers, and 30 landing craft

Missiles

Anti-tank: Snappers (mounted on Zastava jeeps and BTR-40Ps) and Sagers (mounted on BTR-40Ps)

Anti-aircraft: eight SAM batteries with Soviet SAM-2s

SSM: Yugoslavia has no land-based SSM. The Soviet Styx SSM is used by her Osa patrol boats

Arms Industry

The Yugoslavs are well aware of the importance of building up the domestic arms industry, and a Federal Directorate is responsible for supervising the import and export of arms and, to a great extent, controls the domestic arms industry. Most home-produced items of Yugoslav military equipment are either copies of foreign equipment, or are foreign designs built under licence in Yugoslavia. The FAZ family of weapons (M64 and M65) are copies of Soviet weapons, and the Zastava jeep is a licenced copy of the Fiat AR-51. Lack of originality is, however, no great disadvantage, and the Yugoslav arms industry has made very considerable progress since 1970.

RANK, DRESS AND DISTINCTIONS

Rank

General officers: gold-trimmed epaulette with crossed swords above laurel wreath at base

General armije Four gold stars in inverted Y

General pukovnik Three gold stars

General potpukovnik Two gold stars

General maior One gold star

Field officers: gold-edged epaulette

Pukovnik Three gold stars

Potpukovnik Two gold stars

Maior One gold star

Junior officers: plain epaulette

Kapetan 1 klase Four gold stars

Kapetan Three gold stars

Poručnik Two gold stars

Potporučnik One gold star

NCOs and men: chevrons, worn point uppermost on the epaulette

Zastavnik Broad gold chevron below thin gold chevron

Starji vodnik 1 klase Four thin gold chevrons

Starji vodnik Three thin gold chevrons

Vodnik 1 klase	Two thin gold chevrons
Vodnik	One thin gold chevron
Desetar	Two thin red chevrons
Razvodnik	One thin red chevron

Dress

Parade dress consists of open-necked grey tunic and trousers, black boots and grey webbing gaiters. Officers wear Sam Browne belts and other ranks black leather equipment of the German World War II pattern. Headgear is a grey steel helmet resembling the German 'coal-scuttle' helmet. Walking-out dress is similar, but boots are replaced by shoes; officers wear a grey peaked cap and other ranks a grey sidecap. An open-necked grey blouse with grey trousers, black shoes and headgear as for walking-out dress, is worn in summer. Grey denims are worn as barrack dress, and combat dress consists of grey jacket and trousers with black leather boots and equipment. NBC and tank suits are of the Soviet pattern. Mountain units may be seen wearing grey knee-breeches, long grey socks, black climbing boots and soft grey caps. Brass arm-of-service badges are worn on the collar in most orders of dress.

Distinctions

The Order of the Yugoslav Star and the Order of the Yugoslav Flag were founded by Tito in 1954 and 1947, respectively; both assumed their present form in 1961. Each order has several classes, and may be awarded to soldiers and civilians.

CURRENT DEVELOPMENTS

Impressive though the Yugoslav concept of TND appears, it is not without serious flaws. The system's prime aim is to deter aggression by threatening any potential invader with a long and costly struggle. If this deterrence fails, however, it is unlikely that Yugoslavia could fight unaided against a powerful aggressor for an indefinite period. The partisan tactics which proved successful during World War II might be less satisfactory in the face of an enemy equipped with modern weapons and large numbers of aircraft. It has also been suggested that the TDF's standard of training would seriously restrict its operations. Furthermore, although General Lubčić stresses that armaments production must be maintained in war-time, it is difficult to see how Yugoslav industry could be adequately protected from enemy air and missile attack.

Imperfect though the system of TND undoubtedly is, it is not without merit. Yugoslavia has managed to steer a middle course between East and West, and it continues, despite the strategic importance of its location, to avoid inclusion in either of the two great power blocs. TND is a powerful deterrent and, in the event of invasion, the Yugoslav armed forces would probably deny the aggressor victory until a third power or international organisation could intervene.

RICHARD HOLMES

ZAÏRE*

HISTORY AND INTRODUCTION

Until 1977 Zaïre saw itself as a country with especial qualifications for leadership in Africa: as the Congo, it was neither French nor British, but Belgian. Zaïre further claimed links with west Africa, through its small but important access to the sea at the mouth of the Congo (Zaïre) River, and also links with east Africa as Swahili is a *lingua franca* in much of eastern Zaïre, and Swahili is an east-coast language.

Zaïre's attainment of independence in 1960, at the end of an era of colonial rule distinguished by heavy paternalism and lack of any real preparation for nationhood, was followed by a period of the utmost confusion, violence and strife necessitating the mounting of a large United Nations Expeditionary Force. Stability was really only achieved in Zaïre with the return to power, in 1965, of General Mobutu, the Army Commander in a second coup. Since then Zaïre's political and military prestige has increased, though its economy poses severe and worsening problems.

The Zaïre army has its origins in the *Force Publique* created in 1888 in the sinister period of King Léopold II's personal rule. For the most of the colonial period the *Force Publique* was both defence force (with pacification commitments) and gendarmerie. One of its distinctive features was a deliberate Belgian policy of ethnic mixing and integration: this had certain advantages but also could lead to amoral *déraciné* behaviour as in 1960. In World War I units of the Force served in the Cameroun and German East Africa campaigns, but it was little used in World War II. In 1959 the Force was divided into regular military units and gendarmerie, and at independence became the Congo National Army (ANC). These have now become the FAZ (*Forces Armées Zaïroises*).

At independence the Force had no Congolese officers; more important still the charisma of the authority to which it owed its creation and loyalty had gone, and the ANC's sub-*élite* status appeared insecure. Mutinies and collapse of discipline resulted, with the consequent United Nations intervention. The ANC disintegrated into conflicting groups of almost mindless gunmen, some linked to political factions and supported and armed by revolutionary regimes elsewhere, others solely concerned with plunder. As firstly Chief of Staff and later Army Commander, Mobutu tried initially to create a small nucleus of disciplined soldiers around him and then recreate efficient units — he willingly accepted help both from member units of the United Nations Force, and also a small cadre of Belgian regulars. Finally he reabsorbed the breakaway units who had been following the various Lumumba and Tshombe political factions. He continued to be assisted by the Belgians, and then from 1962 onwards, also by the USA on an increasingly large scale. But the ANC was not strong enough to suppress the Simba rising, for which European mercenaries had to be imported. It was against these mercenaries and after his second coup, that Mobutu's reformed ANC won its first real successes. The mercenaries, who alleged that they had not been paid and refused to depart, had allied themselves with mutinous soldiers from the Shaba (Katanga) area, but the ANC, stiffened by United States money and logistic support, forced them to withdraw via Rwanda.

By the end of the 1960s the ANC had in some measure returned to discipline and training. Young officers trained abroad in Belgium, Britain or France had returned to units, Kitona Base was beginning to appear a credible military training centre and other service schools had opened. But cases of indiscipline by soldiers — sale of weapons, robbery with violence, and extortion, were still frequent and occur occasionally to the present time.

Despite his military road to power, Mobutu's regime is not essentially a military one: the President rarely appears in uniform, and the style of the one-party regime, its quest for 'authenticity', and revolutionary songs and slogans, all indicate a search for a mass popular appeal; the President sees the army as a people's revolutionary army — a crucible of revolutionary militancy and commitment. His regime remains, however, very authoritarian, the President's office being the centre of an exceedingly intricate pattern of relationships which serve to keep the President informed on all events in major State institutions. In 1974 rural development and political education were laid down by the President as two major military training priorities. In 1975 there was some evidence of discontent among some senior army officers at both the overall policy of the regime and the tasks it devolved on to the army. Three former generals, a colonel and a major were arrested, convicted and sentenced to death for conspiracy to overthrow the government in August–September, 1975. Further upheavals took place in 1977 and early 1978. As a result of the army's feeble performance in the March, 1977 Shaba crisis (see below), Mobutu dismissed the Chief of Staff and some 35 senior officers of general and colonel rank; some of these appear to have, out of resentment, been involved in a conspiracy in February, 1978. This plot was discovered and further arrests of officers followed. Reports of a rising in January, 1978 in the Kwilu area — an area which has in the past produced opponents of President Mobutu — are also circulating. These reports vary; most note the commitment of FAZ units in suppressing the unrest.

* For general notes on African armies, see Appendix 1.

STRENGTH AND BUDGET

Population: 27,000,000 (approximately)

Army: 30,000 plus an air force of 3000 and eight National Guard and six Gendarmerie units totalling a further 20,000

GNP (estimate): \$3,500,000,000

Defence expenditure: \$104,000,000

COMMAND AND CONSTITUTIONAL STATUS

President Mobutu Sese-Seko, an executive president, is the nation's Minister for Defence.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Zaire's army has two roles: defence against foreign aggression and internal security.

Even prior to the dramatic events of March, 1977 the army had been committed to internal security work, chiefly in the north-eastern area of the country and in the Lake Tanganyika area.

Small units of the Zaire army were deployed in Angola in support of Holden Roberto's FNLA in 1975-6; their performance appears to have been poor. Relations with Congo-Brazzaville were also strained in this period (despite some rhetoric of reconciliation), and occasional border shootings occurred. With the victory of the MPLA Zaire found herself with a serious military problem; her ambitions in the Cabinda area and her support for the FNLA made her the prime target for the victorious MPLA/Cuban forces, Zaire's geographical configuration — long frontiers together with limited access to the sea rendering her particularly vulnerable. In March, 1977 with the clear connivance of the Angolan MPLA government a force of some 2000 (not the 5000 alleged by Zaire) crossed the border into Zaire's Shaba province, taking the town of Mutshatsha and advancing on the important town of Kolwezi. These insurgents were claimed to be Shaba inhabitants, seeking a liberation firstly of their province and secondly of Zaire as a whole. The claim is doubtful. Cuban detachments were reported. The FAZ, however, withdrew precipitously, seeming to have no desire to stand and fight. The President appealed for help, and a Moroccan force arrived in French aircraft, with some French logistic support. As in Benin, the Moroccans had their own reason, the Polisario, for opposing any Marxist advance. This force of 1500 excellent soldiers quickly disposed of the insurgents. Zaire rhetoric subsequently made great claims for the Zaire units which had been rallied — these included a unit of pygmies equipped with bows and arrows — but the triumph was a Moroccan one.

ORGANISATION

Zaire's army consists of 14 infantry battalions, plus a further seven described as 'guards' and a further seven described as 'parachute' or 'commando'. The training for these latter is far from complete. In addition there is one armoured car regiment, one mechanised infantry battalion and there are also small artillery and other support and logistic units. One tank battalion has recently been formed and another is to be raised.

The command organisation is one of seven (regional) brigade groups and one 'parachute' division. Some of the gendarmerie battalions come under army command.

RECRUITMENT, TRAINING AND RESERVES

Military service is voluntary, and no particular ethnic group now appears to be favoured or disadvantaged, though until 1970 the western half of the territory provided most of the recruits. There is no shortage of volunteers.

Kitona Camp remains Zaire's largest training centre, providing most of the army's basic training, together with training for specialist transport, signals and engineer units, and NCO and officer courses. Parachute training takes place at Ndjili and infantry training at Kotakoli.

Foreign training is used extensively and has been drawn from a number of sources. Some specialist personnel and cadets are trained in France, others in Britain. A small British team trained army engineers at Likasi. Belgium trains a number of military personnel of different ranks and arms. The USA does the same, and also maintains a military training mission. Italian personnel assist with air force training. Several Belgian instructors remain at work in the Zaire army, but their status — whether they are loan personnel or are recruited on contract — is not known. Israeli instructors established the Ndjili parachute training facilities, but these all returned home in the 1960s. The proposed arrival of a North Korean training team was also reported in 1976; but this now seems unlikely. Moroccan training staff, in small numbers, arrived after the events of 1977, and French assistance has also been reported.

Some friction exists between older officers, promoted colonial NCOs and younger men trained in foreign academies.

World Armies

EQUIPMENT AND ARMS INDUSTRY

Zaire had no arms industry.

Zaire's equipment, like its training assistance, is drawn from many sources. Over 100 Panhard AML H-60 and H-90 armoured cars have been purchased from France; there are in addition some American M3 and British Ferret vehicles. One report notes the arrival of two battalions' worth of Chinese Type-62 tanks, and Soviet-designed (though not necessarily Soviet-made) anti-tank missiles. Some artillery weapons have been reported but their calibre and source is also unclear. West Germany has provided some army transport and engineering equipment.

The air force includes: some 20 Aermacchi MB 326 light jet aircraft designed as trainers but useful for air-to-ground strike duties; three C130 Hercules transports (with three more on order); 50 helicopters (20 Alouettes and 30 Pumas); and other light transport and training aircraft. A squadron of Mirage V strike aircraft is being delivered from France; some 15 aircraft in all are expected.

RANK, DRESS AND DISTINCTIONS

These generally follow the Belgian pattern, except that a square or kerchief is worn around the neck in place of a collar and tie.

CURRENT DEVELOPMENTS

It is far from clear whether the worthless performance of the forces of Mobutu's regime have harmed him in the manner that might be expected. Indeed March, 1977 may possibly have afforded him a renewed lease of life. His own personal political skill in snatching victory from disaster seems to have revived his flagging prestige among the populace as a whole, although the humiliation undoubtedly bit into many in senior government echelons. This bitterness was one of the causes of the February, 1978 events. But March, 1977 led to a resumption of United States, French and Belgian financial assistance, reinforced by a contribution from Saudi Arabia. Internally some long-overdue political and military reforms have been initiated. Although Mobutu's previous grand designs for power and African hegemony may have been tarnished to the outside observer, his own domestic position may now be more secure. Certainly, powerful interests both at home and abroad are likely to want to see his continuance in power, a final reason being that no successor seems remotely probable.

The FAZ will, however, need a prolonged period of reorganisation, re-equipment and improved training before it can be rated as an effective field force.

L.L. MATHEWS

ZAMBIA*

HISTORY AND INTRODUCTION

Zambia's army's origins lie in the British colonial Northern Rhodesia Regiment (Northern Rhodesia being the name of the territory as a British Protectorate); the NRR contributed battalions to operations in Italian East Africa and Burma in World War II, and one battalion to counter-insurgency operations in Malaya in the early 1950s. On the formation of the Federation of Rhodesia and Nyasaland in 1953, the NRR formed part of the Federal forces. At the dissolution of the Federation in 1963 the regiment reverted to Northern Rhodesia, forming the nucleus of Zambia's army at independence in 1964. At independence the army found itself committed in operations against the violent Lumpa religious sect; after Rhodesia's declaration of independence the military problems became very much more serious, and are noted later.

STRENGTH AND BUDGET

Population: 5,500,000 (approximately)

Army: 14,000 plus an air force of 1500, a reserve of 1500 and two police paramilitary units totalling 1200

GNP (estimate): \$2,500,000,000

Defence expenditure (1977): \$309,400,000

COMMAND AND CONSTITUTIONAL STATUS

The President of Zambia, Dr K. Kaunda, is the State's Commander-in-Chief; there is no Defence Minister. The Defence Forces Commander is Lieutenant-General P. Zuze. Although in 1972 the country became a one-party (UNIP) State and it was said that senior military officers might be liable to non-military responsibilities, little specific political instruction and linking of military units with the party organisation was reported for some time. More recently, however, army officers in uniform have attended UNIP rallies and conferences, and political instruction is being given in units. Army and air force headquarters are situated in a newly constructed headquarters base at Lusaka.

Zambia considers herself, since May, 1977 to be in a 'state of war' with Rhodesia.

ROLE, COMMITMENT, DEPLOYMENT AND RECENT OPERATIONS

Zambia has a minor frontier dispute with Malawi, but the army's main commitments since independence have been the by-products of the Portuguese and Rhodesian situations. Until 1974 incursions in pursuit of insurgents by Portuguese troops and aircraft, occasionally destroying border villages, took place frequently; one or two minor incursions by Rhodesian forces also occurred in this period. In 1975 the Zambian army intervened for the first time to suppress violent vendetta fighting between rival groups among the large numbers of restless and ill-disciplined Rhodesian insurgents; similar interventions have been reported on several subsequent occasions. The most recent reports suggest that one army preoccupation is the protection of Zambia's own citizens from indisciplined Rhodesian insurgents' camps. The Zambian/Rhodesian border area including the Caprivi Strip area is patrolled by Zambian forces to contain and capture Rhodesian (and South African) counter-revolutionary infiltrators; the extreme sensitivity of Zambia on this perceived danger was evident when members of a tourist party in Rhodesia were shot by Zambian soldiers at Victoria Falls, close to the border. At least one unit of the army is normally based on the Copper Belt for general security work. In early 1977 units of the army and the police mobile unit had to be deployed in Zambia's north-western province in pursuit of an armed insurgent group (alleged to have been helped by South Africa), known as the Mushala Gang, named after its leader Adamson Mushala who harbours strong grievances against President Kaunda. Insurgent camps for the rival Rhodesian (Zimbabwe) guerrilla units have proved an increasingly attractive target for Rhodesian air attacks and 'hot pursuit' operations, one of these in early 1978 killing a number of Zambian soldiers. The Zambian forces have not so far succeeded in destroying, or even preventing, these strikes. Although the Zambian government denies the lending of any support to the Rhodesian insurgents other than residence there is little doubt that some 'unofficial' training in the huge camps is offered, and a blind eye turned towards Cuban, Tanzanian or other foreign assistance.

* For general notes on African armies, see Appendix 1.

World Armies

The MPLA government of Angola, now recognised but not trusted by Lusaka, may present a further frontier commitment.

ORGANISATION

The army's eight infantry battalions are numbered 1st to 8th Battalions of the Zambia Regiment. The reconnaissance squadron is named 'A' Squadron, Zambia Armoured Car Regiment, and there are two light batteries and a surface-to-air missile battery of the Zambia Artillery; the engineer squadron of the Zambia Corps of Engineers and the Signal Squadron of the Zambia Corps of Signals are both numbered '1st'; there are also the 1st Supply and Transport Company of the Zambia Service Corps, the 1st Ordnance Supply Company and two workshops.

An ambitious plan for a very large increase in the army's size to 12 battalions or more, drawn up in the late 1960s, had to be discarded for economic reasons.

RECRUITMENT, TRAINING AND RESERVES

Recruitment of soldiers is by voluntary enlistment; no particular ethnic group appears to predominate, although there appears to be some feeling that the Bemba are under-represented.

Zambia found itself very poorly prepared for an independent military existence as a consequence of its inclusion in the Rhodesian-dominated Federation of Rhodesia and Nyasaland until 1963. Cadets were first sent for training to Britain only in the year of independence (1964). This obliged Zambia to rely heavily on white officers of the former Federal forces (usually those of Zambian residence) and British loan service personnel. Neither proved satisfactory — the former Federal officers often had Rhodesian sympathies, several having to be replaced. The arrangements with Britain proved unpopular politically; from the military point of view the British government forbade their use in combat, making them much less valuable to Zambia. Pressures for rapid Africanisation built up; the British training team was withdrawn in 1968–9 and in 1970 the Army Commander (a former Federal officer) and almost all the remaining contract white officers were dismissed. Officer cadets were sent to Britain until the early 1970s; officers are still sent to Britain for staff training. Cadets have been sent to India, Canada and Eire. Some Indian and Tanzanian officers have assisted the army's training in Zambia; a recent report suggests the arrival of a large Cuban mission.

EQUIPMENT AND ARMS INDUSTRY

Zambia has no arms industry. Most of the equipment is British: normal infantry weapons; eight Ferret scout cars; eight 105 mm M56 pack howitzers; four Rapier SAMs; and 24 20 mm anti-aircraft guns. The air force is equipped with six Soko Galeb and Jastreb aircraft, and 16 MB-326 aircraft; there are 33 transport aircraft and nine helicopters.

RANK, DRESS AND DISTINCTIONS

Ranks follow the British system; dress is similar to that of the former Kings African Rifles, dark green being the distinguishing colour.

CURRENT DEVELOPMENTS

Zambia's problems are those of national cohesion, worsened by those of the economy and the Rhodesian situation. These are reflected in its military policy. Heavy conflict on her borders will pose ever-increasing difficulties of external and internal security, but the money for these commitments will be even more difficult to find. It is indeed rumoured that a reduction in defence expenditure will be one of the conditions required for an IMF loan at present under negotiation. A temptation to seek assistance from elsewhere may arise.

ANON.

APPENDIX 1

AFRICA: ARMIES OF NATIONS FORMERLY BRITISH OR FRENCH COLONIES — AN HISTORICAL NOTE

The information at present available on these armies is limited; the difficulties of obtaining up-to-date information are particularly severe and enquiries unwelcome, particularly when these originate from a former colonial power. It is hoped that the publication of this work, however, may arouse sufficient interest to promote a more free exchange of information in the future.

Almost all African nations have armies: even Lesotho and Gambia, which at independence decided not to have an army, maintain a small barrack police gendarmerie, and Botswana, Seychelles and Swaziland have all recently decided to raise a small army. The need for an army was generally perceived at independence to be part of the assumption of nationhood, essential both for self-respect and international status. African armies are, in consequence, a projection of the new nation as an institution; in some cases they share the State's divisions or essential unreality. While in a number of new nations the valour of fighting men in pre-colonial politics may be recalled with pride by the military, in no nation are the armies based on any traditional groupings, ethnic, social or regional. Further, some of the border 'disputes' to which new armies may find themselves posted are also a projection of nation-building. Sometimes deliberately, sometimes not so, these disputes disseminate a concept of nationhood.

Whether many of the armed forces of black Africa can fully and properly be termed 'armies' is an open question. Few of black Africa's armies have the logistic back-up to mount a campaign in a neighbouring territory — many would even find defence of their own borders beyond them. Some teeth-arm units can participate in a multi-nation or United Nations force if the logistic arrangements are provided for from other sources. Post-independence Africa's relative peace (among black nations) has however been one of military incapacity; but the sanctity of colonially drawn frontiers is being undermined, each year, by the increasing number of border disputes. A few States, e.g. Uganda and Nigeria, have the equipment to mount a very brief attack, but all the problems of reserves, supplies, repair facilities and ammunition preclude any long campaign — unless backed by an outside power. For most African nations then, armies have three roles: prestige and ceremonial; internal security; and in varying dimensions a very important and valuable part in the process of modernisation and nation-building. In the internal security commitment the army may not be the only force; Kenya, for example, maintains a strong barrack police gendarmerie and Tanzania a workers' militia; a counter-balancing role is clearly envisaged for both these forces. Most Francophone African States have a pattern of army, gendarmerie and republican guards to eye each other. The prestige and ceremonial role is important in the dissemination of the concept of 'nation' to the general population; the modernisation role may be limited, in more conservative armies, to simple education for pre-literate soldiers and their families, or may in other armies extend to rural development work or political propaganda duties. Many armies have impressive-appearing ranges of weapons in their armouries, but it must be remembered that for some of these ammunition may be exceedingly difficult to obtain — in some cases the weapon representing an alliance with a particular great power now out of favour, in other cases through the age and obsolescence of the weapon. Many artillery weapons, proudly paraded on various independence days, could only fire a handful of rounds, in some cases none at all.

France and Britain left their African possessions with a military model — in Britain's case reinforced by successful earlier developments of the model in the old and Asian Commonwealth countries; only Tanzania and Guinea have specifically and totally rejected the model as entirely unsuitable and potentially dangerous socially. The British model gained added prestige from being 'non-political' and based on a volunteer force; both models transferred concepts of efficiency, honesty, frugality, hierarchy and order, and a perceived repository of true disinterested patriotism; the two latter concepts often produced officers whose nationalism was conservative and non-radical. The British model was further transferred smoothly and easily by virtue of the British organisation of colonial African battalions by territory; handover was therefore a devolutionary change involving Africanisation of the officer corps, conversion of lightly armed battalions into a conventional but unsophisticated field army and provision of logistic and support units, including artillery and armoured cars. These armies in turn are now frequently having to enter the more sophisticated world of tanks, missiles, radar and air-to-ground strike aircraft.

From the early colonial period, France saw her African territories as a source of reserve military manpower; the *Troupes Coloniales* formally created in 1900 was to be a reserve army loyal only to France and formed therefore of units with no particular territorial affiliations. A large military establishment with centralised training and promotion arrangements, was thereby created — in the inter-war period, for example, there were over 40 battalions with even greater numbers in war-time. Conscription measures of varying severity were applied both in war-time and in peace. African units saw service on various fronts in World War I, in the post-1918 garrisoning of Germany, again on various fronts in World War II and in both the long Indo-China operation and the short Suez operation after 1945.

World Armies

This structure lasted until the very end of the 1950s, and even with the 1960 grant of independence to all the French African colonies and Malagasy (with the exception of Guinea, which had opted for independence in 1958, and the Afar and Issa Coast), French thinking altered surprisingly little for several years. Arrangements were made for the handing over of certain units and their officers to new nations, the splitting-up of logistic services and training facilities, and French military aid. These arrangements formed part of the 'treaties of co-operation', to which enormous importance was attached by France; indeed, independence without such a treaty was seen as secession. The treaties were a package; it was not possible for a territory to opt out of the military commitments while retaining general aid; further, the treaties provided for staging rights and, in some territories, bases for French troops, and also asserted a monopoly position in respect of military co-operation. France's perceptions of these arrangements was that their own world military position, and the new nations' frontiers, would be secured by French units, referred to as (French) 'community troops'; the new nations' own armies were to be useful internal security adjuncts. The whole process was made possible by the personal charisma of de Gaulle, and except in the case of Mali and to some extent the Congo, the arrangements lasted during his presidency. Since that time in almost all Francophone territories popular demands for the revision of the 'treaties of co-operation' have led to a number of changes.

No British parallels to the complex French treaties were arranged, and Britain maintains no garrison in sub-Saharan Africa. In colonial days the military establishment in Africa was very small; it was also very often a source of income to certain areas of some colonies and only rarely resented. Britain has made less formal arrangements which have included the provision of British army (and other services') training teams and missions, single instructors for special subjects, and the large-scale provision of places in a very wide variety of British Armed Forces' training schools and establishments. The training so provided does, of course, tend to reinforce the organisational legacy, the British organisational mould of military units: their approximate size; regimental organisation and the different responsibilities of officers and non-commissioned officers; regulations and disciplinary procedures; training methods; roles of the various arms of a service (e.g. the difference between army engineers, electrical and mechanical engineers, signals and pioneers — all of which are separate corps in the British army and have generally been reproduced as small separate corps in new African nations); and perhaps most important of all, command and staff procedures. A number of countries have judged that officers trained outside the British system have found it difficult to adjust on their return; this difficulty led several African countries to seek Canadian, Indian or Pakistani help, since these nations followed the overall British pattern. The service of the various colonial battalions — as units from their individual territories — in World Wars I and II gave each new army a sense of continuity and proud tradition; in the case of the Ghanaian and Nigerian units, strengthened by service in the UN Congo Force.

There were political difficulties, particularly in east Africa, and also legal problems in each territory, but transition began in west Africa in 1951. A few general, if unrelated, features of the transition merit mention. It is possible to note three types of officer — the very few (Gold Coast only) commissioned in World War II, promoted warrant officers and sergeants, and young school leavers trained (usually) at the Royal Military Academy, Sandhurst. Sandhurst's courses have never been very testing academically and the colonial school systems were, after a slow start, able to produce men well able to deal with them. Particular problems arose with technical and administrative units which had sometimes been centralised by region, e.g. east Africa, where each service had to be split and then rebuilt; on the other hand regional groupings enabled certain services, e.g. initial officer training and some technical training, to be undertaken regionally. In these difficult and complex situations many political and military leaders inevitably turned to the British, who at least knew the background and had some realistic idea of what was possible; after independence it was normally only Britain who posted a Defence Adviser (Attaché) to its mission in the newly independent capital. These officers were often very influential in the early years.

West Africa was particularly fortunate in the foresight of the British West African Command General, Sir L. Whistler, appointed in 1951. He urged an immediate increase in African NCOs and a programme of Africanisation of officers to produce captains in 5–10 years, and majors in 10–15 years. Places were reserved at Sandhurst — which at first could not all be filled — and preliminary training courses for potential officers began at Teshie, near Accra, for both Nigeria (to 1960) and the Gold Coast. The first Nigerians arrived at Sandhurst and at other British officer cadet schools in 1952, the first Gold Coast cadets a few months later. Because of settler prejudices in Kenya and the Mau Mau campaign, east Africa was much slower, the first warrant officers being given commissioned status under the title of *effendi* in 1957 after a course run for all three territories in Kenya. Northern Rhodesia and Nyasaland were dominated by Southern Rhodesian prejudices, and their first officers were not commissioned until 1964, immediately prior to independence as Zambia and Malawi. Southern Rhodesia's first African officers were only commissioned in 1977.

The colonial units had always had a small role as a vehicle of modernisation; this tradition, and the exhortations of new political leaders to soldiers to see themselves as agents of nation-building, reinforced a British-transmitted attitude of armies being custodians of true patriotism at a soldier's level. The British vocational view of an officer's calling has led some commentators to observe that military officers formed a very important part of an alleged post-colonial elitist structure in Africa. Certainly the first generally very conservative generation of African officers were often less nationalist (when nationalism was meant to equate with radicalism) than their political leaders; many saw their professional links with Britain as strengthening their own position *vis-à-vis* political leaders who had hoped their armies would turn into armed political support groups. These political leaders then began to pressure their armies, either by starvation of funds, the creation of rival units, or a total theoretical reappraisal of the role of the army — all policies which led to tension. Sometimes difficulties

would be created by unauthorised actions of individual ministers — notably in Kenya, where one minister made his own unauthorised training arrangements. Elsewhere bribery played an unattractive role in the arrangement of military assistance to replace the departing colonial power. One or two minor oddities in the British system (inconsequential in Britain) occasionally became serious on transplantation to Africa, e.g. excesses of regimental loyalty, suspicions of short-service or promoted NCO officers towards Sandhurst officers, friction between young inexperienced Sandhurst subalterns and older experienced sergeants, and the traditional British military slowness to adjust to changing political situations. It is perhaps only barely necessary to add that in the period of handover, no British colonial officials, in London or in any territory, foresaw military intervention in politics; the training of African officers was seen of no more political importance than weights and measures inspectors.

Both the French and the British systems had admirers — because they had clearly been successful. Africa is now being offered a new, immediately successful and dazzling model, the Soviet–Cuban pattern. There can be no doubt that this new pattern will also gain admirers; in Africa success is infectious.

In conclusion the reader should perhaps first be cautioned in respect of the great weight of theoretical material, some briefly mentioned above, that is now appearing on the various themes of army–State relationships in Africa, the causes of coups, personal, military and political ambitions, military professionalism, ‘corporatism’, ‘praetorian’ armies, armies as ‘sections of the *élite* armed with guns’, etc. The sum total of the factors that lead armies to behave in a particular way are generally different in their composition in each particular State: no generalisations apply to all African armies and only very few to a majority. A glance at the entries for, for example, Congo or Uganda will indicate the difficulties of proposing paradigms.

Finally it is hoped that no reader will underestimate the qualities of African soldiers when properly trained and led. The current poor performances of many African armies are products of the transitional nature of their States and societies, training and logistic shortcomings, and poor command. An historical note cannot do better than conclude with General Smuts’s assessment, in the World War I German East African Campaign, that of all the British, South African, Indian and colonial troops under his command, the best were those from west Africa.

L.L. MATHEWS

APPENDIX 2

The Armies of India, Pakistan, Burma, Sri Lanka and Bangladesh

These armies all descend, directly or indirectly, from that of the British Indian Empire, which was garrisoned by units of the British army and by a single Indian Army.

Until 1937, military force in Burma was provided by a regiment of the Indian Army, the 20th Burma Rifles, and by battalions of Burma Military Police officered from India. Subsequently the Burma Rifles and the Military Police came under the control of the Government of Burma. Until 1947 the Indian and Pakistan armies were one — the Indian Army. It was then partitioned, each new State receiving a number of regiments of infantry and cavalry proportionate to its population. So strong were regimental loyalties in the Indian Army, however, that its separated officers made no attempt to remodel the manpower each army received. India and Pakistan continue to preserve the titles and numbering of the old regiments to this day, so that the army of one is half the jigsaw to which the other can supply the missing pieces. The army of Bangladesh was a creation of the State of Pakistan since East Pakistan (Bangladesh) was not a recruiting area before independence, and provided no local regiments. Pakistan raised on the old British-India pattern two regiments, the East Bengal Regiment (of several battalions) and the East Bengal Rifles (a paramilitary force akin to India's Assam Rifles). These formed the basis of the Bangladesh army after independence was secured in 1971. The Sri Lanka army is not directly descended from the British-Indian, but Ceylon was garrisoned from British India and its volunteer forces (until 1947 all that existed) were modelled on the lines of the Auxiliary Force of India (*q. v.*). It was from these volunteer forces that the Sri Lanka army grew. Finally, the Nepalese army, though always a sovereign force, has, through the service of so many Nepalese in the Gorkha regiments of the Indian army, been much influenced by it, and may be said to belong within its military tradition.

A.N. OTHER

ADDENDA

ANGOLA

The Angola government ended 1978 in a somewhat stronger position than at the start of the year. Relations with Zaïre were patched, Zaïre needing peace as much as Angola. Zaïre now recognises the MPLA regime and has undertaken to cease supporting FNLA or UNITA; in return Angola may well ensure future attacks on Shaba are not launched from Angolan soil. The UNITA movement lost some momentum in 1978. In the summer forces supporting the Luanda government launched a series of sweeps against UNITA groups, reducing the area under UNITA control and enabling the Benguela railway line to be reopened, briefly, in November. The forces used were organised into APC-carried company-size task forces, supported by helicopters. Their composition was said to be part FAPLA and part Cuban, with East German helicopter pilots and overall Russian command and co-ordination. UNITA remains, however, undefeated. It continues to receive South African logistical support, also possibly some Moroccan assistance chiefly in signals communications. Most recent reports suggest that the Benguela line is again closed as a result of UNITA activity. Angola's other insurgency movement, FLEC, still operates with, it is alleged, some French support in the Cabinda enclave. To contain it a Cuban garrison has been deployed. Sporadic Bakongo resistance also continues in the north.

The main theatre of Angolan military activity is now in the south, where occasional Angolan-supported SWAPO strikes into Namibia attract small-scale South African incursions. It would appear that the Soviets see the East Germans as a more reliable assistant in this important area. Some reports claim that the East German *élite* 5th Airborne Regiment has arrived in Angola; this seems unlikely, but it is not improbable that advance or reconnaissance parties are at work. Certainly East German officers and NCOs have arrived to form command and training cadres and provide specialists such as helicopter pilots. A South African report names four Soviet generals as commanders in Angola: General Tchakanovitch as the overall commander, and Generals Karpov, Schredin, Tchurupov and Gubin responsible for the Luanda, Lubango, Bie and Kunene areas, respectively.

The November independence-day parade saw a large turn-out by the Workers' Militia, whose organisation has evidently advanced. During the ceremonies President Neto said he could envisage circumstances in which FAPLA units might serve in Namibia.

Latest information suggests that army total strength of some 30,000 is now planned. The FAPLA is reported to possess 160 tanks and 200 BRDM-2 vehicles, and the air force 15 MiG-17 and 12 MiG-21 aircraft, together with seven Mi-8 and 24 Alouette helicopters.

L. L. M.

BENIN

Despite ideological differences, a limited amount of military technical co-operation with France appears to be continuing.

Late in 1978 the Benin government decided to create a small, specially trained, air-transportable military unit. No further details are available at present.

On December 1st, 1978 the first thirty-three products of the new part-ideological and part-military training scheme for young officers passed out of the *École des Cadres du Camp* at Ouidah. The Chief of Staff of the *Forces Armées Populaires* (FAP), General B. Ohouens, represented the Defence and Internal Security Minister M.D. Azonhiho at the ceremony.

L. L. M.

BOTSWANA

In 1978 an order was placed for three Britten-Norman Defender light army co-operation aircraft. Two Skyvan STOL transport aircraft are to be added to the BDF in the spring of 1979.

L. L. M.

World Armies

BURUNDI

Continuing French military assistance, on a limited scale, is reported. One report notes a mission of approximately thirty.

L. L. M.

CAMEROUN

A recent press report claims that China is providing Cameroun with a limited amount of military assistance. This may, however, be confined to two fast patrol boats.

The air force is to possess two Lockheed C130 Hercules and two Hawker-Siddeley HS 748 transports.

The French mission is reported to be approximately thirty strong.

L. L. M.

CAPE VERDE ISLANDS

Recent press reports claim that enquiries in respect of assistance in the formation and training of the small military force proposed have been made in both Lisbon and Paris.

L. L. M.

CENTRAL AFRICAN EMPIRE

Continuing limited French military assistance is reported, as also is a new French project — the building of an air base in the north of the Empire. The base is to serve several purposes — strategic needs, the protection of French access to mineral resources and possibly missile trials.

A military training centre, CSMI (*Centre Supérieur Militaire d'Instruction et de Formation des Cadres des Forces Armées Impériales*) is to open at Bouar; the premises to be used were formerly an officer cadet school.

In January, 1979 Zairois troops were reported to be serving temporarily in the Empire; their help was needed for the containment of student unrest, and the Empire's army was not considered sufficiently loyal for the task. Units were in fact confined to their barracks, except for those deemed especially loyal which are deployed at the 'Imperial Village' of Berengo, 70 miles from the capital. These units, and the army command generally, draw largely on the Mbaka people. The Emperor is himself a Mbaka.

L. L. M.

CHAD

The ceasefire negotiated in March, 1978 lasted for only a very brief period of time; FROLINAT forces quickly resumed their attacks. However, their breach of the cease-fire line led to the despatch of some 1500 French soldiers for the support of President Malloum's government. In co-operation with the Chad army, several bloody reverses (notably one major engagement near Ati, in which the Chad army surrounded FROLINAT detachments while French aircraft delivered successive lethal strikes) were inflicted on the insurgents, and their advance on the capital, N'Djamena, stopped. Over half the country was at this point in insurgent hands, however, and French casualties were causing criticism of French involvement in France.

Events in Chad then developed in a manner both dramatic and complex. In August a new agreement was signed between Hissein Habré, leader of one of the factions composing FROLINAT, and the Chad government. By it, General Malloum remained Head of State, while Habré became Prime Minister. Two new government bodies were established, a Committee of National Union, and a Committee of Defence and Security; followers of Habré and of the former government appear on each in approximately equal numbers. A return to civilian rule and elections is promised. The rationale appears to be a feeling among some, but not all, of Malloum's government that concessions were essential; and a feeling among some, but not all, of FROLINAT that they were being manipulated by foreign powers and concession should be matched by concession.

Under the agreement, Habré's FROLINAT groups are to be integrated into the Chad forces. It is far from clear how many FROLINAT groups have responded to this call; Habré himself has certain links with the Toubou who provide most

of FROLINAT, but it is evident that not all the insurgent groups have responded to his call. One reason for this was the continued presence of the French, on which Malloum insisted but the more radical groups opposed. But some reports suggest that those areas held by hard-line insurgents have seen fighting within them, occasioned by factions who would prefer concessions and peace.

French forces, under General Forest, support the new arrangements. The most effective forms of this support are a squadron of Jaguar aircraft, some 2000 military personnel, and a surveillance system. Forest's predecessor, Bredèche, however, was not in favour of the settlement and was replaced. In addition, Chad has purchased a small number of a new light APC designed for counter-insurgency purposes by Saviem-Creusot and designated VAB (*Véhicule de l'Avant Blindé*).

Libyan reaction seems to have been tempered by internal Libyan difficulties, the divisions among FROLINAT, and support for the new settlement from other Arab and African countries, in particular Sudan. Some withdrawal of Libyan forces northwards has been noted, but support for those FROLINAT factions wishing to continue fighting has been maintained. As a result, sporadic fighting continues.

New appointments include General Adoum Guemouro as Armed Forces Commander, and Colonel Kamougué Wadal Abdelkader as Gendarmerie Commander. The latter also presides over the Committee of Defence and Security. The new Land Forces Commander is Colonel Batinda Rodai, and the Air Force Commander is Colonel Zakaria Wawa Dahab.

The situation remains very confused. Habré enjoys some support among educated southerners, including army officers, who see Malloum as a French puppet. Malloum, on the other hand, is under pressure from many southerners opposed to concessions. Relations between Malloum and Habré have broken down. The government, such as it is, does however gain from further dissensions amongst the insurgents, some of whom welcome Libyan help while others resist it. Future trends are far from clear.

L. L. M.

CONGO (Brazzaville)

The CMP announced the discovery of a major attempt to overthrow the government in August; the three leading figures named as conspirators were respectively a Frenchman, a Ghanaian and an individual said to hold three nationalities — Ghanaian, Togolese and Zairois.

Despite exchange visits of ministers to and with countries such as Vietnam, Angola and China, Congo has returned to the list of African countries receiving a limited amount of French military aid; a mission of ten is said to be at work in Brazzaville.

One recent report claims that a squadron of the tank unit has been equipped with Chinese T-59 medium tanks. This report is not confirmed.

At the time of independence, the French had apparently left a small plant capable of manufacturing light weapons. Whether this plant is in use at present is not known.

News of the resignation of Brigadier Yhombi Opango arrived as these notes were being compiled. The cause appears to be an acute economic crisis, so severe as to amount to the virtual collapse of the State infrastructure in several regions.

L. L. M.

DJIBOUTI

Recent reports suggest that the size of the French garrison has been increased to 5000 men, a squadron of interceptor fighters, two helicopter squadrons, and transport and maritime reconnaissance flights.

L. L. M.

EQUATORIAL GUINEA

The report of 100 Cuban advisers appears to have been an exaggeration; the actual number is likely to be very much smaller.

Another recent report claims that a small Chinese training staff has arrived.

Some evidence also suggests Soviet naval use of Equatorial Guinea with semi-permanent installations; these may include radar observation and warning systems.

L. L. M.

World Armies

FRANCE

During 1978, the following were among French units which served outside the *métropole*: 2 REP, Kolwezi, Zaïre, May 19th–June 6th; 3 RPIMa, Lebanon, March–September; RICM (*Régiment d'Infanterie de Chars de Marine*) (part only), Lebanon, March–September; 8 RPIMa, Lebanon, from October; 1 Hussars Parachutistes (part only), Lebanon, from October. (The last two formed a composite unit under the UN called *Regfrance*.)

The following units were permanently stationed outside the *métropole*: 33 RIMa (Antilles); 9 Bataillon d'Infanterie de Marine (Antilles); 2 RPIMa (Réunion); RIMa du Pacifique (New Caledonia); BIMA de Tahiti (Tahiti); 6 BIMA (Gabon); 10 BIMA (Senegal); 43 BIMA (Ivory Coast); 5 Régiment Inter-Armes d'Outre-Mer (Djibouti); 6 Régiment d'Artillerie de Marine (Djibouti). The 13 DBLE is stationed at Djibouti, the 5 Régiment Mixte du Pacifique (also Foreign Legion) at Tahiti and the 3 Régiment Etranger d'Infanterie in Guyane (French Guiana).

J. K.

GABON

A recent report suggests that France plans to reinforce its forces in Gabon by the opening of a new base at Franceville.

The command of the army recently passed from General Boulingui (who is to become mayor of Tchibanga) to General Ba Oumar Mathieu.

Gabon's paracommando force, now expanded, formed part of the Pan-African Peace Force despatched to the Shaba Province of Zaïre. The unit served there from June to October, 1978; it was claimed to have been of battalion size but two hundred seems a more accurate estimate of the number of men.

The gendarmerie school is located at Owendo.

A small number, probably a dozen, French SS 12 light missiles are reported to have been delivered to Gabon for use on a patrol boat.

China has agreed to provide Gabon with a military hospital.

L. L. M.

THE GAMBIA

Under exchange facility arrangements with Britain, small detachments of the Gambia barrack police train in the UK.

L. L. M.

GHANA

As a result of a *putsch* early in July, 1978 General Acheampong was removed from office and placed in detention. The new Head of State and Chairman of the Supreme Military Council is Lieutenant-General Frederick Akuffo.

The reasons for the change were widespread discontent (fairly general but in particular among the professional classes) over the failure of the Acheampong government to halt the worsening of the country's economic situation, corruption, arrests and the restriction of criticism, and the unpopular 'union government' proposals. The Acheampong government may be seen as a military regime attempting somewhat timidly, and totally without success, a radical economic restructuring of Ghana. Its successor appears more likely to return to the cautious 'corrective' approach of the NLC of 1966, with the aim of a return to civilian rule (though with perhaps certain limitations).

Changes in the major commands followed the change in Head of State. The new Chief of Defence Staff is Major-General J. Hamidu. The new Army Commander is Major-General N. Odartey-Wellington and the new Border Guard Commander is Major-General K. Osei Boateng. The Air Force Commander remains Major-General G.Y. Boakye.

In late 1978 sub-unit exchange training arrangements with Britain were resumed; these will concentrate on infantry training. The USA is also offering certain very limited military assistance.

A Ghana army officer, Major-General E. Erskine, commands the UN Force in the Lebanon.

Twelve Macchi MB 326 K aircraft, rather than six, have been ordered; delivery will be completed in 1979.

L. L. M.

GUINEA (Conakry)

A surprise development occurred in late 1977 and early 1978 when President Touré firstly directed that the Soviet maritime reconnaissance aircraft base near Conakry should be closed, and then ordered a similar closure of naval facilities, and finally forbade the use of Conakry as a staging post for flights carrying Cuban forces to Africa. Disillusionment over trading arrangements with the USSR was the major cause of this realignment of Guinean policies; at the same time relations with France dramatically improved. Chinese military assistance, on a small scale, is being received at present but future trends are more likely to see a return to France.

A parachute company is in the process of formation.

L. L. M.

GUINEA-BISSAU

Recent reports suggest that, although very small numbers of personnel are still sent to Cuba for training, future Guinea-Bissau alignments are more likely to be with non-communist countries, probably France or even possibly with Portugal.

Guinea-Bissau security forces rounded up a group of 'counter-revolutionaries' in November, 1978. This group was stated to have crossed into Guinea-Bissau from Senegal, and to have been composed of mercenaries and former Portuguese colonial soldiers. There was no suggestion of any official Senegalese support and this would seem highly unlikely.

L. L. M.

IRAN

Note: shortly before this entry could be revised and updated before sending it to the printers, in early March, 1979 Iran underwent a revolution which caused the virtual disintegration of the armed forces, and at the time of writing this addendum it was not clear when or on what basis they would be reconstituted.

The rapid collapse of the imposing façade of monarchy and military authority in Iran during 1978 was initiated by popular resentment against the character and policies of the regime, and accelerated by the vacillation and blunders of the regime. It took almost exactly a year of agitation and rioting before the disaffection penetrated to the core of the carefully isolated armed forces, but they then dissolved entirely within a matter of days.

The resentment against the Shah's rule was due in part to its autocratic ways and its brutal secret police, in part to a perception amongst ordinary Iranians that he was subservient to the West — an impression reinforced by the presence of over 100,000 foreigners, many in senior positions, who had been brought in to help the Shah's urgent drive to create an industrialised Iran before the oil ran out. But the greatest factor was undoubtedly the industrialisation drive itself. The expectations of instant wealth which it aroused, and then betrayed, amongst the millions of poor Iranians who were drawn into the slums of the cities, and the massive corruption at all levels which was encouraged by the government's practice of solving problems and overcoming bottlenecks by throwing money at them, conspired to create amongst millions of lower-middle-class and poor Iranians in the cities a conviction that the whole policy was a betrayal of Iranian culture. The simple remedy, for a great many aggrieved losers in the race to become rich, was a return to the values of Islam and a rejection of the Western ways and Western 'domination' which the Shah had come to represent.

This suppressed dissent and hostility to the regime began to mount rapidly after the sharp slow-down in the growth of the economy in 1976 created widespread unemployment and hardship amongst poorer urban Iranians. During 1977 intellectuals began to criticise the conduct of the government openly, and the prime minister who had served for 12 years was dismissed as a gesture of appeasement. However, no steps were taken to curb the enormous military expenditures, amounting to about 15% of the GNP, which must bear a large share of the responsibility for the post-1976 economic difficulties.

The unrest found a channel for political expression at the beginning of 1978, when a government-inspired newspaper attack on the exiled Shi'ite religious leader Ayatollah Ruhollah Khomeini was answered by riots causing many deaths in the religious centre of Qom. The Muslim custom of mourning the dead after 40 days provided the mechanism for an unending cycle of bloody riots, each commemorating the dead of the riot 40 days before and furnishing the martyrs who would be mourned in the riot 40 days hence. Army riot-control tactics were disastrously bad, infallibly providing a new list of martyred rioters after every clash. As the cycle of violence grew in intensity during the spring and summer of 1978, the urban poor, encouraged by the influential class of mullahs, fixed their aim ever more firmly on a restoration of Islamic fundamentalism as the solution to the economic deprivation and cultural alienation many had experienced in the cities, in a kind of nostalgia for an Islamic golden age that never was. Increasingly the exiled Ayatollah Khomeini became the symbol of their aspirations. By August, 1978 the mobs were openly calling for the overthrow of the Shah.

World Armies

The regime's response to this was a clumsy and consistently mis-timed alternation between concessions and savage repression. During the summer the Shah promised free elections for July, 1979, but when agitation continued he introduced martial law in September, and hundreds were killed by Army troops in the ensuing riots in Tehran. In October he tried a new civilian government, but following immense riots in November which devastated much of central Tehran he replaced it by a military government led by General Gholam-Reza Azhari. That also failed to establish its authority successfully, and in December, in desperation, the Shah appointed a leading member of the opposition political front, Dr Shahpour Bakhtiar, as Prime Minister. The opposition instantly disowned Bakhtiar, however, its unanimous demand being that the Shah must go. By the end of 1978 over 2000 Iranian civilians had been killed in rioting, and several disturbing instances of soldiers turning their guns on their officers or themselves rather than fire at civilians had given rise to serious doubts about the reliability of at least the conscript majority in the army if the pressure continued much longer. On January 16th, 1979 the Shah gave way to the argument of his new prime minister, evidently supported by at least some generals, that it would be impossible to re-establish the government's authority (and perhaps save at least the institution of the throne) if the Shah did not go abroad on 'holiday', i.e. go into exile.

The readiness of the army to see the Shah depart reflected the fact that the Shah's relationship with his army had been essentially a symbiotic one, in which he repaid their unwavering loyalty by lavish rewards both in military hardware and in personal prestige and money. But except for the very highest ranking generals, who tended to be entirely the Shah's creatures, the officer corps' loyalty was effectively dependent on the Shah's ability to fulfil his side of the tacit bargain. By the beginning of 1979 the Shah's continued presence in Iran was clearly a danger to the army's continued enjoyment of its premier place in the State and even to its very cohesion, for the signs were mounting that discipline was beginning to crack in the lower ranks under the unceasing pressure in the streets.

The army had always taken great care to insulate its mass of conscripts from infection with civilian discontents. Recruits invariably were mustered hundreds of miles from their home area, and did their military service far from their family and friends. Whenever possible, Turkish- and Kurdish-speaking soldiers were stationed in Persian-speaking areas and vice versa. This ethnic strategy was useless in 1978-9, however, when the revolutionary infection was not conventionally ideological or national, but rather an Islamic movement which potentially appealed to all these ethnic groups.

The danger of the army splitting along the officer-enlisted man line of cleavage was manifest by early 1979. The Iranian army was one of the most class-bound in the world, with officers enjoying extraordinarily high pay and privileges (even junior lieutenants invariably had servants) and drawn almost entirely from the middle and upper classes, while the mass of illiterate or semi-literate conscripts were paid only about \$2 a month. Commissioning from the ranks was extremely rare, and social contact or a sense of common identity between officers and men virtually non-existent.

Yet the army's officer corps, while recognising the grave danger of disintegration which faced the army by January, 1979 and acquiescing in, or even silently welcoming, the physical departure of the Shah as being likely to reduce the pressure on the tottering structure of discipline, could not bring itself entirely to abandon the Shah. Numbers of senior generals were so deeply implicated in ordering acts of brutal violence against rioters over the preceding year that they (rightly) feared for their lives under a different regime, and many others with equal accuracy suspected that both their rank and their considerable wealth, owing directly to the Shah's favour, would be forfeit if the Shah were actually replaced by another authority. The most senior generals, therefore, opted for a hopeless attempt to perpetuate a 'monarchy without the Shah' — and the Shah had so effectively organised the army's structure to prevent coups that the majority of middle- and senior-ranking officers who would have favoured a deal with the opposition that preserved some of the army's privileges were unable to make their opinions prevail in the limited time available.

Ayatollah Khomeini returned from exile at the beginning of February, 1979, 2 weeks after the departure of the Shah. It was never part of his intention to destroy the armed forces along with the monarchy (although it was clear that most senior generals would have to go). He at once sought to enter into negotiations with the officer corps in order to secure their withdrawal of support from the government the Shah had left behind, and a smooth transfer of authority to himself and his political supporters. The army leadership was unable to provide him with a prompt collective response, however, and time was rapidly running out, with the departure of the Shah and the return of the Ayatollah discipline in the enlisted and even the NCO ranks had been fatally undermined. Meanwhile the two urban guerrilla movements that had been in business on a small scale since the early 1970's the Marxist *Fedayeen-e-Khalq* and the 'Islamic Marxist' *Mujahedeen-e-Khalq*, were expanding their active membership at a fantastic rate: each grew at least twenty-fold in strength between November, 1978 and February, 1979, and they came into possession of large numbers of weapons provided by the ever-growing number of deserters from the army.

The crisis came only a week after Khomeini's return, when numbers of airmen in uniform joined pro-Khomeini demonstrations for the first time. The middle ranks of the air force, the technical warrant officers and uniformed civilian workers, had been presenting grave problems of discipline even before the Shah went — they refused to arm combat aircraft, for example, on the implausible ground that the high command had plans to bomb and strafe Iranian cities — primarily because they were in much closer contact with civilian society than most military personnel, and belonged to the urban lower-middle class which was the most fertile source of Khomeini supporters. On the day after the demonstration, February 9th, the Imperial Guard, the most loyal troops left in the army, were brought into the Doshan Tappeh air force base in east Tehran to round up the disaffected air force personnel, and were met with gunfire. In the ensuing battle thousands of armed civilians joined in to support the airmen, and the insurrection had begun. The whole of working-class

south-east Tehran was soon in rebel hands, and the commitment of numbers of Chieftain tanks and helicopter gunships to the battle for the capital failed to stem the tide. In 40 hours of heavy fighting up to a thousand people were killed, but one by one the military installations in the capital were captured. The flow of army and air force deserters to the rebel side became a flood, and on February 11th the armed forces high command ordered its troops back to barracks and declared itself 'neutral' in the political struggle. The rival prime minister who had been appointed by Ayatollah Khomeini on his return, Dr Mehdi Bazargan, took the place of the premier left in office by the Shah, and immediately appointed a new Chief of Army Staff, General Muhammad Vali Gharani, an officer who had been jailed 10 years previously after falling out with the Shah.

The surrender came too late to save the armed forces from disintegration. However, fighting was far less severe in other cities in Iran, but the collapse of military discipline was the same throughout the country. Every barracks and military installation in Tehran, and many others throughout the country, fell entirely into the hands of the guerrilla groups, while those in which military personnel remained at all came under some form of joint administration with the guerrillas. Desertion rates throughout Iran exceeded 50%, and in Tehran on February 14th there was not a single soldier left in uniform. Moreover, most of the 300,000 infantry weapons in army arsenals fell into the hands of the guerrillas and were distributed among their followers.

At the time of writing, one month after the revolution, the task of reconstructing the armed forces had scarcely begun. Eight senior generals had been executed by revolutionary tribunals, and almost all of the 250-odd other generals in the army had been dismissed. The air force had had four different chiefs of staff in 2 weeks (the officer filling that post in early March, 1979 being Brigadier Asghar Imaiyani), and there were numerous cases of army divisions — or what was left of them — being under the effective control of captains who were answerable to mullahs installed in the headquarters offices playing the role of political commissar. The first deadline set for the return of soldiers to their barracks had already passed, and the Chief of Staff confessed that only about 50% of deserters had responded to the summons. In Tehran and many other places, moreover, the army did not control its own bases, which remained in the hands of the guerrilla forces.

There was, moreover, a rapidly growing dispute over the future shape of the army, with the leftist guerrilla groups who controlled most of the firepower in the streets demanding a 'People's Army' (i.e. themselves) in place of a reconstructed regular National Army. On February 20th, in an attempt to defuse this demand, the Bazargan government consented to the creation of a National Guard which would incorporate the existing armed militias. But it was clear that the real leadership group around Khomeini intended to rebuild the regular army as well.

In late February it was announced that no conscripts would be called up during 1979 and that the term of conscript service was being reduced to 1 year, which strongly suggested that the new regime's ultimate aim was to create a smaller, largely professional regular force. This would be counter-balanced by the militia force (renamed the Revolutionary Guard), into which those elements of the 'Islamic Marxist' *Mujahedeen* guerrilla group which were particularly loyal to Khomeini were rapidly being absorbed. It was clearly not intended that this should be allowed to develop into a leftist militia, however, but rather that it would incorporate many *Mujahedeen* and a few *Fedayeen* guerrillas while gradually disarming the rest. The Guard would bear responsibility for the preservation of internal law and order, while the regular army would be charged with external defence. In early March, however, it was not clear how the government or Khomeini was going to induce the guerrilla groups who were the best-armed forces in the country to accept this curtailment of their role, and the question of a 'People's Army' remained open.

On the external front, Iran had already announced its withdrawal from the CENTO alliances, broken off diplomatic relations with Israel, and declared its support for the Palestine Liberation Organisation. All foreign military personnel and civilian technicians employed in training the armed forces and maintaining their weapons had been expelled, and there was reason to suspect that much of Iran's more sophisticated weaponry would soon become unserviceable. All United States monitoring stations which had been established in northern Iran to maintain surveillance of Soviet ballistic missile tests had been closed, some after guerrilla attacks, and the government had stated that they would not be reopened. Almost all of Iran's outstanding contracts for foreign arms purchases, suspended by the Shah's last government, had been definitively cancelled.

The most serious internal security problem facing the government, apart from controlling the urban guerrilla groups, was that of dealing with the separatist and autonomist groups which had sprung up in all of Iran's numerous minority regions: Turkish Azerbaijan, the Turcoman north-east, Baluchistan in the south-east, and above all amongst the big Kurdish population along the western border and the small but extremely important Arabic-speaking population which constitutes a native majority in the main oil-bearing province, Khuzestan. None of these movements had resorted to fighting as of March, 1979, but it would be many months before the regular armed forces were again capable of quelling even a minor revolt in a minority area.

G. D.

IVORY COAST

The Minister for the Armed Forces and National Service is M M'Bahia Blé Kouadio.

The Ivory Coast's land forces have expanded slightly; there is now an additional artillery battery and an anti-aircraft artillery battery. The reconnaissance company may be parachute-trained, probably in Togo.

World Armies

The air force (GATL), or *Groupe Aerien de Transport et de Liaison*, is also expanding in a limited way. Delivery of six Dassault-Breguet/Dornier Alpha Jet close support/training aircraft is scheduled for 1980.

L. L. M.

KAMPUCHEA

The invasion of Kampuchea by 12 divisions of the Vietnamese army, following months of border fighting, culminated rapidly in the capture of the capital and the occupation of the whole country in February, 1979. The government and armed forces of the Khmer Rouge fled and, though Pol Pot claims that his army is conducting guerrilla operations against the invaders, it seems unlikely that they are large-scale or will be successful. The character of the future government and armed forces of Kampuchea is obscure.

J. K.

KENYA

Following the death of President Kenyatta, President D. Arap Moi becomes Commander in Chief of the Armed Forces. The Army Commander is Major-General P. Kikenyi.

The expansion of the Kenya army continues. A sixth battalion, to complete the pattern of two brigades each of three battalions, is planned. A tank unit, with some Scorpion and some Vickers Mk 3 medium tanks, is to be raised. Each infantry battalion has in support a number of AML 60/90 armoured cars; the army possesses thirty in total. An artillery battery of eight 105 mm guns has been formed, and Rapier SAMs are on order. A new British Army Training Team, to instruct in the new weapons, has arrived.

Most recent reports suggest that a further expansion of the artillery is likely; also that the Kenyan government is discussing possible arms purchases with both France and the USA.

L. L. M.

LIBERIA

The Militia is organised into five regiments, each just over a thousand strong.

L. L. M.

LESOTHO

Lesotho has no army, but does possess a small barrack police force well-trained in minor military tactics. The force is said to be approximately four hundred strong, and will in 1979 be equipped with two Short Skyvan STOL transport aircraft.

L. L. M.

MALAGASY REPUBLIC

A recent French report claimed that a French military mission of some fifty personnel was at work in the Republic; the same report noted a Cuban mission of thirty.

Whether for good reason or for rumour is unclear, but in September, 1978 Malagasy forces were put on the alert in anticipation of a 'mercenary raid', the intention of which was said to be the liberation of political prisoners.

It would appear that the infantry regiments are intended to be composed of three battalions each, to fit in with the 'Forces of Development' role; whether all six battalions exist at present is not known.

Four MiG-21 aircraft were supplied to the Malagasy Republic by North Korea late in 1978.

L. L. M.

MALI

It appears that the February, 1978 arrests comprised a group of pro-Soviet officers; as a result some West German and Chinese military advisers have arrived although many Soviet instructors still remain.

Colonel Traoré has been promoted to general.

L. L. M.

MOCAMBIQUE

An officer cadet school opened in Maputo late in 1978. Over 500 cadets and students are said to be in training.

The feeble performance by Moçambique forces against successive Rhodesian air and land raids suggests that earlier reports of Soviet military aid may have been exaggerated. The FPLM has certainly not been deployed in any great strength to protect either the frontiers or the camps of Rhodesian insurgents.

The number of Cubans training the FPLM is said to be three hundred. One report states that the projected size of the army, when training and organisation is complete, will be 20,000, organised into three divisions each of three regiments, each regiment to have three battalions. Each division will have a tank and artillery unit, together with engineer and logistic support. Another report, however, claims the organisation will be one based on four regimental groups.

A further very recent report notes the force to have an overall strength of 21,200, with 150 tanks. The air force is said to have 47 MiG-21 machines, with Atoll air-to-air missiles.

L. L. M.

NIGERIA

Nigeria is to develop a small-arms manufacturing industry, the first Black African country to do so.

The essential elements of the army's reorganisation programme are now more clear. One of these is the delineation of divisional areas for 1, 2 and 3 Divisions which reach from the north to the south of the country (i.e. across all ethnic, former Region or present-day State boundaries). This is to deny any divisional commander any homogeneous area or State apparatus which might tempt him to seizure of power. The exception is 4 Division, which remains a Lagos formation. Each division possesses a mobile brigade — these form a protective ring: Enugu, Bauchi, Gusau, Ilorin.

A Guards Brigade now exists, and forms a large part of 4 Division. Its functions include the security of the Army Command at Dodon Barracks, Lagos, and ceremonial.

With the approaching return to civilian rule, two leading soldiers who had held high political appointments have left office. These are Brigadier Garba, who has assumed command of the Staff College, and Brigadier Yar'Adna, who has retired. General Danjuma remains in the key position of Army Commander.

A battalion of the Nigerian army is serving with the UN in Lebanon.

Seven Chinook helicopters were ordered for the air force in 1977.

The Nigerian army's first large-scale exercise using its new equipment was held in the Rivers State in December, 1978. Units from all four divisions participated.

L. L. M.

RHODESIA

The President of Rhodesia, J. Wrathall, died in 1978; a temporary successor has been appointed pending the 'Internal Settlement' constitutional changes. In the Transitional Government formed for the interim period, Mr John Kadzwiti of the Reverend Sithole wing of the ANC is joint Minister for Defence and Combined Operations with Mr R. Hawkins. The Air Force Commander, whose name was not noted in the main entry, is Air Marshal F. Mussell.

Developments since March, 1978 now suggest a situation much less favourable to the Salisbury government. The internal settlement has not produced political stability and the absence of any real advance for Africans has disillusioned many who initially supported it. The amnesty offer and other attempts to persuade insurgents to surrender have been an almost total failure.

Insurgent attacks develop in expertise and intensity. Bombs have exploded in the centres of both Salisbury and Bulawayo; more serious blows have been sabotage in the suburbs, most notably the fires started late in 1978, at the oil storage terminal near Salisbury. Umtali has been subjected to frequent rocket and mortar attacks, more mines have appeared — including some embedded on metalled roads, and railway journeys have become even more hazardous. The

World Armies

worst affected line has been the critically important Beitbridge route to South Africa, cut very frequently. Even escorted convoy movements are now dangerous over most of Rhodesia, and are frequently impracticable. Most sinister of all for the future, it would appear that the destruction of two Viscount air-liners, one in September, 1978 and a second in February, 1979, was the work of ZIPRA (Nkomo faction) insurgents equipped with SAM-7 surface-to-air manpack guided weapons. Nevertheless this missile does not appear to have yet arrived in insurgent hands in any quantity.

It remains true, however, that the insurgent groups are both sharply divided amongst themselves and usually exceedingly inefficient (this may also be a reason why their patrons have not supplied them with SAM-7s). The bombardment of Umtali is generally wildly inaccurate; the field-craft of many groups is often exceedingly careless. The Mugabe ZANLA forces, numerically larger, are less efficient than those of ZIPRA; one reason for this is said to be that ZANLA prefers to concentrate on political meetings and education together with economic dislocation, while ZIPRA trains more conventionally. This argument is often extended to claim that ZIPRA has an eye on the consolidation of power when victory has been won. It also seems that on a number of occasions ZIPRA groups will denounce ZANLA to government forces. The Rhodesian authorities appear to have been most successful in the north and north-east, where some Tribal Trust Land that had been lost has been regained.

Nevertheless, overall the situation has worsened for the government and a number of recent security and military measures reveal the gravity, almost despair. Most significant of these is the force of pre-emptive strikes, amounting to a Hitlerian *Schrecklichkeit*. The major air and airborne troop strikes into Mozambique (in July, 1978 attacking a ZANLA camp) and Zambia (in October, 1978 striking against a large ZIPRA camp near Lusaka) killed numbers of women and children living in the camps — probably directed to so reside by the Patriotic Front Command as at best a safeguard against such strikes or at worse as propaganda value if killed. On the weekend of February 24th/25th, 1979 an air strike, reported to be the biggest ever launched by Rhodesia, was launched from Wankie against a ZIPRA guerrilla camp at Luso in Angola, about 200 miles from the nearest point to the Angola-Zambia border; it was claimed by the Rhodesians to have been highly successful, and it is possible that some East German and/or Cuban training personnel were killed. In lesser operations increased reliance has been placed either on air-to-ground strikes, with bombs and napalm, or aircraft- or helicopter-carried descents by picked teams of RLI or SAS. These tactics also inevitably occasion heavy loss of civilian life. They need to be placed in the context of declining white morale. Many white soldiers are now not sure what they are fighting for, and when they are sent out on mixed patrols with poorly trained African soldiers self-preservation is a major consideration. Reluctance to patrol and noisy movements in the field have been noted: morale falls as the casualty rates rise, a factor which again leads the command to opt for air strikes. For these some forty further Alouette III helicopters have been given to the air force in the last 2 years, purchased via South Africa. A very recent report notes the delivery of 12 Augusta-Bell AB-205 helicopters, apparently new and straight from the USA, purchased via some intermediary.

The statistics of the campaign speak for themselves. Since 1972, 12,000 have died. The insurgents have lost 6150 men in fighting in Rhodesia; 2459 of these were killed in 1978. In addition a further estimated 4000 have been killed in strikes across Rhodesia's borders. The Rhodesian forces lost 774 men in the period 1972 to the end of 1978 of which 282 were lost in 1978. Even with a claimed kill ratio of nine to one the casualty rate is a penal one.

Other extreme measures have been the extension of martial law to new areas in the south and west in October, 1978; the call-up for part-time duties of white men over fifty; and the call-up of all fit young Africans between the ages of eighteen and twenty-five who have 2 years secondary education. This last measure was intended to raise 3000 men for further RAR battalions, but the call-up was resented and ignored by large numbers of Africans, only a few hundred reporting.

A major problem for the command has been that of deciding whether, in areas regained or still thought to be supporting internal settlement, military surveillance should be discontinued and the unpopular villages dismantled. The problem is complicated by the acute shortage of any security force personnel on the one hand, and the very nature of the internal settlement on the other. The answer has been, in default of any other feasible course, to make many of these areas over to the latest and in many ways most frightening of all the aspects of the Rhodesian situation — private armies of the leading internal-settlement political figures. These are politely described as 'auxiliary forces'; they appear to operate in groups of 100-200, to wear a somewhat motley brown uniform and to be equipped with a very wide variety of weapons. Some of them are former insurgents ('onside ters' in Rhodesian jargon) and retain their Soviet- or Soviet-satellite-made weapons. In theory they are overseen by white liaison officers, in practice they seem to do as they please — in many cases yet one further oppression on hapless peasants. Most recent reports suggest that some 3000 auxiliaries now operate in 22 frozen areas; of these eighteen are followers of Bishop Muzorewa's UANC and four of the Reverend Sithole's ZANU.

The economic plight of Rhodesia worsens. In areas where production is still maintained, it does so under garrison conditions. In particularly high-risk areas, such as the Mozambique border, the majority of farms are being abandoned. The European population of Umtali has fallen from 9000 to 7000. The acute shortage of foreign exchange affects supplies of spare parts and fuel. As war weariness increases, more and more white Rhodesians leave the country, and black Rhodesians fill refugee camps either in the big cities or in neighbouring independent African States.

No factors in Rhodesia suggest any stability in the future. The economy declines, the majority-rule constitution will be difficult to operate and unacceptable to many — both black and white. The formal security forces will decline in efficiency, to the gain of the private political armies. These, and their leaders, are more likely to quarrel than co-operate. The insurgent challenge will remain, but is unlikely to be sufficiently powerful to win. They too will quarrel. The Soviet Union's policy seems to be one of preferring to keep the pot boiling — so as not to disturb *détente*, to distract attention from more pressing

Soviet ambitions in Namibia and Zaïre, and to maintain a permanent diplomatic embarrassment for the West, particularly Britain, in Africa.

Mid-February, 1979

L. L. M.

SENEGAL

A contingent from Senegal was included in the French-organised African security force sent to the Shaba Province of Zaïre in 1978. Their service in Zaïre is attracting political criticism in Senegal.

L. L. M.

SIERRA LEONE

The army is in the process of expansion from one battalion to two. The 1st Battalion Sierra Leone Regiment remains posted to Freetown; the newly formed 2nd Battalion is stationed at Mekene. The major training priority is seen as internal security; civic duties are also included — these provide for rice growing and other agricultural work.

Cadets are trained in Egypt, Tanzania and Britain; a women's section of the army exists for which girls are in training in Britain.

Recent purges and the army expansion have together created a severe shortage of officers.

L. L. M.

SOMALIA

The tensions of defeat rose to the surface in April, 1978 when a group of officers, almost all of the Mijerteyn clan, attempted to overthrow General Siyad Barre. The attempt failed, and the officers were executed in public. It was significant that the political anguish took the form of a return to traditional clan loyalties and vendettas. Some evidence suggests that these feuds, played out in the Ogaden, contributed to the Somali reverses. Whether this is correct or not, the conclusion to be drawn from April, 1978 is that old clan feuds could seriously weaken the Somali army in both peace and war in the future.

There are no firm reports yet available on any re-equipment of the Somali forces. Two pointers to their weakened state appeared in late 1978. Ethiopian aircraft struck three areas in the north of Somalia early in November; their attack was not checked, nor was there any retaliation. In October, on the occasion of the ninth anniversary of the military coup, a ceremonial parade was held; but the best the air force could produce was six aircraft: four MiG-17s and two MiG-21s.

One very recent report claims the new order of battle for the Somali army to be based on three divisions, together with 20 independent regiments. Sixteen new infantry battalions are said to have been raised, increasing the army's strength to over 50,000. Losses in the fighting with Ethiopia are reported to have reduced the total numbers of tanks from 300 to 80, and other armoured fighting vehicles from 350 to 100. Milan anti-tank missiles and 106 mm guns have been supplied, probably via Saudi Arabia, to the Somalis. The air force's casualties are reported to have been 30 aircraft, leaving totals at present of seven MiG-21 and 15 earlier MiG-15 or MiG-17 machines.

L. L. M.

TANZANIA

The TPDF has been considerably increased and now totals over 25,000 in respect of ground forces plus 1000 airmen.

The ground forces are planned for organisation into four brigades, the headquarters for which have all been created. The exact composition of the brigades is to vary according to role, but the army's units would total 12 or 13 battalions, three artillery units, an engineer regiment and an armoured regiment of three battalions. At present only one of these armoured regiments exists — the tank unit noted in the main entry. This regiment has been expanded by the addition of a second squadron of Type 60 light tanks. Some Chinese K63 APCs have also been reported. Soviet SAM-3 surface-to-air missiles are said to be on order.

The air force's strength was last reported to have been 11 MiG-21, 15 MiG-19 and three MiG-17 strike aircraft all in their Chinese-manufacture form, together with assorted transport aircraft of small-to-medium size, and four helicopters. These totals were those before the latest round of Uganda-Tanzania border hostilities, which began at the end of October, 1978.

The Tanzanian forces appear to have reacted slowly to the Ugandan attack; their evident surprise at the size and scale of it

World Armies

does, however, at least add substance to their denial of the charge made by General Amin, that the attack was in retaliation for raids across the border. The Tanzanian confusion was worsened by the destruction, in error by their own forces, of three of their own aircraft.

The Ugandan forces were able to occupy land to a depth of some 20 miles in the Kagera salient, bombing and killing indiscriminately; they reached and crossed the Kagera River advancing south. The Tanzanian forces were only able to mount a counter-attack some 10 days later, and while this has cleared the area south of the river occupied by the Ugandans, who withdrew without forcing a battle, it is only now making headway north of it, although reports on going to press indicated that the advance was at last gaining momentum. Logistic problems, ammunition shortages and the destruction of the bridge appeared initially to have slowed and delayed the TPDF. Both sides have sustained casualties and loss of equipment and aircraft, but it is not at present possible to establish the precise totals and quantities. The TPDF may well be hoping that the internal problems of Uganda will end the threat to their border. Their forces in the area are said to number 8000–10,000, under the command of Brigadier Kiwelu.

See also the Addendum for Uganda.

L. L. M.

TOGO

The Togo army has recently received 30 West German UR-416 light APCs; five Dassault–Breguet/Dornier Alpha Jet light air-to-ground strike aircraft are on order.

Training of cadres takes place at the *Centre National d'Instruction* situated at Lama Kara; this centre also teaches cadres from the gendarmerie. The commando unit's personnel are trained at Temedja (*Centre d'Instruction des Para-Commandos*); their 5 months course includes parachute training.

A company of the Togo army served in the Pan-African Security Force in Shaba Province, Zaïre, in 1978.

The largest exercise ever mounted by the Togo army took place in November, 1978; the exercise was held in the north of the country. It was a joint French–Togolese exercise, the French providing logistic support, transport aircraft for the parachutists and Jaguar air-to-ground strike aircraft. Observers commented very favourably on the physical fitness and endurance of the Togolese soldiers, and the efficiency of the move of sub-units from the south of the country. The aircraft which dropped the parachute troops were, however, French. The exercise was named *Koulougona*.

The air force has now been reconstituted as a separate service. Six Macchi MB 326 interceptor/air-to-ground strike aircraft, together with three helicopters and two light aircraft, were noted on exercise *Koulougona*.

L. L. M.

UGANDA

Other names selected for Uganda army units are the 'Kafaru (Rhinoceros) Mechanised Battalion', the 'Chui (Leopard) Battalion', the 'Mountains of the Moon Battalion', the 'Marine Battalion', the 'Suicide Revolutionary Mechanised Battalion' and the 'Air and Seaborne Battalion'.

Signs of restlessness in Uganda continued throughout 1978, reports noting at least two assassination attempts and rumours alleging several more. Frequent changes were made in the command appointments: General Lumago was replaced as Chief of Staff by General Y. Gowon (not, of course, the distinguished Nigerian officer), a Nubi; Lieutenant-Colonel Gore, another Nubi, was appointed Commander of the Air Force. General Adrisi, under suspicion for criticism of Amin (although like Amin both a Kakwa and a Muslim) was seriously injured in what was described as a motor accident. From the safety of Cairo, Adrisi proclaimed his loyalty to Amin, and was allowed to return and resume his office; this probably represents a sign of his strength of following.

In late October, 1978 large formations of the Uganda army crossed into Tanzania to seize the Kagera salient; hurriedly trumped-up charges of previous Tanzanian border violations were proclaimed. It seems probable that this attack was launched by Amin to bring to an abrupt end the mounting conflict between him and Adrisi. Reports of events immediately prior to the attack suggest that Amin found that both the Simba and Chui battalions were planning to remove him; he first tried to infiltrate both by means of the State Research Bureau, then ordered each to put down the unrest in the other hoping thereby to cancel them both out, and then finally ordered the Marine battalion to proceed to Mbarara and suppress the two units, both said to be loyal to Adrisi. The Marine battalion failed to accomplish this mission; to distract further attention, Amin then ordered a general attack — with a promise of loot and women — on Tanzania.

This attack was mounted with great ferocity, looting and killing being general in the areas occupied. The attacking force comprised a small detachment of the Presidential Guard, the Malire, Marine, Simba, Tiger-Gonda and Mountains of the Moon units, and it reached and crossed the Kagera River without difficulty. It appears to have been under the command of General Gowon. On November 11th the Tanzanian counter-attack began; at the same time intense OAU and other

diplomatic pressure was brought to bear on Amin. The pressure enabled him to present his enforced withdrawal to the Kagera River as a concession. General Gowon was *limogé*, and several unit commanders were replaced abruptly. At one point Amin took personal command for a brief period in an attempt to restore collapsing morale.

At the time of writing (mid-February, 1979) the Uganda forces appear to have recovered some of their morale and to be holding the river lines. TPDF forces occasionally cross, but in infantry detachments only; Uganda fire power has prevented the TPDF armour from crossing and limited the scope of the infantry's operations.

Casualties and the destruction of equipment are claimed by both sides against the other. They are not likely to have been very severe for either army, no real formal battle having taken place. The civilian population — and it is said some mutinous Ugandan soldiers blown up in a prison by their own forces — appear to have been the worst sufferers. Reports of plots and unrest in Ugandan units nearer the capital, Kampala, persist. Shortly before going to press reports indicated the mutiny of the 'Suicide Battalion' which appeared to be in control of Mbaka.

New equipment reported to have arrived for the Uganda army includes: four Italian Augusta-Bell AB-205 helicopters; a squadron's worth (ten) of Soviet PT-76 amphibious reconnaissance light tanks; additional MiG-21 aircraft equipped with Atoll air-to-air missiles, bringing the total of this type of machine possessed by Uganda to twenty-five; and a number of SAM-7 man-pack surface-to-air missiles.

Whether Uganda has the manpower to operate this equipment (or can find non-Ugandan personnel willing to do so) and whether the economy of Uganda can support a prolonged confrontation with Tanzania remains exceedingly doubtful. Indeed, another possible explanation of the conflict may have been a crude attempt by Amin to win military equipment and economic aid from Middle Eastern co-religionists.

Shortly before going to press, the Tanzanian army, supported by units of Ugandan exiles, had taken complete control of the southern half of the country by the end of April, 1979.

The majority of Ugandan army units appeared to have fled north and east without putting up much resistance, and many soldiers deserted or joined the rebels. By the end of April, 1979 the principal towns of Kabale, Mbarara, Masaka, Entebbe (including the country's only international airport), Kampala (the capital), Jinja and Tororo (only a few miles from the Kenyan border) had been captured, the last four with hardly any resistance. One reason for the rapid collapse, apart from the internal divisions and unrest, appeared to be a chronic shortage of fuel. Reports also indicated that the survivors of a 2500 man force of Libyans, composed mainly of older reservists, was airlifted out of the country before the collapse of Kampala. By the beginning of May, 1979 the Tanzanian forces were in control of Soroti in the eastern central part of the Country, and were preparing to press on to Arua in the extreme north-west of the country, where reports suggested Amin was hiding out.

President Lule was sworn in at the end of April.

Lira, equidistant between Soroti and Gulu, was taken in mid-May, 1979. At about the same time reports indicated that Amin and his family were in Libya, where they had been since the beginning of April. A visit to Baghdad which Amin was reported to have taken on April 22nd to attempt to drum up support, ended in failure, and both he and his family were being kept in close isolation by the embarrassed Libyan government, who had made no public announcement of either their presence or the 600 Libyans who had died in Uganda.

Arua was taken with only token resistance at the end of May, 1979 and by the beginning of June the new government claimed that the entire country was now under its control.

UPPER VOLTA

In May, 1978 Upper Volta returned to civilian rule: the army, however, retains considerable influence and, as forecast, President Lamizana has remained Head of State. His opponent in the presidential election won a very large number of votes; the election was not a formality.

The French training mission in Upper Volta numbers approximately twenty; some of the army's NCOs train in Senegal. The army has recently been expanded and full details are far from clear. The number of infantry battalions may now be five or six — a 'para-commando' company has been formed and trained in Togo; an artillery battery has also been raised.

New equipment, all French, includes Panhard AML 60/90 vehicles for the reconnaissance company and 105mm howitzers for the artillery.
